> The chapeau of paragraph 5 of Article XXIV begins with the word "accordingly", which can only be read to refer to paragraph 4 of Article XXIV, which immediately precedes the chapeau.
>
> [..]
>
> 57. According to paragraph 4, the purpose of a customs union is "to facilitate trade" between the constituent members and "not to raise barriers to the trade" with third countries. This objective demands that a balance be struck by the constituent members of a customs union. A customs union should facilitate trade within the customs union, but it should *not* do so in a way that raises barriers to trade with third countries. [..] Paragraph 4 contains purposive, and not operative, language. It does not set forth a separate obligation itself but, rather, sets forth the overriding and pervasive purpose for Article XXIV which is manifested in operative language in the specific obligations that are found elsewhere in Article XXIV. Thus, the purpose set forth in paragraph 4 informs the other relevant paragraphs of Article XXIV, including the chapeau of paragraph 5. For this reason, the chapeau of paragraph 5, and the conditions set forth therein for establishing the availability of a defence under Article XXIV, must be interpreted in the light of the purpose of customs unions set forth in

[8] Australia's Oral Statement, para 35. Oxford English Dictionary, p. 15. Australia refers to the first sense of the word "accordingly" which is preceded by the symbol "=" which indicates that a particular usage is obsolete (see Abbreviations and Symbols, page xxvi).

[9] See Articles II.6(a), III.9, XII.3(d), XVI.3, XVIIII.5, XXIV.5 GATT 1994, together with Ad Article III and Ad Article XXVIII.4 to GATT 1994, Articles 2.1 and 11 of the Dispute Settlement Understanding, Article A(i) of the Trade Policy Review Mechanism, Article 12.8 of the Agreement on Technical Barriers to Trade, Article 1 of the GATS Annex on Telecommunications and Article 5.1 of the Agreement on Textiles and Clothes.

> paragraph 4. The chapeau cannot be interpreted correctly without constant reference to this purpose.[10] (emphasis added)

18. The Appellate Body has, consequently, recognised the linking function of the word "accordingly", and the fact that provisions which may be linked to later provisions through the use of the word "accordingly" may not impose separate obligations.

19. The European Communities would also point out that the Appellate Body has found that other provisions (e.g. Article III.1 GATT) which contain general principles are set up as "a guide to understanding and interpreting the specific obligations contained" in other provisions (e.g. Article III.2 and the other paragraphs of Article III).[11] Such provisions do not, however, impose additional obligations supplemental to the specific obligations, unless expressly stated.[12]

20. The Panel may find it useful to refer to the European Communities' response to a question posed by Australia (see question no. 44 in this document). In its response, the European Communities deals with Australia's unfounded assertion that the European Communities' reading of the first sentence of paragraph 1 would render that provision ineffective.

**Q7 Please explain the meaning of the words "the fundamental requirement" as used in paragraph 1 of Annex 2 of the *Agreement on Agriculture*. 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Answer

21. The phrase "the fundamental requirement" signals the negotiators intent to treat differently measures which are less or not at all distortive to trade or production and sets forth the general purpose of Annex 2; a purpose which permeates the rest of Annex 2. Considering the term in the abstract does not answer the question whether a panel must examine the effects of measures for which green box status is claimed in addition to examining whether such measures respect the basic and policy-specific criteria set out in Annex 2, or whether respecting the basic and policy-specific criteria is such that a measure is deemed not to have the effects mentioned in the first sentence. As the European Communities has explained, there are compelling textual and purpose based arguments which support the latter interpretation.

**Q8. In your oral statement, you emphasize the use of the word "criteria" in other parts of the *Agreement on Agriculture*, as distinct from the reference to "fundamental requirement" in the first sentence of paragraph 1 of Annex 2. Is it the case that sub-paragraphs (a) and (b) of paragraph 1 of Annex 2 are also "criteria"? EC**

---

[10] Appellate Body Report, *Turkey – Restrictions on Imports of Textile and Clothing Products ("Turkey – Textiles")*, WT/DS34/AB/R, adopted 19 November 1999, paras. 56 and 57 (emphasis added). Note that the Panel also found that Article XXIV.4 was "not expressed as an obligation" (Panel Report, *Turkey – Restrictions on Imports of Textile and Clothing Products ("Turkey – Textiles")*, WT/DS34/R, adopted 19 November 1999, as modified by the Appellate Body Report, WT/DS34/AB/R, para. 9.126).

[11] Appellate Body Report, *Japan – Taxes on Alcoholic Beverages ("Japan – Alcoholic Beverages")*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, p. 17.

[12] See Appellate Body Report, *European Communities - Regime for the Importation, Sale and Distribution of Bananas ("European Communities – Bananas")*, WT/DS27/AB/R, adopted 25 September 1997, paras. 214-216 holding that the absence of a specific reference to Article III.1 GATT in Article III.4 GATT meant that an examination of the consistency of a measure with Article III.4 GATT did not require, in addition, an examination of the consistency of the measure with Article III.1 GATT.

Answer

22. Yes. The second sentence of paragraph 1 refers to sub-paragraphs (a) and (b) as "basic criteria". Paragraph 5 refers to the same "basic criteria". The European Communities considers that the "criteria" referred to in Articles 6.1 and 7.1 of the *Agreement on Agriculture* (mentioned in question 6 above) refer to both the basic criteria set out in the second sentence of paragraph 1 and the policy-specific criteria set out in paragraphs 2 to 13 of Annex 2.

**Q9. If the first sentence of paragraph 1 of Annex 2 is a stand-alone obligation, does this allow effects-based claims of non-compliance with Annex 2? If so, how does this affect the purpose of Article 13(b)? 3rd parties' in particular Australia, Argentina, Canada, EC, NZ**

Answer

23. The implication of finding that the first sentence of paragraph 1 is a stand-alone obligation is that an effects test would become applicable to assessing compliance with Annex 2. The result of such an interpretation is two fold. First, as the Panel implies, another WTO Member could bring a WTO dispute alleging that because of its effects a measure does not comply with Annex 2. Second, WTO Members, when designing measures intended to conform to Annex 2, will be required to attempt to identify the effects of such measures. Such a task is often only feasible on an *ex post facto* basis. The correct classification of measures is a vital element for a Member to ensure that it respects it domestic support ceilings. Requiring a Member to measure effects diminishes the ability of a Member to ensure correct classification. Such an interpretation should, therefore, be avoided.[13]

24. It is rather remarkable, had the drafters intended that the first sentence of paragraph 1 be a self-standing obligation, that no indication of how such effects are to be measured was included in the *Agreement on Agriculture*. It is far from obvious how the effects of a measure on production and/or trade is to be measured. Nor is it clear how it can be decided that a particular effect can be considered as going beyond "minimal". This can be contrasted with Article 6.3 of the *SCM Agreement* where the negotiators set out with some precision certain criteria deemed to cause serious prejudice to the interests of another Member. This leads to the inevitable conclusion that the criteria by which a Member or a panel is required to determine whether a measure has more than minimal trade or production distorting effects are the basic and policy specific criteria set out in Annex 2.

25. Article 13(b) is one element of a complex series of arrangements intended to provide legal security and certainty to Members who have embarked on a process of agricultural reform. It is designed to ensure that a Member may design its domestic support measures in such a way as to ensure that they do not provide support in excess of that decided in 1992 in order that it be exempted from the actions listed in Article 13(b). This requires a Member to be able to classify its measures as green box, other exempt policies, or as amber box. Only by being sure of its classification can a Member ensure that it maintains the protection provided by Article 13(b). This is one reason why the criteria for treatment as green box, or as another exempt measure, are so precisely defined. (Other exempt measures are precisely defined in Articles 6.4 and 6.4 of the *Agreement on Agriculture*). Consequently, bringing an effects test into an analysis of green box compatibility would make it very difficult for a Member to be sure that it remains within the level of support decided in 1992 and would therefore render nugatory the security and predictability necessary to permit the process of agricultural reform initiated by the Agreement on Agriculture.

**Q10. If the first sentence of paragraph 1 of Annex 2 is not a stand-alone obligation, then must new, non- or minimally trade-distorting measures that do not conform to the criteria listed in**

[13] See, in this sense, First Third Party Submission of the European Communities, para. 24.

**Annex 2 be classified as non-Green Box? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Answer

26. The European Communities is not convinced that "non- or minimally trade-distorting measures" might exist which would not be covered by Annex 2. Annex 2 has at least two paragraphs which are designed as "catch–all" provisions. Paragraph 2 of Annex 2 acts as a "catch-all" for general service programmes not involving direct payments to producers or processors.[14] Paragraph 5 acts as a "catch-all" for all direct payments.[15] Moreover, Annex 2 is designed to cover all domestic support measures which are deemed to have no or at least minimal trade-distorting effects. Consequently, it would seem surprising if a non- or minimally trade-distortive measure would not meet the criteria of Annex 2.

27. In the hypothesis that a measure which had no or minimal trade-distorting effects did not conform to the criteria in Annex 2 the European Communities would conclude that it could not be considered as Green Box support. As the European Communities explained in its Third Party Submission, rather than defining those domestic support measures which were to be subject to reduction commitments, the negotiators of the *Agreement on Agriculture* chose to define all those measures which were not to be subject to reduction commitments – hence Annex 2.[16] Such a result does not run counter to the objectives of the *Agreement on Agriculture* since it ensures the security and predictability of the reform process.

**Q11 If the first sentence of paragraph 1 of Annex 2 expresses a general principle which informs the interpretation of the criteria in Annex 2, please explain how this affects the assessment of the direct payments programme's compliance with paragraph 6 of Annex 2. 3rd parties, in particular, Australia, Argentina, Canada, EC, NZ**

Answer

28. The European Communities considers that the first sentence of paragraph 1 of Annex 2 sets out the general purpose of Annex 2 and therefore informs the interpretation of the criteria in Annex 2. It is relevant to the interpretation of paragraph 6 in that it should be considered to be part of the context of paragraph 6. Nevertheless, while the first paragraph informs the interpretation of paragraph 6 it cannot detract from the words actually used in paragraph 6.[17] As the Panel considers its interpretation of the words used in paragraph 6, it can take account of the purposive language of the first sentence of paragraph 1.

29. There are two issues which the Panel must resolve with respect to direct payments – the reduction of payments where certain crops are grown and the updating of base periods.

[14] The third sentence of paragraph 2 reads "[S]uch programmes, which include but are not restricted to the following list, shall meet the general criteria in paragraph 1 above and policy-specific conditions where set out below [..]".

[15] The second sentence of paragraph 5 reads "[w]here exemption from reduction is claimed for any existing or new type of direct payment other than those specified in paragraphs 6 through 13, it shall conform to criteria (b) through (e) in paragraph 6, in addition to the general criteria set out in paragraph 1."

[16] First Third party Submission, paras. 19 & 20. Obviously, some other exempted support measures are defined in Article 6 of the *Agreement on Agriculture*.

[17] Appellate Body Report, *Japan – Taxes on Alcoholic Beverages ("Japan – Alcoholic Beverages")*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, p.17.

30. With respect to the former, the European Communities has already explained why it considers that reducing payments upon growing certain crops cannot be considered to base payments on a type of production (see also the EC's response to Panel question 5 above). The European Communities position is supported not only by the text of paragraph 6(b) but also by an interpretation informed by the first sentence of paragraph 1. Permitting such a reduction of payments does not distort trade – it minimises any distortion which may be caused by any decoupled payments in markets which were historically undistorted by subsidies. It ensures that the equilibrium established by the market in the relevant product is maintained. To the extent decoupled support can be seen as having an effect on trade or production by providing support to farmers who produce some crops, the reduction in payment prevents subsidised farmers from potentially upsetting the market equilibrium, and thus serves to prevent effects on trade or production in the market for crops for which payment is reduced. Seen the other way, not ensuring such a reduction would allow subsidised farmers to grow the relevant crops and thus upset the historical market equilibrium with potential effects on trade and production. In the light of the first sentence of paragraph 1, the only possible application of Article 6(b) to payment reductions imposed where certain crops are grown is to find that such reductions are not such as to make the payment based on a type of production.

31. The situation is rather different with respect to the updating of base periods. The European Communities considers that where farmers know that base periods will be updated, and that the production of certain crops will give them a greater entitlement to support in a later period, there will be a production distorting effect. Such updating is clearly inconsistent with notions set out in the first sentence of paragraph 1 since knowledge of such updating will incite farmers to produce more of certain crops which qualify for support and thus will have effects on production.

**Q12. Where does Article 13(b) require a year-on-year comparison? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

32. The European Communities does not consider that Article 13(b) requires a year-on-year comparison. It permits such a year-on-year comparison and given that support is generally expressed in annual amounts, appears a reasonable basis for making such a comparison. In considering this issue, the Panel must compare two elements. The first is the domestic support measure challenged. The second is, at least for Article 13(b)(ii), support "decided" in an earlier period.

33. We examine first the domestic support measure challenged. In order to benefit from the protection of Article 13 a measure must conform to the provisions of Article 6 and must "not grant support" in excess of that decided in during the 1992 marketing year. The European Communities interprets the present tense of "not grant support" as requiring the Panel to determine the support at the time the measure is challenged when Panel is asked to determine whether Article 13 is applicable. Inevitably, such a determination requires that the Panel consider a specific period, which is comparable with an earlier period. The European Communities considers that the Panel has some discretion in choosing a specific period, although it is clear it must be as close as possible to the time of the dispute. However, since the Panel must consider the support granted it must choose a period for which data is complete. Given Article 1(i) of the *Agreement on Agriculture*, the period chosen may well be based on the calendar, financial or marketing year of the Member complained against.

34. In respect of support "decided", the Panel must consider the nature of the support decided during the 1992 marketing year. As the European Communities has explained at length elsewhere, the relevant element for comparison is not the support actually granted for the 1992 marketing year – rather it is the support decided. Consequently, in each case, the element for comparison must depend on the decision made during the 1992 marketing year. As a function of that decision, the Panel will

have to choose a period which is comparable with the most recent period. This may well be a marketing year, but need not be so.

**Q13. Does a failure by a Member to comply in a given *year* with either the chapeau of Article 13(b) or the proviso in subparagraph (ii) of Article 13(b) impact its entitlement to benefit in an earlier or a later year from the exemption from action provided by Article 13(b)? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

35. Failure to comply with Article 6 of the *Agreement on Agriculture* or granting support in excess of that decided in 1992 in a given year does not impact a Member's entitlement to benefit from the protection of Article 13(b) in a later (or earlier) year, provided that the Member concerned complies with Article 6 of the *Agreement on Agriculture* and does not grant support at present in excess of that decided during marketing year 1992. This is clear from the present tense of "do not grant support" which makes it clear that the comparison must be with the support granted in the most recent period.

**Q14. Does a failure of a Member to comply with Article 13(b) in respect of a *specific commodity* impact its entitlement to benefit in respect of other agricultural products from the exemption from action provided by Article 13(b)? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

36. No. A failure to maintain support granted within the level decided during marketing year 1992 in respect of a specific commodity would not affect the availability of Article 13(b) in respect of other commodities, provided that support granted to that specific commodity was not in excess of that decided during 1992.

**Q15. Is there any basis on which counter-cyclical payments could be considered product-specific? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

37. The European Communities considers that, since counter-cyclical payments are paid as a function of fluctuations in the price of different commodities with respect to target prices also specified by commodity, they should be considered product specific.

**Q16. If the word "specific" were deleted from Article 13(b)(ii), would this change the meaning of the subparagraph? 3RD parties, in particular Australia, Argentina, Benin Canada, China, EC, NZ**

Answer

38. Yes. Article 13(b)(ii) refers to product specific support. It does not refer to all support which may be attributed to a product. The use of the word "specific" has meaning, because it makes it clear that the support in question is that granted or decided in respect of a specific product, rather than that granted or decided in respect of all products and which could arguably be attributed to a product.

**Q17. What is the relevance, if any, of the concept of "specificity" in Article 2 of the *SCM Agreement* and references to "a product" or "subsidized product" in certain provisions of the *SCM Agreement* to the meaning of "support to a specific commodity" in Article 13(b)(ii)**

***Agreement on Agriculture*? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

39. The European Communities is not convinced that the drafters of the *Agreement on Agriculture* had Article 2 of the *SCM Agreement* in mind when drafting Article 13(b) of the *Agreement on Agriculture*. It may comment further depending on the views of the other third parties on this issue.

40. The European Communities has already referred to the relevance of the references to " a product" and a "subsidised product" in its Oral Statement.[18]

**Q18. Benin's oral statement considers the phrase "support to a specific commodity" in Article 13(b)(ii) of the *Agreement on Agriculture*. How does Benin believe that phrase is best interpreted. Please substantiate your response, commenting on other submissions by parties and third parties as you believe appropriate. Benin**

Answer

41. The European Communities may comment, as necessary, on Benin's response.

**Q19. Where does Article 13(b)(ii) require a year-on-year comparison? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Answer

42. See the answer to question 12 above.

**Q20. Does Article 13(b)(ii) require a comparison of support granted with support decided? How could such a comparison be made?**

**Answer**

43. Yes. See the answer to question 22 below.

**Q21. Please comment on Brazil's assertion that the terms "grant" and "decided" in Article 13(b)(ii) have broadly the same meaning. If so, why did the drafters not use the same term? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Answer

44. As the European Communities has explained elsewhere, the use of the term "decided" is crucial to an understanding of Article 13(b). It is now established that a panel is obliged to use the normal rules of interpretation of international law as codified in the Vienna Convention on the Law of Treaties. This requires it to look, in the first place, to the ordinary meaning of the words. "Granted" does not mean the same as "decided".

45. Granted is the past tense of the verb "grant" which means "to give or confer, (a possession, a right etc) formally; transfer (property) legally".[19] "Decided" is the past tense of the verb "decide"

[18] EC Oral Statement, 24 July 2003, para. 23.
[19] The New Shorter Oxford English Dictionary, 1993, p. 1131.

which means "come to a determination or resolution *that, to do, whether*".[20] Thus, in this context, "granted" refers to support which has been provided, to which a farmer (or all eligible farmers in a Member) has obtained a right. "Decided" implies that a political authority (be it a legislature or a government department or agency) has determined that a particular crop is to be entitled to a particular type of assistance.

46. The European Communities believes that the use of the term "decided", as opposed to "granted" and "provided" (which are used elsewhere in the *Agreement on Agriculture*) is very deliberate. Article 13(b) is designed to protect support which was "decided" during 1992. It was negotiated in November 1992 as part of the first Blair House Agreement and later multilateralised.[21] In November 1992, the negotiators could not have known the support granted for the marketing year 1992, which was of course running during that period. They did not, therefore, intend to refer to the support granted when using the term "decided". Rather, they were referring to decisions taken during 1992 in respect of support which WTO Members intended to grant – not that actually granted.

**Q22. What is the meaning of "support" in *Agreement on Agriculture* 13(b)(ii) ? Why would it be used differently from Annex 3, where it refers to total outlays? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Answer

47. With respect, the European Communities does not consider that support is equated in Annex 3 to total outlays. Annex 3 provides methodologies for calculating the Aggregate Measure of Support (AMS). Article 1(a) defines the AMS as "the annual level of support, expressed in monetary terms […]". However, AMS is not necessarily calculated in terms of budgetary outlays. For instance, market price support is calculated "using the gap between a fixed external reference price and the applied administered price multiplied by the quantity of production eligible to receive the applied administered price. Budgetary payments made to maintain this gap […] shall not be included in the AMS." (Annex 3, para. 8) Similarly, non-exempt payments dependent on a price gap are to be calculated "either using the gap between the fixed reference price and the applied administered price multiplied by the quantity of production eligible to receive the administered price, or using budgetary outlays" (Annex 3, para. 10). This makes it clear that AMS need not be calculated in terms of total outlays.

48. The European Communities considers the term "support" in Article 13(b)(ii) must be considered from several perspectives. First, it is clear that the word "support" refers to the support granted in a recent period. Second, and at the same time, the word "that" used in the phrase "that decided" is also a reference to the word "support". However, as already noted, there is crucial distinction in this comparison between the "support decided" and the "support granted". The support decided does not equal the support actually granted during marketing year 1992. For the later period, there is no reason that the support granted should not be calculated on the basis of the AMS methodology set out in Annex 3. Indeed, Article 1(a) of the *Agreement on Agriculture* refers to AMS as "the annual level of support" (emphasis added).

49. For the support decided AMS-like criteria should be used. This would take into account the reference to AMS as the annual level of support, but would also recognise that Article 13(b)(ii) refers to the support "decided" rather than granted. Crucially, the support decided must be considered as that which it was decided to provide during the 1992 marketing year. This must be determined on a case-by-case basis. It should be determined on the basis of the information available to the decision

[20] The New Shorter Oxford English Dictionary, 1993, p. 607. Italics in the original.

[21] The main change made in the second Blair House Agreement, in respect of Article 13(b) was the extension of the implementation period for the purposes of the Article 13(b).

makers. It may be that only a certain amount of production would be eligible,[22] or that the decision makers had production estimates at their disposal, and thus knew the extent of the support that was being decided. Alternatively, the amount of support decided could also be determined from budgetary acts, preparing expenditure for future years, in which the decision making authorities would have knowledge of the support they wished to grant, and the quantity of production which would likely enjoy such support. Using such a basis, it would be possible to use AMS-like criteria. AMS-like criteria can be used because it will often be possible to establish, for certain measures, a gap between the applied administered price and the internal or external fixed reference price[23] and establish, on the basis of information available to the decision makers, the amount of production which was eligible, or which was estimated. For other measures, it may also be possible to use appropriation or budgetary decisions.

**Q23. Should support be compared under Article 13(b)(ii) in terms of unit of production or total volume of support or both? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Answer

50. The European Communities considers that the Panel should use AMS for the most recent period, and an AMS - like calculation for calculating the support decided during the 1992 marketing year, as explained in our response to question 22.

**Q24. Please provide any written drafting history which could shed light on why the proviso was added to what is now Article 13(b)(ii) of the *Agreement on Agriculture* and, in particular, why the words "grant" and "decided" were used. EC**

Answer

51. As the European Communities has noted above, the current text of Article 13(b)(ii) formed part of the first Blair House Agreement of November 1992. We have annexed the text which resulted from these negotiations[24], together with the relevant sections of the "Dunkel Draft", which were replaced by Article 13(b)(ii).[25]

52. The European Communities also considers that it may assist the Panel to have a copy of some of the key decisions reforming the EC's Common Agricultural Policy adopted during 1992. Thus, we have annexed Council Regulation (EC) No. 1766/92 on the common organisation of the market in cereals and Council Regulation (EC) No. 1765/92 establishing a system of compensatory payments.[26]

**Q25. Please comment on an interpretation of the words "decided during" in Article 13(b)(ii) that would read them as synonymous with the words "authorized during". 3rd parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Answer

53. The European Communities finds some merit in such an interpretation. It would be consistent with the careful choice of the negotiators to use the word "decided" rather than the term "granted" or

[22] For instance, because of quotas on eligible production or definitive budgetary ceilings.
[23] See para. 9 & 11 of Annex 3.
[24] Exhibit EC-1.
[25] Exhibit EC-2.
[26] Council Regulation (EC) No. 1766/92 on the common organisation of the market in cereals (Exhibit EC-3) and Council Regulation (EC) No. 1765/92 (Exhibit EC-4).

"provided". The European Communities is concerned, however, that the term "authorised" is more restrictive than the term "decided". For that reason, while the European Communities sees support for the interpretation that "decided during" is synonymous with "authorised during", it is not clear to the European Communities that "authorised" has exactly the same meaning as "decided".

**Q26. Under Article 13(b)(ii), a comparison is required between support at different times. One of the issues which is contested between the parties is whether the only later period that the Panel can consider is the present one (i.e. the period underway at the time of the request for establishment of the Panel). This argument is based on the present tense of the words "do not grant" in the English text. The Panel asks whether there is any difference in the verb tense as used in the Spanish-language text, or any other difference which might aid the Panel in interpreting these words? Argentina, EC, Paraguay, Venezuela**

Answer

54. The European Communities notes that both the French and Spanish text also use the present tense.

**Q27. If the 1992 "decision" led to or was the funding source for the money provided in 1992 and later years, is it the full amount of all that funding that constitutes the "support" decided in 1992? If the answer to this question is that it is the full amount of all the support provided pursuant to the "decision" that must be taken into account, must this be compared with the total amount of support that will or might flow from the decision made in the more recent period for the purposes of the comparison required under Article 13(b)(ii)? If a Member did not make a "decision" (however that may be interpreted) in 1992 about "support", is it the case that the Member has a zero base for the purposes of the comparison required under Article 13(b)(ii)? EC**

Answer

55. The European Communities does not consider that it is the full amount of support decided in 1992 for later years that should be taken into account. Such an approach might not be feasible where the decision taken in 1992 was an open-ended one. This approach also sits uneasily with the practice in the *Agreement on Agriculture* of expressing support on an annual basis. Since the regulation of agricultural production takes place on a yearly basis, it seems unlikely that a decision would be taken setting a maximum amount for a number of years without regulating how such support would be allocated between specific years.

56. The European Communities considers that the Panel should use a level of support readily comparable with the support currently granted. This may well be the support decided for a particular marketing year. If a decision was made in 1992 for future years, it would be to ignore the drafters intent to rule out the possibility that the support decided for later years is the relevant support.

57. The European Communities does not consider that it will ever be the case that a Member which provides subsidies can be said never to have made a decision in 1992 which would qualify under Article 13(b). At the very least, a Member would have decided, on the basis of its subsidy programmes, and the amount of eligible production and/or estimated production, to set aside a specific amount of budgetary appropriations for future years. If, however, a Member decided not to provide support to a specific commodity, the level of support for purposes of the comparison would be zero.

**Q28. In paragraph 13 of Australia's oral statement, you state that a "question" is: "could conditions of price competition for the purposes of a non-violation or impairment claim be**

**assessed solely on the basis of budgetary outlay figures, as argued by Brazil, or on the basis of a rate of payment, as argued by the United States? In Australia's view, both factors put forward by Brazil and the United States would properly form a part of that assessment, but not the whole." Could you please clarify this statement (indicating other elements which would complete the "whole" and explain its relevance for the purposes of our consideration of Article 13 of the *Agreement on Agriculture*? Australia, EC**

Answer

58. The European Communities would prefer to let Australia clarify its statement. The European Communities will comment upon Australia's clarification in its comments on the responses of the other third parties.

## III. EXPORT CREDIT GUARANTEE PROGRAMMES

**Q29. (a) Is an export credit guarantee a financial contribution in the form of a "potential direct transfer of funds or liabilities (e.g. loan guarantee)" within the meaning of Article 1.1(a)(1)(i) of the *SCM Agreement*? Why or why not? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

59. Export credits may involve the provision of "loans". Export credit guarantees, like other types of guarantees, normally involve an obligation to cover losses resulting from defaults on guaranteed loans. If provided by a government, they may involve a "financial contribution" within the meaning of Article 1.1(a)(1)(i) of the *SCM Agreement*.

**(b) How, if at all, would this be relevant to the claims of Brazil? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

60. Whether or not export credit guarantees are "financial contributions" is directly relevant to Brazil's claim that GSM 102, GSM 103 and SCGP constitute "export subsidies" within the meaning of Article 3.1 (a) of the *SCM Agreement*.

61. It is also relevant, by way of context, for Brazil's claim that those programmes are "export subsidies" for the purposes of Article 10.1 of the *Agreement on Agriculture*.

**Q30. The Panel could arguably take the view that Articles 1 and 3 of the *SCM Agreement* were relevant in assessing the WTO-consistency of United States export credit guarantees. The Panel would therefore appreciate third party views on this situation, including with respect to the viability of an *a contrario* interpretation of item (j) of the Illustrative List (as addressed in paragraphs 180-183 of the United States' first written submission). 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

62. The relationship between the Illustrative List and Article 3.1(a) is addressed specifically by footnote 5, which provides that

> Measures referred to in Annex I as not constituting export subsides shall not be prohibited under this or any other provision of the Agreement.

63. In this regard, the European Communities recalls the reasoning followed by the panels in *Brazil –Aircraft (21.5) I* and *II*[27], which concluded that the first paragraph of item (k) of the Illustrative List does not provide *a contrario* an "affirmative defence".

64. As noted by the panel in *Brazil –Aircraft (21.5) – II*, the Appellate Body's statement relied upon by the United States "does not form part of the legal basis for its disposition of the appeal, nor did the Appellate Body explain its statement".[28]

65. Item (j) of the illustrative list describes circumstances in which, *inter alia*, export credit guarantee programmes may constitute export subsidies. In certain circumstances (e.g. where the Government is the only provider), it may be that the requirement set out in item (j) – that export credit guarantees must not be provided at premium rates which are inadequate to cover the long-term operating costs and losses of the programme – represents the appropriate benchmark for determining that an export subsidy does not exist.

**Q31. If the Panel decides to refer to provisions of the *SCM Agreement* for contextual guidance in the interpretation of the terms in Article 10 *Agreement on Agriculture*, should the Panel refer to item (j) or Articles 1 and 3 of the *SCM Agreement* or both? . 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

66. Both.

**Q32. The Panel's attention has been drawn to Article 14(c) of the *SCM Agreement* (see third party submission of Canada) and to the panel report in DS 222 *Canada- Export Credits and Loan Guarantees*. How and to what extent are Article 14(c) of the *SCM Agreement,* and the cited panel report, relevant to the issue of whether or not the United States export credit guarantee programmes confer a "benefit"? What would the appropriate market benchmark be to use for any comparison? Please cite any other relevant material. . 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

67. The European Communities agrees that Article 14(c) may be relevant context for the interpretation of Article 1.1(b) of the *SCM Agreement*, where the subsidy consists of a loan guarantee. However, Article 14(c) may not be applicable if the government is the only supplier of a certain type of service and no comparable type is provided by other suppliers. In that case it may be necessary to resort to alternative benchmarks, such as the one set out in item (j) of the Illustrative List. This would depend on the particular circumstances of the case.

**Q33 What is the relevance (if any) of Brazil's statement that : "...export credit guarantees for exports of agricultural exports [*sic*] are not available on the marketplace by commercial lenders." . 3rd parties, in particular, Argentina, Canada, EC, NZ**

[27] Panel report, *Brazil – Export Financing Programme for Aircraft – Recourse by Canada to Article 21.5 of the DSU*, WT/DS64/RW, ("Brazil – Aircraft (21.5) – I"), paras. 6.24-6.67; Panel report, *Brazil – Export Financing Programme for Aircraft – Second Recourse by Canada to Article 21.5 of the DSU*, WT/DS46/RW/2, (Brazil – Aircraft (21.5) - II, paras5.269-5.275.

[28] Panel report, *Brazil –Aircraft (21.5) – II*, footnote 214.

Answer

68. The European Communities does not agree with the proposition that the provision by a government of finance not available from other suppliers confers *per se* a benefit. The European Communities recalls that the Panel in *Canada – Export Credits and Loan Guarantees* left open this issue.[29]

**Q34. Comment on the United States' view of the meaning of "long term operating costs and losses" in item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement* as meaning "claims paid" under the export credit guarantee programmes. Does the United States' interpretation give meaning to both "costs" and "losses"? Do claims paid represent "losses"? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

69. The European Communities does not express an opinion on this question at this time.

**Q35. Did the drafters of the *Agreement on Agriculture* include export credit guarantees in Article 9.1 of the *Agreement on Agriculture*? Why or why not? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

70. Export credit guarantees are not included in Article 9.1. Article 9.1 represents a list of export subsidies which were permitted to be maintained, but which were made subject to reduction commitments. Article 9.1 is a list of permitted export subsidies negotiated by the drafters of the *Agreement on Agriculture*. All other export subsides are regulated by Article 10.1.

**Q36. Please explain any possible significance the following statements may have in respect of Brazil's claims about GSM102 and 103 (7 CFR 1493.10(a)(2), Exhibit BRA-38) 3rd parties, in particular, Argentina, Canada, EC, NZ**

**(a) "The programmes operate in cases where credit is necessary to increase or maintain US exports to a foreign market and where US financial institutions would be unwilling to provide financing without CCC's guarantee. (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

**(b) "The programmes are operated in a manner intended not to interfere with markets for cash sales. The programmes are targeted toward those countries where the guarantee is necessary to secure financing of the exports but which have sufficient financial strength so that foreign exchange will be available for scheduled payments." (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

**(c) "In providing this credit guarantee facility, CCC seeks to expand market opportunities for US agricultural exporters and assist long-term market development for US agricultural commodities." (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

[29] Panel report, *Canada – Export Credits and Loan Guarantees for Regional Aircraft*, WT/DS222/R, para. 7.341.

Answer

71. At this stage, the European Communities does not comment on the factual aspects of this claim.

**Q37. The United States seems to argue that, at present, by virtue of Article 10.2 of the *Agreement on Agriculture*, there are *no* disciplines on agricultural export credit guarantees under the *Agreement on Agriculture* (or the *SCM Agreement)*.**

**(a) Comment on the following proposition: a WTO Member may therefore extend agricultural export credit guarantees without charging a premium, and for an indefinite period, in addition to any other terms and conditions it may wish? How would this reconcile with the title of Article 10 of the *Agreement on Agriculture* ("Prevention of Circumvention on Export Subsidy Commitments"), and with other commitments contained in the *Agreement on Agriculture*? Please cite any relevant material, including any past WTO dispute settlement cases. 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

72. The European Communities considers that it is only the operation of export credit guarantees as export subsidies which is regulated by the *Agreement on Agriculture*. Other elements of the provision of export credit guarantees are not regulated by the *Agreement on Agriculture*. To the extent that the scenario developed by the Panel would lead to the provision of export subsidies which circumvent, or which threaten to circumvent, a Member's export subsidy commitments the European Communities considers that it cannot be reconciled with Article 10.1 of the *Agreement on Agriculture*.

**(b) If, as the United States argues, there are no disciplines on export credit guarantees in the *Agreement on Agriculture*, how could export credit guarantees "conform fully to the provisions of Part V" of the *Agreement on Agriculture* within the meaning of Article 13 (how can you assess "conformity" or non-conformity with non- existent disciplines)? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Answer

73. The European Communities disagrees with the US argument that there are no disciplines on export credit guarantees. The discipline applying to export credit guarantees, where they operate as export subsidies, is that they should not be provided in a manner inconsistent with Article 10.1. If they are provided inconsistently with Article 10.1 then they are not protected by Article 13

## IV. STEP 2 PAYMENTS

**Q38. Please comment on the statement in note 119 of the United States' first written submission that "...to the extent a consumer that had intended to export instead opens the bale, then that consumer could still obtain the Step 2 payment upon submission of the requisite documentation". The Panel notes that Step 2 payments all involve upland cotton produced in the United States. What are the two distinct factual situations that Step 2 payments involve? Other than the panel report in *Canada-Dairy* and the findings of the Appellate Body in *US-FSC***

***(21.5)*[30], do any other dispute settlement reports offer guidance on this issue? For example, how, if at all is the Appellate Body's report in *Canada-Aircraft* relevant here?[31] . 3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

Answer

74. This is a question of fact on which the European Communities takes no position. It will comment, as necessary, on the replies of the other third parties.

**Q39. Please comment on the United States assertions at paragraph 129 of its first written submission, that "[t]he programme is indifferent to whether recipients of the benefit of this programme are exporters or parties that open bales for the processing of manufacturing raw cotton into cotton products in the United States." . 3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

Answer

75. This is a statement of fact on which the European Communities offers no comment at present. The European Communities will comment further depending on the replies of other third parties.

**Q40. With respect to paragraph 32 of the oral statement of the EC, are subsidies contingent on the use of domestic goods consistent with the *AoA*? Does the phrase "provide support in favour of domestic producers" refer to, and/or permit such subsidies? What is the meaning and relevance of this (if any) to Brazil's claims under Article 3 of the *SCM Agreement* and Article III:4 of the GATT 1994.. 3rd parties, in particular, Australia, Argentina, EC, NZ, Paraguay**

Answer

76. The Panel's question involves two elements. First, is a Member entitled to provide domestic content subsidies under the *Agreement on Agriculture*? Second, if such subsidies are permitted, what is the relevance of such a rule to Brazil's claims under Article 3 of the *SCM Agreement* and

---

[30] [Original footnote to question] "We recall that the ETI measure grants a tax exemption in two different sets of circumstances: (a) where property is produced *within* the United States and held for use *outside* the United States; and (b) where property is produced *outside* the United States and held for use outside the United States. Our conclusion that the ETI measure grants subsidies that are export contingent in the first set of circumstances is not affected by the fact that the subsidy can also be obtained in the second set of circumstances. The fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances.[30] Conversely, the export contingency arising in these circumstances has no bearing on whether there is an export contingent subsidy in the second set of circumstances. Where a United States taxpayer is simultaneously producing property within and outside the United States, for direct use outside the United States, subsidies may be granted under the ETI measure in respect of both sets of property. The subsidy granted with respect to the property produced within the United States, and exported from there, is export contingent within the meaning of Article 3.1(a) of the *SCM Agreement*, irrespective of whether the subsidy given in respect of property produced outside the United States is also export contingent."

[31] There, the Appellate Body stated that,

> "the fact that some of TPC's contributions, in some industry sectors, are *not* contingent upon export performance, does not necessarily mean that the same is true for all of TPC's contributions. It is enough to show that one or some of TPC's contributions do constitute subsidies contingent ... in fact … upon export performance".[31]

Article III.4 GATT. The European Communities has already provided elements of a response in its oral statement.[32] These are expanded upon below.

77. First, a Member is entitled to provide domestic content subsidies under the *Agreement on Agriculture* provided such subsidies are provided consistently with the Member's domestic support commitment levels. This conclusion flows from a number of factors. First, the *Agreement on Agriculture* disciplines domestic support. Article 6.1 refers to "domestic support reduction commitments". Article 3.1 refers to "domestic support [..] commitments […] constitut[ing] commitments limiting subsidization" and Article 3.2 obliges Members "not [to] provide support in favour of domestic producers in excess of the [domestic] support commitment levels". Despite these clear rules on domestic support, the *Agreement on Agriculture* does not define "domestic support".

78. AMS is the measurement of domestic support. AMS is defined as "the annual level of support, expressed in monetary terms, provided for an agricultural product in favour of the producers of the basic agricultural product or non-product-specific support provided in favour of agricultural producers in general, other than [that exempted etc]." This is very general – it covers all support in favour of agricultural producers. This broad scope of domestic support measures which can be maintained consistently with the *Agreement on Agriculture* is confirmed by Article 6.1 which states that the domestic support reduction commitments "shall apply to all of its [i.e. the Member's] domestic support measures in favour of agricultural producers […]". Paragraph 1 of Annex 3 on the calculation of the AMS refers to AMS being calculated "on a product specific-basis for each basic agricultural product receiving market prices support, non-exempt direct payments, or any other subsidy not exempted from the reduction commitment". (emphasis added)

79. Consequently, the range of domestic support measures which a Member may maintain (consistent with reduction commitments) is very broad and is only limited by the condition that such support must be in favour of agricultural producers. As the European Communities has noted, paragraph 7 of Annex 3 explicitly states that "measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products".[33] The European Communities considers that the term "benefit" used here must be regarded as being synonymous with "favour" in the sense of "in favour of agricultural producers". Moreover, it is clear that by "measures directed at agricultural processors" the negotiators intended subsidies which were paid to processors, where the benefit went to the agricultural producer. Consequently, in light of the broad definition of "domestic support" and the specific reference to domestic content subsidies in paragraph 7 of Annex 3, the European Communities considers that a Member is entitled to maintain domestic content subsidies consistently with the *Agreement on Agriculture*.

80. Second, in response to the Panel's question, the effect of finding that domestic content subsidies are provided consistently with the *Agreement on Agriculture* would be that they cannot be found inconsistent with either Article 3.1(b) of the *SCM Agreement* or Article III.4 GATT 1994. Article 21.1 of the *Agreement on Agriculture* states that "the provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the

[32] Paras. 34 to 38 of the EC's Oral Statement (as delivered). The Panel's reference to para. 32 corresponds to the text provided at the third party session.

[33] In terms of negotiating background, it may be useful to the Panel to note that paragraph 7 of Annex 3 was subject to negotiation during the period in which a Panel had ruled that the EC's payments to oilseed processors was not covered by Article III.8(b) GATT 1947 and were consequently inconsistent with Article III.4 GATT 1947 (*European Economic Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins* Report of the Panel (L/6627 BISD 37S/86) adopted on 25 January 1990. That the negotiators retained this text must therefore be considered as a clear sign that they intended to permit Members to maintain such subsidies, subject to reduction commitments, in the *Agreement on Agriculture*.

provisions of this Agreement." As the European Communities pointed out in its oral statement, this means that provisions of the other Annex 1A Agreements are "subordinated" to the *Agreement on Agriculture*.[34]

81. To find that such subsidies were inconsistent with either Article 3.1(b) of the *SCM Agreement* or Article III.4 GATT would be to subordinate the right to provide such domestic content subsidies under the *Agreement on Agriculture* to the *SCM Agreement* or GATT 1994. Such an interpretation directly contradicts Article 21.1 of the *Agreement on Agriculture*.

82. Indeed, it can be pointed out that applying Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT to domestic content subsidies provided consistently with the *Agreement on Agriculture* would lead to stricter disciplines being applied to domestic subsidies for agriculture than are applicable to domestic subsidies for industrial goods. If Article 3.1(b) and Article III.4 were to apply, domestic subsidies for agricultural products would be subject to reduction commitments and Article 3.1(b) *SCM Agreement* and Article III.4 GATT. However, domestic subsidies for industrial products are not subject to reduction commitments. Since the *Agreement on Agriculture* establishes "a basis for initiating a process of reform of trade in agriculture", it would seem contradictory to find that domestic support for agriculture is in fact subject to stricter obligations than domestic support for other industries. This explains the "subject to" language of Article 21.1 of the *Agreement on Agriculture*. Article 21.1 and the *Agreement on Agriculture* more generally can also be compared with the other sectoral agreement included in Annex 1A of the WTO Agreement. The *Agreement on Textiles and Clothing* explicitly provides, in its Article 9, that the textiles and clothing sector is to be fully integrated into the GATT 1994. The *Agreement on Agriculture* has no such language, and Article 21.1 runs directly counter to this notion. It cannot be lightly assumed that the negotiators, while providing for the possibility to maintain domestic content subsidies, intended that such subsidies also be subject to rules which effectively makes it impossible to maintain such subsidies.[35]

83. The Panel should therefore reject Brazil's arguments that domestic content subsidies granted in favour of agricultural producers can be found to be inconsistent with Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT 1994.

## V. ETI ACT

**Q41. Concerning its claims on the ETI Act, Brazil relies on the *US – FSC* case. However, it appears that the United States did not raise the issue of the Peace Clause in that case, nor did the US appear to invoke Article 6 of the *Agreement on Agriculture*. If the Panel's understanding is correct, how, if at all, are these differences relevant here? Argentina, China, EC, NZ**

Answer

84. The European Communities does not consider that either the Peace Clause or Article 6 of the *Agreement on Agriculture* is relevant. The ETI Act provides export subsidies.[36] Article 6 of the *Agreement on Agriculture* does not apply to export subsidies, and therefore the US would not have been in a position to invoke it.

[34] Oral Statement, para. 38.

[35] See, in a similar sense, Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) ("European Communities – Hormones")*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, para. 165.

[36] The Appellate Body confirmed the panel's findings of a violation of Article 3.1(a) of the SCM Agreement see Article 231.5 Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"* ("United States – FSC (21.5)"), WT/DS108/AB/RW, adopted 29 January 2002, para. 120.

85. The Peace Clause will only apply in respect of export subsidies which "conform fully to the provisions of Part V" of the *Agreement on Agriculture* (Article 13(c)). The Appellate Body upheld the panel's findings that the ETI Act provided export subsidies in violation of Article 10.1 of the *Agreement on Agriculture*.[37] Consequently, the US could not have legitimately maintained that it was entitled to peace clause protection.

**Q42. How do you view the reference in paragraph 43 of the EC's third party oral statement with respect to the relevance of Article 17.14 of the *DSU*, and, in particular, the phrase "a final resolution to *that* dispute" (emphasis added)? Please explain the use, and relevance (if any) of the term "disputes" in Articles 9.3 and 12 and Appendix 3 of the *DSU*, and please cite any other provisions you consider relevant. Argentina, China, EC, NZ**

Answer

86. Article 17.14 DSU states that an Appellate Body Report shall be "adopted by the DSB and unconditionally accepted by the parties to the dispute". The reference in the EC's oral statement to the phrase "a final resolution to *that* dispute" (emphasis from the Panel) is from the Appellate Body in *United States – Shrimp (21.5)*.[38]

87. In the present case the Panel must decide a preliminary question. It must determine whether the claims brought by Brazil against the ETI Act are in any way different from those which the panel and Appellate Body upheld against the ETI Act in the EC's Recourse to Article 21.5. If Brazil's claims are identical to those upheld against the ETI Act, the European Communities considers that the United States must be considered to have unconditionally accepted the Appellate Body's findings as adopted by the DSB.

88. The Panel may find some assistance in the Appellate Body's findings in *United States – Shrimp (21.5).* In that recourse to Article 21.5, Malaysia attempted to challenge certain aspects of the revised US measure at issue which were identical in the measure which was subject to the original challenge.[39] These aspects had been found by the panel and the Appellate Body to be consistent with the United States' WTO obligations. The Appellate Body found that there was no need for the panel, having determined that this aspect of the measure had not changed, to re-examine the consistency of the measure with the US' WTO obligations.[40]

89. The situation before the Panel is the inverse. Here, the US measure was found to be inconsistent with US' WTO obligations. The European Communities understands that the measure before the Panel in this case and before the panel and the Appellate Body in *United States – FSC (21.5)* is identical. On the assumption that the claims are identical, applying Article 17.14 DSU and the Appellate Body's findings in *United States – Shrimp (21.5)* the United States must be assumed to have unconditionally accepted the findings against the ETI Act.

---

[37] Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"* ("United States – FSC (21.5)"), WT/DS108/AB/RW, adopted 29 January 2002, para. 196.

[38] Para. 97, Article 21.5 Appellate Body Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products – Recourse to Article 21.-5 of the DSU by Malaysia* ("United States – Shrimp (21.5)"), WT/DS58/AB/RW, adopted 21 November 2001.

[39] United States – Shrimp (21.5), para. 96.

[40] The Appellate Body made a similar finding with respect to a claim not pursued before a panel. See, Report of the Appellate Body in *European Communities – Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India – Recourse to Article 21.5 of the DSU by* India, WT/DS141/AB/RW, adopted on 24 April 2003.

90. The European Communities does not consider it material that the present case concerns a party (Brazil) which was not party to the FSC dispute. Article 17.14 states that a "party to the dispute" must unconditionally accept the findings of the Appellate Body adopted by the DSB. Of the parties before the Panel, the United States is a party to the FSC dispute, and must, therefore, unconditionally accept the Appellate Body's findings in that dispute. This is further reinforced by Articles 3.2 and 3.3 DSU which state that the dispute settlement system must provide security and predictability and promote prompt settlement of disputes. Consequently, given the United States is required to unconditionally accept the findings in the Article 21.5 procedure, the European Communities believes that Brazil, by adopting the EC' claims and the Appellate Body's findings in the FSC dispute, would make a sufficient case to compel the Panel to find that the ETI Act is inconsistent with the US' WTO obligations in this dispute.

## VI. QUESTIONS FROM OTHER THIRD PARTIES ADDRESSED TO THE EUROPEAN COMMUNITIES

### Questions from Australia to the European Communities

**Q43. Would the European Communities please explain why, in its view, the ordinary meaning of the phrase "shall meet the fundamental requirement" as it appears in the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* does not give meaning and effect to all provisions of that agreement.[41]**

Answer

91. The European Communities did not state that the phrase "shall meet the fundamental requirement" does not give meaning and effect to all provisions of that agreement. The question appears to be based on an erroneous characterisation of the EC's position. In paragraph 17 of its First Written Submission the European Communities stated that the first sentence of Annex 2 did not create a free-standing obligation. This view is compelling when an interpreter considers the ordinary meaning of the terms, in their context, and in light of the object and purpose of the provision. The European Communities has explained this in some detail in its answers to the Panel's questions 6-11 and in its previous submissions to the Panel.

**Q44. The European Communities argues that, under the "accepted canons of interpretation of international law", "context and objective" require that the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* be considered to set out an objective.[42] Would the European Communities please explain the legal authorities for its argument, having regard to relevant statements by the Appellate Body, particularly those in *Japan – Alcohol Taxes*.[43]**

---

[41] [Original footnote to question] First Third Party Submission by the European Communities, paragraph 17.

[42] [Original footnote to question] Oral Statement by the European Communities, paragraph 25.

[43] [Original footnote to question] In *Japan – Taxes on Alcoholic Beverages*, Report of the Appellate Body, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, pages 11-12, the Appellate Body said:

> Article 31 of the *Vienna Convention* provides that the words of the treaty form the foundation for the interpretive process: "interpretation must be based above all upon the text of the treaty".[…] The provisions of the treaty are to be given their ordinary meaning in their context. […] The object and purpose of the treaty are also to be taken into account in determining the meaning of its provisions.[20] A fundamental tenet of treaty interpretation flowing from the general rule of interpretation set out in Article 31 is the principle of effectiveness …[…] In *[US – Gasoline]*, we noted that "[o]ne of the corollaries of the 'general rule of interpretation' in the *Vienna Convention* is that interpretation must give meaning and effect to all the terms of the treaty. An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility". […]

Answer

92. European Communities understands from Australia's question that Australia considers that the European Communities' interpretation of the first sentence of Paragraph 1 of Annex 2 would deprive the first sentence of effect.

93. Australia's implication is quite erroneous, and built upon an incomplete, examination of the Appellate Body's rulings. The European Communities interpretation does not deprive the first sentence of effect. Stating that the first sentence does not impose a self-standing obligation is not the same as stating that it is deprived of effect. Indeed, the Appellate Body has arrived at exactly the same conclusion with respect to other provisions containing purposive language, similar to that contained in the first sentence of paragraph 1. In *Japan – Alcoholic Beverages* the Appellate Body found:

> Article III:1 articulates a general principle that internal measures should not be applied so as to afford protection to domestic production. This general principle informs the rest of Article III. The purpose of Article III:1 is to establish this general principle as a guide to understanding and interpreting the specific obligations contained in Article III:2 and in the other paragraphs of Article III, while respecting, and not diminishing in any way, the meaning of the words actually used in the texts of those other paragraphs. In short, Article III:1 constitutes part of the context of Article III:2, in the same way that it constitutes part of the context of each of the other paragraphs in Article III. Any other reading of Article III would have the effect of rendering the words of Article III:1 meaningless, thereby violating the fundamental principle of effectiveness in treaty interpretation. Consistent with this principle of effectiveness, and with the textual differences in the two sentences, we believe that Article III:1 informs the first sentence and the second sentence of Article III:2 in different ways.[44] (emphasis added)

94. Moreover, the Appellate Body has also found that Article XXIV.4 GATT , which the Appellate Body qualified as "purposive language", was relevant for the interpretation of Article XXIV.5.[45] Clearly this gave a provision which had no operational effects, an effect, within the meaning of the Appellate Body's statements in *United States – Gasoline*.[46] Similarly, the European Communities has argued that while the first sentence of paragraph 1 does not impose a self standing obligation, it does set out the purpose of Annex 2 which informs the interpretation of other elements of Annex 2. (See the European Communities response to question 11 from the Panel).

**Q45. The European Communities argues that the omission of a reference to the "fundamental requirement" as set out in the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* in paragraphs 5, 6 and 7 of that Annex provides "contextual support" to its argument that the first sentence sets out an objective.[47] Would the European Communities**

---

*Footnote 20:* That is, the treaty's "object and purpose" is to be referred to in determining the meaning of the "terms of the treaty" and not as an independent basis for interpretation: …

[44] Appellate Body Report, *Japan – Taxes on Alcoholic Beverages ("Japan – Alcoholic Beverages")*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, page 18.

[47] [Original footnote to question] First Third Party Submission by the European Communities, paragraph 21.

**please explain the legal authorities for its argument, having regard to its arguments and the Appellate Body's findings in *Argentina – Footwear Safeguard*.[48]**

Answer

95. We refer Australia in part to the European Communities' answer to the previous question where the European Communities has explained that its interpretation of the first sentence of Paragraph 1 does not deprive the provision of effect. Second, the issue in *Argentina – Footwear Safeguards* was whether the panel had given any effect to Article XIX GATT.[49] The panel in that case erroneously concluded that because of the omission of a reference to unforeseen developments in the *Agreement on Safeguards* it need not give effect to this requirement set out in Article XIX GATT. As the European Communities has explained, by interpreting the first sentence of paragraph 1 as setting an objective informing the rest of Annex 2, the Panel would be giving effect to the first sentence.

**Questions from Argentina to the European Communities**

**Q46. In paragraph 18 of its Oral Statement, the European Communities state that Article 13 (b)(ii) and (iii) of the Agreement on Agriculture are clearly "not intended to set up a comparison between domestic support granted in 1992 and domestic support granted in a more recent period" and request the Panel to reject the equation of the term "decided" with the term "granted".**

**What would be, in the opinion of the EC, the appropriate benchmark in a hypothetical case in which a subsidizing Member has taken no decision on internal support during 1992 ?**

Answer

96. We refer Argentina to the European Communities' response to question 27.

---

[48] [Original footnote to question] In *Argentina – Safeguard Measures on Imports of Footwear*, Report of the Appellate Body, WT/DS121/AB/R, the European Communities argued (paragraphs 38-44) on appeal, and the Appellate Body found (paragraph 88), that the Panel erred by:

> fail[ing] to give meaning and legal effect to *all* the relevant terms of the *WTO Agreement*, contrary to the principle of effectiveness … in the interpretations of treaties. [...] The Panel states that the '*express omission* of the criterion of unforeseen developments' in Article XIX:1(a) from the *Agreement on Safeguards* 'must, in our view, have meaning'. [...] On the contrary, in our view, if they had intended to *expressly omit* this clause, the Uruguay Round negotiations would and could have said so in the *Agreement on Safeguards*. They did not.

[49] Appellate Body Report, *Argentina – Safeguard Measures on Imports of Footwear* ("Argentina – Footwear Safeguards"), WT/DS121/AB/R, adopted 12 January 2000.

# ANNEX J-7

## NEW ZEALAND ANSWERS TO QUESTIONS FROM THE PANEL TO THIRD PARTIES

11 August 2003[1]

Article 13(b) of the *Agreement on Agriculture*: Domestic support measures

**Q2. Please explain the difference, if any, between the meaning of "defined" and the meaning of "fixed" in the phrase "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the Agreement on Agriculture. 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Reply

"Defined" and "fixed" mean two different things and impose two distinct and different requirements for a base period under paragraph 6(a) of Annex 2. "Defined" means "having a definite or specified outline or form".[2] "Fixed" means "definitely and permanently placed or assigned; stationary or unchanging in relative position; definite, permanent, lasting".[3] Accordingly a base period must have a definite and specified form that is permanent.

**Q3. Please explain the meaning of "a" in "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the Agreement on Agriculture, the meaning of "the" in "the base period" in paragraphs 6(b), (c) and (d), and the difference between these and the phrase "based on the years 1986-88" in Annex 3. 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Reply

"A" in the context of paragraph 6(a) refers to one single defined and fixed base period. "The" in "the base period" in the context of subsequent sub-paragraphs refers to the single base period required under paragraph 6(a). Paragraph 6(a), however, does not specify a particular base period – only that once it is determined it is fixed. On the other hand, Annex 3 specifies that the "fixed" base period in that instance must be the 1986-88 period.

**Q4. How often can a Member define and fix a base period in accordance with paragraph 6 of Annex 2 of the Agreement on Agriculture? 3rd parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

Once, when a programme is first established. Thereafter, so long as the programme retains fundamentally the same elements, it should be considered to be the same programme and apply the same base periods.

**Q6. Please explain the meaning of the word "criteria" in Article 6.1 and 7.1. What effect, if any, does the use of the word "Accordingly" in paragraph 1 of Annex 2 of the Agreement on**

[1] New Zealand has not responded to questions not directed specifically to New Zealand.
[2] *The New Shorter Oxford English Dictionary*, Vol 1, Clarendon Press, Oxford (1993), page 618.
[3] *Ibid*, page 962.

**Agriculture have on the meaning of the preceding sentence? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Reply

"Criteria" are the standards by which a thing is assessed. In this case they are the standards by which domestic support measures must be assessed in order to qualify for exemption from reduction commitments. These criteria are set out in Article 6 and Annex 2 of the *Agreement on Agriculture*, and include: the "fundamental requirement" in Annex 2 paragraph 1 that measures have at most minimal trade-distorting effects; the "basic criteria" in paragraph 1(a) and (b); and the "policy-specific criteria and conditions" set out elsewhere in Annex 2. The use of the word "accordingly" signifies that the intention of the drafters was to indicate that in order to meet the first criterion – the "fundamental requirement" that they be at most minimally trade-distorting – measures would at the very least have to meet the subsequent basic and policy-specific criteria.

**Q7. Please explain the meaning of the words "the fundamental requirement" as used in paragraph 1 of Annex 2 of the Agreement on Agriculture. 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Reply

"The fundamental requirement" as used in paragraph 1 of Annex 2 refers to a characteristic which, if not present, excludes a measure from a claim of exemption from reduction commitments. In this case that characteristic is that the measure has "no, or at most minimal, trade-distorting effects or effects on production." Paragraph 1 specifies that measures for which exemption is claimed "shall meet" this fundamental requirement. Had the drafters intended to make only a general statement of principle they would not have referred to a "requirement" that "shall be met". The use of the term "fundamental" only serves to underline the importance placed on all measures meeting this requirement in order to be exempt.

**Q9. If the first sentence of paragraph 1 of Annex 2 is a stand-alone obligation, does this allow effects-based claims of non-compliance with Annex 2? If so, how does this affect the purpose of Article 13(b)? 3rd parties' in particular Australia, Argentina, Canada, EC, NZ**

Reply

If the first sentence of paragraph 1 of Annex 2 is a stand-alone obligation it would allow effects-based claims of non-compliance with Annex 2. This is consistent with Article 13(b) because it means that the measures excluded from Annex 2 have a more than minimal distorting effect on trade or production, and as such they could potentially give rise to the kind of adverse effects to the interests of other Members that the *GATT 1994* and the *SCM Agreement* establish a right to address. As such those measures should not be exempt from reduction commitments and should be required to meet the requirements of Article 13(b) in order to be exempt from actions under the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*") and *General Agreement on Tariffs and Trade 1994* (the "*GATT 1994*").

**Q10. If the first sentence of paragraph 1 of Annex 2 is not a stand-alone obligation, then must new, non- or minimally trade-distorting measures that do not conform to the criteria listed in Annex 2 be classified as non-Green Box? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Reply

Yes.

**Q11. If the first sentence of paragraph 1 of Annex 2 expresses a general principle which informs the interpretation of the criteria in Annex 2, please explain how this affects the assessment of the direct payments programme's compliance with paragraph 6 of Annex 2. 3rd parties, in particular, Australia, Argentina, Canada, EC, NZ**

Reply

If the first sentence of paragraph 1 of Annex 2 expresses a general principle then the criteria in paragraph 6 of Annex 2 must be strictly applied to ensure that only genuinely decoupled income support that had at most minimal impacts on trade and/or production qualified for exemption from reduction commitments.

Irrespective of whether the first sentence of paragraph 1 of Annex 2 is to be considered a general principle or a stand-alone obligation, the requirement that there be only one defined and fixed base period in paragraph 6 is unambiguous. In New Zealand's view the updating of base acreage under the Direct Payments programme alone is sufficient to exclude it from the scope of permitted green box measures set out in paragraph 6 of Annex 2, as outlined in paragraph 2.29 of New Zealand's Third Party Submission.[4]

**Q12. Where does Article 13(b) require a year-on-year comparison? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

Article 13(b)(ii) and 13(b)(iii) require a comparison with 1992 of any year in which injury, nullification or impairment or serious prejudice is alleged to have occurred.

**Q13. Does a failure by a Member to comply in a given year with either the chapeau of Article 13(b) or the proviso in subparagraph (ii) of Article 13(b) impact its entitlement to benefit in an earlier or a later year from the exemption from action provided by Article 13(b)? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

The nature of the non-compliance at issue may be such that it does impact on a Member's entitlement to benefit in an earlier or later year from the exemption from action provided by Article 13(b). Whether or not that is so must be assessed on a case-by-case basis.

**Q14. Does a failure of a Member to comply with Article 13(b) in respect of a specific commodity impact its entitlement to benefit in respect of other agricultural products from the exemption from action provided by Article 13(b)? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

[4] Third Party Submission of New Zealand, 15 July 2003.

Reply

No. The language of Article 13(b) makes it clear that the exemption from action applies to a "specific commodity", which means that the eligibility for such exemption must be assessed on a product-by-product basis.

**Q15. Is there any basis on which counter-cyclical payments could be considered product-specific? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

Yes. The basis upon which counter-cyclical payments should be considered product-specific have been outlined in the First Written Submission of Brazil,[5] and highlighted in New Zealand's Third Party Submission.[6]

**Q16. If the word "specific" were deleted from Article 13(b)(ii), would this change the meaning of the subparagraph? 3RD parties, in particular Australia, Argentina, Benin Canada, China, EC, NZ**

Reply

Not necessarily. The application of the rules of treaty interpretation to the provision, taking into account its object and purpose, would still support a conclusion that the relevant support was that granted to an individual commodity. The use of the word "specific" simply reinforces that interpretation.

**Q17. What is the relevance, if any, of the concept of "specificity" in Article 2 of the SCM Agreement and references to "a product" or "subsidized product" in certain provisions of the SCM Agreement to the meaning of "support to a specific commodity" in Article 13(b)(ii) Agreement on Agriculture? 3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

The *SCM Agreement* provisions cited would seem to shed little light on the meaning of "support to a specific commodity" in Article 13(b)(ii). Article 2 of the *SCM Agreement* sets out principles for determining whether a subsidy is specific to an enterprise or industry or group of enterprises or industries. Article 13(b)(ii) of the *Agreement on Agriculture* is concerned with the support granted to a specific commodity. The two assessments are unrelated. In relation to the second part of the question, the references to "a product" or "subsidised product" seem fully consistent with interpreting "support to a specific commodity" referred to in Article 13(b)(ii) as meaning support to a particular product.

**Q19. Where does Article 13(b)(ii) require a year-on-year comparison? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

[5] Brazil's First Submission to the Panel Regarding the "Peace Clause" and Non-"Peace Clause" Related Claims, 24 June 2003 ("First Written Submission of Brazil"), paragraphs 199-202 and 207-213.
[6] Paragraphs 2.17-2.13.

Reply

See New Zealand's answer to question 12 above.

**Q20. Does Article 13(b)(ii) require a comparison of support granted with support decided? How could such a comparison be made?**

Reply

Such a comparison could be made by interpreting these terms logically as requiring a comparison between the total volume of support to a specific commodity in 1992 and in any other year in respect of which claims under the *SCM Agreement* and *GATT 1994* are made.

**Q21. Please comment on Brazil's assertion that the terms "grant" and "decided" in Article 13(b)(ii) have broadly the same meaning. If so, why did the drafters not use the same term? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Reply

Article 13(b)(ii) would be devoid of meaning if it were to be interpreted as requiring a comparison between two things that were not like ie if "support granted" was somehow different from "support decided". Therefore the issue is not the difference in wording used, but substantively, what comparison meets the object and purpose of the provision. In New Zealand's view that is a comparison between the total volume of support to a specific commodity in 1992 and in any other year in respect of which claims under the *SCM Agreement* and *GATT 1994* are made.

**Q22. What is the meaning of "support" in Agreement on Agriculture 13(b)(ii) ? Why would it be used differently from Annex 3, where it refers to total outlays? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Reply

Annex 3 refers to budgetary outlays as a component of the Aggregate Measurement of Support ("AMS") calculation. There is nothing to suggest that budgetary outlays should not also be a component of the calculation of "support" in the context of Article 13(b)(ii).

**Q23. Should support be compared under Article 13(b)(ii) in terms of unit of production or total volume of support or both? 3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

Reply

The rationale behind the comparison required by Article 13(b)(ii) is to create an upper limit to the level of trade and production distortion resulting from Members' domestic support programmes. Therefore the appropriate comparison is with the total volume of support because that provides the truest indication of the real effects of the support programmes on trade and production. Support in terms of unit of production may well be a relevant factor in that calculation but it will not be the only one.

**Q25. Please comment on an interpretation of the words "decided during" in Article 13(b)(ii) that would read them as synonymous with the words "authorized during". 3rd parties, in particular Australia, Argentina, Canada, China, EC, NZ**

Reply

New Zealand is not sure what "authorised" in such a context would mean. Presumably it requires evidence of some kind of formal "authorisation". What support was formally authorised, by legislation or regulation, might provide some insight into what level of support was received for specific commodities, but it cannot provide the full picture. It therefore makes no sense to interpret "decided" in such a limited way.

Export credit guarantee programmes

**Q29. (a) Is an export credit guarantee a financial contribution in the form of a "potential direct transfer of funds or liabilities (e.g. loan guarantee)" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement? Why or why not? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

An export credit guarantee is a "financial contribution" under Article 1.1(a)(1) because it is a "loan guarantee".

**Q29. (b) How, if at all, would this be relevant to the claims of Brazil? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

It is relevant because a financial contribution is a necessary element of a "subsidy" under Article 1.1(a)(1)(i) of the *SCM Agreement*. Brazil has presented arguments to support a finding that the US export credit guarantee programmes are subsidies as defined in Article 1.1(a)(1)(i), that are contingent upon export according to the terms of Article 3.1(a). The *SCM Agreement* has been found to provide useful context for determining what constitutes an export subsidy for the purposes of Article 10.1 of the *Agreement on Agriculture*. Brazil has demonstrated that, in the terms of Article 10.1, the United States export credit guarantee programmes are applied so as to result in, or threaten to lead to, circumvention of the United States export subsidy commitments.

Brazil has therefore demonstrated that the United States export credit guarantee programmes do not conform fully to the provisions of Part V of the *Agreement on Agriculture* and therefore cannot be exempt from actions based on Article XVI of *GATT 1994* or Articles 3, 5 and 6 of the *SCM Agreement* by the terms of Article 13(c)(ii) of the *Agreement on Agriculture*.

**Q30. The Panel could arguably take the view that Articles 1 and 3 of the SCM Agreement were relevant in assessing the WTO-consistency of United States export credit guarantees. The Panel would therefore appreciate third party views on this situation, including with respect to the viability of an a contrario interpretation of item (j) of the Illustrative List (as addressed in paragraphs 180-183 of the United States' first written submission). 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

New Zealand notes that the Illustrative List simply lists measures that constitute export subsidies under Article 3.1(a) of the *SCM Agreement*. As stated by the Panel in Canada – Export Credits, "item (j) sets out the circumstances in which the grant of loan guarantees is *per se* deemed to

be an export subsidy (i.e. when the "premium rates … are inadequate to cover the long-term operating costs and losses" of the loan guarantee)."[7]

**Q31. If the Panel decides to refer to provisions of the SCM Agreement for contextual guidance in the interpretation of the terms in Article 10 Agreement on Agriculture, should the Panel refer to item (j) or Articles 1 and 3 of the SCM Agreement or both? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

The Panel should refer to both. The *SCM Agreement* provides both a general definition of an "export subsidy" (specifically the definition of a "subsidy" in the terms of Article 1 and the requirement of contingency upon export in the terms of Article 3) and an Illustrative List containing specific examples of export subsidies. Therefore Articles 1 and 3 and item (j) of the Illustrative List provide contextual guidance for the interpretation of the terms in Article 10.

**Q32. The Panel's attention has been drawn to Article 14(c) of the SCM Agreement (see third party submission of Canada) and to the panel report in DS 222 Canada- Export Credits and Loan Guarantees. How and to what extent are Article 14(c) of the SCM Agreement, and the cited panel report, relevant to the issue of whether or not the United States export credit guarantee programmes confer a "benefit"? What would the appropriate market benchmark be to use for any comparison? Please cite any other relevant material. . 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

The Panel in Canada – Export Credits and Loan Guarantees[8] considered that Article 14(c) of the *SCM Agreement* provided contextual guidance for interpreting 'benefit' in relation to loan guarantees. In that case it was determined that the relevant benchmark for determining whether a loan guarantee conferred a "benefit" was whether there was "a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed … and the amount that the firm would pay on a comparable commercial loan absent the … guarantee." This confirms that the appropriate point of reference for determining whether a "benefit" has been conferred is the marketplace, in this case the extent to which the premium rates charged on current export credit guarantees are lower than the corresponding financing rates that a commercial bank would normally require given a similar level of risk.

**Q33. What is the relevance (if any) of Brazil's statement that : "...export credit guarantees for exports of agricultural exports [sic] are not available on the marketplace by commercial lenders." . 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

Brazil's statement goes toward a conclusion that a "benefit" is conferred in the terms of Article 1.1(b) of the *SCM Agreement*. It is significant because it indicates that either commercial lenders are not prepared to accept the risks associated with such guarantees or that the United States export credit programme is so big that it has forced any competition from commercial programmes out of the marketplace. For whatever reason, the United States export credit guarantee programmes

[7] Report of the Panel, *Canada – Export Credits and Loan Guarantees for Regional Aircraft*, WT/DS/222, paragraph 7.395.

[8] *Ibid*, paragraph 7.397.

provide the recipient with export credit guarantees not available in, and therefore on terms more favourable than, the marketplace, and thus confers a "benefit" in the terms of Article 1.1(b).

**Q34. Comment on the United States' view of the meaning of "long term operating costs and losses" in item (j) of the Illustrative List of Export Subsidies in Annex I of the SCM Agreement as meaning "claims paid" under the export credit guarantee programmes. Does the United States' interpretation give meaning to both "costs" and "losses"? Do claims paid represent "losses"? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

"Claims paid" is one element of the calculation of the costs and losses of an export credit guarantee programme. Other elements to be taken into account would include, for example, costs and losses associated with reinsurance costs, administration costs and the costs of refinancing (i.e. the rescheduling (not the full amount, but the net present value of the losses)).

**Q35. Did the drafters of the Agreement on Agriculture include export credit guarantees in Article 9.1 of the Agreement on Agriculture? Why or why not? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

The drafters of the *Agreement on Agriculture* did not include export credit guarantees in Article 9.1 of the *Agreement* because export credit guarantees are not, *per se*, export subsidies. They may involve export subsidies, but this depends on whether they provide a benefit in relation to the marketplace.

**Q36. Please explain any possible significance the following statements may have in respect of Brazil's claims about GSM102 and 103 (7 CFR 1493.10(a)(2), Exhibit BRA-38) 3rd parties, in particular, Argentina, Canada, EC, NZ**

**"The programs operate in cases where credit is necessary to increase or maintain U.S. exports to a foreign market and where U.S. financial institutions would be unwilling to provide financing without CCC's guarantee. (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

Reply

See New Zealand's answer to Question 33 above.

**"The programs are operated in a manner intended not to interfere with markets for cash sales. The programs are targeted toward those countries where the guarantee is necessary to secure financing of the exports but which have sufficient financial strength so that foreign exchange will be available for scheduled payments." (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

Reply

This statement simply supports Brazil's analysis in relation to the "benefit" and "export contingency" elements of the export credit guarantee programme.

**"In providing this credit guarantee facility, CCC seeks to expand market opportunities for US agricultural exporters and assist long-term market development for U.S. agricultural commodities." (7 CFR 1493.10(a)(2) Exhibit BRA-38)**

Reply

This statement reinforces the obvious export contingency of the export credit guarantee programme and through the reference to expand[ing] opportunities and assist[ing] long-term market development makes it clear that the intention of the programme is to provide a benefit to US exporters.

Reply

**Q37. The United States seems to argue that, at present, by virtue of Article 10.2 of the Agreement on Agriculture, there are no disciplines on agricultural export credit guarantees under the Agreement on Agriculture (or the SCM Agreement).**

**(a) Comment on the following proposition: a WTO Member may therefore extend agricultural export credit guarantees without charging a premium, and for an indefinite period, in addition to any other terms and conditions it may wish? How would this reconcile with the title of Article 10 of the Agreement on Agriculture ("Prevention of Circumvention on Export Subsidy Commitments"), and with other commitments contained in the Agreement on Agriculture? Please cite any relevant material, including any past WTO dispute settlement cases. 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

The proposition is not reconcilable with the title of Article 10 of the *Agreement on Agriculture* as such an export credit guarantee would clearly provide an export subsidy and thus potentially circumvent export subsidy commitments. It also ignores the findings of the Panel in US-FSC Article 21.5[9], affirmed by the Appellate Body,[10] that the threat of circumvention of export subsidy reduction commitments in the terms of Article 10.1 exists in relation to both unscheduled and scheduled agricultural products when the amount of a subsidy is unqualified or unlimited, as implied in the proposition above.

**(b) If, as the United States argues, there are no disciplines on export credit guarantees in the Agreement on Agriculture, how could export credit guarantees "conform fully to the provisions of Part V" of the Agreement on Agriculture within the meaning of Article 13 (how can you assess "conformity" or non-conformity with non- existent disciplines)? 3rd parties, in particular, Argentina, Canada, EC, NZ**

Reply

The United States interpretation would render the phrase "conforming fully to the provisions of Part V" meaningless in respect of export credit guarantees and it therefore cannot be sustained.

Step 2 payments

**Q38. Please comment on the statement in note 119 of the United States' first written submission that "...to the extent a consumer that had intended to export instead opens the bale,**

[9] Report of the Panel, *United States – Tax Treatment for "Foreign Sales Corporations", Recourse to Article 21.5 of the DSU by the European Communities* (WT/DS108/RW), paragraphs 8.118 and 8.119.

[10] Report of the Appellate Body, *United States – Tax Treatment for "Foreign Sales Corporations", Recourse to Article 21.5 of the DSU by the European Communities* (WT/DS108AB/RW).

**then that consumer could still obtain the Step 2 payment upon submission of the requisite documentation". The Panel notes that Step 2 payments all involve upland cotton produced in the United States. What are the two distinct factual situations that Step 2 payments involve? Other than the panel report in Canada-Dairy and the findings of the Appellate Body in US-FSC (21.5), do any other dispute settlement reports offer guidance on this issue? For example, how, if at all is the Appellate Body's report in Canada-Aircraft relevant here? 3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

Reply

The two distinct factual situations involved are 1) where cotton is exported, and 2) where cotton is used domestically. The notional consumer referred to by the United States cannot be both an exporter and domestic user of the same bale of cotton.

Even if the Panel were to find that there are not two distinct factual situations involved, ie that there was only one 'Step 2 payment' programme as alleged by the United States, the findings of the Appellate Body in Canada-Aircraft[11] referred to in the question above make it clear that the fact that some of the payments made under that programme are *not* contingent upon export performance, does not necessarily mean that the same is true for all of the payments under the programme. To paraphrase the Appellate Body, it is enough to show that one or some of the Step 2 payments do constitute subsidies "contingent … in fact … upon export performance." Those payments made upon production of proof of export clearly meet the export contingency requirement.

**Q39. Please comment on the United States assertions at paragraph 129 of its first written submission, that "[t]he program is indifferent to whether recipients of the benefit of this programme are exporters or parties that open bales for the processing of manufacturing raw cotton into cotton products in the United States." . 3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

Reply

The fact that an applicant is required to identify themselves as either an exporter or domestic user and an exporter is required to provide proof of export in order to receive the payment would seem to suggest that the programme is not, in fact, so 'indifferent'.

**Q40. With respect to paragraph 32 of the oral statement of the EC, are subsidies contingent on the use of domestic goods consistent with the AoA? Does the phrase "provide support in favour of domestic producers" refer to, and/or permit such subsidies? What is the meaning and relevance of this (if any) to Brazil's claims under Article 3 of the SCM Agreement and Article III:4 of the GATT 1994.. 3rd parties, in particular, Australia, Argentina, EC, NZ, Paraguay**

Reply

New Zealand does not agree that a right to provide subsidies contingent upon the use of domestic products contrary to Article 3 of the *SCM Agreement* can be found in the requirement that subsidies "directed at agricultural producers … to the extent that they benefit producers of the basic agricultural product" be included in the calculation of AMS. There is no basis for reading such a right into the *Agreement on Agriculture*. To do so would allow the possibility for exemption from action under the *SCM Agreement* to exist other than by virtue of the peace clause. The peace clause explicitly does not provide such exemption from action under Article 3 of the *SCM Agreement* when

[11] Report of the Appellate Body, *Canada - Measures Affecting the Export of Civilian Aircraft*, WT/DS70/AB/R , paragraph 179.

it quite clearly could have done so. In New Zealand's view that indicates that there was no intention on the part of the drafters that domestic support measures, whether they conform with Article 6 of the *Agreement on Agriculture* or not, should be so exempt. The same is true in respect of *GATT 1994* Article III:4 claims.

ETI Act

**Q41. Concerning its claims on the ETI Act, Brazil relies on the US – FSC case. However, it appears that the United States did not raise the issue of the Peace Clause in that case, nor did the US appear to invoke Article 6 of the Agreement on Agriculture. If the Panel's understanding is correct, how, if at all, are these differences relevant here? Argentina, China, EC, NZ**

Reply

While it is open to the United States to claim exemption from action for such measures under the peace clause, the United States has no reduction commitments in respect of upland cotton and it cannot therefore provide export subsidies to upland cotton in a WTO-consistent manner.

**Q42. How do you view the reference in paragraph 43 of the EC's third party oral statement with respect to the relevance of Article 17.14 of the DSU, and, in particular, the phrase "a final resolution to that dispute" (emphasis added)? Please explain the use, and relevance (if any) of the term "disputes" in Articles 9.3 and 12 and Appendix 3 of the DSU, and please cite any other provisions you consider relevant. Argentina, China, EC, NZ**

Reply

References to "disputes" in the Dispute Settlement Understanding must be interpreted in context. Article 17.14 requires that parties to a dispute unconditionally accept the report of the Appellate Body once adopted by the Dispute Settlement Body ("DSB"). That acceptance is in the context of that particular dispute between those particular parties. However that does not preclude a Panel from finding that a *prima facie* case of WTO-inconsistency has been made out where a Member makes a complaint in relation to a measure that has previously been ruled to be WTO-inconsistent where that ruling has been adopted by the DSB and where the measure remains unchanged.

# ANNEX J-8

## PARAGUAY'S REPLY AS THIRD PARTY TO THE FOLLOWING QUESTION

11 August 2003

ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE

**26. Under Article 13(b)(ii), a comparison is required between support at different times. One of the issues which is contested between the parties is whether the only later period that the Panel can consider is the present one (i.e. the period underway at the time of the request for establishment of the Panel). This argument is based on the present tense of the words "do not grant" in the English text.**

**The Panel asks whether there is any difference in the verb tense as used in the Spanish-language text, or any other difference which might aid the Panel in interpreting these words?**

Reply

In its analysis of the question raised by the Panel as to the period to be considered and the verb tense used, Paraguay is expressing a view based on both versions:

> *"(ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, **provided** that such measures **do not grant support** to a specific commodity in excess of that decided during the 1992 marketing year; and …."*
>
> *"ii) estarán exentas de medidas basadas en el párrafo 1 del artículo XVI del GATT de 1994 o en los artículos 5 y 6 del Acuerdo sobre Subvenciones, **a condición de que no otorguen** ayuda a un producto básico específico por encima de la decidida durante la campaña de comercialización de 1992; y …"*

As regards the verb tense used, the English version clearly calls for a present tense interpretation, as the Panel rightly points out.

It clearly reads "**provided** that such measures do not grant support". If we take the word "provided" as indicating the occurrence of an event (**"in the event"**), we must bear in mind that this would introduce conditionality.

The Spanish text expresses the conditionality in even clearer terms through the words **"a condición de que no otorguen"**, a conditionality which introduces a notion of facts.

In Spanish, the verb is used in the present **subjunctive mode**, which according to the ***Larousse Dictionary***, *is the mode used to express possibility, as opposed to the indicative mode, which is the reality mode.*

Although we consider that both versions indicate the present, it appears to us that the Spanish version of the sentence stresses conditionality, which must be given considerable weight in order to arrive at a correct interpretation.

In the case at issue, *the condition under which the measures shall be exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement* is that support should not be granted to a specific commodity in excess of that decided during the 1992 marketing year.

The 1992 marketing year provides the standard needed to carry out a proper comparison between support at different times, so that in our view, we should be considering the entire spectrum and taking a comprehensive view of the background information.

Paraguay concludes that it is the Panel's task to consider the period it deems suitable for determining the effects of this type of measure on world trade.

# ANNEX J-9

## COMMENTS BY ARGENTINA ON THE REPLY BY THE EUROPEAN COMMUNITIES TO QUESTION 40 FROM THE PANEL

22 August 2003

Argentina would like to make the following comments on the reply by the European Communities to question 40 from the Panel.

Argentina does not share the EC's assertion that Members are entitled to provide domestic content subsidies under the Agreement on Agriculture (AoA) provided such subsidies are provided consistently with the Member's domestic support commitment levels.

It is our view that the rules of the AoA, on the one hand, and of the GATT 1994 and the Agreement on Subsidies and Countervailing Measures (ASCM), on the other, contain disciplines that apply independently unless there is a "conflict" between the provisions, in which case the rules of the AoA apply as a result of Article 21.1 of this Agreement.

Article 21.1 of the AoA states that *"The provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to* ("a reserva de" in the Spanish text) *the provisions of this Agreement*."

The words "subject to" or "a reserva de" indicate dependency or a condition[1]. Such dependency or condition does not, however, mean that all the disciplines in the GATT 1994 and the Agreements in Annex 1A automatically cease to apply in the case of the AoA. On the contrary, these disciplines "shall apply" unless there is a discrepancy or conflict between a rule in the AoA and the rules in the GATT 1994 or the Agreements in Annex 1A. This conclusion also receives contextual support in the General interpretative note to Annex 1A.

The conditions for the existence for a conflict between two rules was clarified by the Appellate Body in the *Guatemala – Cement case*[2], where it is determined that there is a conflict between two provisions if adherence to one provision leads to a violation of the other. In the case before us, in order to determine whether a rule in the GATT 1994 or in an Agreement in Annex 1A (Article 3.1(b) of the ASCM in this particular case) does not apply, it must first be determined whether there is an inconsistency or discrepancy with a provision of the AoA. In other words, these rules must be applied together.

In this connection, Argentina considers that compliance with the obligations laid down in Articles 6.1 and 3.2 of the AoA, and with paragraph 7 of Annex 3, does not allow any inconsistency with Article 3.1(b) of the ASCM to be detected.

Regarding Articles 6.1 and 3.2 of the AoA, nothing in these provisions indicates that it is not possible to apply them together with the prohibition on granting subsidies contingent on the use of domestic rather than imported products. The fact that the term "domestic support" is not defined in

[1] The New Oxford Dictionary of English: "subject to: … 2 dependent or conditionally upon".
[2] WT/DS60/AB/R, paragraph 65.

the AoA or that the AMS is broadly defined, as indicated by the EC[3], does not imply that the prohibition laid down in Article 3.1(b) of the ASCM is not valid in relation to the AoA. In this connection, the AoA does not contain any reference to possible exclusion.

Regarding paragraph 7 of Annex 3, the statement that "Measures directed at agricultural processors shall be excluded to the extent that such measures benefit the producers of the basic agricultural products" does not mean that such benefits cover measures made subject to the use of national rather than imported products. Producers of the basic agricultural products are allowed the benefits without making the measure contingent on the use of domestic products.

Lastly, with regard to the EC's reference to the preamble to the AoA ("*Having decided* to establish a basis for initiating a process of reform of trade in agriculture …"), it should be noted that this process could very well envisage stricter obligations concerning certain types of measure that particularly distort international agricultural trade. On the contrary, it appears contradictory to assume that an agricultural trade reform process envisages the weakening of disciplines that could be applied in another way.

For the foregoing reasons, Argentina considers that subsidies that are granted to agricultural producers contingent on the use of domestic rather than imported products, either as a sole requirement or as one of several requirements, are inconsistent with Article 3.1(b) of the ASCM and Article III.4 of the GATT 1994.

# ANNEX J-10

## COMMENTS BY AUSTRALIA ON THE RESPONSES OF THE EUROPEAN COMMUNITIES TO QUESTIONS FROM THE PANEL AFTER THE FIRST SESSION OF THE FIRST SUBSTANTIVE PANEL MEETING

22 August 2003

These comments by Australia are offered in response to some of the answers submitted by the EC to the questions from the Panel after the first session of the first substantive Panel meeting. It is not Australia's intention to comment on all of the answers submitted by the EC, as most issues have already been addressed in Australia's written Third Party Submission, Australia's Oral Statement and Australia's responses to questions from the Panel after the first session of the first substantive Panel meeting.

Panel question no. 6 and Australian question no. 2

The EC refers to the findings of the Appellate Body in the *Turkey – Textiles* dispute concerning the interpretation of the word "accordingly" at the beginning of Article XXIV:5 of GATT 1994 to support its view that the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* does not establish a freestanding obligation. However, as EC recognises, the Appellate Body expressly found in that dispute that the text of GATT Article XXIV:4 does not contain any operative language, that is, that GATT Article XXIV:4 "does not set forth a separate obligation itself". Nor do any of the other provisions cited by the EC in its footnote 9 contain operative language in the sense of setting forth a separate obligation.

The words "shall meet the fundamental requirement" establish a clear and unambiguous obligation that Annex 2 measures must conform to or satisfy the primary or essential condition that such measures have no, or at most minimal, trade-distorting effects or effects on production. "Shall", when used in the present tense as an auxiliary verb followed by an infinitive as in the first sentence of paragraph 1 of Annex 2, is defined as: "must according to a command or instruction".[1] "Meet" has a number of meanings, including "come into conformity with (a person, a person's wishes or opinion)" and "satisfy (a demand or need); satisfy the requirements of (a particular case); be able or sufficient to discharge (a financial obligation)". The words "shall meet" in context mean that Annex 2 measures must conform to or satisfy an express stipulation. Australia has previously explained that a "fundamental requirement" is a primary or essential condition.[2] When used as a definite article as in the clause "shall meet the fundamental requirement", the word "the" establishes the "fundamental requirement" as the express stipulation that Annex 2 measures must conform to or satisfy.[3]

In Australia's view, the normal rules of treaty interpretation do not permit the word "accordingly" to be interpreted so as to obviate a clear and unambiguous obligation. Australia agrees that the Appellate Body found in the *Turkey – Textiles* dispute, in the particular circumstances of GATT Article XXIV, that the word "accordingly" linked the purposive language of Article XXIV:4 to operative language in the specific obligations found elsewhere in Article XXIV. However, the first

[1] *The New Shorter Oxford English Dictionary*, Volume 2, page 2808.
[2] Australian response to Question no. 7 from the Panel.
[3] Australia addressed the meaning of "the" in more detail in its response to question 3 from the Panel.

sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* cannot be characterised as purposive. The Appellate Body's finding in the *Turkey – Textiles* dispute is not, and cannot be, a valid interpretative basis to say that because the word "accordingly" has a particular meaning in the context of GATT Article XXIV, that same meaning must apply wherever else the word "accordingly" appears.[4]

Panel question no. 9

It remains unclear to Australia what is meant by "effects-based claims" in the context of the Panel's question.

However, Australia notes that under the EC's interpretation there would be no limits to the amounts that a WTO Member could provide as Annex 2 support, even if such support had profound trade-distorting effects or effects on production. For example, the EC's interpretation would allow a Member to pay "decoupled income support" of such a magnitude that the support would provide the means for that Member's domestic producers to switch from dryland to irrigation production with resulting substantial increases in production and trade-distorting effects. Thus, even if the first sentence of paragraph 1 of Annex 2 of the *Agreement on Agriculture* were considered to express an objective, such an outcome would nevertheless be directly contrary to that objective. At the very least, the magnitude of Annex 2 payments must be able to be a factor in assessing whether Annex 2 domestic support measures "meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production".

Further, the EC's argument that identifying the effects of such measures is often only feasible on an *ex post facto* basis is not convincing. First, even the EC argument concedes that in many, if not most, cases, it is feasible to identify the effects of such measures in advance. Secondly, even if the precise effects of such measures cannot be identified in advance, policy makers could draw on past experience and econometric analyses to determine whether certain types of payments would likely be distorting.

Finally, Australia considers that the "problems" pointed to by the EC that would be engendered by interpreting the first sentence of paragraph 1 as a freestanding obligation are no different to other situations, including under the *Agreement on Agriculture*. If another Member were to argue successfully in a dispute that a measure at issue was indeed an export subsidy, the responding Member could well be required to show "after the fact" that it is in compliance with its export subsidy reduction commitments under the *Agreement on Agriculture*.[5]

[4] Australia considers that the Appellate Body's discussion of the meaning of "like products" in *European Communities – Measures Affecting Asbestos and Asbestos-Containing Products* , WTO DS135/AB/R, paragraphs 87-100, confirms this view.

[5] See, for example, *United States – Tax Treatment of "Foreign Sales Corporations"*, WT/DS108.

# ANNEX J-11

## COMMENTS BY THE EUROPEAN COMMUNITIES ON RESPONSES TO THE QUESTIONS OF THE PANEL SUBMITTED BY OTHER THIRD PARTIES

22 August 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. The European Communities has sought to comment on some of the responses to the Panel's questions submitted by other third parties. It has not been possible to do this in an exhaustive manner. Rather, the European Communities has made comments on certain responses which in its view merited further discussion. Evidently, where the European Communities has not commented on a particular argument, this does not imply that we support it.

2. For the Panel's ease of reference, we have retained in this document the Panel's original questions and the responses of the European Communities. Where the European Communities has decided to comment on a particular argument of another third party, we have inserted *verbatim* the text of the other party's arguments. We have deleted all questions which we have decided not to make comments on.

## II. ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE

**Question**

**1. Australia has argued that Article 13 of the *Agreement on Agriculture* is an affirmative defence. How do you reconcile this with your view that the conditions in Article 13 are a "prerequisite" to the availability of a right or privilege? Australia Would other third parties have any comments on Australia's assertion? 3rd parties, in particular Argentina, Benin, China, Chinese Taipei**

Answer

3. Australia's views cannot be reconciled. Australia is correct in noting that the conditions in Article 13 can be considered a prerequisite for taking action under the *SCM Agreement*.[1] In using the term "prerequisite", Australia essentially recognises that, in respect of measures covered by Article 13, a complainant can only invoke the relevant provisions of the *SCM Agreement* if it proves that the threshold requirements or prerequisites referred to in Article 13 have been satisfied. As the European Communities has pointed out, such a situation is very different from the situation where, in the event of a violation of a WTO Agreement, a WTO Member pleads a defence which potentially exculpates it from this violation (e.g. Article XX GATT) in respect of which it bears the burden of proof.

4. Comparing Article 13 with Article 3.3 of the *SPS Agreement* shows that Australia's views are irreconcilable. This provision permits WTO Members not to base SPS measures on international standards but to impose higher standards where there is a scientific justification or an appropriate risk assessment has been carried out. This provision has some similarities with Article 13 of the *Agreement on Agriculture* since it sets a threshold which must be met before a Member can act. However, Article 3.3 may be seen as going further than Article 13 since it provides a derogation from the central discipline of the *SPS Agreement* ; the obligation to base SPS measures on international standards. On the other hand, Article 13 is simply one element regulating the interface between the *Agreement on Agriculture* and the other Annex I Agreements and cannot be seen as a derogation therefrom. Despite the extent to which Article 3.3 could be thought of as a derogation from the *SPS Agreement*, the Appellate Body ruled in *EC Hormones* that it could not be considered an affirmative defence, and that the burden of proof did not, therefore lie with the defendant.[2] In particular, the Appellate Body noted that the situation in Article 3.3 of the SPS Agreement is "qualitatively different" from the relationship between for instance, Article 1 and XX GATT.[3]

5. Consequently, Australia is correct to consider that Article 13 is a prerequisite or a threshold condition before the other Annex I Agreements may become applicable but is incorrect to consider that Article 13 can be considered an affirmative defence.

**Response of Australia**

> Australia does not see any inconsistency in its views. In Australia's view, the potential availability of an affirmative defence in the general sense is in the nature of a right or privilege. Australia wishes to clarify, however, that it considers Article 13 in the specific sense to be a right available when the conditions prescribed therein are met, rather than a privilege.

**EC Comment**

6. The European Communities fails to see how Australia can reasonably assert that there is no "inconsistency in its views". If Article 13 *Agreement on Agriculture* is a "prerequisite" for a complainant to bring an action under the *SCM Agreement* it cannot be at the same time a defence. A defence applies when a breach of a WTO Agreement arises, and the defending Member relies on another provision of a WTO Agreement in order to exculpate itself. Article XX GATT is the best example. In such a case, the burden of proof shifts to the Member invoking a defence. A prerequisite

[2] Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) ("European Communities – Hormones")*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, para. 109.

[3] Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) ("European Communities – Hormones")*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, para. 105.

is entirely different. It implies that before a Member can undertake a particular action, it must take another action. In this context, a complaining Member must prove that Article 13 *Agreement on Agriculture* does not apply, before proving that the relevant provisions of the *SCM Agreement* apply.

7. Australia's bald assertion, glossing over its previous use of the word "prerequisite", does not adequately explain how its views can be reconciled.

## III. ARTICLE 13(B) OF THE *AGREEMENT ON AGRICULTURE*: DOMESTIC SUPPORT MEASURES

### Questions 2 - 5

8. The European Communities would only note that the changes presented by Australia to questions 2 and 3 on 15 August 2003 as "corrigenda" altered substantively the meaning of Australia's original response. The change from "program" to "payment" is a substantial change, and not a mere typographical error.

### Question

**6. Please explain the meaning of the word "criteria" in Article 6.1 and 7.1. What effect, if any, does the use of the word "Accordingly" in paragraph 1 of Annex 2 of the *Agreement on Agriculture* have on the meaning of the preceding sentence? 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Answer

9. Both Article 6.1 and 7.1 refer to the "criteria set out in [..] Annex 2". When one considers Annex 2, there are two sets of "criteria". The first is the "basic criteria" set out in subparagraphs (a) and (b) of paragraph 1, and the second is the "policy-specific criteria" set out in paragraphs 2 to 13. This understanding is confirmed by the text of paragraph 5 of Annex 2, which refers to the "basic criteria" and the "specific criteria". Thus, Articles 6.1 and 7.1 of the *Agreement on Agriculture* refer to the basic and policy specific criteria set out in Annex 2.

10. The European Communities has already set out its understanding of the term "accordingly" in its Third Party Written Submission.[4] In the European Communities view, the term "accordingly" is intended to link the purposive language of the first sentence, with the "basic criteria" set out in the second sentence. In its Third Party Submission the EC offered a dictionary definition, "in accordance with the logical premises" which showed that the word "accordingly" operates as a linkage between the premise or understanding set out in the first sentence and the operative language in the second sentence. Australia offers the Panel another definition: "harmoniously" or "agreeably", but fails to note that that the Oxford English Dictionary considers this usage of the word "accordingly" obsolete.[5]

11. The European Communities would point out that both the French and Spanish text support the view that the use of the word "accordingly" links the general statement in the first sentence with the specific obligations of the second sentence. The French text uses the term "en conséquence" and the Spanish the term "por consiguiente". Both of these terms show that the criteria in the second sentence

[4] First Third Party Submission of the European Communities, 15 July 2003, para. 20. The European Communities recall, in this context, the opinion of Professor Desta set out in footnote 19 to para. 20.

[5] Australia's Oral Statement, para 35. Oxford English Dictionary, p. 15. Australia refers to the first sense of the word "accordingly" which is preceded by the symbol "=" which indicates that a particular usage is obsolete (see Abbreviations and Symbols, page xxvi).

are intended to express the principle set out in the first sentence. Moreover, had the negotiators intended that the first sentence be a self-standing obligation, rather than use the term "accordingly" they would have used the term "additionally" or "in addition", or a synonymous term.

12. Further support for this view can be found in the frequent use of the term "accordingly" in the WTO Agreement. A survey of the term's use suggests that it links a general statement, often recognising that a particular situation causes specific effects, with a right or obligation to take some type of action set out in an ancillary sentence.[6] These general statements are not such as to impose specific obligations. The Appellate Body had occasion to consider the relationship between such provisions in the *Turkey-Textiles* dispute (Articles XXIV.4 and XXIV.5 GATT). It concluded:

> The chapeau of paragraph 5 of Article XXIV begins with the word "accordingly", which can only be read to refer to paragraph 4 of Article XXIV, which immediately precedes the chapeau.
>
> [..]
>
> 57. According to paragraph 4, the purpose of a customs union is "to facilitate trade" between the constituent members and "not to raise barriers to the trade" with third countries. This objective demands that a balance be struck by the constituent members of a customs union. A customs union should facilitate trade within the customs union, but it should *not* do so in a way that raises barriers to trade with third countries. [..] Paragraph 4 contains purposive, and not operative, language. It does not set forth a separate obligation itself but, rather, sets forth the overriding and pervasive purpose for Article XXIV which is manifested in operative language in the specific obligations that are found elsewhere in Article XXIV. Thus, the purpose set forth in paragraph 4 informs the other relevant paragraphs of Article XXIV, including the chapeau of paragraph 5. For this reason, the chapeau of paragraph 5, and the conditions set forth therein for establishing the availability of a defence under Article XXIV, must be interpreted in the light of the purpose of customs unions set forth in paragraph 4. The chapeau cannot be interpreted correctly without constant reference to this purpose.[7] (emphasis added)

13. The Appellate Body has, consequently, recognised the linking function of the word "accordingly", and the fact that provisions which may be linked to later provisions through the use of the word "accordingly" may not impose separate obligations.

14. The European Communities would also point out that the Appellate Body has found that other provisions (e.g. Article III.1 GATT) which contain general principles are set up as "a guide to understanding and interpreting the specific obligations contained" in other provisions (e.g.

---

[6] See Articles II.6(a), III.9, XII.3(d), XVI.3, XVIIII.5, XXIV.5 GATT 1994, together with Ad Article III and Ad Article XXVIII.4 to GATT 1994, Articles 2.1 and 11 of the Dispute Settlement Understanding, Article A(i) of the Trade Policy Review Mechanism, Article 12.8 of the Agreement on Technical Barriers to Trade, Article 1 of the GATS Annex on Telecommunications and Article 5.1 of the Agreement on Textiles and Clothes.

[7] Appellate Body Report, *Turkey – Restrictions on Imports of Textile and Clothing Products ("Turkey – Textiles")*, WT/DS34/AB/R, adopted 19 November 1999, paras. 56 and 57 (emphasis added). Note that the Panel also found that Article XXIV.4 was "not expressed as an obligation" (Panel Report, *Turkey – Restrictions on Imports of Textile and Clothing Products ("Turkey – Textiles")*, WT/DS34/R, adopted 19 November 1999, as modified by the Appellate Body Report, WT/DS34/AB/R, para. 9.126).

Article III.2 and the other paragraphs of Article III).[8] Such provisions do not, however, impose additional obligations supplemental to the specific obligations, unless expressly stated.[9]

15. The Panel may find it useful to refer to the European Communities' response to a question posed by Australia (see question no. 44 in this document). In its response, the European Communities deals with Australia's unfounded assertion that the European Communities' reading of the first sentence of paragraph 1 would render that provision ineffective.

**Response of Australia**

> The ordinary meaning of "criteria", as the plural of "criterion", is "principle[s], standard[s], or test[s] by which a thing is judged, assessed, or identified"[10]. Thus, the "criteria" in Articles 6.1 and 7.1 as these relate to Annex 2 of the *Agreement on Agriculture* encompasses <u>all</u> of the relevant principles, standards or tests established in Annex 2 against which domestic support measures for which exemption from reduction commitments is claimed are to be judged, assessed and/or identified.
>
> As Australia said in its Oral Statement[11], the word "accordingly" has several, equally valid meanings that are potentially applicable in the context: "harmoniously", "agreeably", "in accordance with the logical premises" and "correspondingly".[12] A further definition is "in conformity with a given set of circumstances".[13]
>
> In Australia's view, having regard to its ordinary meanings in its context and in light of the object and purpose of the *Agreement on Agriculture*, including to "[correct] and [prevent] … distortions in world agricultural markets",[14] the word "accordingly" can and should properly be interpreted in the sense of "consistent with" or "in conformity with" the fundamental requirement established in the first sentence. Consistent with that interpretation, the obligation that "green box" measures "meet the fundamental requirement …" is cumulative with the additional basic criteria established in paragraph 1 and the policy specific criteria established in paragraphs 2-13 of Annex 2. To interpret the word "accordingly" otherwise would be to negate the plain and unambiguous obligation established in the first sentence of paragraph 1 of Annex 2 that "[d]omestic support measures for which exemption from the reduction commitments is claimed shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production".

**Response of New Zealand**

> "Criteria" are the standards by which a thing is assessed. In this case they are the standards by which domestic support measures must be assessed in order to qualify for exemption from reduction commitments. These criteria are set out in Article 6 and Annex 2 of the *Agreement*

[11] Oral Statement by Australia, paragraphs 35-36.

[12] *The New Shorter Oxford English Dictionary*, Volume 1, page 15.

[13] *Webster's Third New International Dictionary*, Ed. Philip Babcock Gove, Merriam-Webster Inc, Springfield, Massachusetts, 1993, page 12.

[14] Third preambular paragraph of the *Agreement on Agriculture*.

> *on Agriculture*, and include: the "fundamental requirement" in Annex 2 paragraph 1 that measures have at most minimal trade-distorting effects; the "basic criteria" in paragraph 1(a) and (b); and the "policy-specific criteria and conditions" set out elsewhere in Annex 2. The use of the word "accordingly" signifies that the intention of the drafters was to indicate that in order to meet the first criterion – the "fundamental requirement" that they be at most minimally trade-distorting – measures would at the very least have to meet the subsequent basic and policy-specific criteria.

**EC Comment**

16. Neither Australia nor New Zealand examine the use of the word "criteria" in Annex 2 where it means something different from the fundamental requirement. The second sentence of the first paragraph of Annex 2 clearly distinguishes the "fundamental requirement" from the general and policy-specific "criteria". Paragraph 5 of Annex 2 is even more explicit in this regard. It would seem odd that Article 6.1 and 7.1 would use criteria to mean both the basic and policy specific criteria and the requirement, while Annex 2 itself operates a distinction between the criteria and the requirement. Thus, while it is the case that the dictionary definition of "criteria" could arguably, in the abstract, cover a "fundamental requirement" in this particular case there are compelling arguments that the use of the word "criteria" in Articles 6.1 and 7.1 does not.

17. The European Communities has already explained why Australia's interpretation of "accordingly" is incorrect. It is quite clear that "accordingly" establishes a relationship between the purposive language of the first sentence of para. 1 of Annex 2 and the operational language of the other parts of Annex 2. Synonyms of "accordingly" include "as a result, consequently, ergo, thus, therefore".[15] To read the term as meaning that the first sentence and the rest of the paragraph applied as cumulative and separate conditions (as suggested by Australia) would deprive the word "accordingly" of effect. Reading the first sentence of paragraph 1 as relevant to the interpretation of the rest of Annex 2, but not as a separate condition would, contrary to Australia's assertion, give the first sentence meaning.

18. New Zealand points out that:

> "the use of the word "accordingly" signifies that the intention of the drafters was to indicate that in order to meet the first criterion – the "fundamental requirement" […]measures would at the very least have to meet the subsequent basic and policy-specific criteria"

19. New Zealand does not explain how the first sentence can set a self-standing criterion if respecting that so-called criterion depends on satisfying other criteria. What then is the content of the separate "criterion" in the first sentence, if it is already defined in the second sentence of the first paragraph and the rest of Annex 2 ? Moreover, how, given the alleged existence of two sets of self-standing criteria, can it be sufficient to satisfy only one set of criteria and at the same time satisfy the other set (or "at the very least" satisfy the other set) as the final sentence of New Zealand's response implies. Even on its own terms, New Zealand's position that the first sentence of paragraph 1 is a self standing obligation, but that it can be satisfied by meeting the criteria set out in the rest of Annex 2, is internally inconsistent. This illustrates very well the European Communities' point that the proposition that the first sentence imposes a self-standing obligation cannot be squared with any reasonable interpretation of "accordingly".

[15] Chamber's Thesaurus, 1986.

**Question**

**7. Please explain the meaning of the words "the fundamental requirement" as used in paragraph 1 of Annex 2 of the *Agreement on Agriculture.* 3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

Answer

20. The phrase "the fundamental requirement" signals the negotiators intent to treat differently measures which are less or not at all distortive to trade or production and sets forth the general purpose of Annex 2; a purpose which permeates the rest of Annex 2. Considering the term in the abstract does not answer the question whether a panel must examine the effects of measures for which green box status is claimed in addition to examining whether such measures respect the basic and policy-specific criteria set out in Annex 2, or whether respecting the basic and policy-specific criteria is such that a measure is deemed not to have the effects mentioned in the first sentence. As the European Communities has explained, there are compelling textual and purpose based arguments which support the latter interpretation.

**Response of Australia**

> The word "fundamental" has a number of meanings[16] which can be summarised as "primary" or "essential". The word "requirement" too has a number of meanings[17] which can be summarised as a "condition". Thus, a "fundamental requirement" is a primary or essential condition. [18] It is an overarching, freestanding obligation that applies to all "green box" measures cumulatively with the additional basic criteria established in paragraph 1 and the policy specific criteria established in paragraphs 2-13 of Annex 2. To interpret a "fundamental requirement" otherwise than as a primary or essential condition would not give the words their ordinary meaning in their context and in light of the object and purpose of the *Agreement on Agriculture*.

**EC Response**

21. Australia executes a logical leap in the fourth sentence of its response. It arrives at the conclusion that the "fundamental requirement" is a "freestanding obligation" that applies "cumulatively" with the other criteria. However, this assertion is without foundation, and is directly contradicted by the use of the word "accordingly" at the beginning of the next sentence.

**Question**

**2. In paragraph 13 of Australia's oral statement, you state that a "question" is: "could conditions of price competition for the purposes of a non-violation or impairment claim be assessed solely on the basis of budgetary outlay figures, as argued by Brazil, or on the basis of a rate of payment, as argued by the United States? In Australia's view, both factors put forward by Brazil and the United States would properly form a part of that assessment, but not the**

[16] *The New Shorter Oxford English Dictionary*, Volume 1, page 1042, provides relevant definitions of "fundamental" as "**1** Of or pertaining to the basis or groundwork; going to the root of the matter. **2** Serving as the base or foundation; essential or indispensable. Also, primary, original; from which others are derived."

[17] *The New Shorter Oxford English Dictionary*, Volume 1, page 2557, provides definitions of "requirement" as "**1** The action of requiring something; a request. **2** A thing required or needed, a want, a need. Also the action or an instance of needing or wanting something. **3** Something called for or demanded; a condition which must be complied with."

[18] Third Party Submission of Australia, paragraph 31, and Oral Statement by Australia, paragraph 33.

**whole." Could you please clarify this statement (indicating other elements which would complete the "whole" and explain its relevance for the purposes of our consideration of Article 13 of the *Agreement on Agriculture*? Australia, EC**

Answer

22. The European Communities would prefer to let Australia clarify its statement. The European Communities will comment upon Australia's clarification in its comments on the responses of the other third parties.

**Australia's Response**

> Given the length of Australia's response, the European Communities has not reproduced it here.

**EC Comment**

23. The European Communities is unconvinced of Australia's argument. There is nothing in the text of Article 13 to suggest that in order to determine "support" under Article 13 it is necessary to consider all the factors which are relevant to examining a non-violation case. Moreover, the European Communities notes that Article 13(b)(ii) provides that Articles 5 and 6 of the *SCM Agreement* may be applicable under certain conditions. However, an assessment of whether a measure is inconsistent with Articles 5 and 6 of the *SCM Agreement* is not based on the same criteria as would be applicable in assessing a non-violation complaint. Indeed, such criteria may have nothing to do with the domestic market of the Member which is providing a subsidy. Australia does not explain why the type of criteria relevant to non-violation complaints would also be relevant in assessing a complaint under Articles 5 and 6 of the *SCM Agreement*. Nor does it explain why it is necessary to import notions from the assessment of non-violation complaints, but not notions from Articles 5 and 6 *SCM Agreement* into an assessment of support for the purposes of Article 13 *Agreement on Agriculture*.

24. In short, the European Communities sees no foundation for Australia's assertions.

## IV. STEP 2 PAYMENTS

**Question**

**40 With respect to paragraph 32 of the oral statement of the EC, are subsidies contingent on the use of domestic goods consistent with the *AoA*? Does the phrase "provide support in favour of domestic producers" refer to, and/or permit such subsidies? What is the meaning and relevance of this (if any) to Brazil's claims under Article 3 of the *SCM Agreement* and Article III:4 of the GATT 1994.. 3rd parties, in particular, Australia, Argentina, EC, NZ, Paraguay**

Answer

25. The Panel's question involves two elements. First, is a Member entitled to provide domestic content subsidies under the *Agreement on Agriculture*? Second, if such subsidies are permitted, what is the relevance of such a rule to Brazil's claims under Article 3 of the *SCM Agreement* and

Article III.4 GATT. The European Communities has already provided elements of a response in its oral statement.[19] These are expanded upon below.

26. First, a Member is entitled to provide domestic content subsidies under the *Agreement on Agriculture* provided such subsidies are provided consistently with the Member's domestic support commitment levels. This conclusion flows from a number of factors. First, the *Agreement on Agriculture* disciplines domestic support. Article 6.1 refers to "domestic support reduction commitments". Article 3.1 refers to "domestic support [..] commitments […] constitut[ing] commitments limiting subsidization" and Article 3.2 obliges Members "not [to] provide support in favour of domestic producers in excess of the [domestic] support commitment levels". Despite these clear rules on domestic support, the *Agreement on Agriculture* does not define "domestic support".

27. AMS is the measurement of domestic support. AMS is defined as "the annual level of support, expressed in monetary terms, provided for an agricultural product in favour of the producers of the basic agricultural product or non-product-specific support provided in favour of agricultural producers in general, other than [that exempted etc]." This is very general – it covers all support in favour of agricultural producers. This broad scope of domestic support measures which can be maintained consistently with the *Agreement on Agriculture* is confirmed by Article 6.1 which states that the domestic support reduction commitments "shall apply to all of its [i.e. the Member's] domestic support measures in favour of agricultural producers […]". Paragraph 1 of Annex 3 on the calculation of the AMS refers to AMS being calculated "on a product specific-basis for each basic agricultural product receiving market prices support, non-exempt direct payments, or any other subsidy not exempted from the reduction commitment". (emphasis added)

28. Consequently, the range of domestic support measures which a Member may maintain (consistent with reduction commitments) is very broad and is only limited by the condition that such support must be in favour of agricultural producers. As the European Communities has noted, paragraph 7 of Annex 3 explicitly states that "measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products".[20] The European Communities considers that the term "benefit" used here must be regarded as being synonymous with "favour" in the sense of "in favour of agricultural producers". Moreover, it is clear that by "measures directed at agricultural processors" the negotiators intended subsidies which were paid to processors, where the benefit went to the agricultural producer. Consequently, in light of the broad definition of "domestic support" and the specific reference to domestic content subsidies in paragraph 7 of Annex 3, the European Communities considers that a Member is entitled to maintain domestic content subsidies consistently with the *Agreement on Agriculture*.

29. Second, in response to the Panel's question, the effect of finding that domestic content subsidies are provided consistently with the *Agreement on Agriculture* would be that they cannot be found inconsistent with either Article 3.1(b) of the *SCM Agreement* or Article III.4 GATT 1994. Article 21.1 of the *Agreement on Agriculture* states that "the provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the

[19] Paras. 34 to 38 of the EC's Oral Statement (as delivered). The Panel's reference to para. 32 corresponds to the text provided at the third party session.

[20] In terms of negotiating background, it may be useful to the Panel to note that paragraph 7 of Annex 3 was subject to negotiation during the period in which a Panel had ruled that the EC's payments to oilseed processors was not covered by Article III.8(b) GATT 1947 and were consequently inconsistent with Article III.4 GATT 1947 (*European Economic Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins* Report of the Panel (L/6627 BISD 37S/86) adopted on 25 January 1990. That the negotiators retained this text must therefore be considered as a clear sign that they intended to permit Members to maintain such subsidies, subject to reduction commitments, in the *Agreement on Agriculture*.

provisions of this Agreement." As the European Communities pointed out in its oral statement, this means that provisions of the other Annex 1A Agreements are "subordinated" to the *Agreement on Agriculture*.[21]

30. To find that such subsidies were inconsistent with either Article 3.1(b) of the *SCM Agreement* or Article III.4 GATT would be to subordinate the right to provide such domestic content subsidies under the *Agreement on Agriculture* to the *SCM Agreement* or GATT 1994. Such an interpretation directly contradicts Article 21.1 of the *Agreement on Agriculture*.

31. Indeed, it can be pointed out that applying Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT to domestic content subsidies provided consistently with the *Agreement on Agriculture* would lead to stricter disciplines being applied to domestic subsidies for agriculture than are applicable to domestic subsidies for industrial goods. If Article 3.1(b) and Article III.4 were to apply, domestic subsidies for agricultural products would be subject to reduction commitments and Article 3.1(b) *SCM Agreement* and Article III.4 GATT. However, domestic subsidies for industrial products are not subject to reduction commitments. Since the *Agreement on Agriculture* establishes "a basis for initiating a process of reform of trade in agriculture", it would seem contradictory to find that domestic support for agriculture is in fact subject to stricter obligations than domestic support for other industries. This explains the "subject to" language of Article 21.1 of the *Agreement on Agriculture*. Article 21.1 and the *Agreement on Agriculture* more generally can also be compared with the other sectoral agreement included in Annex 1A of the WTO Agreement. The *Agreement on Textiles and Clothing* explicitly provides, in its Article 9, that the textiles and clothing sector is to be fully integrated into the GATT 1994. The *Agreement on Agriculture* has no such language, and Article 21.1 runs directly counter to this notion. It cannot be lightly assumed that the negotiators, while providing for the possibility to maintain domestic content subsidies, intended that such subsidies also be subject to rules which effectively makes it impossible to maintain such subsidies.[22]

32. The Panel should therefore reject Brazil's arguments that domestic content subsidies granted in favour of agricultural producers can be found to be inconsistent with Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT 1994.

**Australia's response**

> Australia does not consider that the phrase "provide support in favour of domestic producers" in Article 3.2 of the *Agreement on Agriculture* permits subsidies contingent upon the use of domestic goods.
>
> In Australia's view, the legal issue in question relates to the condition attached to the grant of a subsidy, not the grant of a subsidy *per se* or who might benefit from the subsidy. The fact that a measure may benefit an agricultural producer ("support in favour of domestic producers") does not serve to override measures otherwise prohibited.
>
> Article 21.1 of the *Agreement on Agriculture* provides that "[t]he provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the provisions of this Agreement". Article 3.1 of the *SCM Agreement* applies "[e]xcept as provided in the Agreement on Agriculture". The General Interpretive Note to Annex 1A of the *Marrakesh Agreement Establishing the World Trade Organization* also

[21] Oral Statement, para. 38.

[22] See, in a similar sense, Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) ("European Communities – Hormones")*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, para. 165.

provides contextual guidance. Pursuant to that Note, the *Agreement on Agriculture* would prevail to the extent of any conflict with GATT 1994.

However, in the case of subsidies contingent upon the use of domestic goods, there is no conflict between either the *Agreement on Agriculture*, which *inter alia* disciplines the amounts of domestic support in favour of domestic producers which distorts trade and production, and the *SCM Agreement* or GATT 1994, which discipline or prohibit certain conditions attached to subsidies, including subsidies in favour of agricultural producers (subject only to the provisions of Article III:8(b) of GATT 1994). There is no provision in the *Agreement on Agriculture* which provides for an exception to, or cover for, local content conditions attached to the grant of a subsidy.

Australia has already noted[23] that Article 13(b)(ii) does not exempt non-"green box" domestic support measures from actions based on Article 3 of the *SCM Agreement*. Neither does Article 13 anywhere refer to GATT Article III:4. Nor with regard to these Articles is there any provision comparable to Articles 5 and 12 of the *Agreement on Agriculture*. As stated in the preambular clauses of the *Agreement on Agriculture*, the "long-term objective is to provide for substantial progressive reductions in agricultural support and protection": it is not intended to provide for a weakening of disciplines, particularly when such disciplines are not specifically mentioned.

Australia also notes that the domestic support provisions of the *Agreement on Agriculture* provide for a strengthening and elaboration of the provisions of Article XVI of GATT 1994. They are not directed towards a diminution of basic GATT obligations. National treatment is central to the multilateral trading system. It is inconceivable to Australia that the negotiators of the *Agreement on Agriculture* would, as part of a reform program designed to strengthen disciplines, agree to weaken national treatment disciplines.

However, in the event the Panel were to consider that the phrase "provide support in favour of domestic producers" refers to and/or permits subsidies contingent upon the use of domestic goods, Australia notes that such support could be permitted only to the extent that the support was actually passed through to the producers of the basic agricultural product.

**New Zealand's Response**

New Zealand does not agree that a right to provide subsidies contingent upon the use of domestic products contrary to Article 3 of the *SCM Agreement* can be found in the requirement that subsidies "directed at agricultural producers … to the extent that they benefit producers of the basic agricultural product" be included in the calculation of AMS. There is no basis for reading such a right into the *Agreement on Agriculture*. To do so would allow the possibility for exemption from action under the *SCM Agreement* to exist other than by virtue of the peace clause. The peace clause explicitly does not provide such exemption from action under Article 3 of the *SCM Agreement* when it quite clearly could have done so. In New Zealand's view that indicates that there was no intention on the part of the drafters that domestic support measures, whether they conform with Article 6 of the *Agreement on Agriculture* or not, should be so exempt. The same is true in respect of *GATT 1994* Article III:4 claims.

[23] Oral Statement by Australia, paragraphs 29-30.

**EC Comments**

33. Australia confuses legal issues. Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT concern *inter alia* the conditions under which subsidies may be granted. The *Agreement on Agriculture* provides a right, up to a specified limit, to provide support to domestic producers, irrespective of the manner in which such support is provided. That is, a Member is entitled to provide support up to the limits and to do so in any form. Paragraph 3.7 of Annex 3 makes it clear that a Member is entitled to include in its support subsidies granted to processors which benefit agricultural producers. A Member thus has a right to provide support in the form of payments to its agricultural producers. This right conflicts with the prohibition in Article 3.1(b) of the *SCM Agreement* and Article III.4 GATT.

34. The European Communities fails to see the relevance of Article XVI GATT to this issue. Moreover, it is inaccurate of Australia to suggest that interpreting the *Agreement on Agriculture* in this manner would result in a weakening of obligations. Australia conveniently ignores that, in placing absolute limits on the amount of domestic support which a Member may provide, WTO Members agreed to impose stricter disciplines on domestic support for agriculture than that applicable to domestic subsidies for industrial products.

35. New Zealand's argument rests on the conception that it is only Article 13 (the peace clause) which regulates the interface between the *Agreement on Agriculture* and the other Annex 1A Agreements. As Australia points out, Article 21.1 *Agreement on Agriculture* is clearly relevant, as is the General Interpretative Note to Annex 1A. New Zealand's unsubstantiated argument does not stand.

# ANNEX J-12

## REPLIES FROM ARGENTINA TO PANEL'S QUESTIONS

27 October 2003

A. QUESTIONS TO INDIVIDUAL THIRD PARTIES

**Q43. Please elaborate, citing figures, on your statement that polyester fibre prices actually follow cotton prices. Argentina**

1. Argentina submits that the explosion in the production of synthetic fibres played no part in the fall in international cotton prices; in fact, the contrary appears to have occurred.[1]

2. The "Fibre Prices" table in paragraph 23 of the Further Submission of the United States shows that polyester prices have always been lower than cotton prices (see the columns "US mill" and "US spot" as compared to "Asia poly") and, moreover, they appear to follow cotton prices. Thus, for example, in 1995, when cotton prices reached their record level for the series, polyester prices happened to follow the same trend, precisely at a time when the price of oil was practically at its lowest for the period under consideration.

3. Another example is the period from 2000 to 2002: while the price of oil was at its highest, the price of polyester reached its low point for the period under consideration, having "accompanied" the very low cotton prices.

4. Attached hereto as Annex ARG-1 is a graph comparing the evolution of cotton prices (US mill and US spot) with that of polyester fibre prices (Asian poly)[2] and with the price of oil per barrel (West Texas)[3], clearly reflecting a very close correlation between cotton and polyester prices.

5. On the other hand, the last few years do not show any correlation between the price per barrel of oil and the price of polyester fibres, which shows that polyester has had to adapt to cotton prices in order to remain competitive, and not the reverse as the United States claims.

B. QUESTIONS TO ALL THIRD PARTIES

**Q49. What is the meaning and effect of the introductory phrase of Article 3 of the SCM Agreement ("Except as provided in the *Agreement on Agriculture* ...")?**

6. The introductory phrase of Article 3 of the SCM Agreement ("*Except as provided in the Agreement on Agriculture* ...") means that the provisions of that Article apply to agricultural subsidies to the extent that they do not conflict with the Agreement on Agriculture (AoA). The phrase "*except as provided* ..." does not necessarily imply that there is a conflict between the two Agreements.

7. In this connection, Argentina replied to question 40 of the Panel to the third parties, stating that no provision could be found in the AoA that conflicted with Article 3.1(b) of the SCM Agreement. Indeed, the AoA does not contain any provision which explicitly permits the granting of

[1] Second oral third party submission by Argentina, 8 October 2003, paragraphs 15-17.
[2] Source: Further submission of the United States, "Fibre Prices" table, paragraph 23.
[3] Source: Argentine Oil and Gas Institute (IAPG).

"subsidies contingent, whether solely or as one of several other conditions, on the use of domestic over imported products."

8. It is therefore Argentina's understanding that since they are prohibited under Article 3.1(b) of the SCM Agreement, and since there is no specific provision in the AoA that is explicitly mentioned in the introductory phrase of Article 3 of the SCM Agreement, subsidies contingent on the use of domestic over imported goods are also prohibited under the AoA.

9. Likewise, Argentina pointed out in its comments on the reply by the European Communities to question 40 from the Panel that the rules of the AoA, on the one hand, and of the GATT 1994 and the SCM Agreement, on the other, contained disciplines that were applied together, unless there was a discrepancy or "conflict" between the different provisions.[4]

**Q50. According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the *Agreement on Agriculture*?**

10. The impact will depend on the Panel's finding on the preliminary issue raised with respect to the Peace Clause. If the Panel finds, as Argentina maintains, that the United States does not qualify for protection under Article 13 of the AoA, the expiry date of the Peace Clause will be entirely irrelevant.

11. If after 31 December 2003 the Panel should decide not to rule on the substantive claims, this would affect Brazil's right to due process by depriving it, on the basis of rules which are no longer in force, of the right to a finding that would settle of the dispute as to whether or not the subsidies were consistent. Thus, Brazil would be deprived of a positive settlement of the dispute.

**Q51. How should the concept of specificity - and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" - in Article 2 of the *SCM Agreement* apply to subsidies in respect of agricultural commodities? Please answer the following questions citing the principles in Article 2 of the *SCM Agreement*:**

**(a) Is a subsidy in respect of all agricultural, but not other, products specific?**

12. Yes.

**(b) Is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?**

13. Yes.

**(c) Is a subsidy in respect of certain identified agricultural products specific?**

14. Yes.

[4] As already stated, "[t]he conditions for the existence for a conflict between two rules was clarified by the Appellate Body in the *Guatemala – Cement case* (WT/DS60/AB/R, paragraph 65), where it is determined that there is a conflict between two provisions if adherence to one provision leads to a violation of the other. In the case before us, in order to determine whether a rule in the GATT 1994 or in an Agreement in Annex 1A (Article 3.1(b) of the ASCM in this particular case) does not apply, it must first be determined whether there is an inconsistency or discrepancy with a provision of the AoA. In other words, these rules must be applied together." (Comments by Argentina on the reply by the European Communities to question 40 from the Panel to the third parties).

**(d) Is a subsidy in respect of upland cotton, but not other products, specific?**

15. Yes.

**(e) Is a subsidy in respect of certain proportion of the value of total US commodities (or total US agricultural commodities) specific?**

16. Yes.

**(f) Is a subsidy in respect of certain proportion of total US farmland specific?**

17. Yes.

18. Argentina stresses that the concept of "specificity" in Article 2 of the SCM Agreement is very broad, since it refers to the subsidies for an enterprise or an industry or group of enterprises or industries.

19. From the standpoint of the SCM Agreement, agricultural subsidies are specific within the meaning of Article 2, since they are not available for all products. The mere fact that they are "agricultural" precludes any interpretation that they are not specific.

20. As regards the principle of Article 2.1, agricultural subsidies comply with the requirements of each one of its indents:

- Indent (a), because not all of the enterprises of a Member have access to subsidies under the AoA;
- indent (b), because there is no automatic eligibility for the subsidies under the AoA, nor are they based on objective criteria such as those listed in footnote 2 to Article 2, since they benefit the producers of certain products – in the case in point, those included in Annex I of the AoA;
- indent (c), because a subsidy for an agricultural product complies with all of the requirements of the first sentence thereof. As regards the second sentence of indent (c), there is no evidence for including an agricultural subsidy under any of these factors.

As to the specific case of export subsidies, Article 2.3 reaffirms their specificity. Having already pointed out that specificity is established under Article 2.1 and 2.3, there is no need to address the principle in Article 2.2.

21. Generally speaking, it should be borne in mind that in addition to the principles laid down in indents (a) and (b) of Article 2.1 for determining whether a subsidy is specific, indent (c) stipulates that in case of doubt as to the specificity of a subsidy, a number of other factors should be considered. In Argentina's view, this implies that the intention of the drafters of the Agreement was that the concept of "specificity" should be as comprehensive as possible.

**Q52. The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the *SCM Agreement*. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the *SCM Agreement* to withdraw the subsidy without delay, can the Panel:**

**(a) Also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel?**

22. In Argentina's view, if the Panel were to conclude that a subsidy was prohibited and to make a recommendation – under Article 4.7 of the SCM Agreement – to withdraw the subsidy without delay, it could nevertheless also conclude that the same subsidy had resulted in adverse effects to the interests of another Member and make the same recommendation to withdraw the subsidy under Article 7.8 of the SCM Agreement.

23. Indeed, bearing in mind that we are speaking of two different claims, the value of such a conclusion would be to have made *"an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and ... such other findings as will assist the DSB in making recommendations or in giving the rulings provided for in the covered agreements"*, in conformity with Article 11 of the DSU.

24. For the reasons set forth above and as stated throughout these proceedings, Argentina requests the Panel to issue the findings and recommendations requested by Brazil, including those related to the Step 2 and GSM 102 programmes which, under Article 4.7 of the SCM Agreement, must be withdrawn without delay. Likewise, the Panel should also make a recommendation that the United States take appropriate steps to remove the adverse effect of those programmes under Article 7.8 of the SCM Agreement.

**(b) Take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the *SCM Agreement*?**

25. In Argentina's view, if the Panel concludes that there were prohibited subsidies, it should recommended – under Article 4.7 of the SCM Agreement – that they be withdrawn without delay, without prejudice to taking into account the effects of the interaction of those prohibited subsidies with other actionable subsidies.

26. Taking into account the effects of the said interaction is extremely important to determining causation under Article 5 of the SCM Agreement. Indeed, as already stated[5], Argentina considers that it is the collective impact of all the US subsidies that has effects on the cultivated area, production, exports and prices, notwithstanding the fact that the mere elimination of a prohibited subsidy would not necessarily put an end to the adverse effects of the other actionable subsidies.

**Q53. Would a finding of serious prejudice under Article 5(c) of the *SCM Agreement* be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the *SCM Agreement* in this context?**

27. A finding of serious prejudice under Article 5(c) of the SCM Agreement is determinative for a finding under Article XVI:1 of the GATT 1994, since that Article orders the contracting party granting the subsidy to consider the possibility of limiting it *"*[*i*]*n any case in which it is determined that serious prejudice to the interests of any other contracting party is caused or threatened by such subsidization …"*. In other words, if it is determined that a subsidy causes or threatens to cause serious prejudice under Article 5(c) of the SCM Agreement, it necessarily calls for a finding of violation of Article XVI:1 of the GATT 1994.

[5] Second oral third party submission by Argentina, 8 October 2003, paragraph 33.

28. In this connection, footnote 13 of the SCM Agreement, which states that *"the term 'serious prejudice to the interests of another Member' is used in this Agreement in the same sense as it is used in paragraph 1 of Article XVI of GATT 1994, and includes threat of serious prejudice"*, clearly establishes the link between the two provisions.

**Q54. Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevance is this, if any, to Brazil's actionable subsidy claims?**

29. Argentina has no evidence that US cotton producers are unable to cover their fixed and variable costs without subsidies.

30. What Argentina has repeatedly stated – referring to the evidence submitted by Brazil during these proceedings – is that the US cotton producers cannot bridge the gap between total production costs (i.e. the sum of fixed and variable costs) and market prices for cotton without subsidies.

31. Argentina has pointed out that cotton production costs in the United States are among the highest in the world.[6] According to an ICAC study[7], the cost of production in the United States was US$0.81 per pound of cotton in the marketing year 1999[8], while US producers' market prices fell from US$0.60 to US$0.30 per pound.

32. Argentina also stated that the only possible explanation how the United States bridged this widening gap between production costs and market prices is subsidies, since without them many US producers would have been compelled to cease production (in spite of the fact that they would eventually have been able to cover their fixed and variable costs).

33. This fact, that without subsidies US cotton producers could not have bridged the gap between their total production costs and market prices, is entirely relevant to Brazil's claims, since it shows that as a result of the subsidies, less efficient US producers are immune to changes in market prices. In other words, without the US subsidies which generate a world market surplus, international cotton prices would have been higher or would not have fallen as much.

34. This confirms both the actual serious prejudice and the threat of serious prejudice caused by the subsidies, in that future subsidies will be as necessary as the current ones for US producers to bridge the gap between market prices and their total production costs.[9] This will enable them to continue competing with more efficient third-country producers, especially considering that the USDA itself forecasts an increase in total production costs.[10]

**Q55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) (*"another Member"*) for the purposes of these proceedings?**

---

[6] Third party submission by Argentina, 15 July 2003, paragraphs 17 and 18.

[7] Cotton: World Statistics, Bulletin of the International Cotton Advisory Committee, September 2002 (Annex BRA-9).

[8] As stated by Brazil in its first submission to the Panel of 24 June 2003, paragraph 32, according to the ICAC study the cost of production in Argentina averaged 59 cents per pound of cotton (See Annex BRA-9).

[9] Second written third party submission by Argentina, 3 October 2003, paragraph 49.

[10] See Annexes BRA-7 (ERS Data: Commodity Costs and Returns); BRA-257 ("Cost of Farm Production Up in 2003", USDA, 6 May 2003) and BRA-82 ("USDA Agricultural Baseline Projections until 2012", USDA, February 2003, p.48).

35. The concept of "another Member" within the meaning of Article 6.3(c) covers Argentina, which indeed submitted claims relating to the price effect of US subsidies.

36. Notwithstanding, Argentina is aware that in these proceedings, it is Brazil that brought the case and requested consultations and the establishment of this Panel. At the same time, Argentina – which has also suffered serious prejudice – felt that it was appropriate to ask to be joined in the consultations, participated actively in them and raised a number of issues, as well as asking to join as a third party and presenting, in its submissions, arguments relating to price effect.

37. As stated throughout these proceedings, it is in Argentina's interest that the Panel should issue the findings and recommendations requested by Brazil, since this would mean that, in conformity with Article 7.8 of the SCM Agreement, the United States would have to *"take appropriate steps to remove the adverse effects or … withdraw the subsidy"*.

38. This interest on the part of Argentina is based on the conviction that if the Panel were to issue such findings and recommendations, the elimination of the adverse effects or the withdrawal of the subsidies would have a favourable impact on the international price of cotton – indeed, without the US subsidies which generate a world market surplus, international cotton prices could be higher or could fall less. Similarly, if its share in the world market were not increased as a result of the subsidies, the international price of cotton would be higher or would not be so low, and as a result, third party producers, including Argentina, would not suffer as much prejudice as a result of artificially depressed prices.[11]

39. As already stated, an increase in the world cotton price would be significant – even if as a result of the subsidies the suppression or depression of international prices amounted to only 1 cent per pound – since it would enable countries like Argentina to recover their competitive position in the world cotton market.[12]

[11] Second oral third party submission by Argentina, 8 October 2003, paragraph 10.

[12] Second written third party submission by Argentina, 3 October 2003, paragraphs 34 to 36, and second oral third party submission by Argentina, 8 October 2003, paragraph 38.

## RESPONSES BY AUSTRALIA

27 October 2003

A. QUESTIONS TO INDIVIDUAL THIRD PARTIES

43. …

44. …

45. …

46. …

47. …

48. …

B. QUESTIONS TO ALL THIRD PARTIES

**Q49. What is the meaning and effect of the introductory phrase of Article 3 of the SCM Agreement ("Except as provided in the Agreement on Agriculture …")?**

Reply

In Australia's view, with regard to subsidies for agricultural products, unless the *Agreement on Agriculture* makes express provision to the contrary, Article 3 of the *SCM Agreement* continues to apply to such subsidies. The simultaneous application of both Agreements to agricultural products is confirmed by Article 21.1 of the *Agreement on Agriculture.*

Australia noted previously in its response to the Panel's earlier question 40 that the legal issue in question concerning the relationship between the *Agreement on Agriculture* and Article 3.1(b) of the *SCM Agreement* derives from the condition attached to the grant of a subsidy, not the grant of a subsidy *per se* or who might benefit from the subsidy. The *Agreement on Agriculture* does not include any provisions concerning the conditionality of domestic support in the sense of SCM Article 3.1(b).

Moreover, the *Agreement on Agriculture* does not confer a right to grant subsidies. Rather, that Agreement establishes disciplines for the use of certain subsidies in relation to agricultural products should a Member choose to provide subsidies for such products. Arguments that the *Agreement on Agriculture* allows local content subsidies based on the phrase "support in favour of domestic producers" and similar phrasing and the provisions of paragraph 7 of Annex 3 of that Agreement are not sustainable. The word "support" is used throughout the *Agreement on Agriculture* in the sense of generic measures providing a calculable financial advantage to agricultural producers, whether price support, direct subsidy payments or any other means not exempted from a Member's commitment to reduce domestic support. Indeed, Annex 3 is headed "Domestic Support: Calculation of Aggregate Measurement of Support".

It is inconceivable to Australia that any intended exemption from the very significant and unambiguous local content subsidy disciplines of Article 3.1(b) of the *SCM Agreement* would not have been expressly set out in the *Agreement on Agriculture*. The inclusion of express provisions concerning export subsidies in the *Agreement on Agriculture* indicates that the negotiators of that Agreement were well aware of the need to include express provisions if additional or alternative disciplines concerning subsidies for agricultural products were intended vis-à-vis the disciplines established pursuant to the *SCM Agreement*.

The situation is analogous to that examined by the Panel and the Appellate Body in *EC – Bananas* wherein the Appellate Body upheld the Panel's conclusion that the *Agreement on Agriculture* did not permit the EC to act inconsistently with Article XIII of GATT 1994 in the absence of any provisions dealing specifically with the allocation of tariff quotas on agricultural products.[1] In the absence of provisions dealing specifically with local content subsidies in the *Agreement on Agriculture*, that Agreement does not allow a Member to act inconsistently with the *SCM Agreement*. The fact that the phrase "[e]xcept as provided in the Agreement on Agriculture" in the chapeau of SCM Article 3.1 also applies to paragraph (b) of that Article cannot of itself compel the interpretation that there are provision(s) of the *Agreement on Agriculture* which necessarily apply.

The Panel may not interpret the provisions of the *SCM Agreement* and the *Agreement on Agriculture* so as to diminish or override fundamental WTO obligations in the absence of express provisions to that effect. To do so would constitute, in Australia's view, a misapplication of the customary rules of interpretation of public international law.

**Q50. According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the Agreement on Agriculture?**

Reply

In Australia's view, whether the date the Panel's report will be issued to the parties to the dispute will have any impact on any "exempt[ion] from actions" under Article 13(b)(ii) of the *Agreement on Agriculture* will depend on whether the Panel finds that the United States is granting, through domestic support measures that conform fully to the provisions of Article 6 of that Agreement, support to a specific commodity in excess of that decided during the 1992 marketing year. If the Panel finds that the United States is granting support to a specific commodity in excess of that decided during the 1992 marketing year, the United States will have no "exempt[ion] from actions" pursuant to Article 13(b)(ii), irrespective of when the Panel's report is issued. If the Panel finds that the United States is not granting such support to a specific commodity in excess of that decided during the 1992 marketing year, the United States may be "exempt from actions" pursuant to Article 13(b)(ii) until Article 13 expires.

**Q51. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" – in Article 2 of the SCM Agreement apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the SCM Agreement:**

**(a) is a subsidy in respect of all agricultural, but not other, products specific?**

**(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?**

[1] *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, Report of the Appellate Body, WT/DS27/AB/R, paragraphs 153-158.

**(c) is a subsidy in respect of certain identified agricultural products specific?**

**(d) is a subsidy in respect of upland cotton, but not other products, specific?**

**(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?**

Reply

Australia does not wish to comment on this issue.

**Q52. The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the SCM Agreement. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the SCM Agreement to withdraw the subsidy without delay, can the Panel:**

**(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel?**

**(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the SCM Agreement?**

Reply

If the Panel were to conclude that a subsidy was prohibited and to make a recommendation under Article 4.7 of the *SCM Agreement* to "withdraw the subsidy without delay", and having regard to the presumption of adverse effects implicit in a finding that a subsidy is prohibited and to the observations of the Appellate Body on the meaning of "withdraw" in SCM Article 4.7[2]:

(a) the Panel could conclude that the same subsidy had also resulted in adverse effects to the interests of another Member under SCM Article 5, particularly if that other Member were a third party to the dispute in light of the provisions of Article 10.1 of the DSU;

(b) the Panel could also consider the interaction of that prohibited subsidy with other, allegedly actionable subsidies. However, the prohibited subsidy would be required to be withdrawn without delay and thus any causative contribution its interaction with other allegedly actionable subsidies may make to the adverse effects of those other actionable subsidies will be removed as a consequence of the withdrawal of the prohibited subsidy.

**Q53. Would a finding of serious prejudice under Article 5(c) of the SCM Agreement be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the SCM Agreement in this context?**

Reply

Australia does not wish to comment on this issue.

[2] *Brazil – Export Financing Programme for Aircraft*, Recourse by Canada to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS46/AB/RW, paragraph 45.

**Q54. Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevance is this, if any, to Brazil's actionable subsidy claims?**

Reply

Australia does not wish to comment on the facts of US costs of production in relation to upland cotton, but notes the statements of the Appellate Body in relation to the calculation of costs of production in the *Canada – Dairy* dispute.[3]

**Q55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("another Member") for the purposes of these proceedings?**

Reply

Australia does not wish to comment on this issue.

**Q56. Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the Agreement on Agriculture and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5(c) and 6.3(d) of the SCM Agreement.**

**(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on export subsidies" (emphasis added)) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions, of the Agreement on Agriculture, relevant?**

**(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the SCM Agreement, or in any other provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in US – FSC, para. 117 here?**

**(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the SCM Agreement and the prohibition on subsidies contingent upon export in Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 were negotiated?**

Reply

In Australia's view, it is unambiguous that agricultural domestic support programmes are challengeable under Article XVI:3 of GATT 1994.

It is useful to recall to begin with that GATT 1947 did not provide a definition of a "subsidy" or of an "export subsidy" and that the only disciplines on subsidies of any type were the general subsidy disciplines of paragraph 1 of GATT Article XVI. The provisions of Section B of GATT Article XVI, comprising paragraphs 2-5 and headed "Additional Provisions on Export Subsidies", were added at the 1954-55 Review Session and constituted the earliest disciplines directed at "the use

[3] *Canada – Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, Recourse to Article 21.5 of the DSU by New Zealand and the United States, WT/DS103/AB/RW – WT/DS113/AB/RW, paragraphs 94-96, and Second Recourse to Article 21.5 of the DSU by New Zealand and the United States, WT/DS103/AB/RW2 – WT/DS113/AB/RW2, paragraphs 91-120.

of subsidies on the export of primary products". The plurilateral 1979 Tokyo Round Subsidies Code[4] represented a further stage in the elaboration of disciplines on export subsidies and subsidies generally, in particular, Articles 8-11and the Annex. This background is helpful in understanding the evolution of the use of terminology originally found in GATT Article XVI and the relationship between provisions of the covered agreements as they exist today.

In relation to the use of subsidies on the export of primary products, the substantive discipline established by Article XVI:3 of GATT 1994 was that:

> "[i]f a contracting party grants directly or indirectly any form of subsidy which operates to increase the export of any primary product from its territory, such subsidy shall not be applied in a manner which results in that contracting party having more than an equitable share of world export trade in that product, account being taken of the shares of the contracting parties in such trade in the product during a previous representative period, and any special factors which may have affected or may be affecting such trade in the product".

Thus, the key discipline established by Article XVI:3 of GATT 1994 is that a subsidy that has the effect of increasing a Member's exports of a primary product must not be applied so as to result in that Member having more than an equitable, that is, a "just" or "fair",[5] share of world export trade in that primary product. GATT Article XVI:3 was elaborated by Article 10.1 and 10.2 of the later plurilateral Tokyo Round Subsidies Code, but these provisions were not carried forward to, and incorporated as such, in the *SCM Agreement*.

Notwithstanding the heading of Section B of GATT Article XVI, that discipline is distinct from the export subsidy disciplines later incorporated in Article 3.1(a) of the *SCM Agreement*. In particular, GATT Article XVI:3 is concerned with the effects rather than the conditions of a subsidy's grant.

Moreover, the discipline established by Article XVI:3 of GATT 1994 is distinct from the discipline established by Article 6.3(d) of the *SCM Agreement*, which relates to whether the effect of a subsidy is to increase a Member's world market share compared to the previous three-year average share. At the same time, there may be substantial commonality of facts in demonstrating non-compliance with either provision. Further, both GATT Article XVI:3 and SCM Article 6.3(d) must be applied within the same contextual framework of "serious prejudice" established by GATT Article XVI:1, and SCM Article 5(c) and its footnote.

The GATT Article XVI:3 discipline is also distinct from the disciplines established by other provisions of the covered agreements.

The Appellate Body has previously noted that the *WTO Agreement* was accepted by WTO Members as a "single undertaking".[6] The Appellate Body has also said:

> The relationship between the GATT 1994 and the other goods agreements in Annex 1A is complex and must be examined on a case-by-case basis. Although the provisions of the GATT 1947 were incorporated into, and became a part of the GATT

[4] *Agreement on Interpretation and Application of Articles VI, XVI and XXIII of the General Agreement on Tariffs and Trade*, BISD 26S/56.

[5] *The New Shorter Oxford English Dictionary*, Ed. Lesley Brown, Clarendon Press, Oxford, 1993, Volume 1, 843.

[6] For example, *Brazil – Measures Affecting Desiccated Coconut*, Report of the Appellate Body, WT/DS22/AB/R, page 13.

> 1994, they are not the sum total of the rights and obligations of WTO Members concerning a particular matter. For example, with respect to subsidies on agricultural products, Articles II, VI and XVI of the GATT 1994 alone do not represent the total rights and obligations of WTO Members. The *Agreement on Agriculture* and the *SCM Agreement* reflect the latest statement of WTO Members as to their rights and obligations concerning agricultural subsidies. The general interpretative note to Annex 1A was added to reflect that the other goods agreements in Annex 1A, in many ways, represent a substantial elaboration of the provisions of the GATT 1994, and to the extent that the provisions of the other goods agreements conflict with the provisions of the GATT 1994, the provisions of the other goods agreements prevail. This does not mean, however, that the other goods agreements in Annex 1A, such as the *SCM Agreement*, supersede the GATT 1994. …"[7] (emphasis added)

In the absence of a conflict between the provisions of Article XVI:3 of GATT 1994 and Article 6.3(d) of the *SCM Agreement* or any other provisions of the covered agreements such that the General Interpretative Note to Annex 1A of the *WTO Agreement* becomes operative, GATT Article XVI:3 continues to apply. In Australia's view, the Appellate Body report in *US – FSC*, paragraph 117, does not affect the interpretation of the relationship between these provisions other than in the sense of confirming that the relationship must be determined on the basis of the texts of the relevant provisions as a whole.

The continued applicability of Article XVI:3 of GATT 1994 is confirmed by Article 13 of the *Agreement on Agriculture*. The exemption from action pursuant to AA Article 13(b)(ii) is only applicable in respect of paragraph 1 of GATT Article XVI, whereas the exemption from action pursuant to AA Article 13(c)(ii) is applicable to the whole of GATT Article XVI. Had the negotiators of the *WTO Agreement* believed that GATT Article XVI:3 had become redundant, they would not have expressly distinguished between the paragraphs of GATT Article XVI in AA Article 13 as they did. Moreover, Australia believes its view is fully consistent with the provisions of Article 21.1 of the *Agreement on Agriculture* and with the nature of the *WTO Agreement* as a whole as a "single undertaking".

Further, the distinction between the provisions of Article XVI of GATT 1994 in Article 13(b)(ii) and 13(c)(ii) of the *Agreement on Agriculture* is entirely consistent with the object and purpose of the *Agreement on Agriculture*, including as expressed in the third preambular paragraph that the "long-term objective is to provide for substantial progressive reductions in agricultural support and protection sustained over an agreed period of time, resulting in correcting and preventing restrictions and distortions in world agricultural markets". It would be directly contrary to that objective if WTO Members were able, albeit otherwise consistently with the domestic support provisions of the *Agreement on Agriculture*, nonetheless to arrange their domestic support payments so as to achieve an inequitable share of the world export market in a particular primary product.

# ANNEX J-14

## RESPONSES OF BENIN AND CHAD TO THE PANEL'S QUESTIONS

27 October 2003

Benin and Chad would offer the following responses to those Panel questions that pertain to the scope of their Third Party Submissions:

**"44. Please explain how Articles 5 and 6 of the *SCM Agreement* and Article XVI of the GATT 1994 would permit or require the Panel to take account of any effects of the subsidies in question on the interests of Members other than the complaining party. Benin and Chad."**

Brazil is the sole complaining party in this dispute, and ultimately only Brazil would have the right to any remedy provided by the SCM Agreement. However, Benin and Chad submit that the Panel is nevertheless required to take account of the effects of the US subsidies on the interest of Members other than the complaining Member, for the following reasons.

First, the chapeau of Article 5 states that "[n]o Member should cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members". The drafters of Article 5 referred to "Members" in the plural, connoting an obligation on behalf of the subsidizing Member not to cause adverse effects to the interests of all WTO Members – not just the complaining Member.

Second, when the drafters of the SCM Agreement intended to refer only to the "complaining Member", they used this term specifically, such as in Article 6.7, or in paragraph 2 of Annex V. They could similarly have used the term "complaining Member" elsewhere in Articles 5 and 6, but they did not. Therefore, the term "other Members" cannot be interpreted as synonymous with "complaining Members", just as the term "another Member" cannot be read as limited only to the "complaining Member". The treaty interpreter must give meaning to the terms actually used in the text.[1]

Third, this interpretation is consistent with Article 3.8 of the DSU, which provides as follows:

> In cases where there is an infringement of the obligations assumed under a covered agreement, the action is considered *prima facie* to constitute a case of nullification or impairment. This means that there is normally a presumption that a breach of the rules has an adverse impact on other Members parties to that covered agreement, and in such cases, it shall be up to the Member against whom the complaint has been brought to rebut the charge. [emphasis added]

Article 3.8 refers to the "adverse impact" on "other Members" in the plural, referring to all WTO Members. Although the SCM Agreement provides special and additional rules for dispute settlement, these special rules have not ousted the application of DSU Article 3.8. Benin and Chad are "parties to [the] covered agreement", the SCM Agreement, and it can therefore be presumed that

[1] The textual analysis set out above applies equally to Article XVI:1 of the GATT 1994, which refers to the "other contracting party." (By virtue of paragraph 2(a) of the *Explanatory Notes to GATT 1994*, the references to "contracting party" are deemed to read "Member.") Article XVI:1 thus refers to the "other Member" and not the "complaining Member."

the breach of the SCM Agreement by the United States has an adverse impact on these two African countries.

In any event, the Panel need not rely exclusively on the presumption set out DSU Article 3.8, since Benin and Chad have already provided to the Panel detailed evidence about the adverse effects of US subsides on West and Central Africa. Benin and Chad also note the similarities in language between the SCM Agreement ("adverse effects") and DSU Article 3.8 ("adverse impact"). This reinforces the relevance and applicability of the latter provision.

Fourth, DSU Article 10.1, which deals with Third Parties, provides additional support for the position that the Panel should take into account the adverse effects on parties other than just the complaining party:

> The interests of the parties to a dispute and those of other Members under a covered agreement at issue in the dispute shall be fully taken into account during the panel process.

DSU Article 10.1 is not limited simply to allowing Third Parties to present their views. That is dealt with elsewhere, including in DSU Article 10.2, which grants to Third Parties the right "to be heard by the Panel". By contrast, DSU Article 10.1 is not limited to providing Third Parties with the right to present views. Instead, it mandates that the "interests" of the third parties shall be "fully taken into account".

Fifth, DSU Article 24.1 provides that "[a]t all stages… of dispute settlement procedures involving a least-developed country Member, particular consideration shall be given to the special situation of least-developed country Members". Benin and Chad are both least-developed countries. The "particular consideration" that must be extended to them goes beyond simply ensuring that their views are heard – as noted above, such procedural protections are provided for elsewhere in the DSU. Instead, Panels must give "particular consideration" to their "special situation". In the context of the present case, the "special situation" of Benin and Chad has been presented in some detail to the panel. Massive US cotton subsidies have had, and continue to have, a devastating impact on the fragile economies of West Africa, pushing hundreds of thousands of people from subsistence farming into absolute poverty. If DSU Article 24.1 has any meaning, this "special situation" of Benin and Chad must be given full, substantive consideration by the Panel.

Finally, Benin and Chad note that the serious prejudice caused to their economies has also been specifically raised before the Panel by one of the disputing parties, Brazil. As the Panel will recall, Part 7 of Brazil's Further Submission of 9 September 2003 is on "Serious Prejudice to the Interests of African Countries by Reason of the US Subsidies on Upland Cotton". This provides addition support for the position that the serious prejudice to Benin and Chad needs to examined by the Panel in assessing the WTO-consistency of the US subsidies.

**"55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("another Member") for the purposes of these proceedings? All third parties."**

As noted, the drafters of the SCM Agreement used the term "complaining Member" in other provisions of the Agreement. In Article 6.3(c), they chose the term "other Member" rather than "complaining Member." For the reasons set out above, Benin and Chad are of the view that Article 6.3(c) encompasses both the complainant, Brazil, as well as other WTO Members.

The Panel has before it substantial evidence about the effects of the US subsidies, including the significant price undercutting by US cotton compared with the price of the like products of Brazil,

Benin and Chad in world markets, as well as significant price suppression and price depression in world cotton markets. In assessing the WTO-consistency of the US subsidies, the Panel is required by the SCM Agreement to take this evidence into account.

# ANNEX J-15

## CANADA'S RESPONSES TO PANEL QUESTIONS TO THIRD PARTIES FIRST SUBSTANTIVE MEETING OF THE PANEL WITH THE PARTIES (RESUMED FIRST SESSION)

27 October 2003

Canada sets out responses to the questions of the Panel in which Canada has a systemic interest:

**49. What is the meaning and effect of the introductory phrase of Article 3 of the *SCM Agreement* ("Except as provided in the *Agreement on Agriculture*...")?**

Reply

The meaning and effect of this phrase is that Article 3 of the *SCM Agreement* applies *subject to* the export subsidy disciplines of the *Agreement on Agriculture*, which permit, in some instances and within certain limits, the granting or maintaining of subsidies that would otherwise be prohibited under the *SCM Agreement*.

**51. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" – in Article 2 of the *SCM Agreement* apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the *SCM Agreement*:**

Reply

Canada's answers assume that the phrase "in respect of" has the same meaning as the standard "is specific to" in Article 2.1 of the *SCM Agreement*. Based on the ordinary meaning of the phrase "is specific to", read in context and in light of the object and purpose of Article 2 and of the *SCM Agreement*, the specificity test is concerned with the actual availability of a programme. Analysis on availability may include an assessment of the manner in which a programme is used in the circumstances of a given case. The panel in *US – Softwood Lumber III* recently confirmed: "In our view, Article 2 SCM Agreement is concerned with the distortion created by a subsidy which either in law or in fact is not broadly available."[1] Moreover, a programme may be found either *de jure* or *de facto* specific, and either determination depends on the nature of the evidence relied upon.[2]

**(a) is a subsidy in respect of all agricultural, but not other, products specific?**

[1] *United States – Final Countervailing Duty Determination with respect to Certain Softwood Lumber from Canada*, Report of the Panel, WT/DS257/R, circulated 29 August 2003, para. 7.116.

[2] In this respect, a determination under Article 2 is similar to a determination under Article 3. The legal standard expressed by the phrase "is specific to" is the same for both *de jure* or *de facto* determinations; the only difference is the nature of the evidence relied upon. See *Canada – Measures Affecting the Export of Civilian Aircraft*, Report of the Appellate Body, WT/DS70/AB/R, adopted 20 August 1999, para. 167 ("In our view, the legal standard expressed by the word 'contingent' is the same for both *de jure* or *de facto* contingency. There is a difference, however, in what evidence may be employed to prove that a subsidy is export contingent.")

Reply

No. Canada shares the view of the United States in *United States – Continued Dumping and Subsidy Offset Act of 2000*, that, as a general matter, "all agriculture" is too broad to qualify as a "group of enterprises or industries" for specificity purposes.[3]

**(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?**

Reply

The answer will depend on the facts of a given case. A panel would have to consider, among other things, the number of enterprises or industries (based on standard industrial classification) within the jurisdiction of the granting authority that are actually eligible to receive the subsidy, and the level of diversification of the "all agricultural crops" universe. Furthermore, the answer would also depend on the nature of the measure in question and whether it excludes enterprises or industries that might otherwise be reasonably or practically included. For example, weather that may cause extensive damage to crops (e.g. hail, frost, excessive moisture, drought) may not cause any damage to livestock. Therefore, it may not be reasonable or practical to include livestock under a crop insurance programme. On the other hand, an income stabilization programme could reasonably or practically include both crops and livestock.

**(c) is a subsidy in respect of certain identified agricultural products specific?**

Reply

The answer will depend on the facts of a given case, including whether the eligible products involve only "an enterprise or industry or group of enterprises or industries" (based on standard industrial classification) under Article 2.1.

**(d) is a subsidy in respect of upland cotton, but not other products, specific?**

Reply

Yes.

**(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?**

Reply

Where a programme appears *de jure* non-specific under Articles 2.1(a) and (b), predominant use of a programme by "certain enterprises" (a defined term in Article 2.1) would indicate, in the absence of any other reasonable explanation, that the availability of the subsidy is limited in fact to such enterprises or industries under Article 2.1(c) and 2.4. Likewise, where a programme appears *de jure* non-specific under Articles 2.1(a) and (b), the granting of disproportionately large amounts of subsidy to certain enterprises would indicate, in the absence of any other reasonable explanation, that the availability of the subsidy is limited in fact to such enterprises or industries under Article 2.1(c) and 2.4. In both cases, any predominance or disproportionality should be measured over an

[3] *United States – Continued Dumping and Subsidy Offset Act of 2000*, Report of the Panel, WT/DS217/R, WT/DS234/R, adopted 27 January 2003, at para 4.1146.

appropriate period of time and in relation to the value of production in question as compared to the total value of all agricultural production.

**(f) is a subsidy in respect of a certain proportion of total US farmland specific?**

Reply

The answer will depend on the facts of a given case, including the proportion of total US farmland involved, whether that proportion involves "an enterprise or industry or group of enterprises or industries", and whether the programme "is specific to" (i.e., available only to) those enterprises or industries.

# ANNEX J-16

## RESPONSE BY CHINA TO THE PANEL'S QUESTIONS TO THIRD PARTIES

27 October 2003

1. China appreciates this opportunity to present its views again to the Panel in relation to the Panel's questions posed to third parties on October 13, 2003. Given the short period within which third parties are required to submit their views, China responds to and comments on the following underlined questions.

**2. Question 49. What is the meaning and effect of the introductory phrase of Article 3 of the *SCM Agreement* ("Except as provided in the *Agreement on Agriculture*…")? All third parties**

3. To answer this Panel's question, it is helpful to first look to the relationship between the *Agreement on Agriculture* and the *SCM Agreement*. Art. 21.1 of the *Agreement on Agriculture* provides:

> The provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the provisions of this Agreement [on Agriculture].

4. The Appellate Body, in *EC – Bananas III,* further clarified this article by stating that

> the provisions of GATT 1994, [and indeed 'other Multilateral Trade Agreements including the *SCM Agreement*, note added pursuant to Art. 21 of the *Agreement on Agriculture*], …, apply …, except to the extent that the *Agreement on Agriculture* contains specific provisions dealing specifically with the same matter".[1]

In other words, Art. 21.1 of the A*greement on Agriculture*, as interpreted by the Appellate Body, requires that in connection with a specific matter, the A*greement on Agriculture* prevails over the *SCM Agreement* to the extent that it has more specific provisions over the same matter covered by the *SCM Agreement*.

5. The introductory phrase of Art. 3 of the *SCM Agreement* again, in the matter of prohibited subsidies, grants deference to the *Agreement on Agriculture*. It reads:

> [E]xcept as provided in the *Agreement on Agriculture*, the following subsidies, within the meaning of Article 1, shall be prohibited.

Given that the *SCM Agreement* contains disciplines over all types of subsidies, including agricultural, and the *Agreement on Agriculture* imposes more specific disciplines over subsidies granted to agricultural commodities only, where such specificity of discipline can be established, the *Agreement on Agriculture* shall prevail pursuant to Article 3.1 of the *SCM Agreement*.

[1] Appellate Body Report, *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, DSR 1997:II, Para. 155.

6. Therefore, in line with Art. 21.1 of the *Agreement on Agriculture* past Appellate Body interpretation above and Art. 3.1 of the *SCM Agreement*, the *Agreement on Agriculture*, where it is more specific, shall *prevail* over provisions of the *SCM Agreement*.

**7. Question 50. According to its revised timetable, the Panel will issue its report to the parties after the end of 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the *Agreement on Agriculture*? All third parties**

8. China believes Article 13 continues to be applicable to the current case even after it ceases to be in effect.

9. Art. 13 of the *Agreement on Agriculture* protects subsidy measures otherwise prohibited or actionable under the *SCM Agreement* during the nine-year implementation period commencing in 1995. Unless agreed otherwise amongst Members, Article 13 will expire in 2004.

10. Art. 70 of the *Vienna Convention on the Law of Treaties*, in dealing with the consequences of the termination of a treaty, provides to the effect that the termination of a treaty does not affect any right, obligation or legal situation of the parties created through the execution of the treaty prior to its termination. Applied to Art. 13 of the *Agreement on Agriculture*, if a Member's subsidy measures were granted and implemented prior to expiry of the Peace Clause, such Member's possible right to be protected thereunder is not removed by the expiry; neither are obligations on other Members to exercise due restraint. Such rights, obligations and legal situations created through implementation of the Peace Clause for the purpose of these proceedings are allowed by the *Vienna Convention on the Law of Treaties* to be live issues as between parties to a dispute. Even if the Panel were to make its report after the expiry, the rights and obligations and their past interaction are heavily controversial issues the interpretation and resolution of which by this Panel will have bearings on the merits of the case not only between the parties to this dispute, but also to the general WTO membership. Therefore, this Panel, even if it chooses to issue its report after the expiry date of the Peace Clause, is obligated to rule on such rights and obligations during implementation of the Peace Clause.

11. In addition, considering the likelihood of the Peace Clause being extended as reportedly suggested by some Members, however remote, an interpretation of the "exempt from action" requirement and its practical application is of extraordinary value to Members having interests in such an extension proposal; such Members, aided with the Panel's interpretation of the key components of this clause, will have a better basis to form their negotiating policy and stance, not only in terms of the Peace Clause, but also with regard to WTO discipline on agriculture.

**12. Question 51. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" -- in Article 2 of the *SCM Agreement* apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the *SCM Agreement*: All third parties**

**(a) is a subsidy in respect of all agricultural, but not other, products specific?**

**(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?**

**(c) is a subsidy in respect of certain identified agricultural products specific?**

**(d) is a subsidy in respect of upland cotton, but not other products, specific?**

**(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?**

**(f) is a subsidy in respect of a certain proportion of total US farmland specific?**

13. "Commodity" includes agricultural crops such as upland cotton.[2] While the *Agreement on Agriculture* identifies agricultural products by reference to their respective HS codes[3], in certain places it uses the terms "commodity" and "agricultural product" interchangeably.[4] Hence, in China's opinion, "agricultural commodity" can be understood as equivalent to "agricultural product" under the *Agreement on Agriculture*. Such equivalence is particularly relevant with regard to upland cotton, which being an agricultural product and crop, unquestionably meets the definition of a commodity.

14. On the other hand, "industry" used in the context of Art. 2 of the *SCM Agreement* normally refers to "a particular form or branch of productive labour; a trade, a manufacture"[5], while in the context of trade and commercial policy, "agriculture" means "the science and practice of cultivating the soil and rearing animals; farming".[6] Cultivate, in turn, means "prepare and use soil for crops"[7], i.e. the use of productive labour for soil preparation and use. Hence, agriculture, being the science and practice of using productive labour, meets the definition of "industry". Further, the *Agreement on Agriculture* also treats "agriculture" as an "industry" by extensively using "agricultural producers" and "agricultural production" to refer to the targets of domestic support measures.[8]

15. Art. 2 of the *SCM Agreement* provides that a subsidy is specific if it is provided to an enterprise or industry or group of enterprises or industries. Based on the analysis in Paras. 12 and 13 above, China believes that any subsidy to agricultural commodities shall be considered as specific for the purpose of Art. 2 of the *SCM Agreement.* By the same token, China believes that:

(a) a subsidy in respect of all agricultural, but not other, product is specific, since agriculture producing all agricultural products is an industry and consists of "group of enterprises" by definition.

(b) Similarly, subsidies in respect of "all agricultural crops (i.e. but not to other agricultural commodities, such as livestock)", "certain identified agricultural products" and "upland cotton, but not other products" should all be deemed as specific since "group of enterprises" producing crops (certain products, upland cotton) are targeted in all the cases.

(c) The use of "a certain proportion of the value of total US commodities" or "a certain proportion of US farmland" will necessarily be equivalent to "an enterprise or industry or group of enterprises or industries" because the "proportion" has to be generated by adding up those data from specific "enterprise or industry or group of enterprises or industries".

---

[2] Commodity means "a thing of *use* or value; specially a thing that is an object of trade, especially a raw material or agriculture crop", Lesley Brown (ed.), *The Shorter Oxford English Dictionary*, 5th ed. (Oxford University Press, 2002), p.461.

[3] Art. 2, *Agreement on Agriculture*.

[4] e.g. under Art. 6, the terms "*product*-specific domestic support" and "*basic agricultural product*" are used in the context of quantifying domestic support commitments, while under Art. 13(b), domestic support measures under Art. 6 that do not grant support to *a specific commodity* in excess of that decided during the 1992 marketing year are required to be exempt from actions as specified therein.

[7] Ibid, p. 575.

[8] e.g. Art. 6, *Agreement on Agriculture.*

**16. Question 52, The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the *SCM Agreement*. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the *SCM Agreement* to withdraw the subsidy without delay, can the Panel:**

**(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel? All third parties**

**(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the *SCM Agreement*? All third parties**

17. China believes that if this Panel were to find that a subsidy was prohibited and were to recommend under Article 4.7 of the *SCM Agreement* an immediate withdraw the subsidy, there would be no need for this Panel to dwell on the issue of whether adverse effects have been generated by the same subsidy.

18. The *SCM Agreement* has a primary distinction between prohibited subsidies under Article 3 where effects are presumed and actionable subsidies under Article 5 where the complaining party must demonstrate adverse effects. Amongst differences between prohibited and actionable subsidies, such as degree of proof, dispute settlement procedures, are different remedies under Arts. 4.7 and 7.8.

19. While no panel has dealt squarely with the issued raised by this Panel, the panel on *Australia – Automotive Leather II (Article 21.5 – US)* did touch upon the relationship between Arts. 4.7 and 7.8 briefly.[9]

> As regards the context of Article 4.7, we note that the term "withdraw the subsidy" appears elsewhere in the SCM Agreement. We consider these references to "withdrawal" of subsidies to be relevant for our understanding of the term. In the case of "actionable" subsidies, Members whose trade interests are adversely affected may, under Part III of the SCM Agreement, pursue multilateral dispute settlement in order to establish whether the subsidy in question has resulted in adverse effects to the interests of the complaining Member. If such a finding is made, the subsidizing Member "shall take appropriate steps to remove the adverse effects **or shall withdraw the subsidy**".[10] Alternatively, a Member whose domestic industry is injured by subsidized imports may impose a countervailing measure under Part V of the SCM Agreement, "**unless the subsidy or subsidies are withdrawn**".[11] In both cases, withdrawal of the subsidy is an alternative, available to the subsidizing Member, to some other action. Repayment of the subsidy would certainly effectuate withdrawal of the subsidy by a subsidizing Member so as to allow it to avoid action by the complaining Member.[12]

[9] Panel Report, *Australia – Subsidies Provided to Producers and Exporters of Automotive Leather – Recourse to Article 21.5 of the DSU by the United States*, WT/DS126/RW and Corr.1, adopted 1 February 2000.

[10] Original note, "*SCM Agreement Article 7.8* (emphasis added)".

[11] Original note, "*SCM Agreement Article 19.1* (emphasis added)".

[12] Panel Report, *Australia – Subsidies Provided to Producers and Exporters of Automotive Leather – Recourse to Article 21.5 of the DSU by the United States*, WT/DS126/RW and Corr.1, adopted 1 February 2000, Para. 6.28.

20. The panel in that case went *on* to elaborate in light of Art. 4.7's object and purpose:

> Turning to the object and purpose of Article 4.7 of the SCM Agreement, we observe that the SCM Agreement as a whole establishes disciplines on subsidies. The SCM Agreement categorizes subsidies as non-actionable, actionable, or prohibited.[13] In the case of non-actionable and actionable subsidies, Members are only allowed to take certain prescribed steps in the event that their trade interests are harmed by another Member's subsidies. Part II of the SCM Agreement, however, establishes an absolute prohibition on certain types of subsidies: Members are obligated, under Article 3.2 of the SCM Agreement, to "neither grant nor maintain" such subsidies. **While the trade effects of prohibited subsidies may be countered under Parts III and V of the SCM Agreement, Part II of the SCM Agreement establishes special and additional rules for rapid dispute settlement in cases involving such subsidies. Article 4.7 of the SCM Agreement establishes a specific remedy to be recommended in the case of a violation - withdrawal of the subsidy**. (Original emphasis added)

21. Indeed, the panel considered the Art. 4.7 prescription of withdrawal for subsidies found to be prohibited under to be so "special" that it is "specific remedy" designed to "not merely counteract *adverse* trade effects, but is intended to enforce the absolute prohibition on the grant or maintenance of such subsidies".[14]

22. In other words, such a specific remedy under Art. 4.7 grants the subsidizing Member far less options than Art. 7.8, which allows the subsidizing Member the options of either to "remove the adverse effects" or "withdraw the subsidy".

23. The above interpretation is further supported by the difference in terminology for countermeasures allowed to be taken by a complaining Member in the event that recommendations adopted by the DSB are not followed. The Arbitrators in their Decision on *Brazil – Aircraft (Article 22.6 – Brazil)*[15], stated:

> We also note that, when the negotiators have intended to limit countermeasures to the effect caused by the subsidy on a Member's trade, they have used different terms than 'appropriate countermeasures'. Article 7.9 and 10, which is the provision equivalent for actionable subsidies to Article 4.9 and 10 for prohibited subsidies, uses the terms 'commensurate with the degree and nature of the adverse effects determined to exist'.[16]

while Art. 4.10 only used the term "appropriate countermeasures", without the qualification of commensuration with the degree and nature of adverse effects as required under Arts. 7.9 and 7.10 for actionable subsidies. In deed, the Arbitrators ruled in the arbitration that

---

[13] Original note, "[w]e note *that*, pursuant to Article 31 of the SCM Agreement, the provisions of Articles 6.1 (presumption of serious prejudice), and 8 and 9 (non-actionable subsidies) shall apply for five years from the date of entry into force of the WTO Agreement unless extended for a further period."

[14] Panel Report, *Australia – Subsidies Provided to Producers and Exporters of Automotive Leather – Recourse to Article 21.5 of the DSU by the United States*, WT/DS126/RW and Corr.1, adopted 1 February 2000, Para. 6.34.

[15] Decision by the Arbitrators, *Brazil – Export Financing Programme for Aircraft – Recourse to Arbitration by Brazil under Article 22.6 of the DSU and Article 4.11 of the SCM Agreement*, WT/DS46/ARB, 28 August 2000.

[16] *Ibid*, Para. 3.49.

when dealing with a prohibited export subsidy, an amount of countermeasures which corresponds to the total amount of the subsidy is "appropriate"[17] against the Brazilian argument that such an interpretation would be punitive.[18]

24. Hence, past panels and arbitrators have determined that Art. 4.7 remedies are special, specific, and additional to those under Art. 7.8, that when recommended by a panel, they more than counteract adverse trade effects. In light of such reasoning, the need for this Panel, after it having established prohibited subsidies, to go an extra step to find adverse effects is superfluous.

25. With respect to this Panel's question as to whether the Panel can "take into account the effects of interaction of those prohibited subsidies with other, allegedly, actionable subsidies" if it were to find prohibited subsidy, China believes the answer is not straight forward.

26. Art. 5 of the *SCM Agreement* makes no express distinction between prohibited and actionable subsidies when discussing adverse effects to the interests of other Members. It simply requires that no Member shall cause adverse effects through the use of any subsidy referred to in Paras. 1 and 2 of Article 1 of the *SCM Agreement*, which covers all types of subsidies that meets the specificity test, i.e. prohibited and actionable.

27. Having said that, the structure of the *SCM Agreement* is such that it sets out highly compartmentalized sections on prohibited, actionable and non-actionable subsides. Analyses of adverse effects are specifically placed under Part III that deals with actionable subsidies only. As discussed above, establishment of a prohibited subsidy does not require any finding of adverse effect, but is contingent upon a finding of a mere existence. In that sense, when this Panel accounts and analyzes adverse effects caused by actionable subsidies, inclusion of adverse effects generated by prohibited subsidies would tend to enlarge adverse effects caused by actionable subsidies, if the former only adds to the latter. In other words, the highly compartmentalized nature of the *SCM Agreement* requires this Panel to form a precise opinion, where partition is possible, on the degree and nature of adverse effects caused by actionable subsidies alone, and such precision is vital for the subsidizing Member to "remove the adverse effects" under Art. 7.8 and for the complaining Member to take commensurate countermeasures under Arts. 7.9 and 7.10. Such a partitioning method is very much relevant to the issue of causation, as in cases where partition is possible, there should be no causal link between prohibited subsidies and adverse effects caused by actionable subsidies.

28. If, however, this Panel finds that a simple partition is not possible to exclude adverse effects generated by prohibited subsidies, due to the fact that such adverse effects compounds or amplifies adverse effects caused by actionable subsidies, the issue is more difficult. Prohibited subsidies may indeed have played a role in causing a compounding or amplification of adverse effects, caused by actionable subsidies in the first place. Such circumstances would necessitate a consideration of the totality of evidence before this Panel and a finding that best reflects a possible attribution of adverse effects to those only caused by actionable subsidies found. Such a finding, China submits, may have to be weighed against the crucial need to discourage the use of multiple types of subsidies that are not WTO compliant to create compounded adverse effects.

**29. Question 53. Would a finding of serious prejudice under Article 5(c) of the *SCM Agreement* be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the *SCM Agreement* in this context? All third parties**

[17] *Ibid*, Para. 3.60.
[18] *Ibid*, Para. 3.55.

30. China believes that a finding of serious prejudice under Article 5(c) of the *SCM Agreement* would be determinative for a finding under Article XVI:1 of the GATT 1994.

31. Art. 5(c) of the *SCM Agreement* prohibits any Member against using any subsidy to cause serious prejudice to the interests of another Member. Instances of deemed existence and possible occurrence of serious prejudice are further enumerated under Art. 6 of the same agreement. Art. XVI:1 of GATT 1994, on the other hand, requires a subsidizing Member, to discuss, upon request, with the other contracting party or parties concerned, or with the Contracting Parties, the possibility of limiting the subsidization, in the event that its granting of subsidies causes or threatens to cause serious prejudice to the interests of any other contracting party while stopping short of listing those under Art. 6 of the *SCM Agreement*.

32. China believes possible difference, if any, between serious prejudice found under Art. 5(c) of the *SCM Agreement* and serious prejudice found under GATT Art. XVI:1, is effectively removed by footnote 13 of the *SCM Agreement*, which specifically provides:

> The term "serious prejudice to the interests of another Member" is used in this [SCM] Agreement in the same sense as it is used in paragraph 1 of Article XVI of GATT 1994, and includes threat of serious prejudice.

To interpret otherwise would clearly be contrary to the intent of the drafters of this footnote.

**33. Question 55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("another Member") for the purposes of these proceedings? All third parties**

34. China believes that any Member, the prices of whose like product (upland cotton for these proceedings), as supplied in the same market, at the same level of trade and at comparable times, are capable of being compared to the prices of the subsidized product for the purpose of determining whether significant price undercutting exists under Art. 6.3(c), is *another Member* for the purpose of Art. 6.3(c) of the *SCM Agreement*..

35. First, 6.3(c) of the *SCM Agreement* reads,

> Serious prejudice in the sense of paragraph (c) of Article 5 may arise in any case where one or several of the following apply: …
>
> (c) the effect of the subsidy is a significant price undercutting by the subsidized product as compared with the price of a like product of another Member in the same market or significant price suppression, price depression or lost sales in the same market.

36. Article 6.5 subsequently explains that

> For the purpose of paragraph 3(c), price undercutting shall include any case in which such price undercutting has been demonstrated through a comparison of prices of the subsidized product with prices of a non-subsidized like product supplied to the same market. The comparison shall be made at the same level of trade and at comparable times, due account being taken of any other factor affecting price comparability. However, if such a direct comparison is not possible, the existence of price undercutting may be demonstrated on the basis of export unit values.

37. Essentially, Art. 6.5 requires a comparison between prices of the subsidized product and prices of a *non-subsidized like product supplied to the same market* for the purpose of determining whether significant price undercutting exists under Art. 6.3(c). To ensure fairness and statistical meaningfulness of such a comparison, Art. 6.5 requires it to be made at the same level of trade and at comparable times, as well as any other factor affecting price comparability. No where does Art. 6.5 limit non-subsidized like product to only those from one country, e.g. the complaining party.

38. Second, specific references to the "complaining Member" is made in other paragraphs of this very Article 6. For instance, Article 6.7, reads

> Displacement or impediment resulting in serious prejudice shall not arise under paragraph 3 where any of the following circumstances exist during the relevant period:
>
> (a) prohibition or restriction on exports of the like product from *the complaining Member* (emphasis added) or on imports from the *complaining Member* (emphasis added) into the third country market concerned;…".

39. The same word "complaining Member" is specifically used from Para. (a) through to Para. (e) under Article 6.7. The above reference clearly suggests that for the purpose of these paragraphs, the drafters explicitly distinguished the like product from "the complaining Member" from the like product from other Members. Should the drafters have the same intent to make such a distinction under Article 6.3, they would have done so.

40. Based on the above interpretations, China believes that *another Member* under Art. 6.3 of the *SCM Agreement* shall include any Member, the prices of whose like product, upland cotton for these proceedings, as supplied in the same market, at the same level of trade and at comparable times, is capable of being compared to the prices of the subsidized product for the purpose of determining whether significant price undercutting exists under Art. 6.3(c).

**41. Question 56. Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the *Agreement on Agriculture* and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5(c) and 6.3(d) of the *SCM Agreement*. All third parties**

**(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on *export subsidies*" (emphasis added)) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions, of the *Agreement on Agriculture,* relevant?**

42. In China's opinion, agricultural domestic support programmes are not challengeable under Article XVI:3 of GATT 1994.

43. Negotiating history of the current WTO agreements, being codification of the GATT Uruguay Round, as reported by scholars, indicates that the original Art. XVI of GATT 1947 contained only the first paragraph. Section B of Art. XVI and the interpretive note thereto were added by the *1955 Protocol Amending the Preamble and Part I and II of the Agreement* with an intent to outlaw export subsidies that results in subsidizing Member "having more than equitable share of the world export trade in that product"[19] only.[20] While the added article adopted such vague wordings as "any form of

[19] Article XVI:3, GATT 1994.

[20] Terence P. Stewart (ed.), *the GATT Uruguay Round: a Negotiating History* (Kluwer Law and Taxation Publishers, 1993), p. 134.

subsidy which operates to increase the export of any product", no where can any express effort to discipline domestic support be found.

44. The addition of Art. 11, entitled "Subsidies other than export subsidies" by the *1979 Agreement on Interpretation and Application of Article VI, XVI and XXIII of the General Agreement* (the "*Subsidies Code*")[21] is further proof that Art. XVI did not contemplate any discipline on domestic support. While not all Contracting Parties of GATT signed the *Subsidies Code*, it does represent the efforts of some GATT Contracting Parties

> [t]o apply fully and to interpret the provisions of Articles VI, XVI and XXIII of the General Agreement on Tariffs and Trade only with respect to subsidies and countervailing measures and to elaborate rules for their application in order to provide greater uniformity and certainty in their implementation.[22]

45. On the issue of subsidies, the *Subsidies Code* is structured to distinguish between export subsidies on certain primary (Art. 10, for the purpose of Art. XVI:3, GATT) and non-primary subsidies (Art. 9 and illustrative Annex) on the one hand, and "[s]ubsidies other than export subsidies" (Art. 11) on the other. Such a distinction represents consensus, at least amongst some GATT Contracting Parties, that GATT Art. XVI:3 only disciplines export subsidies *per se*.

46. In addition, in attempting to develop the "unlawfulness" of these "non-export subsidies", Art. 11(2) of the *Subsidies Code* only specified possible "injury to a domestic industry of another signatory", "serious prejudice to the interests of another signatory", nullification and impairment of "benefits accruing to another signatory under the General Agreement [of Tariffs and Trade] as well as adverse effect on "the conditions of normal competition", to the express exclusion of a GATT Art. XVI:3 action for "more than equitable share of world export trade". The ostensible omission of a GATT XVI:3 challenge against non-export subsides is again indication that GATT XVI:3 did not contemplate a challenge against non-export subsidies, which should include domestic support measures.

47. The *Agreement on Agriculture* of the WTO, while setting out object and quantitative disciplines on agricultural domestic supports, does not engage in a comprehensive and express definition of the term domestic support, except that it is granted in favour of domestic agricultural producers. Yet the agreement does treat domestic support and export subsidies in different sections. Art. 13, in addition, makes a symmetrical reference to the two concepts on equal footing. The polarized treatment lends support to a conclusion that the multilateral trade regime at the Uruguay Round sees a need to discipline agricultural domestic support measures. Given the progression of discipline development for agricultural domestic support and the loss of inequitable world export trade challenge in the *Agreement on Agriculture*, it appears to be a stretching of terms to interpret that Art. XVI:3 of GATT 1947 should contemplate a challenge against agricultural domestic support measures.

48. Language of Article 21.1 of the *Agreement on Agriculture* again supports the above opinion of China. The article governs the relationship of the provisions of GATT 1994 and the Agreement on Agriculture.[23] The Appellate Body, in its *EC – Bananas III* report, stated to the effect that the provisions of GATT 1994 apply to a matter except to the extent that the *Agreement on Agriculture* contains specific provisions dealing specifically with the same matter.[24]

---

[21] 26S/56.

[22] Preamble, the S*ubsidies Code*.

[23] Appellate Body Report, *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, Appellate Body Report, WT/DS27/AB/R, DSR 1997:II, Paras. 155-156.

[24] See *Supra*, Para. 3.

49. Coming back to the text of GATT Art. XVI:3, as well as the general progression of multilateral trade regime on agricultural domestic support measures, specificity on domestic support discipline as provided under the *Agreement on Agriculture* clearly stands out and pales any possible equation of GATT Article XVI:3 to a discipline on agricultural domestic support.

**(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the *SCM Agreement*, or in any other provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in *US-FSC*, para. 117[25] here?**

**(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the *SCM Agreement* and the prohibition on subsidies contingent upon export in Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 was negotiated?**

50. Art. 6(3)(d), on the other hand, is a natural prolongation of the inequitable world export trade challenge made available by GATT Art. XVI:3 and further developed by the *Subsidies Code*. China believes that requirements of Art. XVI:3 of the GATT 1994 are reflected in and developed by requirements in Article 6.3(d) of the *SCM Agreement*.

51. GATT Art. XVI:3 is the first attempt by the multilateral trade system to seek avoidance of the clinching of "more than equitable share of world export trade in a primary product" by a Member granting "directly or indirectly any form of subsidy which operates to increase the export of any primary product from its territory". The article, led by the word "[a]ccordingly", grants Members the inequitable world export trade challenge to address concerns over possible "harmful effects", "undue

[25] Original quote from the Appellate Body Report, WT/DS108/AB/R, Para. 117:

> "… the provisions of the *SCM Agreement* do not provide explicit assistance as to the relationship between the export subsidy provisions of the *SCM Agreement* and Article XVI:4 of the GATT 1994. In the absence of any such specific textual guidance, we must determine the relationship between Articles 1.1(a)(1) and 3.1(a) of the *SCM Agreement* and Article XVI:4 of the GATT 1994 on the basis of the texts of the relevant provisions as a whole. It is clear from even a cursory examination of Article XVI:4 of the GATT 1994 that it differs very substantially from the subsidy provisions of the *SCM Agreement*, and, in particular, from the export subsidy provisions of both the *SCM Agreement* and the *Agreement on Agriculture*. First of all, the *SCM Agreement* contains an express definition of the term "subsidy" which is not contained in Article XVI:4. In fact, as we have observed previously, the *SCM Agreement* contains a broad package of new export subsidy disciplines that "go well beyond merely applying and interpreting Articles VI, XVI and XXIII of the GATT 1947". Next, Article XVI:4 prohibits export subsidies only when they result in the export sale of a product at a price lower than the "comparable price charged for the like product to buyers in the domestic market". In contrast, the *SCM Agreement* establishes a much broader prohibition against *any* subsidy which is "contingent upon export performance". To say the least, the rule contained in Article 3.1(a) of the *SCM Agreement* that all subsidies which are "contingent upon export performance" are prohibited is significantly different from a rule that prohibits only those subsidies which result in a lower price for the exported product than the comparable price for that product when sold in the domestic market. Thus, whether or not a measure is an export subsidy under Article XVI:4 of the GATT 1947 provides no guidance in determining whether that measure is a prohibited export subsidy under Article 3.1(a) of the *SCM Agreement*. Also, and significantly, Article XVI:4 of the GATT 1994 does not apply to "primary products", which include agricultural products. Unquestionably, the explicit export subsidy disciplines, relating to agricultural products, contained in Articles 3, 8, 9 and 10 of the *Agreement on Agriculture* must clearly take precedence over the *exemption* of primary products from export subsidy disciplines in Article XVI.4 of the GATT 1994."

disturbance" and hindrance to "the achievement of the objectives" of GATT cause by subsidies to primary products, as enumerated under the preceding article of XVI:2.

52. The *Subsidies Code* further defined "more than an equitable share of world export trade" as including

> any case in which the effect of an export subsidy granted by a signatory is to displace the exports of another signatory bearing in mind the developments on world markets.[26]

In addition to attempting to discipline subsidies to primary products, signatories to the *Subsidies Code* also agreed to a number of general provisions on subsidies, not necessarily limited to primary products. Adverse effects caused by subsidies, exemplified by injury to the domestic industry of another signatory, nullification or impairments to the benefits of another Member and serious prejudice to the interests of another Members, were first introduced under Art. 8 of the *Subsidies Code* as indication of the "unlawfulness" of such subsidies. The very same standards were to be later adopted by Art. 5 of the *SCM Agreement* on actionable subsidies.

53. The concept of inequitable world export share caused by subsidies to primary products, on the other hand, was retained under Art. 6.3(d) of the SCM Agreement, with such changes as "world market share" to replace "share of world export trade" and the addition of a three year period to constitute "representative period" benchmark.

54. While China agrees that the requirements of GATT Art. XVI:3 are reflected in and developed by requirements in Article 6.3(d) of the *SCM Agreement*, prior Appellate Body reports have indicated that to the extent a specific WTO agreement conflict with the provisions of GATT 1994, the former shall prevail. In that respect, it is important to quote the Appellate Body in *Brazil – Desiccated Coconut*:

> The relationship between the GATT 1994 and the other goods agreements in Annex 1A is complex and must be examined on a case-by-case basis. Although the provisions of the GATT 1947 were incorporated into, and became a part of the GATT 1994, they are not the sum total of the rights and obligations of WTO Members concerning a particular matter. For example, with respect to subsidies on agricultural products, Articles II, VI and XVI of the GATT 1994 alone do not represent the total rights and obligations of WTO Members. The *Agreement on Agriculture* and the *SCM Agreement* reflect the latest statement of WTO Members as to their rights and obligations concerning agricultural subsidies. The general interpretative note to Annex 1A was added to reflect that the other goods agreements in Annex 1A, in many ways, represent a substantial elaboration of the provisions of the GATT 1994, and to the extent that the provisions of the other goods agreements conflict with the provisions of the GATT 1994, the provisions of the other goods agreements prevail. This does not mean, however, that the other goods agreements in Annex 1A, such as the *SCM Agreement*, supersede the GATT 1994. As the Panel has said:
>
> > ... the question for consideration is not whether the SCM Agreement supersedes Article VI of GATT 1994. Rather, it is whether Article VI creates rules which are separate and distinct from those of the SCM Agreement, and which can be applied without reference to that Agreement, or whether Article VI of GATT 1994 and the SCM

[26] Para. 10:2(a), the *Subsidies Code*.

> Agreement represent an inseparable package of rights and disciplines that must be considered in conjunction.[27]

55. The Appellate Body noted further that "[t]he relationship between the *SCM Agreement* and Article VI of GATT 1994 is set out in Articles 10 and 32.1 of the *SCM Agreement*."[28] Apart from the integrated structure of the *WTO Agreement* and the annexed agreements, the Appellate Body therefore focused on these two provisions of the *SCM Agreement*. The Appellate Body then explicitly agreed with the Panel's statement that:

> Article VI of GATT 1994 and the SCM Agreement represent a new and different package of rights and obligations, as among WTO Members, regarding the use of countervailing duties. Thus, Article VI and the respective SCM Agreements impose obligations on a potential user of countervailing duties, in the form of conditions that have to be fulfilled in order to impose a duty, but they also confer the right to impose a countervailing duty when those conditions are satisfied. The SCM Agreements do not merely impose additional substantive and procedural obligations on a potential user of countervailing measures. Rather, the SCM Agreements and Article VI together define, clarify and in some cases modify the whole package of rights and obligations of a potential user of countervailing measures.[29]

56. The Appellate Body then proceeded to find that:

> [C]ountervailing duties may only be imposed in accordance with Article VI of the GATT 1994 and the *SCM Agreement*. A countervailing duty being a specific action against a subsidy of another WTO Member, pursuant to Article 32.1, it can only be imposed "in accordance with the provisions of GATT 1994, as interpreted by this Agreement". The ordinary meaning of these provisions taken in their context leads us to the conclusion that the negotiators of the *SCM Agreement* clearly intended that, under the integrated *WTO Agreement*, countervailing duties may only be imposed in accordance with the provisions of Part V of the *SCM Agreement* and Article VI of the GATT 1994, taken together. If there is a conflict between the provisions of the *SCM Agreement* and Article VI of the GATT 1994, furthermore, the provisions of the *SCM Agreement* would prevail as a result of the general interpretative note to Annex 1A.
>
> …
>
> The fact that Article VI of the GATT 1947 could be invoked independently of the *Tokyo Round SCM Code* under the previous GATT system does not mean that Article VI of GATT 1994 can be applied independently of the *SCM Agreement* in the context of the WTO. The authors of the new WTO regime intended to put an end to the fragmentation that had characterized the previous system.[30]

57. China takes the above Appellate body statement to mean that Art. 32.1 of the *SCM Agreement*, being the linkage between Art. XVI:3 of GATT 1994 and Art. 6.3(d) of *SCM Agreement*

---

[27] Original Appellate Body quote, Panel Report on *Brazil – Desiccated Coconut, Brazil – Measures Affecting Desiccated coconut*, WT/DS22/R, adopted 20 March 1997, Para. 227; Appellate Body Report, *Brazil – Measures Affecting Desiccated Coconut*, WT/DS22/AB/R, DSR 1997:I, p. 15.

[28] Appellate Body Report on *Brazil – Desiccated Coconut*, p. 16.

[29] Panel Report, *Brazil - -Desiccated Coconut, Brazil – Measures Affecting Desiccated Coconut*, WT/DS22/R, adopted 20 March 1997, Para. 246, as upheld by the Appellate Body Report; Appellate Body Report on *Brazil – Desiccated Coconut*, p. 17.

[30] Appellate Body Report on *Brazil – Desiccated Coconut*, pages 16 and 18.

in connection with the inequitable share of world market challenge, requires that the Art. 6.3(d) prevail over GATT Art. XVI:3. In other words, if this Panel were to find that the GATT provision in conflict with the Art. 6.3(d), a claim against agricultural export subsidies cannot be brought under GATT XVI:3, but should be brought as actionable subsidies under Art. 6.3(d) of the *SCM Agreement*; however, if this Panel does not find any conflict, agricultural export subsidies actionable under Art. 6.3(d) of the *SCM Agreement* shall not be precluded from being actionable under GATT XVI:3, which can only be logical interpretation of note 56 to the *SCM Agreement* as it applies to the relationship.

58. Conflicts or differences were obviously found by the Appellate Body in *US-FSC*. It found that Article XVI:4 of GATT 1994

> differs very substantially from the subsidy provisions of the *SCM Agreement*, and, in particular, from the export subsidy provisions of both the *SCM Agreement* and the *Agreement on* Agriculture.

Hence, "[u]nquestionably, the explicit export subsidy disciplines, relating to agricultural products, contained in Articles 3, 8, 9 and 10 of the Agreement on Agriculture must clearly take precedence over … the GATT 1994".

59. Such an interpretation is further supported the general interpretative note to Annex 1A, which provides to the effect that in the event of a conflict between a provision of the GATT 1994 and a provision of another agreement in Annex 1A, the latter shall prevail to the extent of the conflict.

60. This Panel's Question 56(c) is in fact answered by the quoted passage from the Appellate Body in *US-FSC*. When GATT 1947 was negotiated and codified, there was nothing in it that expressly defines the term "subsidy", or the term "export subsidy". Such definitions only came into WTO wording in the Uruguay Round in addition to the new and more comprehensive discipline on "prohibited subsidies" under the *SCM Agreement* and "domestic [agricultural] support" under the *Agreement on Agriculture*. The more explicit disciplines under the *SCM Agreement* and the *Agreement on Agriculture*, as noted by the Appellate Body in the quoted passage, being "the latest statement of WTO Members as to their rights and obligations concerning agricultural subsidies", clearly take precedence over any GATT 1994 provisions to the extent of direct conflict.

61. China thanks this Panel for granting this opportunity to present its views on issues related to this proceeding, and hopes that this Panel will finds the above points helpful.

# ANNEX J-17

## REPLIES OF THE EUROPEAN COMMUNITIES TO THE QUESTIONS FROM THE PANEL

27 October 2003

### QUESTIONS TO THE EC

Question 45

**In relation to the term "same market" in Article 6.3 (c)of the SCM Agreement states in paragraph 10 of its oral statement that a "world market" cannot exist if there are significant trade barriers between Members. On the other hand, the Panel notes that in relation to cotton, the EC takes the position in paragraph 14 of its further submission that the term "same market" in Article 6.3(c) should be read to include the domestic market of the subsidising Member. In light of the fact that many domestic cotton markets, possibly including that of China, have significant trade barriers, how can the EC reconcile these two positions?**

Reply

1. The question does not state correctly the views expressed by the EC. Contrary to what is said in the question, the EC did not state at paragraph 14 of its further submission that "the term '**same market**' in Article 6.3 **(c)** should be read to include the domestic market of the subsidising Member". Rather, the EC said in paragraphs 14-16 of its further submission that the term "**world market share"** in Article 6.3 **(d)** includes also the share of the domestic market of the subsidising Member. This reading of Article 6.3(d) is compatible with the view that the term "same market" in Article 6.3(c) may include the world market, where there is such a world market. On the other hand, there is no reason why Article 6.3(d) should apply only in those cases where it can be established that there is a world market. Rather the term "world market share" should be understood to mean, in that context, the aggregate of the shares in each of the relevant geographical markets.

2. Contrary also to what is stated in the question, the EC has taken no position on the issue of whether, "in relation to cotton", there is a world market for the purposes of Article 6.3 (c). It might well be that, as suggested in the question, there is no world market for cotton, with the consequence that the price effects mentioned in Article 6.3(c) would have to be observed separately within each distinct national or regional market and/or in the residual "rest-of-the world" market. This is a factual matter on which the EC does not wish to express any views.

Question 46

**Should the Panel prefer a concept of allocation of the benefit of subsidies to later years, to a concept of fully expensing subsidies to the year in which the benefit was provided?**

Reply

3. Whether a subsidy should be "allocated" or "expensed" depends on the nature of the subsidy concerned, having regard to relevant criteria, such as those outlined at paragraph 11 of the EC's further submission.

4. The EC is not expressing any views on the largely factual question of whether the subsidies at issue should be "allocated" or "expensed". The point made by the EC was simply that Brazil cannot have it both ways. If the subsidies are fully expensed to the marketing year where they are granted, as Brazil appears to have done, it is contradictory to claim at the same time that they continue to provide benefits beyond that marketing year.

Question 47

**In the EC further submission, it is said that significantly different conditions of competition in regional markets may prevent the Panel from arriving at the conclusion that there is a world market. Is the payment of a subsidy a "condition of competition" and, if so, how should that impact upon the Panel's analysis?**

Reply

5. To be precise, the EC's position is that there is no world market for the purposes of Article 6.3 (c) where the existence of trade barriers has the consequence that the conditions of competition, and in particular the price levels prevailing in one geographical area are significantly different from those prevailing in another geographical area.

6. Unlike, for example, import duties, quotas or transport costs, subsidies do not, of themselves, insulate the prices in one geographical area from those in other areas and, therefore, do not lead to existence of separate geographical markets.

**QUESTIONS TO ALL THIRD PARTIES**

Question 49

**What is the meaning and effect of the introductory phrase of Article 3 of the SCM Agreement ("Except as provided in the Agreement on Agriculture...")?**

Reply

7. The introductory phrase of Article 3 makes it clear that subsidies which would be inconsistent with Article 3.1, but which are provided consistently with the export competition provisions of the *Agreement on Agriculture* are not prohibited.

Question 50

**According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the Agreement on Agriculture?**

Reply

8. No.

9. In the first place, and contrary to the Panel's implicit suggestion, it is still an open question, in view of the definition of the terms "implementation period" and "year" in Article 1 (f) and (i), respectively, of the *Agreement on Agriculture*, whether the provisions cited in the question will cease to apply by the end of the 2003 calendar year or at a subsequent date during 2004.

10. In any event, the Panel would be precluded by its terms of reference from taking into account the consequences of the expiry of those provisions. The "matter" before the Panel was defined at the time where the DSB agreed to the establishment of the panel and cannot be modified in the course of the proceedings.[1] In accordance with its terms of reference, the Panel must consider the measures in dispute as they existed when the matter was referred to the DSB, on the basis of the facts existing at that moment and in the light of the WTO provisions that were relevant at that time.

11. Brazil's claim is that the measures at issue were WTO inconsistent at the time when the matter was referred to the DSB. The Panel would go beyond its terms of reference if it were to decide that the measures are WTO inconsistent at a subsequent moment, as a result of the expiry of the peace clause. If, on the other hand, the Panel were to apply WTO provisions that will become relevant only after the expiry of the peace clause to measures and facts as they existed at the time when the matter was referred to the DSB, it would be making an impermissible retroactive application of such provisions.

Question 51

**How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" -- in Article 2 of the SCM Agreement apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the SCM Agreement:**

**(a) is a subsidy in respect of all agricultural, but not other, products specific?**

**(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?**

**(c) is a subsidy in respect of certain identified agricultural products specific?**

**(d) is a subsidy in respect of upland cotton, but not other products, specific?**

**(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?**

**(f) is a subsidy in respect of a certain proportion of total US farmland specific?**

Reply

A subsidy granted to an economic operator which does not require any production of agricultural products, and in which the subsidy may be used for any purpose, does not appear, to the EC, to be specific in the sense of Article 2.1(a)

Question 52

**The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the SCM Agreement. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the SCM Agreement to withdraw the subsidy without delay, can the Panel:**

[1] See e.g. Panel report on *India – Measures Affecting the Automotive Sector*, WT/DS1465/R, WT/DS175/R, at para. 7.26.

**(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel?**

Reply

12. Yes. There is nothing in the *SCM Agreement* which prevents a complaining party from claiming that a subsidy is prohibited under Part II and, in addition, causes "adverse effects" under Part III.

13. A finding that a prohibited subsidy causes "serious prejudice" may still be relevant in so far as at it may be possible for the subsidising Member to withdraw the export or local content condition attached to the subsidy, which causes its prohibition, while maintaining the subsidy and its adverse effects.

**(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the SCM Agreement?**

14. In a situation where the complaining party has made no claim that a prohibited subsidy causes adverse effects under Part III, it would be necessary to establish the causal link between the actionable subsidies and the adverse effects. However, the EC understands that this situation does not arise in the present dispute, because Brazil claims that all the allegedly prohibited subsidies cause adverse effects.

Question 53

**Would a finding of serious prejudice under Article 5(c) of the SCM Agreement be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the SCM Agreement in this context?**

Reply

15. Footnote 13 states that the term "serious prejudice" is used in the *SCM Agreement* in the same sense as in Article XVI:1 of the GATT. Therefore, it seems that a finding that a subsidy causes "serious prejudice" under Article 5(c) of the *SCM Agreement* would have the necessary implication that the same subsidy causes also "serious prejudice" in the sense of Article XVI:1 of the GATT, in so far as that provision can be applied on its own.

Question 54

**Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevance is this, if any, to Brazil's actionable subsidy claims ?**

Reply

16. The EC has not taken any position on the factual issue raised in the question.

17. In principle, whether or not a producer is able to cover all its costs without subsidies is not, as such, directly relevant, let alone determinative of whether the subsidies cause adverse effects.

Question 55

**In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("another Member") for the purposes of these proceedings?**

Reply

18. The EC agrees with the United States that, for the purposes of Article 6.3(c), only the price effects on the "products" of Brazil are relevant. (See US Further Submission, para. 86 and the case law cited therein)

Question 56

**Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the Agreement on Agriculture and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5(c) and 6.3(d) of the SCM Agreement.**

**(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on export subsidies" (emphasis added)) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions, of the Agreement on Agriculture, relevant?**

**(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the SCM Agreement, or in any other provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in US-FSC, para. 117[2] here?**

[2] WT/DS108/AB/R, para 117:

> "… the provisions of the *SCM Agreement* do not provide explicit assistance as to the relationship between the export subsidy provisions of the *SCM Agreement* and Article XVI:4 of the GATT 1994. In the absence of any such specific textual guidance, we must determine the relationship between Articles 1.1(a)(1) and 3.1(a) of the *SCM Agreement* and Article XVI:4 of the GATT 1994 on the basis of the texts of the relevant provisions as a whole. It is clear from even a cursory examination of Article XVI:4 of the GATT 1994 that it differs very substantially from the subsidy provisions of the *SCM Agreement*, and, in particular, from the export subsidy provisions of both the *SCM Agreement* and the *Agreement on Agriculture*. First of all, the *SCM Agreement* contains an express definition of the term "subsidy" which is not contained in Article XVI:4. In fact, as we have observed previously, the *SCM Agreement* contains a broad package of new export subsidy disciplines that "go well beyond merely applying and interpreting Articles VI, XVI and XXIII of the GATT 1947". Next, Article XVI:4 prohibits export subsidies only when they result in the export sale of a product at a price lower than the "comparable price charged for the like product to buyers in the domestic market." In contrast, the *SCM Agreement* establishes a much broader prohibition against *any* subsidy which is "contingent upon export performance". To say the least, the rule contained in Article 3.1(a) of the *SCM Agreement* that all subsidies which are "contingent upon export performance" are prohibited is significantly different from a rule that prohibits only those subsidies which result in a lower price for the exported product than the comparable price for that product when sold in the domestic market. Thus, whether or not a measure

**(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the SCM Agreement and the prohibition on subsidies contingent upon export in Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 was negotiated?**

Reply

19. Article XVI:3 of the GATT has been elaborated in Article 6.3(d) of the *SCM Agreement*, with the consequence that it cannot be applied independently from Part III of the SCM Agreement, just like Article VI of the GATT cannot be applied independently from Part V of the *SCM Agreement*.[3] Indeed, if Article XVI:3 could be applied on its own, the additional requirements provided for in Article 6.3(d) and related provisions, such as Article 6.7, would be rendered largely redundant.

20. By its own terms, Article XVI:3 is concerned exclusively with "export subsidies". However, as noted by the Appellate Body in the passage of the *FSC* report mentioned in the question, the scope of the notion of export subsidy in Article XVI differs from the scope of the same term in the *SCM Agreement* and in the *Agreement on Agriculture*. It is conceivable, therefore, that one and the same measure may be at the same time an "export subsidy" in the sense of Article XVI:3 and "domestic support" within the meaning of the *Agreement on Agriculture*. This is not saying that the *Agreement on Agriculture* and Article XVI:3 can apply simultaneously to the same measure. Where a measure is subject to the rules on domestic support of the *Agreement on Agriculture*, those rules excludes the application of Article XVI:3 to the same measure, in accordance with Article 21.1 of the *Agreement on Agriculture* (irrespective of whether Article XVI:3 can be applied independently from the *SCM Agreement*.)

21. This interpretation is confirmed by Article 13 of the *Agreement on Agriculture*. It would be odd if the peace clause exempted export subsidies from action under Article XVI:3, but not domestic support, which is assumed to have less pernicious trade effects. Clearly, if the drafters of the peace clause did not deem necessary to exempt domestic support from action under Article XVI:3 it is because they considered that this provision did not apply to domestic support pursuant to Article 21.1 of the *Agreement on Agriculture*.

---

> is an export subsidy under Article XVI:4 of the GATT 1947 provides no guidance in determining whether that measure is a prohibited export subsidy under Article 3.1(a) of the *SCM Agreement*. Also, and significantly, Article XVI:4 of the GATT 1994 does not apply to "primary products", which include agricultural products. Unquestionably, the explicit export subsidy disciplines, relating to agricultural products, contained in Articles 3, 8, 9 and 10 of the *Agreement on Agriculture* must clearly take precedence over the *exemption* of primary products from export subsidy disciplines in Article XVI:4 of the GATT 1994."

[3] Cf. Panel and Appellate Body reports, *Brazil – Measures Affecting Desiccated Coconuts*, WT/DS22/R and WT/DS22/AB/R.

# ANNEX J-18

## ANSWER TO PANEL QUESTION TO INDIA

27 October 2003

**Question 48**

**In the further submission of India, it is stated that "there is "no obligation under the *SCM Agreement* to demonstrate serious prejudice separately after establishing that one of the effects of a subsidy listed under Article 6.3 applies, as the effects listed in Article 6.3 themselves equate to serious prejudice". How does this view relate to Article 6.3(d), which appears to contain no element of degree? India**

Reply

India presumes that by 'element of degree' the Panel means the 'intensity or amount' of the effects of the subsidy as enumerated in Article 6.3 of the SCM Agreement. India notes that for serious prejudice to arise, in respect of only one out of the four effects of the subsidy in Article 6.3, has the intensity of the effect been specified. This is in respect of the effect of the subsidy in Article 6.3 (c) wherein the 'intensity or amount' of price undercutting, price suppression or price depression has been qualified by 'significant'. Thus, for serious prejudice to arise in case of price undercutting, price suppression or price depression, such effects should be significant. What can constitute 'significant' would vary from case to case. India is of the view that the other cases of effect of the subsidy specified in paragraphs 3 (a), 3(b) and 3 (d) of Article 6 contain no element of degree.

India fails to see how the absence of any element of degree in paragraphs 3 (a), 3(b) and 3 (d) of Article 6 results in the complaining Member being separately required to prove that the prejudice is indeed serious even after having established that one of these effects exists. If the drafters had intended that the complaining Member should separately establish that the prejudice caused by the effects of the subsidy was serious they would have defined the requirements for this purpose. The SCM Agreement contains no such requirement. India is, therefore, of the view that there is no obligation under the *SCM Agreement* to demonstrate serious prejudice separately after establishing that one of the effects of a subsidy listed under Article 6.3 applies.

# ANNEX J-19

## RESUMED FIRST SESSION OF THE FIRST SUBSTANTIVE MEETING OF THE PANEL

## NEW ZEALAND ANSWERS TO QUESTIONS FROM THE PANEL TO THIRD PARTIES

14 October 2003

**Q49. What is the meaning and effect of the introductory phrase of Article 3 of the SCM Agreement ("Except as provided in the Agreement on Agriculture …")? All third parties**

This phrase refers to provisions in the *Agreement on Agriculture* that provide specific exception from Article 3 of the *SCM Agreement*. New Zealand does not agree that any such exception exists in the *Agreement on Agriculture* that would authorise use of local content subsidies contrary to Article 3.1(b) of the *SCM Agreement*, as argued by the United States.[1] There is no basis upon which to claim that the *Agreement on Agriculture* gives Members a right to use whatever domestic support they wish with complete impunity from action under other WTO Agreements.

**Q50. According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exemp[tion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the Agreement on Agriculture? All third parties**

No. Brazil has not claimed that the implementation period in Article 13 has expired. It has claimed that the provision of Articles 13(b) and (c) have not been respected.

**Q51. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" – in Article 2 of the SCM Agreement apply to subsidies in respect of agricultural commodities ? Please answer the following questions, citing the principles in Article 2 of the SCM Agreement. All third parties**

New Zealand agrees with Brazil that the ordinary meaning, context and object and purpose of Article 2.1(a) of the *SCM Agreement* confirm that subsidies that are available to discrete segments of an economy or to only particular industries are specific. New Zealand considers that Brazil has demonstrated that each of the subsidies provided by the United States to upland cotton are specific within the meaning of Article 2.

Whether or not a subsidy is specific within the terms of Article 2, with the exception of prohibited subsidies which are deemed specific by Article 2.3, requires examination of the particular features of the subsidy at issue, including factual information about the actual usage of the subsidy and not simply its availability. Thus in relation to the general scenarios outlined below only general responses are possible.

[1] *United States – Subsidies on Upland Cotton*, Further Submission of the United States, 30 September 2003, para 167.

**(a) is a subsidy in respect of all agricultural, but not other, products specific?**

New Zealand does not consider that this question is relevant to this dispute as none of the subsidies at issue are provided on the same terms to all agricultural products.

**(b) is a subsidy in respect of all agricultural crops (ie but not to other agricultural commodities, such as livestock) specific?**

Yes such a subsidy would be specific, because access to the subsidy is explicitly limited to certain enterprises within the meaning of Article 2.1(a), specifically to producers of agricultural crops.

**(c) is a subsidy in respect of certain identified agricultural products specific?**

Yes, because it is specific to producers of certain agricultural products and is thus explicitly limited to certain enterprises within the meaning of Article 2.1(a).

**(d) is a subsidy in respect of upland cotton, but not other products, specific?**

Yes, because it is specific to producers of one product and is thus explicitly limited to certain enterprises within the meaning of Article 2.1(a).

**(e) is a subsidy in respect of a certain proportion of the value of the total US commodities (or total US agricultural commodities) specific?**

It is not clear from the question what kind of subsidy is being referred to, and, as noted in New Zealand's general comments on this question, whether or not a subsidy is specific within the terms of Article 2 of the *SCM Agreement* requires examination of the particular features of the subsidy at issue. To the extent that the subsidy referred to in the question is limited to certain enterprises (as suggested by the fact that the subsidy is provided only in respect of a certain proportion of the total value of United States commodities or agricultural commodities) it would be specific within the meaning of Article 2.1(a).

**(f) is a subsidy in respect of a certain proportion of total US farmland specific?**

See New Zealand's answer to (e) above.

**Q52. The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the SCM Agreement. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the SCM Agreement to withdraw the subsidy without delay, can the Panel:**

**(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel? All third parties**

A Panel may conclude that a prohibited subsidy had resulted in adverse effects to the interests of another Member. The chapeau of Article 5 of the *SCM Agreement* refers to "any subsidy referred to in paragraphs 1 and 2 of Article 1". Reference is made in paragraph 2 of Article 1 to subsidies being subject to the provisions of Part III only if they are specific in accordance with Article 2. Article 2.3 deems any subsidy falling under the provisions of Article 3, ie prohibited subsidies, to be "specific". Thus a prohibited subsidy may also be subject to the provisions of Part III of the *SCM Agreement*. It is therefore open to a Panel to conclude that a prohibited subsidy resulted in adverse effects to the interests of another Member.

The value of such conclusion in terms of the settlement of the matter before the Panel is to clarify the adverse effects that must be removed by the subsidising Member, albeit that a subsidising Member does not have the option of removing the adverse effects attributable to prohibited subsidies other than by withdrawing the subsidy without delay.

**(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the SCM Agreement? All third parties**

A Panel may take into account the effects of the interaction of those prohibited subsidies with other actionable subsidies. For example, actionable subsidies could operate to neutralise the effect of removal of the prohibited subsidy, as would likely be the case in respect of removal of the Step 2 export payments. Removal of this prohibited export subsidy would be likely to lead to a decline in United States exports and thus lower the United States domestic price for upland cotton. However lower prices for upland cotton producers would trigger increased marketing loan deficiency payments that could in turn boost exports and thus maintain the adverse effect of the United States subsidies.

It is therefore important to consider the interaction of the various types of subsidies at issue and look at their collective effect. However no attribution of the effects to either prohibited or actionable subsidies is needed, because there is no conflict between the remedies for prohibited subsidies and actionable subsidies. To the extent that the subsidies causing serious prejudice to the interests of other Members include prohibited subsidies, the subsidising Member must withdraw them without delay, as they do not have the option available in respect of actionable subsidies of maintaining the subsidy so long as the adverse effect is removed.

**Q53. Would a finding of serious prejudice under Article 5(c) of the SCM Agreement be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the SCM Agreement in this context? All third parties**

A finding of serious prejudice under Article 5(c) of the *SCM Agreement* would be determinative for a finding under Article XVI:1 of the GATT 1994 because serious prejudice is used in the same sense in Article 5(c) as it is in Article XVI:1. Footnote 13 explicitly clarifies this.

**Q54. Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevant is this, if any, to Brazil's actionable subsidy claims? All third parties**

Without subsidies United States cotton producers would not be covering their full costs of production and so would be making losses over the longer term. Evidence for this has been provided by Brazil in Exhibits Bra-7 and Bra-205. For example in 1999, 2000 and 2001 the USDA estimated that United States cotton producers total costs exceed the value of production by 173, 142 and 259 dollars per planted acre respectively, as shown in "US cotton production costs and returns 1997-2001".[2]

Accordingly the subsidies mean that United States production is higher than it otherwise would be. As Professor Sumner's econometric work shows, without subsidies US production over 1999-2002 would have been an average of 28.7 per cent lower than actual US production[3] and as a consequence United States exports would have declined on average by 41.2 per cent between MY

[2] Exhibit BRA 7.

[3] *United States – Subsidies on Upland Cotton*, Brazil's Further Submission to the Panel, 9 September 2003, para 105.

1999-2002[4] and world prices would have been an average of 12.6 per cent higher. This evidence thus supports Brazil's claim that the United States subsidies have caused serious prejudice to Brazil's interests and threaten to cause serious prejudice to Brazil's interests in the future.

**Q55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("another Member") for the purposes of these proceedings? All third parties**

Brazil is the "other party" in the context of Article 5(c). But that does not mean that other Members too cannot be suffering the serious prejudice through the use of the subsidies at issue by the United States. Indeed the Oral Statement of Benin to the Panel[5] makes it clear that this is the case.

**Q56. Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the Agreement on Agriculture and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5 and 6.3 (d) of the SCM Agreement. All third parties.**

**(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on export subsidies" (emphasis added) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions, of the Agreement on Agriculture relevant?**

Agricultural domestic support programmes are challengeable under GATT 1994 Article XVI:3 to the extent that they meet the requirements of that Article, including, for example, that they must provide a subsidy that "operates to increase the export of any primary product from its territory".

The title of Section B is relevant in that it reflects the narrower scope of Section B vis-à-vis Section A. Section B addresses "Additional Provisions on Export Subsidies", whereas Section A is broader and addresses "Subsidies in General" – it includes subsidies that operate to reduce imports of any product into the territory of the subsidising Member. The term "export subsidies" in the particular context of GATT Article XVI is not defined, but can be given meaning by the scope of paragraph 3 which applies to "any form of subsidy which operates to increase the export of any primary product" and is thus a broader definition than "contingent … upon export" found in the *SCM Agreement*.

Article 21.1 of the *Agreement on Agriculture*, which provides that GATT 1994 must be applied subject to the *Agreement*, is relevant in so far as it clarifies that in the event of legal conflict the provisions of the *Agreement on Agriculture* apply. During the implementation period Article 13 of the *Agreement on Agriculture* provides exemption from actions based on specific GATT 1994 provisions, subject to certain criteria being met. Article 13 exempts domestic support measures from action based on Article XVI:1 only if such measures do not grant support in excess of that decided during the 1992 marketing year.

Brazil has brought forward evidence to demonstrate that the subsidies at issue operate to increase United States exports of upland cotton and that they have been applied by the US in a manner that has resulted in the United States having a "more than equitable share of the world export trade" within the meaning of Article XVI:3 and therefore cause serious prejudice within the meaning of Article XVI:1.

[4] *Ibid*.
[5] Oral Statement of Benin, 8 October 2003.

**(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the SCM Agreement, or in any other provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in US-FSC, para 117 here?**

Article 6.3(d) of the *SCM Agreement* elaborates on one specific aspect of the disciplines on subsidies in GATT Article XVI:3, and that is in relation to the situation where a subsidy, as defined in the *SCM Agreement*, results in an increase in the world market share of the subsidising Member in the particular subsidised product. However GATT Article XVI:3 addresses a broader situation – where the result of the application of the subsidies is that the subsidising Member has a "more than equitable share" of the world export trade in the product.

A Member challenging a subsidy need not demonstrate that the subsidising Member's share of the world market has necessarily increased. For example, a Member may apply a subsidy that increases its exports of a product in order to simply maintain its market share. "But for" that subsidy, relevant economic factors might have meant that a Member's exports should in fact have declined. Therefore Article 6.3(d) of the *SCM Agreement* covers one specific aspect of how a "more than equitable share" of the world market might manifest itself but not all such situations.

As such the situation is distinguishable from *US-FSC*[6] in relation to GATT Article XVI:4 where the Appellate Body found that the narrow prohibition in Article XVI:4 had been entirely subsumed by Article 3.1(a) of the *SCM Agreement*.

**(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the SCM Agreement and the prohibition on subsidies contingent upon export in Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 was negotiated?**

See New Zealand's answer to Questions (a) and (b) above.

# ANNEX J-20

## RESPONSES TO QUESTIONS FROM THE PANEL FOR THIRD PARTIES

## THE SEPARATE CUSTOMS TERRITORY OF TAIWAN, PENGHU, KINMEN AND MATSU

27 October 2003

**Q49. About the meaning and effect of the introductory phrase of Article 3 of the SCM Agreement.**

A: The introductory phrase of Article 3 of the SCM Agreement "Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited" has the meaning that if there is different provision in the Agreement on Agriculture (AoA) with regard to the subsidies listed in Article 3 of the SCM Agreement, the AoA provision shall prevail. In other words, even if a subsidy is specific within the meaning of Article 1 of the SCM Agreement, and even if it is a subsidy contigent upon export performance or a subsidy contigent upon the use of domestic over imported goods, it is still not within the scope of prohibition under Article 3 of the SCM Agreement. The effect of such agricultural subsidy shall be decided by the AoA.

The critical point here is whether it is "provided in the Agreement on Agriculture". In this regard, Article 8 of the AoA is relevant. Article 8 provides that: "Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and with the commitments as specified in that Member's Schedule." The AoA, at this current stage, only requires reduction of such subsidy, not the elimination of such subsidy. In other words, suppose the subsidy is in conformity with the AoA and with the commitments as specified in the Members' Schedule, it should be allowed by the AoA and thus would not be prohibited under the SCM Agreement according to the introductory phrase of Article 3 of the SCM Agreement.

**Q50. About the impact of the revised timetable to issue the Panel report after the end of the 2003 calendar year on the "exempt[ion] from actions" under Articles 13(b)(ii) and 13(c)(ii) of the AoA.**

A: We have no comments on this question.

**Q51. About the concept of specificity in Article 2 of the SCM Agreement applying to subsidies in respect of agricultural commodities.**

A: Article 2.1 of the SCM Agreement provides that "In order to determine whether a subsidy, as defined in paragraph 1 of Article 1, is specific to an enterprise or industry or group of enterprises or industries (referred to in this Agreement as 'certain enterprises') within the jurisdiction of the granting authority, the following principles shall apply:…" Thus, when considering the answers below, the principles set forth in Article 2.1 must also be borne in mind.

Also, the basic reason for excluding "non-specific subsidies" from being prohibited should be that the subsidies are generally available and no competitive advantage is provided to a particular sector or some specific sectors. If there is competitive advantage provided to one or more sectors

with the effect of excluding other sectors from receiving the advantages, it should be considered as specific.

Our view is that the concept if specificity applies to the agriculture sector as follows:

(a) All agricultural products: not specific. The competitive advantage is provided to all agricultural products. No agricultural products are excluded.

(b) All agricultural crops: specific. Although the coverage is broad, some agricultural products are excluded.

(c) Certain identified agricultural products: specific. Apparently it excludes a large portion of products.

(d) Upland cotton: specific. It excludes all other products and only gives advantage to one product.

(e) Certain proportion of the value of total US commodities or total US agricultural commodities: not specific. No commodities or agricultural commodities are excluded.

(f) Certain proportion of total US farmland: not specific, as long as farmland is not restricted to that producing certain commodities.

**Q52. About different remedies available in respect of prohibited and actionable subsidies.**

A(a) The SCM Agreement explicitly divides subsidies into three categories, and Part II and Part III are designed to deal with different categories of subsidies. If a subsidy falls within "Part II Prohibited Subsidies", it would not be falling within "Part III Actionable Subsidies". Thus, it is unthinkable that if the Panel were to conclude, for example, that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the SCM Agreement, it would also have to decide whether the same subsidy had resulted in adverse effects to the interest of another Member.

(b) For the same reason, the Panel should not take into account the interactive effects of those prohibited subsidies with other subsidies.

**Q53. About the determinativeness of a finding under the SCM Agreement for a finding under GATT 1994**

A: Footnote 13 of the SCM Agreement explains that "The term 'serious prejudice to the interests of another Member' is used in this Agreement in the same sense as it is used in paragraph 1 of Article XVI of GATT 1994, and includes threat of serious prejudice." Although there is no same provision in Article XVI of the GATT 1994, the real intent of the WTO Members should be to harmonize the meaning and concept of the same phrase where it appears in different agreements. It would also be reasonable to interpret the same phrase in the same manner, unless there is strong reason for not doing so. Our view, therefore, would be that if there is a finding of serious prejudice under Article 5(c) of the SCM Agreement, it should be *de facto* determinative for a finding under Article XVI:1 of the GATT 1994.

**Q54. About the evidence of US cotton producers to cover or not to cover the fixed and variable costs without subsidies.**

A: We do not have information available on this.

**Q55. About "another Member" of Article 6.3(c).**

A: We do not claim that we are "another Member" in the sense of Article 6.3(c) of the SCM Agreement.

**Q56. About the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the AoA and the disciplines on prohibited export subsidies and actionable subsidies in Article 3, 5(c) and 6.3(d) of the SCM Agreement.**

A(a) Agricultural domestic support should not be challengeable under Article XVI:3 of the GATT 1994. Although the second sentence "grants directly or indirectly any form of subsidy which operates to increase the export of any primary product from its territory" seems to be broad enough to include domestic subsidies, this second sentence still comes after the introductory sentence, which requires Members to avoid the use of subsidies on the export of primary products. Also paragraph 3 of Article XVI of the GATT 1994 is under the title "Section B - Additional Provisions on Export Subsidies". There is no reason why the provisions in paragraph 3 should not be limited to export subsidies. Otherwise, the title would become meaningless and redundant.

(b) Paragraph 117 of the Appellate Body Report in *US-FSC* is an appropriate interpretation of the relationship between the definition of subsidies and export subsidies in Articles 1.1(a)(1) and 3.1(a) of the SCM Agreement on the one hand and export subsidies in Article XVI:4 of the GATT 1994 on the other. However, it does not have relevancy in deciding the relationship between domestic subsidies and export subsidies. The requirements of Article XVI:3 of the GATT 1994 are imposed on export subsidies, as explained above, while Article 6.3(d) of the SCM Agreement is about non-export subsidies. Thus, the requirements of Article XVI:3 of the GATT 1994 are neither reflected in, nor developed by or subsumed by the requirements in Article 6.3(d) of the SCM Agreement.

(c) Under the principle set forth by the above-mentioned Paragraph 117 of the Appellate Body Report in *US-FSC*, if there is conflict between Article XVI of the GATT 1994 and the AoA, the AoA must take precedence over the GATT 1994. Based on the same principle, the SCM Agreement should take precedence over the GATT 1994 to the extent that there is conflict. However, with regard to the definition of subsidy in Article 1 of the SCM Agreement and the prohibition on subsidies contingent upon export in Article 3.1(a), there is no conflict provision in Article XVI of the GATT 1994. Thus, there is no issue here of whether one agreement would take preference over the other. Nevertheless, Article XVI of the GATT 1994 and the SCM Agreement are still the rules under the WTO dealing with the same set of matters. The definition of certain terms in one agreement could serve as a very important source in helping to define the same terms in another agreement. Therefore, unless there is a sound basis for having a different interpretation, we do not see any reason for different meanings of subsidies and export subsidies in Article XVI of the GATT 1994 from those in the SCM Agreement.

## COMMUNICATIONS FROM PARTIES AND THIRD PARTIES

# ANNEX K-1

## LETTER FROM THE UNITED STATES

21 May 2003

The Panel in this dispute will soon meet with the parties to discuss the Panel's timetable and working procedures. In this regard, we draw to the Panel's attention Brazil's decision to raise claims under the *Agreement on Subsidies and Countervailing Measures* ("Subsidies Agreement") prior to the expiration of the Peace Clause (Article 13 of the *Agreement on Agriculture*) together with its desire to have recourse to the Annex V procedures of the Subsidies Agreement from the outset of this dispute.

Brazil's claims raise procedural and substantive questions that have not previously been faced by a dispute settlement panel. The most fundamental of these is whether Brazil may proceed with claims under the Subsidies Agreement against US support measures, notwithstanding that these claims are barred by the Peace Clause. The United States clearly maintains that Brazil may not.[1] The United States is submitting this letter in advance of the organizational meeting in order to propose a process to resolve these novel issues in an orderly and logical fashion.

Brazil has not contested that, if US support measures conform to the Peace Clause, they are protected from action based on claims of adverse effects or serious prejudice. In fact, Brazil implicitly recognizes that the Peace Clause bars its claims unless Brazil can demonstrate that the US measures are in breach of the Peace Clause – in both its panel request (WT/DS267/7, at 3) and its consultation request (WT/DS267/1, at 3), Brazil asserts that the Peace Clause does not exempt the challenged US measures from action. Thus, Brazil may not maintain this action based on its claims of adverse effects and serious prejudice under the Subsidies Agreement and GATT 1994 Article XVI unless the Panel has found that US support measures for upland cotton do not conform to the Peace Clause.

Accordingly, the United States proposes that the Panel organize its procedures to deal with the threshold Peace Clause issue at the outset of this dispute. We would suggest that the Panel first receive written submissions from both parties on the applicability of the Peace Clause, to be followed by a meeting of the Panel with the parties on this issue, and then rebuttal submissions. The Panel would then make findings on whether any US measure is in breach of the Peace Clause. If the Panel agrees that Brazil has failed to establish that the US measures are inconsistent with the Peace Clause,

[1] In this dispute, Brazil is claiming that US support measures for upland cotton have caused adverse effects (including serious prejudice) to Brazil's interests, within the meaning of Articles 5 and 6 of the Subsidies Agreement and GATT 1994 Article XVI. Both the Agriculture Agreement and the Subsidies Agreement make clear that such claims are precluded as long as the measures conform to the Peace Clause. The Peace Clause states that domestic support measures that conform fully to the criteria in Annex 2 of the Agriculture Agreement ("green box" support) "shall be . . . exempt from actions based on," *inter alia*, claims of adverse effects, including serious prejudice. Similarly, the Peace Clause states that domestic support measures that conform fully to the criteria in Article 6 of the Agriculture Agreement (for example, "amber box" support) "shall be . . . exempt from actions based on," *inter alia*, claims of ad verse effects, including serious prejudice, "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year." The final sentences of both Article 5 (on adverse effects) and Article 6 (further explaining serious prejudice) of the Subsidies Agreement use identical language to recognize the protection afforded by the Peace Clause: "This Article does not apply to subsidies maintained on agricultural products as provided in Article 13 of the Agreement on Agriculture." Thus, domestic support measures that conform to the criteria specified in the Peace Clause are protected against actions claiming adverse effects and serious prejudice.

then that would dispose of those claims. If the Panel finds that the US measures are inconsistent with the Peace Clause, then Brazil could have recourse to the Annex V procedures with respect to its Subsidies Agreement claims on these measures. In either event, briefing and meetings of the Panel with the parties could then proceed on any claims not disposed of by the Peace Clause findings.

This procedure would satisfy the legal requirement that certain claims not be maintained while the Peace Clause is applicable and provide the Panel with a fair and orderly means of addressing the issues in this dispute. The United States notes that the Panel has broad discretion to determine its working procedures under Article 12.1 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU"), and, under DSU Article 12.2, the Panel is charged with establishing panel procedures with "sufficient flexibility so as to ensure high-quality panel reports." Because in this dispute Brazil has made claims under 17 different provisions of the WTO Multilateral Agreements with respect to numerous US programmes under at least 12 US statutes, we believe the Panel's consideration of the critical Peace Clause issue would be aided by briefing and argumentation focused on this threshold issue. Dispute settlement panels have made use of three panel meetings to allow adequate consideration of particular issues. For example, the panel in *Canada – Measures Relating to Exports of Wheat and Treatment of Imported Grain* (DS276) has recently organized its proposed timetable and procedures to provide for the possibility of a panel meeting prior to the first substantive meeting in order to consider any preliminary issues. We also note that three panel meetings have been scheduled in each of the disputes under the *Agreement on the Application of Sanitary and Phytosanitary Measures* to allow a separate meeting of the panel with scientific/technical experts. Similarly, in this dispute, a meeting focused on the Peace Clause issue would assist in considering the complex matter in dispute.

We look forward to discussing this proposal with you in more detail at the organizational meeting. The United States is providing a copy of this letter directly to Brazil.

# ANNEX K-2

## LETTER FROM BRAZIL

23 May 2003

The Government of Brazil is in receipt of a letter dated 21 May 2003 from the US Mission, proposing that the Panel's working procedures provide for a special advance proceeding to deal with issues relating to Article 13 of the Agreement on Agriculture (AoA), commonly known as the "peace clause". The United States proposes two rounds of submissions by the parties, a meeting of the Panel with the parties, a special "discovery" proceeding and Panel issuance of a separate ruling on these issues. All other work in this dispute would be suspended until after the Panel has issued findings and a preliminary panel report. Brazil opposes these unprecedented and unnecessary procedures, which would impose significant financial and human resource burdens on Brazil and significantly delay this proceeding. Brazil asks that the Panel proceed expeditiously with this case using normal dispute settlement procedures and timeframes, for the reasons set forth below.

Brazil urges the Panel to take full account of Article 3.3 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU), which provides: "The *prompt settlement* of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and to the maintenance of a proper balance between the rights and obligations of Members." DSU Article 12.9 contemplates that panel proceedings will be completed within six months. DSU Article 12.2 provides that "panel procedures should provide sufficient flexibility so as to ensure high-quality panel reports, *while not unduly delaying the panel process*". The US suggested procedure would unduly delay the panel process to the detriment of Brazil's rights.

The United States has singled out AoA Article 13 as a "special" provision which allegedly requires special and unprecedented procedural treatment. Yet DSU Appendix 2, the closed list of "special and additional" rules and procedures that trump the normal rules of dispute settlement, does not include Article 13 or any other AoA provision, nor does it include the cross-references to the AoA in Articles 3.1 and 7.1 of the Agreement on Subsidies and Countervailing Measures (ASCM). There is no support in the DSU, in the Agreement on Agriculture, or elsewhere in the WTO Agreement for the proposition that a separate "mini-trial" on peace clause issues is required before any claim can be made against subsidies under the Agreement on Agriculture. Acceptance of this proposition would invent a substantial new obstacle to future claims by any government against agricultural subsidy programs, altering the rights of Brazil and many other Members, in contradiction to Article 3.2 of the DSU.

The US notion that two rounds of submissions and a special meeting are required before the parties perform any further work on the case is unprecedented. As the Panel is aware, the concept of preliminary objections is not new. There are many WTO cases in which a defending party has made preliminary objections that a claim or a panel request has not met the requirements of DSU Article 6.2, and has requested an early ruling. Sometimes panels make an early ruling,[1] and sometimes

[1] US – Countervailing Duties on Certain Corrosion-Resistant Carbon Steel Flat Products from Germany, WT/DS213/R, fn. 224.

they do not.[2] The decision on how to handle such preliminary objections procedurally is a matter of panel discretion. Where preliminary objections have been resolved in advance of other claims, normally they have been resolved in the panel's first meeting, on the basis of the first round of submissions and oral statements.

The threshold issues posed by AoA Article 13 are no more or less significant than other threshold issues in many WTO Agreements. There are "peace clause"-type provisions in Articles 27.2(b), 27.3, and 27.4 of the ASCM Agreement precluding prohibited subsidy claims against developing country export subsidies under certain conditions. When this provision was invoked by developing countries in prior cases, no special procedures were created by panels and these threshold issues were decided as part of the final panel report.[3] Similarly, no claim may be brought against a measure under the General Agreement on Trade in Services unless the measure falls within the scope of the GATS as defined in GATS Article I. No claim may be brought under Article 2 of the Agreement on Technical Barriers to Trade except in respect of a measure that is a "technical regulation" as defined by that agreement. Claims under the Agreement on Government Procurement may only be brought concerning procurement of an entity covered by Annex I of that agreement. Many more examples exist.

Following the US proposal, panels would be *required* in any case involving such threshold issues to provide for special submissions, special meetings and preliminary panel decisions on admissibility of claims before reaching the substance, adding a month or two to each panel proceeding. The same procedure would be required whenever a defending party makes a preliminary objection under DSU Article 6.2. Resolving such issues, the United States would presumably argue, would be necessary to avoid wasteful litigation of unnecessary claims. But like the Agreement on Agriculture, none of these agreements contain any special procedural provisions for resolution of these threshold issues, and there is no reference to such procedures in Appendix 2 of the DSU. Negotiators could have provided for the type of bifurcated dispute settlement process suggested by the United States for these types of issues. But they did not.

The United States notes that special meetings have been held with experts in cases involving the Agreement on the Application of Sanitary and Phytosanitary Measures (SPS). However, these meetings were held pursuant to Article 11.2 of the SPS Agreement that gives the panel the authority to "seek advice from experts chosen by the panel in consultation with the parties to the dispute." With such authority comes an implied need for the Panel to *meet* with the experts. It also creates an expectation of additional delay from the normal panel schedule to accommodate obtaining such advice. Nothing in the AoA contains any similar authority to address peace clause issues.

The peace clause issues in this dispute are not just technical procedural issues (as the US implies in its letter) that can be quickly disposed of without extensive briefing or the presentation of considerable factual evidence and expert econometric testimony. They require careful deliberation by the Panel on the basis of the entire body of evidence submitted by the parties. The peace clause issues are also intertwined with the substance of Brazil's claims regarding prohibited and actionable subsidies under the Agreement on Subsidies and Countervailing Measures. For example:

> Among the issues presented by the peace clause are whether three of the six actionable US domestic support subsidies (Production Flexibility Payment Contract Payments, Direct Payments, and Counter-Cyclical payments) are properly in the "green" or "amber/blue" box of the AoA. To resolve these issues involves, *inter alia*,

[2] US – Anti-Dumping Measures on Certain Hot Rolled Steel Products from Japan, WT/DS184/R, fn. 16 to para. 7.1.

[3] Brazil – Export Financing Program for Aircraft, WT/DS46/R (20 August 1999), paras. 7.56-57; Indonesia – Certain Measures Affecting the Automobile Industry, WT/DS54/R (23 July 1998), para. 14.52

the presentation of econometric analysis of the trade distorting or production enhancing effects of each of these subsidies to determine whether or not they are properly green box subsidies within Annex 2 AoA. If they are not, then these three subsidies are included in the amount of support in marketing years 1999-2002 for the purpose of comparing against the level of support decided by the United States for marketing year 1992 under Article 13(b)(ii) AoA. However, Brazil's econometric and other extensive documentary evidence regarding the production enhancing effects of such subsidies for the purposes of the peace clause is *exactly* the same evidence Brazil presents for these three referenced subsidies to demonstrate its serious prejudice claims under ASCM Articles 5(c), 6.3(b), 6.3(c), 6.3(d), and Article XVI of GATT 1994.

Brazil has made claims under the AoA and the ASCM regarding prohibited export subsidies under the US Step-2 programme and US export credit guarantee programmes. Brazil will demonstrate in its first submission that these two export subsidies do not "conform fully to the provisions of Part V of this Agreement" in the sense of AoA Article 13(c); obviously, Brazil's evidence and argument regarding the lack of conformity of these two measures with Part V of the AoA largely overlaps with the evidence and argument necessary to demonstrate a violation of ASCM Articles 3.1(a) and (b).

The close relationship between these "threshold" issues and the merits of Brazil's case can be seen by considering the possible outcome of the Panel's preliminary rulings. For instance, if the Panel rules that Brazil may bring its export subsidy claims because the US export subsidies are inconsistent with AoA Part V, it will have decided up front a key issue regarding the merits. But would the United States accept such a ruling and not attempt to re-litigate the same issues raised in the context of the ASCM Agreement? The answer is obvious. It highlights that a preliminary mini-trial of the sort sought by the United States will not save time, expense, and trouble for the Panel or for the parties, and will simply serve to increase the length and expense of this panel proceeding.

The Panel must also consider the position of the 13 interested third parties in this dispute. Many of these third parties may wish to provide their views on the interpretation and application of AoA Article 13 given the implications of any decision for future disputes. If the panel were to decide to request submissions and/or hold a hearing in advance of its first meeting with the parties, third parties will probably claim that they must be accorded the same opportunities for participation as in normal panel proceedings. These opportunities are particularly important since the "mini-trial" called for by the United States would decide key substantive issues relating to the facts and merits of Brazil's complaint.

Brazil would also be prejudiced because the United States proposal would require it to use limited resources to bring its Brazilian counsel and its US econometric experts to Geneva for the proposed special meeting. Further, Brazil would be required to prepare essentially four additional written submissions (a first and rebuttal written submissions, an oral statement submission, and written answers to the Panel's questions) for the proposed special briefing and meeting. The acceptance of the US proposal will create travel, hotel, legal, and human resource expenditures that are particularly burdensome for a developing country with limited financial and human resources such as Brazil. In sum, the US proposal would impair Brazil's rights under WTO rules.

Finally, the United States proposes even more delay in this proceeding with its suggestion in the letter that "Brazil could have recourse to the Annex V procedures with respect to its Subsidies Agreement claims" after the determination by the Panel pursuant to the special procedures. Brazil initiated Annex V procedures on 18 March as the DSB established the panel pursuant to Brazil's request for the establishment of a panel that invoked ASCM Article 7.4. Brazil sought information

from third countries and the United States on 1 April 2003 under the provisions of Annex V, paragraphs 2 and 3. Brazil has collected information from a number of third parties pursuant to these requests. The United States on 19 March in WT/DS267/8 informed the DSB that *"any requests for information pursuant to the Annex V procedures may be provided in writing to the US Mission to the World Trade Organization. The United States will gather the information to respond to any such requests and provide the responses through the US Mission"*. Unfortunately, the United States refused to answer Brazil's questions dated 1 April 2003 during the 60-day period of the procedures that ended on 17 May 2003.

Brazil rejects any suggestion by the United States that a new Annex V procedure be conducted during the panel stage of the process to impose even further delays in this proceeding. Instead, Brazil will use the best information available to it when it files its first submission. If appropriate, Brazil will request that the Panel draw adverse inferences from any failure of the United States to provide information requested during the consultation and Annex V process.

In light of the above, Brazil strongly urges the Panel to reject the United States' unprecedented and wasteful procedural proposal. As noted above, much of the evidence involved in demonstrating the absence of peace clause protection *also* is related to Brazil's substantive claims. Given this overlap, the Panel should structure its work so that the peace clause issues and Brazil's claims regarding prohibited subsidies and serious prejudice are dealt with at the same time and in the same two meetings between the Panel and the parties. Use of the normal two meetings and briefing schedule will permit the Panel to have sufficient time to consider the views of Brazil, the United States, and the 13 third parties involved in this dispute. Use of the existing procedures and timeframes will avoid significant prejudice to Brazil by avoiding it having to use its limited resources to litigate the same issues at three, not two meetings. Use of existing procedures will avoid duplication of effort by the Panel and the third parties, and avoid significant delays in the issuance of a final report regarding the subsidies Brazil challenges in this dispute.

Brazil would be pleased to provide the Panel with additional information at the organizational meeting regarding this and any other procedural issues.

# ANNEX K-3

## LETTER FROM BRAZIL

14 July 2003

Brazil would like to bring to the attention of the Panel in *United States – Subsidies on Upland Cotton* (DS267) the following matter.

The "Working Procedures for the Panel" establish in paragraph 17(b) that,

"*the parties and third parties should provide their submissions to the Secretariat by 5:30 pm on the deadline established by the Panel, unless a different time is set by the Panel"*

and in paragraph 17(d) that,

*"the parties and third parties shall provide electronic copies of all submissions to the Secretariat at the time they provide their submissions [...]".*

The electronic version of the US first submission, which was due on Friday, 11 July, 5:30 pm, was delivered after 11 pm, almost 6 hours after the deadline. Brazil had access to the hard copy only on Saturday morning. Because it was a Friday, the failure of the United States to meet the established deadline led to delays in the transmittal and reception of the submission to different Government officials in Brazil and to Brazil's legal advisors. In addition, the delay no doubt caused third parties to have less time to react to the US submission – a not insignificant delay given the fact that third parties had only two working days to respond to the US submission before filing on 15 July. The result was that Brazilian officials were unable to review the submission until Monday, 14 July.

Brazil notes that this delay is not the first in the present case. The US Comments on the initial brief by Brazil, due on 13 July, 5:30 pm, were sent electronically after 8 pm.

Brazil has been faced with extremely short deadlines in this case, including the filing on 24 June its First Submission which required extensive changes to respond to the Panel's determination of 20 June. Nevertheless, Brazil met the deadline and filed the submission prior to 5:30 pm on 24 June. Brazil expects that the United States will, like Brazil, meet its own deadlines in a timely fashion.

Brazil would like the Panel to take note of this delay and to encourage the US to respect the deadlines, with a view to ensuring procedural fairness in these proceedings.

# ANNEX K-4

## LETTER FROM THE UNITED STATES REQUEST FOR EXTENSION OF DEADLINE FOR RESPONSES TO PANEL QUESTIONS

29 July 2003

In view of the number and the complexity of the questions addressed by the Panel to the United States and Brazil (not counting subparts, it appears that the Panel has asked the United States approximately 95 questions), the United States would like to request an extension of the deadline for the parties' responses until Friday, 15 August 2003. In particular, a number of the questions address new issues and request extensive additional information. Given the issues and volume of information involved, as well as the travel schedules of key members of the US delegation, an extension of the deadline originally proposed by the Panel would assist the parties in providing thorough responses.

While extending the deadline for answers would necessarily shorten the period for commenting on those answers, the parties would still have one week to prepare those comments. The United States considers that both the initial answers and subsequent comments would benefit if proportionately more time were allocated to ensuring that the initial answers are as complete and clear as possible.

# ANNEX K-5

## LETTER FROM BRAZIL

29 July 2003

Brazil received a letter dated today from the United States requesting until Friday 15 August to provide answers to the Panel's questions. Brazil cannot agree to this request.

Brazil has been working diligently every day since 25 July to comply with the Panel's deadline and is prepared to provide its answers to the Panel's questions by 4 August. A delay until 15 August will prejudice Brazil by not providing it with sufficient time to comment on the US answers or to prepare its Rebuttal Submission.

Brazil also notes that the Panel's questions do not raise new issues. Instead, they address issues either raised to a large extent in the First Written Submissions or that have been dealt with extensively during the first substantive meeting with the parties.

However, in the spirit of cooperation and in recognition of the fact that the Panel did request more questions of the United States than Brazil, Brazil would have no objection if the Panel were to extend the deadline to 7 August for the Parties and the Third Parties to answer the Panel's and each other's questions.

# ANNEX K-6

## LETTER FROM THE EUROPEAN COMMISSION

31 July 2003

The European Communities would like to thank the Panel for the questions it has posed to the third parties, and for extending the deadlines for responses. In light of the detailed nature of the questions asked and the importance of the issues concerned, the European Communities respectfully makes two requests to the Panel.

First, it would greatly assist the European Communities (and we assume other third parties) in preparing our responses to the Panel's questions to have sight of the oral statements of the main parties to the dispute at the first substantive meeting. So doing would permit third parties to respond to arguments made by the main parties where such a response would be of relevance in answering the Panel's questions. Since the Panel has requested the third parties to answer detailed questions, the European Communities considers that allowing the third parties access to the oral statements would allow the third parties to participate in a "full and meaningful fashion" in the stages of the proceeding where the panel has requested their input.[1] Moreover, the European Communities considers that this would benefit the Panel since the third parties will be able to provide more complete responses to the Panel's questions.

Second, the European Communities welcomes the Panel's decision to allow the third parties to comment on the response of the other third parties. However, it is not clear to the European Communities whether the third parties will also be able to comment upon the responses of the main parties to the Panel's questions, or questions the main parties have asked of each other. Once more, the European Communities considers that the third parties comments will be more full and meaningful, and consequently more beneficial to the Panel, if it is also possible to comment on the responses of the main parties in addition to commenting upon the other third parties responses.

Accordingly, the European Communities requests the Panel to ask the main parties to provide the third parties with copies of their oral statements and copies of their responses to the Panel's questions, when lodged. The European Communities also requests the Panel to invite the third parties to comment upon the responses of the main parties to the Panel's questions, and those posed by the other party.

Finally, the European Communities would also respectfully ask you to clarify the treatment of the Panel's expression of views on Article 13 of the *Agreement on Agriculture* and associated issues, scheduled for 5 September 2003. Given that the Panel's findings on this issue may be considered similar to a preliminary ruling, and that the third parties will be asked to provide the Panel with further comments on 29 September 2003, the European Communities considers that, in order to protect third parties' due process rights, the Panel's expression of views should be available to the third parties. The European Communities would be obliged if you could confirm this understanding.

[1] Para. 249, Article 21.5 Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"* ("United States – FSC (21.5)"), WT/DS108/AB/RW, adopted 29 January 2002.

A copy of this letter has been provided to the delegations of Brazil and the United States, and to the other third parties.

May I take this opportunity to thank you in advance for your consideration of these issues.

# ANNEX K-7

## LETTER FROM THE UNITED STATES

1 August 2003

The United States is in receipt of the letter dated 31 July 2003, from the European Communities (EC) relating to third parties' participation in the present dispute. The United States would consent to the Panel's release of its further views on the Peace Clause issue to the third parties as a sensible way forward in this dispute (although we would not necessarily endorse all of the reasoning expressed in the EC letter). Further, the United States has no objection to either party choosing to make its submissions or oral statements public – as the United States and, we understand, Brazil have decided to do. However, we see no basis in the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (DSU) for the additional procedural requirements that the EC is proposing – namely, that the Panel require the parties to make available to the third parties copies of their oral statements and responses to the Panel's questions, and that the third parties comment on the parties' responses to the Panel's questions. The EC proposal appears to erase the distinction between parties and third parties for purposes of dispute settlement.

The United States recalls that in the context of a panel proceeding a third party is welcome to express its interests under any covered agreement at issue in the dispute. Thus, the DSU ensures that third parties may express those interests by providing "an opportunity to be heard by the panel and to make written submissions" (DSU Article 10.2) and the right to "receive the submissions of the parties to the dispute to the first meeting of the panel" (DSU Article 10.3). These requirements have been met in every prior dispute by providing third parties the opportunity to receive the first submissions of the parties, to make one written submission, and to present statements at a third-party session of the first meeting of the panel.

We are aware of no dispute in which third parties have been granted the additional rights now sought by the EC. It would represent a fundamental change in the role of third parties in dispute settlement. Changes of this nature are being discussed in the context of the ongoing negotiations on clarifications and improvements to the DSU, and that is the proper forum for Members to consider these changes.

In addition, on a practical note, if the parties have to deal with the additional work of responding to comments by potentially more than a dozen third parties on (1) each others' answers to the Panel's third-party questions as well as (2) the parties' answers to more than 100 questions from the Panel, the already ambitious timetable established by the Panel will become totally untenable.

Finally, the United States recalls that, like all WTO Members and the public, the EC already has access to US submissions and oral statements on our website. (Indeed, we have already provided a copy of our oral statement directly to the EC at their request.) We also understand that Brazil is making its submissions public within two weeks of filing as contemplated by the parties' agreement and reflected in the Panel's Working Procedures. We would welcome Brazil's making its submissions public upon filing but do not see a basis in the DSU for requiring disclosure of those submissions to the third parties.

The United States is providing a copy of this letter directly to Brazil and the third parties.

# ANNEX K-8

## LETTER FROM BRAZIL

1 August 2003

Brazil received a letter dated 31 July 2003 from the European Communities requesting the Panel:

(i) to ask the parties to the dispute to provide third parties with copies of their oral statements and copies of their responses to the Panel's questions;
(ii) to invite the third parties to comment upon the responses of the parties to the dispute to the Panel's questions, and those posed by the other party;
(iii) to make the "Panel's expression of views on Article 13 of the *Agreement on Agriculture* and associated issues", scheduled for 5 September 2003, available to the third parties.

2. With respect to the EC's requests, Brazil would like to make the following comments.

3. In light of the Timetable for Panel Proceedings, the Working Procedures for the Panel, and DSU Articles 10.2 and 10.3, Brazil considers that the third parties to the present dispute are entitled to be provided with copies of the parties' First Written Submission and parties' Further Submission only. In Brazil's view, these are the only documents that constitute "submissions of the parties to the dispute to the first meeting of the panel" in accordance with DSU Article 10.3.

4. Brazil further notes that the parties to the dispute did not make any oral statements during the session of the substantive meeting of the Panel set aside for the third parties to present their views (24 July 2003). Thus, there are no oral statements of which the third parties should receive written versions. As a matter of fact, the oral (opening and closing) statements made by Brazil and the US were delivered exclusively at the closed session of the substantive meeting of the Panel which the third parties did not have access to. Again, there would be no reason for providing third parties with copies of those oral statements.

5. As is the case for the oral statements, Brazil submits that third parties need not be given copies of the parties' responses to the Panel's questions. The Panel's questions were put to Brazil and the US in the context of the closed session of the first substantive meeting with the parties, as were the preliminary responses given by both parties to the dispute. Moreover, such responses do not constitute "submissions" within the meaning of DSU Article 10.3.

6. Finally, with regard to the "Panel's views on certain issues", Brazil agrees with the EC that the document should be available also to third parties.

# ANNEX K-9

## LETTER FROM THE EUROPEAN COMMISSION

4 August 2003

The European Communities refers to its letter to the Panel of 31 July 2003, and the responses of the United States and Brazil of 1 August 2003.

The European Communities would like first to welcome the agreement of both the United States and Brazil that the Panel's views on the Peace Clause and related issues should be communicated to the third parties.

However, in the view of the European Communities, both the United States and Brazil misunderstand the thrust of the EC's letter of 31 July. Both parties enter into a discussion of whether the third parties are entitled to be given access to, and the chance to comment upon, the responses to the Panel's questions of the main parties. Both argue that the documents which the third parties have received are the only documents which the third parties are entitled to. However, these arguments miss the point of the European Communities request.

The European Communities central point was that, given the detailed questions which the third parties have received from the Panel, and given the Panel's decision to permit third parties to comment upon the responses of the other third parties, it would be a reasonable exercise of the Panel's discretion to organise its procedures so as to allow the third parties also to comment upon the responses of the main parties. The European Communities considers that this would be beneficial to the Panel, and would allow the third parties to participate completely, given the extent to which the Panel has already invited the third parties to participate.

The European Communities does not consider that this would set an unfavourable precedent because a panel would always have the discretion, in the light of its own procedures and the dispute before it, to decide whether to grant third parties such possibilities. Moreover, the European Communities sees no possible impairment of the due process rights of the main parties, and indeed neither the United States not Brazil have alleged any such impairment would result from the Panel acceding to the request of the European Communities.

The European Communities is aware of the practical concerns raised by the United States. However, the European Communities notes that a party always has a choice whether to comment upon responses, and that these practical concerns weigh equally on both parties.

Finally, the European Communities is, of course, aware that the United States makes it oral statements public (and is grateful that the US officials involved in this dispute have provided a copy directly to the EC delegation). We also note that the Panel's procedures provide for the submission of non-confidential summaries within 14 days of filing which could be made public.[1] However, the European Communities is not aware, first, whether such summaries shall also be provided to the third parties, and second, whether such summaries can be considered equivalent to the oral statements as

[1] Para. 3 – Panel's Working Procedures.

delivered. In that light, the European Communities recalls its arguments in favour of provision of the statements as delivered, set out in its letter of 31 July 2003.

A copy of this letter has been provided to the delegations of Brazil and the United States, and to the other third parties.

Thank you in advance for your consideration of these issues.

# ANNEX K-10

## LETTER FROM BRAZIL

14 August 2003

Once more, Brazil is faced with the need to detract from its substantive work relating to the dispute *United States – Subsidies on Upland Cotton* (DS267) to bring to the attention of the Panel a new US failure to abide by the "Working Procedures for the Panel" concerning the timing for delivery of documents required by the Panel.

As it had already done on two previous occasions[1], the US did not deliver its answers to the Panel's questions following the first substantive meeting with the parties by the time established in paragraphs 17(b) and (d) of the "Working Procedures".[2] Brazil recalls that the deadline for submitting the parties' answers to the Panel was expressly confirmed by the Panel on its communication dated 30 July 2003 informing about the extension of the deadline for the submission of the parties' responses[3].

As a matter of fact, the electronic version of the US answers, which was due on 11 August, 5:30 pm, was delivered around 11:30 pm, more than 6 hours after the deadline, more than 6 hours after Brazil delivered both its electronic version and hard copies to the Secretariat and the US. Brazil further notes that no hard copy of the US answers was made available either to the Secretariat or to Brazil by the deadline.

Brazil regrets that the US has decided to adopt such a strategy. In this particular case, the US behavior is even more egregious because the deadline – at request of the US and with the good faith and cooperation of Brazil – had been extended by 7 days by the Panel (from 4 August to 11 August).

As stated, the failure of the US to meet the established deadline provided US officials an opportunity to examine Brazil's answers before submitting their own responses more than 6 hours later. Moreover, the US failure led to delays in the transmittal and reception of the US answers to different Government officials in Brazil and to Brazil's legal advisors, diminishing an already short period for Brazil to comment upon the US responses. Due to the 5 hour time zone difference between Brasilia and Geneva, the US delay prevented work by Brazilian officials on the 11th of August. US official, however, had no such impairment since the USTR representatives in Geneva had the Brazilian answers to the Panel by 11:30 a.m. Washington D.C. time on that same date.

Needless to repeat that Brazil – a developing country with serious budgetary and human resources constraints – has been faced with extremely short deadlines in this case, including the filing on 24 June of its First Submission which required extensive changes to respond to the Panel's

[1] Also the US Comments on the initial brief by Brazil, due on 13 June 2003, and the US First Written Submission, due on 11 July 2003, were delivered after the deadline (see Brazil's letter to the Panel on 14 July 2003).

[2] WP, paragraph 17(b): "*the parties and third parties should provide their submissions to the Secretariat by 5:30 pm on the deadlines established by the Panel, unless a different time is set by the Panel.*" WP, paragraph 17(d): "*the parties and third parties shall provide electronic copies of all submissions to the Secretariat at the time they provide their submissions* [...]".

[3] "*The Panel reminds the parties that paragraph 17(b) of the Panel's working procedures indicates that the responses should be submitted by 17:30 (Geneva time).*"

determination of 20 June. However, Brazil has been meeting the deadlines established, and will continue to do so. Although the facts do not recommend Brazil to be very optimistic, Brazil continues to expect that the US will, like Brazil, meet its own deadlines in a timely fashion from now on.

Brazil respectfully asks the Panel to take note of this new delay and to encourage, again, the US to respect the deadlines, with a view to ensuring procedural fairness in these proceedings.

In addition, Brazil would like to bring to the Panel's attention an issue regarding certain of the United States' Answers to the Panel's Questions. In certain answers, the United States has indicated it will provide responsive arguments and information in its rebuttal submission. In other answers, it made allegations without providing any documentary support that would permit Brazil to challenge the accuracy and credibility of allegations. The answers in question are the following:

> Answer to Questions 14 and 26: no detailed information or arguments were provided in the US answers regarding either production flexibility contracts or market loss assistance payments. The last sentence of paragraph 57 of the U.S. answers indicates US will discuss production flexibility contract payments only in the rebuttal submission.
>
> Answer to questions 60 and 66(a): The United States provided no responsive information or calculations to respond to the Panel's questions.
>
> Answer to Questions 66(d): In paragraph 121, the United States indicates that "it will provide a detailed critique of Mr. Sumner's analysis in our rebuttal submission." In paragraph 124 it states: "We will discuss other conceptual errors in Sumner's approach in our rebuttal submission."
>
> Answer to Question 73: Other than an undocumented allegation in US answer to Question 76, the United States provided no information or argument concerning Articles 1 and 3 of the SCM Agreement. Instead, the United States stated in paragraph 140 that it would "review Brazil's submissions, including its responses to these questions, and provide any further response in the US submission".
>
> Answers to Questions 12, 71-88: The United States provided only two exhibits (US-12 and US-20) and no other documentation in support of arguments or allegations.

Brazil recalls that the purpose of scheduling the filing of the answers to the Panel's questions 11 days before the submission of the rebuttal submission was to permit the parties to review each other's answers and supporting documentation and then to comment on those answers in the rebuttal submissions. Brazil cooperated in this process by providing complete and comprehensive answers to all of the Panel's questions together with extensive documentation. As demonstrated above, for certain questions, the United States did not provide complete answers or documentation that would have allowed Brazil the opportunity to comment and rebut in its rebuttal submission.

Brazil will be prejudiced if it does not have the opportunity to comment on information, arguments, and documents the United States makes or provides for the first time in their rebuttal submission that *would have been* responsive to those Panel questions listed above. Accordingly, Brazil requests the right, only with respect to the questions above, to comment on any new information, arguments, or documents presented for the first time in the U.S. rebuttal submission.

Providing Brazil with this right is consistent with basic notions of due process. Otherwise, Brazil will not have another opportunity prior to the Panel's 5 September decision on peace clause issues, to comment on any new information, documents, or arguments presented by the United States.

The inability or unwillingness of the United States to provide complete answers should not prejudice Brazil. The United States now has the benefit of Brazil's complete answers together with extensive additional documentation to comment on in its rebuttal submission. This is particularly true with respect to issues related to export credit guarantees and issues related to Professor Sumner's analysis. Brazil is entitled the same right.

Brazil requests that it be provided until 28 August to file any such comments. In light of the fact that Brazil provided complete answers to the Panel's questions, there is no basis for the Panel to provide the United States with any corresponding right. Its due process rights have not been adversely impacted.

# ANNEX K-11

## LETTER FROM THE UNITED STATES

20 August 2003

The United States has received a copy of the letter to the Panel from Brazil of 14 August 2003. We have also received your communication of yesterday, responding to Brazil's requests for additional time to submit its rebuttal. The United States does wish to record its views on Brazil's letter, and my authorities have therefore instructed me to convey their surprise that Brazil would send such a letter and their regret over any burden that it may have placed on the Panel in what is already a very difficult and complicated dispute.

The United States would first like to thank the Panel for agreeing to extend the deadline for the responses to the Panel's questions. The United States appreciates the depth and level of understanding of the issues represented by the Panel's extensive and broad-ranging questions. Without an extension of the deadline, it would have been completely impossible for the United States to have provided responses in a timely manner. Even with the extension, the drafting, compiling, consulting internally with the various relevant officials, and finalizing the responses all required supreme effort and personal sacrifice on the part of the entire US delegation. The United States did provide responses by the August 11 deadline, although it was not possible to accommodate the 5:30 pm filing guideline despite the best efforts of the United States to do so.[1]

The same burden was not placed on Brazil and the outside legal counsel that Brazil has employed for this dispute. As a result, it is not surprising that Brazil found the deadline to be less demanding and resource-intensive. We would note that, if one only counts the main questions and not any of the subquestions, there were 104 questions posed to the United States, but only 63 posed to Brazil.[2] With all respect, the United States has considerable difficulty with Brazil's complaints about the time within which the United States filed its response in light of the total amount of work required, and effort that the United States expended, to provide its answers to the Panel's questions.[3]

The United States also could not understand how Brazil could ask for an additional opportunity to respond to new material in the rebuttal submissions while at the same time asking that the Panel deny any such opportunity to the United States. (After all, one would expect that Brazil will

[1] On the one hand, the United States is flattered that Brazil credits the United States with the ability to finalize its own responses while simultaneously reviewing Brazil's responses filed earlier in the evening. On the other hand, the United States is, to say the least, taken aback that Brazil would suggest that the United States would do so. In any event, the press of finalizing the US responses completely consumed the US delegation and no one was able to spare time to look at Brazil's responses at any point that day, let alone before the US responses were filed.

[2] The difference in the number of questions for each party means that Brazil had nearly 6-1/2 hours to prepare its responses to each question posed to it, whereas the United States had less than four hours per question. (Counting the subquestions would increase the disparity since a preliminary check indicates that there were more subquestions for the United States than for Brazil.) As a result, Brazil had approximately 65 percent more time to prepare its responses. Had the United States taken the same amount of time as Brazil to prepare each response, its responses would have taken 28 days to file (they would have been finished on August 22).

[3] The United States also failed to understand the reference in Brazil's letter to Brazil's "good faith and cooperation" in extending the deadline by seven days. In fact, Brazil did not "cooperate" in the Panel's decision to grant a seven-day extension. Brazil instead objected to any extension beyond three days.

also provide new material in its rebuttal submission on topics covered in the Panel's questions, and not just repeat material it has already submitted.) Such a one-sided approach would not have achieved the "procedural fairness" that Brazil has said it seeks. In this connection, the United States considers that the approach taken by the Panel in its communication yesterday achieves a fair balance of the parties' interests.

In conclusion, the United States would like to thank the Panel for the approach it has taken on Brazil's request, as well as for its work to date on the many issues presented by this dispute. The United States is also providing a copy of this letter directly to Brazil.

# ANNEX K-12

## LETTER FROM BRAZIL

23 August 2003

The Government of Brazil is in receipt of the Communication from the Panel dated 19 August 2003. Brazil only received this morning the *Rebuttal Submission of the United States of America*, dated 22 August 2003 ("US Rebuttal Submission"). Brazil notes that consistent with all of its earlier written submissions, the United States filed its Rebuttal Submission 6 hours late. This delay has prejudiced Brazil and prevented it from providing comments responsive to the Panel's 19 August 2003 letter until today. Brazil notes that the United States received its copy of Brazil's Rebuttal Submission, along with Brazil's Comments to the US Answers, consistent with the 5:30 p.m. deadline established in the Panel's Working Procedures.

In accordance with your communication of 19 August 2003, Brazil has reviewed the US Rebuttal Submission to determine "whether there is any specific material on which it has not had an opportunity to comment", and which it would like to address in a 27 August submission. Brazil identifies below the specific US arguments, data and documents on which it would like to comment. Brazil also shows below good cause why it should be granted the opportunity to address each specific argument, data and document.

Brazil recalls that its original 14 August 2003 request to the Panel to afford it this opportunity was triggered by explicit indications by the United States, in its 11 August responses to Panel questions, that it was not providing full responses to the Panel's questions and would instead address a number of issues for the first time in its Rebuttal Submission. Brazil argued that it would be prejudiced by this conduct. The list below is consistent with the spirit of Brazil's 14 August request. Brazil's list only includes specific issues that should have been but were not addressed in the United States' 11 August responses, or specific issues related to new documents relied on by the United States for the first time in its Rebuttal Submission.

There are a number of new arguments or re-packaging of earlier arguments presented by the United States in its Rebuttal Submission. Most of these arguments do not require a further response, since Brazil's various earlier submissions and exhibits addressed or anticipated the new or re-packaged US arguments or issues raised by those arguments. In this regard, Brazil notes that the United States' Rebuttal Submission does not respond to a number of arguments made in earlier submissions by Brazil. Brazil would object to any opportunity given to the United States to provide such a response in its 27 August submission. Brazil is of the view that the purpose of this exercise is not to provide the Parties with a whole-scale opportunity to rebut every point raised in either the United States' or Brazil's Rebuttal Submissions. The Panel should limit the United States to comments on specific issues that should have been but were not addressed in Brazil's 11 August responses, or specific issues related to new documents relied on by Brazil for the first time in its Rebuttal Submission.

Should the Panel grant the United States an opportunity to comment on issues beyond this narrow scope, Brazil reserves its right to revisit the list of material it includes in the list below.

In accordance with the above understanding, Brazil requests leave to comment on the following specific material:

**Domestic Support Issues**

Para. 43

*Subject:* US argument regarding the growing of illegal crops, etc.

*Good cause*: This is a new argument that should have been but was not raised in the United States' 11 August response to questions 25 and 26 from the Panel.

Paras. 96-98

*Subject*: US argument regarding crop insurance notifications of other Members.

*Good cause*: This is a new argument referring to new WTO documents not raised in earlier submissions.

Paras. 114-117

*Subject*: US argument regarding a price gap methodology for marketing loans.

*Good cause:* This is a new argument that should have been but was not raised in the United States' 11 August response to question 67 from the Panel, and that is directly contradictory to information provided by the United States in paragraphs 128-134 of that response.

Paras. 123-127 and Exhibit US-24

*Subject*: US new challenge to Professor Dan Sumner's analysis.

*Good cause*: This is a new argument and exhibit that should have been but was not provided in the United States' 11 August response to question 61(d) from the Panel.

Export Credit Guarantee Issues

Paras. 135-146 and Exhibits US-25 through US-29

*Subject:* New US arguments concerning the negotiating history of Article 10.2 AoA.

*Good cause:* These arguments should have been but were not raised in the United States' 11 August response to questions 88(a) and 88(b) from the Panel.

Paras. 147-152

*Subject:* New US argument that had it intended to subject export credit guarantees to the AoA and the SCM Agreement, it would have included them in the calculation of its reduction commitments.

*Good cause:* This argument should have been but was not raised in the United States' 11 August response to questions 88(a) and 88(b) from the Panel.

Paras. 156-157, 160-162, and Exhibits US-31 and US-32

*Subject:* New US arguments and data concerning the FCRA formula and the reestimate process.

*Good cause:* These arguments and data should have been but were not raised in the United States' 11 August response to questions 81(d)-(g) from the Panel.

Para. 169 and Exhibit US-33

*Subject:* New US assertion that rescheduled debt is not in arrears.

*Good cause:* This argument and evidence should have been but was not raised in the United States' 11 August response to question 81(a) from the Panel.

Paras. 172, 174-175:

*Subject:* US argument that item (j) does not require recovery of long-term losses.

*Good cause:* This argument should have been but was not raised in response to the United States' 11 August responses to questions 74 and 77 from the Panel.

Paras. 186-191, and Exhibits US-34 through US-37

*Subject:* US argument that "forfaiting" is analogous to CCC export credit guarantee programs for agricultural commodities.

*Good cause:* This argument should have been but was not raised in the United States' 11 August response to question 76 from the Panel (as well as questions 71(a) and 73).

Brazil notes that the United States has for the first time addressed Brazil's "threat of circumvention" claims under Article 10.1 AoA (paras. 180-183). In particular, Brazil notes new US arguments contrasting CCC guarantee programs from FSC (and the panel and Appellate Body decisions concerning the *United States – FSC* dispute), asserting that there is no legal entitlement to CCC guarantees, and asserting (*via* new data) compliance with scheduled quantitative reduction commitments. Consistent with the purpose of this exercise – offering an opportunity to comment solely on arguments that should have been addressed in the United States' 11 August responses to questions and to new documents proffered by the United States for the first time in its Rebuttal Submission – Brazil is not asking for an opportunity to address the US "circumvention" arguments in its 27 August submission. Brazil would be pleased, however, to address any questions the Panel has concerning these new US arguments.

Brazil thanks the Panel and the Secretariat for its consideration of this request and for its continuing work on this dispute.

# ANNEX K-13

## LETTER FROM THE UNITED STATES

25 August 2003

In the Panel's fax dated 19 August 2003, the Panel noted the possibility that a party might lack sufficient opportunity to comment on information, argumentation and documents submitted by the other party in its rebuttal submission, and the Panel invited the parties to request the opportunity to comment on specific material after receiving each other's rebuttal submissions. My authorities have instructed me to submit this letter requesting such an opportunity.

Because of Brazil's tactical decision to defer presenting its entire case with respect to Peace Clause issues, the United States is once again put in the difficult position of attempting to respond to extensive, wholly new evidence and arguments in an extremely compressed time frame. Furthermore, we note the comment of Brazil in its rebuttal submission that it "provides *additional evidence* establishing that under *a variety of interpretations and methodologies* the US level of support granted to upland cotton in MY 1999-2002 was far greater than the support decided in MY 1992".[1]

Under paragraph 13 of the Panel's working procedures, all evidence was supposed to have been submitted no later than during the first substantive meeting, except evidence necessary for purposes of rebuttals or answers to questions. Brazil has not explained why it could not have presented this evidence by the first Panel meeting or why this evidence is necessary for purposes of rebuttal. A quick review of the "additional evidence" appears to indicate that this is all evidence that should have been presented no later than the meeting with the Panel. Accordingly, unless Brazil can show "good cause" for withholding this evidence from the Panel and the parties until now, the United States would respectfully request the Panel to disregard this evidence.

In light of the shortness of time, the United States requests the opportunity to comment with respect to a number of issues raised for the first time in Brazil's rebuttal submission and comments on answers to questions, as listed below. With respect to each such issue, the United States demonstrates that there is good cause to permit such comments. The United States is requesting the opportunity to comment (even though some of this evidence may be disregarded by the Panel in response to the US request) so as to avoid further delay, pending the Panel's finding in response to the request to disregard the evidence.

Rebuttal Submission:

Paras. 4-9: Brazil for the first time responds to the US argument, made in both its opening and closing oral statements at the first panel meeting, that Brazil's interpretation of paragraph 6(b) would create an inconsistency between that provision and the fundamental requirement of the first

[1] Rebuttal Submission of Brazil, para. 1 (22 August 2003) (emphasis added). We also note that Brazil had indicated in its answers to the Panel's questions that it was deferring presenting its case on several issues pending receipt of the answers to the questions by the United States and in at least one instance by the European Communities (see *e.g.*, paragraph 80 of Brazil's answers to the Panel questions). Brazil's rebuttal submission for the first time now presents this material.

sentence of Annex 2, paragraph 1. This is a new argument not previously made to the Panel, for example, in either of Brazil's oral statements or in its answers to questions from the Panel.[2]

Paras. 24-26: On the basis of a previously submitted exhibit, Brazil now advances for the first time the argument that production flexibility contract payments may be considered "support to upland cotton" on the basis that such payments were not made "in favour of agricultural producers in general" because payments were linked to acres that produced any of seven crops during a fixed and defined base period.[3] This argument could have been made in Brazil's first submission, either of Brazil's oral statements, or in Brazil's answers to questions from the Panel.[4]

Paras. 29-35: In these paragraphs, Brazil for the first time advances an argument for market loss assistance payments that parallels the argument made for the first time in paragraphs 24-26 with respect to production flexibility contract payments: that market loss assistance payments may be considered "support to upland cotton" on the basis that such payments were not made "in favour of agricultural producers in general" because payments were linked to acres that produced any of seven crops during a fixed and defined base period. In addition, Brazil introduces a raft of assertions, new data, and calculations, including some with respect to crops other than upland cotton, to assert that production flexibility contract payments and market loss assistance payments are support for upland cotton because of costs for upland cotton farmers.[5] Brazil could have presented these data, calculations, and arguments in its previous submissions and statements.

Paras. 36-46: As with production flexibility contract payments and market loss assistance payments, Brazil argues (again for the first time) that direct payments may be considered "support to upland cotton" on the basis that such payments were not made in favor of all agricultural producers, and Brazil introduces a raft of assertions, new data, and calculations, including some with respect to crops other than upland cotton, to assert that direct payments are support for upland cotton because of costs for upland cotton farmers.[6] Brazil could have presented these data, calculations, and arguments in its previous submissions and statements.

Paras. 48-50: Brazil makes a nearly identical argument for counter-cyclical payments as for those indicated above: that is, these payments may be considered "support to upland cotton" on the basis that such payments were not made "in favour of agricultural producers in general" and on the basis of the same or similar assertions, new data, and calculations with respect to costs and subsidies for upland cotton and other crops.[7] Brazil could have presented these data, calculations, and arguments in its previous submissions and statements.

---

[2] *See, e.g.*, Brazil's Answer to Question 27 from the Panel (para. 39 failed to make any such argument in the course of the answer alleging that US decoupled income support has more than a minimal effect on production (and thus is inconsistent with the fundamental requirement of the first sentence of Annex 2, paragraph 1) because such support "limit[s] payments based on the type of production").

[3] Indeed, none of the citations provided by Brazil in these paragraphs discloses the argument Brazil now advances. *See* Brazil 's Rebuttal Submission, paras. 24-35 fn. 38-44.

[4] *See* Brazil's Answer to Question 23 from the Panel (paras. 25, 27: noting base acreage and addition of crops to base acreage under direct payments program but failing to argue that limitations on base acreage render measure product-specific).

[5] *See, e.g.*, Brazil's Rebuttal Submission, para. 31 fn. 68, 69 (both of these footnotes contain new evidence that should have been presented by the first Panel meeting); *id.*, para. 33 fn. 71 (disclosing new calculation).

[6] *See, e.g.*, Brazil's Rebuttal Submission, para. 39 fn. 84 (this footnote contains new evidence that should have been presented by the first Panel meeting), 85.

[7] *See, e.g.*, Brazil's Rebuttal Submission, para. 50 fn. 112, 113, 114 (all of this is new evidence that should have been presented by the first Panel meeting).

Paras. 55-59: With respect to crop insurance payments, Brazil introduces new evidence (for example, relating to availability of specific policies) and arguments to claim that these payments are product-specific support to cotton.[8] Brazil could have presented this evidence and argument in its previous submissions and statements.

Paras. 73, 75-77: Brazil introduces revised data and calculations relating to alleged budgetary expenditures for upland cotton and an AMS for upland cotton.[9]

Paras. 88, 90-94: Brazil misstates the US position with respect to the Peace Clause analysis for support provided in past marketing years. Brazil also asserts, erroneously, the US Peace Clause interpretation is inconsistent with the position taken by the United States in previous WTO dispute settlement proceedings. These arguments could have been presented by Brazil earlier -- for instance, during its first oral statement to the Panel[10] or in its answers to the Panel's questions.[11]

Brazil's Comments on U.S. Answers

Paras. 44-45: Brazil for the first time presents an argument claiming that the US interpretation of paragraph 6(b), made in both its opening and closing oral statements at the first panel meeting, would render paragraph 6(e) a nullity. These arguments could have been presented in Brazil's answers to the Panel's questions. (*See also* paragraphs 4-9 of Brazil's Rebuttal Submission, discussed above.)

Paras. 54-56: In the guise of a "general comment" to questions 47-69, Brazil asserts for the first time that the US argument relating to the level of support decided by US measures does not account for various forms of product-specific support. This erroneous assertion could have been presented as early as Brazil's oral statements at the first panel meeting or in its answers to the Panel's questions.

The United States thanks the Panel for its consideration of these requests. In addition, like Brazil, we would of course also welcome the opportunity to respond to any further questions the Panel may have. Moreover, should the Panel consider it useful to hear further argumentation from the Parties, we would of course be pleased to make additional submissions or appear before the Panel on this complicated and sensitive matter.

The United States is providing a copy of this letter directly to Brazil.

[11] *See, e.g.*, Brazil's Answer to Question 15 from the Panel.

# ANNEX K-14

## LETTER FROM BRAZIL

25 August 2003

The Government of Brazil is in receipt of a letter from the United States dated 25 August. Brazil received that letter at 6 p.m. today. Brazil requests the Panel to take the following action as set forth below.

*Rejection of US request as untimely:*

Brazil requests that the Panel disregard the United States' request to have the Panel grant it permission to offer rebuttal arguments to Brazil's 22 August rebuttal submission and comments on the US answers. This letter, like *all* prior US submissions to the Panel, was not timely filed. This latest request was made at least 60 hours too late. The Panel's Communication of 19 August 2003 stated:

> when each party receives the other party's rebuttal submission, it is invited, *without delay* to draw the Panel's attention to any specific material on which it has not had an opportunity to comment . . . ."

The Communication further stated that "the Panel is willing to grant such permission on Saturday, 23 August 2003, if necessary."

Brazil interpreted this Communication as requiring it to make the request on Friday evening, 22 August, immediately after reviewing the US Rebuttal Submission. Unfortunately, the US Rebuttal Submission was sent shortly before midnight on Friday, 22 August and could only be accessed by the Brazilian Mission in Geneva at 9:00 a.m. Geneva time on Saturday, 23 August. Brazil informed the Secretariat on Friday evening that it could not make its request that evening since it had not received the US Rebuttal Submission. Brazil further informed the Secretariat on Saturday morning that it would file a request by 2:00 p.m. on Saturday.

By contrast, the United States received Brazil's 22 August Rebuttal Submission and Brazil's 22 August Comments to the US Answers and Brazil's exhibits at 5:30 p.m. Geneva time on Friday, 22 August. Regardless, the United States waited more than 72 hours to file its request that the Panel strike certain information in Brazil's 22 August submissions, and its request for leave to file comments on those Brazilian submissions.

Brazil has endured repeated violations by the United States of the Panel's procedural deadlines over the past three months. If the Panel's procedures are to mean anything, they must be enforced. There is no doubt that this latest request by the United States is well out of time. It was not made "without delay". There is no basis offered by the United States for such delay. There is none. Accordingly, the Panel should reject the United States request as untimely.

*Reject US Request to Strike Brazil's Rebuttal Evidence and Argument*

The United States also requests the Panel to strike large amounts of Brazil's Rebuttal Submission and Brazil's documents with the argument that Brazil allegedly violated paragraph 13 of the Panel's working procedures. Brazil notes the irony of the United States invoking the Panel's

working procedures given their repeated violations of such procedures over the past three months. Nevertheless, the United States ignores the Panel's Determination of 20 June, in which it stated, in paragraph 20, last bullet:

> For the purposes of allowing the Panel to express its views on the exemption conditions of Article 13 of the *Agreement on Agriculture* by 1 September 2003, in relation to those measures which may be affected by Article 13, *full and complete submissions on factual and legal issues related to Article 13 in this dispute will need to be provided, at the latest, in the parties' rebuttal submissions (to be submitted on 22 August 2003).*

Brazil interpreted this ruling as permitting it to provide no later than 22 August all of its evidence and argument that had not already been provided in its earlier submissions. This is the manner in which it treated the new evidence and arguments presented by the United States in its Rebuttal Submissions. Therefore, Brazil did not, in its 23 August letter to the Panel, seek to "strike" new US evidence included in the US 22 August Rebuttal Submission, but simply asked to be provided with an opportunity to respond to that evidence.

Therefore, there is no basis for the US request.

*Response to US requests to comment on Brazil's 22 August Submissions*

The United States complains at several points in its letter that Brazil is presenting for the first time, in its 22 August Rebuttal Submission, responses to US arguments made in the US opening and closing oral statements at the first panel meeting. Unless particular questions from the Panel offered Brazil the opportunity to respond to arguments made by the United States in the US statements at the first panel meeting, however, Brazil's first opportunity to respond to the US arguments was in Brazil's 22 August Rebuttal Submission.

Brazil has listed below its comments to the requests by the United States:

Brazil's 22 August Rebuttal Submission

Paragraphs 4-9:

These arguments were made by Brazil in rebuttal of US and EC arguments advanced in their first submissions, oral statements and answers to questions, or reflect summaries of earlier arguments made by Brazil. The Panel should, therefore, reject the US request to comment on them.

Paragraphs 24-26:

This evidence and arguments are based on exhibits presented previously and rebut US arguments that PFC payments do not constitute support to upland cotton. Contrary to the US assertion, there is no question by the Panel to which this evidence and arguments would be responsive. Therefore, the US request should be rejected.

Paragraphs 29-35:

This evidence was presented by Brazil in rebuttal to US arguments that market loss assistance payments do not constitute support to upland cotton. The US does not assert that there would have been a question by the Panel to which this evidence and arguments would be responsive. Therefore, the US request should be rejected.

Paragraphs 36-46:

This evidence was presented by Brazil in rebuttal to US arguments that direct payments do not constitute support to upland cotton. The US does not assert that there would have been a question by the Panel to which this evidence and arguments would be responsive. Therefore, the US request should be rejected.

Paragraphs 48-50:

This evidence was presented by Brazil in rebuttal to US arguments that counter-cyclical payments do not constitute support to upland cotton. The US does not assert that there would have been a question by the Panel to which this evidence and arguments would be responsive. Therefore, the US request should be rejected.

Paragraphs 55-59:

This evidence was presented by Brazil in rebuttal to US arguments that crop insurance payments do not constitute support to upland cotton. The US does not assert that there would have been a question by the Panel to which this evidence and arguments would be responsive. Therefore, the US request should be rejected.

Brazil's 22 August Comments on US Answers

Paragraphs 44-45:

These arguments were made in rebuttal of US arguments that the restrictions on planting flexibility contained in the US PFC and direct payment programmes are consistent with Annex 2, paragraph 6. Therefore, the US request should be rejected.

Paragraphs 54-56:

These arguments are a direct reaction and comment to new information provided by the United States in response to Question 67. It is entirely appropriate to react to this information and include it in the peace clause calculation. Therefore, the US request should be rejected.

Brazil would like once more to thank the Panel for the consideration of these requests.

# ANNEX K-15

## LETTER FROM THE UNITED STATES

27 August 2003

Attached please find the US comments on new material in Brazil's rebuttal filings and answer to the additional question from the Panel in the dispute, *United States – Subsidies on Upland Cotton* (DS267). The United States wishes to take this opportunity to thank the Panel for its rapid consideration of, and response to, the US request to file these comments.

In Brazil's letter to the Panel of 14 August 2003, Brazil raises the concern that "basic notions of due process" require providing parties the opportunity to comment on new material. Brazil's concern and the exchanges with the Panel and the parties over the days since that letter have highlighted a particular aspect of the unique proceedings in this panel process. As a result, my authorities have instructed me to draw another matter to the Panel's attention. The United States notes that the Panel intends to express its views on the issue of the Peace Clause by 5 September 2003. No prior panel nor the Appellate Body has made findings on the Peace Clause. The submissions and material provided to the Panel to date have demonstrated that the issues involved in the Panel's findings on the Peace Clause are fact-intensive, complex and sensitive.

While prior panels have made preliminary rulings on procedural issues, no prior panel has been confronted with the situation presented in this dispute. Here, the Panel will be making substantive findings on key provisions of the covered agreements. In this connection, the United States takes note of the Panel's observation that the fairness of panel proceedings may require ensuring that the parties receive sufficient opportunity to comment on new material.[1] The United States also takes note of the provisions of paragraph 2 of Article 15 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* in which Members have agreed that parties should have an opportunity to comment on a panel's findings before they are final.

In this dispute, the Panel's findings on the Peace Clause are presumably intended to be dispositive of substantive claims and arguments of the parties for the remainder of the panel proceedings. Because of the substantive nature of those findings, the Panel's findings on 5 September will need to provide the factual basis and basic rationale underlying the findings. Both parties have a significant interest in those findings, in terms not just of the ultimate conclusion reached, but also in terms of the factual findings, rationale underlying those findings, and an understanding of the scope of those findings.[2] Accordingly, in keeping with Article 15.2 of the DSU, and in order to be fair to both parties, the United States respectfully requests that the Panel provide Brazil and the United States with the Panel's 5 September Peace Clause findings in an interim form and provide the parties an opportunity to comment on the Panel's findings.[3] The United States suggests that, in keeping with the

[1] In the Panel's letter of 19 August 2003.

[2] Recent experience in the DSU with panel preliminary rulings has demonstrated the significant effect they can have on the parties and the course of the panel proceedings.

[3] The United States assumes that the Panel will also include its findings on the Peace Clause in its interim report issued towards the end of the panel proceedings. However, at that point the findings would have already determined the course of the remainder of the panel proceedings and it would be too late for either party to provide comments in a timely manner that would help ensure the accuracy of the facts on which the findings were based or to facilitate a clear understanding of the legal basis for those findings. Accordingly, the opportunity to comment at that stage would be inadequate to preserve the rights of both parties and could

practice in other panel proceedings and this Panel's timetable for the interim review in this dispute, two weeks should be sufficient time to comment.

The United States would be happy to provide further elaboration or to respond to any questions the Panel may have with respect to this request.

The United States is providing a copy of this submission directly to Brazil.

instead prejudice those rights. For the same reason, it could be perceived as circumventing the provisions of Article 15.2 of the DSU to issue substantive findings on the claims made (and that have effect on the parties) without an opportunity for the parties to comment prior to the findings having an effect.

# ANNEX K-16

## LETTER FROM BRAZIL

28 August 2003

The Government of Brazil is in receipt of a letter from the United States dated 27 August. Brazil notes that the US Comments to Brazil's 22 August Rebuttal Submission were filed five hours *after* the deadline of 5:30 p.m. In the covering letter to those Comments, the United States requests that the Panel provide the Parties with an opportunity to comment on an interim form of the Panel's 5 September rulings regarding peace clause-related issues.

Brazil opposes this request for the reasons stated below.

The Panel's ruling of 20 June 2003 revising the timetable for this dispute did so in order to "organize [its] proceedings in an orderly, effective and efficient manner". This 20 June 2003 decision, in the view of Brazil, addressed the concerns of Brazil that the extra briefing and meeting proposed by the United States on peace clause issues would not result in an overly lengthy delay of the resolution of Brazil's serious prejudice claims. To that end, the Panel established the date of September 1 for the Panel's decision and September 4 for Brazil to file its "Further Submission." Those dates were later extended to September 5 and 9 respectively pursuant to a 30 July Panel decision to accommodate a request of the United States for additional time to answer the Panel's questions.

Brazil is ready to file its Further Submission no later than 5:30 p.m. on 9 September. Establishing an unprecedented "interim review" for the peace clause preliminary finding will unquestionably delay Brazil's filing of its Further Submission and the Second meeting of the Panel scheduled for 7-9 October. This request will upset the balance created by the Panel's 20 June proceeding and negatively impact Brazil's rights to a speedy resolution of this dispute pursuant to DSU Article 3.3. The Panel was established more than five months ago and Brazil has yet to file its first submission on many of its claims.

Brazil notes further that DSU Article 15.2 provides an opportunity for the parties to request the panel to review "precise aspects of the interim report prior to the circulation of the final report to the Members". This actual text is contrary to the US statement that Article 15.2 provides Members "an opportunity to comment on a panel's finding before they are final". The parties' rights under Article 15.2 are explicitly recognized and preserved by paragraph 16 of the Panel's Working Procedures.

The US letter argues that the Panel must set forth its complete and full reasoning and factual findings in its 5 September decision. Brazil notes that paragraph 20 of the Panel's 20 June Decision stated that it would "express its views on whether measures raised in this dispute satisfy the conditions in Article 13 of the Agreement on Agriculture" and would "express its views in the form of ruling...". Brazil does not and would not presume or suggest what form the Panel's "ruling" will or should take. However, it is within the Panel's discretion, as with many previous panels, to provide the basic rulings on the preliminary issue and then to further elaborate such rulings in the final determination.

As the United States recognizes, there will be an opportunity for the parties to comment on the interim report that the Panel will issue following the second meeting of the Panel with the Parties.

Brazil believes that its procedural rights will be fully protected by the existing procedural safeguards provided by the interim review process. The United States has provided no legitimate reasons why its rights would not also be protected. Both parties will have an equal opportunity to comment on any decision by the Panel regarding the peace clause at that time.

In sum, Brazil requests that the Panel reject the United States request to establish an interim review process to the Panel's 5 September ruling.

# ANNEX K-17

## LETTER FROM THE UNITED STATES

29 August 2003

By letter of 28 August 2003 Brazil objects to the US request in the dispute *United States – Subsidies on Upland Cotton* (DS267) that the Panel provide Brazil and the United States with the Panel's September 5 Peace Clause findings in an interim form and provide the parties an opportunity to comment on the Panel's findings. My authorities have instructed me to submit this response to Brazil's letter.

The United States has reviewed carefully the concerns raised by Brazil in its letter. Brazil's objection appears solely to be based on the concern that granting this request would mean that the parties would have time to review and provide comments to assist the Panel in finalizing the Panel's findings on this key element of the dispute. Brazil expresses concern that the time for comment may result in some shifting of the schedule for the remainder of the dispute.[1]

Brazil acknowledges that the parties have the right under the DSU to comment on the Panel's Peace Clause findings before they are made final. The only apparent concern for Brazil is when that right to comment can be exercised. For Brazil, the comments should only be provided when they are too late to be effective. According to Brazil's approach, while it is to be expected that the Panel could alter any part of its findings in response to a party's comments, that alteration would come after the Panel's proceedings had already taken place on the basis of the preliminary findings. Any alteration would be unable to affect the past proceedings. The United States is unable to understand how this could possibly mean, as Brazil asserts, that a party's "procedural rights will be fully protected by the existing procedural safeguards provided by the interim review process".

Brazil would compound the problem by suggesting that findings on key substantive claims may be made in just a basic form, with none of the underlying factual basis or legal reasoning. Brazil asserts that would be in keeping "with many previous panels". Brazil's assertion has no foundation. No previous panel has ever been in the current situation, nor has any previous panel made findings part-way through a dispute on the Peace Clause or on any substantive issue, let alone one as factually complex with so many legal questions of first impression. The Panel's situation is unprecedented, thus it is no surprise that there are no precedents on which to draw. However, there *is* the text of the DSU on which to draw. As the United States explained in its 27 August 2003, letter, Article 15.2 of the DSU provides the parties with a right to comment on findings in an interim form. Brazil argues for an approach that would render that right largely hollow.

The United States has difficulty perceiving the basis for Brazil's objections. As the United States has argued, Brazil is barred by virtue of the Peace Clause from pursuing most of its claims in this dispute. It is strange then that Brazil would not want an opportunity to comment on any finding as to whether the Panel should hear evidence and argument on Brazil's claims.

[1] However, granting the request would not appear necessarily to mean any change in the date of circulation of the Panel's final report.

Brazil has failed to present a basis for denying the parties a timely and effective opportunity to exercise their right to comment on the Panel's findings. Accordingly, the United States respectfully renews its request that the Panel provide Brazil and the United States with the Panel's September 5 Peace Clause findings in an interim form and provide the parties an opportunity to comment on the Panel's findings.

The United States is providing a copy of this submission directly to Brazil.

# ANNEX K-18

## LETTER FROM BRAZIL

29 August 2003

The Government of Brazil is in receipt of a letter from the United States dated 29 August responding to Brazil's letter of 28 August. Brazil regrets the US continuation of the debate over its unprecedented "interim review" proposal that distracts the Panel and Brazil from substantive work on this dispute. In response, Brazil refers to the arguments set forth in its letter of 28 August that provides the Panel with the basis to reject the US request for a special interim review procedure.

Brazil notes that the United States does not deny that the proposed new interim procedure would result in additional delay. This is apparently not a concern to the United States. But it is a concern to Brazil. The United States ignores the balance in the Panel's June 20 decision that struck the balance protecting Brazil's rights under Article 3.3 of the DSU.

Reviewing the Panel's decision in the Article 15.2 existing procedures will not, as the United States claims, render the parties rights "largely hollow." The practical purpose of the interim review exercise under Article 15.2 is for parties to point out any particular errors of fact or citations that the Panel may wish to correct in the final report. Thus, the "timely and effective right to comment on the Panel's finding" can be accomplished in this case -- as Brazil suggests -- through the use of the normal Article 15.2 procedures in the normal timeframe for making such comments.

# ANNEX K-19

## LETTER FROM BRAZIL
## COMMENTS RE REVISED TIMETABLE

9 September 2003

1. Brazil welcomes the invitation to comment on the draft further revised timetable, as attached to the Panel's communication of 5 September 2003. In this respect, Brazil recognizes that the Panel must be given all the time necessary to make the best and most objective examination of the matter before it in order to provide the Parties to the dispute with a report founded on a sound legal basis and an accurate scrutiny of the facts. Nonetheless, the proposed date for the second substantive meeting with the Parties poses a difficulty for Brazil given commitments previously scheduled by members of the legal team according to the earlier adopted timetables. Indeed, the Brazilian team would face serious difficulties to participate in meetings in Geneva from 12 to 19 November 2003.

2. Brazil would further recall that any adjustments to the draft further revised timetable should take into account the time limits established in DSU Articles 12.8 and 12.9.

3. That said, Brazil would kindly request the Panel to examine the possibility of modifying the date for the second substantive meeting with the Parties. The subsequent deadlines would be adjusted accordingly.

# ANNEX K-20

## LETTER FROM THE UNITED STATES
## COMMENTS RE REVISED TIMETABLE

9 September 2003

In the Panel's communication of 5 September 2003, the Panel invited the parties to comment on the draft further revised timetable attached to the communication. My authorities have instructed me to submit the following comments on the draft timetable and, in addition, to request that the further submission of the United States be due on 2 October rather than 23 September.

With respect to the draft timetable, the United States notes that the Panel provides separately for comments on answers to questions, due on 27 October, one week after the rebuttal submissions and answers to questions. The United States appreciates the value of an opportunity for the parties to comment on each others' answers to questions. However, in this case that opportunity comes at the cost of adequate time to prepare the rebuttal submissions and answers to questions themselves. Given the number and complexity of issues in this dispute, and the opportunity available at the second substantive meeting for parties to comment on each other's submissions[1] and responses, it would be best to dispense with the 27 October comments, and instead have 30 October – three weeks after 9 October – as the due date for rebuttal submissions and answers to questions. The first substantive meeting may finish as late as 9 October, leaving less than two weeks for rebuttals and answers to questions[2] if they are due on 22 October. The United States notes that DSU Appendix 3 provides as a guideline for 2-3 weeks between the first substantive meeting and rebuttal submissions. Given the scope and scale of argumentation that has prevailed to date, and that is likely to continue, the United States believes that at least the three week guideline provided for in Appendix 3 is necessary for the parties to have adequate time to prepare their rebuttal submissions and answers.

The United States also wishes to request that it have until 2 October to prepare its further submission. Brazil noted in its submission of 24 June 2003 that its submission due today would include "extensive evidence"[3], and we expect that it will also include extensive new argumentation. It is therefore likely to require significant effort and time for the preparation of a response. Brazil has had months to prepare this submission, which is a first written submission for purposes of this part of the proceedings. Appendix 3 provides for 2-3 weeks for a first submission of the party complained

[1] The United States notes as well that comments on rebuttal submissions could be of equal importance or value, and those will be presented at the Panel meeting.

[2] The United States assumes that the questions may be at least as comprehensive at this stage as they were in connection with the Peace Clause, and therefore require significant time and care to research, develop and consult on the answers to those questions.

[3] Brazil stated in paragraph 18 of its submission of 24 June 2003,

> **Consistent with the Panel's decision of 20 June decision, and because (1) Brazil's claim under GATT Article XVI:3 involves export subsidies conditionally exempt from action and (2) Brazil's actionable subsidy claims under ASCM Articles 5 and 6 involve domestic support and export subsidies conditionally exempt from action, Brazil will only present its extensive evidence in support of those claims in its "further submission".**

against[4], and the burdens imposed by this dispute clearly warrant at least a three-week response period.

Preparing the submission in three weeks would likely be extremely challenging under any circumstances. However, the timing for this submission involves unusual circumstances. Many of the US officials involved in this dispute are attending the Fifth Ministerial Conference in Cancun this week and are therefore unavailable to assist with preparation of the submission. At the same time, the head of the US litigation team in this dispute became a father three weeks ahead of schedule. As a result, he will have limited time over the next week (at least) to prepare the US response. For all of these reasons, the United States respectfully requests that its next submission be due no earlier than 2 October.[5]

[4] Indeed, in the DSU negotiations many Members have indicated that this is too short a period of time and that the timeframes suggested in Appendix 3 of the DSU for first submissions should be reversed between complaining parties and responding parties.

[5] The United States notes that the third party submissions could then be due on 6 October.

# ANNEX K-21

## LETTER FROM BRAZIL
## COMMENTS RE REVISED TIMETABLE

10 September 2003

Brazil is in receipt of a letter dated 9 September 2003 from the United States commenting on the proposed timetable and requesting to be able to file their Further Submission on 2 October.

Brazil opposes the US request that it be granted until 2 October to file its Further Submission for the reasons set out below:

First, the United States has been on notice of Brazil's claims and arguments on the adverse effects portion of this dispute for almost one year when Brazil filed its 27 September 2002 request for consultations (WT/DS 267/1). The Annex to this comprehensive consultation request set forth in detail arguments, facts, and evidence (mostly consisting of US Government documents) that were available to Brazil. The great majority of these arguments and evidence are now found in Brazil's Further Submission. If this information and the three sessions of the consultations discussing these issues were not enough, Brazil's First Submission at paragraphs 1-15 outlined in summary form many of the principle arguments (and evidence) supporting Brazil's adverse effects claims. All of these arguments are again repeated in Brazil's Further Submission. Paragraphs 26-106 of Brazil's First Submission also set out comprehensive facts upon which Brazil relies but not repeated in its Further Submission. Thus, in view of the transparency of Brazil's earlier submissions, the United States' claims concerning the alleged "complexity" of this dispute as justifying more time to prepare is somewhat disingenuous.

Second, Brazil and the Third Parties need sufficient time between the filing of the US Further Submission to prepare their oral statements for the second session of the First Meeting on 7-9 October. Providing the United States until 2 October to file its Further Submission will not provide the Panel, Brazil, or the third parties enough time to prepare for the hearing on 7-9 October. Given the previous practice of the United States to file its submissions six hours late (the equivalent of unilaterally granting itself an additional working day to file each submission, and of giving Brazil one less day to respond), the US request to file on 2 October probably means that Brazil will not be able to review the submission until 3 October.

Third, Brazil (and no doubt some of the third parties) has relied upon the long-standing date of 7-9 October for the resumed session of the First Meeting. Brazil notes that while the United States' letter does not ask to reschedule the date of the resumed Second Session of the First Substantive meeting, the effect of its request to file its Further Submission on 2 October does just that. Brazil strongly opposes any delay in the resumed session of the First Meeting. Brazil intends to present at least three witnesses at the resumed session - Professor Daniel Sumner, Andrew Macdonald, and an upland cotton producer from Brazil. Each of these individuals (as well as the Brazilian delegation travelling from Brasilia) have complicated schedules and they have for some time rearranged their schedules to attend the hearing on 7-9 October.

Fourth, the working procedures of the DSU provide for 2-3 weeks for the Party complained against to file its First Written Submission and 2-3 weeks for the Parties to file their Rebuttal submissions. The United States' request to file on 2 October is beyond that maximum amount of time.

However, in the spirit of compromise, and particularly in view of circumstances set out in the fourth sentence of the last full paragraph of the US letter, Brazil could agree to an extension of time *no later than* Thursday, 25 September 2003 at 5:30 p.m. *Geneva* time. In this regard, Brazil notes that both the United States and Brazil will have, under the revised timetable for Panel proceedings, numerous opportunities to brief the various issues in the adverse effects portion of this dispute and thus to fully articulate, expand, and clarify their arguments and supporting evidence.

The United States also requests that the parties be provided until 30 October to file their rebuttal submissions. Brazil has no objection to this request but believes it is important to keep the 22 October date for answering questions intact. Under Brazil's proposed procedure – which was used in the "peace clause" portion of the proceedings – the parties could use their Rebuttal Submissions as the vehicle for commenting on the Parties' answers to the questions.

# ANNEX K-22

## LETTER FROM THE UNITED STATES RE DRAFT REVISED TIMETABLE

11 September 2003

My authorities have instructed me to respond to Brazil's letter of 10 September 2003, objecting to the US request for an extension to file its Further Submission.

In this letter, Brazil suggests first that its request for consultations offered sufficient notice of Brazil's arguments that the United States does not now require sufficient time to respond to the Brazilian Further Submission – a submission so extensive that it had to be divided in two for electronic transmission, and which in addition included extensive economic annexes. According to Brazil, the consultation request and additional summaries of Brazil's arguments render the US reference to the complexity of the issues raised by Brazil "disingenuous."

Brazil appears to be making the implausible suggestions that it is possible to respond to arguments that have not yet been written, and that complex issues become less complex if summarized in advance. One need only note again the size of Brazil's submission to conclude that Brazil itself did not consider its previous summaries to adequately present its arguments; yet Brazil considers that those summaries should have provided a sufficient basis for the United States to prepare its response. It is a statement of the obvious that Brazil's 214-page Further Submission represents the first time Brazil has set forth its detailed arguments and evidence (including the lengthy economic analysis found in the annexes). It is this Brazilian submission, and not anticipatory summaries, to which the United States must have the ability to respond. Brazil's suggestion that the United States need not have adequate time to respond to Brazil's massive submission on the basis that Brazil's argumentation cannot, under the circumstances, be considered "complex," strains credulity.

Brazil also objects to the US extension request on the ground that Brazil and third parties need adequate time to prepare for the second session of the first panel meeting. As regards Brazil, this amounts to an argument that while one week is not enough time for it to prepare for the panel meeting, two weeks must be considered sufficient for the US to respond to Brazil's 214-page submission and economic annexes. Apparently, Brazil considers it fair that, after having had months to prepare its Further Submission, the amount of time for the US response (two weeks) should be no greater than that provided to Brazil to prepare for the first panel meeting. While the United States appreciates that the time for third-party submissions will be limited, this is frequently the case in disputes given party and panel schedules. Further, third parties are free to use the third-party session to elaborate on their written statements.

Brazil is correct when it notes that the United States has not asked the Panel to postpone the date of the first panel meeting. However, it errs when it says that the US request would require a change in the date of that meeting. To the contrary, the United States made its requests for modification of the timetable in consideration of the dates of the panel meetings and on the assumption that it might be difficult for the Panel to change that date in light of the panelists' differing schedules. Indeed, but for seeking to accommodate the panelists' schedules by retaining the meeting dates, the United States would have requested a longer response period appropriate to the argumentation and evidence Brazil has submitted.

At the same time, the United States notes that Brazil has asked the Panel to postpone the date of the second meeting. The United States has no objection in principle to this request, but would request that it be consulted on any new dates that might be possible in light of the panelists' schedules. Brazil is not the only one with "complicated schedules."

Brazil also notes that Appendix 3 provides *as a guideline* 2-3 weeks for a responding party's first submission, and states that the US request exceeds that period (by two days). Brazil ignores not only the fact that a panel is free to adjust these time frames, but that a panel is required to adjust these time frames. Article 12.4 of the DSU states that panels must "provide sufficient time for the parties to the dispute to prepare their submissions." Indeed, in the past several disputes in which the United States has been a *complaining* party, panels have on average provided five weeks for the *responding* party to prepare its first written submission, twice the average called for under the DSU.[1] Article 12.4 applies fully to this proceeding, and the time requested by the United States to prepare its submission is more than justified.

In light of the above, and now with confirmation that Brazil's Further Submission does in fact contain "extensive evidence" and "extensive new argumentation", as foreshadowed by the US letter of 9 September, 2003[2], the United States respectfully renews its request that the Panel provide it until 2 October 2003, to submit its Further Submission. We thank the Panel once again for its consideration of this and previous requests.

[1] Indeed, of the last 23 panels to which the United States has been a party, the single shortest time period for preparing a responding submission has been the 17 days provided in this proceeding, a marked contrast from the over 35 days provided to responding parties when the United States has been the complaining party.

[2] US letter of September 9, 2003, para. 3.

# ANNEX K-23

## LETTER FROM BRAZIL

16 September 2003

Brazil thanks the Panel for its "Proposed revision to timetable for Panel Proceedings" of 12 September 2003.

Brazil notices that the second hearing with the parties is scheduled for 2 and 3 December, receipt of answers to Panel's questions for 22 December and receipt of parties' comments on each other's answers for 19 January 2004. Brazil also appreciates that establishing the timetable with the parties, the panelists and the Secretariat requires considerable coordination.

In light of the several changes made to the original schedule and also of the length of time between the second hearing and the answers to questions from the Panel, Brazil would like to suggest that these answers be delivered on 15 December (instead of 22 December) and that the parties' comments on the answers be due on 22 December (instead of 19 January). This would allow for the completion of the parties' main substantive work still in 2003 (the next step would then be the comments on the descriptive part).

Furthermore, Brazil notices that Article 12.9 of the DSU establishes that "in no case should the period from the establishment of the panel to the circulation of the report to the Members exceed nine months". The new proposed timetable of the Panel foresees that circulation of the final report to the WTO Members will take place after 19 May, that is, more than 5 months in excess of the strict time limit set up in DSU Article 12.9. Therefore, Brazil would stress that any changes in the schedule should not postpone the conclusion of the proceedings.

# ANNEX K-24

## LETTER FROM THE UNITED STATES
## COMMENTS ON REVISED TIMETABLE

16 September 2003

The United States thanks the Panel for its invitation to comment on the draft further revised timetable attached to its communication of 12 September 2003. My authorities have instructed me to submit the following comments.

The new dates of December 2 and 3 for the second substantive meeting are acceptable to the United States. We note, however, that there is approximately one month between the receipt of the further rebuttals (currently due November 3) and the second substantive meeting. We believe that this one month would be better allocated for the parties to consider and draft responses to the Panel's questions and prepare their rebuttal submissions. Therefore, the United States proposes that the due date for receipt of answers to Panel's questions be changed to Friday, 31 October 2003, and that the due date for the rebuttal submissions be changed to Friday, 21 November 2003. This would leave approximately 10 days before the second Panel meeting (which would be within the DSU guideline of one to two weeks between rebuttal submissions and the second panel meeting).

There also remains some concern with the 3 p.m. deadline for filing the US further submission on 29 September. While we – as always – will try our best to accommodate this deadline, we note that the time difference between Geneva and Washington (opening of business time in Washington would be 3 p.m. Geneva time) may cause additional difficulties with respect to finalizing the US submission in capital. We nonetheless appreciate the Panel's understanding in this regard.

# ANNEX K-25

## LETTER FROM BRAZIL

17 September 2003

1. The Government of Brazil is in receipt of a letter from the United States dated 16 September commenting on the proposed further revised timetable attached to the Panel's communication of 12 September.

2. Brazil would like to express its opposition to the alterations suggested by the United States. In our view the dates proposed by the Panel on 12 September ensure the parties will have the appropriate amount of time to respond to the Panel's further questions and to elaborate their further rebuttal submissions. Brazil notes, in particular, that between the last day of the resumed second session of the first substantive meeting (9 October) and the deadline for delivering their further rebuttal submissions (3 November), parties will have almost 30 days to prepare such documents. This is more than the amount of time the United States requested on 9 September to elaborate its further submission (previously due on 22 September).

3. Therefore, Brazil submits that parties need not be granted any extension of deadlines as suggested by the United States. Nonetheless, were the Panel inclined to change the timetable to accommodate the US concerns, Brazil would reiterate that any modifications in the schedule should not result in further delays of the proceedings (whose current timetable already exceeds by more than five months the time limit set out in DSU Article 12.9).

# ANNEX K-26

## LETTER FROM THE UNITED STATES

17 September 2003

My authorities have instructed me to respond to Brazil's letter of 16 September 2003, suggesting that the parties' answers to the Panel's questions related to the second substantive meeting be due 15 December instead of 22 December, and that the comments on these answers be due 22 December instead of 19 January 2004. The United States opposes these suggestions.

As it currently stands, the issues in this dispute are both wide-ranging and complicated. Therefore, it is unrealistic to expect that the parties would need only 10 days to answer the Panel's questions, and only 7 days to comment on each other's answers. Moreover, Brazil's sole justification for its suggestion, *i.e.*, that this "would allow for the completion of the parties' main substantive work still in 2003," is a *non sequitur*, particularly in light of the fact that Brazil does not object to the rest of the Panel's further revised timetable.

# ANNEX K-27

## LETTER FROM THE UNITED STATES

23 September 2003

As the Panel may be aware, hurricane Isabel hit the mid-Atlantic region of the East Coast of the United States last Thursday and Friday, bringing with it significant flooding, property damage, and extended loss of electricity to hundreds of thousands of homes and businesses. The hurricane forced all US Government offices in the Washington, D.C., area to be closed on Thursday and Friday, 18 and 19 September 2003. Further, several members of the US delegation were without power through the weekend and were unable to access materials for this dispute. During this time the United States delegation was unable to work on the US further submission that is due on 29 September. As result, the United States has been significantly impeded in its preparation of that submission. At the same time, we are mindful of the October 7 through 9 dates for the next meeting with the Panel.

Accordingly, the United States would like to request a modification of the deadline for submitting its further submission so that it would be due on Thursday, 2 October. In order to provide additional time for the Panel and the parties to review the third party further submissions, currently scheduled to be submitted on Friday, October 3, the deadline for these submissions could be changed to the opening of business on Monday, 6 October 2003.

# ANNEX K-28

## LETTER FROM BRAZIL

23 September 2003

The Government of Brazil is in receipt of a letter from the United States dated 23 September asking for a further extension of time until 2 October 2003 to respond to Brazil's Further Submission. The most recent US request for an extension of time would mean that the Panel, Brazil, and the Third Parties would have only two working days – Friday 3 October and Monday 6 October -- to review and draft an oral statement in response to the US Further Submission. Brazil would have no working days to review the numerous third party submissions.

The Panel must balance out the rights of Brazil and the Third Parties with those of the United States. The United States has been in receipt of Brazil's Further Submission for over two weeks. The United States will have a number of opportunities, including in its 7 October Oral Statement and in answering questions posed by the Panel, to clarify and expand on its responses to issues raised in Brazil's Further Submission. Under these circumstances, Brazil requests that the Panel maintain the current schedule requiring the United States to provide its Further Submission on 29 September 2003.

# ANNEX K-29

## LETTER FROM BRAZIL

2 October 2003

As the Panel may be aware, for the sixth consecutive time in the present proceedings the United States failed to deliver a document by the time expressly determined by the Panel in the Working Procedures and constantly reiterated to the United States in specific communications of the Panel. Instead of abiding by the 5h30 p.m. (Geneva time) deadline, the United States delivered the electronic version of its Further Submission around 11h45 p.m. on 30 September 2003, again more than 6 hours after the deadline. No hard copy of the document, also due on the same day by 5h30 p.m., was available to Brazil before 1 October.

Brazil will not repeat here the whole set of arguments showing the prejudices and obstacles caused by the US tactic to the rights of Brazil. We note however that this sixth delay is particularly egregious given the fact that the Panel provided the United States with two separate extensions of time to prepare its Further Submission. Therefore, Brazil cannot at this time only ask the Panel to take note of the problem and to encourage the United States to respect the deadlines. After six consecutive and totally unjustifiable delays, a more compelling action by the Panel appears to be necessary.

The strict observance of the deadlines is a centerpiece of any procedurally fair proceedings in all legal systems where the due process principle is expected to apply. Consequently, disrespect of the deadlines constitutes a fundamental breach of due process requirements, undermining the procedural fairness in the conduct of the examination of the matter in dispute. In other words, deadlines cannot be taken lightly. This is reinforced by DSU Article 12.5, which states: "Panels should set precise deadlines for written submissions by the parties and the parties should respect those deadlines."

In WTO dispute settlement procedures a Panel, together with the Appellate Body, must act as the guardian of the procedural fairness and, in order to act in this capacity, it is accorded the authority and discretion to establish its own working procedures, in addition to those set out in DSU Appendix 3, as recognized by the Appellate Body.[1] The working procedures are, in effect, the means by which a Panel exercises its authority and discretion to ensure that due process is respected and parties to the dispute have equal opportunities of defense. Brazil is fully aware that the term "working procedures" has been interpreted differently by WTO Members, but it is undeniable that the setting out and enforcement of deadlines is within the boundaries of the Panel's authority to establish its own working procedures.

In view of the fact that Brazil's rights have been systematically impaired by the US contempt of the established rules, and taking into consideration the Panel's authority to set up procedural rules to guarantee the respect for due process requirements, Brazil requests the Panel to determine that in the next steps of the present proceedings any unjustified delay in document delivery by the US results in such document being disregarded by the Panel. In addition, Brazil requests that the Panel reflect

[1] See for instance *Australia – Measures Affecting Importation of Salmon* (DS18), Report of the Appellate Body, para. 272.

each of the violations of the working procedures by the United States in the factual section of its Final Report so that the record of misconduct may be available to the full WTO Membership.

# ANNEX K-30

## LETTER FROM THE UNITED STATES

6 October 2003

The United States received on Friday, 3 October 2003, a copy of the letter to the Panel from Brazil dated 2 October 2003, and my authorities have instructed me to submit this reply. The United States regrets that Brazil once again distracts the Panel and the United States from the work required to prepare for the second session of the first panel meeting.

The United States takes seriously the time lines established by the Panel and has expended considerable resources and dedicated tremendous personnel time and effort to accommodate each of them.[1] As a result, the United States has filed each of its submissions on the date specified by the Panel. At the same time, the Panel will appreciate that the issues are not only complicated and difficult, but that there are a very large number of them – and that the materials that Brazil has submitted are voluminous.

As the complaining party in this dispute, Brazil has had the advantage of months and months in preparing its case far in advance.[2] Brazil has, however, consistently sought to deny to the United States sufficient time to prepare its own submissions, and Brazil's letter of last week regrettably continues an approach it appears to have adopted at the beginning of this dispute: to employ procedural tactics in an attempt to reduce the material and arguments that the United States could submit to the Panel to respond to Brazil's arguments, to correct factual errors by Brazil, and to explain the legal inaccuracies and omissions committed by Brazil. Those procedural tactics include in particular seeking imbalances between itself and the United States in the time provided to prepare submissions. These imbalances have been manifest from early in this dispute, as Brazil has simultaneously been submitting extraordinarily lengthy and complicated submissions and been resisting every effort of the United States to ensure that, as provided by Article 12.4 of the DSU, "the panel ... provide sufficient time for the parties to the dispute to prepare their submissions."

The United States recalls the very first example of Brazil's approach. During the organizational meeting Brazil objected to the US request that the time for the first US submission be increased beyond the two weeks contemplated in the Panel's draft timetable of 27 May. In that same meeting, however, Brazil objected to the suggestion that it have less than two weeks after filing its first submission to submit the executive summary of that submission. As the United States commented at the time, it seemed implausible that the United States could prepare a *substantive response* to a submission in two weeks if Brazil was unable to prepare a *summary* of that submission in less than that time. Brazil's attempt to hold the United States to a two-week period to reply to the first Brazilian submission is particularly telling given that, during that organizational meeting, the Panel had not yet decided to bifurcate the parties' initial submissions. Brazil thus must have hoped to force a response in two weeks to the over 350 pages of material contained in both its first submission (24 June 2003) and in its further written submission (9 September 2003).

[1] The United States also wishes to note that it arranged with the Brazilian Mission in Geneva to transmit a copy of its Further Submission directly to Brasilia upon filing in order to enable the Brazilian authorities to begin reviewing the document as soon as possible. The United States wishes to take this opportunity to express once again its thanks to the Brazilian Mission for its courtesy and cooperation in this connection.

[2] The document "properties" of Brazil's further submission to the Panel suggest quite clearly that Brazil began preparing its submission in April of ***2002*** -- i.e., more than a year before filing it.

The exchange at the organizational meeting was only the first example of a Brazilian approach to this dispute that combines extremely lengthy material with procedural inflexibility. The most recent example was Brazil's unwillingness to contemplate an extension for the filing of the US Further Submission in response to the circumstances in Washington, D.C., brought about by Hurricane Isabel (letter of 23 September 2003).

As the United States noted in its letter of 11 September 2003, the timetable that the Panel has established in this dispute for the filing of the US submissions are much shorter than the amount of time that has been provided to other WTO Members.[3] The length and complexity of Brazil's submissions makes it increasingly difficult to consider that the United States has had sufficient time to prepare its submissions or that the United States does not suffer prejudice in this proceeding as a result.[4]

It is also difficult, in the circumstances of this dispute, to credit the Brazilian suggestion that it is *Brazil* that has suffered an "impairment" of its "rights" when the United States has filed each of its written submissions on the date specified by the Panel. Brazil's sole complaint is with the time, not the date, of filing. There is certainly no basis (and indeed Brazil has not suggested one) for Brazil's astonishing suggestion that the Panel should not consider the views of the United States in the future. Brazil's suggestion is particularly startling in light of the numerous occasions on which Brazil has made extra submissions to the Panel that were nowhere provided for in the Panel's working procedures. Brazil appears to believe that it may ignore the Panel's working procedures at its convenience.[5]

Brazil's suggestion that "the Panel reflect each of the violations of the working procedures by the United States in the factual section of its Final Report" continues Brazil's one-sided approach to presenting material in these proceedings. First, of course, there is no basis for Brazil's characterization of the proceedings to date nor is there any basis for Brazil to seek to use the Panel's report[6] for Brazil's own purposes. Second, the United States notes that Brazil carefully seeks to censor out any reference to Brazil's disregard for the Panel's working procedures. Third, Brazil also would appear to want to avoid any record of the US responses to Brazil's allegations, an approach which would seem to be in keeping with Brazil's attempts throughout this proceeding to limit any material that might refute Brazil's flawed claims.

In conclusion, the United States would like to thank the Panel for its work to date on the many issues presented by this dispute. We look forward to our discussions of the parties' further submissions this week.

The United States is providing a copy of this letter directly to Brazil.

---

[3] The United States noted then that in the most recent 23 panel proceedings to which it had been a party, the single shortest time period for preparing a responding submission has been the 17 days provided in this proceeding -- roughly one-half the average time period that respondents had been given when the United States was the complaining party.

[4] The United States would also like to take this opportunity to thank the Panel for agreeing to extend the deadline for the rebuttal submissions; we would hope that this extended time will help in the completion of that submission.

[5] The United States has to date in this dispute deliberately refrained from requesting that the Panel disregard Brazil' s extra-procedural material.

[6] The purpose of the Panel's report is supposed to be to help resolve the dispute in accordance with the terms of reference for the Panel, and the content of the report is specified in Articles 12.7 and 19.1 of the DSU. Brazil neglects to refer to these provisions.

# ANNEX K-31

## LETTER FROM THE UNITED STATES

14 October 2003

As discussed during the second session of the first panel meeting, the United States is providing in the attachment a written description of materials relating to Dr. Sumner's model that Brazil has agreed to provide to the Panel and the United States. The United States looks forward to receiving these materials at Brazil's earliest opportunity, with a view to permitting the United States to undertake its review of these materials in a timely fashion and without delay.

The United States is also providing in the attachment, as agreed, the two remaining exhibits referred to in its opening statement at the second session of the first panel meeting.

**ATTACHMENT**

**Request from the United States to Brazil**

Please provide the following information relating to the model used by Dr. Sumner in his analysis presented in Annex I to Brazil's further submission:

(a) Electronic copies of the actual models used for the baseline and each of the seven scenarios described in Annex I.

(b) Printed copies of the exact equation specifications used for the baseline and for each of the seven scenarios described in Annex I, including all parameter estimates. (If no such printed copies currently exist, please develop and provide.)

(c) Documentation of all adaptations to the original FAPRI modelling system made or used by Dr. Sumner for his analysis presented in Annex I. (If no such documentation currently exists, please develop and provide.)

# ANNEX K-32

## LETTER FROM BRAZIL

5 November 2003

In a letter to the Panel dated 14 October 2003, the United States requested from Brazil electronic and documentary information concerning Professor Sumner's econometric model (items a, b and c of the Annex).

In order to collect and compile that information, Professor Sumner, at the request of Brazil, has been working diligently to provide the United States with the "printed copies" of the exact equation specifications in paragraph (b) of the Annex and the "documentation of all adaptations to the original FAPRI modelling system made or used by Dr. Sumner for his analysis" as requested in paragraph (c). This process is now about to be completed and Brazil expects to provide the United States and the Panel with this information early in the week of 10 November.

As regards the request in paragraph (a) of the Annex for electronic copies of the FAPRI/CARD model used by Professor Sumner, Professor Sumner has contacted Professor Bruce Babcock of the Centre for Agricultural and Rural Development at the Iowa State University, which "owns" the FAPRI model. You will realize by the attached exchange of correspondence between Professor Sumner and Professor Babcock, that "[they] are unable to respond to your request for a simple 'electronic copy' of the FAPRI model used for the baseline and each of the seven scenarios described in Annex I because they literally do not exist".

Brazil notes, however, the last paragraph of Professor Babcock's letter which provides as follows:

> "[W]e would be willing to run USTR-requested scenarios using the FAPRI/CARD modeling system along with the operational additions and adaptations that comprise [Professor Sumner's] model of cotton policy. Our researchers would have to be compensated for the time it would take to run the model and we would have to work out the timing and other logistics of running the model".
>
> It is thus our understanding that this paragraph means that the "electronic version" of the model used by Professor Sumner is presently available for use by the US Government upon coordination with FAPRI staff."

# ANNEX K-33

## LETTER FROM THE UNITED STATES

11 November 2003

The United States is in receipt of Brazil's letter of 5 November 2003, in which it indicates that it expects to submit during the week of November 10 certain evidence relating to the analysis of Dr. Sumner presented in Annex I to Brazil 's further submission. My authorities have instructed me to submit this response.

The United States is disappointed that Brazil claims not to be able to provide electronic copies of the actual model used in that analysis. In our experience, it is common for electronic copies of econometric models to be disclosed to substantiate claimed model results, even in the context of WTO dispute settlement. Brazil's failure to make electronic copies available will hinder the ability of the Panel and the United States to analyze Dr. Sumner's claimed results.[1]

Brazil states that it will be providing printed copies of the exact equation specifications and documentation of all adaptations to the original FAPRI modelling system. This evidence is expected to be substantial and complex. Brazil has previously stated that its economic model "is built upon hundreds of linear supply, demand and related equations for major commodities - and in particular upland cotton - in the United States" and that "[t]hese equations are linked to a system of equations covering the demand and supply of upland cotton internationally".[2] This substantial new evidence relates to the core of Brazil's case relating to price suppression, as evidenced by the frequent invocation of those results in Brazil's further submission, at the second session of the first panel meeting, and in Brazil's answers to the Panel's further questions.

We note that the Panel and the United States had asked for this evidence during the first panel meeting, nearly five weeks ago. The United States expected this evidence to be submitted by the conclusion of the first panel meeting, or, at the latest, shortly after the United States provided Brazil with a written version of the information requested. Brazil, however, has now indicated that it will submit some of this new evidence mere days before the parties' rebuttal submissions are due.

The United States notes that, pursuant to paragraph 13 of the Panel's working procedures, the United States must be provided sufficient time to respond in writing to any new evidence submitted by Brazil. This paragraph reflects the Panel's obligation under Article 12.4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* to "provide sufficient time for the parties to the dispute to prepare their submissions." Had Brazil presented that new evidence relating to Dr. Sumner's analysis no later than during the first panel meeting on 7-9 October 2003, as

[1] The offer by FAPRI to run simulations at the United States request for a fee is not an acceptable substitute. It is unprecedented that a party to a dispute should put another party in the position of not being able to gain access to that party's evidence, and its only recourse is to pay a private entity in order to gain even partial access.

[2] *See* Brazil's Further Submission, para. 218 ("The econometric model is built upon *hundreds of linear supply, demand and related equations* for major commodities - and in particular upland cotton - in the United States, but also accounts for regionally varying supply and demand responses in the United States. *These equations are linked to a system of equations* covering the demand and supply of upland cotton internationally.") (emphasis added).

contemplated by the Panel's working procedures, under the current timetable the United States would have been afforded nearly 6 weeks to examine and respond to that evidence.[3]

Given the anticipated complexity of the information and the fact that it will not be provided in electronic form, the United States will need sufficient time to be able to analyze and respond to Brazil's complex and substantial new evidence. To this end, and on the assumption that Brazil meets its expectation of submitting that evidence early this week, the United States would request that the rebuttal submissions be due on 22 December 2003, the current date for answers to panel questions. Remaining items on the timetable set out by the Panel could then be rescheduled accordingly. Adjusting the timetable in light of Brazil's late submission of new evidence is necessary to preserve US rights of defence by providing sufficient opportunity to analyze and critique that new evidence as well as by allowing the United States to present its response to that evidence in its rebuttal submission and at the second panel meeting.[4]

[3] Had Brazil presented this evidence as part of Annex I to its further submission of 9 September 2003, moreover, the United States would have been afforded 10 weeks to review and respond to that evidence.

[4] *See* Working Procedures for the Panel, para. 7 ("Formal rebuttals shall be made at a second substantive meeting of the Panel. . . . . The parties shall submit, prior to that meeting, written rebuttals to the Panel.") (28 May 2003).

# ANNEX K-34

## LETTER FROM BRAZIL

12 November 2003

The Government of Brazil is in receipt of a letter from the United States dated 11 November requesting yet another lengthy delay in this panel proceeding. Brazil requests the Panel to reject this request and maintain the current schedule including the deadline for rebuttal submissions of 18 November and the second Panel meeting on 2-3 December for the reasons set forth below.

The United States' letter attempts to leave the impression that there will be a tremendous amount of new evidence that will be provided to them in *written* form in response to their request of 14 October. This is incorrect. The bulk of the requested information is in *electronic* form which has been available for the United States to examine, review, and use since 5 November. Attached to this letter are (1) Professor Sumner's *written* adaptations to the FAPRI model for each of the seven scenarios described in Annex I to Brazil's Further Submission (Exhibit Bra-313), and (2) Professor Sumner's summary description of the equations in the FAPRI domestic model and the CARD international cotton model (Exhibit Bra-314). As the Panel can see from Exhibit Bra-313, this document reflecting Professor Sumner's adaptations is not lengthy and does not contain hundreds of equations as the US letter suggests. The "hundreds of equations" referred to in the US letter are those of the *FAPRI/CARD* model used by Professor Sumner and summarized in Exhibit Bra-314. Brazil believes that the US econometric experts who deal with the FAPRI model on a regular basis will not have any difficulty understanding Exhibit Bra-313. Professor Sumner, of course, will be prepared to provide any additional follow-up information and clarifications, as necessary, at the Panel meeting on 2-3 December for which he has made arrangements in his schedule to attend.

Brazil has been informed by Professor Sumner that he is working as quickly and thoroughly as he can in completing this work in addition to his other many responsibilities as the Director of the Agricultural Issues Centre at the University of California at Davis. Professor Sumner indicates he expects to be able to provide the relevant equations for the CARD international cotton model by the close of business on 13 November. This will complete Brazil's response to the US request of 14 October. Because Professor Sumner made no adaptations to the CARD international cotton model, the information to be provided will simply be the equations for a model that is much-used and well-known to USDA economists.

Brazil notes that the United States waited until 14 October to file its request for this information from Brazil. Brazil's letter of 5 November provided the United States with an offer of complete access to the electronic version of the exact same model used by Professor Sumner. The United States then waited almost a week to reply to Brazil's 5 November letter with full knowledge that the date for the Further Rebuttal Submission was 18 November. It appears as if the United States has *not* used the week since 5 November to take advantage of its ability to review and analyze the complete electronic version of everything that Professor Sumner has done in his analysis. As the last paragraph of Professor Babcock's letter of 31 October stated, upon request, the United States will be provided full and immediate access to the FAPRI and CARD models and Professor Sumner's adaptations that are available in electronic form.

Contrary to the US unsupported assertion, Brazil has not "put the United States in the position of not being able to gain access to that party's evidence." Rather, Professor Babcock's offer provides

the United States with complete access to the electronic version of *all* of the equations and analysis performed by Professor Sumner and the United States had access to them since 5 November.

Brazil further notes that it was required to use the FAPRI/CARD model for a fee, that neither Brazil nor Professor Sumner owns or can copy this model, and as explained by Professor Babcock, that there is no "written version" of the FAPRI model. The United States can, however, make arrangements with FAPRI officials to use the model and it would certainly not be unprecedented for the United States Government (or other governments or private entities) to compensate FAPRI for the use of the FAPRI model.

Brazil notes that USDA economists and officials use the FAPRI model frequently and are well aware of its parameters (for which the USDA provided it with its highest honorary award in 2002). Therefore, it will not be difficult for the United States to quickly analyze Professor Sumner's limited adaptations to the standard FAPRI/CARD models with which they are familiar. Brazil also notes that the FAPRI project is financed in large part by the US Congress

With respect to the existing schedule, Brazil considers that there is no legal or due process basis for the Panel to again delay the proceedings. Indeed, the existing schedule has considerable flexibility to provide the United States with more than sufficient time to prepare any rebuttal of Professor Sumner's analysis. In order to avoid further delay, Brazil suggests that the United States and Brazil file their rebuttal submissions on 18 November and the Panel hold the second meeting of the Panel with the Parties on 2-3 December as originally scheduled.

If the United States determines that it does not have sufficient time to (a) use the exact same FAPRI/CARD electronic model as adapted by Professor Sumner (as offered by Professor Babcock) and (b) to analyze Professor's Sumner's written equations and explanations of adaptations to the FAPRI model by 18 November, then Brazil would have no objection to the United States providing its rebuttal to Professor Sumner's analysis by 28 November, a few days prior to the Panel meeting on 2-3 December. This rebuttal, however, would be in addition to the 18 November Rebuttal on the multitude of other issues in this proceeding that do not relate in any way to Professor Sumner's analysis.

Brazil notes that the current schedule is also flexible enough to allow for rebuttal and counter-rebuttal by the Parties of the US analysis of Professor Sumner's results, *i.e.*, until the 22 December and 19 January deadlines for answering and then commenting on the Answers to the Panel's Questions. Of course, if the Panel determines that the United States and Brazil need additional time to comment on the econometric models or other issues, then the Panel has the discretion to allow for this for periods after 19 January 2004.

Brazil believes that this proposal will protect the United States' and Brazil's due process rights without yet again delaying this proceeding. It will allow the Panel and the Parties to maintain their current travel and business schedules which have now been in place for some time. Brazil notes that its delegation has scheduled a number of meetings and travel with a view towards the 2-3 December meeting date.

Finally, Brazil stresses that any changes in the schedule must not further delay the date of issuance of the final report to the parties, since the time limits of DSU Articles 12.8 and 12.9 have already been breached.

# ANNEX K-35

## LETTER FROM THE UNITED STATES

13 November 2003

My authorities have instructed me to respond to Brazil's letter of 12 November 2003, in which Brazil objects to the US request for an extension of time for the filing of rebuttal submissions in this dispute. Brazil ignores the Panel 's working procedures and the arguments in our letter of 11 November 2003, in dismissing the possibility that the United States would be prejudiced if the briefing schedule were not adjusted to take into account Brazil's decision to submit new evidence relating to the analysis of Dr. Sumner nearly five weeks after the conclusion of the first panel meeting. Brazil's 12 November letter cannot change the fact that United States will be prejudiced if it is not given adequate time to analyze the materials Brazil is only now providing.

*First*, Brazil simply does not discuss either the requirements of DSU Article 12.4, which provides that "[i]n preparing the timetable for the panel process, the panel shall provide sufficient time for the parties to the dispute to prepare their submissions," or the provisions of paragraph 13 of the Panel's working procedures, pursuant to which the United States must be provided sufficient time to respond in writing to any new evidence submitted by Brazil.

*Second*, Brazil states that it "would have no objection to the United States providing its rebuttal to Professor Sumner's analysis by 28 November, a few days prior to the Panel meeting on 2-3 December" and that "the current schedule is also flexible enough to allow for rebuttal and counter-rebuttal by the Parties of the US analysis of Professor Sumner's results, i.e., until the 22 December and 19 January deadlines for answering and then commenting on the Answers to the Panel's Questions". The United States cannot agree to this proposal. Indeed, this suggestion by Brazil would make it appear that Dr. Sumner's analysis was an issue of secondary importance to Brazil's allegations, such that the US response is not important to the Panel's evaluation. The reality, of course, is that Brazil's main economic conclusions rest on Dr. Sumner's analysis. If not, there would have been no reason for Brazil to reference that analysis repeatedly in its further submission, to attach Dr. Sumner's analysis as a 52-page annex to that submission, to call upon Dr. Sumner to deliver a 16-page statement as part of its opening statement and a four-page statement as part of its closing statement at the second session of the first panel meeting, nor to continue referencing Dr. Sumner's analysis in its answer to the Panel's further questions. It is simply not credible for Brazil to suggest that no prejudice would result to the United States if it were compelled to prepare and file a rebuttal submission without having had sufficient opportunity to examine and critique Brazil's new evidence relating to the very model which allegedly underlies Dr. Sumner's analysis.

*Third*, Brazil has also indicated that it will file *even more* new evidence on 13 November relating to Dr. Sumner's analysis. In addition to the prejudice that would result from not being able to prepare our rebuttal submission and prepare for the second panel meeting with sufficient time to analyze this new evidence, the United States notes that it has already been prejudiced because preparation of the US rebuttal submission over the last several weeks has been based on the materials which we have had at hand, that is to say, neither the materials included with Brazil 's 12 November letter nor those it says will be forthcoming on 13 November. Elements of the US rebuttal could be superseded or confirmed on the basis of Brazil's new information. Thus, without an extension of time, the United States will be forced either to reply to Dr. Sumner 's analysis in the absence of complete information or to defer responding to the centrepiece of Brazil's case.

*Fourth*, Brazil is in error when it claims that "the United States waited until 14 October to file its request for this information from Brazil". In fact, both the United States and the Panel Chairman verbally requested access to Brazil' s model on 7 October 2003, at the conclusion of opening statements on the first day of the second session of the first panel meeting. Brazil has provided no explanation for why it should have delayed providing any information in response to that request for nearly five weeks, which merely related to the very model that Dr. Sumner asserts to have employed.

*Fifith*, Brazil also claims that "Brazil's letter of 5 November provided the United States with an offer of complete access to the electronic version of the exact same model used by Professor Sumner" and "Professor Babcock's offer provides the United States with complete access to the electronic version of all of the equations and analysis performed by Professor Sumner *and the United States had access to them since 5 November*" (italics added). Presumably, Brazil is referring to its suggestion that the United States pay to *run* the model employed by Brazil[1], since FAPRI did not offer to disclose – either to the United States or the Panel – the equations underlying that model, whether for pay or otherwise (and we assume Brazil was also offering to the Panel this opportunity to pay to obtain Brazil's evidence). As stated in the US letter of 11 November, Brazil's suggestion that the responding party (and presumably the Panel) must pay for evidence on which the complaining party so heavily relies is unprecedented.

*Sixth*, Brazil also claims that "it will not be difficult for the United States to quickly analyze Professor Sumner's limited adaptations to the standard FAPRI/CARD models with which they are familiar." If it is the case that Professor Sumner has made only "limited adaptations to the standard FAPRI/CARD models," a claim we are not in a position to confirm, then again the question arises why Brazil should have delayed five weeks in providing these new materials. Presumably, Professor Sumner knew of and had documented those adaptations prior to submitting his analysis to the Panel as part of Brazil' s further submission on 9 September.

The United States respectfully requests the Panel to defer the parties' rebuttal submissions as set out in its letter of 11 November 2003. The United States is providing a copy of this letter directly to Brazil.

[1] *See* Brazil's Letter of 5 November 2003, p. 2 (quoting FAPRI letter as saying that FAPRI "'would be willing to run USTR-requested scenarios using the FAPRI/CARD modeling system along with the operational additions and adaptations that comprise [Professor Sumner's] model of cotton policy. Our researchers would have to be compensated for the time it would take to run the model and we would have to work out the timing and other logistics of running the model.'").

# ANNEX K-36

## LETTER FROM BRAZIL

13 November 2003

Brazil is in receipt of a letter from the United States dated 13 November. Brazil reiterates its request that the Panel adhere to the existing schedule along with the suggested modifications proposed by Brazil in its letter of 12 November. Brazil responds to the numbered paragraphs of the US 13 November letter below using the same paragraph numbers.

*First*, Brazil notes that with respect to DSU Article 12.4, the normal amount of time for a rebuttal submission set out in Annex 3 of the DSU is 2-3 weeks from the date of the First Substantive meeting. The Panel in this case provided the parties with a period of six weeks to prepare rebuttal submissions. Based on Brazil's suggestion that the United States have until 28 November to prepare a rebuttal on a single aspect of Brazil's evidence, the United States will have had **23 days** (from 5 November or more than three weeks) to examine, use, and analyze the full electronic version of everything that Professor Sumner examined. In addition, the United States would have **16 days** from 12 November to examine Professor Sumner's written adaptations to the FAPRI/CARD model and **15 days** (from November 13) to examine the full CARD international cotton model. All of these time frames either exceed or are within the 2-3 week period for rebuttal submissions set out in Annex 3 to the DSU. Therefore, there is no basis for the United States to claim any violation of either its due process rights or of DSU Article 12.4.

*Second*, Professor Sumner's analysis is not the "centrepiece" of Brazil's adverse effects case that the United States claims. Brazil has placed an enormous amount of evidence before the Panel that exists independently of Professor Sumner's analysis. Brazil has repeatedly emphasized in this dispute that Professor Sumner's analysis confirms econometrically what common sense and the overwhelming body of other evidence already conclusively demonstrates. The Panel need only examine paragraph 105 of Brazil's Further Submission to appreciate this point. Even Professor Sumner's econometric analysis is only one of many such analyses of the impact of US upland cotton subsidies that is referenced in Brazil's submissions. Professor Sumner has functioned for Brazil in these proceedings as a dual expert – as one who is expert in US subsidy programs and the US agricultural system, as well as an expert in econometric analysis.

*Third*, Brazil attaches as Exhibit Bra-315 the documentation for the CARD international cotton model.[1] This model is well-known to USDA economists and has not been changed for Professor Sumner's analysis. Therefore, this information will not be "new" to the United States or is something that it could not otherwise have already anticipated in preparing their arguments.

*Fourth*, the United States did not provide in writing, exactly what evidence it wanted from Professor Sumner until 14 October. Brazil provided access to the complete electronic version of Professor Sumner's analysis – which *only* exists in electronic form – on 5 November. This was not five weeks after receipt of the US request as the US claims. The additional information provided on 12 and 13 November required Professor Sumner to expend considerable amount of time. His busy

[1]Brazil is also providing herewith an electronic version of the CARD international cotton model via email.

schedule at the University of California at Davis as well as previous speaking commitments posed additional difficulties in completing this assignment.

*Fifth*, the United States again demonstrates that it has made no efforts to take advantage of the offer to gain access to *everything* that Professor Sumner did and analyzed, which is contained in the electronic version at the University of Iowa in the care of Professor Babcock. It appears to Brazil that the United States' conduct suggests it may be more interested in delaying this proceeding than in gaining access to Professor Sumner's analysis.

*Sixth*, the United States claims that it has only a small amount of time to change their rebuttal submission. Brazil notes that on 24 June 2003, it filed a lengthy submission after only being given 4 days notice of what it was required to file. Brazil, at great effort, met that deadline. Further, the additional ten days proposed by Brazil (until 28 November) provide the United States with an opportunity to react to and respond to Professor Sumner's documents delivered on 12 and 13 November. The United States will have additional time to prepare further responses for their oral statement on 2 December. Finally, as Brazil's 12 November letter indicated, both Brazil and the United States will have until 22 December and 19 January to file additional answers to questions and comments relating, *inter alia*, to the econometric models at issue in this dispute.

*In conclusion*, the Panel has to balance the right of the United States to have sufficient time to prepare a rebuttal to Professor Sumner's analysis with Brazil's right to obtain a timely panel decision. Brazil believes that its suggestion to provide the United States with an additional 10 days to prepare its rebuttal – until 28 November – is an appropriate result which is fair and protects each of the parties' due process rights. However, the request by the United States for another five weeks to prepare their rebuttal and to delay this proceeding by at least as much time, if not more, is grossly out of proportion. Brazil requests the Panel to avoid yet another long delay in these proceedings.

# ANNEX K-37

## LETTER FROM THE UNITED STATES

18 December 2003

In a communication dated 8 December 2003, the Panel afforded to the United States the opportunity to respond by 18 December 2003, to the request that Brazil had made through the Panel for certain information in Exhibit BRA-369.[1] The United States has completed work on 3 electronic files containing approximately 135 megabytes of requested data related to the production flexibility contract payment era, which are being transmitted with this letter. Work on the data files relating to the direct and counter-cyclical payment era is continuing, and the United States is endeavouring to provide this data by close of business Friday, 19 December.

However, as the United States preliminarily advised Brazil and the Panel at the second panel meeting, the release of planted acreage information associated with a particular farm, county, and state number is confidential information that cannot be released under US domestic law, in particular the Privacy Act of 1974.[2] This is consistent with the position of the United States in Freedom of Information Act[3] appeals raising this issue. One such decision is attached as Exhibit US-104.[4] Although the United States cannot provide planted acreage information associated with an individual farm, in an effort to be as fully responsive as possible, we are providing, for all programme crops and for each marketing year: (1) planted acreage data aggregated for all cotton farms and (2) farm-level planted acreage data without any fields that could identify the particular farm.

The United States is providing all of the pieces of data requested by Brazil in data files organized as follows:[5]

> First, a file with aggregate data for yields, bases, cropland, and plantings for all "cotton farms" for all programme crops as defined in the data request, using three categories: (1) farms with "cotton base" but no cotton plantings; (2) farms with cotton plantings but no "cotton base," and (3) farms with cotton plantings and "cotton base."
>
> Second, a farm-by-farm file (with particular farm identification information) with all of the requested data (plus additional data regarding payment quantities) but not including planted acres and cropland.

[1] *See* Exhibit US-102.

[2] *See* 5 USC 552a(b) (Exhibit US-107).

[3] Exhibit US-103.

[4] We note that no final denial of a release may be made by the US Department of Agriculture without the concurrence of USDA's Office of General Counsel. *See* 7 CFR 1.14 (Exhibit US-105). The attached appeal determination is consistent with USDA's long-standing policy that planted acres will not be released. For example, the policy against release has been stated explicitly since 1997 in FSA's FOIA Handbook. (*See* Exhibit US- 106.)

[5] In addition to the data requested by Brazil, the United States has provided total cropland and programme payment units (base acreage x base yield x .85) to allow for more meaningful aggregation.

> Third, farm-by-farm files for planted acres only for all programme crops, but with no other data and with the order of the farms scrambled in order to prevent any matching of farms.

The three files have been copied to a CD. The base and yield data are a text file named "Pfcby.txt." A description of that file and its 118 fields is found at Exhibit US-109. Planted acres are in "Pfcplac.txt". A description of that file is found at Exhibit US-110. Finally, the aggregate data file is named "Pfcsum.xls". That file is an Excel file and the headings within the file should be self-explanatory.

The information that we are providing is also sensitive. We do not consent to release of this information to the public domain and expect that it will be used solely for purposes of this dispute settlement proceeding. Therefore, pursuant to paragraph 3 of the Panel's working procedures, we designate this information as confidential and must exceptionally insist that this information not be disclosed outside of the delegation of the Brazilian Government and the Panel.

During the Panel meeting, Brazil referred to information released by the United States in connection with rice. This release was an error. Apparently, the Kansas City office of the Farm Services Agency (FSA) believed at some point that the Washington FOIA office had approved the release of planted acres so long as names and addresses were left out. FSA Washington personnel were not aware of that misunderstanding. It has been corrected. The farm number is unique and can be linked back to the name and address of persons on the farm using the FSA-supplied Environmental Working Group (EWG) payment and name and address files.[6] The payment files will allow a match by farm number. This leads, by the same file, to the "customer number". That number leads, in the name and address file, to the name and address of the farm owner. At the second Panel meeting, Brazil indicated that the rice request was theirs. We ask accordingly that Brazil and its agents return all copies of the erroneous rice release.[7]

The United States also notes that responding to Brazil's request has not been a simple undertaking. Because of the extensive nature of the request, it was necessary to run through approximately 10 million files to extract the pertinent information. There are approximately 2 million farms involved. For the production flexibility contract ("PFC") payment era under the 1996 Act, there were 7 programme crops. In the direct payment and counter-cyclical ("DCP") payment era under the 2002 Act, there are 10 programme crops (counting "other oilseeds", such as rapeseed, canola, etc., as one "programme crop" only). The PFC file alone, if each field for each farm was considered a cell, contains 25 million cells of information. The task involved is a far bigger, far more complicated task than the erroneous rice release. More than 250,000 farms fit the "cotton farm" definition at work in this exercise. The United States has expended a significant amount of time and resources to respond to this data request.[8]

Per Brazil's request, the United States is providing a copy of this letter, associated exhibits, and three electronic data files relating to the production flexibility contract payment era directly to Brazil through the Brazilian Embassy in Washington, D.C. Because of their size, the electronic data files will be couriered to Geneva for transmission to the Panel.

---

[6] *See* Exhibit US-108 (excerpt of BRA-316).

[7] Regarding that release, the United States notes, too, that no member of the US delegation at the second panel meeting in Geneva was aware of the rice release. On inquiry, no one at FSA in Washington was aware of it either. The rice data was sent to an address in Geneva identified by the requester, a member of the Brazilian delegation, who the Kansas City office was led to understand had "relatives" there.

[8] There may well be limitations in the data output since the output depends on the completeness and accuracy of input from the FSA county offices. Moreover, not all farms file crop reports and not all plantings are plantings of programme crops. These are merely some examples.

# ANNEX K-38

## LETTER FROM THE UNITED STATES

22 December 2003

Further to the letter of the United States to the Panel on 18 December 2003, attached please find a letter from the United States to the Embassy of Brazil in Washington, D.C., dated 19 December 2003, transmitting directly to Brazil the completed electronic data files relating to the direct and counter-cyclical payment era. Please also find attached Exhibits US-111 and US-112. This letter, the electronic data files, and the two exhibits were received by the Embassy of Brazil on 19 December. The electronic data files are presently en route to Geneva, and will be transmitted to the Brazilian Mission to the WTO and to the Panel shortly.

In a letter dated 18 December 2003, to the Chairman of the Panel in the WTO dispute settlement proceeding *United States – Subsidies on Upland Cotton* (DS267), the United States indicated that it would endeavour to provide additional information responding to the request of Brazil conveyed in Exhibit BRA-369 by Friday, 19 December. In particular, we indicated that preparation of certain direct and counter-cyclical payment era electronic files was continuing. Those files have now been completed and are being transmitted with this letter.

There are three direct and counter-cyclical payment era files, containing approximately 85 megabytes of requested data, on the enclosed CD. These three files correspond to the three production flexibility contract payment era files transmitted previously. First, there is a farm-by-farm base and yield data file ("Dcpby.txt"); a description of that file and its 99 fields is found at Exhibit US-111. Second, there is a planted acres file ("Dcpplac.txt"); a description of that file is found at Exhibit US-112. For the reasons set forth in the 18 December letter to the Chairman, we note that the order of the records in the planted acre file is not the same as in the base and yield file. Finally, there is an aggregate data file ("Dcpsum.xls"); that file is an Excel file, and the headings within the file should be self-explanatory.

As indicated in the 18 December letter to the Chairman, the information that we are providing is sensitive. We do not consent to release of this information to the public domain and expect that it will be used solely for purposes of this dispute settlement proceeding. Therefore, pursuant to paragraph 3 of the Panel's working procedures, we designate this information as confidential and must exceptionally insist that this information not be disclosed outside of the delegation of the Brazilian Government and the Panel.

The United States is providing a copy of this letter, associated exhibits, and three electronic data files relating to the direct and counter-cyclical payment era directly to the Panel.

# ANNEX K-39

## LETTER FROM BRAZIL

23 December 2003

As per its Communication of 8 December 2003, the Panel established 22 December as a deadline for the delivery by Brazil and the United States of the Answers to Questions from the Panel and also for the delivery of the US comments on Brazil's econometric model.

In its Communication of 13 October, the Panel established that "*In accordance with paragraph 17 (b) of the Panel's working procedures, the Panel sets the following time for the provision of submissions by the parties: 11.59 p.m., Geneva time on the dates concerned. This time refers to receipt of submissions by the other party and the Secretariat and not to commencement of transmission. For greater clarity, this time for receipt of submissions also refers to the time of completion of receipt of any Exhibits and service of any Exhibits (if necessary electronically) to the other party and to the Secretariat as envisaged in paragraphs 17 (a)-(d) of the Panel's working procedures. All other provisions of the Working Procedures remain unchanged*".

The "Working Procedures for the Panel" establish in paragraph 17 b that

> *"the parties and third parties should provide their submissions to the Secretariat by 5:30 pm on the deadlines established by the Panel, unless a different time is set by the Panel"*

and in paragraph 17 d that,

> *"the parties and third parties shall provide electronic copies of all submissions to the Secretariat at the time they provide their submissions [...]"*.

The US submissions were not delivered within the deadline of 11.59 p.m. provided by the Panel, which is already an exception to the generally observed deadline of 5:30pm. Neither the paper nor the electronic versions of the submissions were delivered on 22 December until 11.59 p.m.. As duly registered at the form provided by the Secretary to the Panel, the US submission had not been delivered until 0.35 a.m. and it was apparently delivered as late as 1.08 a.m.. The electronic version was sent at 0.47 a.m. and received by Brazil at 1.34 a.m.

Brazil notes that, apart of the impairment of Brazil's rights under the DSU, the delay by the US also involves significant administrative constraints for the Brazilian Delegation in Geneva, which maintains human resources active until such a time as the US delivers the documents

This is already the seventh time the United States fails to deliver a document by the time expressly determined by the Panel. This issue has also been addressed during the panel hearing on 7 to 9 October and the Panel has already explicitly requested the United States to respect the deadlines of the dispute – "in order to ensure due process and secure a balance between the two parties" (Panel's Communication of 13 October). In its letter of 2 October, Brazil had requested the Panel to "determine that in the next steps of the present proceedings any unjustified delay in document delivery by the US results in such document being disregarded by the Panel".

Brazil therefore hereby requests that the documents delivered today by the United States, in renewed disrespect of the established deadline, be disregarded by the Panel.

Please accept, Sir, the assurances of my highest consideration.

# ANNEX K-40

## LETTER FROM BRAZIL

23 December 2003

The Government of Brazil is in receipt of a letter from the Panel dated 23 December enclosing a number of new questions to Brazil (eight) and to the United States (five) with a deadline set for 12 January. These questions address new interpretations by the Appellate Body, are very comprehensive, and in the view of Brazil will require a significant allocation of resources to complete properly.

Brazil notes that in addition to answering these questions, it must also respond to an extensive US critique of Professor Sumner's analysis, as well as provide comments and analysis on the US 18 December 2003 data, by 12 January. Because Brazil was not aware that the Panel would be filing these new questions, its representatives made severely tight travel and professional commitments that try to accommodate the upcoming holidays bearing in mind the original two deadlines for 12 January (Sumner and 18 December rebuttals).

In consideration of the above, Brazil requests that the Panel push the schedule back by only one week. The original 12 January deadline would be moved to 19 January, and the 19 January deadline for comments on the answers to the Parties' questions would be moved to 26 January. Other aspects of the schedule would be adjusted accordingly by the Panel, but with no more than a one week delay for the issuance of the final report, if this should be deemed necessary by the Panel.

Please accept, Sir, the assurances of my highest consideration.

# ANNEX K-41

## LETTER FROM THE UNITED STATES

23 December 2003

At the Panel's invitation, my authorities have instructed me to provide the following comments on Brazil's letter of 23 December 2003, in which Brazil requests that the upcoming schedule of filings be delayed.

The United States is amenable to Brazil's extension request, with the alternations suggested below, because it is well aware of the burdens that the very tight time frame established in this dispute has imposed on the parties (and the Panel), particularly in light of the complexity of the matter before the Panel and the volume of materials necessary to examine that matter. In fact, the United States has in the past three business days alone:

- Filed via two letters dated 18 and 19 December 2003, approximately two hundred megabytes of data requested by Brazil. Attempting to collect, prepare, and file these data within the time set out by the Panel in its 8 December communication required enormous efforts on the part of the United States, necessarily affecting preparations of the US answers to the Panel's questions and the US comments on Brazil's econometric model.

- Filed answers to approximately 51 questions from the Panel, within the same time that Brazil had to answer approximately 32 questions. (Indeed, given Brazil's comment that the "eight" new questions directed to it "in the view of Brazil will require a significant allocation of resources to complete properly" and therefore justify an extension of time, Brazil should now understand – if it did not before – the significantly greater burdens placed on the United States in responding to approximately 20 more questions than Brazil was asked to respond to.)

- Filed comments on Brazil's econometric model. In making this filing, the United States was faced with examining, and preparing and filing comments on the FAPRI model transmitted to the United States by Dr. Bruce Babcock, per the Panel's communication dated 8 December 2003, within the time originally set out by the Panel only to address Brazil's exhibits and models.

Had the United States focused its energies only on the answers to the Panel's questions and the comments on Brazil's economic modelling, the filing of those documents would not have been delayed, but the United States chose to make best efforts to comply with all of the requests and time frames set by the Panel in this dispute. It is only due to tremendous efforts by US personnel in Washington, Kansas City, and Geneva that Brazil is even in a position to cite the need to respond to the data submitted by the United States as part of the reason a delay in the schedule is needed.

In light of the foregoing, the United States would be willing to agree to an extension of time. However, instead of Brazil 's proposal, the United States would ask that the schedule be altered as follows: First, we would ask that the filing of the parties' responses to the additional questions from the Panel (dated 23 December 2003), as well as Brazil's comments originally scheduled for 12 January 2004, be moved to 21 January (to take into account the fact that 19 January is a US Federal holiday). We would then request that the parties' comments on each other's answers be

moved to 2 February. The reason for this latter proposal is because, in addition to filing comments on Brazil's answers to the Panel's additional questions on that date, the United States will also be filing – per the Panel's communication of 8 December 2003 – comments on (1) Brazil's comments on the data provided by the United States on 18 and 19 December 2003, as well as (2) Brazil's comments on the US comments on Brazil's economic model. Given Brazil's confirmation in its letter that its submissions on these matters will require four weeks to prepare, the United States and the Panel can expect that those comments will be extensive. Thus, one week to respond to Brazil 's three submissions would understandably be insufficient; for due process reasons, the United States believes at least two weeks would be needed to respond to Brazil's four weeks worth of comments and answers.

In agreeing to Brazil's extension request, with the above caveats, the United States notes that it is simply seeking to advance the goal of WTO dispute settlement – that is, the effective resolution of disputes, rather than pursuing litigation tactics designed merely to disadvantage the other party procedurally. In this regard, we regret Brazil's second letter of 23 December, requesting that certain US documents "be disregarded by the Panel". The United States has in a communication earlier today expressed its regret for any inconvenience that may have resulted to the Panel and Brazil due to the delay in submitting the US comments and its answers to questions from the Panel, noting largely the same reasons Brazil is now relying on to support its extension request. Indeed, this delay resulted in large measure from the US determination to make best efforts to respond to Brazil's request for certain information while simultaneously preparing its comments and answers. In this connection, we find it interesting that Brazil is seeking to have the Panel "disregard[]" the US answers and comments, but not the extensive data requested by Brazil, which was provided on 19 December, one day after the date set out in the Panel's 8 December communication. The significant burdens on all parties to a WTO dispute, and this dispute in particular, are well-understood. The effective functioning of the dispute settlement system and the resolution of disputes are not served through one-sided approaches that only recognize the burdens place on one party but not the other.

# ANNEX K-42

## REPLIES OF THE UNITED STATES TO ARTICLE 13 REQUEST

20 January 2004

The United States is in receipt of a request for information from the Panel pursuant to Article 13 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* transmitted on 12 January 2004. In its request, the Panel "requests the United States to provide the same data that it agreed to provide in its letters dated 18 and 22 December 2003 but in a format which permits matching of farm-specific information on contract payments with farm-specific information on plantings".[1] The Panel's request states that "[d]isclosure is sought to permit an assessment of the total expenditures of PFC, MLA, CCP and direct payments by the US Federal Government to upland cotton producers in the relevant marketing years" and invites the United States to "protect the identity of individual producers by, for example, using substitute farm numbers which still permit data-matching". My authorities have instructed me to submit this response.

With respect to the Panel's explanation that "disclosure is sought to permit an assessment of the total expenditures of PFC, MLA, CCP and direct payments by the US Federal Government to upland cotton producers in the relevant marketing years", the United States notes that it has previously provided data that permits calculation of "total expenditures" for all decoupled payments made to farms planting upland cotton with respect to historical base acres (whether upland cotton base acres or otherwise). In particular, for the production flexibility contract payment era, we provided a farm-by-farm file ("Pfcby.txt") with base acreage and yield data for all programme crops for all "cotton farms" as defined in BRA-369 and data file ("Pfcsum.xls") that aggregated this data for ease of use.[2] The "programme payment units" field allows for easy calculation of "total expenditures" to farms planting upland cotton in any given year by multiplying payment units by the applicable payment rate. Similarly, for the direct and counter-cyclical payment era, the United States provided a farm-by-farm file ("Dcpby.txt") with base acreage and yield data and an aggregate data file ("Dcpsum.xls").[3] Again, the "programme payment units" field allows for easy calculation of total expenditures by multiplying payment units by the applicable payment rate. Thus, the data already provided by the United States to Brazil and the Panel would permit an assessment of total expenditures of decoupled payments to farms planting upland cotton.

The United States has studied the Panel's request for certain farm-specific data as well as its suggestions with respect to protecting US producers' privacy interests. The United States thanks the Panel for recognizing the important confidentiality concerns which arise from Brazil's request to receive, by farm number, contract payment and planting information. The Panel will recall that at the second panel meeting the US delegation expressly inquired of the Brazilian delegation whether the

[1] The Panel's request references US letters dated 18 and 22 December 2003, providing certain information from Brazil. The United States understands the latter reference to be to the 19 December letter to Brazil that was transmitted to the Panel and the Brazilian Mission to the WTO on 22 December 2003.

[2] These files were provided, per Brazil's request, to the Brazilian Embassy in Washington, D.C., on 18 December 2003 via CD-ROM. The US letter was filed with the Panel on 18 December, and the CD-ROM was delivered via courier to Geneva and filed with the Panel on 23 December 2003.

[3] These files were provided to the Brazilian Embassy in Washington, D.C., on 19 December 2003 via CD-ROM. The US letter was filed with the Panel on 22 December, and the CD-ROM was delivered via courier to Geneva and filed with the Panel on 23 December 2003.

United States could provide the requested data in some format that also protected the identity of individual producers. The Brazilian delegation refused to answer and insisted that the requested information be provided with farm numbers, as set out in Exhibit BRA-369. In response to Brazil's request, the United States therefore provided all of the data that it could without violating the privacy interests of US producers, as required under the Privacy Act of 1974.

The United States has studied the Panel's request and has concluded that it is not possible to "protect the identity of individual producers" while providing the requested data in a format that permits data-matching. This results because the United States has already provided, by farm number, farm-specific contract information, including base acreage, base yield, and payment units, for each programme crop for each requested year. For example, for each and every "cotton farm" (as defined in the Brazilian request) identified by its FSA farm number, the United States has provided 96 separate data fields relating to 2002 direct and counter-cyclical contract payments. These 96 fields of contract data form a unique combination, such that – even in the absence of farm numbers – disclosing the farm-specific plantings that correspond to each unique combination of contract data would allow each farm's plantings to be connected to the FSA farm numbers through the farm-by-farm files previously provided. Thus, as a result of Brazil's insistence on receiving data with the FSA farm numbers and refusal to consider any alternative that would respect the privacy interests of US producers, unfortunately there would not appear to be a way to provide the requested data and "protect the identity of individual producers" given the data already provided. Under the Privacy Act of 1974, the United States could not disclose this information without the consent of the submitter.[4] Thus, the existence of confidentiality procedures would still not permit the United States to release each farm's planting information associated with the farm's particular contract payment data (given the previous submission of contract data in association with farm, county, and state numbers).[5]

With respect to the Panel's reference to the release of certain farm-specific planting data by the Farm Services Agency to a member of the Brazilian delegation, the United States has explained in its December 18 letter to the Panel that this release was in error. We have requested that Brazil assist the United States in curing this breach of confidentiality by returning all copies of the erroneous release but have yet to receive a response.

The Panel makes reference to a weighing of "the public interest in disclosure" against a payment recipient's privacy interests. The question of whether the information could be released – and even whether the "public interest" is a relevant consideration – is a complicated issue under US domestic law. In the first instance, the US Department of Agriculture has determined that it is prohibited under US law from releasing this information without the consent of each submitter. In any event, we note that the Panel states that it requests these data "to permit an assessment of the *total expenditures* of PFC, MLA, CCP and direct payments . . . to upland cotton producers". Thus, the information relevant to the Panel's assessment would not be *farm-specific data* but rather some *aggregation* of data to permit this "assessment of . . . total expenditures". As noted above, the United States has provided both farm-specific and aggregated contract data that would permit an assessment of total expenditures of decoupled payments to farms planting upland cotton.

[4] 5 U.S.C. 552a(b) ("No agency shall disclose any record which is contained in a system of records by any means of communication to any person, or to another agency, except pursuant to a written request by, or with the prior written consent of, the individual to whom the record pertains . . . .").

[5] Moreover, because contract data by farm number may be releasable information – as we have done here with respect to Brazil's specific request – a request to release contract data associated with a farm's planting information would raise the same privacy concerns because of the potential to link such data back to farm and recipient information that could be separately obtained.

The United States further notes the Panel's statement that "[a] refusal by the United States to provide the information as requested without an adequate explanation may lead to adverse inferences being drawn". As explained, the United States does not have the authority to provide the farm-specific planting information in the format requested. Further, the United States has provided both farm-specific and aggregated contract data that would permit the Panel to make the assessment it identifies, that is, an assessment of total expenditures of decoupled payments to farms planting upland cotton. The situation here is thus very different from the one in Canada - Aircraft where the Appellate Body first opined that "a panel should be willing expressly to remind parties – during the course of dispute settlement proceedings – that a refusal to provide information requested by the panel may lead to inferences[6] being drawn about the inculpatory character of the information withheld".[7] There is no basis for an "inference" of any kind, adverse or otherwise.[8]

Finally, we of course recognize that the Panel has the right to seek information which it deems appropriate pursuant to Article 13.1 of the DSU. We wish to recall, however, that panels must take care not to use the information gathered under this authority to relieve a complaining party from its burden of establishing a *prima facie* case of WTO inconsistency based on specific legal claims asserted by it. In *Japan – Measures Affecting Agricultural Products*, the Appellate Body explained that it is for a complaining party to make arguments supporting its specific legal claims and that the panel had erred in using information it had obtained to make a finding of inconsistency on the basis of an argument and claim not explicitly advanced by the complaining party.[9] In this dispute, Brazil has not advanced legal claims and arguments that decoupled payments should attribute across the total value of the recipients' production, nor has Brazil advanced claims and arguments setting forth any methodology for calculating the total amount of payments it challenges, as reflected in Question 258 from the Panel to Brazil. The Panel may not relieve Brazil of its burden of advancing and establishing claims and arguments relating to the value of decoupled payments benefiting upland cotton, a crucial element in Brazil's *prima facie* case under Articles 5 and 6 of the *Agreement on Subsidies and Countervailing Measures*.

---

[6] The United States notes that in the same report the Appellate Body was careful to distinguish "adverse" inferences from other "inferences", remarking that: "We note, preliminarily, that the 'adverse inference' that Brazil believes the Panel should have drawn is not appropriately regarded as a punitive inference in the sense of a 'punishment' or 'penalty' for Canada's withholding of information. It is merely an inference which in certain circumstances could be logically or reasonably derived by a panel from the facts before it." *Canada – Measures Affecting the Export of Civilian Aircraft*, WT/DS70/AB/R, adopted 20 August 1999, para. 200 ("*Canada – Aircraft*").

[7] *Canada – Aircraft*, WT/DS70/AB/R, para. 204.

[8] The United States also notes that it is even less appropriate to draw "adverse inferences" in this dispute than in *Canada - Aircraft* in that Annex V, which was referred to by the Appellate Body in *Canada - Aircraft*, was rendered inapplicable by the Peace Clause in this dispute.

[9] Appellate Body Report, *Japan – Measures Affecting Agricultural Products*, WT/DS76/AB/R, adopted 19 March 1999, paras. 129-30.

# ANNEX K-43

## LETTER FROM THE UNITED STATES

28 January 2004

Enclosed with this letter the United States is providing a CD containing revised versions of the 6 electronic data files relating to the production flexibility contract era and the direct and counter-cyclical payment era that were transmitted to Brazil on 18 and 19 December 2003, and to the Panel on 18 and 22 December 2003. The enclosed CD contains six revised data files. The file names are identical to those previously submitted but with an "r" preceding the original file name. Thus, the files are now titled "rDcpsum.xls" (aggregate data file), "rDcpby.txt' (farm-by-farm base and yield data file), "rDcpplac.txt" (planted acres file), "rPfcsum.xls" (aggregate data filed), "rPfcby.txt" (base and yield data file), and "rPfcplac.txt" (planted acres file). We have prepared these revised electronic files after becoming aware of certain errors in the original data files submitted.

In the limited time available to reply to Brazil's request for data, certain programming errors appear to have resulted. As indicated in our letter of 18 December to the Panel, responding to the Brazilian request involved extracting pertinent information from approximately 10 million data files; because that request sought information relating to up to 10 programme crops on nearly 250,000 farms, the information provided by the United States ultimately spanned nearly 220 megabytes of data. Because that data was not the product of any established procedure with a protocol for cross-checking and verification, it was perhaps inevitable that certain errors should have occurred.

In preparing comments on Brazil's answer to question 258 from the Panel, the United States became aware that certain fields in the aggregate data files ("Pfcsum.xls" and "Dcpsum.xls") that the United States had prepared to assist the Panel and Brazil in interpreting the voluminous data in the farm-by-farm files contained no data (indicated by a zero ("0") or a dash ("-")). For example, looking at the original summary file for the direct and counter-cyclical payment era ("Dcpsum.xls"), those farms that in marketing year 2002 had upland cotton base acreage (4.7 million acres) but planted no cotton at all (0 acres), are also listed as having planted no acres of wheat, oats, rice, corn, sorghum, barley, flax, sunflower, safflower, soybeans, rapeseed, mustard, canola, crambe, or sesame on 15.9 million acres of cropland.

The United States has now expended significant effort correcting for programming errors and re-running the pertinent search. These efforts revealed that, while the cotton data continues to be correct (that is, farms with 4.7 million base acres of upland cotton planted not a single acre of cotton in marketing year 2002), in fact these farms planted approximately 10.3 million acres of these other crops and not zero as originally reported.

The corrected programming and new search generally corrected for instances in which the original search apparently failed to capture relevant data. The most significant revisions relate to (1) additional planted acres for other crops for those farms with upland cotton base acres that planted no cotton and (2) additional base acres for other crops for those farms without any upland cotton base acres that did plant cotton.

# ANNEX K-44

## LETTER FROM THE UNITED STATES

30 January 2004

The United States is in receipt of a document filed by Brazil with the Panel on 28 January 2004, providing Brazil's comments regarding data provided by the United States on 18 and 19 December 2003, and related matters. Brazil's filing of these comments was made 8 days after the deadline set by the Panel in communications dated 8 December and 24 December 2003, and on the date that had been established by the Panel for the United States to comment on Brazil's materials. Accordingly, my authorities have instructed me to respectfully request the Panel to specify the new date for the United States to file comments. The United States further suggests that since the Panel had originally provided that the United States would have eight days to provide its comments, the US comments could now be due eight days from the date the Panel establishes the new deadline.

As you know, on 8 December 2003, the Panel communicated to the Parties a revised schedule following the second panel meeting. The second paragraph of that coverfax and timetable reads: "As stated by the Chairman on 3 December, the United States will be given until **18 December** to respond to Brazil's request made in Exhibit BRA-369. Brazil will be given until **12 January 2004**, to comment on the US response." The third paragraph reads: "The parties may submit any further comments on each other's comments by **19 January 2004**."

On 24 December 2003, the Panel amended the timetable, stating that "all submissions originally due 12 January 2004 would now be due **Tuesday, 20 January 2004**" and "all submissions originally due 19 January 2004 would now be due **Wednesday, 28 January 2004**." Thus, Brazil had until 20 January 2004, to file its comments on the US data, and the United States had until 28 January 2004, to file its comments on Brazil's comments.

Brazil did not file its comments on 20 January, nor did it seek an extension of time from the Panel. Instead, Brazil simply delayed filing its 48 pages of detailed comments (with accompanying exhibits) until 28 January.[1] Providing the United States eight days to comment from the date of the Panel's communication of the new deadline would preserve the procedural balance originally established by the Panel.

[1] The United States finds Brazil's eight-day delay in meeting the Panel's deadline particularly ironic in light of Brazil's letters, such as its letter of 23 December 2003, complaining about the time of US filings.

# ANNEX K-45

## LETTER FROM BRAZIL

2 February 2004

The Government of Brazil is in receipt of a letter from the United States dated 30 January 2004 requesting an additional eight days to respond to Brazil's 28 January 2004 *Comments and Requests Regarding Data Provided by the United States on 18/19 December 2003 and the US Refusal to Provide Non-Scrambled Data on 20 January 2004* ("*Brazil's Comments*"). Brazil would comment on the US request as follows:

First, the US 30 January 2004 letter suggests that Brazil was late in filing *Brazil's Comments*. This is incorrect. The US letter ignores the fact and the effect of the Panel's 12 January 2004 Communication, in which the Panel requested the United States to produce complete and unscrambled data concerning contract payment base and current plantings of upland cotton farms. This Communication necessarily mooted, at least temporarily, any comments by Brazil on the 18/19 December 2003 US "scrambled" data. It would have made little sense for Brazil to comment on the data deficiencies (and the implications thereof) on 20 January 2004, since Brazil trusted that the United States would have lived up to the Panel's repeated request and produced the data by 20 January 2004, as required by DSU Article 13.1. Only after the United States failed to produce the requested data was Brazil able to properly comment on the US data – and it did so on 28 January 2004 (in a much shorter time - 8 days - than originally foreseen by the Panel's 12 January 2004 deadline).

Second, the United States requests the opportunity to comment on Brazil's Comments and requests eight days to do so. Brazil is of the view that eight days from 28 January would be acceptable, which would make the US submission due on 5 February 2004. The United States already has had access to Brazil's Comments for five days (since 28 January 2004). The US request for what would amount to essentially two weeks to respond would further delay these proceedings. It would also violate Brazil's due process rights if the United States were given more time to comment on these documents than Brazil had to comment on the failure of the United States to produce the information on 20 January 2004.

Third, in order to preserve Brazil's due process rights, the Panel should limit the scope of the US "Comments" to responding to arguments that the United States has not yet had an opportunity to respond. For example, Sections 4, 5, 11 of *Brazil's Comments* simply respond to arguments and facts already presented in US letters of 18 December 2003 and 20 January 2004 in which the United States sought to justify the refusal to produce farm-specific data. The United States should not be given yet another opportunity to comment on Brazil's comments.

Fourth, the Panel should reject any attempt by the United States to present positive evidence in any comments without also giving Brazil an opportunity to respond. For example, the United States never presented the Panel with *any* application of its own proposed methodology for calculating and allocating the amount of contract payments to current upland cotton farmers. It would be manifestly unfair for the United States to present, in its last submission, positive evidence based on incomplete (non-farm specific data) in support of its defence when it has refused to provide any calculation, or even an estimate, for thirteen months – let alone produced the requested data that would permit Brazil or the Panel to do so.

Fifth, Brazil notes that the U.S. letter of 28 January 2004 provides Brazil and the panel with "revised" data files to correct for "certain errors" in the original data submitted forty days earlier on 18 December 2003. None of these "corrections" provide any useable farm-specific contract payment base and current planting data. Thus, the United States continues to violate the Panel's 8 December 2003 and 12 January 2004 requests for such information. Further, the 28 January 2004 revised data continues to suffer from the various aggregation problems identified in paragraphs 8-15, 22, 76-81, 90-98, of *Brazil's Comments*. Nor does the corrected data include complete information on market loss assistance payments (as identified in paragraphs 20, 22, 43, 82 and 95 as well as notes 40, 43, 75, 163, 164, 166, 195 and 197 of *Brazil's Comments*), or information on MY 2002 peanut base payments (as identified in paragraphs 21-23, 43 and 98 as well as notes 75, 132, 161, 166, 195 and 196 of *Brazil's Comments*). Thus, Brazil does not believe that this "revised" data, arriving *after* the 11th hour, is either timely or useful. If, however, the Panel believes that it would be useful for Brazil to provide revised calculations (based on the revised US summary data) replacing those set out in paragraphs 83 and 96 of *Brazil's Comments*, or comment in any other way on the revised US "scrambled" data, Brazil will be pleased to do so. Brazil recalls, however, that it provided the figures in those two paragraphs based on the flawed US summary data to demonstrate the existence of further support for its "14/16th" methodology estimated figures.

# ANNEX K-46

## LETTER FROM THE UNITED STATES

3 February 2004

The United States is in receipt of a letter filed by Brazil on 2 February 2004, commenting on the US request for the Panel to establish a new deadline for the United States to file comments on Brazil's comments regarding data provided by the United States on 18 and 19 December 2003, and related matters.

My authorities have instructed me to inform the Panel that the United States welcomes Brazil's statement that it has no objection to the Panel establishing a new deadline for the United States to comment on Brazil's comments. Brazil, however, objects to the United States being given eight days from the Panel's communication establishing the new deadline, arguing that it would "violate Brazil's due process rights if the United States were given more time to comment on these documents than Brazil had to comment on the failure of the United States to provide the information on 20 January 2004". With respect, this fundamentally misstates the issue.

Brazil had access to the 18 and 19 December data for nearly *six weeks* before filing its comments, due on 20 January but submitted on 28 January, and evidently used that time in order to prepare quite lengthy and detailed comments (over 50 pages plus exhibits). Yet Brazil objects to the Panel providing the United States with notice that it has eight days to prepare its response. Brazil would have the Panel upset the balance of time set out in its communications for the preparation of the respective comments of Brazil and the United States.

We also note Brazil's argument that the Panel's 12 January letter "necessarily mooted, at least temporarily", the 20 January date for the filing of Brazil's comments. It is ironic, to say the least, that Brazil should have complained about delays (measured in minutes) in filing certain US documents and then unilaterally have decided that it was entitled to an additional *eight days* in filing its comments since, in Brazil's view, "[i]t would have made little sense" for Brazil to comply with the Panel's 20 January deadline. Brazil did not request the Panel to modify the deadlines as a result of the Panel's 12 January letter. Brazil simply decided not to abide by the deadlines established by the Panel. Indeed, Brazil should have filed its comments on the 18 and 19 December data on 20 January as scheduled and has provided no reason why it was unable to do so.

If Brazil wanted a further opportunity from the Panel to comment on any response to the Panel's 12 January letter, it could have so requested. Brazil did not do so. Instead it simply ignored the Panel's deadline and used a nearly six-week period to provide comments on the US data. Thus, Brazil's February 2 letter continues to evince its one-sided tactics on procedural issues, in which Brazil seeks (or simply provides to itself) substantial periods of time to prepare its filings but seeks to deny adequate time to the United States to prepare its responses.[1]

[1] For example, the United States recalls that at the panel organizational meeting, Brazil objected to the United States having more than two weeks to prepare its first submission while at the same arguing that Brazil would need a full two weeks to prepare the executive summary of its own first submission. (Brazil did not volunteer that it had already drafted a first submission that would ultimately turn out to be more than 135 pages in length, with over 100 exhibits.) As the United States noted at the time, it seemed implausible that the United States could prepare a *substantive response* to a submission in two weeks if Brazil was unable to prepare a *summary* of that submission in less than that time.

We note Brazil's request that the Panel *ex ante* "limit the scope of the US 'Comments' to arguments [to which] the United States has not yet had an opportunity to respond" and prevent the United States from "present[ing] positive evidence". However, the Panel had previously established that the United States "may submit any further comments on [Brazil's] comments" by 19 January, 2004[2], later revised to 28 January 2004.[3] Therefore, Brazil's request does not comport with the Panel's previous communication, would prejudge what comments the United States may provide (and perhaps preclude relevant comments on new information presented by Brazil), and would impose a limitation with respect to arguments and evidence on the United States that was not imposed on Brazil.

Finally, Brazil continues to mischaracterize the situation when it asserts that the United States should have breached US law regarding the protection of individual privacy in order to produce additional data relating to planting and contract payment information on a farm-by-farm basis. We have previously explained in our letters of 20 January 2004, and 18 December, 2003 why under US law we are unable to provide the data requested. In part, this results from Brazil's refusal at the second panel meeting to allow *any* deviation from the request set out in Exhibit BRA-369, which specifically requested that the data be provided by farm with its associated FSA farm number. The United States responded to that request to the maximum extent permissible under US law.

In sum, the Panel had intended for the United States to provide comments and have 8 days from the 20 January deadline for Brazil's comments to do so. However, Brazil seeks to impose limitations that were not applied to its own comments, and which would significantly impair the information available to the Panel in evaluating the material before it and US rights of defence. We request that the Panel reject Brazil's unbalanced suggestions and suggest that the US comments be due eight days from the Panel's confirmation of the new deadline for filing those comments.

[2] Panel Communication of 8 December 2003.

# ANNEX K-47

## LETTER FROM THE UNITED STATES

11 February 2004

Attached please find answers of the United States to 29 additional questions from the Panel following the second substantive meeting in the dispute *United States – Subsidies on Upland Cotton* (DS267) and the comments of the United States on Brazil's 28 January 2004 comments and new arguments on the extensive data provided by the United States.

The United States wishes to inform the Panel that it continues to work on preparing information requested by the Panel in its supplementary request for information pursuant to Article 13 of the DSU as well as certain information requested under the Panel's additional questions. Unfortunately, the very extensive nature of those requests for information have rendered it impossible for the United States to prepare and provide that information within the eight days requested by the Panel.

- For example, the Panel has requested that the United States provide "such of the information requested on 12 January 2004 in the format requested, as regards payment recipients who do not have interests protected under the Privacy Act [of] 1974, if any".[1] More than 250,000 farms fell within the farm criteria set out in Brazil's request in Exhibit BRA-369[2], to which the Panel's January 12 request referred. While it would not be possible to examine singly the records relating to each of these 250,000 farms, the United States continues to seek some means by which the identities of payment recipients who may not have protectable privacy interests could be identified. Eight days has not been sufficient time to complete that effort.

- In addition, the Panel has asked for a very substantial amount of acreage information for "covered commodities" over four marketing years under four different programmes and for all commodities for which planting information is maintained in marketing year 2002. A significant amount of time was required to generate the data in response to the Panel's earlier requests. That effort and the programming errors encountered in that response demonstrate that the response to the supplemental request also requires more than eight days.

Thus, the United States continues to work on responses to item (a) and all the bulleted subparts of item (b) of the Panel's supplementary request for information, as well as to Question 264(b) of the Panel's additional questions. Based on the work completed to date, our current understanding of the scope of the Panel's requests, and our experience completing (and revising) a similar, but smaller, computerized search for electronic files in December, the United States estimates that it would be able to provide the requested information by four weeks from the date the Panel provides the clarifications requested below. Of course, should the United States complete its preparation of the requested information prior to that date, we would make that information available to the Panel and Brazil at that time.

[1] Panel's Supplementary Request for Information Pursuant to Article 13 of the DSU, item (a) (3 February 2004).

[2] *See* US Letter to the Panel at 3 (December 18, 2003).

With respect to item (b) of the Panel's supplementary request for information, the United States would seek clarification of that request. First, the United States would ask the Panel to specify which commodities are "covered commodities" as that term is used in several of the bullet points and subbullets. Second, the United States would seek confirmation that, with respect to the information sought for marketing year 2002 "with respect to all crops on cropland covered by the acreage reports", the relevant portions of the "above questions" are those that ask for planted acreage information for each Category of farm. Clarifications of these points will assist the United States greatly in preparing data responsive to the Panel's request.

Finally, the United States notes that the Panel's communication of 3 February invites the parties "to submit, by Wednesday 18 February 2004, any comments on material submitted on 11 February by the other party". The United States understands this procedure to mean that, with respect to Brazil's 28 January comments on the data submitted by the United States on 18 and 19 December 2003, Brazil would be permitted to file comments on the US comments filed today. If this is not the case, the United States would appreciate the Panel providing clarification to the parties at its earliest convenience.

However, to the extent that the Panel has given Brazil the opportunity to file a reply on 18 February to the US comments filed today, and Brazil chooses to do so, the United States would request an opportunity to respond to Brazil's comments. The procedure set out by the Panel in its communications of 8 and 24 December 2003, originally set out one opportunity for Brazil to comment on the US data (on 20 January 2004) and one opportunity for the United States to respond to Brazil's comments (on 28 January 2004). As the responding party, the United States believes that it is important that it have the opportunity to respond to Brazil's arguments, particularly in this dispute where Brazil's arguments and legal positions have changed from submission to submission. To the extent that Brazil as complaining party is now being provided two opportunities to comment on the US data, the United States would feel bound to request a similar second opportunity to comment. We suggest that the deadline for the US reply could be set for Wednesday, 25 February.

# ANNEX K-48

## LETTER FROM BRAZIL

13 February 2004

The Government of Brazil is in receipt of a letter from the United States dated 11 February 2004 in which it informs the Panel that it is not providing the requested information by the 11 February 2004 deadline. Further, the letter requests (1) four additional weeks to provide data, and (2) the opportunity to respond to Brazil's 18 February 2004 comments on the "US data". Brazil asks the Panel to reject both of these requests.

In putting these requests into perspective, Brazil recalls that the entire contract payment exercise is to provide the Panel with sufficient data to determine and calculate (using whichever methodology the Panel deems appropriate) the amount of "support to" upland cotton for MY 1999-2002. The best way for the Panel to do this is if it has the actual data to calculate the amount of contract payments received by producers that planted cotton in MY 1999-2002. As the Panel knows, it does not yet have this actual data. Any objective assessment of the record indicates that Brazil has sought this contract payment information since November 2002, and that the Panel has sought it since it posed Question 67 *bis* to the United States in August 2003.

The immediate focus of this lengthy exercise is the Panel's 3 February 2004 "Supplementary request for information pursuant to Article 13 of the DSU and additional questions." ("3 February 2004 Request"). In part (a) of that request, the Panel asked for "such information requested on 12 January 2004 in the format requested, as regards payment recipients who do not have interests protected under the Privacy Act of 1974, if any". In a completely separate request (not conditioned on the Privacy Act), the Panel asked in part (b) for summary *aggregated* information that required the United States to compare farm-specific contract acreage data with farm-specific planting data. Data provided in response to part (b) could not possibly include any confidential information since it is aggregated.

The United States letter of 11 February 2004 states that it needs four additional weeks to complete the part (a) analysis. Brazil notes that because the United States apparently intends only to provide farm-specific information for far less than the total amount of farms (*i.e.*, those that are not held by "individuals") this information will be useless for calculating the exact amount of *total* contract payments. Therefore, Brazil does not believe that the United States should be given any additional time to produce this information. In this regard, it is important to stress that even if part of the farm-specific information were confidential under US law (which Brazil believes is not the case), the United States would still be required to produce the information requested by the Panel on 8 December 2003 and 12 January 2004 subject to WTO confidentiality procedures.

With respect to part (b) of the Panel's 3 February 2004 Request, the United States also claims it needs four additional weeks to complete this analysis. And it asks the Panel to "clarify" its request regarding what are "covered commodities" and "with respect to all crops on cropland covered by the acreage reports". The Panel's 3 February 2004 Request provided a chart which listed the "covered commodities". If the United States had any questions despite the clarity of this chart, then why did it wait 8 days to raise these questions? Further, the request for "crops on cropland covered by the acreage reports *not simply commodities covered by the programmes*" could not be clearer. Again,

why did the United States wait 8 days to bring this to the Panel's attention if it was truly puzzled by this condition of the Panel's request?

With respect to the enormous amount of time the United States claims it will take to produce information in response to part (b) of the Panel's 3 February 2004 Request, Brazil notes that the format of the Panel's Request was very similar to the *rice* FOIA request that is set out in Exhibit Bra-368. The testimony of Mark Somers before the Panel on 3 December 2003 indicated that the rice FOIA documents showed that USDA took less than a week to process the data and respond to the rice FOIA request once USDA's statistical experts began work on the project (and the time from filing the request to issuance of the data was 15 days). Indeed, Brazil was easily able to calculate the aggregate rice farm-specific base and acreage information in just a few days as set forth in Christopher Campbell's statement in Exhibit Bra-368. With its access to a number of USDA statistical experts, not to mention the centralized database with all of the records already inputted, it is simply not credible for the United States to claim that it needs more than five weeks to respond to the Panel's request.

As the Panel knows from reviewing Exhibit Bra-368, the data delivered by USDA's Kansas City office permitted the ready tabulation of the exact number of rice farms holding contract acreage and the amount of their rice acreage. The Panel's request for contract and planted acreage information on farms planting cotton is not fundamentally different from the rice request in terms of the type of data files at issue. The raw data in the contract and planted acreage (for all planted commodities) files that the United States would use to respond to the Panel's 3 February 2003 request are the same raw data files that have been in the centralized Kansas City database throughout this dispute. If there were any doubt about this, the United States demonstrated that it examined all the farm-specific data in its 18/19 December 2003 responses (albeit producing them in a scrambled format). Thus, part (b) of the Panel's 3 February 2004 Request did not involve any new data files – simply the writing of a programme that would allow the production of the data in an aggregated, non-confidential summary form, as defined and requested by the Panel.

Brazil believes that the Panel should not provide the United States with any additional time to respond to part (b) of its 3 February 2004 Request. The United States stood by and waited while the deadline approached without making any effort to request additional time or to seek clarifications. Yet, the United States had no difficulty during the same 8-day period in making extensive comments on Brazil's 28 January 2004 Comments and Requests Regarding Data Provided by the United States on 18/19 December 2003 and the US Refusal to Provide Non-Scrambled Data on 20 January 2004. ("Brazil's 28 January Data Comments"). The United States provides no legitimate explanation why it could not complete part (b) of the Panel's request within the Panel's deadline. Indeed, the United States – in a non-litigation context – demonstrated in the rice FOIA request just how easy and fast it is to provide this information.

The Panel is now only one month away from the one-year anniversary of its establishment, and almost two months *beyond* the nine-month deadline for completing its work set out in DSU Article 12.9. Brazil has not objected to the Panel's laudable attempts to coax the United States into producing the actual non-scrambled data that would permit calculation of the amount of support provided to upland cotton producers from the four different contract payments. Brazil was willing to go along with the delays that each of these requests necessitated because it, presumably like the Panel, wanted the Panel to make use of the most complete and accurate information available to decide these important issues. Starting with its Question 67 *bis*, the Panel has now asked for contract payment information data on *five* separate occasions (Question 125(9) and 8 December 2003, 12 January 2004 and 3 February 2004 Requests). The Panel now has before it a pattern of delay by the United States that is seriously impinging on Brazil's due process rights to receive a timely resolution of its claims in this dispute.

Therefore, Brazil strongly believes that the United States has been given more than sufficient time (seven months) and opportunities (five) to produce the requested contract payment information in one form or another. If the Panel believes, however, that the required balance between ensuring high-quality panel reports and not unduly delaying the panel process requires providing yet another opportunity to the United States to produce the data requested in part (b) of the Panel's 3 February 2004 Request, then Brazil has the following additional comments. If the United States provides the complete information requested in part (b) of the 3 February 2004 Request, then most of Brazil's 28 January Data Comments would be rendered moot. The purpose of those comments was to (a) demonstrate the inadequacy of the US data production, (b) request the drawing of adverse inferences, and (c) in the absence of the actual data, to apply the inadequate summary data. Because the US 11 February 2004 comments on Brazil's 28 January 2004 Data Comments are only relevant to these underlying Brazilian comments, the US 11 February 2004 Comments will also similarly be largely rendered moot *if* the United States provides the data requested in part (b). With the actual and complete data, the Panel would be in the position to apply any methodology it determines to be acceptable. Further, by producing the complete aggregated information, there would no longer be a need to draw adverse inferences. Nor, would there be any need for Brazil to comment on the US use of the incomplete and inadequate data in applying the US methodology.

Accordingly, if the Panel provides the United States with additional time to provide the data (which Brazil opposes), it should allow Brazil the opportunity to file comments, to the extent any are still relevant, to the United States 11 February 2004 Comments to Brazil's 28 January 2004 Data Comments until 8 days *after* the United States has provided the information responsive to part (b) of the Panel's 3 February 2004 Request. By using this modified procedure, Brazil hopes to alleviate some of the considerable legal costs it has incurred in this extraordinary process. It would deny Brazil's due process rights to incur such unnecessary expenses by filing a response which would not assist the Panel in resolving the relevant issues in this dispute, assuming the United States provides the complete data requested in part (b).

Brazil also opposes the unjustified attempt by the United States to further delay this proceeding by seeking yet another opportunity to comment on Brazil's 18 February 2004 Comments. Brazil notes that the United States 11 February 2004 Comments to Brazil's 28 January 2004 Data Comments go far beyond what are legitimate comments on Brazil's original 28 January 2004 Data Comments. In particularly, in a number of instances, the US 11 February 2004 Comments address issues raised in Brazil's 28 January 2004 Comments on US Answers to Questions Posed by the Panel Following the Second Substantive Meeting of the Panel.

Thus, the United States, having already abused the Panel's procedures, now seeks yet another opportunity to comment. The Panel's 3 February 2004 Communication made it clear that the deadline for the United States to comment would be 11 February 2004. The US request would only serve to further delay these proceedings, to the detriment of Brazil.

Finally, Brazil asks the Panel to reject the United States' unilateral decision to take additional time to respond to Question 264(b). There is absolutely no legitimate reason for the United States to have failed to respond to this question; nor has the United States indicated any such reasons. The Panel's question in no sense called for a complicated analysis, and a response could readily have been provided within the 8-day response period. After reviewing the US response, Brazil was able to set up a table comparing the US and Brazilian figures in less than an hour.

# ANNEX K-49

## LETTER FROM THE UNITED STATES

16 February 2004

The United States is in receipt of a letter from Brazil dated 13 February 2004, requesting the Panel not to afford the United States additional time to provide certain requested information and the opportunity to respond to Brazil's anticipated 18 February 2004, comments on certain data submitted by the United States. My authorities have instructed me to make the following reply to these issues.

The United States has communicated to the Panel that work continues in response to the Panel's supplemental request for information and that the United States expects to complete this work within four weeks from the date the Panel provides certain clarifications to its request. The United States provided this time estimate on the basis of its work completed to date and questions that arose with respect to the Panel's request (the subject of our request for clarifications).[1] We also noted that item (a) in the Panel's request presented the challenge of seeking some means by which to review the identities of payment recipients on approximately 250,000 farms within the scope of the request, a task which was impossible to complete within the eight days the Panel had requested. Finally, in producing this time estimate, United States reflected on its experience in producing data for this dispute in December 2003. That data was provided within 15 days of its request, and, on subsequent review, contained a number of inaccuracies that had to be cured by a subsequent filing.[2] In addition to explaining the reasons supporting our estimate, we also made clear that "should the United States complete its preparation of the requested information prior to that date, we would make that information available to the Panel and Brazil at that time".[3]

If anything, the data requested by the Panel on 3 February 2004, is more extensive than the information requested in December as it requests that additional data be sought and that different aggregations be provided. By way of example, for marketing year 2002, we understand that the Panel has requested planted acreage data for all "crops" for each Category of farm set out in the request.[4] The Panel will recall that in marketing year 2002, the "crops" for which crop insurance premium subsidies were available included:

> Almonds, apples, avocado, avocado trees, barley, blackberries, blueberries, burley tobacco, cabbage, canola, cherries, chile peppers, cigar binder tobacco, cigar filler

[1] With respect to the first point of clarification sought by the United States, Brazil points to a table in the Panel's supplemental request for information. We note that two of the headings in that table, "soybeans" and "other oilseeds", are marked with an asterisk, which denotes "[w]here applicable". *See* Panel's Supplemental Request for Information, at 2 (3 February 2004). The United States has requested clarification of the Panel's supplemental request because, even with that table, the precise scope of the term "covered commodity" and where soybeans and other oilseeds are "applicable" are not clear.

[2] *See* US Letter to Panel of 28 January 2003 (transmitting CD-ROM with revised data files).

[3] *See* US Letter to Panel of 11 February 2004, at 2.

[4] Whether the data sought was planted acreage only for farms falling within each Category of farm was the second point of clarification raised by the United States. *See* US Letter to Panel of 11 February 2004, at 2. The United States was not asking for a list of "crops" covered by that request, a point which Brazil evidently misunderstands. Brazil's Letter to the Panel of 13 February 2004, at 2 ("Further, the request for 'crops on cropland covered by the acreage reports *not simply commodities covered by the programmes'* could not be clearer.").

> tobacco, cigar wrapper tobacco, citrus (grapefruit, lemons, limes, mandarins, murcotts, navel orange dollar, oranges, tangelos, tangerines), citrus trees, corn, cotton, cotton extra long staple, crambe, cranberries, cultivated clams, cultivated wild rice, dark air tobacco, dry beans, dry peas, figs, fire-cured tobacco, flax, Florida fruit trees, carambola, flue-cured tobacco, forage production, forage seed, forage seeding, fresh apricots, fresh nectarines, fresh market beans, fresh market sweet corn, fresh market tomatoes, grain sorghum, grapes, green peas, hybrid corn seed, hybrid sorghum seed, macadamia nuts, macadamia trees, mango trees, Maryland tobacco, millet, mint, mustard, nursery, oats, onions, peaches, peanuts, pears, pecans, peppers, plums, popcorn, potatoes, processing apricots, processing beans, processing cucumbers, prunes, raisins, rangeland, rapeseed, raspberries, rice, rye, safflower, soybeans, stonefruit (processing apricots, processing cling peaches, processing freestone), strawberries, sugar beets, sugarcane, sunflowers, sweet corn, sweet potatoes, table grapes, tomatoes (canning and processing), walnuts, wheat, and winter squash.[5]

Thus, this one element of the Panel's supplemental request would seem to require the United States to gather and organize a substantial amount of information not previously provided.

We do note again that the Panel's request for aggregated acreage data does not involve privacy issues and thank the Panel for seeking the data in this format, which allows the United States both to provide data in a manner consistent with its domestic law and to do so in a way that may be of assistance to the Panel. Had Brazil requested data in a similar aggregated format or responded positively to the US request at the second panel meeting for alternatives that would allow farmer privacy interests to be protected, a brief delay would not be necessary while the United States seeks to provide the requested data. Brazil did not respond positively to that request, insisted on receiving the data in a format that would reveal farmer identities, and never requested the Panel to seek data from the United States in aggregated form – despite the fact that *only Brazil was aware of its invented methodology until it responded to the Panel's Question 258 on 20 January 2004*. Had Brazil included its methodology in its first submission on Peace Clause issues (on 24 June 2003), all the time now being devoted to these topics could quite likely have been saved. Brazil's complaint that the United States is responsible for any perceived delays in the Panel's schedule would thus appear to be sorely misdirected.

We note Brazil's suggestion that, should the Panel accept the data the United States is preparing in response to item (b) of the Panel's supplemental request for information, "then most of Brazil's 28 January Data comments would be rendered moot".[6] We are not exactly sure what that statement means or how it relates to Brazil's objection to the United States requiring additional time to provide a response to the information that the Panel has requested. However, Brazil further states that "by producing the complete aggregated information, there would no longer be a need to draw adverse inferences".[7] The United States welcomes this belated recognition by Brazil that disclosure of farm-specific information of contract acreage and planted acreage is *not* necessary under Brazil's invented allocation methodology.

Brazil also questions the United States' comment that it will require additional time to respond to Question 264(b), saying that "Brazil was able to set up a table comparing the US and Brazilian figures in less than an hour." It does not appear to the United States that the Panel's question simply called for "set[ting] up a table" to compare the data referenced in that question. For

[5] Exhibit Bra-62 (US Department of Agriculture, Crops Covered Under the 2002 Crop Insurance Programme) (www.rma.usda.gov/policies/02croplist.html).

[6] Brazil's Letter to Panel of 13 February 2004, at 5.

[7] *Id.*

example, Brazil asserted in paragraph 135 of its 28 January 2004, comments on US answers that "the difference between the chart provided by the United States in Exhibit US-128 and Brazil's chart in para. 165 of its 11 August Answers lies in the treatment of rescheduled debt". To provide a helpful answer would seem to require that the United States examine what goes into each of the figures that are represented in Brazil's chart. The United States was not able to complete that analysis within the eight days provided – but was able to generate and provide in its 11 February answers copious amounts of numbers and data in response to the 29 Panel questions. Rather than seek an extension with respect to *all* questions, we provided the data we could on 11 February and will provide any other data in response to Question 264(b) within the time indicated (and sooner if the data can be collected and examined in less time).

With respect to comments by the Parties on the materials that the United States is preparing, we would not object to the Panel granting Brazil an opportunity to comment on the data to be provided by the United States in response to item (b) of the Panel's supplemental request. However, we cannot understand nor accept Brazil's suggestion that the United States should not be afforded an opportunity to reply to Brazil's comments. Since Brazil is seeking another opportunity to comment (eight days after the United States has provided the information in response to item (b)), there would be no significant "further delay in these proceedings, to the detriment of Brazil" were the United States to file its reply to Brazil's comments within, say, one week of those comments. In this respect, we note that Brazil continues its one-sided approach to procedural issues by seeking to provide itself with an opportunity to comment but to deny the same to the United States. Since this would be the first time Brazil's comments on the item (b) data would be presented, the United States as responding party must be given an opportunity to respond.[8]

Finally, the United States regrets that Brazil has repeated its suggestion that the United States should provide data protected by the Privacy Act and that the United States should rely on WTO confidentiality provisions in doing so. Apart from the fact that the United States is not able under its domestic law simply to ignore US persons' Privacy Act interests on that basis, the growing number of press articles revealing non-public information about this dispute makes that suggestion even less tenable.[9]

[8] In this connection we would like to draw the Panel's attention to a previous proceeding in which Brazil's last-minute submission of evidence and legal argumentation raised difficulties for the other party involved. Report of the Arbitrator in *Canada – Export Credits and Loan Guarantees for Regional Aircraft*, Recourse to Arbitration by Canada, WT/DS222/ARB, paras. 2.14 and 2.16. We recall that in the present dispute, Brazil first failed to explain its invented allocation methodology until 20 January 2004 – eight months into this dispute – when compelled to do so by the Panel. Then, Brazil delayed submitting its comments on the US December data until 28 January 2004 – eight days after the deadline set by the Panel. Now, Brazil would seek to have an opportunity to comment on the item (b) data – despite the necessary "delay in the proceeding" that would entail – but simultaneously seeks to deprive the United States of its "right – as respondent – to speak last." In this dispute, it would be singularly inappropriate to allow Brazil the final chance to comment.

[9] The most recent example contains a reference to the statement in a Panel communication to the United States that a failure to provide certain requested information without adequate explanation could lead to adverse inferences being drawn. (Exhibit US-155.) As far as the United States is aware, any communication from the Panel to the parties are subject to the confidentiality rules of the proceeding.

# ANNEX K-50

## LETTER FROM THE UNITED STATES

23 February 2004

The United States thanks the Panel for its communication of 20 February 2004, in which the Panel extends to the United States the opportunity to respond to Brazil's 18 February submission relating to certain data provided by the United States on 18 and 19 December 2003. The United States would like to confirm that it does wish to comment on this Brazilian submission. The Panel has asked the United States to file any comments within five days, that is, by Wednesday, 25 February. In light of the extensive material submitted by Brazil and US efforts to respond simultaneously to the Panel's supplemental request for information, the United States would like to ask the Panel to extend the deadline to provide these comments, to Wednesday, 3 March, the same due date for the US response to the Panel's supplemental request for additional information.

This extension would greatly assist the United States in providing useful comments for the Panel on Brazil's lengthy 18 February comments, which totalled 79 pages. Of these 79 pages, 41 pages were devoted to setting forth results of numerous calculations. The personnel who would need to review these calculations are also involved in the ongoing US efforts to provide data in response to the Panel's supplemental request for additional information. The extension requested would permit these personnel to better advance US efforts to respond fully and accurately to the Panel's supplemental request while simultaneously reviewing and providing comments on Brazil's 18 February submission.

In addition, we note that the extension requested would not impact any other dates set by the Panel in this proceeding. Thus, the United States respectfully requests the Panel to extend the deadline to provide the US comments, to Wednesday, 3 March.

The United States is providing a copy of this letter directly to Brazil.

# ANNEX L

## COMMUNICATIONS FROM THE PANEL

[1] Communications included as L-1.4, -1.7, -1.11, -1.12, -1.13 and -1.14 were also sent to 3rd parties.

# ANNEX L-1.1

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

21 May 2003

I refer to the letter from the United States dated 21 May 2003and addressed to the Chair of the Panel. I understand this was also copied to your delegation. The Panel wishes to ask Brazil to communicate its views, if any, in writing in response to this letter.

The Panel would appreciate if Brazil's written response could be submitted before the close of business this Friday, 23 May 2003. This is in view of the fact that the Chairman of the Panel, Mr. Rosati, is proposing to convene an organizational meeting with the parties on Monday 26 May 2003 from 11:30 a.m. The venue will be communicated to you shortly.

# ANNEX L-1.2

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

27 May 2003

The Panel takes note of the United States' comments with respect to the Panel's timetable and working procedures, dated 21 May 2003, and Brazil's communication dated 23 May 2003.

Attached you will find the Panel's proposed **working procedures and timetable**. The Panel intends to hold an **organizational meeting with the parties at 8 a.m. on Wednesday, 28 May** 2003 at room C in order to hear the parties' views on these proposals.

As indicated in the attached proposed timetable, prior to the submission by the parties of their first written submissions, the Panel intends to request the parties to address, in their initial briefs to the Panel, the following:

- whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue.

As also indicated in the attached timetable, the Panel will invite the parties to submit any written comments on each other's comments on this issue. The Panel currently wishes to signal its intention to clarify to the parties its view on these issues prior to the parties' submission of their first written submissions.

In the event that the Panel were to rule that Article 13 precludes the Panel from considering certain claims raised by Brazil prior to a conclusion that certain conditions of Article 13 remain unfulfilled, we may decide to adjust the timetable to permit the parties to make further submission(s) after the second substantive meeting and to schedule further substantive meeting(s), as necessary, with the parties.

With respect to the participation of third parties in these Panel proceedings, the Panel is aware of the provisions of Article 10.3 of the *DSU*, which states that third parties shall receive the submissions of the parties to the dispute to the first meeting of the Panel. Given the significant systemic issues in this Panel proceeding, and in exercise of our discretion to manage these Panel proceedings, we believe that it would be appropriate in this case for the third parties to have access to the parties' initial written comments (and any written comments the parties may make on each others' comments) as well as to have the ability to submit any written comments they themselves may have on the issue that we have identified above. We therefore intend to invite the parties to serve also on the third parties their initial briefs and any responding comments. At the organizational meeting, we will invite any comments you may have on this proposed approach to third party participation.

[Attachment omitted]

# ANNEX L-1.3

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

28 May 2003

Attached you will find the timetable and working procedures adopted by the Panel for this dispute in accordance with Article 12.1 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*DSU*"). In adopting the timetable and working procedures, the Panel has carefully considered the parties' comments at this morning's organizational meeting.

As indicated in the attached timetable, prior to the submission by the parties of their first written submissions, the Panel requests the parties to address, in their initial briefs to the Panel (to be submitted on 5 June 2003), the following:

- whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue. For greater clarity, the Panel invites the parties, during this initial stage of the proceedings, to focus on matters of legal interpretation, rather than upon the submission of any factual evidence that might be associated with the substantive elements of Article 13.

As also indicated in the attached timetable, the Panel will invite the parties to submit any written comments on each other's comments on this issue (i.e. on 13 June 2003). The Panel intends to rule on these issues on 20 June 2003, prior to the parties' submission of their first written submissions.

As has been indicated, the Panel recognizes that it may need to revisit certain aspects of its timetable and working procedures in light of developments during the course of the Panel procedures, including the nature of the Panel's ruling that is scheduled for 20 June 2003. In particular, in the event that the Panel were to rule that Article 13 precludes the Panel from considering certain claims raised by Brazil prior to a conclusion that certain conditions of Article 13 remain unfulfilled, we may decide to adjust the timetable to permit the parties to make further submission(s) after the second substantive meeting and to schedule further substantive meeting(s), as necessary, with the parties. Related amendments to the working procedures may also be made, if necessary.

With respect to the participation of third parties in these Panel proceedings, we have carefully considered the parties' comments at this morning's organizational meeting. In exercise of our discretion to manage these Panel proceedings, we continue to believe that it would be appropriate in this case for the third parties to have access to the parties' initial written comments (and any written comments the parties may make on each others' comments) as well as to have the ability to submit any written comments they themselves may have on the issue that we have identified above. The Panel considers that such third party participation in this initial stage of the Panel proceedings is appropriate for the following reasons.

The Panel is aware of the provisions of Article 10.3 of the *DSU*, which states that third parties shall receive the submissions of the parties to the dispute to the first meeting of the Panel. We would also observe that the factual circumstance that presents itself here is not itself specifically addressed by the *DSU*. In our view, the legal issue that the Panel has asked the parties to address in their initial briefs will necessarily have ramifications for the remainder of the Panel proceedings, including the scope of the first substantive meeting, at which third parties will participate.

We therefore invite the parties to serve also on the third parties their initial briefs and any responding comments. The Panel will also invite third parties to submit any written comments they might have concerning the initial phase of these proceedings. The deadline for any third party comments is 10 June 2003. The parties' comments to be submitted on 13 June may, of course, also address comments made by third parties.

# ANNEX L-1.4

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THIRD PARTIES

20 June 2003

1. In a communication to the Panel, dated 21 May 2003, prior to the Panel's adoption of its working procedures, the United States had "propose[d] that the Panel organize its procedures to deal with the threshold Peace Clause issue at the outset of this dispute". The United States asserted *inter alia* that "[b]ecause in this dispute Brazil has made claims under 17 different provisions of the WTO Multilateral Agreements with respect to numerous US programmes under at least 12 US statutes, we believe the Panel's consideration of the critical Peace Clause issue would be aided by briefing and argumentation focused on this threshold issue". Brazil submitted a communication in response, dated 23 May 2003, opposing the US proposal.

2. On 28 May 2003, after having heard the views of the parties, we adopted our timetable and working procedures in accordance with Article 12.1 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*DSU*").

3. At the same time, we indicated that we would consider giving a ruling on certain issues on 20 June 2003, prior to the submission by the parties of their first written submissions, in relation to the following question and we requested the parties and third parties to address us in relation to it:

> "whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue. For greater clarity, the Panel invites the parties, during this initial stage of the proceedings, to focus on matters of legal interpretation, rather than upon the submission of any factual evidence that might be associated with the substantive elements of Article 13."

4. The parties submitted their initial briefs on this question on 5 June 2003. On 10 June, the following six third parties submitted briefs: Argentina; Australia; European Communities; India, New Zealand and Paraguay. The parties submitted further comments on 13 June 2003.

5. Article 13(a)(ii) of the *Agreement on Agriculture* states that domestic support measures that conform fully to the provisions of Annex 2 of the *Agreement on Agriculture* shall be exempt from actions based on Article XVI of *GATT 1994* and Part III of the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*"). Article 13(b)(ii) of the *Agreement on Agriculture* states that domestic support measures that conform fully to certain conditions shall be "exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year." Articles 5 and 6 of the *SCM Agreement* are each qualified by the proviso that "[t]his Article does not apply to subsidies maintained on agricultural

products as provided in Article 13 of the Agreement on Agriculture". Article 13(c)(ii) of the *Agreement on Agriculture* provides that export subsidies that conform fully to the provisions of Part V of that Agreement, as reflected in each Member's Schedule, shall be "exempt from actions based on Article XVI of GATT 1994 or Articles 3, 5 and 6 of the Subsidies Agreement". Article 3.1 of the *SCM Agreement*, which prohibits export subsidies, is qualified by the proviso: "Except as provided in the *Agreement on Agriculture*...". These provisions of Article 13 afford a conditional exemption from certain obligations relating to certain actionable and prohibited subsidies under the provisions of the *SCM Agreement* and Article XVI of the *GATT 1994*. This conditionality requires, *inter alia*, a comparison of facts with the applicable exemption requirements.

6. Briefly, Brazil asserts that the Panel can simultaneously consider all of the arguments and evidence on the substance of its claims under the *SCM* and *Agriculture Agreements*, while the United States asserts that the Panel is precluded from examining the SCM claims concerning prohibited and actionable subsidies in the absence of a prior ruling that the conditions of Article 13 of the *Agreement on Agriculture* are not satisfied, and, even if not, the Panel should exercise its discretion to order its proceedings in this way. All of the six third parties that made submissions support the view that the Panel is not precluded from simultaneously considering all of the arguments and evidence on the substance of Brazil's claims under the *SCM* and *Agriculture Agreements*, or, putting this another way, that conclusions on the applicability of the Article 13 exemptions do not have to be made before consideration of SCM claims in relation to the measures concerned.

7. We are faced with two questions:

- first, whether we are *required* to defer any examination of certain of Brazil's claims based on Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* until after making a ruling or expressing views on the issue of fulfilment of *Agreement on Agriculture* Article 13 conditions; and

- second, if not, then *how* we should exercise our discretion to best structure our examination of the matter before us.

8. These questions concern the manner in which we should or must treat the claims of Brazil based on Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* having regard to the provisions of Article 13 of the *Agreement on Agriculture*.

9. We therefore look first to the dispute settlement procedures governing disputes under the *SCM Agreement*. Article 30 of the *SCM Agreement* states: "The provisions of Articles XXII and XXIII of GATT 1994 as elaborated and applied by the Dispute Settlement Understanding shall apply to consultations and the settlement of disputes under this Agreement, except as otherwise specifically provided herein."

10. We thus turn next to the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*DSU*") and to the terms of the *SCM Agreement* itself (in order to see whether or not there is anything otherwise specifically provided therein). Article 1.1 of the *DSU* is entitled "Coverage and Application". It states that "[t]he rules and procedures of this Understanding shall apply to disputes brought pursuant to the consultation and dispute settlement provisions of the agreements listed in Appendix 1 to this Understanding (referred to in this Understanding as the "covered agreements")."

11. As the Appellate Body has observed, "[a]rticle 1.1 of the DSU establishes an integrated dispute settlement system which applies to all of the agreements listed in Appendix 1 to the *DSU* (the "covered agreements"). The DSU is a coherent system of rules and procedures for dispute settlement

which applies to "disputes brought pursuant to the consultation and dispute settlement provisions of" the covered agreements."[1] The *SCM Agreement* and the *GATT 1994* are Multilateral Agreements on Trade in Goods in Annex 1A of the *WTO Agreement* and are therefore "covered agreements" listed in Appendix 1 of the *DSU*. The general *DSU* rules and procedures do not set forth any specific distinct way to deal with claims under the *SCM Agreement* and the *GATT 1994* having regard to the provisions of Article 13 of the *Agreement on Agriculture*.

12. Article 1.2 of the *DSU* provides, in relevant part, that the rules and procedures of the *DSU* shall apply subject to such special or additional rules and procedures on dispute settlement contained in the covered agreements as are identified in Appendix 2 to the *DSU*.

13. We therefore examine whether Appendix 2 to the *DSU* identifies any special or additional dispute settlement rules or procedures relating to the *SCM Agreement* or to Article XVI of the *GATT 1994*.

14. Appendix 2 of the *DSU* does not identify Article XVI of the *GATT 1994* as a special or additional rule. It does identify Articles 4.2-4.12 and Articles 7.2-7.10 of the *SCM Agreement* as "special or additional rules and procedures". These provisions contain special procedures and remedies for disputes involving prohibited and actionable subsidies governed by the *SCM Agreement*. However, none of these provisions purports to confer any sort of precedence or priority for considering SCM remedies in a dispute involving claims under the *Agreement on Agriculture*. Furthermore, Article 7.1 of the *SCM Agreement*, which is not identified as a special or additional rule or procedure in Appendix 2 of the *DSU*, indicates that it applies: "Except as provided in Article 13 of the Agreement on Agriculture....". This clearly indicates to us that this provision must be read in the light of the provisions of Article 13 of the *Agreement on Agriculture*. Moreover, as noted in para. 5 above, the substantive provisions to which these remedial articles are linked – Articles 3, 5 and 6 – stipulate either that they apply "except as provided in the Agreement on Agriculture" (Article 3 relating to prohibited subsidies), or that they do "not apply to subsidies maintained on agricultural products as provided in Article 13 of the Agreement on Agriculture" (Articles 5 and 6.9 of the *SCM Agreement*, entitled "Adverse Effects" and "Serious Prejudice", respectively).

15. The cited provisions of the *SCM Agreement* refer, as just indicated, to the *Agreement on Agriculture*, and some specify more precisely Article 13 of the *Agreement on Agriculture*. We therefore examine the rules applicable to dispute settlement under the *Agreement on Agriculture*, which is also a Multilateral Agreement on Trade in Goods in Annex 1A of the *WTO Agreement* and is, therefore, a "covered agreement" listed in Appendix 1 of the *DSU*. Article 19 of the *Agreement on Agriculture* is entitled "Consultation and Dispute Settlement". It states that the provisions of Articles XXII and XXIII of *GATT 1994*, as elaborated and applied by the *DSU*, shall apply to consultations and the settlement of disputes under that Agreement.

16. Appendix 2 to the *DSU* does not identify any special or additional dispute settlement rules or procedures relating to Article 13 of the *Agreement on Agriculture*.

17. Consequently, consistent with our consideration of the relevant provisions, there is no special dispute settlement requirement foreseen in the covered agreements in respect of a panel's consideration of the fulfilment of Article 13 conditions. The issue of fulfilment of the conditions of Article 13 of the *Agreement on Agriculture* is to be resolved using generally applicable *DSU* rules and procedures. The fact that certain very specific provisions are included in Appendix 2 of the *DSU* as special or additional rules indicates that, when the drafters intended to make a particular provision

[1] Appellate Body Report, *Guatemala – Anti-Dumping Investigation Regarding Portland Cement from Mexico* ("*Guatemala – Cement I*"), WT/DS60/AB/R, adopted 25 November 1998, DSR 1998:IX, 3767, para. 64.

applicable as a special or additional dispute settlement rule, they did so explicitly. Therefore, their failure to include a reference to any provision of the *Agreement on Agriculture* in the text of Appendix 2 demonstrates that they did not intend to make any provision of that Agreement a special or additional dispute settlement rule. It is not necessary for us to look for any further interpretive guidance on this issue.

18. We next turn to the issue of how we should structure our procedures to consider the matter before us. As we have concluded above, this issue is subject to the *DSU* but not otherwise affected by the covered agreements. In this regard, within the overall parameters set by the *DSU* of prompt and efficient dispute resolution[2], we must exercise our discretion as to how best to organize our procedures. Our discretion must be guided by the instructions given to us by the *DSU*. Pursuant to Article 12.1 of the *DSU*, "[p]anels shall follow the Working Procedures in Appendix 3 unless the panel decides otherwise after consulting the parties to the dispute". Moreover, Article 12.2 provides: "Panel procedures should provide sufficient flexibility so as to ensure high-quality panel reports, while not unduly delaying the panel process."

19. Article 11 of the *DSU*, entitled "Function of Panels" provides that the function of panels is to assist the DSB in discharging its responsibilities under the *DSU* and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements. Article 11 contemplates that a panel must make an "objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements." It does not require that a panel must conduct its proceedings in any particular way, provided that its requirements are fulfilled. It is within our discretion to manage our procedures so as to best fulfil the requirements of Article 11.

20. Given the potential complexity of the claims before us, the conditional nature of certain of these claims and the volume of evidence which may be introduced by the parties in support of their claims and arguments, and in order to organize our proceedings in an orderly, effective and efficient manner which serves to facilitate an objective assessment of the matter before us, and optimizes use of our resources, we have adopted the following modifications to our procedures (as indicated in the attached timetable):

- The Panel intends to express its views on whether measures raised in this dispute satisfy the conditions in Article 13 of the *Agreement on Agriculture*, to the extent that it is able to do so, by **1 September 2003**, and will defer its consideration of claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* as those provisions are referred to in Article 13 of the *Agreement on Agriculture* until after it has expressed those views. The Panel's views may be expressed in the form of rulings which could affect the Panel's further consideration of this dispute.

- In order that third parties may participate effectively at the first meeting at which the claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* as referred to in Article 13 of the *Agreement on Agriculture* are examined (as necessary), the Panel intends to divide its first meeting into two sessions, each of which will include a third party session.

[2] Article 3.3 of the *DSU* provides: "The prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members."

- Accordingly, for the purposes of the first session of the first substantive meeting on 22-24 July 2003, the Panel does not require the parties to address claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* as referred to in Article 13 of the *Agreement on Agriculture*. Having said this, the Panel notes that this does not preclude the parties from addressing such matters in their first submissions.

- All other claims of Brazil in relation to measures which Brazil maintains do not involve a consideration of Article 13 of the *Agreement on Agriculture* should also be addressed in first submissions, in order for the other party and third parties to have an opportunity to express their views on any such claims.

- For the purposes of allowing the Panel to express its views on the exemption conditions of Article 13 of the *Agreement on Agriculture* by 1 September 2003, in relation to those measures which may be affected by Article 13, full and complete submissions on factual and legal issues related to Article 13 in this dispute will need to be provided, at the latest, in the parties' rebuttal submissions (to be submitted on 22 August 2003).

21. We recognize that we may need to revisit certain aspects of our timetable and working procedures in light of developments during the course of the Panel procedures. Related amendments to the working procedures may also be made, if necessary. We have been mindful of due process considerations in revising our timetable and will continue to ensure that the parties have reasonable time to prepare for any subsequent stages of the dispute, as appropriate.

# ANNEX L-1.5

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

25 July 2003

Please find attached a communication from the Panel on the following issues:

1. The Panel's view on the preliminary ruling requested by the United States.
2. Questions from the Panel to the parties.
3. A copy of the Panel's questions to third parties (sent for your reference)

The Panel's questions are intended to facilitate the work of the Panel, and do not in any way prejudge the Panel's findings on the matter before it. Nor does the fact that the Panel has placed these questions under certain headings prejudge the Panel's findings on the matter before it. Each party is free to respond to or comment on questions posed to the other party or third parties.

Please be reminded that as stated by the Chairman of the Panel in the meeting, parties are requested to submit answers by the close of business of 4 August 2003. Subsequently, parties can submit comments to each other's responses by the close of business 22 August, the same deadline applicable to the rebuttal submissions

Panels' views on the preliminary ruling requested by the United States

1. The United States requests a preliminary ruling that:

(1) export credit guarantee measures relating to eligible US agricultural commodities other than upland cotton,

(2) production flexibility contract payments and market loss assistance payments, and

(3) the Agricultural Assistance Act of 2003

are not within the Panel's terms of reference.[1]

2. Brazil asserts that these items are properly within the Panel's terms of reference and asks the Panel to reject the United States' request.[2]

3. The Panel wishes to indicate to the parties how it intends to rule on items (1) and (2), in order to assist them in deciding what argumentation and evidence to submit in their answers to questions and rebuttals.

4. The DSB established the Panel at its meeting on 18 March 2003 with the following standard terms of reference:[3]

> "To examine, in the light of the relevant provisions of the covered agreements cited by Brazil in document WT/DS267/7, the matter referred to the DSB by Brazil in that document and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements".

5. With respect to item (1), the Panel intends to rule in its report that "export credit guarantees … to facilitate the export of US upland cotton, and other eligible agricultural commodities" as addressed in document WT/DS267/7, are within its terms of reference.

6. With respect to item (2), the Panel intends to rule in its report that production flexibility contract payments and market loss assistance payments as addressed in document WT/DS267/7 are within its terms of reference. This is without prejudice to the relevance, if any, of those payments under Article 13(b) of the *Agreement on Agriculture*, Articles 5, 6 and 7 of the *SCM Agreement* and Article XVI of *GATT 1994*.

7. The Panel has not yet decided upon its approach to item (3) and asks the parties not to exclude consideration of the Agricultural Assistance Act of 2003 in responding to the Panels' written questions and in rebuttal submissions.

[1] US First Written Submission, para. 218.
[2] Brazil's Oral Statement at the First Substantive Meeting, paragraphs 90, 144 and 145.
[3] WT/DSB/M/145 (paragraph 35)

Questions from the Panel to the parties –
First session of the first substantive Panel meeting

UPLAND COTTON

1. Please confirm that all information and data that you have provided to the Panel relating to "cotton" in fact relates to upland cotton only. **BRA, USA**

PRELIMINARY ISSUES

*Note to parties: As indicated in the cover note, the Panel has expressed its views in respect of the three United States requests for preliminary rulings. The Panel's questions reflected in this compilation relating to the requested preliminary rulings on which the Panel has expressed its views are those that were posed in the course of the first session of the first Panel meeting. This is to give an opportunity for the parties to transpose into writing their oral responses.*

**Product scope of Panel's terms of reference relating to Brazil's export credit guarantee claims**

2. Is Brazil's claim in relation to export credit guarantees against the measures said to constitute the GSM-102, GSM-103 and SCGP programmes in their entire application, or against the measures said to constitute the GSM-102, GSM-103 and SCGP programmes in their application to upland cotton, or both? **BRA**

3. If the request for consultations in this dispute omitted certain *products* in relation to export credit guarantees, on what basis is it argued that it failed to identify the *measures* at issue in accordance with Article 4.4 of the *DSU*? **USA**

4. Is it argued that the export credit guarantee programmes concerning upland cotton are each a separate or independent *measure*, in that they operate independently? **USA**

5. Is there a specification in any legislation or regulation (or any other official government document) which limit or restrict the export credit guarantee programmes at issue exclusively to upland cotton? **USA**

6. For the purposes of the Panel's examination of Brazil's claims relating to GSM-102, GSM-103 and SCGP under the *Agreement on Agriculture* and the *SCM Agreement*, is accurate data and information available with respect to these export credit guarantee programmes concerning upland cotton alone (e.g. with respect to "long-term operating costs and losses")? In this respect, the Panel also directs the parties' attention to the specific questions below relating to the programmes. **USA**

7. Are commitments with respect to export subsidies under the *Agreement on Agriculture* commodity-specific? How, if at all, is this relevant? **BRA, USA**

8. Does the United States confirm that the questions referred to by Brazil in paragraph 92 of Brazil's oral statement were posed to the United States in the consultations? **USA**

9. How does the United States respond to paragraph 94 of Brazil's oral statement? **USA**

10. What actual prejudice, if any, has the United States suffered as a result of the alleged omission of products other than upland cotton from the request for consultations? **USA**

11. Does the United States agree that Brazil's request for establishment of the Panel can be understood to indicate that Brazil's export credit guarantee claims relatesto products other than upland cotton? How, if at all, is this relevant? **USA**

12. Please address issues and submit evidence regarding the three export credit guarantee programmes concerned relating to upland cotton and other eligible agricultural commodities in your answers to questions and rebuttal submissions. **BRA, USA**

13. Please include any argumentation and evidence to support your statement during the Panel meeting that the inclusion of such other eligible agricultural commodities would create additional "work" for the Panel with respect to each of these commodities under Article 13 of the *Agreement on Agriculture*. **USA**

**Expired measures**

14. Please submit evidence regarding the programmes under the 1996 FAIR Act, in particular, production flexibility contract payments and market loss assistance payments, to the extent that they would be relevant to the Panel's determination under Article 13 of the *Agreement on Agriculture* in your answers to questions and rebuttal submission. **USA**

15. Do the parties agree that it is beyond a Panel's power to recommend a remedy for an expired measure? Could the Panel could be required to examine "expired measures" in order to conduct its assessment of the matter before it? How, if at all, is Article 7.8 of the *SCM Agreement* relevant to these matters? **BRA, USA**

**Agricultural Assistance Act of 2003**

16. What, if any, prejudice in terms of the presentation of its case does the United States allege, should the Panel proceed to consider the measures constituting the cottonseed payments under the Agricultural Assistance Act of 2003? **USA**

17. (a) What is the relationship of the Agricultural Assistance Act of 2003 to other legislation in the request for establishment of the Panel? **BRA, USA**

(b) Do the legal instruments follow directly one after another, or are there temporal gaps? Are payments authorized under a broad legislative authority or are they specific to each legal instrument? **BRA, USA**

(c) Please provide any implementing regulations. Do these implementing regulations resemble those relating to previous programmes or payments? Are payments made retrospectively? How if at all is this relevant? **BRA, USA**

18. If the Panel is correct in understanding that cottonseed payments are divided between processors and producers, how is this reflected in Brazil's calculations? **BRA**

**Measures at issue**

19. The Panel notes that Brazil's panel request refers, *inter alia*, to alleged "subsidies" and "domestic support" "provided" in various contexts. Please specify the measures, in particular, the legislative and regulatory provisions, by number and letter, in respect of which Brazil seeks relief and indicate where each is referred to in the panel request. **BRA**

ARTICLE 13(B): DOMESTIC SUPPORT MEASURES

**"exempt from actions"**

20. In paragraph 8 of its initial brief (dated 5 June, 2003), the United States argued that the word "actions" as used in the phrase "exempt from actions" in Article 13 of the *Agreement on Agriculture* includes the "bringing of a case" and consultations. In paragraph 36 of its first written submission (dated 11 July, 2003), the United States stated as follows:

> "[P]rior to this point in the process, the *DSU* rules did not afford the United States any opportunity to prevent the dispute from proceeding through consultations and panel establishment automatically, regardless of the U.S. insistence that its measures conform to the Peace Clause."

Is it the United States' understanding that the drafters used the phrase "exempt from actions" knowing that under the *DSU* it would not be possible fully to exempt "actions", as the United States interprets that term? **USA**

21. In *US - FSC* and *US - FSC (21.5)* the Appellate Body made findings under the *SCM Agreement* relating to export subsidies in respect of agricultural products without making a finding in respect of Article 13 of the *Agreement on Agriculture.* How is this relevant to the United States' interpretation of the phrase "exempt from actions" as used in Article 13? **USA**

**"such measures" and Annex 2 of the *Agreement on Agriculture***

22. Please explain the difference, if any, between the meaning of "defined" and the meaning of "fixed" in the phrase "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*. **BRA, USA**

23. Please explain the meaning of "a" in "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*, the meaning of "the" in "the base period" in paragraphs 6(b), (c) and (d), and the difference between these and the phrase "based on the years 1986-88" in Annex 3. **BRA, USA**

24. How often can a Member define and fix a base period in accordance with paragraph 6 of Annex 2 of the *Agreement on Agriculture*? **BRA, USA**

25. Does the United States consider that there is any ambiguity in the term "type of production" as used in paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*? **USA**

26. Can the United States confirm Brazil's assertions in paragraph 174 of its first written submission that the implementing regulations for direct payments prohibit or limit payments if base acreage is used for the production of certain crops? If so, can the United States clarify the statement in paragraph 56 of its first written submission that direct payments are made regardless of what is currently produced on those acres? Can the United States confirm the same point in relation to production flexibility contracts? **USA**

27. Does Brazil argue that any United States measure that does not comply with the fundamental requirement of paragraph 1 of Annex 2 of the *Agreement on Agriculture* is actionable independently of any failure of that measure to comply with the basic or policy-specific criteria in Annex 2? **BRA**

28. Please explain the meaning of the word "criteria" in Articles 6.1 and 7.1. What effect, if any, does the use of the word "Accordingly" in paragraph 1 of Annex 2 of the *Agreement on Agriculture* have on the meaning of the preceding sentence? **BRA**

29. Please explain the meaning of the words "the fundamental requirement" as used in paragraph 1 of Annex 2 of the *Agreement on Agriculture.* **USA**

30. Do the parties consider that direct payments and production flexibility contract payments meet or met the basic criteria referred to in paragraph 1 of Annex 2 of the *Agreement on Agriculture*? **BRA, USA**

31. If the first sentence of paragraph 1 of Annex 2 is not a stand-alone obligation, then must new, non- or minimally trade-distorting measures that do not conform to the criteria listed in Annex 2 be classified as non-Green Box? **BRA, USA**

32. If the first sentence of paragraph 1 of Annex 2 expresses a general principle which informs the interpretation of the criteria in Annex 2, please explain how this affects the assessment of the direct payments programme's compliance with paragraph 6 of Annex 2. **USA**

**"do not grant support to a specific commodity"**

33. According to the United States' interpretation of the word "grant", when can a Member claim that a measure is not exempt from action under Article 13(b)? What if the measure is enacted annually? Can the Member obtain a remedy in respect of that measure under the *DSU*? **USA**

34. Does Brazil interpret the word "grant" as used in Article 13(b)(ii) of the *Agreement on Agriculture* to mean payment made *in* a specific year or payment made *in respect of* a specific year? **BRA**

35. Does a failure by a Member to comply in a given *year* with either the chapeau of Article 13(b) or the proviso in subparagraph (ii) of Article 13(b) impact its entitlement to benefit in an earlier or a later year from the exemption from action provided by Article 13(b)? **BRA, USA**

36. Does a failure by a Member to comply with Article 13(b) in respect of a *specific commodity* impact its entitlement to benefit in respect of other agricultural products from the exemption from action provided by Article 13(b)? **BRA, USA**

37. In the United States' view, why did the drafters not use the exact term "product-specific" in Article 13(b)(ii)? **USA**

38. Given the fact that subsidies available for more than one product could have various effects on production, how does the United States demarcate between product-specific support and non-product specific support ? **USA**

39. If "such measures" in Article 13(b)(ii) refers to all those in the chapeau of Article 13(b), why are they not all included in the potential comparisons with 1992? In what circumstances can measures which grant non-product specific support lose exemption from action under Articles 5 and 6 of the *SCM Agreement* and Article XVI of *GATT 1994*? **USA**

40. In relation to which other provisions in the *Agreement on Agriculture* is it relevant to disaggregate non-product specific support in terms of specific commodities? **BRA**

41. What is the position of Brazil with regard to certain other domestic support measures not cited by Brazil that were notified by the United States as non-product-specific (e.g. G/AG/N/USA/43), some of which presumably deliver support to upland cotton (e.g. state credit programmes, irrigation subsidies etc). Why have budgetary outlays for such measures related to upland cotton not been included in the comparison of support with 1992? **BRA**

42. If the word "specific" were deleted from Article 13(b)(ii), would this change the meaning of the subparagraph? **BRA**

43. What are the precise differences between deficiency payments and counter-cyclical payments that lead you to classify the former as product-specific and the latter as non-product specific? How do you classify market loss assistance payments? **USA**

44. Do you allege that counter-cyclical payments could be considered product-specific? **BRA**

45. If the Panel considered that Step 2 payments paid to exporters were an export subsidy, would the United States count them as domestic support measures for the purposes of Article 13(b)? Please verify Brazil's separate data for Step 2 export payments and Step 2 domestic payments in Exhibit BRA-69 or provide separate data. **BRA, USA**

46. What is the relevance, if any, of the concept of "specificity" in Article 2 of the *SCM* Agreement and references to "a product" or "subsidized product" in certain provisions of the *SCM Agreement* to the meaning of "support to a specific commodity" in Article 13(b)(ii) *Agreement on Agriculture*? **BRA, USA**

**"in excess of that decided during the 1992 marketing year"**

47. Where does Article 13(b)(ii) require a year-on-year comparison? **BRA, USA**

48. Does Article 13(b)(ii) require a comparison of support granted with support decided? How could such a comparison be made? **BRA, USA**

49. Brazil claims that the terms "grant" and "decided" in Article 13(b)(ii) have broadly the same meaning. If so, why did the drafters not use the same term? **BRA**

50. Please provide any written drafting history which could shed light on why the proviso was added to what is now Article 13(b)(ii) and, in particular, why both words "grant" and "decided" were used. **USA**

51. Could the United States please comment on the interpretation advanced by the EC, in paragraphs 16 and 18 of its oral statement, of the words "decided during the 1992 marketing year"? **USA**

52. Please comment on an interpretation of the words "decided during" in Article 13(b)(ii) that would read them as synonymous with the words "authorized during". **BRA, USA**

53. Assume, for arguments sake, that the only "decision" made in the United States in 1992 was the target price. How would Brazil make the comparison *vis-à-vis*, for example, the year 2001? **BRA**

54. Please identify all United States legal and regulatory and administrative instruments decided during the marketing year 1992, with the respective dates of decision, that decided support for upland cotton. **BRA, USA**

55. Please provide a copy of the instrument in which the rate of support for upland cotton during the marketing year 1992 was decided, indicating the date of the decision. **USA**

56. Could the United States please explain how support granted under legislation that dates back to 1990 can have been support "decided during the marketing year 1992"? **USA**

57. If the United States decided on a rate of support for MY1992, does that not mean that it decided on whatever budgetary outlay was required to meet that rate of support, even if the exact amount was not known at that time? **USA**

58. Please comment on the argument advanced by the EC, in paragraph 17 of its oral statement that: "Had WTO Members intended a limitation to the support provided or granted in 1992 the word 'for' would have been used in place of 'during'." **BRA**

59. Should the rate of support as indicated in Article 13(b)(ii) include the market price? If so, why is it appropriate to include it in the comparison under Article 13(b)(ii)? **BRA, USA**

60. Can you provide information on support decided in 1992 and the years with which you believe it should be compared, on a per support programme / per unit of production / per annum basis? If possible, please specify how, if at all, budget outlays may be transposed into units of production, and which units of production are best to use. **BRA, USA**

61. Does the United States consider that Article 13(b)(ii) permits a comparison on any basis other than a per pound basis? **USA**

62. According to Prof. Sumner's calculation, the per pound support increased by approximately 24% from 1992 to 2002. On the other hand, the Panel understands that the total budget outlay, according to Brazil, increased more than that. What, in Brazil's view, is the reason for this difference in the rate of increase? **BRA**

63. In relation to Prof. Sumner's presentation at the first session of the first substantive meeting, please elaborate on the reasons behind the increase in the figures (from 1992 to 2002) concerning Loan Support and Step 2 payments. **BRA**

64. Do the figures cited in Prof. Sumner's presentation at the first session of the first substantive meeting indicate amount available or amount spent? Can the Panel derive amount spent from these figures? If Article 13(b)(ii) requires a rate of support comparison, is the rate of support the "rate" of support available or the "rate" at which the support was spent? **BRA**

65. Does Brazil consider that adjustment for inflation is relevant in the context of the comparison under Article 13 (b)(ii) ? **BRA**

66. Could you please comment on the relative merits of each of the following calculation methods for the purposes of the comparison of support to upland cotton with 1992, irrespective of whether a particular measure should be included or excluded:

(a) Total budgetary outlays (Brazil's approach). **USA**

(b) Budgetary outlays per unit of upland cotton: Could you please calculate and provide an estimate for the marketing years 1992 and 1999-2002, respectively, and draw attention to any factors/qualifications that the Panel would need to be aware of. **BRA, USA**

(c) Per unit rate of support (United States approach): How should changes in acreage, eligibility and payment limitations per farm(s) (commodity certificate programs) be factored into this approach? **BRA**

(d) Per unit rate of support for upland cotton (Prof. Sumner's approach at the first session of the first substantive meeting ). **USA**

67. The Panel requests the parties to calculate and submit estimates of the AMS for upland cotton for marketing years 1992, 1999, 2000, 2001 and 2002. For this purpose the parties are each requested to submit AMS calculations for upland cotton (using the budgetary-outlay/non-price gap methodology employed by the United States in respect of cotton in its DS Notifications (e.g., G/AG/N/USA/43) and using the formats and supporting tables in document G/AG/2) on the same basis as would be the case in calculating a product specific AMS for the purposes of the calculation of the "Total Current AMS" in any year in accordance with the relevant provisions, including as appropriate Article 1(a), (b) and (h), Article 6 and Annex 3 to the Agreement. **BRA, USA**

68. Could you please clarify the result of the calculations of, and the meaning of the title, in Appendix Table 1 "Estimated per unit Subsidy Rates by Program and Year" in Annex 2 to Exhibit BRA-105, page 12. Why are the numbers calculated for marketing loans considered to be subsidies? Could the Panel, for example, read the "total level of support" (bottom line of the table) as the effective support *price* for upland cotton or the maximum rate of support for upland cotton? **BRA, USA**

69. Can the United States confirm that the "marketing year" for upland cotton is 1 August to 31 July ? Can the United States confirm the Panel's understanding that USDA data for the "crop year" corresponds to the "marketing year"? **USA**

EXPORT CREDIT GUARANTEE PROGRAMMES

70. How does Brazil respond to the United States' assertion that Brazil is trying to realize through litigation what it could not achieve in past negotiations ? **BRA**

71. (a) Is an export credit guarantee a financial contribution in the form of a "potential direct transfer of funds or liabilities (e.g. loan guarantee)" within the meaning of Article 1.1(a)(1)(i) of the *SCM Agreement*? Why or why not? Does it confer a benefit within the meaning of Article 1.1(b)? Why or why not? If so, to whom? **USA**

(b) How, if at all, would these elements be relevant to the claims of Brazil, and the United States response thereto? **BRA, USA**

72. Could Brazil expand on why, as indicated in paragraph 118 of its oral statement, it does "not agree" with the United States arguments relating to the viability of an *a contrario* interpretation of item (j) of the Illustrative List of Export Subsidies in Annex 1 of the *SCM Agreement*? **BRA**

73. The Panel could arguably take the view that Articles 1 and 3 of the *SCM Agreement* were relevant in assessing the WTO-consistency of United States export credit guarantees. The United States has yet to submit any evidence or argumentation on this point, either as potential context for interpretation of the terms in Article 10 of the *Agreement on Agriculture* or in relation to Brazil's claims under the *SCM Agreement*. The Panel would therefore appreciate United States views in respect of this situation, and invites the United States to submit relevant argumentation and evidence. **USA**

74. If the Panel decides to refer to provisions of the *SCM Agreement* for contextual guidance in the interpretation of the terms in Article 10 of the *Agreement on Agriculture*, should the Panel refer to item (j) or Articles 1 and 3 of the *SCM Agreement* or both? **BRA, USA**

75. The Panel's attention has been drawn to Article 14(c) of the *SCM Agreement* (see e.g. written third party submission of Canada) and to the panel report in DS 222 *Canada- Export Credits and Loan Guarantees*. How and to what extent are Article 14(c) of the *SCM Agreement*, and the cited panel report, relevant to the issue of whether or not the United States export credit guarantee programmes confer a "benefit"? What would be the appropriate market benchmark to use for any comparison? Please cite any other relevant material. **BRA, USA**

76. How does the United States respond to Brazil's statement that : "...export credit guarantees for exports of agricultural exports [*sic*] are not available on the marketplace by commercial lenders."? **USA**

77. How does the United States interpretation of "long term operating costs and losses" in item (j) as claims paid give meaning to *both* "costs" and "losses"? Do claims paid represent "losses" or "costs" or both? If claims paid is represented by "losses", what would go into the "cost" element of item (j)? Could the United States expand on why it disagrees with the items which Brazil identifies for inclusion in the examination to be conducted under item (j)? **USA**

78. Can the United States provide supporting documentation for data used relating to "costs and losses" in paragraph 173? Could the United States confirm that the figures cited in paragraph 173 of its first written submission relate to the SCGP? Why did the United States cite these figures after stating that it is not possible to make any assessment of the long-term operating costs and losses of this programme? **USA**

79. In respect of what time periods does Article 13(c) require an assessment of conformity with Part V of the *Agreement on Agriculture*? How does this affect, if at all, your interpretation of Article 13(b)? **BRA, USA**

80. In Brazil's view, why did the drafters of the *Agreement on Agriculture* not include export credit guarantees in Article 9.1? **BRA**

81. How does the United States respond to the following in Brazil's oral statement: **USA**

(a) paragraph 122 (rescheduled guarantees)
(b) paragraph 123 (interest on debt to Treasury)
(c) paragraphs 125 ff. (guaranteed loan subsidy)
(d) paragraphs 127-129 (re-estimates, etc.)
(e) Exhibits BRA-125-127
(f) the chart on page 53 of Brazil's oral statement at the first session of the first Panel meeting relating to "Guaranteed Loan Subsidy and Administrative Expenses of US Export Credit Guarantee Programs GSM-102 GSM 103 and SCGP"?
(g) In respect of (a)-(f) above, how and to what extent do the information and data presented for the export guarantee programmes concerning "program" and "financing", "summary of loan levels", "subsidy budget authority", "outlay levels", etc., in particular in Exhibits BRA-125-127, reflect "actual costs and losses" of the GSM-102, GSM-102 and SCGP export credit guarantee programmes(see e.g. Brazil's closing oral statement at the first session of the first substantive meeting, paragraph 24)? **USA**

82. Please explain each of the following statements and any possible significance it may have in respect of Brazil's claims about GSM-102 and GSM-103 (7 CFR 1493.10(a)(2), Exhibit BRA-38): **BRA, USA**

(a) "The programs operate in cases where credit is necessary to increase or maintain U.S. exports to a foreign market and where U.S. financial institutions would be unwilling to provide financing without CCC's guarantee. (7 CFR 1493.10(a)(2) Exhibit BRA-38)

(b) "The programs are operated in a manner intended not to interfere with markets for cash sales. The programs are targeted toward those countries where the guarantee is necessary to secure financing of the exports but which have sufficient financial strength so that foreign exchange will be available for scheduled payments." (7 CFR 1493.10(a)(2) Exhibit BRA-38)

(c) "In providing this credit guarantee facility, CCC seeks to expand market opportunities for US agricultural exporters and assist long-term market development for US agricultural commodities." (7 CFR 1493.10(a)(2) Exhibit BRA-38)

83. Could Brazil explain how the procedure in Annex V of the *SCM Agreement* would be relevant to its claims concerning agricultural export subsidies, prohibited subsidies and agricultural domestic support? (e.g. note 301 in Brazil's first submission and paragraph 4 of Brazil's oral statement at the first session of the first substantive meeting). **BRA**

84. Is the Panel correct in understanding that, under the *GSM-102 and GSM-103 programmes*, the exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different credit periods? How and on what basis are the fee rates fixed? Do the fee rates ever change? If so, how and for what reason? Would it be necessary to amend the legislation and/or regulations in order to adjust the fee rates? **USA**

85. Is the Panel correct in understanding that, under the *SCGP*, the exporter pays a fee for the guarantee calculated on the guaranteed portion of the value of the export sales? How and on what basis are the fee rates fixed? Do the fee rates ever change? If so, how and for what reason? Would it be necessary to amend the legislation and/or regulations in order to adjust the fee rates? Please explain any "risk" assessment involved in the programme. **USA**

86. Is there a risk categorization in relation to three export credit guarantee programmes (GSM-102, GSM-103 and SCGP)? Does this have any impact on premiums payable and the ability of the CCC to on-sell the guarantees ? **USA**

87. What proportion of CCC (export-related and total) long term operating costs and losses are represented by GSM-102, GSM-103 and SCGP programmes? **USA**

88. (a) Is the Panel correct in understanding that the United States' argument is that, at present, by virtue of Article 10.2 of the *Agreement on Agriculture*, there are ***no*** disciplines on agricultural export credit guarantees under the *Agreement on Agriculture* (or the *SCM Agreement)*? **USA**

(b) Does the United States agree with the following proposition: a WTO Member may therefore extend agricultural export credit guarantees without charging a premium, and for an indefinite period, in addition to any other terms and conditions it may wish? How would this reconcile with the title of Article 10 of the *Agreement on Agriculture* ("Prevention of Circumvention on Export Subsidy Commitments"), and

with other commitments contained in the *Agreement on Agriculture*? Please cite any relevant material, including any past WTO dispute settlement cases. How would this reconcile with the United States' own statement, at paragraph 21 of its closing oral statement that "of course, the United States may not provide subsidies without any limit". **USA**

(c) If, as the United States argues, there are no disciplines on export credit guarantees in the *Agreement on Agriculture*, how could export credit guarantees "conform fully to the provisions of Part V" of the *Agreement on Agriculture* within the meaning of Article 13 (how can you assess "conformity" or non-conformity when there are allegedly no disciplines against which such an assessment could occur)? **USA**

(d) Is the United States advocating the view that its own export credit guarantee programmes, which pre-dated the Uruguay Round, are effectively "grandfathered" so as to benefit from some sort of exemption from the export subsidy disciplines of the *Agreement on Agriculture*? How, if at all, is it relevant that the SCGP did not, according to the United States, become relevant for upland cotton until the late 1990's (i.e. after the entry into force of the *WTO Agreement*)? **USA**

STEP 2 PAYMENTS

89. Does the United States confirm Brazil's statement in paragraph 331 of its first submission that "The conditions and requirements for Step 2 domestic payments remain unchanged with the passage of the 2002 FSRI Act"? What is the relevance of this, if any, to this dispute? **USA**

90. Does the United States confirm Brazil's statement in paragraph 235 of its first submission that the changes concerning Step 2 export payments from the 1996 FAIR Act to the 2002 FSRI Act are: increase in the amount of the subsidy by 1.25 cents per pound and the removal of any budgetary limits that applied under the 1996 FAIR Act? What is the relevance of this, if any, to this dispute? **USA**

91. What is the significance of the elimination of the 1.25 cent threshold payment in the 2002 FSRI Act pertaining to Step 2 payments? **USA**

92. Does the United States confirm that Exhibit BRA-65 represents a sample contract for exporters of eligible upland cotton to conclude with the CCC under the FSRI 2002, and that an application form (Exhibit BRA-66) needs to be filled out with data on weekly exports and submitted to the USDA FAS. Is Exhibit BRA-66 - Form CCC 1045-2 – also a valid example? If not, please identify any differences or distinctions. **USA**

93. Please elaborate why the United States deems that Step 2 payments upon submission of proof of export are not subsidies contingent upon export. Is it the US contention that, in order to be contingent on export, exportation must be the exclusive condition for receipt of the payment? **USA**

94. Is the Panel correct in understanding that Brazil alleges an inconsistency with Article 3.1(b) of the *SCM Agreement* only with respect to Step 2 *domestic* payments? **BRA**

95. Do the criteria in 7 CFR 1427.103(c)(2) (Exhibit BRA-37) that Step 2 "eligible upland cotton" must be "not imported cotton" apply to *both* domestic and export payments? **USA**

96. Is a domestic sale a "use" for the purposes of Step 2 payments? Is a sale for export, or export, considered a "use"? **USA**

97. How does the United States respond to Brazil's assertion, at paragraph 70 of Brazil's oral statement at the first session of the first substantive meeting, that "It is obvious that a single bale of cotton cannot be both exported and used domestically." Is this a relevant consideration? **USA**

98. How many Step 2 payments are received if a bale of upland cotton is exported, and then opened by a domestic user in the United States, or *vice versa*? **USA**

99. How does the United States respond to Brazil's arguments in paragraphs 71-75 of Brazil's oral statement at the first session of the first Panel meeting concerning the relevance of the Appellate Body Report in *US-FSC (21.5)*. **USA**

100. How does Brazil respond to the statement in note 119 of the United States' first written submission that "...to the extent a consumer that had intended to export instead opens the bale, then that consumer could still obtain the Step 2 payment upon submission of the requisite documentation". The Panel notes that Step 2 payments all involve upland cotton produced in the United States. What are the two distinct factual situations that Step 2 payments involve? Other than the panel report in *Canada-Dairy* and the findings of the Appellate Body in *US-FSC (21.5)*[4], do any other dispute settlement reports offer guidance on this issue? For example, how, if at all is the Appellate Body's report in *Canada-Aircraft* relevant here?[5] **BRA**

101. How does Brazil respond to the United States' assertion at paragraph 22 of its oral statement that the programme involves "eligible users" who constitute the "entire universe" of potential purchasers of upland cotton? **BRA**

102. How does Brazil respond to the United States' assertion at paragraph 129 of its first written submission, that "[t]he program is indifferent to whether recipients of the benefit of this programme are exporters or parties that open bales for the processing of manufacturing raw cotton into cotton products in the United States." **BRA**

103. Is the Step 2 programme fund a unified fund that is available for either domestic users or exporters, without a specific amount earmarked for either domestic users or exporters? Please

[4] "We recall that the ETI measure grants a tax exemption in two different sets of circumstances: (a) where property is produced *within* the United States and held for use *outside* the United States; and (b) where property is produced *outside* the United States and held for use outside the United States. Our conclusion that the ETI measure grants subsidies that are export contingent in the first set of circumstances is not affected by the fact that the subsidy can also be obtained in the second set of circumstances. The fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances.[4] Conversely, the export contingency arising in these circumstances has no bearing on whether there is an export contingent subsidy in the second set of circumstances. Where a United States taxpayer is simultaneously producing property within and outside the United States, for direct use outside the United States, subsidies may be granted under the ETI measure in respect of both sets of property. The subsidy granted with respect to the property produced within the United States, and exported from there, is export contingent within the meaning of Article 3.1(a) of the *SCM Agreement*, irrespective of whether the subsidy given in respect of property produced outside the United States is also export contingent."

2 [5] There, the Appellate Body stated that,

> "the fact that some of TPC's contributions, in some industry sectors, are *not* contingent upon export performance, does not necessarily mean that the same is true for all of TPC's contributions. It is enough to show that one or some of TPC's contributions do constitute subsidies "contingent ... in fact … upon export performance".[5]

substantiate your response, including by reference to any applicable statutory or regulatory provisions. **USA**

104. How does the United States respond to the data presented in Exhibit BRA-69? Is it accurate? Please substantiate. **USA**

105. Why is the Step 2 programme separated into "domestic users" and "exporters"? Apart from differentiating between exporters and domestic users, with consequential differentiation as to the forms that must be filled out and certain other conditions that must be fulfilled, are the eligibility criteria for Step 2 payments identical? Are the form and rate of payment, as well as the actual payment made, identical? **USA**

106. With respect to paragraph 139 of the United States' first written submission, are Step 2 *export* payments included in the annual reduction commitments of the United States? If so, why? **USA**

107. Please comment on any relevance, to Brazil's *de jure* claims of inconsistency with the provisions of the *Agreement on Agriculture*, of Exhibit BRA-69, which shows Step 2 payments made to (i) domestic users and (ii) exporters. This Exhibit shows that, from FY 91/92 through 02, the Step 2 payments for exporters exceeded those for domestic users in FY 94; FY 95; FY 96 (in fact there were no domestic payments in FY 96); and FY 02. In the other years, the domestic payments are greater than export payments. **BRA, USA**

108. At paragraph 135 of its first written submission, the United States states : "[T]he *subsidy* is not contingent upon export performance..." (emphasis added). Again, in the course of the first Panel meeting, the United States admitted that the Step 2 payments were "subsidies". Does the United States thus concede that Step 2 payments constitute a "subsidy" within the meaning of the *WTO Agreement*? **USA**

109. How does the United States respond to Brazil's arguments concerning a mandatory/discretionary distinction and the allegation that certain United States measures (including s.1207(a) of the 2002 FSRI Act) are mandatory? (This is referred to, for example, in paragraph 28 of Brazil's first written submission). Does the United States agree with the assertion that (subject to the availability of funds) the payment by the Secretary of Step 2 payments is mandatory under section 1207(a) FSRI upon fulfilment by a domestic user or exporter of the conditions set out in the legislation and regulations? If not, then why not? To what extent is this relevant here? What determines the "availability of funds"? Please cite any other relevant measures or provisions which you consider should guide the Panel in respect of this issue. **USA**

110. Section 1207(a) of the 2002 FSRI Act provides that during the period beginning on the date of the enactment of the FSRI Act through 31 July 2008, " .. the Secretary shall issue marketing certificates or cash payments, at the option of the recipient, to domestic users and exporters for documented purchases by domestic users and sales for export by exporters...". The Panel notes that Brazil does not appear to distinguish between the treatment of (i) cash payments and (ii) marketing certificates in terms of the issue of whether or not a "subsidy" exists. The United States refers to "benefits" and "payments" and "programme" in asserting that Step 2 is not export contingent (paragraphs 127-135 of the United States' first written submission).

(a) Do the parties thus agree that there is no need to draw any distinction between the treatment of (i) cash payments and (ii) marketing certificates in terms of the issue of whether or not a "subsidy" exists for the purposes of the *Agreement on Agriculture*? **BRA, USA**

(b) Why would a domestic user or an exporter select to receive a marketing certificate over a cash payment? What is the proportion of cash payments vs. marketing certificates granted under the programme? **USA**

111. Does the United States maintain its argument that actions based on Article 3.1(b) of the *SCM Agreement* are conditionally "exempt from actions" due to the operation of Article 13 of the *Agreement on Agriculture*? **USA**

112. In the event that the Panel finds that Article 6.3 of the *Agreement on Agriculture* does not preclude an examination of Brazil's claims under Article 3.1 of the *SCM Agreement* and Article III:4 of *GATT 1994*, how does the United States respond to the merits of Brazil's claims relating to Step 2 payments under those provisions? **USA**

113. Is it necessary for measures directed at agricultural processors included in AMS to discriminate on the basis of the origin of goods? **USA**

114. With respect to the last sentence of paragraph 22 of Brazil's closing oral statement, could Brazil elaborate on the circumstances in which a local content subsidy would comply with Article 3.1(b) of the *SCM Agreement*? **BRA**

115. What is the meaning and relevance (if any) to Brazil's claims under Article 3 of the *SCM Agreement* and Article III:4 of *GATT 1994* of the phrase "measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products" in the *Agreement on Agriculture*? **BRA, USA**

116. With respect to paragraph 32 of the oral statement of the EC, are subsidies contingent on the use of domestic goods consistent with the *Agreement on Agriculture*? Does the phrase "provide support in favour of domestic producers" in Article 3.2 of the *Agreement on Agriculture* refer to, and/or permit such subsidies? **BRA, USA**

117. What is the relationship between Step 2 payments to exporters and the marketing loan payments, both of which appear to compensate for the price differences relative to the Liverpool A-Index? For example, is there double compensation? Or is one of the explanations that these export-related price compensatory payments are paid to different operators (namely, the producer, on the one hand under the marketing loan arrangements, and the processor/users (Step 2 programme) arrangements on the other? **USA**

118. Can the United States confirm that it does not rely on Article III:8 of *GATT 1994*? **USA**

ETI ACT

119. How does the United States respond to Brazil's reference to the panel report in *India - Patents (EC)* (at paragraph 138 of its oral statement at the first session of the first substantive meeting)?[6]

[6]That panel stated: "It can thus be concluded that panels are not *bound* by previous decisions of panels or the Appellate Body even if the subject-matter is the same. In examining dispute WT/DS79 we are not legally bound by the conclusions of the Panel in dispute WT/DS50 as modified by the Appellate Body report. However, in the course of "normal dispute settlement procedures" required under Article 10.4 of the *DSU*, we will take into account the conclusions and reasoning in the Panel and Appellate Body reports in WT/DS50. Moreover, in our examination, we believe that we should give significant weight to both Article 3.2 of the *DSU*, which stresses the role of the WTO dispute settlement system in providing security and predictability to the multilateral trading system, and to the need to avoid inconsistent rulings

How, if at all, should the Panel take this report into account in considering the issues raised by Brazil's claims relating to the ETI Act? **USA**

120. Concerning its claims on the ETI Act, Brazil relies on the *US – FSC* case. However, it appears that the United States did not raise the issue of the Peace Clause in that case, nor did the United States appear to invoke Article 6 of the *Agreement on Agriculture*. If the Panel's understanding is correct, how, if at all, are these differences relevant here? Could you direct the Panel to any relevant findings or conclusions by the panel or Appellate Body in that case? **BRA**

121. How do you respond to the reference in paragraph 43 of EC third party oral statement with respect to the relevance of Article 17.14 of the *DSU*, and, in particular, the phrase "a final resolution to *that* dispute" (emphasis added)? Please explain the use, and relevance (if any) of the term "disputes" in Articles 9.3 and 12 and Appendix 3 of the *DSU*, and please cite any other provisions you consider relevant. **USA, BRA**

[Attachment on questions to Third Parties omitted]

---

(which concern has been referred to by both parties). In our view, these considerations form the basis of the requirement of the referral to the "original panel" wherever possible under Article 10.4 of the *DSU*." (footnote omitted)

# ANNEX L-1.6

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

30 July 2003

The Panel is in receipt of the communication from the United States, dated 29 July, requesting an extension of the deadline for the submission of the parties' responses to questions, as well as the response from Brazil, dated 30 July.

Taking these communications into account, the Panel has decided to extend the deadline for the submission of the parties' responses to questions from Monday 4 August to **Monday 11 August**. The Panel reminds the parties that paragraph 17(b) of the Panel's working procedures indicates that the responses should be submitted by **17:30** (Geneva time).

The Panel has also decided upon the following additional changes to its schedule:

| | |
|---|---|
| Panel's views on certain issues: | 5 September 2003 |
| Further submission of Brazil: | 9 September 2003 |
| Further submission of the US: | 23 September 2003 |
| Further submission of the third parties (as necessary): | 29 September 2003 |

For the time being, all other dates remain unchanged. This includes the deadline for the submission of the parties' comments on each other's responses, as well as the submission of the parties' rebuttal submissions (i.e. 22 August). It also includes the dates for the resumption of the first substantive meeting (as necessary) and the second substantive meeting (i.e. 7-9 October).

# ANNEX L-1.7

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THE THIRD PARTIES

5 August 2003

1. The Panel has received a letter from the European Commission, dated 31 July 2003, in which the European Communities ("EC"):

- seeks clarification of the Panel's procedures for its expression of views on 5 September 2003 in relation to Article 13 of the *Agreement on Agriculture*; and

- makes two requests for additional third party rights.

2. The Panel sought the views of the parties to the dispute on these requests, which it received in letters dated 1 August 2003. Neither party objects to the Panel communicating its views to the third parties on 5 September 2003, but neither party agrees that the Panel should accept the EC's requests for additional third party rights. The EC responded to the parties' letters in a further letter dated 4 August 2003.

### 1. Panel's procedures for its expression of views on 5 September 2003 in relation to Article 13 of the *Agreement on Agriculture*

3. The Panel confirms that, in accordance with its communication dated 20 June 2003, as amended on 30 July 2003, it intends to express its views on whether measures raised in this dispute satisfy the conditions in Article 13 of the *Agreement on Agriculture*, to the extent that it is able to do so, by 5 September 2003. Those views will be communicated to third parties, as well as to the parties to the dispute, in order to enable them to participate, as necessary and appropriate, in any second session of the first substantive meeting in a full and meaningful fashion.

### 2. EC requests for additional third party rights

4. The EC requests the following additional third party rights: (a) access to the oral statements of the parties to the dispute at the first session of the first substantive meeting held on 22-24 July 2003, and (b) the opportunity to comment on their responses to the Panel's questions, or questions that they have posed to each other.[1]

5. Third parties have certain rights in panel proceedings under Article 10 of the DSU, which a panel may not deny. The grant of third party rights beyond those provided in the DSU lies within the discretion and authority of a panel. That discretion is limited by the requirements of due process. Article 10.1, 10.2 and 10.3 of the DSU provides as follows:

[1] The Panel notes that the parties to the dispute have not posed any written questions to each other, and therefore does not need to address the request to allow third parties to comment upon the responses to such questions.

*Third Parties*

> "1. The interests of the parties to a dispute and those of other Members under a covered agreement at issue in the dispute shall be fully taken into account during the panel process.
>
> "2. Any Member having a substantial interest in a matter before a panel and having notified its interest to the DSB (referred to in this Understanding as a "third party") shall have an opportunity to be heard by the panel and to make written submissions to the panel. These submissions shall also be given to the parties to the dispute and shall be reflected in the panel report.
>
> "3. Third parties shall receive the submissions of the parties to the dispute to the first meeting of the panel."

6. In our view, written versions of the parties' oral statements and the parties' responses to the Panel's questions do not form part of "the submissions of the parties to the dispute to the first meeting of the Panel", as provided for in Article 10.3 of the DSU. Articles 10.2 and 12.6 and the working procedure in paragraph 3 of Appendix 3 use the terms "written submissions" and "submissions" interchangeably. Appendix 3 distinguishes between "written submissions" in paragraphs 3, 4 and 10 and "a written version of … oral statements" in paragraph 9. Under the standard panel working procedures set out in Appendix 3 of the DSU, third parties may only attend the third party session and are not present during the rest of the panel's meetings. The granting of access by the Panel to written versions of the parties' oral statements would run counter to the standard practice under the DSU of holding the sessions at which those statements are made in the absence of the third parties.

7. As the Panel indicated in its communication dated 20 June 2003, the first meeting in this dispute is to be held in two separate sessions two months apart, as necessary. The issues under consideration at each session are distinct, so that the written versions of oral statements at the first session cannot be considered submissions to the second session. The Panel's working procedures currently envisage that third parties will receive the parties' written submissions to any second session of the first meeting, and will have an opportunity to present their views at any such session. Thus, with respect to the issues that form the subject of each session of the first meeting, each third party will receive the rights provided for in Article 10.2 and 10.3 of the DSU.

8. Therefore, in our view, third parties have no entitlement under the DSU to the additional rights requested by the EC, and we also note that there is no agreement between the parties that such additional rights should be granted. In any case, the EC indicates in its letter dated 4 August 2003 that this was not the thrust of its requests but, rather, it would be a "reasonable exercise of the Panel's discretion" to allow the third parties also to comment on the responses of the parties to the dispute to the Panel's questions.

9. The Panel must consider whether it should grant such additional rights as part of its duty to ensure due process of law for third parties, or within its discretion to grant or refuse the rights requested as it believes appropriate, keeping firmly in mind the Panel's duty to ensure an objective assessment of the matter before it in accordance with Article 11 of the DSU, and the requirement that the interests of the parties to the dispute and those of other Members under a covered agreement at issue in the dispute shall be fully taken into account during the panel process, in accordance with Article 10.1.

10. The EC has argued that access to oral statements would permit third parties to respond to arguments made by the parties to the dispute where such a response would be of relevance in answering the Panel's questions to third parties, and that this would benefit the Panel since the third

parties would be able to provide more complete responses to the Panel's questions. It also argues that the third parties' comments on each others' responses to questions will be more full and meaningful, and consequently more beneficial to the Panel, if it is also possible for them to comment on the responses of the parties to the dispute.

11. In addition to the issues raised by the EC, the Panel is keenly aware of the implications of this particular dispute for third parties, including the systemic importance of the interpretation of Article 13 of the *Agreement on Agriculture* and its trade policy impact.

12. In fact, the Panel has already taken into account, to a certain extent, the systemic implications of this dispute and the issues now raised by the EC. The Panel has posed a large number of questions to third parties, including 39 questions addressed specifically to the EC. Through the third parties' responses to these questions, the Panel hopes to receive their views on the merits and systemic considerations presently at issue in this dispute, which it will take into account in its assessment of the matter before it. The questions are detailed precisely to ensure that third parties' views are fully taken into account in what is a complex case. The Panel believes that, through the questions that it has posed to the parties to the dispute and to third parties, it has ensured that it will benefit from third parties' input and that nothing prevents them from participating in a full and meaningful fashion.

13. This is not the only opportunity for third parties to express their views in this dispute. The Panel specifically sought the views of third parties on the issue of whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the Agreement on Subsidies and Countervailing Measures in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. Six third parties, including the EC, made submissions to the Panel on that issue, which the Panel took into account.

14. Nothing precludes the Panel from posing further questions to the parties to the dispute or third parties as the Panel deems necessary or appropriate throughout the course of these proceedings. The Panel may also seek the views of third parties in further questions at any second session of the first meeting that may be held, by posing questions on the issues under consideration at that session.

15. The Panel notes that none of the third parties, including the EC, requested any additional rights prior to the first meeting, even after the Panel's communication of 20 June 2003, in which it announced that the first meeting would be held in two sessions, as necessary. The parties to the dispute therefore delivered their oral statements at that meeting in closed session without third parties present, as is the usual procedure under Article 12 and Appendix 3 of the DSU, on the basis that the confidentiality of those statements was within their own respective control. The Panel is therefore unwilling to direct the parties to grant access to written versions of those statements after the event.

16. The Panel notes that nothing in the DSU or the Panel's working procedures precludes a party to the dispute from disclosing statements of its own positions to the public, as foreseen in Article 18.2 and paragraph 3 of the working procedures, and that the United States has indicated that it makes its oral statements available on its website and has already provided a copy directly to the EC.

17. For the reasons set out above, the Panel denies both the EC's requests for additional third party rights. Nonetheless, in view of the phased nature of the first meeting, the Panel directs the parties to the dispute to make best efforts to ensure that their submissions to any second session of the first meeting are understandable either on their own or in conjunction with the submissions to the first session of the meeting. In particular, such submissions should not refer to any document to which the third parties do not have access without, at the very least, a summary, explanation or description of the contents of that document (or a citation indicating where that document may be found on the public record).

# ANNEX L-1.8

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

19 August 2003

The Panel has received a communication from Brazil dated 14 August 2003 in which Brazil draws attention to the timing and format of service of the United States' responses to the Panel's questions, in light of paragraphs 17(b) and (d) of our Working Procedures, and in which it raises issues of procedural fairness.

The Panel has taken note of the matters raised in the communication from Brazil and draws them to the United States' attention. The Panel recalls that, at its meeting with the parties on 22 July 2003, it also drew the attention of the United States to these issues as raised by Brazil in connection with the filing of the United States' first written submission and comments on Brazil's initial brief.

In its communication dated 14 August 2003, Brazil also requested the right to comment on any new information, arguments or documents presented for the first time in the United States' rebuttal submission with respect to specific questions posed by the Panel. It raised considerations of due process and requested that the Panel provide it until 28 August 2003 to file any such comments without granting the United States any corresponding right.

The Panel has a duty to ensure the fairness of its proceedings, which requires that the parties receive sufficient opportunity to comment on information, argumentation and documents submitted. Due to the phasing of the first meeting, a party might lack sufficient opportunity to comment on such material presented for the first time in a rebuttal submission before the Panel expresses its views on certain issues in dispute. However, this will depend on what the rebuttal submissions actually contain.

Accordingly, when each party receives the other party's rebuttal submission, it is invited, without delay, to draw the Panel's attention to any specific material on which it has not had an opportunity to comment and to show cause why it needs such an opportunity. Upon a showing of good cause, the Panel will permit that party to comment in writing by 27 August 2003. The Panel is willing to grant such permission on Saturday, 23 August 2003, if necessary.

# ANNEX L-1.9

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

23 August 2003

The Panel has received a communication from Brazil dated 23 August 2003 in which Brazil requests the opportunity to comment on specific paragraphs of the United States' rebuttal, and exhibits thereto, as the parties were invited to do by the Panel in its communication dated 19 August 2003.

The Panel considers that Brazil has not had sufficient opportunity to comment on new material specifically listed in its communication of 23 August 2003. The Panel notes that the argument raised in paragraph 123 of the United States' rebuttal is not new but was raised earlier in the United States' response to question 66(d) posed by the Panel and in section 2.3.2 of Brazil's rebuttal.

Accordingly, the Panel permits Brazil to comment in writing on such new material by 27 August 2003. The procedures regarding service of documents set out in paragraph 17 of the Panel's working procedures shall apply.

# ANNEX L-1.10

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

25 August 2003

The Panel has received a communication from the United States dated 25 August 2003 in which the United States requests the opportunity to comment on specific paragraphs of Brazil's rebuttal, and comments on responses to questions, as the parties were invited to do by the Panel in its communication dated 19 August 2003. The Panel has also received a response to that communication from Brazil, also dated 25 August 2003, in which Brazil submits that the United States' request should be rejected.

The Panel considers that the United States has not had sufficient opportunity to comment on new material specifically listed in its communication of 25 August 2003, other than the alleged misstatements in paragraphs 88, 90-94 of Brazil's rebuttal which the Panel can check against the cross-referenced United States' responses and Panel report, if necessary.

Accordingly, the Panel permits the United States to comment in writing on such new material by 27 August 2003. The procedures regarding service of documents set out in paragraph 17 of the Panel's working procedures shall apply.

The Panel notes that the United States welcomes the opportunity to respond to any further questions that the Panel may have. Therefore, the Panel poses the following additional question to the United States and seeks a response by 27 August 2003:

> 67*bis*. Please state the annual amount granted by the US government in each of the 1999, 2000, 2001 and 2002 marketing years (as applicable) to US upland cotton producers, per pound and in total expenditures, under each of the following programs: production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments.

# ANNEX L-1.11

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THIRD PARTIES

5 September 2003

1. On 20 June 2003, the Panel communicated to the parties and third parties that:

> "Given the potential complexity of the claims before us, the conditional nature of certain of these claims and the volume of evidence which may be introduced by the parties in support of their claims and arguments, and in order to organize our proceedings in an orderly, effective and efficient manner which serves to facilitate an objective assessment of the matter before us, and optimizes use of our resources, we have adopted the following modifications to our procedures …"

2. The first modification to our procedures was as follows:

> "The Panel intends to express its views on whether measures raised in this dispute satisfy the conditions in Article 13 of the *Agreement on Agriculture*, to the extent that it is able to do so, by 1 September 2003, and will defer its consideration of claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994* as those provisions are referred to in Article 13 of the *Agreement on Agriculture* until after it has expressed those views. The Panel's views may be expressed in the form of rulings which could affect the Panel's further consideration of this dispute."

3. In a fax dated 30 July 2003, the Panel decided to modify the date for expression of its views to 5 September 2003.

4. The Panel takes note of the correspondence from the parties dated 27, 28 and 29 August 2003 and declines to make findings at this stage as to whether measures raised in this dispute satisfy the conditions in Article 13 of the *Agreement on Agriculture*, for the reasons given in its communication dated 20 June 2003. The Panel's findings on that issue will be included in its interim report, on which the parties will have the right to comment in accordance with Article 15.2 of the *DSU*.

5. The Panel has now had the opportunity to consider the parties' and third parties' evidence and arguments to date. At this stage, the Panel cannot conclude its assessment of the matter before it on the basis that the measures raised in this dispute satisfy the conditions in Article 13 of the *Agreement on Agriculture*. The expression by the Panel of this view is without prejudice to the Panel's eventual findings, and is subject to paragraph 6 below. In this context, the Panel is of the view that consideration, as appropriate, of Brazil's claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994*, as those provisions are referred to in Article 13 of the *Agreement on Agriculture*, is warranted in order for the Panel properly to discharge its responsibilities under the *DSU* and the relevant covered agreements. Therefore, the Panel will consider those claims at a second session of the first substantive meeting.

6. The Panel also wishes to inform the parties that, on the basis of the evidence and arguments presented to date, it is unable to form any view on whether the ETI Act satisfies the relevant provisions of the *Agreement on Agriculture*.

7. Regarding the Panel's procedures:

(a) the Panel invites the parties to address in further submissions, due on 9 and 23 September respectively, the claims referred to in paragraph 5 above;

(b) the Panel also invites the parties to address further the issue whether the export credit guarantee programs at issue constitute export subsidies for the purposes of the *Agreement on Agriculture*;

(c) the Panel confirms that items (o), (p) and (q) of its timetable will be necessary, and confirms the following dates:

| | |
|---|---|
| Further submissions of the third parties: | 29 September 2003; |
| First substantive meeting with the parties (resumed second session) : | 7, 8 and (as necessary) 9 October 2003; |
| Third party session: | **8 October** 2003 [1]; |

(d) the Panel invites the third parties to address in their further submissions the claims referred to in paragraph 5 above;

(e) the Panel intends to postpone the second substantive meeting; and

(f) the Panel invites the parties to comment on the attached draft further revised timetable. Such comments should be submitted no later than close of business on Tuesday, 9 September 2003.

[Attachment omitted]

[1] The Panel wishes to inform parties and third parties that due to the availability of meeting rooms, the third party session, previously scheduled for 9 October, will now be held on Wednesday, 8 October. The Panel will continue its meeting with the parties after the third party session and also on 9 October, as necessary.

# ANNEX L-1.12

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THIRD PARTIES

12 September 2003

Having carefully considered the parties' comments received on 9, 10 and 11 September, the Panel intends to follow the revised timetable, as attached.

In this connection, the Panel would like to inform the United States that the deadline for its "further submission" is **15h00 (i.e. 3 pm) Geneva time** on Monday, 29 September.

The Panel also wishes to draw the attention of **third parties** that the **deadline for their further submissions** has been changed to **3 October**.

In light of the US request for an opportunity to comment on the new dates of the second meeting, now rescheduled to be 2 and 3 December 2003, the Panel invites the US and Brazil to submit comments, if any, on these dates. Such comments, which should focus on the date of the second substantive meeting and other dates directly affected by this date, should be submitted no later than close of business on **Tuesday, 16 September**.

[Attachment omitted]

# ANNEX L-1.13

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THIRD PARTIES

18 September 2003

The Panel has received letters from Brazil and the US dated 16 September and 17 September, in which they submit further comments on certain dates we indicated in our fax dated 12 September.

Having carefully considered the views of both parties, the Panel amends the dates indicated in the 12 September fax as follows:

- The deadline for the receipt of answers to Panel's questions (previously, 22 October) will be changed to **27 October**.

- The deadline for the receipt of further rebuttals of the parties (previously, 3 November) will be changed to **18 November.**

In respect of items (u) and (v), the Panel notes Brazil's preference for "the completion of the parties' main substantive work still in 2003". The Panel reminds the parties that, as indicated in the 12 September fax, items (u) and (v) are deadlines that would apply "as necessary". They may, therefore, depend upon various factors, including the number and nature of any questions the Panel may actually pose to one or both parties at that juncture. Therefore, at least for the time being, the Panel prefers to leave these dates as indicated (22 December and 19 January, respectively).

**All other dates indicated in the fax of 12 September remain unchanged, and are now confirmed.**

# ANNEX L-1.14

## COMMUNICATION TO BRAZIL AND THE UNITED STATES AND THIRD PARTIES

24 September 2003

The Panel has received a letter from the United States dated 23 September, in which it informs the Panel of delays in the preparation of its further submission caused by hurricane Isabel, as well as a response from Brazil, also dated 23 September. Having carefully considered the views of both parties, the Panel further amends the dates we indicated in our fax of 12 September as follows:

deadline for the US's further submission: **30 September, 2003 (by 17:30 Geneva time)**

**All other dates and deadlines** indicated in the fax of 12 September (and subsequently amended in the fax of 18 September) including the deadline for the "further submission from third parties" (3 October), **remain unchanged**.

The Panel notes that the time for the third parties to review the US's "further submission" before making their respective written submissions is limited. The Panel reminds third parties that they are free to present arguments in addition to those set out in their written submissions in their oral statements to be presented on 8 October.

# ANNEX L-1.15

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

13 October 2003

1. Please find attached the Panel's questions to the parties following the resumed session of the first substantive Panel meeting. Parties are reminded that responses are due by **27 October 2003**.

2. The Panel's questions are intended to facilitate the work of the Panel, and do not in any way prejudge the Panel's findings on the matter before it. Nor does the fact that the Panel has placed these questions under certain headings prejudge the Panel's findings on the matter before it. Each party is free to respond to or comment on questions posed to the other parties or third parties.

3. The Panel takes note of Brazil's request in its letter dated 2 October 2003 regarding the late receipt of submissions, and the US response in its letter dated 6 October 2003. In accordance with paragraph 17(b) of the Panel's working procedures, the Panel sets the following time for the provision of submissions by the parties: 11:59 pm, Geneva time on the dates concerned. This time refers to *receipt* of submissions by the other party and the Secretariat and not to commencement of transmission. For greater clarity, this time for receipt of submissions also refers to the time of completion of receipt of any Exhibits and service of all Exhibits (if necessary, electronically) to the other party and to the Secretariat as envisaged in paragraphs 17(a)-(d) of the Panel's working procedures. All other provisions of the Working Procedures remain unchanged. The Panel confirms the dates in the revised timetable, as revised in its communication of 18 September 2003.

4. The Panel has set this time in light of the repeated service of submissions by the United States after 5.30 p.m. and in order to ensure due process and secure a balance between the two parties. The Panel stresses its expectation that the parties will respect all of the rules and procedures set out in the *DSU* and in the working procedures, including the new time set by the Panel above for the dates in question.

5. The Panel takes note of the United States' request in section II of its further submission for three preliminary rulings, regarding interest subsidies and storage payments; cottonseed payments; and export credit guarantees for products other than upland cotton. The Panel is not currently in a position to rule on these issues. The Panel will make rulings as necessary and appropriate in the course of this proceeding and hopes to be in a position to express its views, or give a ruling, on these requests, as appropriate, by 3 November (that is, shortly after the date of receipt of written responses to questions). Meanwhile, the Panel requests the parties not to exclude consideration of these issues in their responses to questions.

Questions from the Panel to the Parties –
Resumed first session of the first substantive Panel meeting

A. REQUEST FOR PRELIMINARY RULINGS

122. Does Brazil allege that cottonseed payments, interest subsidies and storage payments are included in the subsidies that cause serious prejudice? Do they appear in the economic calculations? **BRA**

123. Does Brazil's request for the establishment of the Panel name the statute authorizing cottonseed payments for the 1999 crop? **BRA**

B. EXEMPTION FROM ACTIONS

124. According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the *Agreement on Agriculture*? **BRA, US**

C. IDENTIFICATION OF THE SUBSIDIZED PRODUCT

125.

(1) In view of requirements in the FAIR Act of 1996 and the FSRI Act of 2002 that contract acreage remain in agricultural or conservation uses and which impose penalties if the producer grows fruits or vegetables, how likely is it that the producer with upland cotton base acreage will not use his or her land to produce programme crops or covered commodities? **US**

(2) Brazil has submitted that "The record suggests that *historic* producers are *current* producers." It points to factors including the specialization of upland cotton producers, the need to recoup expensive investments in cotton-specific equipment, and the geographic focus and climatic requirements of upland cotton production in the "cotton belt". (Brazil's rebuttal submission, footnote 98, on page 24)

(a) Regarding the specialization of upland cotton producers and the geographic focus of upland cotton production, how does Brazil take account of the fact that cotton is produced in 17 of the 50 states of the United States and that average cotton area is approximately 38% of a cotton farm's acres? (This information is taken from the US's response to question 67*bis*, footnote 35). **BRA**

(b) Regarding the geographic focus of upland cotton production, how many other crops can upland cotton producers viably grow in the cotton belt, other than fruits and vegetables? **US**

(c) Regarding the high cost of upland cotton production, can Brazil show that farms who planted upland cotton could only have covered their costs by receiving upland cotton, rice or peanut payments in every year from 1999 through 2002? **BRA**

(d) Regarding the need to recoup investments in cotton-specific equipment, is it important to planting decisions that upland cotton producers cannot run any other crop through their cotton-pickers? How does this affect the likelihood that they will grow other crops? **US**

(3) In calculating the amount of PFC, MLA, direct and counter-cyclical payments that went on upland cotton, Brazil made an adjustment for the ratio of current acreage to base acreage (see its

answer to question 67, footnotes 2, 3, 4 and 5). Is this an appropriate adjustment for the particular factors referred to above? Why or why not? **BRA, US**

(4) Dr. Glauber has alleged that there are statistical problems in comparing planted acres to programme acres because of abandonment of crops and also because planted acres are only survey estimates, not reported figures (See Exhibit US-24, the first full paragraph in P2). Would it be more appropriate to divide harvested acreage by base acreage? What margin of error is there between the survey estimates and reported figures? **BRA, US**

(5) Do the acreage reports under section 1105(c) of the FSRI Act of 2002 indicate or assist in determining the number or proportion of acres of upland cotton planted on upland cotton base acres? Was there an acreage reporting requirement for upland cotton during MY1996 through 2002? **BRA, US**

(6) Please prepare a chart showing upland cotton base acreage, planted acreage and harvested acreage for MY1996 through 2002. Does the planted acreage fluctuate within a broad band? If not, does this indicate any stability in decisions to plant the same acres to upland cotton? **BRA, US**

(7) Brazil states that one third of all US farms with eligible acreage decided to update their base acreage under the direct payments and counter-cyclical payments programmes using their MY1998-2001 acreage. What is the proportion of the current base acreage for upland cotton resulting from such updating? Is the observed updating of base acreage consistent with Brazil's argument that it is only profitable to grow upland cotton on base acreage (and peanut and rice base acreage)? **BRA**

(8) How could one take account of upland cotton producers who receive PFC, MLA, direct and counter-cyclical payments for other covered commodity base acreage? **BRA, US**

(9) Assuming that Brazil's payment figures were to amount to a *prima facie* case, please answer the following questions: **US**

(a) How would the United States calculate or estimate the proportion of upland cotton producers who receive subsidy payments for upland cotton base acreage?

(b) Should any adjustment estimates be made for any factors besides those listed by Brazil?

(c) What adjustment estimate would it be appropriate to make?

(d) How could one take account of upland cotton producers who receive decoupled payments for other programme crop base acreage?

(e) Could the US specifically indicate what, in its view, are the flaws in the approach summarized in paras. 6-7 of Brazil's closing oral statement[1] on 9 October (i.e. the use of the ration of 0.87 to adjust the amount of total upland cotton direct and CCPs for the MY to obtain the amount of subsidies received by upland cotton producers)? Can the US suggest an alternative approach that would yield reliable results in its view?

[1] All of the paragraph numbers in relation to oral statements (opening statement and closing statement) cited in this document corresponds to the numbering made in the version available to the Panel on the date of the statement.

D. "LIKE PRODUCT"

126. Does the US agree that the product at issue is upland cotton lint and that Brazilian upland cotton lint is "like" US upland cotton lint within the meaning of Article 6.3(c) of the *SCM Agreement* in that it is a separate like product that is identical or has characteristics similar to the upland cotton lint from the United States? (e.g. Brazil's further submission, para. 81) **US**

E. "SUBSIDIES"

127. The Panel notes that the US contests that export credit guarantees constitute "subsidies". The Panel recalls that the US agrees that Step 2 payments are "subsidies" and wishes to have confirmation that it is correct in understanding that the US does not disagree that the following are "subsidies" for the purposes of Article 1 of the *SCM Agreement*: marketing loan/loan deficiency payments, PFC, direct payments, market loss assistance and CCP payments, crop insurance payments, cottonseed payments, storage payments and interest subsidy (without prejudice to the Panel's rulings on the US requests for preliminary rulings on the latter two payments). **US**

F. PROHIBITED SUBSIDIES

128. Could the US respond to Brazil's assertions relating to the meaning and effect of the introductory phrase of Article 3 ("Except as provided in the *Agreement on Agriculture*....")? Would the meaning/effect change if Article 13 of the *Agreement on Agriculture* did not exist? **BRA, US**

G. SPECIFICITY / CROP INSURANCE

129. In the event that the Panel does not consider that the alleged prohibited subsidies fall within the provisions of Article 3 and are therefore, pursuant to Article 2.3, "deemed to be specific", are there any other grounds on which Brazil would rely in order to support the view that such measures are "specific" within the meaning of Article 2 of the *SCM Agreement* (see, for example, fn 16 of Brazil's further submission)? **BRA**

130. Does Brazil agree that the US insurance premium subsidy is available in respect of all agricultural products? Please cite relevant portions of the record. **BRA**

131. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" -- in Article 2 of the *SCM Agreement* apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the *SCM Agreement*: **BRA, US**

(a) is a subsidy in respect of all agricultural, but not other, products specific?

(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?

(c) is a subsidy in respect of certain identified agricultural products specific?

(d) is a subsidy in respect of upland cotton, but not other products, specific?

(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?

(f) is a subsidy in respect of a certain proportion of total US farmland specific?

132. Please state the amount and percentage of upland cotton acreage covered by each crop insurance programme and/or policy under the ARP Act of 2000. **US**

133. Concerning Brazil's arguments in its oral statement, para. 7, can the US indicate if any producers of livestock outside a pilot programme are covered by the crop insurance programme? **US**

134. Please state the annual amount of premiums paid or contributions made by US upland cotton farmers relating to each of the crop insurance programmes and/or policies supported by the US Risk Management Agency and the Federal Crop Insurance Corporation in each year from 1992 through 2002. **US**

135. Please state the annual amount of insurance indemnity payments made by the US government; or insurance companies participating in crop insurance programmes and/or policies under the ARP Act of 2000 to upland cotton farmers in each year from 1992 through 2002. **US**

136. Is the US arguing that crop insurance subsidies corresponding to "over 90 per cent of insured cotton area" (US 7 October oral statement, para. 46) in MY1999 through 2002 are consistent with paragraph 8(a) of Annex 2 of the *Agreement on Agriculture*? Is it correct that in the past these subsidies were nonetheless notified to the Committee on Agriculture as non-product specific AMS (see, for example, G/AG/N/USA/43 in Exhibit BRA-47)? **US**

H. EXPORT CREDIT GUARANTEES

137. Please elaborate the meaning of "net losses" as is used in paragraph 70 of Brazil's 7 October oral statement. **BRA**

138. Please comment on Brazil's views stated in paragraph 70 of its 7 October oral statement. **US**

139. In the context of export credit guarantees, is the Panel correct in understanding that Brazil's claims of inconsistency with the *Agriculture Agreement* involve GSM 102, GSM 103 and SCGP, but that it limits its "serious prejudice" allegations in respect of export credit guarantee programmes to the GSM 102 programme, and does not challenge GSM 103 and SCGP in this respect? If so,

(a) could Brazil please explain why it did so, and confirm that all the data relied upon in its further submissions (e.g. in Table 13) relate to the GSM 102 programme rather than to GSM 102, GSM 103 and SCGP (and, if the data needs to be adjusted to take account of a narrower "serious prejudice" focus, supply GSM-102-relevant data)? **BRA**

(b) for the purposes of Article 13(c)(ii) of the *Agreement on Agriculture*, is it necessary for the Panel to examine only GSM 102 or should the Panel's examination include also GSM 103 and SCGP? Why or why not? **BRA**

140. Could Brazil explain how, if at all, it has treated export credit guarantees for the purpose of Table 1 of its further submission? **BRA**

141. The Panel notes the US argument, *inter alia* in its further submission, that the export credit guarantee programmes are "self-sustaining". Recalling that item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement* refers to "premium rates", could the US expand upon how it takes into account the premium rates for the export credit guarantee programmes in its analysis. **US**

142. The US has pointed out that there are many limitations on granting export credit guarantees and that there is no requirement to issue any particular guarantee (US further submission, paras 153-

156). Can the Commodity Credit Corporation decline to grant an export credit guarantee even in cases where the programme conditions are met? **US**

143. Brazil agrees with National Cotton Council estimates of the effects of the GSM 102 programmes (Brazil's further submission, para. 190) but it also cites a different conclusion by Prof. Sumner (paragraph 192). Brazil cites other estimates by Prof. Sumner throughout its further submission. Does Brazil adopt Prof. Sumner's conclusions and estimates as part of its submission? **BRA**

I. STEP 2 PAYMENTS

144. Is the Panel correct in understanding that the US does not dispute that Step 2 (domestic) payments are contingent upon import substitution, and that it argues that such measures are permitted due to the operation of the provisions of the *Agreement on Agriculture*? How is that relevant to a claim under Articles 5 and 6 of the *SCM Agreement*? **US**

J. ACTIONABLE SUBSIDIES

145. The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Articles 4.7 and 7.8 of the *SCM Agreement*. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the *SCM Agreement* to withdraw the subsidy without delay, can the Panel:

(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel? **BRA, US**

(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the *SCM Agreement*? **BRA, US**

146. Brazil acknowledges that there are some interaction effects that may increase or decrease the overall effects of the subsidies (Brazil's further submission, para. 225). How would your analysis under Articles 5(c) and 6.3 of the *SCM Agreement* and Article XVI of *GATT 1994* differ if it excluded, for example, crop insurance subsidies, PFC and/or direct payments? **BRA**

147. Does the US agree that subsidies provided under the marketing loan programme, counter-cyclical payments and market loss assistance are or were more than minimally trade-distorting? If so, please elaborate on the type of effects which are more than minimally trade-distorting within the meaning of Annex 2 of the *Agreement on Agriculture* but less than adverse effects within the meaning of Article 5 of the *SCM Agreement*. **US**

148. How should the significance of price suppression or depression be assessed under Article 6.3(c) of the *SCM Agreement*? In terms of a meaningful effect? Or another concept? **BRA**, **US**

149. What is the meaning of "may" in the chapeau of Article 6.3(c) in the context of Brazil's assertion that there is no need to conduct a distinct analysis of "serious prejudice" under Article 5(c) after having made a finding under 6.3(c) or (d)? (Brazil's further submission, paras 437 ff). How, if at all, are Articles 6.2 and 6.8 relevant in this context? What context should the Panel use for assessing serious prejudice under Article 5(c) of the *SCM Agreement* if the Panel takes the view that Article 6.3(c) and (d) are permissive conditions for a determination of serious prejudice? **US**

150. Is the list in Article 6.3 of the *SCM Agreement* exhaustive, or could serious prejudice arise in circumstances other than those listed in paragraphs (a) through (d)? **US**

151. Where in the text of Article 6.3(d) of the *SCM Agreement* is there a basis to take into account that 1998 may be a "misleading" year for the purposes of comparison? For example, unlike the text of Article XVI:3 of the GATT 1994, there does not seem to be a general reference to "special factors". **US**

152. If the US is correct in asserting that the Article 13(b)(ii) *Agreement on Agriculture* analysis is a year-by-year analysis, how would this affect the Panel's examination of Brazil's claims of serious prejudice, including the three year period and the trend period in Article 6.3(d) of the *SCM Agreement*? **US**

153. Would the conditions in Article 6.3(d) of the *SCM Agreement* be satisfied in respect of time periods other than the one specified? What relevance, if any, would this have for Brazil's claims? **BRA**

154. Does the US agree that upland cotton is a "primary product or commodity" within the meaning of Article 6.3(d) of the *SCM Agreement*? (ref. Brazil's further submission, para. 262) and within the meaning of Article XVI:3 of the GATT 1994? **US**

155. Please respond to Brazil's identification of the seven-year period beginning with MY1996 (following the passage of the FAIR Act of 1996) as the "most representative period" for the purposes of Article 6.3(d)? (ref. Brazil further submission, para. 269) **US**

156. Does the US agree that "...footnote 17 [of the SCM Agreement] does not carve out upland cotton from the scope of Article 6.3(d) of the SCM Agreement"? (ref. Brazil further submission, para. 275). **US**

157. Does the reference to "trade" in footnote 17 of the *SCM Agreement* have any impact on the interpretation of "world market share" in Article 6.3(d)) If so, what is it? **US**

158. Please respond to Brazil's assertion that "...the absence of any payment, production or expenditure limitations in the US marketing loan programme is analogous to the EC sugar regime that was challenged in *EC – Sugar Exports II (Brazil)* and *EC – Sugar Exports I (Australia)*." (ref. Brazil further submission, para. 317) **US**

159. The EC, in its oral statement (paras 9 and 10), disagrees with the US interpretation of the terms "same market". Can the US comment on the EC's view? **US**

160. Without prejudice to the meaning of "world market share" as used in Article 6.3(d) of the *SCM Agreement*, can you confirm the world export share statistics provided in Exhibit BRA-206? **US**

161. Would a finding of serious prejudice under Article 5(c) of the *SCM Agreement* be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the *SCM Agreement* in this context? **BRA, US**

162. Can the US confirm that marketing loan/LDP, step 2 and counter-cyclical payments are mandatory if the price conditions are fulfilled? **US**

163. Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevance is this, if any, to Brazil's actionable subsidy claims ? **US, BRA**

K. CAUSATION

164. When the US points, in its oral statement of 7 October, to the alleged "bias" of Prof. Sumner's model, is it arguing that US subsidies are irrelevant to the movement in prices and production (acreage) of upland cotton? **US**

165. Please comment (and submit substantiating evidence) on the US assertion that the FAPRI model has been designed and developed for prospective analysis, and is not suitable for retrospective counterfactual analysis. What is the reliability of past FAPRI-produced analyses when compared with actual data for the period covered by them? Is there any other instrument that can be used to try to identify the effect of subsidies already granted, or of their removal? **BRA, US**

166. The US states that "futures prices demonstrate that market participants predict increasing upland prices over the course of the marketing year" (US 7 October oral statement, para. 62). Please elaborate on this argument including citing specific futures prices. **US**

167. How does Brazil react to Exhibit US-44? **BRA**

168. Please confirm that the production figures cited in Exhibit US-47 are for upland cotton only and do not include textiles. **US**

169. Can the US confirm the accuracy of the facts and figures cited in the four bullet points in paragraph 12 of Brazil's 7 October oral statement? **US**

170. Brazil quotes a report that states that a 10% increase in soybean prices reduces upland cotton acreage by only 0.25% (Brazil's 7 October oral statement, para. 27). Could Brazil indicate if this analysis is done on a short-run basis or a long-run basis? **BRA**

171. In paragraphs 22 and 23 of its further submission, we understand that the US is, in short, claiming that increased total supply (i.e. including polyester) drove prices down. On the other hand, we note that, according to the figures in the chart in paragraph 22 of the same submission, the world production of cotton during this period has basically been steady. Do all polyester fibres as represented by these figures compete directly with cotton? That is to say, do these figures for polyester fibres include, for example, those that are used for textiles that technically cannot be substituted by cotton? **US**

172. Please estimate the price effect, in cents per pound, of the growth in the US retail market which it is said has directly contributed to strengthening world cotton prices. **US**

173. The US asserts that "burgeoning US textile imports … shifted the disposition of US cotton production from domestic mills to export markets" (US further submission, para. 20). A similar description appears in paragraph 33, together with the explanation that "the share of world cotton consumption supplied by US cotton has been roughly the same since 1991/92". Why have sales of US cotton for export increased and sales of cotton imported into the US increased? **US**

174. How, if at all, did the Asian financial crisis affect the United States' world market share? Did it disproportionately affect the US as compared to other exporters? **US**

175. With reference to paragraphs 57-58 and the related table on page 21 of the US further submission, could you please clarify the arguments regarding the ratio of the soybean futures to the cotton futures prices since in the table the inverse ratio is used? **US**

176. With reference to Figure 4 of Brazil's Further Submission, how does Brazil explain the apparent decrease in prices in 2001 and the increase of the A-Index in recent months, despite the continued use of US subsidies on upland cotton? **BRA**

177. Could the United States further elaborate on paragraph 50 of its 7 October oral statement? **US**

178. The Panel notes Exhibit US-63. Could the US please provide a conceptually analogous graph concerning US export sales during the same period? **US**

179. Could Brazil comment on the argument that decoupled payments and other subsidies to upland cotton are largely being capitalized into land values and that removing these subsidies would reduce the cost of production of upland cotton producers (US 7 October oral statement, para. 48). What would be the net effect of these adjustments? **BRA**

180. Please describe the precise formula as to how USDA determines the "adjusted world price" using the Liverpool A-Index, the NY futures price and any other relevant price indicators. Please submit substantiating evidence. **BRA, US**

181. Please provide a side-by-side chart of the weekly US adjusted world price, the Liverpool A-Index, the NY futures price, and spot market prices from 1996-present. What, if anything, does this reveal? **BRA, US**

182. Please explain why the US can be taken to be price *leaders*, or price *setters*, (and not just takers) when US producers receive large subsidy payment to support the difference between *world prices* and their own costs? **BRA**

## L. ARTICLE XVI OF GATT 1994

183. Why does Brazil believe that the appropriate "previous representative period" is the term of the previous Farm Bill, MY1996-2002? (Brazil's further submission, para. 282) **BRA**

184. Why does Brazil believe that an "equitable share" is one which factors out all subsidies? To the extent that domestic support and export subsidies are permitted by the *Agreement on Agriculture*, why should they not be accepted as being normal conditions in analyzing an equitable market share? (See Brazil's further submission, paras 288-289) **BRA**

185. Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the *Agreement on Agriculture* and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5(c) and 6.3(d) of the *SCM Agreement*. **BRA, US**

(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on *export subsidies*" (emphasis added)) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions of the *Agreement on Agriculture*, relevant?

(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the *SCM Agreement*, or in any other

provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in *US-FSC*, para. 117[2] here?

(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the *SCM Agreement* and the prohibition on subsidies contingent upon export in Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 was negotiated?

186. Could the United States please expand upon its statement that "[t]hese are the types of considerations that led to the negotiation of the Subsidies Agreement...." (US further submission, para. 109)? Is there any relevant material, including, for example, drafting history that might support this statement? **US**

M. THREAT CLAIMS

187. Please provide USDA's projections of marketing loan/LDP payments, direct payments and counter-cyclical payments to be made during MY2003 through 2007 based on the most recent USDA baseline projection. **US**

[2] WT/DS108/AB/R, para 117:

> "… the provisions of the *SCM Agreement* do not provide explicit assistance as to the relationship between the export subsidy provisions of the *SCM Agreement* and Article XVI:4 of the GATT 1994. In the absence of any such specific textual guidance, we must determine the relationship between Articles 1.1(a)(1) and 3.1(a) of the *SCM Agreement* and Article XVI:4 of the GATT 1994 on the basis of the texts of the relevant provisions as a whole. It is clear from even a cursory examination of Article XVI:4 of the GATT 1994 that it differs very substantially from the subsidy provisions of the *SCM Agreement*, and, in particular, from the export subsidy provisions of both the *SCM Agreement* and the *Agreement on Agriculture*. First of all, the *SCM Agreement* contains an express definition of the term "subsidy" which is not contained in Article XVI:4. In fact, as we have observed previously, the *SCM Agreement* contains a broad package of new export subsidy disciplines that "go well beyond merely applying and interpreting Articles VI, XVI and XXIII of the GATT 1947". Next, Article XVI:4 prohibits export subsidies only when they result in the export sale of a product at a price lower than the "comparable price charged for the like product to buyers in the domestic market." In contrast, the *SCM Agreement* establishes a much broader prohibition against *any* subsidy which is "contingent upon export performance". To say the least, the rule contained in Article 3.1(a) of the *SCM Agreement* that all subsidies which are "contingent upon export performance" are prohibited is significantly different from a rule that prohibits only those subsidies which result in a lower price for the exported product than the comparable price for that product when sold in the domestic market. Thus, whether or not a measure is an export subsidy under Article XVI:4 of the GATT 1947 provides no guidance in determining whether that measure is a prohibited export subsidy under Article 3.1(a) of the *SCM Agreement*. Also, and significantly, Article XVI:4 of the GATT 1994 does not apply to "primary products", which include agricultural products. Unquestionably, the explicit export subsidy disciplines, relating to agricultural products, contained in Articles 3, 8, 9 and 10 of the *Agreement on Agriculture* must clearly take precedence over the *exemption* of primary products from export subsidy disciplines in Article XVI:4 of the GATT 1994."

188. Can the United States comment on the FAPRI projections for cotton provided in Exhibit BRA-202? **US**

N. CLARIFICATIONS

189. Please indicate whether the correct figure in paragraph 37 of Brazil's 7 October oral statement is 38.1% or 38.3%? **BRA**

190. Please confirm that the figure "17.5" in paragraph 43 of Brazil's 7 October oral statement, is "percentage point". **BRA**

191. Brazil clarify its statement in para. 12 of its 9 September further submission: "Alternatively crop insurance is **not specific** because the 2000 ARP Act denies benefits to commodities representing more than half of the value of US agriculture. Further US crops represent only 0.8 per cent of total US GDP." (emphasis added) **BRA**

# ANNEX L-1.16

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

3 November 2003

1. The Panel recalls that paragraph 5 of its 13 October 2003 communication reads as follows:

> "The Panel takes note of the United States' request in section II of its further submission for three preliminary rulings, regarding interest subsidies and storage payments; cottonseed payments; and export credit guarantees for products other than upland cotton. The Panel is not currently in a position to rule on these issues. The Panel will make rulings as necessary and appropriate in the course of this proceeding and hopes to be in a position to express its views, or give a ruling, on these requests, as appropriate, by 3 November (that is, shortly after the date of receipt of written responses to questions). Meanwhile, the Panel requests the parties not to exclude consideration of these issues in their responses to questions."

2. Accordingly, please find attached a communication from the Panel.

Panel's views on the preliminary ruling requested by the United States
in its further written submission of 30 September 2003

1. In its further written submission of 30 September 2003, the United States requests a preliminary ruling that:

(1) Brazil may not advance claims under either Article 4 or Article 7 of the *SCM Agreement* with respect to export credit guarantee measures relating to eligible US agricultural commodities other than upland cotton, because it did not include a statement of available evidence with respect to these measures as required by Articles 4.2 and 7.2 of the *SCM Agreement*;

(2) cottonseed payments made for the 1999 and 2000 crops are not within the Panel's terms of reference; and

(3) storage payments and interest subsidies referred to as "other payments" for upland cotton are not within the Panel's terms of reference.[1]

2. Brazil asks the Panel to reject the United States' request. In respect of item (1), Brazil asserts that the US request is not new and is untimely, groundless and "mooted by" the Panel's 25 July communication indicating that the Panel intended to rule that export credit guarantees to facilitate the export of US upland cotton and other eligible agricultural commodities are within the Panel's terms of reference.[2] Brazil asserts that items (2) and (3) are properly within the Panel's terms of reference.[3]

3. The Panel wishes to indicate to the parties how it intends to rule on items (1) and (2), in order to assist them in deciding what argumentation and evidence to submit in their further rebuttal submissions.

4. With respect to item (1), assuming *arguendo* that the US request was timely,[4] the Panel intends to rule in its report that Brazil provided a statement of available evidence with respect to export credit guarantee measures relating to eligible US agricultural commodities other than upland cotton, as required by Articles 4.2 and 7.2 of the *SCM Agreement*. As previously indicated in the Panel's communication of 25 July 2003, the Panel also intends to rule that "export credit guarantees … to facilitate the export of US upland cotton, and other eligible agricultural commodities" as addressed in document WT/DS267/7, are within its terms of reference.

5. With respect to item (2), the Panel intends to rule that cottonseed payments made under Public Laws 106-224 and 107-25 (in respect of the 2000 crop) are within its terms of reference, but that cottonseed payments made under Public Law 106-113 (in respect of the 1999 crop) are not within its terms of reference. This is without prejudice to the relevance, if any, of the cottonseed payments in respect of the 1999 crop to the conditions set out in Article 13(b) of the *Agreement on Agriculture*.

[1] US Further Written Submission, Sections II and XIII.
[2] Brazil's Oral Statement at the Resumed First Substantive Meeting, paragraphs 73-78.
[3] Brazil's Oral Statement at the Resumed First Substantive Meeting, paragraphs 79-81.
[4] The Panel recalls paragraph 12 of its working procedures but, in light of its intended ruling, does not need to address the issue of timeliness here.

6. The Panel has not yet decided upon its approach to item (3) and asks the parties not to exclude consideration of these other payments in their further rebuttal submissions.

# ANNEX L-1.17

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

14 November 2003

1. The Panel takes note of the United States' written request of 14 October 2003 for certain information relating to the quantitative simulation model used by Dr. Sumner in his analysis presented in Annex I to Brazil's 9 September 2003 further written submission. The Panel also takes note of the parties' related communications dated 5, 11, 12 and 13 November 2003, and the submissions by Brazil on 12 and 13 November 2003.

2. The Panel confirms the dates in its existing timetable, subject to the following.

3. The Panel does not require the parties' 18 November further rebuttal submissions, nor their oral statements during the second Panel meeting, to address the methodology, equations or parameters underlying the quantitative modelling simulation in Annex I to Brazil's further written submission which are directly linked to the information requested by the United States on 14 October 2003 and the submissions by Brazil on 12-13 November 2003. Having said this, the parties are not precluded from doing so.

4. Mindful of the requirements of Article 12.4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* and in keeping with its duty to conduct an objective assessment of the matter before it, the Panel invites the United States to submit, on 22 December, in conjunction with its responses to any questions following the second Panel meeting, any comments that it may have on Brazil's submissions of 12-13 November 2003. Brazil may submit any comments on any such US comments by 12 January 2004, and the United States may submit any further comments by 19 January 2004. If necessary, at the discretion of the Panel, a further Panel meeting with the parties may be held to address this specific material.

5. This decision is without prejudice to the relevance and significance which the Panel may ascribe to the quantitative simulation model and related evidence and argumentation in its report.

6. Finally, the Panel wishes to ask the United States to respond, by 22 December, to the following:

> Is the Panel correct in understanding that the US government (including the United States Department of Agriculture) does not have a license or any other form of permission (standing or otherwise; free of charge or otherwise) to run, electronically, the FAPRI/CARD model and/or Professor Sumner's adaptations thereto?

# ANNEX L-1.18

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

8 December 2003

1. Please find attached:

- a communication from the Panel concerning its views on one of the preliminary ruling requests from the United States.

- a communication from the Panel concerning the FAPRI model, the essence of which was communicated to the parties by the Chairman of the Panel on 3 December 2003. As indicated therein, any US comments are due by **22 December**. Brazil will be given until **12 January 2004**, to comment on the US comments.

- the questions from the Panel. As was indicated earlier, responses to these questions are to be submitted by **22 December**.

2. As stated by the Chairman on 3 December, the United States will be given until **18 December** to respond to Brazil's request made in Exhibit BRA-369. Brazil will be given until **12 January 2004**, to comment on the US response.

3. The parties may submit any further comments on each other's comments by **19 January 2004**.

Panels' views on the preliminary ruling requested by the United States regarding the Agricultural Assistance Act of 2003

7. The United States requests a preliminary ruling that any measure under the Agricultural Assistance Act of 2003, including a cottonseed payment under that Act, is not within the Panel's terms of reference.[1]

8. Brazil asserts that that Act is properly within the Panel's terms of reference and asks the Panel to reject the United States' request.[2]

9. The Panel wishes to indicate to the parties how it intends to rule on this item in order to assist them in deciding what argumentation and evidence to submit in their answers to questions.

10. The Panel intends to rule that cottonseed payments made under the Agricultural Assistance Act of 2003 are not within its terms of reference. This is without prejudice to the relevance, if any, of those cottonseed payments to the conditions set out in Article 13(b) of the *Agreement on Agriculture*.

11. The Panel notes that it has not expressed a view concerning the United States' request for a preliminary ruling that storage payments and interest subsidies referred to as "other payments" for upland cotton are not within the Panel's terms of reference.[3] The Panel has not yet decided upon its approach to this item and asks the parties to respond to its written questions relevant to these payments, and not to exclude consideration of these payments in their answers to other questions.

[1] US First Written Submission, paras 217, 218; US Further Submission, para. 8.

[2] Brazil's Oral Statement at the first session of the First Substantive Meeting, para. 145; Brazil's Response to Panel Question No. 17 and comments on US Response to Panel Question No. 17.

[3] US Further Written Submission, Sections II and XIII.

Panels' communication concerning the FAPRI model

1. The Panel has been advised by Brazil that, to the best of Brazil's knowledge and belief, all of the information used by FAPRI to generate the various results presented in Brazil's submissions concerning the effects of the subsidies, and their removal, has been provided to the US in an electronic format. Conceptually speaking, the information is in two parts: (a) the model used as the basis for generating the results ("the FAPRI model"), and (b) adaptations to the model and other specific pieces of information which effect the calculations made by the model ("the Brazil information"). FAPRI has possession of the FAPRI model and the Brazil information. Brazil only has possession of the Brazil information. Brazil instructed FAPRI as to the use of the Brazil information that FAPRI then used to generate the various results presented by Brazil to the Panel.

2. We say that the US has all of the information (ie both the FAPRI model and Brazil's information) "to the best of Brazil's knowledge and belief" because Brazil itself has never had access to all of the data comprising the FAPRI model, which is voluminous. FAPRI considers the model to be its own work product. At the request of Brazil, FAPRI has made all of the information available to the US. Why it has done this in the case of the US, but not Brazil, relates to the relationship (commercial or otherwise) between FAPRI (which receives US funding for its work) and the US Government. FAPRI has provided all of the information to the US on the express stipulation that the model not be provided to the Panel or Brazil ("the FAPRI stipulation").

3. At para 74 of its Opening Statement at the Second Panel Meeting, the US asks this of the Panel:

> "[W]hether it intends the United States to comment on this new model, documentation, and results by the original 22 December deadline to file comments on the methodology underlying the Annex I model."

4. During the Second Panel Meeting, Brazil advised the Panel that it had no objection, then, to the US looking at the information provided to it by FAPRI, notwithstanding the FAPRI stipulation. The Panel acknowledges this, but also notes that it would be open to Brazil to reconsider its position depending on anything that the US may wish to present to the Panel about the FAPRI model.

5. The Panel's view in these circumstances is that the US should comment on the FAPRI model, if it believes that it needs to do so in the interests of presenting its case to the Panel, by **22 December**. The FAPRI stipulation does not, in the Panel's view, affect the Panel's ability to make an objective assessment of the matter before it in the terms of Article 11 of the DSU. The Panel will assess the reliability and relevance of the FAPRI model on the basis of the evidence presented to it by the parties.

6. Brazil will be given until **12 January 2004**, to comment on the above US comments.

Questions from the Panel to the Parties –
second substantive Panel meeting

A. TERMS OF REFERENCE

192. Regarding the interest subsidies and storage payments listed by the United States in its response to the Panel's Question No. 67:

(a) Please provide a copy of the regulations under which they are currently provided and under which they were provided during the marketing years 1996-2002;

(b) Please indicate whether there are any such payments which are not provided to implement the repayment rate for upland cotton within the marketing loan programme. **USA**

193. Are interest subsidies and storage payments already included in the amounts shown in your submissions to date for payments under the marketing loan programme? Has there been any double-counting? **BRA**

194. Does the United States maintain its position stated in response to the Panel's Question No. 67 that "it would not be appropriate for the Panel to examine payments made after the date of panel establishment"? If so, please explain why. Can Brazil comment on this statement? **BRA, USA**

B. ECONOMIC DATA

195. Does the United States wish to revise its response to the Panel's Question No. 67*bis*, in particular, its statement that "the United States ... does not maintain information on the amount of expenditures made under the cited programmes to US upland cotton producers"? Did the United States make enquiries of the FSA in the course of preparing its original answer? **USA**

196. Please provide the latest data for the 2002 marketing year on payments under the marketing loan, direct payments, counter-cyclical payments, user marketing certificate (step 2) programmes and export credit guarantee programmes. **BRA, USA**

197. Please provide actual data for 2002/2003 for US exports, US consumption and per cent of world consumption to replace the projected data in Exhibit US-47. If available, please provide projected data for 2003/2004 to replace the forecast data. **USA**

198. Please comment on the respective merits of the price-gap calculations of MY1992 deficiency payments in US comments of 27 August, footnote 14 ($867 million), and Brazil's response to the Panel's Question No. 67 ($812 million). **BRA, USA**

199. What is the composition of the A-Index? We do note footnote 19 and, for example, Exhibit BRA-11, but please explain more in detail how this index is calculated. **BRA**

200. Concerning the chart on page 37 of Brazil's further rebuttal submission, why did Brazil use a futures price at planting time? Is this a relevant measure for assessing acreage response? **BRA**

201. Is data available to show the proportion of US upland cotton production sold under futures contracts, and the prices under those contracts, at different times during the marketing year? If so,

please provide summarized versions to the Panel. How does a futures sale impact the producer's entitlement to marketing loan programme payments? **BRA, USA**

202. Concerning paragraph 7 of the US oral statement, are the expected cash prices shown for February only? Can the US provide the prices for January and March of each year as well? **USA**

203. Please provide information concerning the organization, mandate, credentials and standing of FAPRI. **BRA**

204. Which support to upland cotton is not captured in the EWG data referred to in Brazil's 18 November further rebuttal submission? **BRA**

205. Does the United States accept or agree with the EWG data submitted by Brazil? If not, please explain your reasons. **USA**

206. Please explain how the graph in paragraph 40 of the US further rebuttal submission was derived. In so doing, please clarify whether the figures are on a cents per pound basis or some other basis. What averaging method was used? Can you prepare individual charts showing average US and Brazilian cotton prices for each of those third country markets? **USA**

207. Please indicate whether any of the measures challenged in this dispute *obliges* cotton farmers to harvest their crop in order to receive the benefit of the programme (subsidy). **USA**

208. Please provide data for the marketing years 1992 and 1999-2002 of the "quantity of production to receive the applied administered price" (*Agreement on Agriculture*, Annex 3, paragraph 8) for purposes of a price-gap calculation of support through the marketing loan programme. **USA**

209. It is understood that the data in the graph in paragraph 5 of the US oral statement are as at harvest time, while the data in the graph in paragraph 39 of Brazil's oral statement are as at planting time. Please explain why the trend of US acreage increase/decrease differs between these two graphs. **BRA, USA**

210. Are worldwide planted acreage figures available? **BRA, USA**

211. Brazil presents a graph in paragraph 59 of its further rebuttal submission indicating the increasing cumulative loss incurred by cotton producers. Please comment on the argument that US cotton producers could not continue operating without subsidies. In particular:

(a) to what extent does the use of 1997 survey technological coefficients with annually updated values affect the results?

(b) to what extent do producers base planting decisions on their ability to cover operating costs but not whole farm costs? **USA**

212. Brazil states in paragraph 37 of its oral statement that studies of Westcott and Price found that the effect of the programme on cotton is to add an additional 1 to 1.5 million acres during marketing years 1999-2001 and to suppress US prices by 5 cents per pound. Does the US reject these findings? Why or why not? **USA**

213. What differences, if any, can be observed in the results of econometric models in the literature which use lagged prices and those which use futures prices to analyse the effect of prices on planting decisions? **BRA, USA**

C. DOMESTIC SUPPORT

214. Please provide a copy of regulations regarding the marketing loan programme and loan ..... deficiency payments published at 58 Federal Register 15755, dated 24 March 1993. What does this regulation indicate about the target price? **USA**

215. Please expand or comment on the statement at paragraph 91 of the US further rebuttal submission that the counter-cyclical target price ceases to be paid when the farm price rises above 65.73 cents per pound. In this scenario, should the Panel disregard Direct Payments? **BRA, USA**

216. How many times have upland cotton producers been able to update their base acres since 1984? How do upland cotton producers come to note the possibility of future updating? Please provide examples of relevant material. **BRA, USA**

217. What is the reason for reducing payments under the PFC and direct payments programmes for planting and harvesting fruit, vegetables and wild rice on certain base acreage? Please comment on the statements by the European Communities that "the reduction in payment for fruit and vegetables, if the EC understands correctly, is in fact designed to avoid unfair competition within the subsidising Member." (EC oral statement at first session, first substantive meeting, paragraph 29) and "To find otherwise would not permit a WTO Member wishing to introduce decoupled payments to take account of important elements of internal competition (…)" (EC response to Panel third party Question No. 5). **USA**

218. Please comment on the testimony of USDA Chief Economist Keith Collins cited in paragraph 36 of Brazil's oral statement regarding the trade-distorting and production-distorting nature of the marketing loan payments. **USA**

D. EXPORT CREDIT GUARANTEES

219. Under the *Agreement on Agriculture* the general position is that the use of export subsidies, both those listed in Article 9.1 as well as those within the scope of Article 1(e) which are not so listed, may only be used within the limits of the product specific reduction commitments specified in Part IV of Members' Schedules. One might therefore have expected that Article 3.3 of the *Agreement on Agriculture* would have prohibited the use of both listed and non-listed export subsidies in excess of reduction commitment levels in the case of scheduled products and, in the case of non-scheduled products, would have simply prohibited the use of any export subsidy. Instead, the Article 3.3 prohibition is limited in both cases to export subsidies listed in Article 9.1. What significance, if any, does this contextual aspect have for how Article 10.2 might be interpreted having regard, *inter alia*, to:

(a) the fact that export performance-related tax incentives, which like subsidised export credit facilities were considered as a possible candidate for listing as an Article 9.1 export subsidy in the pre-December 1991 Draft Final Act negotiations, have been held (for example, in *United States – Tax Treatment for Foreign Sales Corporations*, WT/DS108) to be subject to the anti-circumvention provisions of Article 10.1; and

(b) the treatment of international food aid and non-commercial transactions under Article 10? **USA**

220. What will be the relevance of Articles 9 and 10.1 of the *Agreement of Agriculture* to export credit guarantees when disciplines are internationally agreed? **BRA**

221. In respect of the table in paragraph 161 of the US August 22 rebuttal submission (concerning the cohort specific treatment of export credit guarantees), the Panel notes the subsequent US agreement (footnotes 82 and 96 in US further submission of 30 September 2003; footnote 160 in US 18 November further rebuttal submission) to Brazil's assertion (footnote 67 in Brazil's 27 August 2003 comments on US rebuttal submission) that the total figure net of re-estimates should be $230,127,023 instead of the figure which originally appeared ($381,345,059).

(a) Please submit a corrected table reflecting all of the necessary information to produce this result, to the extent this is possible for the reasons indicated in footnote 96 in US further submission of 30 September 2003.

(b) Please clarify whether and how the Panel should treat the figures in Exhibit BRA-182 for the net lifetime re-estimates for each respective cohort.

(c) The Panel notes that the CCC 2002 financial statement in Exhibit BRA-158 refers to annual "administrative" expenses of $4 million, and that the US has also referred to this figure in its submissions (e.g. US first written submission, paragraph 175). Please confirm whether the figures in the table in paragraph 161 of the US August 22 rebuttal submission (or a corrected version thereof) includes "administrative expenses", of approximately $4 million per year over the period 1992-2002, and explain why (or why not) this affects the substantive result.

(d) Please identify what is considered an "administrative expense" for this purpose.

(e) The Panel notes the US statement in paragraph 160 of its answers to Panel questions following the first meeting that all cohorts are still open although the 1994 and 1995 cohorts will close this year. Is this still an accurate statement? If not, please indicate whether any cohorts have since "closed" for the period 1992-2002.

(f) The Panel notes the current "high" figures for 1997 and 1998 indicated in the original US chart. Pending their confirmation and/or updating by the US, why does the US assert that a cohort will *necessarily* reach a "profitable" result (for example, the 1994 cohort, which has almost closed still indicates an outstanding amount)? Do "re-estimates" reflect also expectations about a cohort's future performance?

(g) Why should the Panel "eliminate" the 2001 and 2002 cohorts from its examination, as suggested in paragraph 198 of the US further rebuttal submission?

(h) Why should the Panel "eliminate", in addition, the 2000 cohort, as also suggested in paragraph 198 of the US further rebuttal submission for which information is presumably more "complete"?

(i) Under the US approach, at what point in time could a Panel ever make an assessment of the programme, if it had to wait for each cohort to be completed before it could be "properly" assessed? Why is it inappropriate for the Panel to include these "most recent years" in its evaluation, as the US suggests in paragraph 199 of its 18 November further rebuttal submission? **USA**

222. For GSM 102, 103 and SCGP, please provide year-by-year amounts from 1992 to 2003 with respect to: (i) cumulative outstanding guarantees; (ii) claims paid; (iii) recoveries made; (iv) revenue from premiums; (v) other current revenue, including interest earned; (vi) interest charges paid; and (vii) administrative costs of running the programmes. Please indicate any allocation methodologies used to calculate administrative costs. **USA**

223. Are the premium rates applicable to GSM 102, 103 and SCGP subject to regular review as to their adequacy in enabling the operating costs and losses associated with these programmes? If so, what criteria or benchmarks are taken into consideration for this purpose? Secondly, how do the premium rates applied compare with the implicit cost of forfaiting transactions and with premiums for export credit insurance? **USA**

224. Please indicate how the CCC's cost of borrowing was treated in the 2002 financial statement of the CCC, in Exhibit BRA 158. **USA**

225. Please indicate whether there was any instance where the CCC "wrote off" debt and, if so, please indicate the accounting regulation or principle used. If a "written off" debt is subsequently recovered, do the CCC's accounts reflect both the interest cost and interest received in relation to the debt during the time it was "written off"? **USA**

226. If a debt was "written off" more than ten years ago, does it still create a cost to the programme? If so, how is this reflected in the 2002 financial statement of the CCC, in Exhibit BRA 158 (or any other material)? **USA**

227. The United States has indicated that Brazil continues to "mischaracterize" the amount of $411 million in the 2002 financial statement of the CCC, in Exhibit BRA 158, pp. 18 & 19. Can the United States please indicate how it believes this amount – referred to on p. 19 of the Exhibit as "Credit Guarantee Liability-End of Fiscal Year" - should be properly characterized? How, if at all, does it represent CCC operating costs or losses? **USA**

228. What accounting principles should the Panel use in assessing the long-term operating costs and losses of these three programmes? For example, if internal US Government regulations require costs to be treated differently to generally accepted accounting principles, is it incumbent on the Panel to conduct its analysis in accordance with that treatment? **BRA, USA**

E. SERIOUS PREJUDICE

229. What is the meaning of the words "may arise in any case where *one or several* of the following apply" (emphasis added) in Article 6.3 of the *SCM Agreement*? Please comment on the possibility that these words indicate that one of the Article 6 subparagraphs may not be sufficient to establish serious prejudice and that serious prejudice should be considered an additional or overriding criterion to the factors specified in the subparagraphs. **BRA**

230. Please comment on Brazil's views on Article 6.3 of the *SCM Agreement* as stated in paragraphs 92-94 of its further submission. **USA**

231. Do you believe that the now-expired Article 6.1 and/or Annex IV of the *SCM Agreement* are relevant context for the Panel's interpretation of Article 6.3? **USA**

232. How, if at all, should the Panel take into account the effects of other factors in its analysis of the effects of US subsidies under Article 6.3? If the Panel should compare the effects of other factors to establish the relative significance of one compared to others, how would this be done? What would be relevant “factors” for this purpose? **BRA**

233. In Brazil's view, what is or are the "same market(s)" for the purposes of Article 6.3(c)? Does Brazil's view of "world market" imply that regardless of which domestic (or other) "market" is examined, price suppression will be identifiable? **BRA**

234. Does "significant" price suppression under Article 6.3(c) necessarily amount to "serious" prejudice within the meaning of Article 5(c)? Could the level of "significance" of any price suppression under Article 6.3(c) determine whether any prejudice under Article 5(c) rises to the level of "serious prejudice"? **USA, BRA**

235. Please comment on paragraphs 8, 9 and 10 of the US 2 December oral statement, in particular, why the average Brazilian price is shown as lower than the average US price. **BRA**

236. The Panel notes Exhibit US-47 (and the chart in paragraph 13 of the US 2 December oral statement). Please provide a conceptually analogous chart to Exhibit US-63 with respect to data relating to the US interpretation of "world market share". **USA**

237. Could a phenomenon that remains at approximately the same level over a given period of time be considered a "consistent trend" within the meaning of Article 6.3(d)? Do parties have any suggestions as to how to determine a "consistent trend", statistically or otherwise? **BRA, USA**

238. According to the US interpretation of the term "world market share":

(a) should the domestic consumption of closed markets be added into the denominator?

(b) if US production and consumption increased by the same percentage, whilst the rest of the world's production and consumption remained steady, would this imply an increase in the US "world market share" by a different percentage?

(c) does Saudi Arabia have a small world market share for oil? **USA**

239. How does the US respond to Brazil's assertions that, under the US interpretation of the term "world market share":

(a) there would be no WTO disciplines on production-enhancing subsidies that increase a Member's world market share of exports? (see paragraph 64 of Brazil's 2 December oral statement);

(b) a Member's exports would have to be disregarded in calculating their "world market share" in terms of "world consumption"? (see e.g. paragraph 65 of Brazil's 2 December oral statement) **USA**

240. Does Article XVI:3 of GATT 1994 provide context in interpreting Article 6.3(d) of the *SCM Agreement*? Do these provisions apply separately? If not, could it indicate that "world market share" is intended to mean the same as "share of world export trade"? **USA**

241. How does the US reconcile its data on consumption for 2002 in US Exhibit 40, Table 1 with the "consumption" data it refers to in its 30 September submission, paragraph 34, Exhibit US-47 or US-71? **USA**

242. How much of the benefits of PFC, MLA, CCP and Direct Payments go to land owners? If not all of the benefits go to land owners, what proportion goes to producers? **USA**

243. Can the Panel assume that any support at all, even marketing loan programme payments, benefits upland cotton if an upland cotton producer has other agricultural production besides upland cotton? **USA**

244. What proportion of the 2000 cottonseed payments benefited *producers of upland cotton*, given that payments were made to *first handlers*, who were only obliged to share them with the producer to the extent that the revenue from sale of the cottonseed was shared with the producer? (see 7 CFR §1427.1104(c) in Exhibit US-15). **BRA**

245. Can a panel take Green Box subsidies into account in considering the effects of non-Green Box subsidies in an action based on Articles 5 and 6 of the *SCM Agreement*? **BRA, USA**

246. Can a panel take prohibited subsidies into account in considering the effects of subsidies in an action based on Articles 5 and 6 of the *SCM Agreement*? **BRA, USA**

247. Can the Panel take into account trends and volatility in market and futures prices of upland cotton after the date of establishment of the Panel? If so, how do they affect the analysis of Brazil's claim of a threat of serious prejudice? **BRA, USA**

F. STEP 2

248. In respect of the level of Step 2 payments in certain time periods, the Panel notes, *inter alia*, footnote 129 in the US first written submission; footnote 33 in the US 18 November further rebuttal submission; and Exhibit BRA-350. Have Step 2 payments ever been zero since the elimination of the 1.25 cent per pound threshold in the FSRI Act of 2002? In what circumstances could a Step 2 payment be zero? How does the elimination of the 1.25 cent per pound threshold in the FSRI Act of 2002 affect your response? **BRA, USA**

249. The Panel notes that the definition of eligible "exporter" in 7 CFR 1427.104(a)(2) includes "a producer":

(a) How does this reconcile with Brazil's argument that Step 2 "export payments" do not directly benefit the producer?[4] How, if at all, would this be relevant for an analysis of the issue of export contingency under the *Agreement on Agriculture* or the *SCM Agreement*? **BRA**

(b) How does this reconcile with Dr. Glauber's statement in Exhibit US-24, p. 3 (referring to "the 1990 Farm Bill and subsequent legislation") that Step 2 payments do *not* go directly to the producer? **USA**

(c) What proportion of Step 2 "export payments" go to producers? Please supply supporting evidence. **USA**

G. REMEDIES

250. Does Brazil seek relief under Article XVI of *GATT 1994* in respect of expired measures? What type of recommendation would the Panel be authorized to make? (Brazil further submission, paragraph 471 (iii)) **BRA**

251. In light, *inter alia*, of Article 7.8 of the *SCM Agreement*, if the Panel were to find that any subsidies have resulted in adverse effects to the interests of another Member within the meaning of Article 5 of the *SCM Agreement*, should it make any recommendation other than the one set out in the first sentence of Article 19.1 of the DSU? **BRA**

[4] For example, Brazil's response to Panel Question 125, paragraph 14.

252. Without prejudice to any findings by the Panel, if the Panel were to find that any of the challenged measures constitute prohibited subsidies within the meaning of Article 3 of the *SCM Agreement*, what are the considerations that should guide the Panel in making a recommendation under Article 4.7 of the *SCM Agreement* relating to the time period "within which the measure must be withdrawn"? What should that time period be? **BRA**

H. MISCELLANEOUS

253. Regarding the adjustment authority related to Uruguay Round compliance in s.1601(e) of the FSRI Act of 2002 (the so-called "circuit-breaker provision"):

(a) Does it relate to export credit guarantees, crop insurance and cottonseed payments?

(b) Does it relate only to compliance with AMS commitments?

(c) Is the authority discretionary? If so, can its exercise be limited by the legislative branch of government?

(d) How would the Secretary exercise her authority to prevent serious prejudice to the interests of another Member? How would she exercise her authority to prevent a threat of serious prejudice to the interests of another Member? At what time and on the basis of what type of information would she exercise her authority?

(e) What does "to the maximum extent practicable" mean? In what circumstances would it not be practicable for the Secretary to exercise her adjustment authority? **USA**

254. Would payments made after the date of panel establishment be *mandatory* under the marketing loan, direct payments, counter-cyclical payments and user marketing certificate (step 2) programmes, but for the circuit-breaker provision? **USA**

255. How does Brazil respond to US assertions concerning the circuit-breaker provision? (see US 2 December oral statement, paragraph 82). Does this mean that US subsidies cannot be "mandatory" for the purposes of WTO dispute settlement? **BRA**

256. The United States submits that the Panel cannot make rulings without allocating precise amounts of payments to upland cotton production. However, to the extent that such precise data is not on the Panel record, to what extent can the Panel rely on less precise data, and on reasonable assumptions, in fulfilling its duty under Article 11 of the *DSU* in this case? **USA**

# ANNEX L-1.19

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

23 December 2003

Please find attached additional questions from the Panel.

We would ask the parties to provide their responses by **12 January 2004.** The parties may submit any comments on each other's responses by **19 January 2004**.

Additional Questions from the Panel to the parties –
following the second substantive Panel meeting

257. The Panel takes note of the Appellate Body Report in *United States – Sunset Review of Anti-Dumping Duties on Corrosion-Resistant Carbon Steel Flat Products from Japan* (DS244), which was circulated to WTO Members on 15 December 2003. The Panel is aware that this report has yet to be adopted by the Dispute Settlement Body. Nevertheless, the Panel asks the parties to respond to the following related questions.

(a) In that report, the Appellate Body cautioned against the "mechanistic" application of the so-called "mandatory/discretionary distinction" and stated that the import of this distinction may vary from case to case (para. 93). For the Appellate Body, the question of whether a measure is mandatory or not is relevant "if at all" only as part of the assessment of whether the measure is, as such, inconsistent with particular obligations. How, if at all, are these statements and the related findings concerning the mandatory/discretionary distinction in that Appellate Body Report relevant to:

(i) the legal standard and elements Brazil sets out to establish its export and prohibited subsidy claims under the provisions of the *Agreement on Agriculture* and Articles 3.1(a) and (b) of the *SCM Agreement*, concerning: **BRA**

- Step 2 payments (see, *e.g.* paras. 244-245 & 250 Brazil's first written submission; Panel Question 109 and parties' responses/comments thereon); and

- export credit guarantee programmes: GSM-102, GSM-103 and SCGP (see, *e.g.*, para. 90 Brazil's oral statement at second Panel meeting).

(ii) the legal standard and elements Brazil sets out to establish its serious prejudice and "threat of serious prejudice" claims, and in particular, its designation of marketing loan; crop insurance; counter-cyclical payments; direct payments and Step 2 as "mandatory"? **BRA**

(iii) the legal standard and elements Brazil sets out to establish its "*per se*" "serious prejudice" claims (*e.g.* Brazil's 9 September further submission, para. 417 *ff*; US oral statement at second Panel meeting, para. 86 *ff.*)? **BRA**

(b) How and to what extent are the legal and regulatory provisions cited in paras. 415 and 423 of Brazil's 9 September further submission "normative" in nature and treated as binding within the US legal system (see, *e.g.*, para. 99 of the Appellate Body Report)? Does your response differ depending on whether the payments are dependent upon market price conditions? **BRA**

(c) Does Brazil challenge as "mandatory" the "subsidies" themselves, the subsidy programmes or the legal/regulatory provisions for the grant or maintenance of those subsidies, or something else? **BRA**

(d) Does the "requirement" upon the CCC to make available "not less than" $5.5 billion annually in guarantees have a normative character and operation? (see, e.g. Brazil's response to Panel Question 142; Exhibit BRA-297, 7 USC 5641(b)(1); 7 USC 5622(a) & (b); paragraph 201 of US 18 November further rebuttal submissions). Is this requirement "mandatory"? If so, how does the CCC have "discretion" not to make this amount of guarantees available in a given year? **USA**

(e) Does the US agree that, under the Budget Enforcement Act of 1990, the Office of Management and Budget classifies the export credit guarantee programs as "mandatory" (see Brazil's response to Panel Question 142, para. 89)? Does this exempt the programmes from the requirement to receive new Congressional budget authority before it undertakes new guarantee commitments (*e.g.* Exhibit BRA-117 (2 USC 661(c)(2))? **USA**

# ANNEX L-1.20

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

24 December 2003

The Panel has received a letter from Brazil dated 23 December (numbered 760), in which it requests extension of certain deadlines. The Panel has also received a response from the US, dated 23 December. Having carefully considered the views of both parties, the Panel notifies the parties that it would amend the four immediate deadlines and schedules as follows:

(1) all submissions originally due 12 January 2004 would now be due **Tuesday, 20 January 2004**

(2) all submissions originally due 19 January 2004 would now be due **Wednesday, 28 January 2004**.

(3) issuance of descriptive part of the report to parties (currently scheduled for 26 January) would be rescheduled to **Wednesday, 4 February 2004**.

(4) receipt of comments by parties on the descriptive part of the report (currently scheduled for 19 February) would be rescheduled to **Monday, 1 March 2004**.

All subsequent dates remain unchanged. However, please be reminded that such dates may be changed in light of further developments.

# ANNEX L-1.21

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

12 January 2004

The Panel takes note that, as stated in its letters dated 18 and 22 December 2003, the United States provided certain data requested by Brazil, but deleted from farm-level planted acreage data any fields that could identify individual farms. Brazil commented on this in its answer to Panel Question No. 196. The United States stated in its letter dated 18 December 2003 that "the release of planted acreage information associated with a particular farm, county and state number is confidential information that cannot be released under US domestic law, in particular the Privacy Act of 1974."

The Panel has reviewed the material submitted in support in Exhibits US-102 through 107, and makes the following observations:

- in the sample Freedom of Information Act ("FOIA") determination submitted to the Panel, the FSA appears to have relied on the fact that the acreage requested concerned a single producer only and that there was no public interest in disclosure of records which did not directly reveal the operations or activities of the US Federal Government;

- in that sample FOIA determination, the FSA applied the relevant US domestic law and expressly acknowledged that disclosure of individual data on commodity programme recipients can be released where the recipients' privacy interests in that information are outweighed by the public interest in disclosure;

- the information which the US asserts that it cannot disclose is relatively generic, concerning planted acreage, and does not relate to one individual but to tens of thousands of business people, and can be protected under the DSU and our working procedures;

- farm-specific information on contract payments is already available free of charge on the internet on the EWG database, having been disclosed under the FOIA; and

- comprehensive farm-specific information concerning rice, including planted acreage data associated with particular farm, county and state numbers, was provided on request under the FOIA to a member of the public who was assisting Professor Sumner in the presentation of Brazil's case to the Panel. A sample of this data is set out in Exhibit BRA-369.

Article 13.1 of the DSU relevantly provides as follows:

> "A Member should respond promptly and fully to any request by a panel for such information as the panel considers necessary and appropriate. Confidential information which is provided shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information."

Pursuant to Article 13 of the DSU, the Panel requests the United States to provide the same data that it agreed to provide in its letters dated 18 and 22 December 2003 but in a format which permits matching of farm-specific information on contract payments with farm-specific information

on plantings. The Panel considers it both necessary and appropriate to seek this information in a suitable format in order to undertake its mandate to assist the DSB in discharging its responsibilities under the DSU and the covered agreements. Disclosure is sought to permit an assessment of the total expenditures of PFC, MLA, CCP and direct payments by the US Federal Government to upland cotton producers in the relevant marketing years.

The United States may again designate the data as confidential in accordance with paragraph 3 of the Panel's working procedures. Disclosure can be limited to Brazil's delegation, the Panel and Secretariat staff assisting the Panel. The United States may also protect the identity of individual producers by, for example, using substitute farm numbers which still permit data-matching.

A refusal by the United States to provide the information as requested without an adequate explanation may lead to adverse inferences being drawn.

The Panel reminds Brazil that it may not disclose the above information outside its delegation in this proceeding if it is designated by the United States as confidential.

The Panel also wishes to pose the following additional question to Brazil:

> 258. Please submit a detailed explanation of the method by which one could calculate total expenditures to producers of upland cotton under the four relevant programmes on the basis of the data which it seeks.

The Panel asks the parties to provide the respective information requested by 20 January 2004.

# ANNEX L-1.22

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

3 February 2004

Please find attached the Panel's supplementary request to the United States for information pursuant to Article 13 of the DSU, as well as additional questions to both parties. The Panel would like to ask the parties to provide the information requested and responses to the additional questions by **Wednesday 11 February 2004**. The Parties are invited to submit, by **Wednesday 18 February 2004,** any comments on material submitted on 11 February by the other party.

In light of the above development, the Panel intends to postpone the issuance of the descriptive part until **Friday 20 February 2004**. The remainder of the Panel's schedule remains unchanged for the time being.

The Panel recalls that it indicated, in its communication dated 14 November, that "[i]f necessary, at the discretion of the Panel, a further Panel meeting with the parties may be held" to address the issue of econometric models. The Panel would like to indicate that, at this stage, it does not see the need to hold such a meeting.

The Panel has noted the US letter dated 30 January, Brazil's response dated 2 February, and a further letter from the US dated 3 February 2004. Keeping in mind the dictates of due process and relevant provisions of the covered agreements -- including Article 12.2 of the DSU which requires Panel procedures to provide sufficient flexibility so as to ensure high-quality panel reports while not unduly delaying the panel process -- the Panel is of the view that the above revisions to the timetable provide the United States and Brazil sufficient opportunity to comment on each other's comments. Accordingly, the US is free to submit its comments on Brazil's above mentioned submission by 11 February (**but no later**).

This is without prejudice to any definitive view of the Panel on the characterization of any of the above communications by the parties and, in particular, of the document submitted by Brazil entitled "Brazil's Comments and Requests Regarding Data Provided by the United States on 18/19 December 2003 and the US Refusal to Provide Non-scrambled Data on 20 January 2004".

# PANEL'S SUPPLEMENTARY REQUEST FOR INFORMATION PURSUANT TO ARTICLE 13 OF THE DSU AND ADDITIONAL QUESTIONS

The Panel has reviewed the United States' letters dated 18 December 2003 and 20 January 2004, and the material submitted in support in Exhibits US-102 through 107, and Brazil's response to Question No. 258.

Pursuant to Article 13 of the DSU, the Panel requests the United States to provide:

(a) such of the information requested on 12 January 2004 in the format requested, as regards payment recipients who do not have interests protected under the Privacy Act 1974, if any; and

(b) the following information for each of the PFC, MLA, CCP and direct payments programmes for each of the 1999, 2000, 2001 and 2002 marketing years, showing as many of the underlying calculations as possible:

- How many farms had fewer upland cotton planted acres than upland cotton base acres, or equal numbers of each? We refer to these as "Category A" farms. What was the total of their upland cotton base acreage? What was the total of their upland cotton planted acreage?
    - How many Category A farms did not plant any other covered commodities? What was the total of their upland cotton base acreage? What was the total of their upland cotton planted acreage?
- How many farms had more upland cotton planted acres than upland cotton base acres? We refer to these as "Category B" farms. What was the total of their base acreage for each covered commodity, including upland cotton? What was the total of their planted acreage for each covered commodity, including upland cotton? Please also provide the following information concerning these farms:
    - How many Category B farms had equal numbers of acres planted to all covered commodities and base acres for all covered commodities? We refer to these as "Category B-1" farms. What was the total of the base acreage of Category B-1 farms for each covered commodity, including upland cotton? What was the total of the planted acreage of Category B-1 farms for each covered commodity, including upland cotton?
    - How many Category B farms had fewer acres planted to all covered commodities than base acres for all covered commodities? We refer to these as "Category B-2" farms. How much was the total acreage of Category B-2 farms planted to all covered commodities less than their base acreage for all covered commodities? What was the total of the base acreage of Category B-2 farms for each covered commodity, including upland cotton? What was the total of the planted acreage of Category B-2 farms for each covered commodity, including upland cotton?
    - How many Category B farms had more acres planted to all covered commodities than base acres for all covered commodities? We refer to these as "Category B-3" farms.

How much did the total acreage of Category B-3 farms planted to all covered commodities exceed their base acreage for all covered commodities? What was the total of the base acreage of Category B-3 farms for each covered commodity, including upland cotton? What was the total of the planted acreage of Category B-3 farms for each covered commodity, including upland cotton?

- How many farms had upland cotton planted acres but no upland cotton base acres? We refer to these as "Category C" farms. What was the total of the base acreage of Category C farms for each covered commodity? What was the total of the planted acreage of Category C farms for each covered commodity, including upland cotton?

- In addition, for the marketing year 2002, please reply to the above questions with respect to all crops on cropland covered by the acreage reports, not simply commodities covered by the programmes.

- In addition, please provide all of the above information on a state-by-state basis.

You may wish to present your responses regarding acreage for each covered commodity in a table as follows:

**TABLE**

**Programme:**
**Marketing year:**
**Category of Farm:**

| | Covered commodities | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Upland Cotton | Barley | Corn | Oats | Rice | Sorghum | Wheat | Soybeans* | Other Oilseeds* |
| Base acres | | | | | | | | | |
| Planted acres | | | | | | | | | |

* Where applicable.

The Panel considers it both necessary and appropriate to seek this information to undertake its mandate to assist the DSB in discharging its responsibilities under the DSU and the covered agreements. However, the Panel reserves its views as to the extent to which any methodology might be appropriate to determine support provided to upland cotton in the circumstances of this case.

A refusal by the United States to provide the information as requested without an adequate explanation may lead to adverse inferences being drawn.

The Panel also wishes to pose the following additional questions to the United States (Nos. 259 – 275) and to Brazil (No. 276):

259. With respect to the Privacy Act of 1974, 5 U.S.C. 552a:

(a) Whose interests are protected under section 552a(b) in light of the definition of "individual" in section 552a(a)(2)? Do all payment recipients, including corporations and organizations, have Privacy Act rights? If not, is the United States prevented by its domestic law from releasing such of the information requested on 12 January 2004 as relates to payment recipients without Privacy Act rights? Please explain with references to case law.

(b) The Panel notes that data concerning the four relevant programmes, in particular, payment amounts, identified by specific farms, is freely available on the internet. Please explain why that data can be disclosed but the requested planted acreage data cannot. Do individual recipients have Privacy Act rights with respect to their entrepreneurial activity? Please explain with references to case law.

(c) Please provide any further available evidence of the USDA's long-standing policy that planted acreage information will not be released.

260. On 27 August 2003, in its response to Question No. 67 *bis*, the United States indicated that "it does not maintain information on the amount of expenditures made under the cited programmes to US upland cotton producers". On 12 January 2004, the Panel requested the United States to provide information "to permit an assessment of the total expenditures of PFC, MLA, CCP and direct payments by the US Federal Government to upland cotton producers in the relevant marketing years". On 20 January 2004, the United States informed the Panel that "the data already provided by the United States to Brazil and the Panel would permit an assessment of total expenditures of decoupled payments to farms planting upland cotton." Is the latest statement responsive to the Panel's request? If so, how can it be reconciled with the first statement?

261. Please confirm that each record in the actual planting database relates to a specific farm (Filenames: rPFCplac and rDCPplac in Exhibits US-111 and US-112). For example, in the data from rDCPplac:

*First line*:
Field9;Field16;Field22;Field28;Field34;Field40;Field46;Field52;Field58;Field64;Field70;Field76;Field82;Field88;Field94;Field100

*Second line*:
237.10;23059.80;5566.20;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00;0.00

Does the second line represent data on plantings by the same farm?

262. The Panel has noted the two CD-ROMs delivered by the US in the evening of 23 December 2003. They are marked "US-111" and "US-112" respectively, but the contents actually do not correspond to the indication. The Panel also takes note of the US letter dated 28 January 2004 and the CD-ROM delivered together with it. For the record, please clarify the correct CD-ROMs and provide corresponding descriptions of their contents with exhibit numbers.

263. The Panel has noted that the United States' response to Question No. 214 refers to Exhibits US-117 and US-118. Are these the correct documents to which the United States intended to refer in that response? If not, please provide a copy of regulations regarding the

marketing loan programme and loan deficiency payments published at 58 Federal Register 15755, dated 24 March 1993.

264. The Panel asks the United States to clarify certain aspects of Exhibit US-128:

(a) Is the Panel correct in understanding that -- as Brazil asserts in footnotes 290 and 291 of Brazil's 28 January 2004 comments on US responses to questions -- Exhibit US-128, all data are presented on a cohort-specific basis? If so, please also present the information originally requested by the Panel in another chart containing *programme* (as opposed to cohort-specific) activity by fiscal year.

(b) Does the US agree with the statement in paragraph 135 of Brazil's 28 January 2004 comments on US responses to questions that the difference between the $1,148 billion in the chart at para. 165 of Brazil's 11 August answers to questions and the $666 million amount in Exhibit US-128 ($1.75 billion) closely corresponds to the total "Claims rescheduled" figure reported by the US in Exhibit US-128 (column F)?

(c) Does the US agree that from the formula in column G (that is: (Column (D) minus (E) minus (F)), it follows that a rescheduled claim no longer constitutes an outstanding claim at the moment the terms of the re-scheduling are agreed and that a rescheduling is treated as 100 per cent recovered, as Brazil states in footnote 292 of Brazil's 28 January 2004 comments on US responses to questions?

(d) Is the Panel correct in understanding that the amount of $888,984,792.04 in column F in Exhibit US-128 under "ALL" for 1992 represents the total continuing amount of unrecovered claims for the 1992 cohort, and that the amount of 387,692,219.39 represents the total continuing amount of unrecovered claims for the 1993 cohort, etc? Please indicate and substantiate how much principal and/or interest has actually been paid/recovered/rescheduled *annually* 1992-2003 in respect of each of the amounts shown in Columns D, E & F in the table.

265. In connection with the US response to Question No. 225, please also provide amounts actually "written off" and "forgiven" annually for each *post*-1992 cohort, with annual details of country and amount (principal/interest).

266. What are the precise terms, conditions and duration of each rescheduling reflected in column F in Exhibit US-128?

267. Is the Panel correct in understanding that "interest collected on reschedulings" in Column M in Exhibit US-128 refers not to amounts that have been actually collected by the CCC but rather to interest capitalized in conjunction with the rescheduling? If so, what are the terms, conditions and duration of the arrangements pertaining to these amounts?

268. Concerning Column N in Exhibit US-128, please elaborate upon "Interest earned from US Treasury on uninvested funds". What is the source and authority for these funds and for the interest thereon to be part of the CCC total revenues? What are the terms, conditions and duration of the arrangements pertaining to these amounts?

269. The Panel notes the table submitted by the US in its answer to Question No. 224 (CCC Financing Account Payments of Interest on Borrowings from Treasury and Interest Earned on Uninvested Funds). Is the Panel correct in understanding that the figures in this table correspond to the "ALL" figures in Columns I and N of Exhibit US-128?

270. With respect to Column I in Exhibit US-128, ("Interest paid on borrowing from US Treasury") and Note 8, p. 25 of Exhibit US-129:

(i) please provide the total annual amounts (interest bearing and non-interest bearing) borrowed by the CCC from the US Treasury (annually since 1992), as well as the terms, conditions, interest rate (where applicable) and duration of such borrowing. Please provide details of any other amount borrowed by the CCC from the US Treasury during this period that may not have formed part of the regular annual borrowings.

(ii) Please explain the nature of "CCC's permanent indefinite borrowing authority from Treasury" referred to in Note 8, p. 25 of Exhibit US-129.

(iii) What determines the level of CCC export credit guarantee borrowing (interest-bearing and non-interest-bearing)? Is the interest-free borrowing up to the amount of unreimbursed realized losses?

(iv) Why are repayments applied to non-interest bearing notes first, as indicated at Note 8, p. 25 of Exhibit US-129?

271. Note 8, p. 25 of Exhibit US-129 states that "In fiscal year 2003, CCC was fully reimbursed for its prior year net realized losses." Please indicate the amounts of prior year net realized losses (annually, since 1992) for which the CCC has been fully reimbursed.

272. With respect to the US response to Question No. 226, is the Panel correct in understanding that the reflection of write-offs as part of the operating loss of the CCC which in turn was replenished through the annual appropriations process ended with the entry into force of the FCRA in fiscal year 1992? If not, what amounts have been replenished through this process annually since fiscal year 1992?

273. With respect to the US response to Question No. 225, what criteria does the CCC apply to "independently determine" that a debt is uncollectible? For post-1992 cohorts, what are these uncollectible amounts (annually) and how, if at all, are such "uncollectible amounts" shown in Exhibit US-128?

274. The Panel notes the US statement in the US response to Question No. 81 that "All rescheduled claims are currently performing " and that "all payments due up to this point under [rescheduling] agreements have been received". However, the Panel also notes Exhibit US-129 (in particular, Note 5 on p. 22) and Brazil's reference thereto in Brazil's 28 January comments on the US response to Question No. 222. In this connection:

(a) How does the US respond to Brazil's statement in Brazil's 28 January comments that Exhibit US-129 confirms that rescheduling of export credit guarantee receivables cover both principal and interest, thereby confirming that not all of the rescheduled debt performs and that additional interest charges were also rescheduled?

(b) In Note 5 on p. 22 of Exhibit US-129, what is the definition of "non-performing"? What is the meaning of "delinquent"? What is the current principal balance and amount of interest of the three CCC export credit guarantee programme "receivables" in a non-performing status (individually and together, for GSM 102, GSM 103 and SCGP))? What is the amount of interest on non-reporting "receivables"?

(c) The Panel notes the US reference to the "Paris Club" in US response to Question No. 225. What is the P.L. 480 programme referred to in Note 5 on p. 22 of Exhibit US-129 (including the Paris Club debt reduction process and the HIPC Initiative) ? To what extent is the P.L. 480 programme and Paris Club process relevant to the export credit guarantee programmes at issue in this dispute? Please identify and give the amounts of all CCC export credit guarantee debt subject to the P.L. 480 debt reduction (or other similar) process since 1992.

(d) Can the US explain the process referred to in the second column of Note 5 on p. 22 ("CCC is awaiting an apportionment from the Office of Management and Budget before the transaction can be completed. Until such time, however, there is a 100% subsidy allowance established against the relevant debt as of September 30, 2003.") Please provide details of all such "apportionments" relating to the three export credit guarantee programmes in fiscal years 1992-2003.

275. Please provide evidence (or cite relevant portions of the record) that the premium rates for the export credit guarantee programmes are "reviewed annually" as stated in US 28 January comments on response to Question No. 223 (see also US 22 December response to Question No. 107; Brazil's 28 January 2004 comments on responses to Question No. 223.).

The Panel wishes to pose the following additional question to Brazil:

276. The Panel notes the parties' responses and comments relating to Question No. 252 concerning the time period within which any prohibited measure must be withdrawn within the meaning of Article 4.7 of the *SCM Agreement*. Please supplement your original response, taking into account the particular nature of each alleged prohibited subsidy measure (i.e. "Step 2" payments under Section 1207(a) of the 2002 FSRI Act, export credit guarantee programmes and the ETI Act) and the functioning of the US legal and regulatory system in respect of these measures.

# ANNEX L-1.23

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

16 February 2004

1. The Panel is in receipt of the letter from the U.S. dated 11 February, the response from Brazil dated 13 February and another US letter dated 16 February.

2. On page 2 of the United States letter of 11 February, with respect to item (b) of the Panel's supplementary request for information, the United States asks the Panel to specify which commodities are "covered commodities". We would like to clarify that "covered commodities" and "commodities covered", as used in the bullet points and sub-bullets, refer to wheat, corn, grain sorghum, barley, oats, upland cotton, rice, soybeans, "other oilseeds" as defined in Section 1001(9) of the FSRI Act of 2002, and peanuts, except that soybeans do not apply to PFC payments and "other oilseeds" and peanuts do not apply to PFC or MLA payments.

3. The Panel also confirms that the additional information sought for marketing year 2002 "with respect to all crops on cropland covered by the acreage reports" refers to the reports filed under Section 1105(c) of the FSRI Act of 2002. The relevant portions of the "above questions" are those that ask for planted acreage information for each Category of farms. All crops other than "covered commodities" as defined in Section 1001(4) of the FSRI Act of 2002 and peanuts may be aggregated as "other crops".

4. In relation to the third point the US raises in its letter dated 11 February, the Panel informs the parties as follows:

(a) Without prejudice to whether any further comments are necessary, we would consider the US request for another opportunity to comment if Brazil submits any such comments on the US submission entitled "Comments of the United States of America on the Comments of Brazil to US data Submitted on 18 and 19 December 2003" (submitted 11 February).

(b) The US would be granted until **Tuesday 3 March**, at the latest, to submit all remaining data that was requested by the Panel in its communication dated 3 February.

(c) The issuance of the descriptive part would be changed to **Friday 5 March**.

(d) The remainder of the Panel's schedule remains unchanged for the time being.

5. The Panel notes that the data submitted by the United States, as described in Exhibit US-145, does not include data on MLA and CCP payments. The Panel asks the United States to address these payments and include this information in its response to the supplementary request for information.

6. The Panel also notes that the US response to Panel Question No. 263 refers to Exhibit US-263. Could the United States please confirm that this should refer to Exhibit US-146.

7. The Panel further notes Brazil's request for an opportunity to comment after the United States has submitted the data referred to in paragraph 4(b) above. The Panel will consider this request after it has had the opportunity to review data submitted by the United States.

# ANNEX L-1.24

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

20 February 2004

1. The Panel refers to its communication dated 16 February. Item 4 (a) of this communication deals with the request made by the United States (in its letter dated 11 February) that it be provided another opportunity to comment on a certain submission from Brazil. The Panel has informed parties in the same 4 (a) that it would consider this request if Brazil submits any such comments. The Panel has received on 18 February a submission entitled "Brazil's Comments on United States 11 February Comments on Brazil's 28 January 'Comments and Requests Regarding Data Provided by the United States on 18/19 December 2003 and the US Refusal to Provide Non-scrambled Data on 20 January 2004'". The Panel understands that this submission corresponds to what the United States was requesting to be given another opportunity to comment on. The Panel would now allow the United States to submit, if it so wishes, comments on this specific submission from Brazil by **Wednesday 25 February**. The Panel informs parties that it does not see, at this time, the need to have further opportunities to comment on this submission (if any) from the United States.

2. The Panel also takes note of Brazil's observation in paragraph 33 of its 18 February "Comments on US 11 February 2004 Answers to Additional Questions from the Panel Following the Second Meeting of the Panel with the Parties" that "...the Panel did not respond to Brazil's request that it deny the United States' efforts to decide at what pace it wishes to offer responses to the Panel's questions". The Panel also recalls the United States' original statement in connection with Question 264(b) that it "expects to be able to provide an answer within the same time period as its response to the Panel's supplemental request for information." In this connection, we wish to draw the parties' attention to our statement in item 4(b) of the 16 February communication, and to clarify that that statement also pertains to the United States response to Question 264(b). Thus, the United States has until **3 March**, at the latest, to submit its response. We further note that Brazil states in the same paragraph 33 that it "reserves the right to comment" on the United States response to Question 264(b). In line with what we mentioned in paragraph 7 of our communication dated 16 February, we would decide whether it is appropriate to give Brazil the opportunity, *after* we have had the opportunity to review the response from the United States.

# ANNEX L-1.25

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

24 February 2004

The Panel is in receipt of the letter from the United States dated 23 February 2004.

After carefully considering the views of the United States, we now change the date by which the United States is expected to submit its comment from the date originally designated as 25 February in our communication dated 20 February, to **3 March 2004**.

All other statements in our communication dated 20 February remain unchanged.

# ANNEX L-1.26

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

4 March 2003

The Panel is in receipt of the submissions from the United States dated 3 March. The Panel reminds parties of our communications dated 16, 20 and 24 February 2004, especially in relation to our intention to consider whether or not to allow Brazil to comment on certain US submissions. After carefully examining yesterday's submission from the United States, the Panel informs parties of the following amendment to the current timetable.

1. Brazil is granted until **10 March 2004** to submit comments, if any, on (a) the data supplied by the United States, dated 3 March, in the form of a CD-ROM (i.e. 8 data files therein) and (b) the submission entitled "Answers of the United States of America to Questions 264(b) Dated 3 February 2004, from the Panel to the Parties following the Second Panel Meeting". The Panel does not see the need to grant Brazil the opportunity to comment on any other submission from the United States.

2. The United States is granted until **15 March 2004** to submit comments, if any, on the submission from Brazil to be received by 10 March 2004.

3. The descriptive part will be issued on **16 March 2004**.

4. Comments on the descriptive part is to be received by **30 March 2004**.

5. The rest of the timetable remains unchanged for now.

# ANNEX L-1.27

## COMMUNICATION TO BRAZIL AND THE UNITED STATES

7 April 2004

The Panel informs the parties of the following change in the timetable for this dispute. As indicated, the Panel now intends to issue the interim report to the parties on Monday 26 April 2004.

| | |
|---|---|
| Issuance of the interim report, including the findings and conclusions, to the parties: | 26 April 2004 |
| Deadline for parties to request review of part(s) of report: | 10 May 2004 |
| Interim review meeting with the parties, if requested. If interim review meeting not requested, the deadline for comments on each others' comment. | 3 June 2004<br>(if a review meeting is to be held, **4 June** as well as 3 June, as necessary.) |
| Issuance of final report to the parties: | 18 June 2004 |
| Circulation of the final report to Members: | [after translation] |

# ANNEX L-2.1

## COMMUNICATION TO THIRD PARTIES

28 May 2003

Your delegation has reserved its rights to participate as a third party in the Panel *United States - Subsidies on Upland Cotton (DS267)*- Complaint by Brazil - established by the DSB on 18 March 2003. The Panel has now started its work.

Attached you will find the timetable and working procedures adopted by the Panel for this dispute in accordance with Article 12.1 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*DSU*").

As indicated in the attached timetable, prior to the submission by the parties of their first written submissions in these proceedings, the Panel has requested the parties to address, in their initial briefs to the Panel (to be submitted on 5 June 2003), the following:

- whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue. For greater clarity, the Panel invites the parties, during this initial stage of the proceedings, to focus on matters of legal interpretation, rather than upon the submission of any factual evidence that might be associated with the substantive elements of Article 13.

As also indicated in the attached timetable, the Panel will invite the parties to submit any written comments on each other's comments on this issue (i.e. on 13 June 2003). The Panel intends to rule on these issues on 20 June 2003, prior to the parties' submission of their first written submissions.

We have invited the parties to serve also on the third parties their initial briefs and any responding comments. The Panel also invites third parties to submit any written comments they might have concerning the initial phase of these proceedings. **The deadline for any initial third party comments on the specific issue identified above is 10 June 2003.**

Moreover, as also indicated in the attached timetable, the Panel invites your delegation to present its views at a meeting with the parties to the dispute and other third parties, which is scheduled for 24 July 2003. The exact time and venue will be communicated to you in due time.

The Panel would appreciate it if your delegation could provide the Panel with your written submission by 5.30 p.m. on 15 July 2003. If you so wish, this written statement may take the place of an oral presentation to the Panel. The Panel would appreciate the submission being kept as short as possible. I would appreciate it if you would advise the Panel before 1 July 2003 through me as Secretary to the Panel (telephone 022/739 6419) whether your delegation will be represented at the meeting and whether your delegation will require interpretation services into and out of English.

# ANNEX L-2.2

## COMMUNICATION TO THIRD PARTIES

25 July 2003

Please find attached a communication from the Panel on the following issues:

1. The Panel's view on the preliminary ruling requested by the United States.

2. Panel's questions to third parties.

The Panel's questions are intended to facilitate the work of the Panel, and do not in any way prejudge the Panel's findings on the matter before it. Nor does the fact that the Panel has placed these questions under certain headings prejudge the Panel's findings on the matter before it. Each third party is free to respond to or comment on questions posed to the other third parties.

Please be reminded that you are requested to submit answers by the close of business of 4 August 2003. Subsequently, third parties can submit comments to other's responses by the close of business 22 August.

[1st attachment omitted]

Questions from the Panel to the third parties –
First session of the first substantive Panel meeting

ARTICLE 13 OF THE *AGREEMENT ON AGRICULTURE*

1. Australia has argued that Article 13 of the *Agreement on Agriculture* is an affirmative defence. How do you reconcile this with your view that the conditions in Article 13 are a "prerequisite" to the availability of a right or privilege? **Australia** Would other third parties have any comments on Australia's assertion? **3RD parties, in particular Argentina, Benin, China, Chinese Taipei**

ARTICLE 13(B) OF THE *AGREEMENT ON AGRICULTURE*: DOMESTIC SUPPORT MEASURES

2. Please explain the difference, if any, between the meaning of "defined" and the meaning of "fixed" in the phrase "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the *Agreement on Agriculture* . **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

3. Please explain the meaning of "a" in "a defined and fixed base period" in paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*, the meaning of "the" in "the base period" in paragraphs 6(b), (c) and (d), and the difference between these and the phrase "based on the years 1986-88" in Annex 3. **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

4. How often can a Member define and fix a base period in accordance with paragraph 6 of Annex 2 of the *Agreement on Agriculture*? **3rd parties, in particular Australia, Argentina, Canada, China, EC, NZ**

5. Do you agree that a payment penalty based on crops produced is "related to type of production"? **EC**

6. Please explain the meaning of the word "criteria" in Article 6.1 and 7.1. What effect, if any, does the use of the word "Accordingly" in paragraph 1 of Annex 2 of the *Agreement on Agriculture* have on the meaning of the preceding sentence? **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

7. Please explain the meaning of the words "the fundamental requirement" as used in paragraph 1 of Annex 2 of the *Agreement on Agriculture*. **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

8. In your oral statement, you emphasize the use of the word "criteria" in other parts of the *Agreement on Agriculture*, as distinct from the reference to "fundamental requirement" in the first sentence of paragraph 1 of Annex 2. Is it the case that sub-paragraphs (a) and (b) of paragraph 1 of Annex 2 are also "criteria"? **EC**

9. If the first sentence of paragraph 1 of Annex 2 is a stand-alone obligation, does this allow effects-based claims of non-compliance with Annex 2? If so, how does this affect the purpose of Article 13(b)? **3rd parties' in particular Australia, Argentina, Canada, EC, NZ**

10. If the first sentence of paragraph 1 of Annex 2 is not a stand-alone obligation, then must new, non- or minimally trade-distorting measures that do not conform to the criteria listed in Annex 2 be classified as non-Green Box? **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

11. If the first sentence of paragraph 1 of Annex 2 expresses a general principle which informs the interpretation of the criteria in Annex 2, please explain how this affects the assessment of the direct payments programme's compliance with paragraph 6 of Annex 2. **3rd parties, in particular, Australia, Argentina, Canada, EC, NZ**

12. Where does Article 13(b) require a year-on-year comparison? **3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

13. Does a failure by a Member to comply in a given *year* with either the chapeau of Article 13(b) or the proviso in subparagraph (ii) of Article 13(b) impact its entitlement to benefit in an earlier or a later year from the exemption from action provided by Article 13(b)? **3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

14. Does a failure of a Member to comply with Article 13(b) in respect of a *specific commodity* impact its entitlement to benefit in respect of other agricultural products from the exemption from action provided by Article 13(b)? **3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

15. Is there any basis on which counter-cyclical payments could be considered product-specific? **3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

16. If the word "specific" were deleted from Article 13(b)(ii), would this change the meaning of the subparagraph? **3RD parties, in particular Australia, Argentina, Benin Canada, China, EC, NZ**

17. What is the relevance, if any, of the concept of "specificity" in Article 2 of the *SCM Agreement* and references to "a product" or "subsidized product" in certain provisions of the *SCM Agreement* to the meaning of "support to a specific commodity" in Article 13(b)(ii) *Agreement on Agriculture*? **3RD parties, in particular Australia, Argentina, Canada, China, EC, NZ**

18. Benin's oral statement considers the phrase "support to a specific commodity" in Article 13(b)(ii) of the *Agreement on Agriculture*. How does Benin believe that phrase is best interpreted. Please substantiate your response, commenting on other submissions by parties and third parties as you believe appropriate. **Benin**

19. Where does Article 13(b)(ii) require a year-on-year comparison? **3rd parties, in particular Australia, Argentina, Canada, EC, NZ**

20. Does Article 13(b)(ii) require a comparison of support granted with support decided? How could such a comparison be made?

21. Please comment on Brazil's assertion that the terms "grant" and "decided" in Article 13(b)(ii) have broadly the same meaning. If so, why did the drafters not use the same term? **3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

22. What is the meaning of "support" in *Agreement on Agriculture* 13(b)(ii) ? Why would it be used differently from Annex 3, where it refers to total outlays? **3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

23. Should support be compared under Article 13(b)(ii) in terms of unit of production or total volume of support or both? **3rd parties, in particular, Australia, Argentina, Canada, China, EC, NZ**

24. Please provide any written drafting history which could shed light on why the proviso was added to what is now Article 13(b)(ii) of the *Agreement on Agriculture* and, in particular, why the words "grant" and "decided" were used. **EC**

25. Please comment on an interpretation of the words "decided during" in Article 13(b)(ii) that would read them as synonymous with the words "authorized during". **3rd parties, in particular Australia, Argentina, Canada, China, EC, NZ**

26. Under Article 13(b)(ii), a comparison is required between support at different times. One of the issues which is contested between the parties is whether the only later period that the Panel can consider is the present one (i.e. the period underway at the time of the request for establishment of the Panel). This argument is based on the present tense of the words "do not grant" in the English text. The Panel asks whether there is any difference in the verb tense as used in the Spanish-language text, or any other difference which might aid the Panel in interpreting these words? **Argentina, EC, Paraguay, Venezuela**

27. If the 1992 "decision" led to or was the funding source for the money provided in 1992 and later years, is it the full amount of all that funding that constitutes the "support" decided in 1992? If the answer to this question is that it is the full amount of all the support provided pursuant to the "decision" that must be taken into account, must this be compared with the total amount of support that will or might flow from the decision made in the more recent period for the purposes of the comparison required under Article 13(b)(ii)? If a Member did not make a "decision" (however that may be interpreted) in 1992 about "support", is it the case that the Member has a zero base for the purposes of the comparison required under Article 13(b)(ii)? **EC**

28. In paragraph 13 of Australia's oral statement, you state that a "question" is: "could conditions of price competition for the purposes of a non-violation or impairment claim be assessed solely on the basis of budgetary outlay figures, as argued by Brazil, or on the basis of a rate of payment, as argued by the United States? In Australia's view, both factors put forward by Brazil and the United States would properly form a part of that assessment, but not the whole." Could you please clarify this statement (indicating other elements which would complete the "whole" and explain its relevance for the purposes of our consideration of Article 13 of the *Agreement on Agriculture*? **Australia, EC**

EXPORT CREDIT GUARANTEE PROGRAMMES

29. (a) Is an export credit guarantee a financial contribution in the form of a "potential direct transfer of funds or liabilities (e.g. loan guarantee)" within the meaning of Article 1.1(a)(1)(i) of the *SCM Agreement*? Why or why not? **3rd parties, in particular, Argentina, Canada, EC, NZ**

(b) How, if at all, would this be relevant to the claims of Brazil? **3rd parties, in particular, Argentina, Canada, EC, NZ**

30. The Panel could arguably take the view that Articles 1 and 3 of the *SCM Agreement* were relevant in assessing the WTO-consistency of United States export credit guarantees. The Panel would therefore appreciate third party views on this situation, including with respect to the viability of an *a contrario* interpretation of item (j) of the Illustrative List (as addressed in paragraphs 180-183 of the United States' first written submission). **3rd parties, in particular, Argentina, Canada, EC, NZ**

31. If the Panel decides to refer to provisions of the *SCM Agreement* for contextual guidance in the interpretation of the terms in Article 10 *Agreement on Agriculture*, should the Panel refer to item (j) or Articles 1 and 3 of the *SCM Agreement* or both? . **3rd parties, in particular, Argentina, Canada, EC, NZ**

32. The Panel's attention has been drawn to Article 14(c) of the *SCM Agreement* (see third party submission of Canada) and to the panel report in DS 222 *Canada- Export Credits and Loan Guarantees*. How and to what extent are Article 14(c) of the *SCM Agreement*, and the cited panel report, relevant to the issue of whether or not the United States export credit guarantee programmes confer a "benefit"? What would the appropriate market benchmark be to use for any comparison? Please cite any other relevant material. . **3rd parties, in particular, Argentina, Canada, EC, NZ**

33. What is the relevance (if any) of Brazil's statement that : "...export credit guarantees for exports of agricultural exports [sic] are not available on the marketplace by commercial lenders." . **3rd parties, in particular, Argentina, Canada, EC, NZ**

34. Comment on the United States' view of the meaning of "long term operating costs and losses" in item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement* as meaning "claims paid" under the export credit guarantee programmes. Does the United States' interpretation give meaning to both "costs" and "losses"? Do claims paid represent "losses"? **3rd parties, in particular, Argentina, Canada, EC, NZ**

35. Did the drafters of the *Agreement on Agriculture* include export credit guarantees in Article 9.1 of the *Agreement on Agriculture*? Why or why not? **3rd parties, in particular, Argentina, Canada, EC, NZ**

36. Please explain any possible significance the following statements may have in respect of Brazil's claims about GSM102 and 103 (7 CFR 1493.10(a)(2), Exhibit BRA-38) **3rd parties, in particular, Argentina, Canada, EC, NZ**

(a) "The programmes operate in cases where credit is necessary to increase or maintain US exports to a foreign market and where US financial institutions would be unwilling to provide financing without CCC's guarantee. (7 CFR 1493.10(a)(2) Exhibit BRA-38)

(b) "The programmes are operated in a manner intended not to interfere with markets for cash sales. The programmes are targeted toward those countries where the guarantee is necessary to secure financing of the exports but which have sufficient financial strength so that foreign exchange will be available for scheduled payments." (7 CFR 1493.10(a)(2) Exhibit BRA-38)

(c) "In providing this credit guarantee facility, CCC seeks to expand market opportunities for US agricultural exporters and assist long-term market development for US agricultural commodities." (7 CFR 1493.10(a)(2) Exhibit BRA-38)

37. The United States seems to argue that, at present, by virtue of Article 10.2 of the *Agreement on Agriculture*, there are **no** disciplines on agricultural export credit guarantees under the *Agreement on Agriculture* (or the *SCM Agreement*).

(a) Comment on the following proposition: a WTO Member may therefore extend agricultural export credit guarantees without charging a premium, and for an indefinite period, in addition to any other terms and conditions it may wish? How would this reconcile with the title of Article 10 of the *Agreement on Agriculture* ("Prevention of Circumvention on Export Subsidy Commitments"), and with other commitments contained in the *Agreement on Agriculture*? Please cite any relevant material, including any past WTO dispute settlement cases. **3rd parties, in particular, Argentina, Canada, EC, NZ**

(b) If, as the United States argues, there are no disciplines on export credit guarantees in the *Agreement on Agriculture*, how could export credit guarantees "conform fully to the provisions of Part V" of the *Agreement on Agriculture* within the meaning of Article 13 (how can you assess "conformity" or non-conformity with non- existent disciplines)? **3rd parties, in particular, Argentina, Canada, EC, NZ**

STEP 2 PAYMENTS

38. Please comment on the statement in note 119 of the United States' first written submission that "...to the extent a consumer that had intended to export instead opens the bale, then that consumer could still obtain the Step 2 payment upon submission of the requisite documentation". The Panel notes that Step 2 payments all involve upland cotton produced in the United States. What are the two distinct factual situations that Step 2 payments involve? Other than the panel report in *Canada-Dairy* and the findings of the Appellate Body in *US-FSC* (21.5)[1], do any other dispute settlement reports offer guidance on this issue? For example, how, if at all is the Appellate Body's report in *Canada-Aircraft* relevant here?[2] . **3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

39. Please comment on the United States assertions at paragraph 129 of its first written submission, that "[t]he programme is indifferent to whether recipients of the benefit of this programme are exporters or parties that open bales for the processing of manufacturing raw cotton into cotton products in the United States." . **3rd parties, in particular, Australia, Argentina, NZ, Paraguay**

40. With respect to paragraph 32 of the oral statement of the EC, are subsidies contingent on the use of domestic goods consistent with the *AoA*? Does the phrase "provide support in favour of domestic producers" refer to, and/or permit such subsidies? What is the meaning and relevance of this (if any) to Brazil's claims under Article 3 of the *SCM Agreement* and Article III:4 of the GATT 1994.. **3rd parties, in particular, Australia, Argentina, EC, NZ, Paraguay**

---

[1] "We recall that the ETI measure grants a tax exemption in two different sets of circumstances: (a) where property is produced *within* the United States and held for use *outside* the United States; and (b) where property is produced *outside* the United States and held for use outside the United States. Our conclusion that the ETI measure grants subsidies that are export contingent in the first set of circumstances is not affected by the fact that the subsidy can also be obtained in the second set of circumstances. The fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances. [1] Conversely, the export contingency arising in these circumstances has no bearing on whether there is an export contingent subsidy in the second set of circumstances. Where a United States taxpayer is simultaneously producing property within and outside the United States, for direct use outside the United States, subsidies may be granted under the ETI measure in respect of both sets of property. The subsidy granted with respect to the property produced within the United States, and exported from there, is export contingent within the meaning of Article 3.1(a) of the *SCM Agreement*, irrespective of whether the subsidy given in respect of property produced outside the United States is also export contingent."

3. [2] There, the Appellate Body stated that,

> "the fact that some of TPC's contributions, in some industry sectors, are *not* contingent upon export performance, does not necessarily mean that the same is true for all of TPC's contributions. It is enough to show that one or some of TPC's contributions do constitute subsidies "contingent ... in fact … upon export performance".[2]

ETI ACT

41. Concerning its claims on the ETI Act, Brazil relies on the *US – FSC* case. However, it appears that the United States did not raise the issue of the Peace Clause in that case, nor did the US appear to invoke Article 6 of the *Agreement on Agriculture*. If the Panel's understanding is correct, how, if at all, are these differences relevant here? **Argentina, China, EC, NZ**

42. How do you view the reference in paragraph 43 of the EC's third party oral statement with respect to the relevance of Article 17.14 of the DSU, and, in particular, the phrase "a final resolution to *that* dispute" (emphasis added)? Please explain the use, and relevance (if any) of the term "disputes" in Articles 9.3 and 12 and Appendix 3 of the DSU, and please cite any other provisions you consider relevant. **Argentina, China, EC, NZ**

# ANNEX L-2.3

## COMMUNICATION TO THIRD PARTIES

30 July 2003

Taking into account a 29 July 2003 communication received from the United States, and Brazil's 30 July response, the Panel has decided to extend the deadline for the submission of the parties' and third parties' responses to questions from Monday 4 August to **Monday 11 August** (**17h30** (Geneva time)).

The Panel has also decided upon the following additional changes to its schedule:

| | |
|---|---|
| Panel's views on certain issues: | 5 September 2003 |
| Further submission of Brazil: | 9 September 2003 |
| Further submission of the US: | 23 September 2003 |
| Further submission of the third parties (as necessary): | 29 September 2003 |

For the time being, all other dates remain unchanged. This includes the deadline for the submission of the parties' and third parties' comments on responses. It also includes the dates for the resumption of the first substantive meeting and the third party session (as necessary) and the second substantive meeting (i.e. 7-9 October).

# ANNEX L-2.4

## COMMUNICATION TO THIRD PARTIES

13 October 2003

Please find attached the Panel's questions to third parties following the resumed first session of the first substantive Panel meeting.

The Panel's questions are intended to facilitate the work of the Panel, and do not in any way prejudge the Panel's findings on the matter before it. Nor does the fact that the Panel has placed these questions under certain headings prejudge the Panel's findings on the matter before it. Each third party is free to respond to or comment on questions posed to the other third parties.

You are requested to submit answers by close of business on **27 October 2003**. All provisions of the existing working procedures, including the time specified in paragraph 17(b) of the Panel's existing working procedures for service of submissions by third parties, are confirmed.

Questions from the Panel to the third parties –
resumed first session of the first substantive Panel meeting

A. QUESTIONS TO INDIVIDUAL THIRD PARTIES

43. Please elaborate, citing figures, on your statement that polyester fibre prices actually follow cotton prices. Argentina

44. Please explain how Articles 5 and 6 of the *SCM Agreement* and Article XVI of the GATT 1994 would permit or require the Panel to take account of any effects of the subsidies in question on the interests of Members other than the complaining party. **Benin and Chad**

45. In relation to the term "same market" in Article 6.3(c) of the *SCM Agreement*, the EC states in paragraph 10 of its oral statement that a "world market" cannot exist if there are significant trade barriers between Members. On the other hand, the Panel notes that in relation to cotton, the EC takes the position in paragraph 14 of its further submission that the term "same market" in Article 6.3(c) should be read to include the domestic market of the subsidising Member. In light of the fact that many domestic cotton markets, possibly including that of China, have significant trade barriers, how can the EC reconcile these two positions? **EC**

46. Should the Panel prefer a concept of allocation of the benefit of subsidies to later years, to a concept of fully expensing subsidies to the year in which the benefit was provided? **EC**

47. In the EC further submission, it is said that significantly different conditions of competition in regional markets may prevent the Panel from arriving at the conclusion that there is a world market. Is the payment of a subsidy a “condition of competition” and, if so, how should that impact upon the Panel’s analysis? **EC**

48. In the further submission of India, it is stated that “there is “no obligation under the *SCM Agreement* to demonstrate serious prejudice separately after establishing that one of the effects of a subsidy listed under Article 6.3 applies, as the effects listed in Article 6.3 themselves equate to serious prejudice”. How does this view relate to Article 6.3(d), which appears to contain no element of degree? **India**

B. QUESTIONS TO ALL THIRD PARTIES

49. What is the meaning and effect of the introductory phrase of Article 3 of the *SCM Agreement* ("Except as provided in the *Agreement on Agriculture*...")? **All third parties**

50. According to its revised timetable, the Panel will issue its report to the parties after the end of the 2003 calendar year. Does this have any impact on "exempt[ion] from actions" under Article 13(b)(ii) and 13(c)(ii) of the *Agreement on Agriculture*? **All third parties**

51. How should the concept of specificity – and, in particular, the concept of specificity to "an enterprise or industry or group of enterprises or industries" -- in Article 2 of the *SCM Agreement* apply to subsidies in respect of agricultural commodities? Please answer the following questions, citing the principles in Article 2 of the *SCM Agreement*: **All third parties**

(a) is a subsidy in respect of all agricultural, but not other, products specific?

(b) is a subsidy in respect of all agricultural crops (i.e. but not to other agricultural commodities, such as livestock) specific?

(c) is a subsidy in respect of certain identified agricultural products specific?

(d) is a subsidy in respect of upland cotton, but not other products, specific?

(e) is a subsidy in respect of a certain proportion of the value of total US commodities (or total US agricultural commodities) specific?

(f) is a subsidy in respect of a certain proportion of total US farmland specific?

52. The Panel notes that different remedies are available in respect of prohibited and actionable subsidies under Article 4.7 and 7.8 of the *SCM Agreement*. If the Panel were to conclude that a subsidy was prohibited and were to make a recommendation under Article 4.7 of the *SCM Agreement* to withdraw the subsidy without delay, can the Panel:

(a) also conclude that the same subsidy had resulted in adverse effects to the interests of another Member? If so, what would be the value of such a conclusion in terms of the settlement of the matter before the Panel? **All third parties**

(b) take into account the effects of the interaction of those prohibited subsidies with other, allegedly, actionable subsidies? If so, how is this relevant to the issue of causation under Article 5 of the *SCM Agreement*? **All third parties**

53. Would a finding of serious prejudice under Article 5(c) of the *SCM Agreement* be determinative for a finding under Article XVI:1 of the GATT 1994? Why or why not? What, if any, is the role of footnote 13 of the *SCM Agreement* in this context? **All third parties**

54. Are US cotton producers able to cover the fixed and variable costs without subsidies? Please provide substantiating evidence. Of what relevance is this, if any, to Brazil's actionable subsidy claims ? **All third parties**

55. In light of the fact that certain third parties have provided submissions about the price effect of claimed US subsidies, which Member or Members is, or are, the "other party" under Article 6.3(c) ("*another Member*") for the purposes of these proceedings? **All third parties**

56. Please respond to the following questions concerning the relationship between Article XVI:3 of the GATT 1994, the disciplines on export subsidies and domestic support in the *Agreement on Agriculture* and the disciplines on prohibited export subsidies and actionable subsidies in Articles 3, 5(c) and 6.3(d) of the *SCM Agreement*. **All third parties**

(a) Are agricultural domestic support programmes challengeable under Article XVI:3 of the GATT 1994? How, if at all, is the title of Section B of Article XVI ("Additional provisions on *export subsidies*" (emphasis added)) relevant? How, if at all, are Articles 13 and 21.1, or any other provisions, of the *Agreement on Agriculture*, relevant?

(b) Are the requirements of Article XVI:3 of the GATT 1994 reflected in, developed by or subsumed by the requirements in Article 6.3(d) of the *SCM Agreement*, or in any other provisions of the covered agreements? Of what relevance, if any, is the Appellate Body Report in *US-FSC*, para. 117[1] here?

(c) Of what relevance, if any, is the fact that the definition of "subsidy" in Article 1 of the *SCM Agreement* and the prohibition on subsidies contingent upon export in

[1] WT/DS108/AB/R, para 117:

> "… the provisions of the *SCM Agreement* do not provide explicit assistance as to the relationship between the export subsidy provisions of the *SCM Agreement* and Article XVI:4 of the GATT 1994. In the absence of any such specific textual guidance, we must determine the relationship between Articles 1.1(a)(1) and 3.1(a) of the *SCM Agreement* and Article XVI:4 of the GATT 1994 on the basis of the texts of the relevant provisions as a whole. It is clear from even a cursory examination of Article XVI:4 of the GATT 1994 that it differs very substantially from the subsidy provisions of the *SCM Agreement*, and, in particular, from the export subsidy provisions of both the *SCM Agreement* and the *Agreement on Agriculture*. First of all, the *SCM Agreement* contains an express definition of the term "subsidy" which is not contained in Article XVI:4. In fact, as we have observed previously, the *SCM Agreement* contains a broad package of new export subsidy disciplines that "go well beyond merely applying and interpreting Articles VI, XVI and XXIII of the GATT 1947". Next, Article XVI:4 prohibits export subsidies only when they result in the export sale of a product at a price lower than the "comparable price charged for the like product to buyers in the domestic market." In contrast, the *SCM Agreement* establishes a much broader prohibition against *any* subsidy which is "contingent upon export performance". To say the least, the rule contained in Article 3.1(a) of the *SCM Agreement* that all subsidies which are "contingent upon export performance" are prohibited is significantly different from a rule that prohibits only those subsidies which result in a lower price for the exported product than the comparable price for that product when sold in the domestic market. Thus, whether or not a measure is an export subsidy under Article XVI:4 of the GATT 1947 provides no guidance in determining whether that measure is a prohibited export subsidy under Article 3.1(a) of the *SCM Agreement*. Also, and significantly, Article XVI:4 of the GATT 1994 does not apply to "primary products", which include agricultural products. Unquestionably, the explicit export subsidy disciplines, relating to agricultural products, contained in Articles 3, 8, 9 and 10 of the *Agreement on Agriculture* must clearly take precedence over the *exemption* of primary products from export subsidy disciplines in Article XVI:4 of the GATT 1994."

Article 3.1(a) were introduced in the Uruguay Round, but did not exist at the time that the GATT 1947 was negotiated?

# ANNEX M

## WORKING PROCEDURES AND TIMETABLE OF THE PANEL

# ANNEX M-1

## WORKING PROCEDURES FOR THE PANEL

1. In its proceedings the Panel shall follow the relevant provisions of the Dispute Settlement Understanding (DSU). In addition, the following working procedures shall apply.

2. The Panel shall meet in closed session. The parties to the dispute, and interested third parties, shall be present at the meetings only when invited by the Panel to appear before it.

3. The deliberations of the Panel and the documents submitted to it shall be kept confidential. Nothing in the DSU shall preclude a party to a dispute from disclosing statements of its own positions to the public. Members shall treat as confidential information submitted by another Member to the Panel which that Member has designated as confidential. Where a party to a dispute submits a confidential version of its written submissions to the Panel, it shall also, upon request of a Member, provide a non-confidential summary of the information contained in its submissions that could be disclosed to the public.[1]

4. Before the first substantive meeting of the Panel with the parties, the parties to the dispute shall transmit to the Panel written submissions in which they present the facts of the case, their arguments and their counter-arguments, respectively. Third parties may transmit to the Panel written submissions after the first written submissions of the parties have been submitted.

5. At its first substantive meeting with the parties, the Panel shall ask Brazil to present its case. Subsequently, and at the same meeting, the United States will be asked to present its point of view. Third parties will be asked to present their views thereafter at the separate session of the same meeting set aside for that purpose. The parties will then be allowed an opportunity for final statements, with Brazil presenting its statement first.

6. All third parties which have notified their interest in the dispute to the Dispute Settlement Body shall be invited in writing to present their views during a session of the substantive meeting of the Panel set aside for that purpose. All such third parties may be present during the entirety of this session.

7. Formal rebuttals shall be made at a second substantive meeting of the Panel. The United States shall have the right to take the floor first, to be followed by Brazil. The parties shall submit, prior to that meeting, written rebuttals to the Panel.

8. The Panel may at any time put questions to the parties and to the third parties and ask them for explanations either in the course of the substantive meeting or in writing. Answers to questions shall be submitted in writing by the date(s) specified by the Panel. Answers to questions after the first meeting shall be submitted in writing at the same time as the written rebuttals, unless the Panel specifies a different deadline.

9. The parties to the dispute and any third party invited to present its views shall make available to the Panel and the other party or parties a written version of their oral statements, preferably at the end of the meeting, and in any event not later than the day following the meeting. Parties and third parties are encouraged to provide the Panel and other participants in the meeting with a provisional written version of their oral statements at the time the oral statement is presented.

[1] The Panel notes that parties have agreed between themselves as to applicable deadlines for the submission of non-confidential summaries: 14 days after the submission of the confidential version.

10. In the interest of full transparency, the presentations, rebuttals and statements shall be made in the presence of the parties. Moreover, each party's written submissions, including responses to questions put by the Panel, shall be made available to the other party.

11. The parties shall provide the Secretariat with an executive summary of the claims and arguments contained in their written submissions, oral presentations, and, if necessary, answers to questions. These executive summaries will be used by the Secretariat only for the purpose of assisting the Secretariat in drafting a concise arguments section of the Panel report so as to facilitate timely translation and circulation of the Panel report to the Members. They shall not serve in any way as a substitute for the submissions of the parties. The summaries of the first written submission and rebuttal written submission shall be limited to ten (10) pages each, and the summaries of the oral statements at the meetings will be limited to five (5) pages each. The Panel will determine the page limit for executive summaries of parties' responses to questions, if necessary and as appropriate. Third parties are requested to provide the Panel with executive summaries of their written submissions and oral presentations, of no more than 5 pages each. The executive summaries shall be submitted to the Secretariat within ten days of the original submission, presentation or, if necessary, written replies, concerned. Paragraph 17 shall apply to the service of executive summaries.

12. A party shall submit any request for preliminary ruling not later than its first submission to the Panel. If the complaining party requests such a ruling, the respondent shall submit its response to the request in its first submission. If the respondent requests such a ruling, the complaining party shall submit its response to the request prior to the first substantive meeting of the Panel, at a time to be determined by the Panel in light of the request. Exceptions to this procedure will be granted upon a showing of good cause.

13. Parties shall submit all factual evidence to the Panel no later than during the first substantive meeting, except with respect to evidence necessary for purposes of rebuttals or answers to questions. Exceptions to this procedure will be granted upon a showing of good cause. The other party shall be accorded a period of time for comment, as appropriate, on any new factual evidence submitted after the first substantive meeting**.**

14. The parties to the dispute have the right to determine the composition of their own delegations. The parties shall have the responsibility for all members of their delegations and shall ensure that all members of the delegation act in accordance with the rules of the DSU and the Working Procedures of this Panel, particularly in regard to confidentiality of the proceedings. The parties as well as third parties shall provide a list of their delegation before each meeting to Mr. Hiromi Yano (office 3036 ; e-mail hiromi.yano@wto.org ).

15. To facilitate the maintenance of the record of the dispute, and to maximize the clarity of submissions, in particular the references to exhibits submitted by parties, parties shall sequentially number their exhibits throughout the course of the dispute. For example, exhibits submitted by Brazil could be numbered BRA-1, BRA-2, etc. If the last exhibit in connection with the first submission was numbered BRA-5, the first exhibit of the next submission thus would be numbered BRA-6.

16. Following issuance of the interim report, the parties shall have two weeks to submit written requests to review precise aspects of the interim report and to request a further meeting with the Panel. The right to request such a meeting must be exercised no later than at that time. Following receipt of any written requests for review, if no further meeting with the Panel is requested, the parties shall have the opportunity, within a time-period specified by the Panel, to submit written comments on the other party's written requests for review. Such comments shall be strictly limited to responding to the other party's written request for review.

17. The following procedures regarding service of documents shall apply:

(a) Each party and third party shall serve all of its written submissions, executive summaries and written versions of oral statements, directly on all other parties, and on third parties as appropriate, and confirm that it has done so at the time it provides those submissions to the Secretariat.

(b) The parties and third parties should provide their submissions to the Secretariat by 5:30 p.m. on the deadlines established by the Panel, unless a different time is set by the Panel.

(c) The parties and third parties shall provide the Secretariat with nine paper copies of each of their written submissions. Seven of these copies should be filed with Mr. Ferdinand Ferranco (Office 3154). Two copies should be filed with the Secretary to the Panel. The final written versions of the parties' and third parties' oral statements shall be provided not later than noon of the day following the date of the presentation.

(d) The parties and third parties shall provide electronic copies of all submissions to the Secretariat at the time they provide their submissions, if possible in a format compatible with that used by the Secretariat. If the electronic version is provided by e-mail, it should be addressed to DSRegistry@wto.org, and cc'd to susan.hainsworth@wto.org, matthew.kennedy@wto.org, paul.shanahan@wto.org, thomas.friedheim@wto.org and hiromi.yano@wto.org. If a diskette is provided, it should be delivered to Mr. Ferdinand Ferranco.

(e) The Panel will endeavour to provide the parties with an electronic version of the descriptive part, the interim report and the final report, as well as of other documents as appropriate. When the Panel transmits to the parties or third parties both paper and electronic versions of a document, the paper version shall constitute the official version for the purposes of the record of the dispute.

# ANNEX M-2

## TIMETABLE

### UNITED STATES – SUBSIDIES ON UPLAND COTTON (WT/DS267)

**Timetable for Panel Proceedings**[1]

| | | |
|---|---|---|
| 1. | Establishment of the Panel: | 18 March 2003 |
| 2. | Constitution of the Panel: | 19 May 2003 |
| 3. | The following dates apply: | |
| (a) | Organizational meeting: | 28 May 2003 |
| (b) | Parties' comments on certain issues as indicated in the cover letter | 5 June 2003 |
| (c) | Third parties' comments on certain issues | 10 June 2003 |
| (d) | Parties' comments on each others' and third parties' comments submitted | 13 June 2003 |
| (e) | Issuance of Panel ruling on certain issues | 20 June 2003 |
| (f) | First submission of Brazil (complaining party) | 24 June 2003 |
| (g) | First submission of the US (party complained against) | 11 July 2003 |
| (h) | Submissions from third parties: | 15 July 2003 |
| (i) | First substantive meeting with the parties [2]: | 22, 23 July 2003<br>24 July 2003 |

[1] As was presented to parties and third parties on 28 May 2003. Subsequent changes are indicated in footnotes. Original footnote omitted.

[2] In a communication delivered on 20 June 2003 in accordance with item (e) of the timetable above, the Panel changed this meeting (including the third party session) to the "**first session of the first substantive meeting**" . The same communication also established the following dates: (a) the **Panel's view on certain issues** (i.e. issues relating to the "Peace Clause") to be issued on 1 September 2003, (b) **second session of the first substantive meeting** to be held on 7- 9 October 2003 (third party session held on 8 October), and (c) deadlines to submit further submissions for this second session: 4 September (from Brazil), 18 September (from the US) and 22 September (from the third parties). These dates were further changed by the Panel's communication dated 30 July to : (a) the Panel's view on "certain issues" on 5 September and (b) deadline to submit further submissions from Brazil by 9 September, from the US by 23 September (changed further to 29 September by the Panel's communication dated 12 September and changed again to 30 September by the Panel's communication dated 24 September), and from third parties by 29 September (changed further to

| | | |
|---|---|---|
| (j) | Third party session: | |
| (k) | Receipt of written rebuttals of the parties: | 29 August 2003 [3] |
| (l) | Second substantive meeting with the parties: | 17,18 September 2003 [4] |
| (m) | Issuance of descriptive part of the report to the parties: | 1 October 2003 [5] |
| (n) | Receipt of comments by the parties on the descriptive part of the report: | 15 October 2003 |
| (o) | Issuance of the interim report, including the findings and conclusions, to the parties: | 4 November 2003 [6] |
| (p) | Deadline for parties to request review of part(s) of report: | 18 November 2003 |
| (q) | Interim review meeting with the parties, if requested. If interim review meeting not requested, the deadline for comments on each others' comment. | 24 November 2003 |

3 October by the Panel's communication dated 12 September). The 12 September communication from the Panel established a deadline for parties to submit, before the second session of the second substantive meeting, "**further rebuttals**" by 3 November 2003. This date was further changed to 18 November by the Panel's communication dated 18 September.

[3] Changed to 22 August 2003 by the Panel's communication dated 20 June.

[4] Changed to 7, 8 October 2003 by the Panel's communication dated 20 June. These dates were subsequently changed to 2, 3 December by the Panel's communication dated 12 September. Apart from responses to Panel's questions, the Panel has established several deadlines after the second substantive meeting for parties to submit various documents. (See Panel's communications dated 14 November 2003, 8 December 2003, 24 December 2003, 12 January 2004, 3 February 2004, 16 February 2004, 20 February 2004, 24 February 2004 and 4 March 2004.)

[5] The dates for items (m) and (n) were delayed several times and were ultimately set to be 16 March and 30 March 2004, respectively, by the Panel's communication of 4 March 2004.

[6] The dates for items (o) - (r) were delayed several times and were ultimately set to be as follows, respectively, by the Panel's communication of 7 April, 2004: 26 April, 10 May, 3 June and 18 June 2004.

### UNITED STATES – SUBSIDIES ON UPLAND COTTON

Request for Consultations by Brazil

The following communication, dated 27 September 2002, from the Permanent Mission of Brazil to the Permanent Mission of the United States and to the Chairman of the Dispute Settlement Body, is circulated in accordance with Article 4.4 of the DSU.

---

Upon instruction from my authorities, the Government of Brazil hereby requests consultations with the Government of the United States pursuant to Articles 4.1, 7.1 and 30 of the Agreement on Subsidies and Countervailing Measures (SCM Agreement), Article 19 of the Agreement on Agriculture, Article XXII of GATT 1994 and Article 4 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU).

The measures that are the subject of this request are prohibited and actionable subsidies provided to US producers, users and/or exporters of upland cotton[1], as well as legislation, regulations, statutory instruments and amendments thereto providing such subsidies (including export credits), grants, and any other assistance to the US producers, users and exporters of upland cotton ("US upland cotton industry"). The measures include the following:

– Domestic support subsidies provided to the US upland cotton industry during marketing years 1999-2002;[2]

– Export subsidies provided to the US upland cotton industry during marketing years 1999-2002;[3]

[1] Except with respect to export credit guarantee programs as explained below.

[2] The "marketing" year for upland cotton runs from 1 August through 31 July. For example, marketing year 2001 started on 1 August 2001 and ended on 31 July 2002. Brazil, as does the United States in its official USDA documents, treats "marketing year" to mean the same thing as "crop year".

[3] The adverse effects and serious prejudice and threat thereof created by the measures in the marketing years 1999-2007 also exists for the corresponding (somewhat overlapping) US fiscal years 2000-2008. The US government fiscal year runs from 1 October to 30 September. For example, the fiscal year for 2001 started on 1 October 2000 and ended on 30 September 2001.

– Subsidies provided contingent upon the use of US upland cotton;

– Subsidies and domestic support provided under the Farm Security and Rural Investment Act of 2002 (FSRIA), including the regulations, administrative procedures and other measures implementing FSRIA related to marketing loans, loan deficiency payments (LDPs), commodity certificates, direct payments, counter-cyclical payments, conservation payments (to the extent they exceed the costs of complying with such programs), Step 2 certificate program payments, export credit guarantees, and any other provisions of FSRIA that provide direct or indirect support to the US upland cotton industry;

– Subsidies and domestic support provided under the Agricultural Risk Protection Act of 2000 and any other measures that provide subsidies relating to crop, disaster or other types of insurance to the US upland cotton industry;

– Subsidies and domestic support provided under the Federal Agricultural Improvement and Reform Act (FAIR Act) of 1996, and programs under the FAIR Act or amendments thereto relating to marketing loans, loan deficiency payments, commodity certificates, production flexibility contract payments, conservation payments, Step 2 certificate program payments, export credit guarantees, and any other FAIR Act provisions providing direct or indirect support to the US upland cotton industry;

– Export subsidies, exporter assistance, export credit guarantees, export and market access enhancement to facilitate the export of US upland cotton provided under the Agricultural Trade Act of 1978, as amended, and other measures such as the GSM-102, GSM-103, and SCGP programs, and the Step 1 and Step 2 certificate programs, among others;

– Subsidies provided to the US upland cotton industry under the Agricultural Act of 1949 as amended;

– Export subsidies provided to exporters of US upland cotton under the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 ("ETI Act");

– Subsidies provided under the Agriculture, Rural Development, Food and Drug Administration and Related Agencies Appropriation Act of 2002 (November 2001), the Crop Year 2001 Agricultural Economic Assistance Act (August 2001), the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 2001 (October 2000), the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 2000 (October 1999), and the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 1999 (October 1998);

– All subsidies or support measures benefiting upland cotton that have trade-distorting effects or effects on production by the US upland cotton industry, or that have an effect of providing price support for upland cotton, or that are otherwise not exempt from the reduction commitments of the United States, as described in Annex 2 of the Agreement on Agriculture, because they do not meet the policy-specific criteria and conditions set out in paragraphs 2-13 of Annex II of the Agreement on Agriculture (*i.e.* they are not so-called green box subsidies);

– Export subsidies, domestic support, and other subsidies provided under regulations, administrative procedures, administrative practices and any other present measures, amendments thereto, or future measures implementing any of the measures listed above, that provide for or facilitate the payment of domestic support, export subsidies, and other subsidies for the production, use and/or export of US upland cotton and upland cotton products.

The Government of Brazil considers that these measures are inconsistent with the obligations of the United States under the following provisions:

1. Article 5(c) of the SCM Agreement;
2. Article 6.3(b), (c) and (d) of the SCM Agreement;
3. Article 3.1(a) of the SCM Agreement including item (j) of the Illustrative List of Export Subsidies in Annex I thereto;
4. Article 3.1(b) of the SCM Agreement;
5. Article 3.2 of the SCM Agreement;
6. Article 3.3 of the Agreement on Agriculture;
7. Article 7.1 of the Agreement on Agriculture;
8. Article 8 of the Agreement on Agriculture;
9. Article 9.1 of the Agreement on Agriculture;
10. Article 10.1 of the Agreement on Agriculture; and
11. Article III:4 of GATT 1994.

Brazil is of the view that the US statutes, regulations, and administrative procedures listed above are inconsistent with these provisions as such and as applied.

The United States has no basis to assert a defense under Article 13(b)(ii) of the Agreement on Agriculture that the domestic support measures listed above are exempt from action based on Articles 5 and 6 of the SCM Agreement, because these measures provide support to upland cotton in marketing years 1999-2002 in excess of the support decided by the United States in the 1992 marketing year. Similarly, the United States has no basis to assert a defense under Article 13(c)(ii) of the Agreement on Agriculture that the export subsidies listed above are exempt from action based on Article 3, 5 and 6 of the SCM Agreement, because these export subsidies do not conform fully to the provisions of Part V of the Agreement on Agriculture, as reflected in the Schedule of the United States.

The measures listed above are subsidies because in each instance there is a financial contribution by the US government, or an income or price support in the sense of Article XVI of GATT 1994, and a benefit is thereby conferred within the meaning of Article 1.1(a) and (b) of the SCM Agreement. Each of the listed subsidies is specific to US producers of primary agricultural products and/or to the upland cotton industry within the meaning of Articles 2.1 and 2.3 of the SCM Agreement.

The use of these measures causes adverse effects, *i.e.* serious prejudice to the interests of Brazil:

– The effect of the measures is significant price depression and price suppression in the markets for upland cotton in Brazil and elsewhere during marketing years 1999-2002 in violation of SCM Articles 5(c) and 6.3(c).

– The effect of the measures is to displace or impede exports of Brazilian upland cotton in third country markets during marketing years 1999-2002, in violation of Articles 5(c) and 6.3(b) of the SCM Agreement.

– The effect of the measures is to increase the world market share of the United States for upland cotton in marketing year 2001 as compared to the average share of the United States between marketing years between 1998-2000, and by increasing its world market share for the production of upland cotton in the period from marketing year 1985 (the first year in which LDP and marketing loan payments were made for upland cotton) to marketing year

2001 from 16.7 to 20.6 percent in violation of Articles 5(c) and 6.3(d) of the SCM Agreement.

The statutes, regulations, and administrative measures listed above and the subsidies they mandate threaten – as such and as applied – to cause serious prejudice to the interests of Brazil as follows:

– By mandating conditions that will result in continued depressed and suppressed upland cotton prices for marketing years 2002 through 2007 through the guaranteed payment of subsidies to the US upland cotton industry, which artificially increases and/or maintains high-cost US upland cotton production in violation of SCM Articles 5(c) and 6.3(c); and

– By mandating conditions that will result in over-production of high-cost US upland cotton, which will continue to displace and impede Brazil's export market share in the world market and specific national markets for upland cotton, in violation of SCM Articles 5(c) and 6.3(b).

With respect to the Step 2 program, Brazil believes that the program as such and as applied to provide payments to exporters of US upland cotton is inconsistent with Articles 3.3, 8, 9.1, and 10.1 of the Agreement on Agriculture, and with Articles 3.1(a) and 3.2 of the SCM Agreement. Brazil further believes that the program, as such and as applied to provide payments to US domestic mill users of US upland cotton, are inconsistent with Article 3.1(b) of the SCM Agreement, and Article III:4 of GATT 1994. Step 2 payments are actionable subsidies for the purpose of Brazil's claims under Articles 5 and 6.3 of the SCM Agreement.

Regarding export credit guarantees, export and market access enhancement provided under the Agricultural Trade Act of 1978, as amended, and other measures such as the GSM-102, GSM-103, and SCGP programs, Brazil is of the view that these programs, as applied and as such, violate Articles 3.3, 8, 9.1, and 10.1 of the Agreement on Agriculture and are prohibited export subsidies under Article 3.1(a) and item (j) of the Illustrative List of Export Subsidies included as Annex I to the SCM Agreement. Subsidies provided under these programs are also actionable subsidies for the purpose of Brazil's claims under Article 6.3 of the SCM Agreement.

Articles 4.2 and 7.2 of the SCM Agreement together require that this request for consultations include a statement of available evidence (1) with regard to the existence and nature of the subsidies in question and (2) the adverse effects and serious prejudice to the interests of Brazil. This letter identifies the existence and nature of the subsidies, and further evidence is provided in the annex to this letter.

The Government of Brazil reserves the right to request the United States to produce information and documents regarding the measures in question and thir effect on the interests of Brazil, during the consultation process. The Government of Brazil also reserves the right to address additional measures and claims under other WTO provisions during the course of the consultations.

My authorities look forward to receiving in due course a reply from the United States to this request. Brazil is ready to consider with the United States mutually convenient dates to hold consultations in Geneva.

# ANNEX

## Statement of Available Evidence With Regard to the Existence and Nature of the Subsidies in Question and the Serious Prejudice Caused to the Interest of Brazil

1. Brazil's request for consultations dated 27 September 2002 identifies the prohibited and actionable subsidies that are the subject of this request for consultations.

2. The evidence set out below is evidence available to Brazil at this time regarding the existence and nature of those subsidies, and the adverse effects caused by them to the interests of Brazil. It reflects the presently available evidence regarding the claims reflected in Brazil's request for consultations and is supported by documents that are described and set out in United States Department of Agriculture (USDA) and non-governmental internet locations set out in paragraph 4 below. Brazil reserves the right to supplement or alter this list in the future, as required.

3. The evidence presently available to Brazil includes the following:

– US producers of upland cotton received domestic support in excess of 100 percent of the US crop value in marketing year 2001;

– US domestic and export support subsidies to upland cotton in marketing year 2001 exceeded $4 billion – far greater than the value of total US production;

– Compared with marketing year 1992, US Government subsidies to US producers of upland cotton have increased significantly, particularly for the 1999 and 2001 marketing year;

– The provisions of the 2002 Farm Bill mandate the payment of subsidies considerably in excess of those provided in the 1996 FAIR Act, including a new counter-cyclical payment program providing for more than $1 billion for marketing year 2002 at current market prices for upland cotton. The 2002 Farm Bill provides similar (although increased) payments as the FAIR act in the form of a "direct payment" program (a successor to production flexibility payments) and continues largely unchanged the loan deficiency payments, marketing loans payments, crop insurance payments, and the Step 2 program and other export subsidy programs that provided support to the US upland cotton industry prior to passage of the 2002 Farm Bill;

– For a significant number of US producers of upland cotton, total cost of production in 2001 (and from 1991 through 2000) was well *above* the US market price of upland cotton;

– Thus, without the benefit of US domestic and export subsidies, many US producers would not be able to produce upland cotton without sustaining a significant loss; current price projections for marketing years 2003-2007 indicate that US upland cotton prices are expected to remain well below the US cost of production;

– With upland cotton prices declining over the 4-year period from 1998 through 2001, US production increased from 14 million tons in marketing year 1998 to a record 20.3 million metric tons in marketing year 2001;

– In marketing year 2001 the United States was the world's largest exporter of upland cotton, with a 38 percent share. It is expected that the United States will remain by far the world's largest exporter of upland cotton in marketing year 2002;

– The volume of US exports of US upland cotton increased significantly from 946.000 metric tons in marketing year 1998 to 1.829.000 metric tons in marketing year 2001, with 1.960.000 metric tons expected to be exported in marketing year 2002;

– The effect of the US subsidies over the period of marketing years 1999-2001 was an increase in production of US upland cotton, an increase in US exports, and a corresponding significant decrease in Brazilian, world, and US prices of upland cotton;

– US year-end surplus stocks of upland cotton in marketing year 2001 increased steadily between marketing years 1999-2001 with the additional surplus creating a depressing and suppressing effect on US and world prices;

– Brazilian upland cotton is like or has characteristics closely resembling US upland cotton, is used interchangeably by customers in third country markets with US upland cotton and competes in the same markets for the same customers. Thus, the overproduction of US upland cotton suppresses and depresses the price that Brazilian producers can obtain for their upland cotton on the world and Brazilian market;

– Prices for upland cotton in Brazil follow trends created in the US and Northern European markets and experienced significant declines between marketing years 1999-2002;

– Brazilian production of upland cotton decreased between marketing year 2000 and 2001 from 939.000 to 718.000 metric tons;

– Prices for upland cotton in the Brazilian, worldwide, and other regional and third country markets were significantly depressed and suppressed over the period of marketing years 1999-2002 as a result of the effect of US subsidies;

– Prices for upland cotton in the Brazilian, worldwide, and other regional and third country markets continue to be suppressed in marketing year 2002 as a result of US subsidies;

– The world market share of the United States for upland cotton in marketing year 2001 increased over the average share of the United States between marketing years 1998-2000. In addition, the United States increased its world market share for the production of upland cotton in the period from marketing year 1985 (the first year in which LDP and marketing loan payments were made for upland cotton) to marketing year 2001 from 16.7 to 20.6 percent;

– The United States' notifications of subsidies to the WTO Committee on Agriculture provide information indicating that the loan deficiency payments (LDP), marketing loan gains, crop insurance programs, marketing loss payments, and Step 2 certificate payments made in connection with upland cotton are not "green" box payments;

– USDA econometric analyses demonstrate the actual or potential production enhancing effects for particular crops in the United States of LDP, marketing loan payments, crop insurance subsidies, and even production flexibility payments. Certain of these studies demonstrate the production enhancing effects of such subsidies on US production of upland cotton;

– Econometric studies by the International Cotton Advisory Committee, the World Bank, and the International Monetary Fund demonstrate that many of the US subsidies at issue in the consultation request have a price suppressive and depressive effect on prices of upland cotton and other crops;

– The US Step 1 and Step 2 programs, since their origin and up to the present, enhance the export competitiveness of US-produced upland cotton -- an effect consistent with the expressed purpose of such programs;

– US export credit guarantee programs have caused serious prejudice to Brazilian upland cotton producers by providing below-market financing benefits for the export of competing US upland cotton;

– US export credit guarantee programs, since their origin in 1980 and up the present, provide premium rates that are inadequate to cover the long-term operating costs and losses of the programs; in particular there were losses caused by large-scale defaults totalling billions of dollars that have not been reflected in increased premiums to cover such losses;

– The volume of production and export of lower-cost Brazilian upland cotton have been impeded by US subsidies that have built and maintained excess US production by higher-cost US producers;

– The estimated losses suffered by Brazil due to price suppressed or depressed by US subsidies to the US upland cotton industry are well in excess of $ 600 million for marketing year 2001 alone including lost revenue, lost production, losses of related services, lost federal and state revenue, higher unemployment and losses in Brazil's trade balance.

4. The statistics, data and analytic documents supporting the summary of evidence above can be found in the following documents published by among others the US Department of Agriculture, the International Cotton Advisory Committee and the Food and Agriculture Policy Research Institute, University of Missouri as well as others:

## ANNEX N-2

# WORLD TRADE ORGANIZATION

**WT/DS267/7**
7 February 2003

(03-0838)

Original: English

### UNITED STATES – SUBSIDIES ON UPLAND COTTON

Request for the Establishment of a Panel by Brazil

The following communication, dated 6 February 2003, from the Permanent Mission of Brazil to the Chairman of the Dispute Settlement Body, is circulated pursuant to Article 6.2 of the DSU.

---

On 27 September, the Government of Brazil requested consultations with the Government of the United States pursuant to Articles 4.1, 7.1 and 30 of the Agreement on Subsidies and Countervailing Measures (SCM Agreement), Article 19 of the Agreement on Agriculture, Article XXII of GATT 1994 and Article 4 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU). This request was circulated to the WTO Members on 3 October 2002 as document WT/DS267/1, "United States – Subsidies on Upland Cotton". Consultations were held on 3, 4 and 19 December 2002 and on 17 January 2003 with a view to reaching a mutually satisfactory solution. Unfortunately, these consultations failed to settle the dispute.

The Government of Brazil therefore hereby requests that a panel be established pursuant to Articles 6 of the DSU, Article XXIII:2 of GATT 1994, Article 19 of the Agreement on Agriculture, and Articles 4.4, 7.4 and 30 of the SCM Agreement (to the extent that Article 30 incorporates by reference Article XXIII of GATT 1994).

The Government of Brazil further requests that the DSB initiate the procedures provided in Annex V of the SCM Agreement pursuant to paragraph 2 of that Annex. The Government of Brazil intends to put forward suggestions as to the information that should be sought under this procedure once the panel is established.

The measures that are the subject of this request are prohibited and actionable subsidies provided to US producers, users and/or exporters of upland cotton[1], as well as legislation, regulations and statutory instruments and amendments thereto providing such subsidies (including export credit guarantees), grants, and any other assistance to the US producers, users and exporters of upland cotton ("US upland cotton industry"). The measures include the following:

[1] The term "upland cotton" means raw upland cotton as well as the primary processed forms of such cotton including upland cotton lint and cottonseed. The focus of Brazil's claims relate to upland cotton with the exception of the US export credit guarantee programs as explained below.

Domestic support subsidies provided to the US upland cotton industry during marketing years 1999-2001[2];

Domestic support subsidies that are mandated to be provided to the US upland cotton industry during marketing years 2002-2007;

Export subsidies provided to the US upland cotton industry during marketing years 1999-2001;

Export subsides that are mandated to be provided to the US upland cotton industry during marketing years 2002-2007;

Subsidies provided contingent upon the use of US over imported upland cotton in marketing years 1999-2001 and that are mandated to be provided to the US upland cotton industry during marketing years 2002-2007;

Subsidies and domestic support provided under the Farm Security and Rural Investment Act of 2002 (FSRIA), including the regulations, administrative procedures and other measures implementing FSRIA related to marketing loans, loan deficiency payments (LDPs), commodity certificates, direct payments, counter-cyclical payments, conservation payments (to the extent they exceed the costs of complying with such programs), Step 2 certificate programme payments, export credit guarantees, crop insurance, and any other provisions of FSRIA that provide direct or indirect support to the US upland cotton industry;

Subsidies and domestic support provided under the Agricultural Risk Protection Act of 2000 and any other measures that provide subsidies relating to crop, disaster or other types of insurance to the US upland cotton industry;

Subsidies and domestic support provided under the Federal Agricultural Improvement and Reform Act (FAIR Act) of 1996, and programs under the FAIR Act or amendments thereto relating to marketing loans, loan deficiency payments, commodity certificates, production flexibility contract payments, conservation payments, Step 2 certificate programme payments, export credit guarantees, crop insurance, and any other FAIR Act provisions providing direct or indirect support to the US upland cotton industry;

Export subsidies, exporter assistance, export credit guarantees, export and market access enhancement to facilitate the export of US upland cotton, and other eligible agricultural commodities as addressed herein, provided under the Agricultural Trade Act of 1978, as amended, and other measures such as the GSM-102, GSM-103, and SCGP programs, and the Step 1 and Step 2 certificate programs, among others;

Subsidies provided to the US upland cotton industry under the Agricultural Act of 1949 as amended;

Export subsidies provided to exporters of US upland cotton under the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 ("ETI Act");

Subsidies provided under the Agricultural Assistance Act of 2003; Subsidies provided under the Agriculture, Rural Development, Food and Drug Administration and Related Agencies Appropriation Act of 2002 (November 2001), the Crop Year 2001 Agricultural Economic

[2] The "marketing" year for upland cotton runs from 1 August through 31 July. For example, marketing year 2001 started on 1 August 2001 and ended on 31 July 2002. Brazil, as does the United States in its official USDA documents, treats "marketing year" to mean the same as "crop year."

Assistance Act (August 2001), the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 2001 (October 2000), the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 2000 (October 1999), and the Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act of 1999 (October 1998);

All subsidies or support measures benefiting upland cotton that have trade-distorting effects or effects on production by the US upland cotton industry, or that have an effect of providing price support for upland cotton, or that are otherwise not exempt from the reduction commitments of the United States, as described in Annex 2 of the Agreement on Agriculture, because they do not meet the policy-specific criteria and conditions set out in paragraphs 2-13 of Annex II of the Agreement on Agriculture (*i.e.* they are not so-called "green box" subsidies);

Export subsidies, domestic support, and other subsidies provided under regulations, administrative procedures, administrative practices and any other present measures or future measures implementing or amending any of the measures listed above, that provide for or facilitate the payment of domestic support, export subsidies, and other subsidies for the production, use and/or export of US upland cotton and upland cotton products.

The measures, and any amendments to these measures, are inconsistent with the obligations of the United States under the following provisions:

1. Article 5(a) of the SCM Agreement;
2. Article 5(c) of the SCM Agreement;
3. Article 6.3(b), (c) and (d) of the SCM Agreement;
4. Article 3.1(a) of the SCM Agreement including item (j) of the Illustrative List of Export Subsidies in Annex I thereto;
5. Article 3.1(b) of the SCM Agreement;
6. Article 3.2 of the SCM Agreement;
7. Article 3.3 of the Agreement on Agriculture;
8. Article 7.1 of the Agreement on Agriculture;
9. Article 8 of the Agreement on Agriculture;
10. Article 9.1 of the Agreement on Agriculture;
11. Article 10.1 of the Agreement on Agriculture; and
12. Article III:4 of GATT 1994
13. Article XVI.1 and Article XVI.3 of GATT 1994

The US statutes, regulations and administrative procedures and any amendments thereto listed above are inconsistent with these provisions as such and as applied.

The United States has no basis to assert a defense under Article 13(b)(ii) of the Agreement on Agriculture that the domestic support measures listed above are exempt from action based on Articles 5 and 6 of the SCM Agreement, because these measures provide support to upland cotton in marketing years 1999-2001 in excess of the support decided by the United States in the 1992 marketing year. Similarly, the United States has no basis to assert a defense under Article 13(c)(ii) of the Agreement on Agriculture that the export subsidies listed above are exempt from action based on Article 3, 5 and 6 of the SCM Agreement, because these export subsidies do not conform fully to the provisions of Part V of the Agreement on Agriculture, as reflected in the Schedule of the United States.

The measures listed above are subsidies because in each instance there is a financial contribution by the US government, or an income or price support in the sense of Article XVI of GATT 1994, and a benefit is thereby conferred within the meaning of Article 1.1(a) and (b) of the SCM Agreement. Each of the listed subsidies is specific to US producers of primary agricultural

products and/or to the upland cotton industry within the meaning of Articles 2.1 and 2.3 of the SCM Agreement.

The use of measures provided to the US upland cotton industry causes adverse effects including material injury to the Brazilian upland cotton industry under SCM Article 5(a), and serious prejudice to the interests of Brazil under SCM Article 5(c) including:[3]

> The effect of the measures is significant price depression and price suppression in the markets for upland cotton in Brazil, the United States, other third country markets, and the world market during marketing years 1999-2002 in violation of SCM Articles 5(c) and 6.3(c).
>
> The effect of the measures is to displace or impede exports of Brazilian upland cotton in third country markets during marketing years 1999-2002, in violation of Articles 5(c) and 6.3(b) of the SCM Agreement.
>
> The effect of the measures is to increase the world export market share of the United States for upland cotton in marketing year 2001 as compared to the average share of the United States between marketing years 1998-2000, and by increasing its world export market share for the production of upland cotton in the period beginning with the FAIR Act in marketing year 1996 from 24 percent to 37 percent in marketing year 2001 in violation of Articles 5(c) and 6.3(d) of the SCM Agreement.
>
> The effect of the measures during marketing years 1999-2002 is to increase and maintain high levels of exports of upland cotton from the United States and to provide the United States with an inequitable share of world export trade in upland cotton in violation of Article XVI.1 and 3 of GATT 1994.

The statutes, regulations, and administrative measures and any amendments thereto listed above and the actionable subsidies they mandate threaten, as such and as applied, to cause material injury to the Brazilian upland cotton industry, and serious prejudice to the interests of Brazil including:

> By mandating conditions that are having and will continue to result in significant suppression and depression of upland cotton prices for marketing years 2002 through 2007 through the guaranteed payment of amounts of subsidies to the US upland cotton industry, which artificially increases and/or maintains high-cost US upland cotton production in violation of SCM Articles 5(c) and 6.3(c); and
>
> By mandating conditions that will result in over-production of high-cost US upland cotton, which will continue to displace and impede Brazil's export market share in the third country markets for upland cotton, in violation of SCM Articles 5(c) and 6.3(b).
>
> By mandating conditions that will result in over-production of high-cost US upland cotton, which will increase or continue to maintain high levels of exports of upland cotton from the United States in violation of SCM Articles 5(c) and 6.3(d) and continue to result in the United States having an inequitable share of world upland cotton export trade in violation of Article XVI.1 and 3 of GATT 1994.

[3] The adverse effects and serious prejudice and threat thereof created by the measures in the marketing years 1999-2007 also exists for the corresponding (somewhat overlapping) US fiscal years 2000 - 2008. The US government fiscal year runs from 1 October to 30 September. For example, the fiscal year for 2001 started on 1 October 2000 and ended on 30 September 2001.

With respect to subsidies provided under the so-called "Step 2" programmes, one type of subsidy under the programme provides payments to exporters contingent upon the export of US upland cotton and is inconsistent with Articles 3.3, 8, 9.1, and 10.1 of the Agreement on Agriculture, and with Articles 3.1(a) and 3.2 of the SCM Agreement. Another type of subsidy under the Step-2 programme provides payments to US domestic mill users contingent upon the use of US upland cotton and is inconsistent with Article 3.1(b) and 3.2 of the SCM Agreement, and Article III:4 of GATT 1994. Brazil challenges these two types of subsidies under the Step 2 programme as such and as applied. These two Step 2 subsidies are actionable for the purpose of Brazil's claims under Articles 5 and 6.3 of the SCM Agreement.

Regarding export credit guarantees and export and market access enhancement provided under the Agricultural Trade Act of 1978, as amended, and export credit guarantee measures relating to eligible US agricultural commodities, such as the GSM-102, GSM-103, and SCGP programmes, these programs violate, as applied and as such, Articles 3.3, 8, 9.1, and 10.1 of the Agreement on Agriculture and are prohibited export subsidies under Articles 3.1(a), 3.2 and item (j) of the Illustrated List of Export Subsidies included as Annex I to the SCM Agreement. Subsidies provided under these programs are also actionable subsidies for the purpose of Brazil's claims under Articles 5 and 6.3 of the SCM Agreement.

Brazil requests that a Panel be established with standard terms of reference, in accordance with Article 7 of the DSU.

Brazil asks that this request for the establishment of a Panel be placed on the agenda for the next meeting of the Dispute Settlement Body, which is scheduled to take place on 19 February 2003.

# ANNEX O-2

## LIST OF EXHIBITS OF THE UNITED STATES

| | |
|---|---|
| US-1 | 2002 Farm Security and Rural Investment Act, Public Law 107-171, 116 Stat. 134 (13 May 2002) (Title I) |
| US-2 | 57 *Federal Register* 14,326 (20 April 1992) |
| US-3 | 7 C.F.R. Part 1413 (1 January 1993) |
| US-4 | 7 C.F.R. 1413.6 (1991 ed.) |
| US-5 | 7 U.S.C. § 1444-2 (1992 supp.) |
| US-6 | 7 C.F.R. Part 1493 (2003) (excerpts) |
| US-7 | Organization for Economic Co-operation and Development, *The Chairman's Revised Proposal for a Sector Understanding on Export Credits for Agricultural Products*, TD/CONSENSUS(2000)25/REV4 (9 July 2002) |
| US-8 | Cairns Group, *Negotiating Proposal on Export Competition*, JOB(02)/186 (20 November 2002) |
| US-9 | *Negotiations on Agriculture: First Draft of Modalities for the Further Commitments*, TN/AG/W/1/Rev.1 (18 March 2003) |
| US-10 | MERCOSUR *et al.*, *Export Credits for Agricultural Products*, G/AG/NG/W/139, G/AG/W/50 (21 March 2001) |
| US-11 | 2 U.S.C. §§ 661 *et seq.* (2003) |
| US-12 | Examples of export credit guarantee program announcements issued pursuant to applicable program regulations (7 C.F.R. §§ 1493.10(d), 1493.400(d)) |
| US-13 | Schedule XX – United States of America, Part IV, Section II: Export subsidy reduction commitments |
| US-14 | 2002 Crop Cottonseed Regulations, 68 *Federal Register* 20,331 (25 April 2003) |
| US-15 | Regulations to disburse the 2000 crop cottonseed payment, 65 *Federal Register* 65,718 (2 November 2000) |
| US-16 | 1999 Crop Cottonseed Program Regulations, 65 *Federal Register* 36,563 (8 June 2000) |
| US-17 | US Department of Agriculture, Upland Cotton Fact Sheet (September 1992) |
| US-18 | USDA budget data (MY1999 & MY2000 marketing loan payments) (www.fsa.usda.gov/dam/BUD/estimatesbook.htm) |

US-19 Marketing Year 2002 Loan Deficiency Payment and Price Support Cumulative Activity As of 3/12/2003

US-20 Schedule of current fees paid by an exporter participating in either the GSM-102 or GSM-103 program

US-21 Recently updated program documents for the Step 2 program

US-22 The Agricultural Market Transition Act, Title I of the Federal Agriculture Improvement Act of 1996, Public Law No. 104-127 (4 April 1996)

US-23 The Production Effects of Decoupled Payments, by Dr. Joseph W. Glauber, Deputy Chief Economist, US Department of Agriculture

US-24 Calculating the Per-Unit Rate of Support, by Dr. Joseph W. Glauber, Deputy Chief Economist, US Department of Agriculture (22 August 2003)

US-25 MTN.GNG/NG5/W/170 (11 July 1990)

US-26 MTN.GNG/AG/W/1 (24 June 1991)

US-27 MTN.GNG/AG/W/1/Add.1 to Add.11 (2 August 1991)

US-28 Uruguay Round Agriculture Negotiations, Discussion Paper, Draft Text on Agriculture (12 December 1991)

US-29 Agriculture text of the Draft Final Act, MTN.TNC/W/FA (20 December 1991)

US-30 Articles 1 - 3 and the Illustrative List of Export Subsidies within the Draft SCM Agreement of the Draft Final Act, MTN.TNC/W/FA

US-31 Budget Summary GSM-102, 103 and Supplier Credit; Subsidy Estimates and Reestimates by Fiscal Year; Fiscal Years 1992 through 2004

US-32 United States Department of Agriculture, Advice of Allotment, Allotment Numbers 01-CCC-47; 02-CCC-28; 02-CCC-27; 03-CCC-26

US-33 Status of Reschedulings for CCC Export Credit Guarantee Program activity for fiscal years 1992-2002

US-34 World Trade (December 1998)

US-35 "Financial Know-How Pays Off," Journal of Commerce (14 June 1995)

US-36 Financial Times (27 January 1994)

US-37 Latin Finance, 1 June 1999, "Brazil Bounces Back," pg. S16; Trade Finance, 1 October 2002. "Forfaiters Seek Eastern Promise," No. 8, vol. 5, pg. SS7

US-38 US Department of Agriculture, Fiscal Year Actual Budgetary Expenditures by Crop Year (http://www.fsa.usda.gov/dam/BUD/bud1.htm)

US-39 US Department of Agriculture, Compliance Report for 1992 Acreage Reduction Program

US-40 US Department of Agriculture, Understanding Factors Driving World Cotton Markets is Crucial for Explaining What Affected World Cotton Prices and US Production and Exports between 1995-2002 (2003)

US-41 Foreign Agricultural Service, US Department of Agriculture, Export Credits Sales Registration Data

US-42 OMB Circular No. A-11, sections 20.5(a); 20.5(f), pages 20-19, 20-22 (July 2003)

US-43 OMB Circular No. A-11, Part 4, Instructions on Budget Execution, Section 120.1, page 120-2 (July 2003)

US-44 Marketing loan rate and A-Index prices, MY 1996-2002 (graph and data)

US-45 Harvest season futures prices at planting and US loan rate, MY1996-2002 (graph and data)

US-46 Low US Northern Europe quote and A-Index, 1999-2003 (graph and data)

US-47 US world market share, MY1995-2003 (graph and data)

# UNITED STATES – SUBSIDIES ON UPLAND COTTON

## *Report of the Panel*

Corrigendum

The following corrections should be made to document WT/DS267/R:

paragraph 6.9
"paragraph 7.227" should read "paragraph 7.277".

paragraph 6.22
"paragraph 7.6314" should read "paragraph 7.634".

paragraph 6.52
"footnote 1374" should read "footnote 1432".

paragraph 7.294
"Brazil's taking of 'legal steps to establish a claim' " should read "Brazil's 'taking of legal steps to establish a claim' ".

paragraph 7.688
"Article 13(b)(ii) of the *SCM Agreement*" should read "Article 13(b)(ii) of the *Agreement on Agriculture*".

paragraph 7.691
"Article 1.1(a)2(ii)" should read "Article 1.1(a)(1)(ii)".

footnote 993
"Question No.229" should read "Question No.228".

footnote 1052
"para. 7.866" should read "para. 7.843".

paragraph 7.1131
The following changes should be made in the 4th sentence:
(i) The first pair of quotation marks should be deleted.
(ii) The first pair of double quotation marks should be deleted.
(iii) The term "certain identified agricultural products" as it first appears in the sentence should be deleted (together with the quotation mark).
(iv) A quotation mark should be put before the word "all" and after the close bracket.

[*] In English only.

./.

paragraph 7.1140
"enterprise" should read "enterprises".

footnote 1313
"*DSU*" should read "*SCM Agreement*".

paragraph 7.1207
"subsidized Member" should read "subsidizing Member".

footnote 1333
The words "subsidized product" and "like product" that appear in the second and third lines, respectively, should be in italics.

paragraph 7.1227
"adverse effects to the interests" should read "adverse *effects* to the interests", and "(c) the effect of the subsidy is" should read "(c) the *effect* of the subsidy is".

footnote 1358
"Article 16.4" should read "Article 16.2".

paragraph 7.1246
The word "cotton" that appears in the first line should be deleted.

footnote 1429
"(MTN/GNG/NG19/W/38/Rev.2)" should read "(MTN/GNG/NG10/W/38/Rev.2)".

footnote 1431
"to request a finding" should read "to make a finding".

paragraph 7.1401
"is capable of" should read "are capable of ".

paragraph 7.1430
"*WTO Agreement*" should read "*SCM Agreement*".

## INITIAL BRIEFS OF PARTIES AND THIRD PARTIES

# ANNEX A-1

## BRAZIL'S BRIEF ON PRELIMINARY ISSUE REGARDING THE "PEACE CLAUSE" OF THE AGREEMENT ON AGRICULTURE

5 June 2003

TABLE OF CONTENTS

## I. INTRODUCTION AND SUMMARY

1. Brazil responds to the Panel's 28 May 2003 request for a briefing on the following issue:

> *Whether Article 13 of the Agreement on Agriculture precludes the Panel from considering Brazil's claims under the Agreement on Subsidies and Countervailing Measures in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled.*[1]

[1] The Panel also "invites the parties to explain their interpretation of the words 'exempt from actions' as used in Article 13 of the Agreement on Agriculture, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue."

2. The short answer to this question is "no". There is no procedural rule or legal requirement for a panel to make such a preliminary finding. The phrase "exempt from actions" in Article 13(b)(ii) and 13(c)(ii) of the Agreement on Agriculture (AoA) means that *if all* the conditions of Article 13(b)(ii) and 13(c)(ii) are fulfilled (*i.e.*, there is peace clause protection), a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic and export support measures that otherwise would be subject to the disciplines of certain provisions of the Agreement on Subsidies and Countervailing Measures (ASCM or SCM Agreement) or Article XVI of GATT 1994. But neither the phrase "exempt from actions" nor AoA Article 13 compel the Panel to *first* make a peace clause finding before considering the substance of Brazil's ASCM and GATT Article XVI claims.

3. Article 13 of the Agreement on Agriculture is not a "special and additional" rule set out in Appendix 2 to the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU). Article 19 of the AoA makes all DSU provisions applicable to the AoA. Pursuant to DSU Article 11, a panel must make an "objective assessment of the facts of the case". Assessing and weighing all relevant facts – including rebuttal facts – obtained during the normal two meeting panel process is essential to resolve properly fact-intensive issues relating to the peace clause. This Panel should follow the lead of previous panels that made similar complex threshold findings in final panel reports.

4. Brazil will be prejudiced by delays in the process because a number of Brazil's claims are not dependent on any resolution of the "peace clause". Much of the proof required for demonstrating that the US has no peace clause protection under Articles 13(b)(ii) and 13(c)(ii) is the same evidence demonstrating US violations under the SCM Agreement. Requiring separate briefings, hearing, presentation of factual evidence and legal argument for such inter-connected "peace clause" issues would seriously disrupt Brazil's presentation of its evidence, lead to duplication of its efforts, delay the proceeding, and increase Brazil's financial and human resource costs.

## II. ANALYSIS OF THE PHRASE "EXEMPT FROM ACTIONS"

1. The Panel has requested that Brazil address the meaning of the phrase "exempt from actions" in AoA Article 13. In the view of Brazil, this phrase means that a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that otherwise would be subject to the disciplines of certain ASCM and GATT 1994 provisions if those measures are in compliance with the various peace clause provisions. It does not mean that a Panel may not hear evidence or consider Brazil's ASCM or GATT 1994 claims while it decides whether all the peace clause conditions have been fulfilled. In sum, this phrase in no way suggests that a panel must make a finding that the peace clause provisions are unfulfilled before proceeding with the other claims.

2. The phrase "exempt from actions" is used, as relevant to this dispute, in AoA Articles 13(a), 13(b)(ii), and 13(c)(ii). The dictionary definition of "actions" is "the taking of legal steps to establish a claim or obtain a remedy."[2] In a multilateral system such as the WTO (like GATT 1947[3] before it), "actions" are taken collectively by Members. DSU Article 2.1 (last sentence) emphasizes this notion

[2] New Shorter Oxford Dictionary, Volume 1 (1993 Edition), at 22.

[3] Article XXV of GATT 1994 provides for "joint action" by the contracting parties to "further the objectives of this Agreement". The decision by the contracting parties to approve the Tokyo Round results in 1979 was entitled "Action by the CONTRACTING PARTIES on the Multilateral Trade Negotiations". BISD 26S/201.

in stating that "only those Members that are parties to that Agreement may participate in decisions or *actions* taken by the DSB with respect to that dispute." (emphasis added) "Actions" include decisions made by the Dispute Settlement Body (DSB) to adopt rulings and recommendations of panels and the Appellate Body. Article XVI:1 of GATT 1994 also provides for another action, a decision by the relevant WTO body to hold consultations with a subsidizing Member to discuss what steps that Member will take to remove the serious prejudice or threat caused by its subsidies.[4] And "actions" also include the enforcement of remedies authorized by the DSB pursuant to DSU Article 22. In sum, "actions" are multilaterally agreed decisions of WTO bodies including the DSB.

3. The ordinary meaning of the word "exempt" is "grant immunity or freedom from liability to which others are subject".[5] The chapeau of Article 13 states that the period of exemption is "during the implementation period", *i.e.*, until 1 January 2004.

4. Combining these definitions of "actions" and "exempt," the term "exempt from action" in Article 13(b)(ii) means that before 1 January 2004, a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic support measures that otherwise would be subject to the disciplines of Article XVI:1 and ASCM Articles 5 and 6. And "exempt from action" in the context of Article XVI:1 would mean that the WTO could not take a decision to require a Member to consult with the WTO on how the Member will eliminate serious prejudice or the threat of serious prejudice caused by that subsidy. However, the immediate context of the phrase "exempt from actions" in Articles 13(a), 13 (b)(ii) and 13(c)(ii) make clear that the "exemption" is not *absolute* but rather subject to a number of conditions:

- Article 13(a) only permits green box domestic subsidies to be exempt from the types of determinations listed in Article 13(a) (i), (ii) or (iii) if they "conform fully to the provisions of Annex 2" of the AoA. If a domestic support measure does not comply with one of a number of requirements of the "green box" provisions of Annex 2, then such domestic support would be evaluated under the peace clause provisions of Article 13(b) and could be subject to a remedy determination by the DSB and/or the WTO.

- Under the provisions of peace clause Article 13(b)(ii), "amber" and "blue" box domestic support measures provided during any marketing year between 1995-2003 are only exempt from determinations by the DSB and/or the WTO relating to paragraph 1 of Article XVI of GATT 1994 (not Article XVI, paragraph 3) and Articles 5 and 6 (not Article 3) of the SCM Agreement "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year". If the quantity of amber and/or blue box support granted in any marketing year from the 1995-2003 period is greater than that decided during marketing year 1992, then the subsidy programme is not "exempt" from such determinations.

- Export subsidies under the peace clause provisions of AoA Article 13(c)(ii) are only exempt from determinations by the DSB and/or the WTO relating to Article XVI of GATT 1994 or Articles 3, 5 and 6 of the SCM Agreement *if* they "conform fully to the provisions of Part V of [the AoA]". Thus, if export subsidy measures are inconsistent with the provisions of AoA Articles 8, 9 or 10, then they are no longer exempt from such determinations.

[4] *See, e.g.*, Report of the Working Party on Article XVI:1 discussions on *EC- Refunds on Exports of Sugar*, BISD 28S/80.

[5] New Shorter Oxford Dictionary, Volume 1 (1993 Edition), at 878.

5. In sum, "exempt from actions" means that a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that are "peace clause" protected. Yet, as described below, the phrase "exempt from actions" when viewed in the broader context of DSU provisions *does not require* the Panel to *first* make a peace clause compliance finding before hearing or considering any of the evidence or arguments relating to the various ASCM or GATT 1994 claims.

## III. THE CONTEXT OF ARTICLE 13 DEMONSTRATES THAT THERE IS NO LEGAL REQUIREMENT FOR THE PANEL TO FIRST MAKE A FINDING ON THE PEACE CLAUSE BEFORE PERMITTING BRAZIL TO SET OUT ITS ARGUMENT AND CLAIMS REGARDING US VIOLATIONS OF THE SCM AGREEMENT

1. There is nothing in the text of Article 13 or other provisions of the AoA, the SCM Agreement, or any other WTO Agreement *requiring* the Panel to make a preliminary factual and legal finding on the applicability of the peace clause before examining Brazil's evidence and argument regarding US violations of the SCM Agreement or GATT 1994.

2. First, and most importantly, Annex 2 of the DSU Agreement is the closed list of "special and additional" rules and procedures that trump the normal rules of dispute settlement. This list does not include Article 13 or any other AoA provisions. Thus, resolution of the "peace clause" issues, like other issues raised by Brazil's request for establishment of a panel, must be resolved using normal DSU rules and procedures.

3. Second, AoA Article 13 does not exclude AoA Article 19 which states that the "provisions of Articles XXII and XXIII of GATT 1994, as elaborated and applied by the Dispute Settlement Understanding, shall apply to consultations and *the settlement of disputes under this Agreement*" (emphasis added). Among the DSU procedures applicable to AoA Article 13 is DSU Article 11 which provides, in part:

> [a] panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements.

4. Article 11 contemplates that a panel must make an "objective assessment of the facts of the case". It does not state that a panel must conduct such an assessment by first examining *part* of the facts of a case before it then examines *other* facts. Further, Article 11 contemplates that the parties will have the full opportunity to search for and present rebuttal facts. This is accomplished through the normal two meeting panel process – not in a single truncated meeting. It is also accomplished through the exchange of rebuttal submissions.

5. Review by a panel of all the facts including rebuttal facts is necessary *before* deciding whether the peace clause is applicable or not. This follows from the inter-related nature of the proof necessary to demonstrate the peace clause and ASCM actionable and prohibited export subsidy claims. As the Panel will discover shortly upon reviewing Brazil's First Submission, the facts relevant to the application of the "peace clause" largely overlap with facts relevant to determining whether the programmes at issue are "actionable" or "prohibited export subsidies". Consider the following:

- Each of the domestic support subsidies at issue in Brazil's actionable subsidy claims are also at issue in Brazil's proof regarding the absence of US peace clause protection for marketing years 1999-2002. For the purposes of AoA Article 13(b)(ii) the "amber" box subsidies include marketing loan/loan deficiency payments; crop insurance payments; Step-2 payments; production flexibility contract payments; direct payments; marketing loss assistance payments; counter-cyclical payments, and cottonseed payments. Proof of both peace clause and actionable subsidies require the same detailed descriptions of the type, nature, extent, and history of each of these US domestic support programmes.

- Brazil has made claims under the AoA and the ASCM regarding prohibited export subsidies under the US Step-2 programme and US export credit guarantee programmes. Brazil will demonstrate that these two export subsidies do not "conform fully to the provisions of Part V of this Agreement" in the sense of AoA Article 13(c); obviously, Brazil's evidence and argument regarding the lack of conformity of these two measures with Part V of the AoA largely overlaps with the evidence and argument necessary to demonstrate a violation of ASCM Articles 3.1(a) and (b).

6. This close overlap of proof for both peace clause and actionable and prohibited subsidy claims highlights the need for the Panel to examine all the "facts of the case" together – including rebuttal facts presented by Brazil to contest US assertions. Such a determination can only be made after collecting information in an iterative process.

7. DSU Article 11 also requires a panel to consider the "applicability" of the "relevant covered agreements". This includes deciding whether actions are exempt from the *covered* agreements. But Article 11 contains no requirement for a special briefing, meeting or determination by a panel to resolve such applicability or exemption.

8. Of course, when fulfilling its obligations under DSU Article 11, the Panel may well need to organize its assessment of the facts in its final determination by first examining and deciding issues related to the peace clause. The Appellate Body in *Brazil Aircraft* held that this is what the panel should have done in deciding the very similar peace-clause-like issues under ASCM Articles 27.2(b) and 27.4.[6] But there is nothing in DSU Article 11 or any other WTO provision mandating that Brazil present its evidence relating to the peace clause alone, divorced from factual evidence and argument relating to the SCM Agreement. As described below, such a requirement would be inconsistent with the previous practice of panels and prejudicial to Brazil's efforts to make a coherent and unified presentation of its case.

## IV. RESOLUTION OF THRESHOLD ISSUES PRIOR TO PROVIDING PARTIES THE OPPORTUNITY TO PRESENT ALL OF ITS EVIDENCE IS CONTRARY TO THE PRACTICE OF EARLIER PANELS

1. Many panels have faced preliminary threshold issues under DSU Article 6.2 and other WTO Agreements. These preliminary issues have involved whether panels have the jurisdiction to resolve and make recommendations concerning certain claims and measures. Many of these preliminary issues involved far less complex facts than are presented by the peace clause in this dispute. Despite this, many panels waited to resolve these threshold jurisdictional issues until the final determination

[6] Appellate Body Report, *Brazil – Export Financing Programme for Aircraft*, WT/DS46/AB/R (adopted 2 August 1999), paras. 143-44.

after reviewing all the evidence and arguments.[7] Other panels have decided these threshold issues after the first meeting of the panel with the parties where the complaining party had an opportunity to present its evidence.[8]

2. The closest case to the peace clause issue presented here was addressed in *Brazil – Export Financing Programme for Aircraft*.[9] That dispute involved Articles 27.2(b) and 27.4 of the SCM Agreement, which exempts certain developing country Members from obligations under ASCM Article 3.1(a) provided that such a Member has complied with certain stated condiditons.[10] The Appellate Body discussed the application of this peace-clause-like provision in *Brazil Aircraft.*[11]

---

[7] WTO Panel Report, *Canada – Measures Affecting the Export of Civilian Aircraft*, WT/DS70/R (adopted 20 August 1999), para. 9.15 (Panel rejected request for preliminary ruling based claims under DSU Article 6.2 and decided issues in final report); WTO Panel Report, *Egypt – Definitive Anti-Dumping Measures on Steel Rebar from Turkey*, WT/DS211/R (adopted 1 October 2002), para. 7.27-7.31 (Panel determined in final report that certain claims were not within its terms of reference); WTO Panel Report, *India – Measures Affecting the Automotive Sector*, WT/DS146/R and WT/DS/175/R (adopted 5 April 2002), paras. 7.44-7.103 (Panel rejected India's threshold *res judicata* claims in final panel report); WTO Panel Report, *United States – Anti-Dumping Duty and Dynamic Random Access Semiconductors (DRAMS) of One Megabit or more From Korea*, WT/DS99/R (adopted 19 March 1999), para. 6.17 (Panel ruled in final report granting US's preliminary objections that certain AD measures predated the WTO and could therefore not be subject to challenge); WTO Panel Report, *Japan – Taxes on Alcoholic Beverages*, WT/DS8/R, WT/DS10/R and WT/DS11/R (adopted 1 November 1996), para. 6.5 (Final report determined that a claim was outside of the Panel's terms of reference); WTO Panel Report *United States – Definitive Safeguard Measures on Circular Welded Carbon Quality Line Pipe from Korea*, WT/DS202/R (adopted 8 March 2002), para. 7.121-7.126 (Panel rejected a Korean claim as beyond its terms of reference in the final panel report); WTO Panel Report, *United States – Anti-Dumping Measures on Certain Hot-Rolled Steel Products from Japan*, WT/DS184/R (adopted 23 August 2001), para. 7.22 (final report determined that the "adverse facts available" claim was beyond its terms of reference).

[8] WTO Panel Report, *European Communities – Anti-Dumping Duties on Malleable Cast Iron Tube or Pipe Fittings from Brazil*, WT/DS219/R (not yet adopted), para. 7.14 (preliminary finding made following first meeting with the parties that certain claims were not within its terms of reference); WTO Panel Report, *United States – Countervailing Duties on Certain Corrosion-Resistant Carbon Steel Flat Products from Germany*, WTDS213/R (adopted 19 December 2002), para 8.1 –8.2 and footnote 224 (Panel decided at end of first meeting that two claims were outside its terms of reference and provided reasoning in final Panel report); WTO Panel Report, *United States – Import Measures on Certain Products from the European Communities*, WT/DS165/R (adopted 10 January 2001), para. 6.11 (Panel issued preliminary ruling regarding scope of measures within its terms of reference at the end of the second meeting with the parties); WTO Panel Report, *United States – Safeguard Measures on Imports of Certain Fresh, Chilled and Frozen Lamb from New Zealand and Australia*, WT/DS177/R and WT/DS178/R (adopted 16 May 2001), para. 5.15 (Panel ruled during first meeting that panel request was sufficient in covering all the claims brought by Australia and New Zealand).

[9] WTO Panel Report, WT/DS46/AB/R (adopted 2 August 1999).

[10] These provisions provide as follows:

> 27.2: The prohibition of paragraph 1(a) of Article 3 [prohibited export subsidies] shall not apply to:
> ** ** ** **
> (b) other developing country Members for a period of eight years from the date of entry into force of the WTO Agreement, subject to compliance with the provisions in paragraph 4.
>
> 27.4: Any developing country Member referred to in paragraph 2(b) shall phase out its export subsidies within the eight-year period, preferably in a progressive manner. However, a developing country Member shall not increase the level of its export subsidies, and shall eliminate them within a period shorter than that provided for in this paragraph when the use of such export subsidies is inconsistent with its development needs. . .

[11] Appellate Body Report, WT/DS46/AB/R (adopted 2 August 1999).

> In our view, too, paragraph 4 of Article 27 provides certain obligations that developing country Members must fulfill if they are to benefit from this special and differential treatment during the transitional period. . . . If a developing country Member complies with the obligations in Article 27.4, the prohibition on export subsidies in Article 3.1(a) simply does not apply. . . . If [. . .] non-compliance is demonstrated, then, and only then, does the prohibition of Article 3.1(a) *apply* to that developing country Member.[12] (*emphasis added)*

3. The Appellate Body found that the panel should have considered first the threshold issue of whether Brazil was in compliance with Article 27.4 before deciding whether Brazil was in violation of ASCM Article 3.1(a).[13] Yet, there was never a suggestion or finding that the Panel erred by not conducting a special briefing and special determination *before* even accepting arguments of Brazil and Canada regarding the ASCM Article 3.1(a) issue. A finding on the threshold issue in that case, as here, was conditioned upon other crucial determinations such as: the definition of subsidy; the moment when a subsidy was granted; the relevant level, etc. In that case, the threshold issue was decided by the Panel in the final report only after the parties had a chance to discuss all the related issues during the full course of the Panel proceedings.

4. There are a number of other threshold issues in WTO Agreements. No claim may be brought against a measure under the General Agreement on Trade in Services (GATS) unless the measure falls within the scope of the General Agreement on Trade in Services as defined in GATS Article I. No claim may be brought under Article 2 of the Agreement on Technical Barriers to Trade except in respect of a measure that is a "technical regulation" as defined by that agreement. Claims under the Agreement on Government Procurement may only be brought concerning procurement of an entity covered by Annex I of that agreement. While the language of these provisions differs, the effect is the same as the operation of the AoA Article 13 and ASCM Articles 27.2(b) and 27.4 – if the threshold objections are granted, the Panel cannot make a finding that the defending Member has acted contrary to the covered agreements. Yet none of these provisions have special and additional rules to provide for extraordinary preliminary briefings, meetings, and determinations prior to a panel hearing all of the claims presented.

## V. BRAZIL WILL BE PREJUDICED BY SEPARATE HEARINGS AND BRIEFINGS ON THE PEACE CLAUSE ISSUE

1. Brazil has previously described in its letter of 23 May 2003 to the Panel the prejudice that will occur if special meetings and briefings are imposed to resolve peace clause issues. Such prejudice includes requiring Brazil to present the *same* evidence three – not two times – and in having to bring its legal and economic experts to Geneva for an extra meeting.

2. In addition, Brazil would note that such special proceedings would cause it prejudice because there would be significantly delays in the resolution of its claims – many of which do not implicate the peace clause. These non-peace clause claims include the following:

1. Article XVI:3 of GATT 1994 involving all domestic and export subsidies challenged by Brazil;
2. Article III:4 of GATT 1994 regarding Step-2 domestic payments;

[12] Appellate Body Report, WT/DS46/AB/R, paras. 140-41 .
[13] Appellate Body Report, WT/DS46/AB/R, paras. 143-44.

1. Articles 3.1(b) and 3.2 of SCM Agreement regarding prohibited local content Step-2 domestic payments;
2. Articles 3.3 and 9.1(a) of the AoA regarding export subsidies including Step-2 export payments;
3. Articles 8 and 10.1 of the AoA regarding the GSM 102, GSM 103, and SCGP export credit guarantee programmes;
1. Articles 8 and 10.1 of the AoA regarding ETI measure (FSC replacement measure).

3. Moreover, Brazil's proof of these claims involves evidence overlapping with that relevant to Brazil's peace clause claims, as well as with its actionable and prohibited export subsidy claims. Given this overlap, a special proceeding on only the peace clause would negatively impact on Brazil's ability to present a coherent and unified presentation of its case.

## VI. CONCLUSION

1. For the reasons set forth above, Brazil requests that this Panel find that it is not precluded from hearing evidence and considering Brazil's claims under the ASCM or Article XVI of GATT 1994 without first concluding that the peace clause conditions of AoA Article 13(b)(ii) and 13(c)(ii) remain unfulfilled.

# ANNEX A-2

## INITIAL BRIEF OF THE UNITED STATES ON THE QUESTION POSED BY THE PANEL

5 June 2003

### A. INTRODUCTION

1. The United States thanks the Panel for this opportunity to comment on the question concerning Article 13 of the *Agreement on Agriculture* ("Agriculture Agreement") posed by the Panel in its fax of 28 May 2003. The Panel asked the parties to address:

> [W]hether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions in Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue.

2. Article 13 (the "Peace Clause") precludes the Panel from considering Brazil's claims under Article XVI of the *General Agreement on Tariffs and Trade 1994* ("GATT 1994") and the *Agreement on Subsidies and Countervailing Measures* ("Subsidies Agreement") since the US support measures at issue conform with the Peace Clause. The Peace Clause "exempt[s]" conforming support measures "from actions based on" the corresponding provisions of the Subsidies Agreement and the GATT 1994.[1] Read in accordance with the customary rules of interpretation of public international law, the phrase "exempt from actions" means "not exposed or subject to" a "legal process or suit" or the "taking of legal steps to establish a claim". Therefore, Brazil cannot maintain any action – and the United States cannot be required to defend any such action – based on provisions specified in the Peace Clause[2] since the US support measures for upland cotton conform to the Peace Clause. In light of the correct interpretation of the Peace Clause, the United States respectfully requests the Panel to organize its procedures to first determine whether Brazil may maintain any action based on provisions exempted by the Peace Clause.

3. Consider the alternative approach proposed by Brazil in its 23 May letter – that is, requiring the United States to defend the substantive claims at the same time as arguing the Peace Clause issues. If the Panel were to allow Brazil to proceed with its substantive claims under the Subsidies Agreement and GATT 1994 now, and only conclude later (for example, at the time of the issuance of its report) that the US measures at issue conform to the Peace Clause based on the facts of this dispute, US measures would already have been subject to Brazil's action based on those claims. As the United States will explain, this would contradict the ordinary meaning of the phrase "exempt from actions" in Article 13, read in its context, and in light of the object and purpose of the Agriculture

[1] For example, Article XVI of the GATT 1994 and Part III of the Subsidies Agreement correspond to Article 13(a)(ii) of the Agriculture Agreement, GATT 1994 Article XVI:1 and Articles 5 and 6 of the Subsidies Agreement correspond to Article 13(b)(ii) of the Agriculture Agreement, and GATT 1994 Article XVI and Articles 3, 5, and 6 of the Subsidies Agreement correspond to Article 13(c)(ii) of the Agriculture Agreement..

[2] *See* WT/DS267/7, at 3 (asserting claims based on Subsidies Agreement Articles 3.1(a), 3.1(b), 3.2, 5(a), 5(c), 6.3(b), 6.3(c), and 6.3(d) and GATT 1994 Articles XVI:1 and Article XVI:3).

Agreement. Consequently, to allow Brazil to proceed with any action against these US measures that are exempt from actions based on such claims would contravene the Peace Clause and upset the balance of rights and obligations of WTO Members.

B. LEGAL INTERPRETATION OF THE PEACE CLAUSE

4. The Peace Clause, Article 13 of the Agriculture Agreement[3], governs the treatment during the implementation period of the Agreement of certain domestic support measures and export subsidies "notwithstanding the provisions of GATT 1994 and the Agreement on Subsidies and Countervailing Measures".[4] For purposes of the Panel 's question, there would appear to be two interpretive issues. The first is straightforward and apparently not in dispute: whether the Peace Clause is in effect for the measures at issue. The second is what is the nature of the treatment under the Peace Clause of conforming measures – i.e., what does it mean to say that conforming measures are "exempt from actions".

[3] The Peace Clause reads:

During the implementation period, notwithstanding the provisions of GATT 1994 and the Agreement on Subsidies and Countervailing Measures (referred to in this Article as the "Subsidies Agreement"):

(a) domestic support measures that conform fully to the provisions of Annex 2 to this Agreement shall be:
  (i) non-actionable subsidies for purposes of countervailing duties;
  (ii) exempt from actions based on Article XVI of GATT 1994 and Part III of the Subsidies Agreement; and
  (iii) exempt from actions based on non-violation nullification or impairment of the benefits of tariff concessions accruing to another Member under Article II of GATT 1994, in the sense of paragraph 1(b) of Article XXIII of GATT 1994;

(b) domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, shall be:
  (i) exempt from the imposition of countervailing duties unless a determination of injury or threat thereof is made in accordance with Article VI of GATT 1994 and Part V of the Subsidies Agreement, and due restraint shall be shown in initiating any countervailing duty investigations;
  (ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year; and
  (iii) exempt from actions based on non-violation nullification or impairment of the benefits of tariff concessions accruing to another Member under Article II of GATT 1994, in the sense of paragraph 1(b) of Article XXIII of GATT 1994, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year;

(c) export subsidies that conform fully to the provisions of Part V of this Agreement, as reflected in each Member's Schedule, shall be:
  (i) subject to countervailing duties only upon a determination of injury or threat thereof based on volume, effect on prices, or consequent impact in accordance with Article VI of GATT 1994 and Part V of the Subsidies Agreement, and due restraint shall be shown in initiating any countervailing duty investigations; and
  (ii) exempt from actions based on Article XVI of GATT 1994 or Articles 3, 5 and 6 of the Subsidies Agreement.

Agriculture Agreement, Article 13 (footnote omitted).

[4] Agriculture Agreement, Article 13 (chapeau). Article 21.1 of the Agriculture Agreement also makes it clear that the Subsidies Agreement and GATT 1994 only apply "subject to" the provisions of the Agriculture Agreement, including Article 13 (the Peace Clause).

### 1. Duration of the Peace Clause: The "Implementation Period"

5. The Peace Clause is in force at present. The first words of the Peace Clause ("During the implementation period") establish the duration of the treatment afforded by this provision. Article 1(f) of the Agriculture Agreement defines "implementation period" as "the six-year period commencing in the year 1995" but goes on to specify that "for purposes of Article 13, it means the nine-year period commencing in 1995". That is, Members determined that exempting certain measures from certain actions based on otherwise applicable WTO provisions was desirable for a time period *longer* than the period for the phase-in of all other commitments under the Agriculture Agreement. Thus, the Peace Clause currently continues to exempt conforming measures – whether US, Brazilian, or of any other Member – from actions under the corresponding provisions of the GATT 1994 and the Subsidies Agreement.

### 2. Effect of the Peace Clause: "Exempt from Actions"

6. For purposes of this dispute, all of the relevant provisions of the Peace Clause utilize the same language and construction: conforming measures "shall be . . . exempt from actions based on" specified provisions of the WTO agreements. The critical phrase "exempt from actions" is not defined in the Agriculture Agreement. According to the customary rules of interpretation of public international law[5], these terms should be interpreted according to their ordinary meaning in their context, in light of the object and purpose of the Agreement.[6]

7. The ordinary meaning of the word "exempt" is "[n]ot exposed or subject to something unpleasant or inconvenient; not liable to a charge, tax, etc. (Foll. by *from, of*.)".[7] The ordinary meaning of the word "action" is "[t]he taking of legal steps to establish a claim or obtain remedy; the right to institute a legal process" and "[a] legal process or suit".[8] A legal dictionary provides further explanation of the term "action":

> Term in its *usual legal sense* means *a lawsuit* brought in a court; a *formal complaint* within the jurisdiction of a court of law. . . . . The *legal or formal demand of one's right* from another person or party made and insisted on in a court of justice. An *ordinary proceeding in a court* of justice by which one party prosecutes another for the enforcement or protection of a right, the redress or prevention of a wrong, or the punishment of a public offence. It includes *all the formal proceedings* in a court of justice attendant upon the demand of a right made by one person of another in such court, *including an adjudication* upon the right and its enforcement or denial by the court.[9]

Thus, according to the ordinary meaning of the terms, "exempt from action" means "not exposed or subject to" the "taking of legal steps to establish a claim", such as a "formal complaint" or any "formal proceedings", including an "adjudication" of the claim. An even simpler formulation would be "not liable to" a "legal process or suit".

---

[5] *See Understanding on Rules and Procedures Governing the Settlement of Disputes*, Article 3.2 (The dispute settlement system "serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law.").

[6] The customary rules of interpretation of public international law are reflected in part in Article 31(1) of the Vienna Convention, which reads: "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose."

[7] *The New Shorter Oxford English Dictionary*, vol. 1, at 878 (first definition as adjective & noun) (italics in original).

[8] *The New Shorter Oxford English Dictionary*, vol. 1, at 22 (first and second definitions).

[9] *Black's Law Dictionary* at 28 (6th ed. 1990) (emphasis added).

8. Relevant context for the phrase "exempt from actions" includes the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU"), which applies to "disputes brought pursuant to the consultation and dispute settlement provisions of the agreements listed in Appendix 1 to this Understanding (referred to in this Understanding as the 'covered agreements')". The covered agreements, of course, include the Agriculture Agreement and the Subsidies Agreement. Article 3.7 of the DSU states: "*Before bringing a case*, a Member shall exercise its judgement as to whether *action* under these procedures would be fruitful" (emphasis added). Similarly, Article 4.5 of the DSU states: "*In the course of consultations* in accordance with the provisions of a covered agreement, before resorting to *further action* under this Understanding, Members should attempt to obtain satisfactory adjustment of the matter" (emphasis added). Thus, these provisions suggest that "action" based on the relevant provisions would include all stages of a dispute, including the "bringing [of] a case", consultations, and panel proceedings.[10]

9. In addition, Article 7, which forms part of Part III of the Subsidies Agreement (entitled "Actionable Subsidies"), serves as context for the term "exempt from actions." Article 7 provides procedures (including consultations, panel proceedings, and remedies) to enforce the legal rights contained in Article 5 (on "adverse effects") and Article 6 (on "serious prejudice"). Article 7 states in its introductory phrase that its procedures apply "[e]xcept as provided in Article 13 of the Agreement on Agriculture".[11] Thus, these provisions also support reading "exempt from actions" in Article 13 to mean "not subject to" the "taking of legal steps to establish a claim". Footnote 35 of the Subsidies Agreement provides additional context that may help explain that "exempt from action" includes not resorting to dispute settlement. Footnote 35, which deals with "non-actionable"[12] subsidies, states that "[t]he provisions of Parts III [on actionable subsidies] and V [on countervailing measures] *shall not be invoked* regarding measures considered non-actionable in accordance with the provisions of Part IV".[13] As otherwise relevant provisions cannot be "invoked" for non-actionable subsidies, footnote 35 supports reading " exempt from action" as not resorting to dispute settlement by asserting legal claims.

10. This interpretation of "exempt from actions" meshes with the object and purpose of the Agriculture Agreement. The Agreement represents the outcome of long and difficult negotiations to move towards the "long-term objective . . . to provide for substantial progressive reductions in agricultural support and protection sustained over an agreed period of time, resulting in correcting and preventing restrictions and distortions in world agricultural markets".[14] Members therefore agreed to the Peace Clause, recognizing that agricultural subsidies could not be eliminated immediately and needed, under certain conditions, to be exempted from the Subsidies Agreement and GATT 1994 subsidies disciplines.

## C. CONCLUSION: BRAZIL MAY NOT BRING, AND THE PANEL MAY NOT ADJUDICATE, A SUBSIDIES AGREEMENT OR GATT 1994 ARTICLE XVI ACTION AGAINST US MEASURES CONFORMING TO THE PEACE CLAUSE

11. Brazil's approach – that both the applicability of the Peace Clause and Brazil's Subsidies Agreement and GATT 1994 Article XVI claims be considered at the same time – would contravene the plain meaning of the Peace Clause by subjecting US measures to the "taking of legal steps to establish a claim". Under Brazil's approach, the US measures would be subject to an action based on the

[10] As further support for the fact that "action" includes dispute settlement, DSU Article 3.10 provides that: "It is understood that requests for conciliation and the use of the dispute settlement procedures should not be intended or considered as contentious *acts* . . ." (emphasis added).

[11] Subsidies Agreement, Article 7.1.

[12] The ordinary meaning of the term "actionable" is "[a]ffording ground for an action at law". *The New Shorter Oxford English Dictionary*, vol. 1, at 22.

[13] Subsidies Agreement, Article 10 fn. 35 (emphasis added).

[14] Agriculture Agreement, preamble (third paragraph).

corresponding provisions of the Subsidies Agreement and GATT 1994 at the same time that the Panel would be reviewing the applicability of the Peace Clause. Brazil's approach would ignore the plain meaning of the provisions of the Peace Clause exempting these measures from actions.

12. Accordingly, the United States respectfully requests the Panel to find that measures that conform to the Peace Clause are exempt from any action, including action under the DSU, based on the corresponding provisions of the Subsidies Agreement and the GATT 1994. As a result, the United States is not required to defend those measures in any action based on Brazilian claims exempted by the Peace Clause.

# ANNEX A-3

## ARGENTINA'S THIRD PARTY INITIAL BRIEF

10 June 2003

1. Argentina would like to thank the Panel for the opportunity to submit, as third party to the dispute, written comments concerning whether Article 13 of the Agreement on Agriculture (AoA) precludes the Panel from considering Brazil´s claims under the Agreement on Subsidies and Countervailing Measures (SCM Agreement) in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. To that respect, Argentina states the following:

2. The text of Article 13 of the AoA does not require the Panel to make a preliminary finding on the applicability of the peace clause before examining Brazil´s claims under the SCM Agreement or GATT 1994. If the negotiators had considered such preliminary finding was necessary, they would have set it forth.

3. Indeed, a textual analysis of Article 13 of the AoA reveals that *"actions"*, and not the analysis of claims under Article XVI of GATT 1994 or Articles 3, 5 or 6 of the SCM Agreement, can only be precluded if all conditions established in paragraphs b) (ii) or c) (ii) of the referred Article 13 are met.

4. To that regard, the Appellate Body has established:

> *"The duty of a treaty interpreter is to examine the words of the treaty to determine the intentions of the parties. This should be done in accordance with the principles of treaty interpretation set out in Article 31 of the Vienna Convention. But these principles of interpretation neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended."*[1]

- **The terms *"exempt from actions"* as stated in Article 13 of the Agreement on Agriculture:**

5. From Argentina´s point of view, in the context of Article 13 of the AoA the words *"exempt from actions"* do not amount to an impossibility to request a panel procedure. *"Exempt from actions"* means that a finding of inconsistency with Articles XVI of GATT 1994 or Articles 3, 5 and 6 of SCM Agreement will not be possible if the legal requirements for the exemption are fulfilled. The immediate context of the terms "*exempt from actions"* -i.e., paragraphs b) and c)- confirms this interpretation since that exemption require a particular threshold, i.e., that domestic support measures and export subsidies "conform fully" (to different provisions of the AoA).

6. Nevertheless, it is precisely through the panel procedures that the fulfilment of those legal requirements will be determined. Argentina agrees with Brazil´s statement in paragraph 6 of its Brief that the word "actions" in the context of Article 13 of the AoA refers to decisions of WTO competent bodies, such as the DSB when it discharges its duties by establishing a panel. A different interpretation would imply giving the measures allegedly covered by the Peace Clause a character of absolute immunity, independent of whether the legal requirements established in Article 13 are fulfilled or not. This would contradict the principle of *in dubio mitius*, constituting a more onerous interpretation of the treaty provisions

[1] Appellate Body Report, *India-Patents*, adopted 16 January 1998, WT/DS50/AB/R, para. 45. (Emphasis added).

7. Therefore, the words *"exempt from actions"* do not preclude a Panel from considering a claim under the SCM Agreement or GATT 1994 while it decides whether the Peace Clause conditions have been fulfilled.

8. Argentina considers that there is no doubt that "the Peace Clause currently continues to exempt conforming measures from actions under the corresponding provisions of the GATT 1994 and the Subsidies Agreement".[2] Indeed, the key words in Article 13 b) (ii) and c) (ii) of the AoA are "*that conform fully*" and "*provided that"* and "*that conform fully*", respectively. These words imply that the exception is not absolute, but rather subject to the fulfilment of certain conditions. When considering the interpretative issues for purposes of the Panel's question at paragraph 4 of its Brief, the US seems to omit this issue by stating that what appears to be in dispute is the nature of the treatment of conforming measures under the Peace Clause. However, from Argentina's point of view, what is important here is to determine at this stage of the proceedings the treatment under the Peace Clause of measures that are supposed not to be in conformity with the legal requirements needed to be exempted from actions.

9. In addition, the fulfilment of the legal conditions set forth under Article 13 is a matter of fact that necessarily requires to be elucidated during panel procedures. If not, how can this issue be elucidated where, as in the present case, the US did not state which was its 1992 domestic support level and did not answer the specific questions during the consultations? Only through panel proceedings could those issues be elucidated.

10. On the other hand, as Brazil stated in paragraph 17 of its Brief[3], there is no WTO provision obliging a Member to present evidence relating to the Peace Clause in a manner that is divorced from factual evidence and allegations under the SCM Agreement and/or GATT 1994. As stated by Brazil in paragraphs 13 and 14 of its Brief, according to Article 11 of the DSU a panel must make an objective assessment of the facts of the case and not of part of them before examining others, specially when, as in the case at hand, there is an overlap between the evidence related to the requirements of Art. 13 of the AoA and the evidence related to the actionable and prohibited subsidy claims.

11. Argentina considers that the text of Article 13 of the AoA does not ban a Panel from considering altogether a defence invoked under the Peace Clause and the allegations of inconsistency under GATT 1994 or the SCM Agreement. If a preliminary ruling on the applicability of the Peace Clause were necessary before being able to examine Brazil´s claims under the SCM Agreement or GATT 1994, the terms "*exempt from actions"* would have too broad a sense. It would amount to the creation of a new obligations for Members clearly not envisaged in the text of Art. 13.

12. Finally , the same reasoning could apply to other preliminary issues, such us the objections to the consistency of a Panel´s terms of reference with Article 6.2 of the DSU or the general exceptions under Article XX of GATT 1994. However, different Panels and the Appellate Body have made their findings on those issues altogether with their findings regarding substantive claims.

- **Other relevant provisions of the covered agreements:**

13. The SCM Agreement is applicable both for agricultural and non-agricultural products. It is true that Article 7 of the SCM Agreement states that the request of consultations is subject to Article 13 of the AoA. However, in the case at hand the US did not put it forward neither during

[2] US Initial Brief on Question Posed by Panel, 5 June 2003.

[3] Brazil´s Brief on Preliminary Issue Regarding the "Peace Clause" of the Agreement on Agriculture, 5 June 2003.

consultations nor during the meetings where the establishment of the Panel was requested, thus engaging itself in such procedures.

- **Other considerations that should guide the assessment of this issue :**

14. Argentina considers that the provisions contained in Article 13 of the AoA have an exceptional nature. This would imply that the Member who alleges to be protected by the Peace Clause has the burden of proving the fulfilment of its legal requirements. As long as the US does not demonstrates *prima facie* that it fulfils all the conditions that would allow a protection against a claim by virtue of Article 13 of the AoA, the Panel should consider as appropriate the claims under Article XVI of GATT 1994 or Articles 3, 5 and 6 of the SCM Agreement.

15. Finally, as stated by Brazil in paragraphs 13 and 14 of its Brief, according to DSU Article 11 a panel must make an objective assessment of the facts of the case and not of part of them before examining others, specially when, as in the case at hand, there is a need to clarify closely related issues of fact that relate both to the fulfilment of the conditions set forth by the Peace Clause and to the substantive claims regarding actionable and prohibited subsidies.

**Conclusion**

16. According to the above statements, Argentina considers that Article 13 of the AoA does not preclude the Panel from hearing evidence and considering Brazil´s claims under the SCM Agreement or GATT 1994 while it decides whether the Peace Clause conditions of Article 13 have or have not been met.

# ANNEX A-4

## AUSTRALIA'S WRITTEN COMMENTS

10 June 2003

1. I refer to your faxed letter of 28 May 2003 in which you invited third parties to the dispute to submit any written comments they may have in relation to the following:

> whether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled. In particular, the Panel invite the parties to explain their interpretation of the words "exempt from action" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue. For greater clarity, the Panel invites the parties, during this initial stage of the proceedings, to focus on matters of legal interpretation, rather than upon the submission of any factual evidence that might be associated with the substantive elements of Article 13.

2. Please note that, for the purposes of Australia's comments in relation to the issues identified in the previous paragraph, references to "Article 13" refer to Article 13(a)(ii), 13(b)(ii) and 13(c)(ii). There is nothing in Article 13 of the *Agreement on Agriculture* – nor indeed in the *Dispute Settlement Understanding ("the DSU")* – that would preclude the Panel from considering claims under the *Agreement on Subsidies and Countervailing Measures* in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled.

3. Article 13 of the *Agreement on Agriculture* provides a limited, conditional and time-limited exemption from actions based on Article XVI of GATT 1994 and certain provisions of the *Agreement on Subsidies and Countervailing Measures* ("the specified provisions") in respect of measures which conform fully to the respective provisions of the *Agreement on Agriculture* and to Article 13 itself. Article 13 does not preclude *per se* claims based on the specified provisions, that is, Article 13 does not prevent the specified provisions being invoked. Rather, Article 13 is in the nature of an "affirmative defence" for measures which are inconsistent with the specified provisions.[1]

4. Viewing Article 13 of the *Agreement on Agriculture* as an affirmative defence gives proper meaning to that provision, as well as to Article 21 of the *Agreement on Agriculture* and Articles 3.1, 6.9 and 7.1 of the *Agreement on Subsidies and Countervailing Measures*. This view would also be consistent with the interpretive principle of effectiveness, which the Appellate Body has found should guide the interpretation of the WTO Agreement.[2]

5. In assessing an affirmative defence based on Article 13 of the *Agreement on Agriculture*, the proper application of that provision would require the Panel to consider the conditions listed in Article 13 ("the prescribed conditions"), that is:

---

[1] See, for example, *United States – Measures Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/AB/R, page 16.

[2] *United States – Continued Dumping and Subsidy Offset Act of 2000*, WT/DS217/AB/R, WT/DS234/AB/R, paragraph 271.

- as appropriate, whether the measure at issue constitutes a domestic support measure or an export subsidy within the meaning of Annex 2 to, or Articles 6 or 1(e) of, the *Agreement on Agriculture*; and, if so,

- as appropriate, whether the measure at issue conforms fully to the provisions of Annex 2 to, or Article 6 or Part V of, the *Agreement on Agriculture*; and

- as appropriate, whether measures falling within the provisions of Article 6 of the *Agreement on Agriculture* grant support to a specific commodity not in excess of that decided during the 1992 marketing year.

6. Only if the Panel determines that Article 13 of the *Agreement on Agriculture* is relevant because the prescribed conditions are met would it need to consider whether the measures at issue are "exempt from actions based on" the specified provisions. In that event, the Panel would need to consider whether the measures at issue are "free or released from a duty or liability to which others are held"[3] in relation to a proceeding "found[ed], buil[t] or construct[ed] on"[4] the specified provisions. In other words, if the prescribed conditions are met, a Member will be immune from liability for a measure's inconsistency with the specified provisions for the period for which Article 13 applies.

7. In this dispute, there is disagreement between the parties to the dispute whether the measures at issue conform fully to the respective provisions of the *Agreement on Agriculture*. However, disagreement between the parties to the dispute does not serve to limit the Panel's mandate. There is no provision in the covered agreements that a disagreement between the parties to the dispute about conformity would serve as a barrier to a Panel's legal mandate to examine claims in accordance with the provisions of Article 3.2 and 11 of the DSU. There is, therefore, no requirement that the Panel reach a conclusion that certain conditions of Article 13 of the *Agreement on Agriculture* remain unfulfilled before considering claims under the *Agreement on Subsidies and Countervailing Measures*.

# ANNEX A-5

## COMMENTS BY THE EUROPEAN COMMUNITIES ON CERTAIN ISSUES RAISED ON AN INITIAL BASIS BY THE PANEL

10 June 2002

TABLE OF CONTENTS

## I. INTRODUCTION

1. The Panel has asked the Parties to this dispute, together with the third parties, to comment on the following question:

> [W]hether Article 13 of the *Agreement on Agriculture* precludes the Panel from considering Brazil's claims under the *Agreement on Subsidies and Countervailing Measures* in these proceedings in the absence of a prior conclusion by the Panel that certain conditions in Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the *Agreement on Agriculture*, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue.

2. The European Communities understands the positions of the two parties as follows. The United States is arguing for a multi stage procedure – first the Panel should deal with this initial issue, second, it should examine whether the US measures at issue fall under Article 13 of the *Agreement on Agriculture*, and finally, and only if the measures do not fall under Article 13 of the *Agreement on Agriculture*, should the Panel examine whether these measures are consistent with the *Agreement on*

*Subsidies and Countervailing Duties* (*SCM Agreement*).[1] On the other hand, Brazil considers that the Panel should, after settling this initial issue, examine Brazil's claims under Article 13 of the *Agreement on Agriculture* and the *SCM Agreement* simultaneously, treating Brazil's claims under Article 13 of the *Agreement on Agriculture* as a threshold issue.[2] Neither party appears to suggest that this issue is anything other than a substantive issue. [3]

3. The parties submissions concern the manner in which the Panel should organise its procedures. In other words, should it hear arguments and evidence on Brazil's claims under Article XVI GATT and the *SCM Agreement* before it has decided whether the United States can avail itself of Article 13 of the *Agreement on Agriculture*. The European Communities considers that this issue falls within the Panel's discretion as to the organization of its procedures. Such discretion is, nevertheless, not without its limits. The European Communities considers that there are a number of factors which require the Panel to exercise its discretion so as to examine the evidence and arguments presented by the parties with respect to both Article 13 of the *Agreement on Agriculture* and Article XVI GATT and the *SCM Agreement* at the same time. The European Communities sets out its arguments on these issues in more detail in the sections below.

## II. THE QUESTION AT ISSUE FALLS WITHIN THE PANEL'S DISCRETION AS TO THE ORGANISATION OF ITS OWN PROCEDURES

4. Both parties seem to consider that the Panel is required to rule, as a matter of substance, on whether the US measures fall under Article 13 of the *Agreement on Agriculture*, and if not, whether they are consistent with Article XVI GATT and the *SCM Agreement*. Brazil's contention that the US measures are inconsistent with Article XVI GATT and the *SCM Agreement*, because they are not covered by Article 13 of the *Agreement on Agriculture* requires the Panel to determine whether Article 13 is applicable. Similarly, the United States' claim that Article 13 of the *Agreement on Agriculture* prevents the Panel from ruling on Brazil's other claims requires adjudication of the issue of the applicability of Article 13.

5. The European Communities finds support for its view that the choice between a single and multistage procedure is a matter for the Panel's discretion in the fact that Article 13 of the *Agreement on Agriculture* is not set up as a specific rule which can be distinguished from the normal DSU procedures. Thus, for instance, Article 13 is not mentioned in Annex 2 of the DSU listing special or additional rules and procedures contained in the covered agreements. Moreover, Article 19 of the *Agreement on Agriculture* states that the provisions of Article XXII and XXIII GATT, as elaborated in the DSU, apply to the *Agreement on Agriculture*. Consequently, there are no special rules foreseen in respect of Article 13 in the event that a Member requests dispute settlement in which it may be raised as an issue.

6. In order further to demonstrate that this is a matter for the Panel's discretion, it is instructive to consider the United States' arguments on the meaning of exempt from action". The United States argues that the meaning of the term "exempt from action" is that no formal proceedings can be

[1] In para. 2 of its initial brief, the US argues

> "[t]he United States respectfully requests the Panel to organize its procedures to first determine whether Brazil may maintain any action based on provisions exempted by the Peace Clause."

[2] Brazil concludes its initial brief as follows:

> "[ ..] Brazil requests that this Panel find that it is not precluded from hearing evidence and considering Brazil's claims under the ASCM or Article XVI of GATT 1994 without first concluding that the peace clause conditions of AoA Article 13(b)(ii) and 13(c)(ii) remain unfulfilled."

[3] For instance, that the arguments on Article XVI GATT and the SCM Agreement are not within the terms of reference of the Panel.

launched with respect to the matter exempt from action, and that in the WTO, this would mean that a Member could not request consultations and later request the establishment of a panel.[4] The implications of this are unclear however. The logical conclusion would appear to be that the United States is suggesting that Brazil should first bring a panel arguing that Article 13 of the *Agreement on Agriculture* is not applicable, and then (if it is successful) bring a second panel to adjudicate its claims under Article XVI GATT and the *SCM Agreement*? This notion seems implausible for a number of reasons. First, in considering whether Article 13 of the *Agreement on Agriculture* is applicable, the first Panel would not be adjudicating a dispute but would be requested to issue a declaratory judgement. Second, a Member is not under an obligation to act consistently with Article 13 of the *Agreement on Agriculture* – failing to respect Article 13 implies that a Member no longer enjoys the protection thereof. Consequently, and third, Article 13 of the *Agreement on Agriculture* can only be seen as a defence against a claim brought under other aspects of the WTO Agreements which regulate the provision of subsidies. It would seem bizarre if, before Brazil could bring a claim with respect to subsidies which it considered did not respect the US's WTO obligations, Brazil had first to establish that potential US defences did not apply.

7. The European Communities notes that, although this situation is the logical continuation of the US interpretation of the term "exempt from action", the United States does not suggest that Brazil should have launched two successive WTO panels. Rather it maintains that the Panel's hearing argument and evidence on Article XVI GATT and the *SCM Agreement* would amount to an "action" which cannot be brought against it until it is determined that the US measures do not conform to Article 13 of the *Agreement on Agriculture*. Why the United States considers that hearing evidence would amount to such a prohibited "action", while requesting consultations or the establishment of a panel does not amount to maintaining an "action" is unclear. Indeed, the European Communities would presume that the United States would agree that Article 13 of the *Agreement on Agriculture* has the ultimate effect of not requiring any subsidy maintained consistently with Article 13 of the *Agreement on Agriculture* and otherwise inconsistent with the *SCM Agreement* to be brought into conformity with the provisions of the *SCM Agreement* (typically through its withdrawal). For the European Communities, therefore, the issue of whether a measure falls under Article 13 is necessarily a question which a Panel must decide before it decides whether the measure might violate Article XVI GATT or the *SCM Agreement.* However, the mere fact that the Article 13 issues must be decided before the other claims are decided does not imply that a panel, when it is examining evidence and considering arguments with respect to Article 13 of the *Agreement on Agriculture*, is precluded from hearing the evidence and arguments relating to Article XVI GATT or the *SCM Agreement* until after it has decided on the applicability of Article 13 of the *Agreement on Agriculture*.

8. In conclusion, the Panel has substantial discretion in deciding how it will manage these issues. Article 12.1 DSU makes it quite clear that the Working Procedures set out in Appendix 3 of the DSU may be departed from if the Panel decides this is appropriate. Therefore, it is a matter for the Panel's discretion whether to arrange a multistage procedure as proposed by the United States or a single stage procedure as proposed by Brazil.

9. The European Communities considers that the normal procedure proposed by Brazil should be followed by the Panel for the reasons set out in the next section.

[4] See paras. 7 and 8 of the US initial Submission.

## III. SEVERAL FACTORS MILITATE IN FAVOUR OF EXAMINING THE EVIDENCE AND ARGUMENTS PRESENTED IN RESPECT OF ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE AT THE SAME TIME AS THE OTHER CLAIMS

10. The European Communities submits that the Panel should consider evidence and argument relating to both the applicability of Article 13 of the *Agreement on Agriculture*, and the other provisions which Brazil has alleged the United States has acted inconsistently with.

### A. THE APPLICATION OF ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE IS DEPENDENT ON THE EXAMINATION OF QUESTIOnS OF SUBSTANCE

11. As the United States and Brazil appear to have recognised, the question of the applicability of Article 13 of the *Agreement on Agriculture* is dependent on the assessment of substantive issues, notably the conformity of the measures in question with other provisions of the *Agreement on Agriculture*. In order for the Panel to establish whether Article 13 applies, the Panel will have to consider detailed arguments and evidence. For that reason, the applicability of Article 13 should be subjected to the normally applicable procedures by which Panel deal with complex issues of fact and law and not adjudicated in some form of preliminary procedure. The European Communities note, for instance, that this was the approach taken by the panel in the *United States – Export Restraints* dispute, which refused to rule on a number of preliminary objections brought by the United States (as the defendant) which went to the substance of the matter.[5]

### B. ASSESSING THE APPLICABILITY OF ARTICLE 13 AS A PRELIMINARY MEASURE MAY DELAY THE ISSUANCE OF THE REPORT

12. In the same vein, it can be noted that hearing evidence and considering arguments on the applicability of Article 13 would inevitably require a considerable amount of time, as will hearing and assessing the arguments and evidence on the other issues which could only be considered after the preliminary decision on Article 13 was taken. Given the substantial number of claims brought, their complex nature, and the substantial interest in this dispute from third parties, the Panel may, if it splits up the dispute into three stages, have problems issuing its report within nine months, as it is required to do under the Article 12.9 DSU.

13. The European Communities also has some sympathy for the concerns set out by Brazil, in section V of its Initial Submission, as to the effect of splitting the procedure on Brazil's ability to present its case.

### C. THIRD PARTY DUE PROCESS RIGHTS MAY BE INFRINGED BY A DECISION TO SPLIT THE PROCEDURE INTO THREE STAGES

14. As the Panel is aware, Article 10.3 DSU provides that third parties are entitled to receive the submissions of the parties to the first meeting with the Panel. If the first panel meeting is limited to considering the applicability of Article 13 of the *Agreement on Agriculture* and thus parties submissions are limited to that question, the third parties will not have an opportunity to be heard on issues other than Article 13 of the *Agreement on Agriculture*. If the Panel decides to adopt a three stage procedure, in order to avoid such a situation arising, the European Communities respectfully submits that the Panel should make provision to ensure that third parties have adequate access, and the opportunity to be heard on all matters (that is, also in the third stage of procedures). Inevitably,

[5] Panel report, *United States – Measures Treating Export Restraints as Subsidies*, WT/DS194/R, adopted 23 August 2001, para. 8.2.

however, setting up such a procedure will involve additional work for both the Panel and the Secretariat.

## IV. CONCLUSION

15. In conclusion, the European Communities respectfully submits that, while the Panel is obliged to decide on the applicability of Article 13 of the *Agreement on Agriculture* before it may take a decision with respect to Brazil's claims under Article XVI GATT and the *SCM Agreement* it is not precluded from considering evidence or argument on these claims until after it has decided on the applicability of Article 13 of the *Agreement on Agriculture*. As the European Communities has explained above, there are several reasons militating in favour of the Panel considering all arguments and evidence simultaneously.

# ANNEX A-6

## INDIA'S COMMENTS ON PRELIMINARY ISSUE REGARDING THE PEACE CLAUSE OF THE AGREEMENT ON AGRICULTURE

10 June 2003

1. India thanks the panel for being provided an opportunity to comment on the submissions of Brazil and the United States on the following question concerning Article 13 of the Agreement on Agriculture posed by the Panel:

> *Whether Article 13 of the Agreement on Agriculture precludes the Panel from considering Brazil's claims under the Agreement on Subsidies and Countervailing Measures in these proceedings in the absence of a prior conclusion by the Panel that certain conditions of Article 13 remain unfulfilled.*[1]

2. India notes that both Brazil and the United States evidently agree that "exempt from actions" means that a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that are in compliance with various provisions of the Peace Clause. In other words, a measure must be in conformity with: (a) provisions of Annex 2 of the Agreement on Agriculture in respect of green box domestic support measures; (b) provisions of Article 6 of the Agreement on Agriculture in respect of amber and blue box support measures; and (c) Part V of the Agreement on Agriculture as reflected in each member's Schedule in respect of export subsidies to attract the exemption from obtaining a remedy under the Peace Clause.

3. However the United States seems to argue in various paragraphs of its submission, including in paragraphs 7, 9 and 12, that this exemption extends to "any action, including action under the DSU, based on the corresponding provisions of the Subsidies Agreement and GATT 1994". The United States thereby suggests that resort cannot be had to the dispute settlement proceedings by asserting legal claims in respect of measures claimed by a Member to be Peace Clause protected.

4. Thus, on the question posed by the Panel, the United States is of the view that the Panel should organize its procedures to first determine whether Brazil may maintain any "action" based on provisions exempted by the Peace Clause. On the other hand, Brazil has asserted that the phrase "exempt from actions" in Article 13 of the Agreement on Agriculture does not compel the Panel to *first* make a Peace Clause finding before considering the substance of Brazil's other claims.

5. The United States seeks to interpret "action" to "include all stages of a dispute, including the "bringing [of] a case," consultations, and panel proceedings." Subsequently, the United States suggests a reading of "exempt from actions" in Article 13 to mean "not subject to" the "taking of legal steps to establish a claim" or "not resorting to dispute settlement by asserting legal claims".

6. In India's view, if the interpretation of "exempt from actions" under Article 13 of the Agreement on Agriculture, as sought by the United States, extends to exemption from "any action"

[1] The Panel also "invites the parties to explain their interpretation of the words 'exempt from actions' as used in Article 13 of the Agreement on Agriculture, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue."

such that resorting to dispute settlement by asserting legal claims is precluded in respect of Peace Clause protected measures, then consequences follow that have systemic implications. This interpretation would result in countries being precluded from even resorting to the dispute settlement process in respect of measures claimed by the country to be complained against to be conforming to the Peace Clause unless there is a prior finding on the lack of conformity of the measure with the Peace Clause. This interpretation of "exempt from actions" taken to its logical end would imply that even consultations under the DSU cannot be sought in respect of such a measure, unless there is a prior finding on non-conformity of the measure with the Peace Clause. A complaining country would therefore have to resort to the dispute settlement process twice in respect of the same measure; first, for obtaining a finding whether the measure is in conformity with the Peace Clause and, if not, then whether the measure is in conformity with obligations under various WTO Agreements. In India's view this result is neither desirable nor envisaged under the DSU or any other covered agreements.

7. India believes that neither the phrase "exempt from actions" nor Article 13 of the Agreement on Agriculture compel the Panel to *first* make a peace clause finding before considering the substance of Brazil's claims in various issues in this dispute. India is of the view that Article 13 of the Agreement on Agriculture is not a "special and additional" rule set out in Appendix 2 to the DSU. Article 19 of the Agreement on Agriculture makes all DSU provisions applicable to the Agreement on Agriculture. Thus there is no legal basis under the DSU or any of the covered agreements that would support the two stage approach suggested by the United States in this dispute whereby the Panel would first make a Peace Clause finding before considering claims on other agreements.

8. In conclusion, India believes that the phrase "exempt from actions" when viewed in the context of DSU provisions *does not require* the Panel to *first* make a Peace Clause non-compliance finding before hearing or considering any of the evidence or arguments relating to the various claims under other agreements.

# ANNEX A-7

## THIRD PARTY COMMENTS BY NEW ZEALAND ON PRELIMINARY ISSUE REGARDING ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE ("THE PEACE CLAUSE")

10 June 2003

New Zealand welcomes the opportunity to comment on the preliminary issue addressed in the Panel's 28 May 2003 request:

> "Whether Article 13 of the Agreement on Agriculture precludes the Panel from considering Brazil's claims under the Agreement on Subsidies and Countervailing Measures in these proceedings in the absence of a prior conclusion of the Panel that certain conditions of Article 13 remain unfulfilled …"

In New Zealand's view, a Panel is not required to make any prior conclusion concerning the applicability of Article 13 (the "Peace Clause") before proceeding to hear evidence and submissions relating to substance of legal claims brought under the Agreement on Subsidies and Countervailing Measures (ASCM) and GATT Article XVI. New Zealand notes in this regard that the overlapping nature of the evidence required to establish both the applicability of the Peace Clause as well as actionable and prohibited subsidies claims would make a separation of submissions and hearings on each aspect artificial.

In relation to the Panel's request for views on the term "exempt from actions" in Article 13(b)(ii) and 13(c)(ii), New Zealand considers that these words simply mean that a Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that are otherwise protected by the "Peace Clause". New Zealand does not consider that this phrase should be interpreted so as to suggest that substantive claims under the ASCM and GATT Article XVI can only be addressed in written or oral submissions after a Panel has made a ruling that the Peace Clause apply.

In summary, New Zealand considers that the Panel is not precluded from hearing evidence and considering claims under the Agreement on Subsidies and Countervailing Measures or Article XVI of the GATT without first concluding that Peace Clause conditions remain unfulfilled.

# ANNEX A-8

## SUBMISSION OF PARAGUAY
## COMMENTS ON THE "PEACE CLAUSE"

10 June 2003

Paraguay does not see how, under the provisions of the Dispute Settlement Understanding (DSU), the Panel can establish that a matter calls for a "preliminary and special ruling" when the DSU does not provide for such a procedure.

If this were so, many complaints would be subject to the prior demonstration of the existence of the conditions for bringing the action, when in fact, what needs to be resolved is the main subject of the dispute and the effects caused by the failure to comply with the rules and regulations of world trade.

Paraguay considers that to set a precedent of this kind would be to undermine the DSU's purpose of providing a flexible and prompt dispute settlement procedure, since countries would be faced with an unnecessary delay in the process involving costs and time beyond their "predictions".

Since there is no established procedural rule in this respect, the Panel must proceed to the analysis of the substantive issue, and permit the parties, in this case especially Brazil as complainant – and by extension Paraguay – to demonstrate that the subsidies and support measures benefiting upland cotton have effects on trade and production by the cotton industry in the world.

Paraguay has a supreme interest in ensuring the application of strict justice with respect to this complaint, since cotton production is the sustenance of the poorest segments of its population. Indeed, 70 per cent of the country's small farmers depend on cotton production for their living.

As already stated in the past, of Paraguay's population of approximately 5,300,000, some 150,000 families work in cotton production, and the damage caused by the kinds of subsidies and support measures at issue in this case have caused an exodus of this rural population to urban areas with no relief or solution in sight, further aggravating the country's economic situation.

In view of the above, Paraguay considers that since Article XIII is not a rule forming part of the procedural system established by the DSU, a preliminary ruling by the Panel on the "Peace Clause" would be inappropriate.

# ANNEX A-9

BRAZIL'S COMMENTS ON THE BRIEFS BY THE UNITED STATES AND THE THIRD PARTIES ON CERTAIN PRELIMINARY ISSUES REGARDING THE "PEACE CLAUSE" OF THE AGREEMENT ON AGRICULTURE

13 June 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. Brazil welcomes the opportunity to provide its comments regarding the third party submissions of Argentina, Australia, the European Communities, India, New Zealand, and Paraguay filed on 10 June 2003, and to respond to the *Initial Brief of the United States of America on the Questions Posed by the Panel (US Initial Brief),* filed on 5 June 2003.

## II. THE US TEXTUAL AND CONTEXTUAL ARGUMENTS CONCERNING "EXEMPT FROM ACTIONS" ARE INCONSISTENT WITH THE MULTILATERAL NATURE OF "ACTIONS" UNDER THE DSU AND WITH US CONDUCT IN THIS DISPUTE

2. The customary rules of interpretation of public international law do not support the United States' reading of Article 13 of the Agreement on Agriculture (AoA). The United States relies on a legal dictionary for a definition of "action" and then concludes incorrectly that "action" means any "proceeding in a court of justice" including any "legal steps to establish a claim".[1] This interpretation misreads Article 13 because it starts from fundamentally mistaken premises.

3. A WTO panel is not a "court" because the WTO panel process is founded on, and guided by, *collective* action by the Members. A lawsuit in a US or Brazilian court of law starts automatically when a plaintiff takes the "action" of filing papers that are in the proper form. But a DSU panel proceeding commences only when the Members of the WTO take *collective* "action" to establish the panel. The DSU rules "elaborate and apply"[2] the rules in GATT Article XXIII:2, which speak of an investigation by the CONTRACTING PARTIES – which under GATT Article XXV:1 are all the contracting parties "acting jointly". Whereas a US or Brazilian judge has broad powers conferred on him or her constitutionally, a WTO panel is a body of limited jurisdiction acting only with powers delegated to it by the DSB. For example, defending parties challenge claims as going beyond the terms of reference under DSU 6.2, because the terms of reference define the limits of the powers delegated to the panel by the DSB through the DSB's action to establish the panel.

4. The "negative consensus" provisions in DSU Article 16.4 further support Brazil's position that "action" in AoA Article 13 must be interpreted as *joint* action by WTO Members. Decisions of a court are directly and immediately binding on the parties to the litigation, but such is not the case for decisions of a panel or the Appellate Body. Instead, the drafters of the DSU decided that the Members acting jointly would retain ultimate control of whether a panel or Appellate Body report has any binding effect. Similarly, the recommendations and rulings referred to in DSU Articles 21 and 22 are not recommendations and rulings of a panel or the Appellate Body, but are recommendations and rulings of the DSB. Accordingly, DSU 21.7 refers to *further* actions that the DSB must consider when a matter (not an "action") has been raised by a developing country.

5. The United States misinterprets DSU Article 3.7.[3] In this provision ("Before bringing a case, a Member shall exercise its judgment as to whether action under these procedures would be fruitful"), "actions" could and should be read in a *collective* context, as referring to the DSB's *action* to adopt a panel report and (if need be) to authorize suspension of concessions. DSU Article 3.7 transposed a provision in the 1979 Understanding Regarding Notification, Dispute Settlement and Surveillance[4]

[1] US Initial Brief, para. 7.

[2] AoA Article 19: provides that "The provisions of Articles XXII and XXIII of GATT 1994, as elaborated and applied by the Dispute Settlement Understanding, shall apply to consultations and the settlement of disputes under this Agreement."

[3] US Initial Brief, para. 8.

[4] Adopted on 28 November 1979; BISD 26S/210. The full text is set out in the GATT Analytical Index (6th Ed., 1995) at page 632. DSU Article 3.7 transposes paragraph 4 of the Agreed Description of the

which refers to "action under Article XXIII:2." As discussed in Brazil's Initial Brief, such "action" has always meant *joint* action by the CONTRACTING PARTIES, not individual action by a particular contracting party. Article 3.7 simply restates the common-sense advice that litigants must consider in advance whether the persuasive effect of a collective determination of rule violation and a collective authorization of suspension of concessions would be useful in eliminating the concrete problem. It cannot be read to suggest that any Member should be able to pressure another into dropping a valid legal claim by arguing that enforcing rights through litigation is not "fruitful."

6. The United States also misinterprets DSU Article 4.5 ("before resorting to further action under this Understanding, Members should attempt to obtain satisfactory adjustment of the matter.").[5] Read correctly, DSU Article 4.5 simply refers to the "action" of the DSB to grant a request for establishment of a panel.[6] Thus, Article 4.5 urges a Member to attempt to obtain satisfactory adjustment of the "matter" (not the "action") before it requests the DSB to take action to establish a panel.

7. The United States also cites footnote 35 of the SCM Agreement ("The provisions of Parts III and V *shall not be invoked* regarding measures considered non-actionable in accordance with the provisions of Part IV.").[7] Yet "shall not be invoked" is a different legal standard that goes substantially farther than "shall be . . . exempt from actions." Under footnote 35, no DSB authorization could be obtained to establish a panel against a non-actionable subsidy granted by another Member. By contrast, AoA Article 13 exempts certain agricultural subsidies from actions by the DSB adopting a panel or Appellate Body report or authorizing suspension of concessions, but only *under certain conditions*. The DSB can only take "actions" against such subsidies if it decides that those conditions are unfulfilled (based on the recommendations in the report of the panel and/or Appellate Body). But this *conditionality* means that a panel must address the conditions of the peace clause if they are invoked by the Member providing the domestic support – as the United States appears to have indicated it will do in this dispute. If the drafters had intended to protect agricultural subsidies against even an *invocation* of Part II and III of the SCM Agreement, they would have said so, and they did not.

8. The United States argues in paragraph 9 that its subsidies are even "exempt" from consultations under the DSU. Paragraph 9 highlights the logical challenges presented by the US argument—particularly in light of the fact, discussed below, that Article 13 does not create *any* exception to the normal rules of WTO dispute settlement.

9. Moreover, the United States' own conduct in this dispute is at odds with paragraph 9 of the US brief. Brazil's consultation request dated 3 October 2002 clearly stated that "the United States has no basis to assert a defence under Article 13(b)(ii) . . . [and] Article 13(c)(ii) of the Agreement on Agriculture . . ".[8] Yet, the United States said nothing during three rounds of consultations about any requirement for a separate panel proceeding regarding the peace clause. Brazil's panel request also referred to the lack of any basis for the United States to assert a peace clause "defence".[9] The DSB minutes reflect that the United States did not mention the peace clause at all in the meetings of the

---

Customary Practice of the GATT in the Field of Dispute Settlement (Article XXIII:2) annexed to the 1979 Understanding; paragraph 4 appears on page 635.

[5] US Initial Brief, para. 8.

[6] DSU Article 4.5 was a transposition of paragraph 4 in the Agreed Description of the Customary Practice of the GATT in the Field of Dispute Settlement annexed to the (Tokyo Round) Understanding Regarding Notification (BISD 26S/210; The full text is set out in the GATT Analytical Index on page 635). That provision refers to "action under Article XXIII:2." As discussed by Brazil, such "actions" are multilateral actions by the CONTRACTING PARTIES, not individual action by a particular contracting party.

[7] US Initial Brief, para. 9.

[8] WT/DS267/1 at 3.

[9] WT/DS267/7.

DSB that considered the panel request.[10] The first official US assertion regarding special procedural requirements relating to the peace clause did not come until a meeting in the office of the Director of the Legal Services Division, on 25 March 2003, one week after the Panel was established on 18 March 2003.

10. In considering the US request for a special "peace clause" proceeding, the Panel should take note that the panel and Appellate Body in the *US - FSC* dispute rejected US procedural claims of an allegedly defective EC consultation request. In that dispute the United States engaged in three rounds of consultations without mentioning the problem once and then attempted to raise the defect consultations request as a preliminary objection to the panel. The panel and the Appellate Body both rejected the objection. As the Appellate Body found:

> It seems to us that, by engaging in consultations on three separate occasions, and not even raising its objections in the two DSB meetings at which the request for establishment of a panel was on the agenda, the United States acted as if it had accepted the establishment of the Panel in this dispute, as well as the consultations preceding such establishment. In these circumstances, the United States cannot now, in our view, assert that the European Communities' claims under Article 3 of the *SCM Agreement* should have been dismissed and that the Panel's findings on these issues should be reversed.[11]

11. In this dispute, the United States sat mute on the subject of peace clause procedures through three rounds of consultations and two DSB meetings. Had the United States raised this particular procedural issue on a timely basis, other WTO Members may have reserved their rights under DSU Article 10. To permit such an issue to be raised on such an untimely basis also denies those other Members their rights under the DSU.

## III. THE NARROW INTERPRETATION OF THE WORD "ACTION" SUGGESTED BY THE UNITED STATES IS NOT SUPPORTED BY ALL THREE AUTHENTIC VERSIONS OF THE AOA

12. As argued in Brazil's Initial Brief of 5 June , Brazil believes that the word action refers to collective actions of the WTO Members, and not to actions by individual Members. Brazil further submits that the meaning the United States tries to impute to the word "action" is too narrow and inadequate.

13. Brazil recalls that the three versions of the WTO Agreements are authentic. The US interprets the word "action" in the English version as "legal process or suit". Brazil agrees that this is a possible meaning of the word, but so is "the process or condition of acting or doing"; or "a thing done, a deed, an act...; habitual or ordinary deeds".[12] Therefore, the word action in the English language could mean either a legal process or a simple act or deed.

14. The French version uses the word "action" which also allows both connotations. It could have the ordinary connotation of: "ce que fait qqn et par quoi il réalise une intention ou un impulsion;" "exercice de la faculté d'agir;" but it could also have the more specific meaning of the "exercice d'un droit en justice".[13]

[10] WT/DSB/M/143, WT/DSB/M/145.
[11] WT/DS108/AB/R, "United States – Tax Treatment for "Foreign Sales Corporations", para. 165.
[12] The New Shorter Oxford English Dictionary, 1993 edition.
[13] Le Petit Robert, Nouvelle édition ... 1982.

15. The Spanish version however does not allow such interpretative flexibility. The word used in Article 13 is not the word "acción", which would allow the arguable double meaning of the English and French versions: "resultado de hacer" or "*[e]n sentido procesal*, derecho a acudir a un juez o tribunal ..."[14] (emphasis added). The word used in Article 13 of the Spanish version is "medidas." While "medidas" could mean "disposición, prevención ... tomar, adoptar medidas"[15], it could not possibly have the connotation of a legal action. Again, while the dictionary meanings of the word "acción" do include the possibility of a judicial measure, the same is not true for the word "medidas".

16. Therefore, the Panel must avoid an interpretation of Article 13 that is possible in only two of the authentic versions, while there is another plausible – and in fact more adequate – interpretation that is equally possible in all three authentic versions. The Panel must accordingly reject the narrow interpretation suggested by the United States for the word "action".

## IV. THE OVERLY-BROAD US DEFINITION OF "EXEMPT FROM ACTION" IMPROPERLY CREATES NEW OBLIGATIONS AND PROCEDURES NOT CONTEMPLATED IN THE AOA OR THE DSU

17. The United States argues that the word "action" means "all stages of the dispute, including the 'bringing [of] a case,' consultations, and panel proceedings".[16] Brazil agrees with the arguments advanced by Argentina[17], the European Communities[18] and India[19] that this broad US interpretation would exempt measures allegedly covered by the "peace clause" exemption from any aspect of the DSU, including consultations. As India and the European Communities correctly point out, the result would logically lead to two separate panel proceedings – an initial proceeding deciding the peace clause issues, and after the issuance of a decision, the initiation of a second proceeding beginning with consultations to challenge the measures under the ASCM.[20] Yet, as these and other third parties highlight, there is no textual requirement or provision in the AoA, the DSU, or any other WTO provision for such a two-panel or two-stage process to resolve peace clause issues.

## V. THE US PROPOSAL FOR A SEPARATE PROCEEDING FOR PEACE CLAUSE ISSUES WOULD EFFECTIVELY ADD AOA ARTICLE 13 TO THE CLOSED LIST OF SPECIAL AND ADDITIONAL PROVISIONS IN DSU APPENDIX 2 AND GIVE AOA ARTICLE 13 A SCOPE THAT WAS NOT INTENDED BY AOA DRAFTERS

18. The United States' initial brief makes no reference to DSU Appendix 2, even though this provision was a key issue raised in Brazil's 23 May letter to the Panel. Brazil repeats that Appendix 2 provides a closed list of all the "special and additional" provisions that trump the normal rules of dispute settlement under the DSU. Article 13 does not appear in Appendix 2. Set forth below are two additional reasons in support of this argument.

19. First, providing a special proceeding for determining peace clause defences would effectively add Article 13 to DSU Appendix 2. In the first dispute settlement proceeding on *Guatemala Cement*, the panel found that Article 17 of the *Anti-Dumping Agreement* (ADA) replaced the DSU system as a whole because ADA Articles 17.4-17.7 were listed as special and additional provisions in Appendix 2

[14] Diccionario de la Lengua Española (Real Academia Española), vigésima segunda edición, 2001.
[15] *Id.*
[16] US Initial Brief para. 8.
[17] Argentina's Third Party Initial Brief, para. 6;
[18] Initial Submission by the European Communities, paras. 6-7;
[19] India's comments on preliminary issue regarding the Peace Clause of the Agreement on Agriculture, para. 6.
[20] Initial Submission by the European Communities, paras. 6-7; India's comments on preliminary issue regarding the Peace Clause of the Agreement on Agriculture, para. 6.

even though ADA Articles 17.1-17.3 were not included.[21] The Appellate Body reversed the panel's implied determination to treat ADA Articles 17.1-17.3 as special and additional rules when it found that DSU provisions generally do not apply to disputes brought pursuant to the ADA:

> Article 17.3 of the *Anti-Dumping Agreement* is not listed in Appendix 2 of the DSU as a special or additional rule and procedure. It is not listed precisely because it provides the legal basis for consultations to be requested by a complaining Member under the *Anti-Dumping Agreement.*[22]
>
> The special or additional provisions listed in Appendix 2 of the DSU are designed to deal with the particularities of dispute settlement relating to obligations arising under a specific covered agreement, while Article 1 of the DSU seeks to establish an integrated and comprehensive dispute settlement system for all of the covered agreements of the *WTO Agreements* as a whole. . . [23]

20. The effect of the United States argument and interpretation of "action" in this case would be to include AoA Article 13 as a special and additional rule in Appendix 2. Were the Panel to agree with the United States, it would create a precedent for applying a special procedure whenever a peace clause defence might be invoked. However, this is precisely what the Appellate Body rejected in *Guatemala Cement,* emphasizing that the WTO's dispute settlement system is a *unified* system, not one fragmented according to topic.[24]

21. Second, the negotiating history confirms that AoA Article 13 was not intended to alter normal dispute settlement procedures. The concept of "due restraint" first appeared in Article 18.2 of the Agriculture text in the Dunkel Draft of December 1991, which provided:

> On the basis of the commitments undertaken in the framework of this Agreement, Members will exercise due restraint in the application of their rights under the General Agreement in relation to products included in the reform programme.[25]

The concept of special and additional provisions and Appendix 2 then emerged during the work of the Legal Drafting Group on dispute settlement in Spring 1992. The final Legal Drafting Group DSU text dated 15 June 1992 included AoA Article 18.2 in its Appendix 2, as a special and additional provision.[26]

22. The United States and the EC then reached the Blair House Agreements in November 1992, providing *inter alia* for the Dunkel Draft text of Article 18.2 to be deleted, and for the insertion in the AoA of a text corresponding to the present Article 13. In the fall of 1993, the Institutions Group discussed both institutions and dispute settlement; the DSU text resulting from its work, as circulated on 15 November 1993, placed AoA Article 18.2 in brackets.[27]

23. During this period, further discussions also took place on the AoA. After a US-EU settlement in early December 1993 adjusting the Blair House deal, the Blair House changes as adjusted were

[27] Exhibit Bra-2. Excerpt of *Draft Understanding on Rules and Procedures Governing the Settlement of Disputes*, 15 November 1993.

made to the AoA. In the December 15, 1993 Final Act, the text of the AoA reflected those changes [28], and Appendix 2 of the DSU[29] included no reference to the AoA. The negotiating record thus confirms that if negotiators had intended to include the peace clause in Appendix 2, they had ample opportunity to do so. The changes in the "peace clause" component of the Blair House agreements involved deleting former Article 18.2, which *was* a dispute settlement provision listed in Appendix 2, and substituting Article 13. However, although Article 13 limits the ultimate "action" that the DSB may take, as a drafting matter it is *not* placed together with the dispute settlement provisions of the AoA, it is not labeled as a dispute settlement provision, and it is not included in Appendix 2 of the DSU. Reading Article 13 as the United States requests would be inconsistent with DSU Article 3.2 by impermissibly altering the balance of rights and obligations in the WTO and its dispute settlement procedures.

24. Furthermore, AoA Article 13 deliberately makes no reference to any provisions relating to dispute settlement under the Agreement on Agriculture itself (Article 19) or other relevant WTO Agreements (ASCM Articles 4 and 7; DSU or GATT 1994 Articles XXII and XXIII). The AoA Article 13 drafting denotes that Uruguay Round negotiators were concerned about the relationship between substantive provisions of the SCM Agreement (Articles 3, 5 and 6) and GATT 1994 (Article XVI) and the substantive provisions on domestic support and export subsidies under the AoA. In short, what Article 13 does is to protect Members that comply with Article 13 conditions from actions derived from a violation of the substantive provisions cited therein, namely ASCM Articles 3, 5 and 6 and GATT 1994 Article XVI. What Article 13 does not, given the way it was drafted, is to shield Members from the dispute settlement procedures which would be necessary to identify or to confirm the substantive violation of those Articles.

25. Had the AoA drafters intended to carve domestic support and/or export subsidy measures out of the WTO dispute settlement mechanism they would have done it expressly, but they did not. This is further confirmed by the example of Article 6 of the TRIPS Agreement, which clearly states that the issue of the exhaustion of intellectual property rights cannot be addressed through dispute settlement.[30] Unlike AoA Article 13, TRIPS Article 6 expressly prohibits a Member from resorting to the WTO dispute settlement mechanism to challenge certain matters. Against all these evident facts, the only argument the US has to read a prohibition to resort to dispute settlement into Article 13 is based on a groundless definition of "action", as shown above.

## VI. A SPECIAL PEACE CLAUSE PROCEDURE WOULD AMOUNT TO HAVING THE PANEL ISSUE A DECLARATORY JUDGMENT FOR THE US AFFIRMATIVE DEFENCE

26. Brazil's request for the establishment of a panel (as well as its consultation request) stated that the "United States has no basis to assert a defence under Article 13(b)(ii) . . . and Article 13(c)(ii) of the Agreement on Agriculture . . .".[31] The third-party statements of the European Communities, Australia, and Argentina agree with Brazil's description of the peace clause as a "defence". Each of these third parties agree that the United States is required to assert and prove that all the peace clause conditions apply. For example, the European Communities stated that AoA Article 13

> can only be seen as a defence against a claim brought under other aspects of the WTO Agreements which regulate the provision of subsidies. It would seem bizarre if,

[28] MTN/FA II/A1A-3, Arts. 13, 19.

[29] MTN/FA II/A2, Appendix 2.

[30] TRIPs Article 6 reads: "*For the purposes of dispute settlement under this Agreement, subject to the provisions of Articles 3 and 4 nothing in this Agreement shall be used to address the issue of the exhaustion of intellectual property rights.*"

[31] WT/DS267/7

> before Brazil could bring a claim with respect to subsidies which it considered did not respect the US's WTO obligations, Brazil had first to establish that potential US defences did not apply.[32]

27. In addition, Australia argues that "Article 13 is in the nature of an 'affirmative defence' for measures which are inconsistent with the specified provisions". [33] Argentina also takes the view that this provision is in the nature of an affirmative defence, stating that "the Member who alleges to be protected by the Peace Clause has the burden of proving the fulfillment of its legal requirement".[34]

28. The United States' Initial Brief alleges in paragraph 2 that "the US support measures at issue conform with the Peace Clause". Based on this allegation, the United States concludes that "Brazil cannot maintain any action – and the United States cannot be required to defend any such action. . ."[35] The United States has not labeled this as a defence, or an "affirmative defence". However, this assertion by the United States suggests its intent to invoke such a defence as part of its First Submission that it will file on 11 July 2003.[36]

29. Brazil agrees with the European Communities, Australia and Argentina that the peace clause is a defence requiring the United States – not Brazil – to demonstrate that it has met all of its conditions. Brazil also agrees with the European Communities that it would be bizarre if Brazil were required to establish that potential US defences did not apply before it could bring its own claims. And Brazil further agrees with the European Communities that what the United States is requesting in this dispute is effectively a "declaratory judgment" that the United States defences of the peace clause do or do not apply.

30. Brazil will present evidence in its First Submission that the US measures do not meet the conditions of the various peace clause provisions. Brazil will do this because the United States is on record before this Panel in asserting that its support measures are fully in compliance with the peace clause. However, Brazil is not required to present any evidence on the peace clause to assert its actionable and prohibited subsidy claims under the ASCM. Rather, this is the US burden defending against Brazil's various claims. The time and place for the Panel to hear and consider any evidence proffered by the US in any such defence is during the normal panel process, as Brazil has argued in this Comments, in its Initial Brief and in its letter dated 23 May 2003. There is no basis for the United States to demand, or for the Panel to grant, a declaratory judgment that the US peace clause defences are legitimate or not.

## VII. CONCLUSION

31. For the reasons set forth above, Brazil's Initial Brief and its letter dated 23 May 2003, Brazil requests that this Panel find that it is not precluded from hearing evidence and considering Brazil's claims under the ASCM or Article XVI of GATT 1994 without first concluding that the peace clause conditions of AoA Article 13(b)(ii) and 13(c)(ii) remain unfulfilled.

---

[32] EC Initial Submisson, para. 6.
[33] Australia Initial Submission paras. 4-7.
[34] Argentina Initial Submission, para. 14.
[35] US Initial Brief, para. 2.
[36] By contrast, the United States did *not* invoke the peace clause defence in *US - FSC* even though the EC request for the establishment of a panel included claims under ASCM Article 3.1(a) with respect to export subsidies for agricultural products. AoA Article 13(c) conditionally exempts those claims from "actions."

# ANNEX A-10

## COMMENTS OF THE UNITED STATES ON THE COMMENTS BY BRAZIL AND THE THIRD PARTIES ON THE QUESTION POSED BY THE PANEL

13 June 2003

## I. OVERVIEW

1. The United States thanks the Panel for this opportunity to provide its views on the comments by Brazil and the third parties on the question concerning Article 13 of the *Agreement on Agriculture* ("Agriculture Agreement") posed by the Panel in its fax of 28 May 2003.[1] The interpretation of Article 13 (the "Peace Clause") advanced by Brazil and endorsed by some of the third parties is deeply flawed. Simply put, Brazil fails to read the Peace Clause according to the customary rules of interpretation of public international law. Its interpretation does not read the terms of the Peace Clause according to their ordinary meaning, ignores relevant context, and would lead to an absurd result.

2. Brazil reads the Peace Clause phrase "exempt from actions" to mean only that "a complaining Member cannot receive authorization from the DSB [Dispute Settlement Body] *to obtain a remedy* against another Member's domestic and export support measures that otherwise would be subject to the disciplines of certain provisions of the Agreement on Subsidies and Countervailing Measures . . . or Article XVI of GATT 1994'".[2] However, Brazil's reading simply ignores parts of the definition of "actions" that it quotes: "The dictionary definition of 'actions' is 'the *taking of legal steps* to *establish a claim* or obtain a remedy".[3] Thus, while the United States would agree that the phrase "exempt from actions" precludes "the taking of legal steps to . . . obtain a remedy", Brazil provides no explanation of why the term "exempt from actions" would not, based on its ordinary meaning, also preclude "the taking of legal steps to establish a claim".[4]

3. Brazil also bases its reading in part on the assertion that "[i]n a multilateral system such as the WTO (like GATT 1947 before it), 'actions' are taken collectively by Members".[5] Brazil cannot explain, however, why "actions" should be limited to *only* those actions taken collectively. Read in the context of provisions in the WTO agreements in which the term "action" does not refer to collective action by Members, "action" in the Peace Clause refers broadly to the "taking of legal steps to establish a claim or obtain a remedy".

---

[1] The Panel asked the parties to address: "[W]hether Article 13 of the Agreement on Agriculture precludes the Panel from considering Brazil's claims under the Agreement on Subsidies and Countervailing Measures in these proceedings in the absence of a prior conclusion by the Panel that certain conditions in Article 13 remain unfulfilled. In particular, the Panel invites the parties to explain their interpretation of the words "exempt from actions" as used in Article 13 of the Agreement on Agriculture, as well as bringing to the Panel's attention any other relevant provisions of the covered agreements and any other relevant considerations which the parties consider should guide the Panel's consideration of this issue."

[2] Brazil's Brief on Preliminary Issue Regarding the "Peace Clause" of the Agreement on Agriculture, para. 2 (5 June 2003) ("Brazil's Initial Brief") (emphasis added).

[3] Brazil's Initial Brief, para. 6 (emphasis added).

[4] *See infra* part II.A.

[5] Brazil's Initial Brief, para. 6 (footnote omitted).

4. In addition, Brazil's suggested reading of the Peace Clause would lead to an absurd result. If the phrase "exempt from actions" means nothing more than that "a complaining Member cannot receive authorization from the DSB to obtain a remedy", then a panel would be perfectly free to make findings that a measure that conforms to the Peace Clause is inconsistent with the relevant provisions of the *General Agreement on Tariffs and Trade 1994* ("GATT 1994") or the *Agreement on Subsidies and Countervailing Measures* ("Subsidies Agreement"). Under the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU"), the DSB would be unable to avoid adopting the panel findings of inconsistency with the Subsidies Agreement or GATT 1994 or recommendations to bring the measure into conformity, thus depriving the Peace Clause of any meaning.

5. The remainder of Brazil's arguments do not go to a proper interpretation of the Peace Clause under the customary rules of interpretation of public international law and so do not assist in answering the question posed by the Panel concerning the Peace Clause. Nonetheless, the United States addresses various of these misplaced concerns. For example, Brazil argues that the Peace Clause is not a special or additional rule set out in Appendix 2 of the DSU; however, the Peace Clause need not be a special or additional rule because the Panel may properly deal with the Peace Clause issue under normal DSU rules. Brazil also tries to cite to unrelated issues in completely distinct disputes, arguing that some of these other panels have delayed making "complex threshold findings" until final panel reports. None of these panels is relevant since none of them has been presented with the issues presented by the Peace Clause. Brazil also asserts that consideration of alleged administrative burdens should override the plain meaning of the text of the Agriculture Agreement – an obviously erroneous approach.

6. As the United States explained in its initial brief on the Panel's question[6], the phrase "exempt from actions" (read in accordance with the customary rules of interpretation of public international law) means "not exposed or subject to" a "legal process or suit" or the "taking of legal steps to establish a claim". Therefore, Brazil cannot maintain any action – and the United States cannot be required to defend any such action – based on provisions specified in the Peace Clause since the US support measures for upland cotton conform to the Peace Clause.

7. In light of the correct interpretation of the Peace Clause, the United States affirms that it respectfully requests the Panel to organize its procedures to first determine whether Brazil may maintain any action based on provisions exempted by the Peace Clause. Bifurcation of the legal issues in this proceeding is not only required under the Peace Clause but, as an exercise of the Panel's discretion to organize its procedures, would assist the Panel in resolving the complex issues involved in this dispute in a logical and orderly fashion.

## II. BRAZIL'S INITIAL BRIEF DOES NOT READ THE PEACE CLAUSE ACCORDING TO THE CUSTOMARY RULES OF INTERPRETATION OF PUBLIC INTERNATIONAL LAW AND LEADS TO ABSURD RESULTS

### A. THE ORDINARY MEANING OF "EXEMPT FROM ACTIONS" DOES NOT SUPPORT BRAZIL'S READING

8. According to the customary rules of interpretation of public international law[7], the terms of the Peace Clause should be interpreted according to their ordinary meaning in their context, in light of

[6] Initial Brief of the United States of America on the Question Posed by the Panel, paras. 6-10 (5 June 2003) ("US Initial Brief").

[7] *See* DSU Article 3.2 (The dispute settlement system "serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law.").

the object and purpose of the Agriculture Agreement.[8] The United States agrees completely with Brazil in terms of the dictionary definition of "actions". Under that definition, "action" means "the *taking of legal steps to establish a claim* or obtain a remedy".[9] As the Panel's question has highlighted, one of the key issues in this dispute is whether the Peace Clause permits Brazil to "take legal steps" so Brazil can "establish" its Subsidies Agreement "claims".

9. Yet, as soon as Brazil provides the correct definition of "action", Brazil urges an approach that would ignore it. Combining this definition with that for the word "exempt"[10], Brazil reads the term "exempt from actions" to mean "that a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that are 'peace clause' protected".[11] Strikingly, neither Brazil nor any of the third parties who share this interpretation[12] provides any basis in the text of the Peace Clause for ignoring that portion of the definition of "actions" that refers to "the *taking of legal steps* to *establish a claim*".[13]

---

[8] The customary rules of interpretation of public international law are reflected in part in Article 31(1) of the Vienna Convention, which reads: "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose."

[9] Brazil's Initial Brief, para. 6 (emphasis added).

[10] Brazil has quoted the definition of the word "exempt" when used as a verb. *See The New Shorter Oxford English Dictionary*, vol. 1, at 878 (1993 ed.) (first definition as transitive verb: "Grant immunity or freedom from or *from* a liability to which others are subject") (italics in original). However, if used as a verb in the Peace Clause, the correct form of "exempt" would be "shall be *exempted* from actions." *See id.*, vol. 1, at 878 (examples for first definition of "exempt" as verb: "J. A. FROUDE Clergy who committed felony were no longer *exempted* from the penalties of their crimes. R. D. LAING I was *exempted* from military service because of asthma.") (italics added). As used in the Peace Clause in the construction "shall be . . . *exempt* from actions," "exempt" is an adjective. *See id.*, vol. 1, at 878 (examples of "exempt" as used in first definition as adjective: "R.C. TRENCH They whom Christ loves are no more *exempt* than others *from* their share of earthly trouble and anguish. J. BERGER He is *exempt* on medical grounds *from* military service.") (italics added). Therefore, the correct definition of "exempt" as used in the Peace Clause is "[n]ot exposed or subject to something unpleasant or inconvenient; not liable to a charge, tax, etc. (Foll. by *from, of*.)." *Id.*, vol. 1, at 878 (first definition as adjective) (italics in original).

[11] Brazil's Initial Brief, para. 9; *see id.*, para. 8.

[12] Regrettably, *none* of the third parties (save Australia) even attempts to read the Peace Clause – and in particular the phrase "exempt from actions" – according to the customary rules of interpretation of public international law. Australia does offer an interpretation of "exempt from actions based on" purportedly using the ordinary meaning of the terms, but it appears that Australia has interpreted "exempt from actions" merely by quoting a definition for " exempt." *Compare* Comments of Australia on Question Posed by Panel, para. 7 & n. 3, *with Black's Law Dictionary* at 593 (7th ed. 1999) (definition of "exempt" as adjective: "Free or released from a duty or liability to which others are held."). That is, Australia's interpretation ascribes no meaning to the words "from actions," reducing them to inutility. In addition to failing to provide any definition for "actions," Australia also fails to examine any context for that term in the DSU and the Subsidies Agreement. *See* US Initial Brief, paras. 7-10.

[13] Argentina reads "exempt from actions" as meaning that "a finding of inconsistency with Articles XVI of GATT 1994 or Articles 3, 5 and 6 of SCM Agreement will not be possible if the legal requirements for the exemption are fulfilled." Comments by Argentina on Question Posed by Panel, para. 5. However, in making this assertion, Argentina neither provides nor attempts to distinguish the ordinary meaning of "action" as the "taking of legal steps to establish a claim or obtain a remedy." Nor does Argentina explain why, if Members only meant to preclude "a finding of inconsistency" with specified provisions, they did not simply use the word "finding" – for example, "measures . . . shall be . . . exempt from findings based on" certain specified provisions – when the term "finding" is used at least 12 times in the DSU. *See, e.g.*, DSU Article 7.1 (standard panel terms of reference include "mak[ing] such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in that/those agreement(s)"); DSU Article 11 (panel should make an objective assessment of matter before it, including "such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements"); DSU

10. As the United States has demonstrated, the ordinary meaning of "action" encompasses not only the "taking of legal steps to . . . obtain a remedy" but also the "taking of legal steps to establish a claim". Other dictionary definitions of "action" – such as "the right to institute a legal process", "[a] legal process or suit", "a lawsuit brought in court", "a formal complaint", "a legal or formal demand of one's right", and "all the formal proceedings in a court of justice attendant upon the demand of a right made by one person of another in such court"[14] – provide additional support for this reading. Thus, while the United States agrees that the phrase "exempt from actions" would also preclude "the taking of legal steps to . . . obtain a remedy"[15], the United States disagrees with Brazil that one may ignore that "exempt from actions" also precludes "the taking of legal steps to establish a claim." Nothing in the text of the Peace Clause authorizes departing from the ordinary meaning of the Peace Clause phrase "exempt from actions" to narrow this text to refer *solely* to "obtaining a remedy".[16]

B. THE CONTEXT FOR "EXEMPT FROM ACTIONS" DOES NOT SUPPORT BRAZIL'S READING

11. In its analysis of the phrase "exempt from actions", Brazil quickly moves beyond the ordinary meaning of the term "action" it quotes (which encompasses "the taking of legal steps to establish a claim") to examine what it deems relevant context for the term. Brazil asserts that "[i]n a multilateral system such as the WTO (like GATT 1947 before it), 'actions' are taken collectively by Members"[17], citing DSU Article 2.1 (last sentence), GATT 1994 Article XVI:1, and DSU Article 22[18], and concludes: "In sum, 'actions' are multilaterally agreed decisions of WTO bodies including the DSB."[19] Brazil's argument overlooks the fact that there are numerous instances in various WTO agreements in which the term "action " is used to refer to action by an individual Member, not just collective action by Members.

12. Brazil notes that the term "actions" is sometimes used in the DSU to refer to collective "decisions or actions" by the DSB.[20] This observation is accurate, but the conclusion that Brazil draws from it is a *non sequitur*. The fact that the term "action" can mean "collective decision or action by the DSB" does not imply that the term "action" can mean *only* "collective decision or action by the DSB".

13. Brazil has moreover failed to consider those instances in which the term "action" is used to refer to individual action by Members.[21] For example, Article 3.7 of the DSU, which states that "[b]efore bringing a case, a Member shall exercise its judgement as to whether action under these

---

Article 12.7 (panel "shall submit its findings in the form of a written report to the DSB"). There is no basis in the text or context of the Peace Clause to read "actions" to be limited to "panel findings".

[14] US Initial Brief, para. 7.

[15] Indeed, this necessarily follows from the fact that, if a party cannot take legal steps to establish a claim, it will also be precluded from obtaining a remedy.

[16] We also note that Brazil's approach of interpreting "exempt from actions" as "cannot receive authorization . . . to obtain a remedy" appears to overlook the "taking of legal steps" component of even the "remedy" portion of the definition of " action".

[17] Brazil's Initial Brief, para. 6 (footnote omitted).

[18] Brazil also asserts that "'[a]ctions' include decisions made by the Dispute Settlement Body (DSB) to adopt rulings and recommendations of panels and the Appellate Body" but provides no reference to a provision of the DSU to support the assertion. Neither DSU Article 16.4 (on adoption of panel reports) nor DSU Article 17.14 (on adoption of Appellate Body reports) uses the term "action" to describe a DSB decision to adopt panel and Appellate Body rulings and recommendations.

[19] Brazil's Initial Brief, para. 6.

[20] For example, Brazil quotes DSU Article 2.1, which states that "[w]here the DSB administers the dispute settlement provisions of a Plurilateral Trade Agreement, only those Members that are parties to that Agreement may participate in decisions or actions taken by the DSB with respect to that dispute."

[21] *See* US Initial Brief, paras. 8-9.

procedures would be fruitful," does not by its terms refer to "multilaterally agreed decisions of WTO bodies including the DSB". Similarly, Article 4.5 of the DSU states: "*In the course of consultations* in accordance with the provisions of a covered agreement, before resorting to *further action* under this Understanding, Members should attempt to obtain satisfactory adjustment of the matter" (emphasis added). In the Subsidies Agreement, subsidies are divided into prohibited, actionable, and non-actionable categories, and a Member may impose countervailing duties against prohibited and "actionable" subsidies without first obtaining authorization through a "multilaterally agreed decision[] of WTO bodies including the DSB".[22] Brazil's interpretation is at odds with all of these provisions – for example, since during consultations the DSB will not have taken *any* action with respect to a dispute, how could a Member attempt to settle a matter before resorting to *further* action? These provisions make clear that, read in the context of the DSU and the Subsidies Agreement, "actions" has a broader scope than Brazil would like: as indicated by its ordinary meaning, "actions " refers to "the taking of legal steps to establish a claim or obtain a remedy," encompassing all stages of a dispute – obtaining DSB authorization for retaliation would only constitute one, final step.[23]

14. Indeed, had Members intended the scope of the Peace Clause to be limited solely to collective decisions taken by the DSB, they could have used in the Peace Clause the same construction as used in DSU Article 2.1 – for example, "measures . . . shall be . . . exempt from actions taken by the DSB based on" specified provisions. Members did not do so, however.

15. Finally, the United States notes that Brazil has asserted that GATT 1994 Article XVI:1 and DSU Article 22 provide relevant context for the term "actions". However, neither of these provisions uses the term "action" at all[24], and they do not support Brazil's assertion that "actions" in the Peace Clause must be read to refer solely to "multilaterally agreed decisions of WTO bodies including the DSB." Similarly, Brazil refers to GATT 1994 Article XXV, entitled "Joint Action by the Contracting Parties." The fact that the drafters referred to this one kind of "action" as *joint* action only reinforces that the term "action" by itself is not intended to be limited to *only* "joint" or "collective" action. The phrase "contracting parties acting jointly" in Article XXV would be unnecessary if Brazil's interpretation of "action" were correct.[25]

---

[22] Members are obligated to "take all necessary steps to ensure that the imposition of a countervailing duty on any product of the territory of any Member imported into the territory of another Member is in accordance with the provisions of Article VI of GATT 1994 and the terms of this Agreement." Subsidies Agreement, Article 10 (footnote omitted). *See also* GATT 1994 Article VI:6 (requiring multilateral approval of certain exceptional anti-dumping and countervailing duties).

[23] We note that Argentina implicitly concedes that relevant context in the Subsidies Agreement for the phrase "exempt from actions" suggests that the term is not limited to decisions or actions taken by the DSB. Argentina recognizes that "[i]t is true that Article 7 of the SCM Agreement states that the request of consultations is subject to Article 13 of the AoA". Argentina's Third Party Initial Brief, para. 13. This would appear to contradict its reading of "the word 'actions' in the context of Article 13 of the AoA [as] refer[ring] to decisions of WTO competent bodies, such as the DSB when it discharges its duties by establishing a panel," *id.*, para. 6. That is, if the Peace Clause precludes a request for consultations by a Member under Article 7 of the Subsidies Agreement, the term "actions" in the Peace Clause cannot solely refer to "decisions of WTO competent bodies".

[24] *See, e.g.*, GATT 1994 Article XVI:1 ("In any case in which it is determined that serious prejudice to the interests of any other contracting party is caused or threatened by any such subsidization, the contracting party granting the subsidy shall, upon request, discuss with the other contracting party or contracting parties concerned, or with the CONTRACTING PARTIES, the possibility of limiting the subsidization."); DSU Article 22.6 ("When the situation described in paragraph 2 occurs, the DSB, upon request, shall grant authorization to suspend concessions or other obligations within 30 days of the expiry of the reasonable period of time unless the DSB decides by consensus to reject the request.").

[25] *See* GATT 1994 Article XXV ("Wherever reference is made in this Agreement to the contracting parties acting jointly they are designated as the CONTRACTING PARTIES. ").

C. BRAZIL'S INTERPRETATION OF THE PEACE CLAUSE WOULD LEAD TO ABSURD RESULTS

16. Brazil's suggested reading of the Peace Clause would rob this provision of any real meaning. Brazil would expose measures that conform to the Peace Clause to finding of inconsistency with the relevant GATT 1994 and Subsidies Agreement provisions and would expose them to retaliation *unless* the complaining party were to agree *not* to adopt the findings or authorize retaliation.

17. Under Brazil's interpretation, the phrase "exempt from actions" means only that "a complaining Member cannot receive authorization from the DSB to obtain a remedy" – that is, the Peace Clause would exempt conforming measures from actions taken by the DSB to authorize remedies but not from findings by the Panel. A panel would therefore be perfectly free to make findings in its final report that a challenged measure that conforms to the Peace Clause is inconsistent with, *inter alia*, the Subsidies Agreement. Under the DSU, the DSB would be unable to avoid adopting the panel findings of inconsistency with the relevant GATT 1994 or Subsidies Agreement provisions or recommendations to bring the measure into conformity.[26] Panel reports are adopted automatically by the DSB under the "negative consensus" rule[27] and authorization to retaliate is also automatically given unless the DSB decides by consensus against this.[28] As a result, the DSB could not decline to adopt the report or authorize remedies unless the complaining party agreed. Thus, under Brazil's reading, the phrase "measures . . . shall be . . . exempt from actions" in the Peace Clause would exempt conforming measures from DSB authorization to retaliate, but *only if* the complaining Member itself agreed not to authorize a remedy. This would be a strange and strained interpretation of the Peace Clause indeed and would effectively render it inutile, contrary to customary rules of treaty interpretation.

18. This absurd result would also conflict with the object and purpose of the Peace Clause and the Agriculture Agreement: namely, to exempt agricultural subsidies, under certain conditions, from the subsidies disciplines of the Subsidies Agreement and GATT 1994 while Members continue negotiations to move towards the "long-term objective . . . to provide for substantial progressive reductions in agricultural support and protection sustained over an agreed period of time".[29] Brazil also has not explained why, on its reading, Members would have chosen to allow actions, with all of their attendant burden on Members' (and the WTO's) resources, up to but not including authorization for retaliation.

[26] Under DSU Article 19, "[w]here a panel or the Appellate Body concludes that a measure is inconsistent with a covered agreement, it shall recommend that the Member concerned bring the measure into conformity with that agreement." DSU Article 19 (emphasis added) (footnote omitted).

[27] Under DSU Article 16, a panel report "shall be adopted at a DSB meeting unless a party to the dispute formally notifies the DSB of its decision to appeal or the DSB decides by consensus not to adopt the report". DSU Article 16.4 (footnote omitted).

[28] When a Member "fails to bring the measure found to be inconsistent with a covered agreement into compliance therewith or otherwise comply with the recommendations and rulings" and compensation cannot be agreed, the complaining party Member may request authorization from the DSB to suspend concessions, DSU Article 22.2, and "the DSB, upon request, shall grant authorization to suspend concessions or other obligations within 30 days of the expiry of the reasonable period of time unless the DSB decides by consensus to reject the request", DSU Article 22.6.

[29] Agriculture Agreement, preamble (third paragraph).

## III. BRAZIL'S INITIAL BRIEF RAISES A NUMBER OF MISGUIDED CONCERNS WHICH CANNOT UPSET THE BALANCE OF RIGHTS AND OBLIGATIONS OF MEMBERS UNDER THE PEACE CLAUSE AND DO NOT SUPPORT CONSIDERING BOTH THE APPLICABILITY OF THE PEACE CLAUSE AND BRAZIL'S SUBSTANTIVE CLAIMS TOGETHER

19. Brazil has advanced a number of other arguments, which relate neither to the ordinary meaning and context of the phrase "exempt from actions" nor to the object and purpose of the Peace Clause and the *Agreement on Agriculture*. These arguments are thus not relevant to the Panel's task of clarifying the meaning of the Peace Clause in accordance with customary rules of interpretation of public international law. Nonetheless, an examination of each of Brazil's arguments reveals that none of these concerns is well-founded.

### A. THE PANEL MAY EXAMINE THE APPLICABILITY OF THE PEACE CLAUSE UNDER NORMAL DSU RULES

20. Brazil argues that because Article 13 is not a special or additional rule set out in Appendix 2 of the DSU, Peace Clause issues must be resolved using normal DSU rules and procedures, which Brazil believes would prohibit reaching the Peace Clause issue first. Brazil errs on two counts. There was no need to designate Article 13 of the Agriculture Agreement as a special or additional rule *precisely because* the Panel may properly deal with the Peace Clause issue using the flexibility inherent in the normal DSU rules. The DSU, in Articles 12.1 and 12.2, provides the Panel with all the authority it needs to organize its working procedures as it considers best to resolve the matter in dispute.[30] Under DSU Article 12.1, the Panel is given the authority to determine its own working procedures "after consulting the parties to the dispute".[31] Under DSU Article 12.2, moreover, the Panel is charged with establishing panel procedures with "sufficient flexibility so as to ensure high-quality panel reports".[32]

21. Brazil itself has conceded the Panel's broad authority to establish its procedures in its letter of 23 May 2003, when it wrote of objections relating to the scope of a panel request under DSU Article 6.2: "The decision on how to handle such preliminary objections procedurally *is a matter of panel discretion*".[33] Thus, Brazil implicitly recognizes that the Panel already has the flexibility and the authority under normal DSU rules to organize its procedures to consider and dispose of the Peace Clause issue first. There is no need for the Peace Clause to be listed as a "special or additional rule and procedure" in DSU Appendix 2 because under normal DSU rules the Panel may bifurcate the proceedings in order to respect the balance of rights and obligations of Members under the Peace Clause and the Agriculture Agreement – that is, to ensure that conforming US measures are "exempt from actions based on" provisions specified in the Peace Clause.

---

[30] *See* Comments by the European Communities on certain issues raised on an initial basis by the Panel, para. 8 ("In conclusion, the Panel has substantial discretion in deciding how it will manage these issues. Article 12.1 DSU makes it quite clear that the Working Procedures set out in Appendix 3 of the DSU may be departed from if the Panel decides this is appropriate.").

[31] DSU Article 12.1 ("Panels shall follow the Working Procedures in Appendix 3 unless the panel decides otherwise after consulting with the parties to the dispute. ").

[32] DSU Article 12.2 ("Panel procedures should provide sufficient flexibility so as to ensure high-quality panel reports, while not unduly delaying the panel process.").

[33] Letter from Ambassador Luiz Felipe de Seixas Corrêa, Permanent Mission of Brazil, to Mr. Dariusz Rosati, Chairman of Panel, at 3 (23 May 2003) (emphasis added). The carry-over paragraph continues: "Where preliminary objections have been resolved in advance of other claims, normally they have been resolved in the panel's first meeting, on the basis of the first round of submissions and oral statements."

22. The United States notes that the Appellate Body has urged panels to adopt working procedures providing for preliminary rulings to deal with threshold jurisdictional issues[34], even though there are no "special and additional rules" in the DSU providing for these. In addition, we note that Article 10.3 of the Agriculture Agreement (the same agreement at issue here) is not listed as a "special and additional rule," but panels and the Appellate Body have made clear that this provision nonetheless governs dispute settlement proceedings by shifting the burden of proof to the responding party.[35]

23. Finally, Brazil relies on Article 11 of the DSU – pursuant to which a panel "should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements" – to support its position. Brazil's reliance on Article 11 is misplaced as shown by a simple examination of the text of Article 11. Article 11 provides the standard of review for panels; it does not guide the procedure used by panels. According to Brazil, DSU Article 11 somehow mandates that a panel review "all the facts including rebuttal facts," hold two panel meetings, and allow for the exchange of rebuttal submissions.[36] Brazil's argument is untenable; it would read Article 11 to *mandate* a particular series of meetings and submissions when Article 11 does *not* set out *any* particular procedural steps through which a panel "should make an objective assessment of the matter before it." At the same time, Brazil argues that the Panel *may not*, consistent with Article 11, consider the applicability of the Peace Clause first because "Article 11 contains no requirement for a special briefing, meeting or determination by a panel to resolve such applicability or exemption."[37] Of course, there is nothing in the text of Article 11 that supports reading this provision to preclude the Panel's bifurcating the proceeding to respect the balance of rights and obligations in the Peace Clause. However, to be consistent with its own argument, Brazil should also read Article 11 not to mandate any particular number or sequence of procedural steps (such as those set out in DSU Appendix 3) that are not required under its terms.

B. NO PREVIOUS PANEL REPORT HAS EXAMINED THE PEACE CLAUSE, AND OTHER PROCEDURAL PROVISIONS CITED BY BRAZIL DO NOT CONTAIN THE PHRASE "SHALL BE . . . EXEMPT FROM ACTIONS"

24. Brazil suggests that deciding the issue of the applicability of the Peace Clause in advance of Brazil's substantive Subsidies Agreement and GATT 1994 claims is "contrary to the practice of earlier panels".[38] Of course, there is no such practice since this is the first dispute to face this issue.

25. Brazil also argues that there are "a number of other threshold issues in WTO Agreements" but that "none of these provisions have special and additional rules to provide for extraordinary preliminary briefings, meetings, and determinations prior to a panel hearing on all of the claims presented".[39] Brazil's invocation of previous panel proceedings is inapt. Brazil has not asserted that any of the "threshold" provisions in other WTO agreements that it cites or that have been interpreted by previous panels contain the same language as the Peace Clause (that is, "shall be . . . exempt from

[34] *See* Appellate Body Report, *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, para. 144.

[35] *See* Appellate Body Report, *Canada – Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, WT/DS103/AB/RW2, WT/DS113/AB/RW2, paras. 67-75 (second recourse to DSU Article 21.5).

[36] *See* Brazil's Initial Brief, paras. 11-16.

[37] Brazil's Initial Brief, para. 16; *see id.*, para. 11 ("Thus, resolution of the 'peace clause' issues . . . must be resolved using normal DSU rules and procedures.").

[38] Brazil's Initial Brief at 7 (heading IV).

[39] Brazil's Initial Brief, para. 21.

actions").[40] Indeed, it is striking that Brazil studiously avoids comparing the text of any of these provisions with the text of the Peace Clause.[41]

26. Given the fact that *none* of the other provisions cited by Brazil contains Peace Clause-like language, these provisions have little relevance for the Panel's interpretation of the Peace Clause. At most, the relevance of these provisions lies in the fact that such " threshold" provisions do *not* use language that certain measures "shall be . . . exempt from actions." This suggests that the distinct language of the Peace Clause was intended to provide a distinct right, and one that differs from rights provided by these other WTO provisions.

27. We also note Brazil's argument that in the "closest case to the peace clause issue presented here" – that is, *Brazil – Export Financing Programme for Aircraft*, WT/DS46/AB/R – there was "never a suggestion or finding that the panel erred by not conducting a special briefing and special determination" on the "threshold issue whether Brazil was in compliance with Article 27.4" of the Subsidies Agreement. From the Appellate Body report, it would appear that the Appellate Body did not address it because no party suggested that this threshold issue had to be taken up as a first stage of the proceeding. Nonetheless, the Appellate Body found that the panel erred in not considering the threshold Article 27.4 issue first. The Peace Clause language ("measures . . . shall be . . . exempt from actions") is different and even stronger in requiring that the Peace Clause be taken up first and separately, with findings, prior to any consideration of the relevant GATT 1994 and Subsidies Agreement provisions.

## C. BRAZIL WILL NOT BE PREJUDICED BY SEPARATE HEARINGS AND BRIEFINGS ON THE PEACE CLAUSE ISSUE

28. Brazil, referring to its 23 May letter, argues that it will be prejudiced if the Panel considers separately the issue of the applicability of the Peace Clause from Brazil's substantive claims as this will disrupt "Brazil's efforts to make a coherent and unified presentation of its case"[42] and result in greater expense to Brazil "in having to bring its legal and economic experts to Geneva for an extra meeting."[43] Of course, any concerns that Brazil's presentation of its case may be affected cannot supersede the rights and obligations of Members as set out in the covered agreements – including the Peace Clause. In fact, the Peace Clause resolves any issue of how to account for burdens on parties since it provides that the responding party's measures are exempt from any action based on the relevant GATT 1994 and Subsidies Agreement provisions – it exempts the responding party from the burden of having to respond to the complaining party's claims. Brazil ignores this aspect of the Peace Clause. In any event, we note that bifurcating this proceeding to ensure that these conforming US measures are exempt from action based on Peace Clause-specified provisions will *reduce*, rather than increase, the amount of work involved for *both* parties. Here, dealing with the Peace Clause issue first will resolve that part of the dispute, saving both parties further work, since the US measures conform to the Peace Clause. And in general, such an approach simply means that a panel would deal

[40] For example, arguments that a particular claim is not within a panel's terms of reference under DSU Article 6.2 do not involve any textual mandate that measures "shall be . . . exempt from actions." What Brazil calls the "closest case to the peace clause issue presented here" involved Articles 27.2(b) and 27.4 of the Subsidies Agreement, neither of which says that measures "shall be . . . exempt from actions based on" specified provisions. *See* Brazil's Initial Brief, para. 19 (quoting Appellate Body discussion of Subsidies Agreement Articles 27.2(b) and 27.4 in *Brazil – Export Financing Programme for Aircraft*, WT/DS46/AB/R; Subsidies Agreement Article 27.2 states that the "prohibition of paragraph 1(a) of Article 3 shall not apply to" developing country Members in compliance with Article 27.4). Other provisions cited by Brazil (Article 1 of the *General Agreement on Trade in Services*, Article 2 of the *Agreement on Technical Barriers to Trade*, and Annex I of the *Agreement on Government Procurement*) similarly do not provide a legal right not to be subject to actions.

[41] *See* Brazil's Initial Brief, paras. 18-21.

[42] *See* Brazil's Initial Brief, paras. 17.

[43] Brazil's Initial Brief, para. 22.

in sequence with the issues it would otherwise have to confront in a dispute. Because no additional issues would be covered (and needless work on certain claims might be avoided), it would not appear that additional effort on the part of a panel or the parties would be required.

29. We also note in any event that Brazil's concerns about duplication of its factual presentation and increased expense seem overstated. Even if this were a dispute where the relevant measures did not conform to the Peace Clause, Brazil misunderstands the process. The fact that some of the same evidence might be relevant to Peace Clause as well as Subsidies Agreement claims does *not* mean that the evidence would have to be introduced twice. Once Brazil's factual evidence were introduced, if it were relevant to later stages of the proceeding, it could of course be used for that purpose.[44] Thus, there should be no duplication of its factual presentation and no additional burden to Brazil on that count. Similarly, with respect to concerns about the additional expenditure of resources should the Panel bifurcate this proceeding, the full-time presence of Brazil's private-sector counsel in Geneva should alleviate some of the expense that extra meetings (which there is no reason to assume would be needed since the US measures conform to the Peace Clause) might entail. In any event, however, the United States finds it difficult to believe that Brazil would bring an action with claims under 17 different provisions of the WTO agreements with respect to programs under at least 12 US statutes and not expect that the resulting dispute would involve additional complications and all the accompanying demands for time and resources.

30. Finally, the United States notes that Brazil has raised the issue that separate hearings and briefing on the Peace Clause issue "would cause it prejudice because there would be significant[] delays in the resolution of its claims – many of which do not implicate the peace clause".[45]. While, on its face, Brazil's list of "non-peace clause claims" appears to include claims based on provisions specified in the Peace Clause[46], Brazil's point is not raised by the Panel's question. If the Panel requests the parties to give their views on the question of what should happen with any claims in this action based on provisions not specified by the Peace Clause, the United States would be pleased to do so.

## IV. WERE THE PANEL TO CONSIDER THAT THE PEACE CLAUSE DOES NOT REQUIRE THAT THE PANEL DETERMINE WHETHER US MEASURES ARE EXEMPT FROM ACTIONS BEFORE CONSIDERING BRAZIL'S SUBSIDIES AGREEMENT AND GATT 1994 ARTICLE XVI ACTION, THE PANEL SHOULD EXERCISE ITS DISCRETION TO BIFURCATE THE PROCEEDING

31. Putting aside the arguments related to prejudice and expense which have been discussed above, the United States notes that, in the course of allegedly discussing the "context" for the Peace Clause, Brazil makes an argument that speaks not to any relevant context but to the Panel's exercise of its discretion to organize its procedures. Brazil argues that the "close overlap of proof for both peace clause and actionable and prohibited subsidy claims highlights the need for the Panel to examine all the 'facts of the case' together".[47] First, in this context, the United States has noted, and Brazil and the European Communities apparently agree, that the Panel enjoys significant discretion under DSU Articles 12.1 and 12.2 to organize its working procedures as it considers best to resolve the matter in dispute.

---

[44] To put it simply, "Brazil exhibit 419" (for example) would remain "Brazil exhibit 419" – it would not change simply because it was now being cited in a different argument.

[45] Brazil's Initial Brief, para. 23.

[46] Brazil argues that its "non-peace clause claims include . . . Article XVI:3 of GATT 1994 involving all domestic and export subsidies challenged by Brazil." Brazil's Initial Brief, para. 23. However, the Peace Clause explicitly states that conforming "export subsidies . . . shall be . . . exempt from actions based on Article XVI of GATT 1994." Agriculture Agreement, Article 13(c)(ii).

[47] Brazil's Initial Brief, para. 15.

32. However, even were the Panel to conclude that Article 13 does not require the Panel to determine whether US measures are in breach of the Peace Clause and no longer "exempt from actions based on" specified provisions, the significance and wording of the Peace Clause in this dispute would mean that the Panel should exercise its discretion to bifurcate this proceeding. The Peace Clause would remain a significant, decisive issue. As noted above, bifurcating the proceedings would save both parties as well as the Panel significant time and work since it will render it unnecessary to address the relevant GATT 1994 and Subsidies Agreement claims.

33. Furthermore, given that Brazil has signalled that its Peace Clause arguments alone will involve "the presentation of considerable factual evidence and expert econometric testimony"[48], it would appear that to hear Brazil's substantive claims at the same time would significantly complicate the Panel's work. The apparent complexity of Brazil's Peace Clause evidence also calls into significant question the likelihood that the timetable requested by Brazil is realistic with respect to the legitimate interests of the United States to defend its position. Finally, we note that, by seeking to have the Panel consider both the Peace Clause issue and Brazil's substantive claims at the same time, Brazil may be attempting to prejudice the US rights of defence – particularly since, even on Brazil's mis-reading of the Peace Clause, the US measures are "exempt from actions", Brazil is not entitled to obtain any remedy from the DSB.[49]

34. The United States also disagrees in any event that the "close overlap of proof for both peace clause and actionable and prohibited subsidy claims highlights the need for the Panel to examine all the 'facts of the case' together". For example, to establish its "serious prejudice" claims, Brazil must present evidence showing that the United States has caused "adverse effects" through "the use of any subsidy" (Subsidies Agreement, Article 5(c)) and evidence on "the effect of the subsidy" (Subsidies Agreement, Article 6.3(b), (c), (d)). Neither of these showings is relevant to the issue of whether US measures have breached the Peace Clause.

35. Frankly, if Brazil's Peace Clause arguments will involve extensive factual and econometric evidence, it is difficult to understand why the Panel would be *better* served by considering this "considerable" evidence and testimony at the same time that it receives even *more* evidence and testimony on other, unrelated issues. Thus, even if one hypothesized that the Peace Clause does not require the Panel to consider the issue of its applicability prior to examining Brazil's substantive claims and that the Panel solely needed to consider how to take the Peace Clause issue into account in exercising its discretion to organize its procedures, the United States submits that the Panel's work would be facilitated by focusing on the legally and logically distinct Peace Clause issue first.[50]

[49] *See* Brazil's Initial Brief, para. 9 ("In sum, 'exempt from actions' means that a complaining Member cannot receive authorization from the DSB to obtain a remedy against another Member's domestic or export support measures that are 'peace clause' protected.").

[50] *See* Appellate Body Report, *Brazil – Export Financing Programme for Aircraft*, WT/DS46/AB/R, paras. 142-44 (finding that panel should have considered threshold Article 27.4 issue before examining whether export subsidy had been provided under Subsidies Agreement Article 3.1(a)); *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, para. 144 (noting that panels would be better served by adopting working procedures providing for preliminary rulings to deal with threshold jurisdictional issues).

## V. OTHER ARGUMENTS BY THIRD PARTIES

### A. GIVEN DSU RULES, THE PANEL'S ORGANIZATION OF ITS PROCEDURES REPRESENTS THE FIRST OPPORTUNITY TO ARREST BRAZIL' S ACTION

36. India and the European Communities have suggested that, taken to its logical extreme, reading "actions" as the "taking of legal steps to establish a claim" would require a complaining party to bring two actions: first, an action to establish that the Peace Clause does not apply to certain measures, and second, if a panel were to find the Peace Clause inapplicable, an action challenging the measures based on the provisions specified in the Peace Clause. While this issue is not pertinent to the Panel's question concerning Article 13, the United States notes that it has not advanced such an interpretation by, for example, asking the Panel to find that it could not be established.[51] Thus, this issue is not before the Panel, and India's and the EC's arguments are irrelevant. Rather, we have requested more modestly that the Panel, consistent with the Peace Clause, structure its procedures so that US measures will in fact be exempted from Brazil's action based on provisions specified in the Peace Clause at the earliest possible juncture under the DSU.

37. As these third parties apparently fail to appreciate, prior to this moment, DSU rules provided for the dispute to proceed through consultations and panel establishment automatically, regardless of the US insistence that its measures conform to the Peace Clause. Although the United States has maintained at each and every stage that the challenged measures conform to the Peace Clause, the United States could not have stopped Brazil from asking for consultations[52], nor could it reasonably have been expected to refuse an entire request for consultations because it contains a request contrary to the Peace Clause, nor could the United States have prevented the establishment of this Panel. As a responding party cannot prevent panel establishment from occurring, it will inevitably be forced to argue to a panel that the panel's procedures should be structured so that the party' s challenged measures are not subject, from that point on, to actions based on provisions specified in the Peace Clause. Thus, given the automaticity in DSU rules relating to consultations and panel establishment, the Panel's organization of its procedures provides the first opportunity to arrest Brazil's "taking of legal steps to establish a claim", and this is all the United States has asked the Panel to do.

### B. CONTRARY TO THE SUGGESTION BY SEVERAL THIRD PARTIES, THE PEACE CLAUSE IS NOT AN AFFIRMATIVE DEFENCE

38. Australia and the European Communities have each asserted that the Peace Clause is an affirmative defence.[53] The United States believes that they are in error. However, this issue is not

[51] We also note that this potential question relating to whether a panel could have been established given the applicability of the Peace Clause could arise even under Brazil's interpretation of "exempt from actions". Brazil states that "actions are multilaterally agreed decisions of WTO bodies including the DSB". However, "exempt from actions" would then seem to reach DSU Article 6.1, under which the DSB takes a "multilaterally agreed decision" to establish a panel to consider a matter. Thus, under Brazil's own logic, "exempt from actions" in the Peace Clause should also preclude a decision by the DSB to establish a panel and not just a decision to authorize remedies. Argentina implicitly concedes the point when it states that it "agrees with Brazil's statement in paragraph 6 of its Brief that the word 'actions' in the context of Article 13 of the AoA refers to decisions of WTO competent bodies, *such as the DSB when it discharges its duties by establishing a panel*". Argentina's Third Party Initial Brief, para. 6 (emphasis added).

[52] However, the United States notes that Argentina (in paragraph 13 of its "Third Party Initial Brief") accepts that under Article 7 of the Subsidies Agreement, a Member is not to request consultations on measures conforming to the Peace Clause.

[53] *See* Comments by Australia, para. 4 (10 June 2003); Comments by the European Communities on certain issues raised on an initial basis by the Panel, para. 6 (dated 10 June "2002" on first page, 2003 in the heading).

raised by the Panel's question concerning Article 13, and there is no need to discuss it further at this time.

## VI. CONCLUSION: BRAZIL MAY NOT BRING, AND THE PANEL MAY NOT ADJUDICATE, A SUBSIDIES AGREEMENT OR GATT 1994 ARTICLE XVI ACTION AGAINST US MEASURES CONFORMING TO THE PEACE CLAUSE

39. For the reasons set out above and in its initial brief on the Panel's question concerning the Peace Clause, the United States respectfully requests the Panel to find that measures that conform to the Peace Clause are exempt from any action, including action under the DSU, based on the corresponding provisions of the Subsidies Agreement and the GATT 1994. As a result, the United States is not required to defend those measures in any action based on Brazilian claims exempted by the Peace Clause.

# ANNEX B

## SUBMISSION OF PARTIES AND THIRD PARTIES FOR THE FIRST SESSION OF THE FIRST SUBSTANTIVE MEETING

# ANNEX B-1

## EXECUTIVE SUMMARY OF BRAZIL'S FIRST SUBMISSION TO THE PANEL REGARDING THE "PEACE CLAUSE" AND NON-PEACE CLAUSE RELATED CLAIMS

### Introduction

1. Brazil's first submission initially addresses issues relating to the substantive interpretation of Article 13 of the Agreement on Agriculture (AoA), known as the "peace clause," and details the evidence demonstrating that the United States has no basis to assert a peace clause defence regarding Brazil's actionable and prohibited subsidy claims. The second part of Brazil's first submission sets forth the evidence and arguments concerning claims involving the following US measures: Step 2 export payments, the US export credit guarantee programmes (GSM 102, GSM 103 and SCGP) and the ETI Act subsidies. These three subsidies do not fully conform to the provisions of Part V of the Agreement on Agriculture and, thus, the United States has no peace clause protection from claims under the SCM Agreement. Step 2 export payments, the three export credit guarantee programmes and the ETI Act subsidies also violate ASCM Article 3.1(a) and 3.2. Finally, Brazil demonstrates that Step 2 domestic payments violate ASCM Article 3.1(b) and GATT Article III:4.

### Issues Regarding the Peace Clause in AoA Article 13

2. The peace clause of AoA Article 13 is in the nature of an affirmative defence. The United States has indicated that it will invoke a peace clause defence. To do so, the United States bears the burden of proof that US domestic support and export subsidies to upland cotton are provided in conformity with the requirements of the peace clause. Based on public international law and Appellate Body jurisprudence on the allocation of the burden of proof, AoA Article 13 is an affirmative defence because it provides an exception to a legal regime otherwise applying to agricultural support measures. It does not alter the scope of other provisions providing positive obligations on Members, and is not itself a positive obligation. It simply allows Members to maintain measures otherwise inconsistent with their WTO obligations exempt from actions, provided that the measures meet the conditions specified in AoA Article 13.

3. In accordance with Article 31 of the *Vienna Convention*, the appropriate interpretation of AoA Article 13(b)(ii) is the following: Members may assert a peace clause defence under AoA Article 13(b)(ii) *only* if the total quantity of support granted through all non-"green box" domestic support measures (*i.e.*, measures that do not fully comply with the provisions of AoA Annex 2) to a specific commodity in any marketing year from 1995-2003 does not exceed the quantity of non-"green box" domestic support decided to be granted in MY 1992. The only "decision" made by the United States "during" MY 1992 was to grant (i.e., make actual expenditures) of $1.994 billion in non-"green box" support to upland cotton pursuant to the terms of the 1990 FACT Act.

4. The evidence regarding the amount of non-"green box" US support to upland cotton granted in MY 1999-2002 is based largely on USDA documents, which show that US non-"green box" domestic support decided to be authorized and paid to upland cotton increased to $3,445 million in MY 1999, was $2,311 million in MY 2000, and increased to a new record high of $4,093 million in MY 2001 (for a crop valued at $3,312 million). Brazil estimates that US non-"green box" domestic support for MY 2002 (which will end on 31 July 2003) is $3,113 million. This estimate is based on the last available data and the requirements set out in the 2002 FSRI Act.

5. Thus, the evidence reveals that the amount of non-"green box" support granted in MY 1999-2002 exceeds the level of support "decided" by the United States in MY 1992. Therefore, the United States does not enjoy peace clause exemption from actions based on ASCM Article 5 and 6 and Article XVI:1 of GATT 1994 involving non-"green box" domestic support to upland cotton.

6. Brazil's calculation of the MY 1999-2002 reflects the appropriate set of non-"green box" domestic support measures granted to upland cotton. The United States notified to the WTO Committee on Agriculture that the following programmes are "amber box" support for MY 1999: Step 2 payments, loan deficiency payments, marketing loan gains, crop insurance payments, cottonseed payments, and market loss assistance payments. The structure of the first five of these domestic support programmes is substantially the same in MY 2000-2001 and under the 2002 FSRI Act as it was in MY 1999. There is also no indication that these five programmes should not continue to be treated as non-"green box" domestic support to upland cotton for the purposes of MY 2002. Therefore, the support under these five programmes, as well as market loss assistance payments, are non-"green box" support to upland cotton and are properly included in the set of domestic support measures for purposes of assessing possible US peace clause exemption from action.

7. With respect to production flexibility contract payments (PFC), direct payments (DP) and counter-cyclical payments (CCP), the evidence demonstrates that these payments are also non-"green box" support granted to upland cotton. The basis of this conclusion is summarized below.

8. *Production Flexibility Contract Payments (PFC)*: There are two reasons why PFC payments are not properly "green box" support. First, PFC payments are inconsistent with AoA Annex 2 paragraph 6(b), because Section 118(b) of the 1996 FAIR Act and the regulations implementing the PFC programme eliminates or reduces payments if producers grow certain products – fruits, vegetables and wild rice – on contract acreage.

9. AoA Annex 2 paragraph 6(b) requires that the "amount" of payments "shall not be related to or based on, the type of production…" The object and purpose of paragraph 6(b), based on its text and context, is to ensure that decoupled "green box" payments are not focused or channelled for a single product or a particular sub-set of products. It covers only *completely* decoupled domestic support measures. Paragraph 6(b) seeks to guarantee that a producer who receives such payments can produce any product covered by the Agreement on Agriculture.

10. Section 118(b) of the 1996 FAIR Act and its regulations make it clear that the *amount* of PFC payments in any given marketing year between 1996 and 2001 was related to or was based on the *type* of production undertaken by a producer who entered into a PFC contract. The general rule is that "planting fruits and vegetables (except lentils, mung beans, and dry peas) shall be prohibited on contract acreage". If fruits and vegetables are grown on contract acreage, then the regulations provide that "the Deputy Administrator shall terminate the contract with respect to the producer on each farm in which the producer has an interest". The regulations also provide that in less serious cases of violation, the penalty may be a reduction of contract payments equal to the market value of the fruits and vegetables or the contract payment for each acre used for fruits and vegetables. Thus, the PFC payments are not "decoupled income support" as set out in AoA Annex 2 paragraph 6(b) and therefore, are not "green box" support.

11. The second reason that PFC payments provided to upland cotton producers are not properly "green box" support is that they are inconsistent with the "fundamental" requirement in AoA Annex 2 paragraph 1 that they have "no, or at most minimal, trade distorting effects or effects on production". The quantity or level of production or trade distorting effects need only be very minimal to trigger denial of "green box" status under AoA Annex 2. This follows from the text of AoA Annex 2 paragraph 1, which contains the phrases "no," "at most," and "fundamental".

12. The record in this case demonstrates that PFC payments have had more than "at most" a "minimal" effect on production of US upland cotton during MY 1999-2002. Almost all upland cotton producers participated in the PFC programme. Furthermore, domestic US upland cotton producers view PFC payments as an important component of payments provided to upland cotton farmers. The percentage of subsidization by PFC payments relative to the market value measured by the price received by US upland cotton producers represents between 14 and 17 per cent for period MY 1999-2001. This provides US producers with a significant advantage in export competition with producers in the rest of the world who do not receive such a level of (or any) subsidies.

13. The PFC payments also have production effects because of the very high cost of production for upland cotton in the United States. Given the high US costs, without 14-17 per cent subsidies some higher-cost US producers would likely stop producing upland cotton. This would have resulted in lower levels of US upland cotton production. USDA economists have acknowledged the production-enhancing effects of PFC payments. They have also identified likely patterns of production effects.

14. Because the *quantity* or *level* or trade distorting effects need only be very minimal to trigger denial of "green box" status under AoA Annex 2, the evidence of the production enhancing effects of PFC payments necessitates the conclusion that PFC payments are not properly included within the AoA Annex 2 "green box". They are, thus, properly included within the domestic support measures to be used for the calculation of the amount of domestic support to upland cotton for MY 1999, 2000 and 2001.

15. *Direct payments (DP)*: with the passage of the new FSRI Act in May 2002, PFC payments were discontinued and replaced with DP. These began to be paid in MY 2002 and will be paid until the end of MY 2007. USDA has identified the DP programme as the direct successor to the PFC programme under the 1996 FAIR Act.

16. There are three reasons why DP are not properly within AoA Annex 2. First, as with PFC payments, the amount of DP are related to or based on the type of production undertaken in any year after the base period in violation of AoA Annex 2 paragraph 6(b). The 2002 FSRI Act and its implementing regulations eliminate or limit the amount of DP if base acreage is used for the production of certain crops, i.e., fruits, vegetables and wild rice.

17. Second, the DP provisions of the 2002 FSRI Act violate AoA Annex 2, paragraph 6(a) and (b) because producers were permitted to "update" their base acreage using MY 1998-2001 production totals. This is inconsistent with Annex 2, paragraph 6(a), which requires a *single, fixed* base period for a programme of support. The object and purpose of AoA Annex 2 paragraph 6(a) and (b) is to ensure that Members do not permit payments to increase over time in a manner linked to increases in production over time. This also follows from the AoA Annex 2 paragraph 1 requirement that "green box" support measures have no or at most minimal production effects. That can only occur if the base (i.e., the base for increased payments) does not adapt to recent changes in the production of a farmer.

18. The major structural elements of the PFC programme and the DP programme are the same for both programmes in terms of the basic types of crops covered, the producer's obligations to receive payments, prohibited plantings of certain crops, and freedom to receive payments for one crop and farm another crop. The change from the PFC programme to the DP programme is not "de-coupling" but rather "re-coupling" of MY 2002 and future DP with MY 1998-2001 production.

19. One third of farms receiving PFC payments between MY 1996-2001 updated their acreage for the DP programme using MY 1998-2001 production data. Thus, interpreting AoA Annex 2 paragraph 6(a) and (b) to permit an updating of the "fixed" base period by essentially changing the name of the "PFC payment" programme to DP programme would render these provisions a nullity.

20. Third, DP also have more than "at most minimal" production and trade-distorting effects contrary to the chapeau of AoA Annex 2 paragraph 1. DP, like PFC payments, can increase production of upland cotton through (1) a direct wealth effect through risk aversion reduction, (2) a wealth facilitated increased investment reflecting reduced credit constraints, and (3) a secondary wealth effect resulting from the increase in investment. In addition, the updating of base acres in the 2002 FSRI Act created an ongoing production-enhancing effect because farmers will expect future updates and continue to maintain high levels and even increase production between MY 2002 - 2007. Continued low cotton prices will increase the need of producers to protect their base as a hedge against low prices. In addition, US upland cotton producers are among the world's highest cost producers. That means that the amount of DP (and CCP) is critical to the economic survival of many US upland cotton producers. Thus, there will be a very strong incentive to maintain and increase upland cotton base in anticipation of future base updates in future farm legislation to offset potentially lower world prices.

21. In sum, DP are properly included within the set of domestic support measures to be used for calculating the amount of domestic support to upland cotton for MY 2002.

22. *Counter-Cyclical Payments (CCP)*: are non-"green box" domestic support because they are inconsistent with AoA Annex 2 paragraphs 6(a), 6(b) and 6(c). First, like PFC and DP, CCP are inconsistent with Annex 2 paragraph 6(b) because the CCP programme eliminates or limits the amount of payments for *those* producers who grow fruits, vegetables and wild rice on base acres.

23. Second, CCP also violate AoA Annex 2 paragraph 6(c) because the amount of payments is based on current market prices. The ordinary meaning of AoA Annex 2 paragraph 6(c) is that any direct income support to a producer of agricultural products must not be linked to an international or domestic price established after the base period, *i.e.*, to a current price. CCP are not based on the prices of upland cotton production that took place in a prior base period but rather on prices of present production. As the current upland cotton prices received by US farmers fluctuate between $0.52 and $0.6573 per pound, the amount of payments for each year between MY 2002-2007 changes. This is inconsistent with AoA Annex 2 paragraph 6(c), which requires that payments cannot be based on "the prices…applying to any production undertaken in any period after the base period". But the CCP programme has no fixed "base period" for the purposes of setting "prices". It uses current prices, *i.e.*, prices that apply to current production and, thus, to a "production undertaken in a period after the base period".

24. Third, like PFC and DP, CCP have production and trade distorting effects in violation of AoA Annex 2 paragraph 1. The new CCP programme for upland cotton is one of the main sources of increased payments for US cotton producers between the 1996 FAIR Act and the 2002 FSRI Act. The payments to US upland cotton farmers in MY 2002 will exceed $1 billion and represent over 32 per cent of the market value of US upland cotton. USDA economists have acknowledged that CCP have identifiable and measurable production effects.

25. In sum, CCP are non-"green box" domestic support properly included within the set of domestic support measures to be used for calculating the amount of domestic support to upland cotton for MY 2002.

26. *DP and CCP are support to upland cotton*: DP and CCP made in MY 2002 are support to upland cotton within the meaning of AoA Article 13(b)(ii). The great majority of upland cotton producers are enrolled in the programmes and will receive the full amount of these payments in MY 2002. Most of the producers of upland cotton in MY 2002 used upland cotton base acres to produce upland cotton. US farms growing the bulk of upland cotton tend to grow upland cotton year after year because of considerable investments in cotton-specific equipment and the lack of alternative crops. Thus, most farmers with cotton "base acreage" generally do not use that base acreage to grow other

crops. In addition, CCP create incentives to maintain upland cotton production at the level of the base period in order to minimize the risk of low revenues.

27. In sum, the United States cannot successfully invoke peace clause protection against Brazil's actionable subsidy claims under ASCM Articles 5 and 6 or Brazil's claims under GATT Article XVI:1.

28. *Export Subsidy Peace Clause Issues Under AoA Article 13 (c):* The United States also has no peace clause protection under AoA Article 13(c) for claims against export subsidies under the SCM Agreement regarding Step 2 export payments, the export credit guarantees and subsidies provided under the ETI Act. AoA Article 13(c) can only be invoked by a WTO Member as an affirmative defence if that WTO Member can demonstrate that its export subsidies "conform fully to the provisions of Part V" of the AoA. Part V of the AoA consists of Articles 8 to 11. A Member violates Part V of the AoA if it provides export subsidies for products for which it has not undertaken any export subsidy reduction commitments; or second, if it has export subsidy reduction commitments for the product under consideration, but exceeds the maximum amount of export subsidies to or the maximum value of the product that it has scheduled to be exported with the assistance of export subsidies. The United States does not enjoy peace clause protection for the agricultural export subsidies challenged by Brazil under the SCM Agreement because – as Brazil demonstrates – each of the subsidies at issue does not fully conform to Part V of the AoA.

**Brazil's Claims Regarding Prohibited US Export and Local Content Subsidies**

29. The United States maintains three types of export subsidies related to US upland cotton and other commodities. These subsidies violate AoA Articles 3.3, 8 and 10.1 and are prohibited under ASCM Articles 3.1(a) and 3.2. Brazil challenges all three measures to the extent they provide subsidies to upland cotton. In addition, it challenges the export credit guarantee programmes for all products covered.

30. The first measure, the Step 2 export programme, relates solely to exports of US upland cotton and provides grants to exporters. The second group of measures are three export credit guarantee programmes – the General Sales Manager 102 ("GSM 102"), the General Sales Manager 103 ("GSM 103") and the Supplier Credit Guarantee Programme ("SCGP") – provided by the United States in connection with the export of agricultural goods in general. The third measure providing export subsidies is the FSC Repeal and Extraterritorial Income (ETI) Act of 2000, by which the United States provides tax breaks for exporters of US products, including agricultural products such as upland cotton.

31. *Step 2 Export Payments:* Section 1207(a) of the 2002 FSRI Act mandates Step 2 export payments contingent on the export of US upland cotton lint. Section 1207(a) of the 2002 FSRI Act requires USDA to pay US exporters the difference between higher priced US upland cotton and the average of the five lowest price quotes for exports of upland cotton worldwide (Cotlook's A-Index). The size of this subsidy averaged 8 per cent of the price received by US producers between MY 1999-2001 and an estimated 9.9 per cent in MY 2002.

32. Step 2 export payments constitute export subsidies within the meaning of the AoA. The Appellate Body has indicated that context for interpretation of an "export subsidy" under the AoA is found in the ASCM. Step 2 export payments involve grants within the meaning of ASCM Article 1.1(a)(1)(i), as the US Government pays money to US exporters. Such grants are direct transfers of economic *resources* for which the US Government receives no consideration. Step 2 export payments constitute "free money" for which exporters incur no corresponding obligations and, thus are made for "less than full consideration". They, therefore, confer a benefit within the meaning of ASCM Article 1.1(b). Finally, Step 2 payments are also export contingent within the meaning of ASCM

Article 3.1(a) because exporters are only eligible to receive Step 2 export payments if they produce evidence that they have exported an amount of US upland cotton.

33. Section 1207(a) of the 2002 FSRI Act requires the US Secretary of Agriculture to make Step 2 export payments to eligible exporters upon proof of the export of US cotton. Therefore, Section 1207(a) of the 2002 FSRI Act is inconsistent with AoA Articles 3.3 and 8, because it requires payments of export subsidies to upland cotton without the United States having undertaken any export subsidy reduction commitments under the AoA. Thus, the United States has no peace clause protection against claims made under the ASCM for Step 2 export payments. In addition, for the same reasons the Step 2 export payments violate AoA Articles 3.3 and 8, Section 1207(a) of the 2002 FSRI Act also mandates payment of export subsidies in violation of ASCM Articles 3.1(a) and 3.2.

34. *Export Credit Guarantee Programmes:* The United States, through the US Commodity Credit Corporation (CCC), operates three export credit guarantee programmes – General Sales Manager 102 (GSM 102), General Sales Manager 103 (GSM 103) and the Supplier Credit Guarantee Programme (SCGP). The programmes guarantee the repayment of loans granted to foreign importers of all US agricultural commodities and are not limited to upland cotton. Brazil's also challenges the whole programmes, not just as they relate to upland cotton.

35. USDA export data demonstrates that US exports of most scheduled commodities exceed the respective US quantitative export subsidy reduction commitment. For unscheduled commitments, there is no such commitment, which means *that* every export of these commodities is in excess of the United States' commitments. In *Canada – Dairy Article 21.5 (II)*, the Appellate Body characterized export subsidy claims under the AoA as involving both a "quantitative aspect" and an "export subsidization aspect". It held that AoA Article 10.3 allocates the burden of proof for the export subsidization part to the defending Member – in this case the United States – if the complaining Member – in this case Brazil – establishes that the level of exports in exceeds of the export subsidy reduction commitments. Therefore, the United States bears the burden to prove that its excess exports did not benefit from export subsidies, including export credit guarantees

36. Nevertheless, Brazil also provides evidence that the three export credit guarantee programmes are export subsidies within the meaning of the AoA. The Appellate Body in *US – FSC* held that export subsidies within the meaning of the SCM Agreement are also export subsidies for the purposes of the AoA. Brazil demonstrates in two distinct ways that GSM 102, GSM 103 and SCGP are "export subsidies". First, context for determining whether the US programmes are export subsidies under the AoA is provided by reference to ASCM Annex I, Item (j) of the Illustrative List of Export Subsidies. Item (j) provides that export credit guarantee programmes are export subsidies if they are operated "at premium rates which are inadequate to cover the long-term operating costs and losses of the programme". Second, export credit guarantees also constitute export subsidies under the AoA and in light of the Appelllate Body decisions in *US- FSC* and *Canada – Dairy*, if they involve "financial contributions" that confer "benefits" and are contingent upon export performance within the meaning of ASCM Articles 1.1 and 3.1(a).

37. US documents demonstrate that GSM 102, GSM 103 and SCGP are export subsidies because they are operated at premium rates which are far below the level necessary to cover the programmes operating costs and losses. The programmes are, thus, export subsidies as defined in item (j) of the Illustrative List of Export Subsidies. Under Appellate Body and panel jurisprudence, export subsidies defined in the ASCM Agreement are relevant context for a finding of export subsidies under the AoA. Therefore these three programmes constitute export subsidies within the meaning of the AoA.

38. In addition, GSM 102, GSM 103 and SCGP are export subsidies within the meaning of the AoA because they are financial contributions consistent with ASCM Article 1.1(a)(1)(i), and confer benefits within the meaning of ASCM Article 1.1(b). The United States itself, in its budget, treats them as subsidies. In addition, no such guarantees are commercially available in the marketplace.

GSM 102, GSM 103 and SCGP are, furthermore, contingent upon export performance within the meaning of ASCM Article 3.1(a). Thus, the programme constitutes export subsidies within the meaning of both the SCM Agreement and the AoA.

39. The export subsidies GSM 102, GSM 103 and SCGP result in, or threaten to lead to, circumvention of the United States' export subsidy commitments within the meaning of AoA Article 10.1. GSM 102, GSM 103 and SCGP, in so far as they are available for unscheduled products, violate AoA Articles 10.1 and 8 because they make export subsidies available for unscheduled products. The Appellate Body has held that for unscheduled products, it is inconsistent with AoA Article 3.3 to provide export subsidies listed in AoA Article 9.1, and that it is inconsistent with AoA Articles 10.1 and 8 to provide any other export subsidy. GSM 102, GSM 103 and SCGP provide export subsidies to unscheduled products, and thus violate AoA Article 10.1 and 8.

40. With respect to scheduled products, GSM 102, GSM 103 and SCGP as such also threaten to lead to circumvention of the US export subsidy reduction commitments. The United States provides monetary allocations for export credit guarantees to individual third countries either on a commodity specific basis or on a non-commodity specific basis. This common feature of the three export credit guarantee programmes creates a threat that the United States will exceed its quantitative export subsidy reduction commitment for scheduled products in violation of AoA Articles 10.1 and 8.

41. In sum, the export credit guarantee programmes GSM 102, GSM 103 and SCGP are inconsistent with AoA Articles 10.1 and 8. As they do not fully conform to AoA Part V, they do not enjoy peace clause protection under AoA Article 13(c)(ii).

42. Brazil has already established that GSM 102, GSM 103 and SCGP are export subsidies within the meaning of item (j) of the Illustrative List of Export Subsidies attached as Annex I to the SCM Agreement, and within the meaning of ASCM Article 3.1(a). It follows that GSM 102, GSM 103 and SCGP are prohibited export subsidies within the meaning of ASCM Articles 3.1(a) and 3.2.

43. *ETI Act Export Subsidies*: The third export subsidy provided by the United States to upland cotton consists of tax cuts under the FSC Repeal and Extraterritorial Income Act of 2000. This Act eliminates tax liabilities for exporters, *inter alia*, of upland cotton. A WTO panel and the Appellate Body have previously found that the ETI Act violates AoA Articles 10.1 and 8 and ASCM Articles 3.1(a) and 3.2. The tax breaks provided for under the ETI Act constitute export subsidies within the meaning of AoA Article 10.1. The ETI Act threatens to circumvent the US export subsidy commitments by providing an export subsidy to upland cotton while the United States does not have any export subsidy reduction commitments for upland cotton in violation of AoA Articles 10.1 and 8. As the ETI Act subsidies do not fully conform to AoA Part V, there is no peace clause exemption from actions under the SCM Agreement. Consequently, the ETI Act *also* constitutes a prohibited export subsidy within the meaning of ASCM Article 3.1(a) and 3.2.

44. *Step 2* Domestic *Payments*: Section 1207(a) of the 2002 FSRI Act mandates the payment of the Step 2 domestic payments. Step 2 domestic payments are subsidies within the meaning of the ASCM Article 1.1. They involve grants because the US Government pays domestic users of US upland cotton the difference between higher priced US upland cotton and the average of the five lowest upland cotton price quotes for exports (A-Index) without receiving any consideration in return. These grants are direct transfers of funds and constitute a financial contribution by a Government within the meaning of ASCM Article 1.1(a)(1)(i). They confer a "benefit" within the meaning of ASCM Article 1.1(b) because the domestic user of US upland cotton receives the financial contribution on terms more favorable than those available in the market. Step 2 domestic payments constitute "free money" for which domestic users of US upland cotton incur no corresponding obligations. Finally, Step 2 domestic payments are contingent on the use of domestic over imported goods. Domestic users of US cotton can only receive payments upon proof of opening a bale of domestic US upland cotton. In sum, Section 1207(a) of the 2002 FSRI Act mandating Step 2 domestic

payments violates ASCM Articles 3.1(b) and 3.2 by requiring the provision of subsidies contingent upon the use of domestic over imported goods.

45. The Step 2 domestic payment programme also constitutes a violation of GATT Article III:4. Section 1207(a) requires the US Secretary of Agriculture to treat upland cotton of non-US source less favorable than like US upland cotton. Only upland cotton that "is domestically produced baled upland cotton" is eligible for the Step 2 domestic payment programme. Paying a subsidy to like domestic upland cotton while denying such payments to imported like cotton negatively affects the competitiveness of imported cotton by making it less attractive to US purchasers. The Step 2 domestic payment programme therefore extends "less favorable treatment" to imported goods within the meaning of GATT Article III:4.

**Conclusion**

46. In Brazil's further submission (scheduled for 4 September 2003 following the Panels expression of its views on AoA Article 13 on 1 September 2003) Brazil will present its arguments concerning its claims under ASCM Articles 5(c), 6.3(b), 6.3(c) and 6.3(d), as well as under GATT Article XVI.

# ANNEX B-2

## EXECUTIVE SUMMARY OF THE FIRST WRITTEN SUBMISSION OF THE UNITED STATES

1. In this submission, the United States principally focuses on the issues involving the Peace Clause. However, three sets of measures identified by Brazil – (1) export credit guarantee measures relating to eligible US agricultural commodities other than US upland cotton; (2) production flexibility contract payments and market loss assistance payments; and (3) cottonseed payments – were, respectively, not the subject of consultations, had expired before consultations were requested, or had not yet been adopted at the time of the consultation and panel requests. With respect to these measures, the United States requests that the Panel make preliminary rulings that they are not within the Panel's terms of reference.

2. **General Interpretation of the Peace Clause and "Exempt from Actions"**: As set out in more previous submissions, read in accordance with the customary rules of interpretation of public international law, the key Peace Clause phrase "exempt from actions" means "not exposed or subject to" a "legal process or suit" or the "taking of legal steps to establish a claim or obtain a remedy". Relevant context in DSU Article 3.7 and 4.5 and Subsidies Agreement Article 7 supports this reading. For example, contrary to Brazil's suggestion that "action" only refers to "collective action" by the Dispute Settlement Body, DSU Article 4.5 uses the phrase "further" action. Since no "action" will have been taken by the DSB "in the course of consultations," the phrase "further action" suggests that requesting consultations is part of the action brought by a complaining party. Thus, these provisions suggest that "action" based on the relevant provisions would include all stages of a dispute, including the "bringing [of] a case", consultations, and panel proceedings and would support reading "exempt from actions" in Article 13 to mean "not subject to" the "taking of legal steps to establish a claim".

3. Prior to this point in the process, DSU rules did not afford the United States any opportunity to prevent the dispute from proceeding through consultations and panel establishment automatically, regardless of the US insistence that its measures conform to the Peace Clause. As a responding party cannot prevent panel establishment from occurring, it will inevitably be forced to argue to a panel that its procedures should be structured so that the party's challenged measures are not subject, from that point on, to actions based on provisions specified in the Peace Clause. Thus, the Panel's organization of its procedures provided the first opportunity to arrest Brazil's "taking of legal steps to establish a claim".

4. **The Peace Clause Is Not an Affirmative Defence**: The Peace Clause applies *"[n]otwithstanding* the provisions of GATT 1994" and the Subsidies Agreement – that is, *in spite of* and *without regard to or prevention by* the subsidies obligations contained in those agreements. Article 21.1 of the Agriculture Agreement further clarifies that the obligations of Members under the Subsidies Agreement and GATT 1994 *only* apply "*subject to*" the provisions of the Agriculture Agreement, including the Peace Clause. There is no need to determine if a measure is inconsistent with WTO subsidies disciplines before applying the Peace Clause as would be the case if the Peace Clause were an affirmative defence to those obligations.

5. As in *United States - Measures Affecting Imports of Woven Wool Shirts and Blouses from India*, in which the Appellate Body explained that a provision that was described as an "exception" was not an affirmative defence and in fact was "an integral part" of the arrangement under the *Agreement on Textiles and Clothing* that "reflects an equally carefully drawn balance of rights and obligations of Members", here, too, the Peace Clause is part and parcel of the balance of rights and

obligations with the subsidies disciplines of GATT 1994 and the Subsidies Agreement and explains which measures are subject to actions based on those disciplines.

6. Article 13(a)(i) establishes that green box measures are "non-actionable subsidies for purposes of countervailing duties". This obligation is not contingent on whether a Member asserts an "affirmative defence" that a particular measure is "green box"; that is, one Member is not free to impose a countervailing duty until another establishes a Peace Clause "affirmative defence". There is no textual basis to interpret the Peace Clause to be an affirmative defence under one provision (Article 13(b)(ii)) but not another. In fact, rather than a defence, the Peace Clause could be used on the *offense* (as a cause of action) if, for example, a Member imposed a countervailing duty on a "green box" measure while the Peace Clause was in force.

7. Brazil has erroneously asserted that the Peace Clause "provides no positive obligations itself". Brazil overlooks the text of, for example, Article 13(a)(ii) and (b)(ii), which incorporates positive obligations of Annex 2 and Article 6 by reference. The Peace Clause also differs from the fifth sentence of footnote 59 to item (e) and under the second paragraph of item (k) of the Illustrative List, under which it appears that a measure otherwise prohibited under Article 3 of the Subsidies Agreement would nonetheless be permitted given the existence of circumstances detailed in those provisions. However, under the Peace Clause, conforming measures are not even exposed or subject to the taking of legal steps to establish a claim or obtain a remedy based on Peace Clause-specified provisions. Further, Subsidies Agreement Articles 3, 5, and 6 recognize that measures conforming to the Peace Clause are not subject to those disciplines by expressly excluding such measures from the scope of those obligations.

8. Brazil asserted in both its panel and consultation requests that the Peace Clause does not exempt the challenged US measures from action. Brazil implicitly recognized in these documents that it must surmount the Peace Clause hurdle to bring this action against US agricultural support measures. Even were the United States to present no arguments on the applicability of the Peace Clause, Article 13 would bar Brazil's claims unless Brazil made a *prima facie* case that the US measures breach the Peace Clause.

9. **US Direct Payments Meet and Conform to the Criteria in Article 13(a)**: Pursuant to Agriculture Agreement Article 13(a)(ii) domestic support measures that "conform fully to the provisions of Annex 2 to this Agreement" are "exempt from actions based on Article XVI of GATT 1994 and Part III of the Subsidies Agreement". The 2002 Act establishes several types of measures that qualify for green box protection, including one, direct payments, that is challenged by Brazil.

10. Direct payments under the 2002 Act conform fully to the basic criteria in paragraph 1, Annex 2, as well as the five "policy-specific criteria and conditions" in paragraph 6, Annex 2, for "decoupled income support". Consistent with paragraph 1, direct payments are provided by a publicly-funded government programme and do not provide price support. Consistent with paragraph 6, direct payments establish eligibility by reference to the clearly-defined criteria of factor use or production level in a defined and fixed base period. Payments are not related to production or prices or the factors of production employed in any year after the base period, and no production is required in order to receive such payments.

11. In short, direct payments do not provide support for upland cotton because they are not linked to current cotton production. These payments are made with respect to farm acreage that was devoted to agricultural production in the past, including previous upland cotton production. Direct payments, however, are made regardless of whether cotton is currently produced on those acres or whether anything is produced at all. Because all of the criteria in paragraphs 1, 5, and 6 are met, direct payments conform to the requirements of Annex 2 and are "exempt from actions" based on Part III of the Subsidies Agreement and GATT 1994 Article XVI.

12. **Applicability of Agriculture Agreement Article 13(b)(ii):** Pursuant to Agriculture Agreement Article 13(b)(ii), "domestic support measures that conform fully to the provisions of Article 6" are "exempt from actions" based on GATT 1994 Article XVI:1 and Subsidies Agreement Articles 5 and 6. Brazil does not contest that US non-green box domestic support measures conform fully to the requirements of Article 6. Thus, the only question is whether US non-green box domestic support measures do or do not "grant support to a specific commodity in excess of that decided during the 1992 marketing year."

13. The phrase "grant support to a specific commodity" is not explicitly defined. Read according to its ordinary meaning, this phrase means to "give" or "confer" formally a "subsidy" ("assistance, backing") "specially . . . pertaining to a particular" "agricultural crop". Read in the context of, *inter alia*, the definition of "Aggregate Measurement of Support" in Article 1(a), "support to a specific commodity" refers to support "provided for an agricultural product in favour of the producers of the basic agricultural product" or "product-specific support".

14. The product-specific support granted by such Article 6 measures must be compared to "that decided during the 1992 marketing year". According to its ordinary meaning, this phrase would mean the product-specific support that was "determined" or "pronounced" during the 1992 marketing year. With reference to support or subsidies, the term "decided" is not used elsewhere in the Agriculture Agreement nor in the Subsidies Agreement. Various provisions that define the overall domestic support in favour of agricultural producers that has been, is being, and may be provided by a Member use the phrase "support *provided*" in favour of an agricultural product or agricultural producers no fewer than 13 times. Context thus suggests that the use of the term "*decided"* in Article 13(b) was deliberate so as to make the availability of the Peace Clause not dependent upon the support – for example, as measured through budgetary outlays – actually "provided" during the 1992 marketing year. This interpretation is further supported by Members' decision not to use the term "Aggregate Measurement of Support" in this part of Article 13(b)(ii). That is, Members did not choose to make the applicability of the Peace Clause contingent on comparison of a Member's product-specific Aggregate Measurement of Support.

15. The Peace Clause thus exempts from certain actions a Member's non-green box domestic support measures that conform to that Member's overall reduction commitments under Article 6, provided that such measures do not currently "give" or "confer" "product-specific support" in excess of that "determined" or "pronounced" during the 1992 marketing year. The relevant test for the applicability of Article 13(b)(ii) is to compare the product-specific support as it was decided in 1992 versus the product-specific support that existing measures currently grant.

16. **US Measures Conform to the Criteria in Article 13(b) and Are Exempt from Actions**: US domestic support measures under the 2002 Act were written to grant support for upland cotton within the 1992 marketing year level so that such measures would conform to the Peace Clause criteria. In particular, the 2002 Act shifts support away from the product-specific support that prevailed in 1992 to reduce support linked to the production of upland cotton.

17. **The Product-Specific Support for Upland Cotton Decided During 1992 Was To Ensure Income of 72.9 Cents per Pound**: The product-specific support in favour of upland cotton decided during the 1992 marketing year was to ensure a level of income ($0.729) for upland cotton farmers for each pound of upland cotton production. That is, US domestic support measures set a *rate* of support, rather than deciding *ex ante* a level of budgetary outlay or expenditures. This support was granted by the 1990 Act through two programmes: marketing loans (including marketing loan gains and loan deficiency payments) and deficiency payments.

18. Through marketing loans, the United States in effect guaranteed that cotton producers would realize income equivalent to at least 52.35 cents per pound of upland cotton produced. The United States further ensured cotton farmers would realize income equivalent to 72.9 cents per pound

of upland cotton produced by making "deficiency payments". By the terms of the 1990 Act and all subsequent implementing regulations, the support "decided" (that is, " determined" or "pronounced") in favour of upland cotton was *not* expressed in terms of outlays or appropriations but rather as a *rate*: that is, through both marketing loans and deficiency payments, producer income of 72.9 cents per pound of upland cotton. Thus, budgetary outlays, which reflect the difference between the rates set out in US legislation and regulations (which *were* decided by the US Government) and market prices (which obviously were *not*), do not represent the product-specific support "decided" during the 1992 marketing year.

19. **US Domestic Support Measures Currently Grant Product-Specific Support to Upland Cotton to Ensure Producer Income of 52 Cents per Pound**: Under the 2002 Act, product-specific support is again granted to upland cotton through the marketing loan programme and through user marketing (step 2) payments. Despite a small adjustment in the user marketing (step 2) payment formula, US measures currently in effect grant product-specific support to upland cotton far lower than that decided in the 1992 marketing year. Through the marketing loan programme, the US Government has in effect guaranteed that cotton producers will realize income equivalent to at least 52 cents ($0.52) per pound (the "2002 loan rate") of upland cotton produced. Marketing loans and loan deficiency payments are contingent on a farm's actual production of upland cotton in the current marketing year.

20. Product-specific support decided during the 1992 marketing year for upland cotton was to ensure producer income of 72.9 cents per pound; US domestic support measures currently grant product-specific support only at the rate of 52 cents per pound of production. Even taking into account the minor differences in payment rates for user marketing payments, this comparison indicates that US measures do not grant product-specific support to upland cotton in excess of that decided during the 1992 marketing year; in fact, current US measures grant product-specific support at a rate more than 20 cents per pound *less* than that decided during 1992.

21. **US Payments That Brazil Has Mischaracterized As Providing Support to a Specific Commodity Do Not Form Part of the Peace Clause Comparison**: Direct payments, counter-cyclical payments, and crop insurance are not product-specific support for upland cotton and are therefore irrelevant to the 1992 to 2002 Peace Clause comparison. Direct payments are green box support because they conform to the applicable general and policy-specific criteria under Annex 2 of the Agriculture Agreement. As green box measures, direct payments are not part of the comparison of "product-specific" support under Article 13(b)(ii). Because direct payments are based on quantities of acreage that historically produced certain commodities, including upland cotton, and there is no requirement to produce upland cotton to receive these payments, however, direct payments are non-product-specific.

22. With respect to counter-cyclical payments, the United States notes that these measures do not grant product-specific support to upland cotton. Product-specific support is " provided for an agricultural product" for the benefit of "the *producers* of the basic agricultural product". The payment formula for counter-cyclical payments demonstrates that these payments are not "provided for an agricultural product" because it is not current production of upland cotton that qualifies a recipient to receive payment. In addition, it is not "the producers of the basic agricultural product" – that is, current upland cotton growers – that are entitled to receive the counter-cyclical payments but rather persons (farmers and landowners) on farm acres with *past histories* of producing covered commodities, including upland cotton. Because counter-cyclical payments are not product-specific support for upland cotton, such payments are not properly part of the Peace Clause comparison under Article 13(b)(ii).

23. Neither does crop insurance grant product-specific support to upland cotton. A variety of insurance plans are now subsidized and reinsured by the United States. The basic programme provisions for crop insurance are generic, not commodity-specific. For example, the US Government

provides an incentive to participate in the crop insurance programme by subsidizing the premium paid by the farmer. This premium subsidy is available to a broad array of commodities around the country and does not vary by commodity. Thus, while the United States notifies crop insurance as "amber box" domestic support subject to US reduction commitments, crop insurance is "non-product-specific support in favour of agricultural producers in general".

24. **Conclusion: US Non-Green Box Domestic Support Measures Are Exempt from Brazil's Subsidies Agreement and GATT 1994 Article XVI Action**: Brazil has asserted that US domestic support measures breach the Peace Clause by comparing US budgetary outlays for the 1992 marketing year to US budgetary outlays for marketing years 1999-2001 and its "reasonable" estimates of US outlays for the 2002 marketing year. As noted above, Brazil's interpretation of the Peace Clause and resulting analysis is fundamentally in error. Because the level of income support granted to upland cotton producers is far lower now than the support decided in marketing year 1992, Brazil may not maintain this action and advance claims under GATT 1994 Article XVI:1 or Subsidies Agreement Articles 5 and 6 with respect to US non-green box domestic support measures – marketing loan programme payments, user marketing (step 2) certificates, counter-cyclical payments, and crop insurance subsidies.

25. **US Step 2 Payments Are Not an Export Subsidy for Upland Cotton**: User marketing (Step 2) payments are made to users of upland cotton. Under section 1207 of the 2002 Act, the Secretary of Agriculture is authorized to issue marketing certificates or cash payments *to domestic users and exporters* of upland cotton *for documented purchases by domestic users and sales for export by exporters*. The programme is indifferent to whether recipients of the benefit of this programme are parties that open bales for the processing of manufacturing raw cotton into cotton products in the United States or exporters. Accordingly, the United States reports the benefits conferred under the Step 2 programme as product-specific amber box domestic support.

26. The Step 2 programme is not an export subsidy under Agriculture Agreement Article 9.1 and not an export subsidy in circumvention of the US obligation not to confer an export subsidy with respect to cotton, contrary to Article 10.1. Article 1(e) of the Agriculture Agreement states that "'export subsidies' refers to subsidies contingent upon export performance, including the export subsidies listed in Article 9 of this Agreement". Consequently, to constitute an "export subsidy" for any purposes of the Agreement, the subsidy must first be "contingent on export performance". The benefits of the Step 2 programme are not contingent on export performance.

27. A WTO dispute settlement panel has already determined that such facts do not involve an export subsidy for purposes of both Articles 9 and 10 of the Agriculture Agreement, because the subsidy is not "contingent on export performance". The panel in *Canada - Measures Affecting the Importation of Milk and the Exportation of Dairy Products* concluded that where a subsidy was available in connection with the exported product but also to processors producing for the domestic market, "access to milk under such other classes is not 'contingent on export performance.' We therefore find that such other milk classes do not involve an export subsidy under Article 9.1(a)". For precisely the same reasons, the panel also found that "these other milk classes do not involve an export subsidy in the sense of Article 10.1". Similarly, the Step 2 programme is not an export subsidy inconsistent with Articles 9 and 10 of because the subsidy is not contingent on export performance and therefore is not an export subsidy.

28. **Brazil Bears the Burden of Proof to Demonstrate the Existence of an Export Subsidy for Upland Cotton**: Brazil as complainant bears the burden of proof with respect to any export subsidy claim relating to upland cotton. Brazil cites Agriculture Agreement Article 10.3 to assert that the United States bears this burden. However, the burden-shift set forth in Article 10.3 is only applicable with respect to exports in excess of a *reduction* commitment level. As Brazil correctly points out, the United States does not have such a *reduction* commitment level with respect to upland cotton. Article 10.3 therefore does not apply with respect to US cotton exports. With respect to products for

which a Member has no scheduled export subsidy reduction commitments, the burden of proof remains with the complainant.

29. **US Step 2 Payments Are Not a Prohibited Subsidy Under Article 3 of the Subsidies Agreement**: With respect to domestic support, the negotiators of the Agriculture Agreement devised the novel concept of "Aggregate Measurement of Support" (AMS), defined in Article 1(a). As the definition provides, all annual domestic support provided for an agricultural product, like cotton, in favour of the producers of that product that is not otherwise exempt under the "green box" (Annex 2) from reduction commitments, or as otherwise provided in Articles 6.4 and 6.5 of the Agreement, is included in the AMS. The definition further contemplates that support provided during any one year is to be calculated in accordance with the provisions of Annex 3. Paragraph 7 of Annex 3 requires that "measures directed at agricultural processors shall be included [in the AMS] to the extent such measures benefit the producers of the basic agricultural products".

30. Accordingly, Step 2 user payments, directed at upland cotton processors and other users but intended to benefit US producers of upland cotton, are included in the annual AMS calculation of the United States. As a result, such payments are subject to reduction commitments applicable to the United States. Agriculture Agreement Article 6.3 provides that "a Member shall be considered to be in compliance with its domestic support reduction commitments in any year in which its domestic support in favour of agricultural producers expressed in terms of Current Total AMS does not exceed the corresponding annual or final bound commitment level specified in Part IV of the Member's Schedule". Where a particular programme exists in favour of agricultural producers within such Current Total AMS, the Agriculture Agreement is entirely agnostic as to the method of delivery of such support.

31. The United States is in compliance with its domestic support reduction commitments, of which support in the form of the Step 2 programme is a constituent part, as provided in the Agriculture Agreement. Articles 3.1(a) and 3.1(b) of the Subsidies Agreement apply "except as provided in the Agreement on Agriculture". The conformity of the Step 2 programmes with the terms, object and purpose of the Agriculture Agreement – and in particular the domestic support reduction commitments – constitute precisely the kind of exception contemplated in the introductory words of Article 3. Inasmuch as Articles 3.1(a) and (b) do not apply to Step 2 payments, the Step 2 programme also cannot violate Subsidies Agreement Article 3.2.

32. **US Step 2 Payments Are Not Inconsistent with GATT 1994 Article III:4**: As contemplated by the terms of the Step 2 programme itself, as well as Annex 3 of the Agriculture Agreement, the Step 2 programme provides benefits in favour of US upland cotton producers. As noted above, the Step 2 programme is in conformity with Agriculture Agreement Article 6. In addition, Agriculture Agreement Article 3.1 provides that the domestic support commitments in Part IV of each Member's Schedule are made an integral part of GATT 1994. The domestic support commitments of the United States are therefore an integral part of GATT 1994 itself, and Agriculture Agreement Article 21.1 expressly states that "the provisions of GATT 1994 . . . shall apply subject to the provisions of this Agreement".

33. Pursuant to Article 6.3 of the Agriculture Agreement, "a Member shall be considered to be in compliance with its domestic support reduction commitments in any year in which its domestic support in favour of agricultural producers expressed in terms of Current Total AMS does not exceed the corresponding annual or final bound commitment level specified in Part IV of the Member's Schedule". Annex 3, paragraph 7, specifically requires that "[m]easures directed at processors shall be included" in the calculation of AMS to subject these measures to the domestic support reduction commitments established for the first time in the Agriculture Agreement. The Step 2 programme exists in favour of agricultural producers within such Current Total AMS, and the text of the Agriculture Agreement does not prohibit any particular form of delivery of such amber box domestic support.

34. The Agriculture Agreement imposed for the first time rigorous disciplines on agricultural support. The domestic support reduction commitments of the United States constitute an integral part of GATT 1994. A coherent reading of the Agriculture Agreement with the GATT 1994 indicates that the Step 2 programme does not violate GATT 1994 Article III:4.

35. **The Commodity Credit Corporation Export Credit Guarantee Programmes are Not Export Subsidies**: During the Uruguay Round, negotiators did not reach agreement on disciplines on all areas that had been the subject of negotiations, in several cases agreeing to continue negotiating after the close of the Round and the entry into force of the WTO Agreement. The simple fact is that during the Uruguay Round WTO Members did not agree on disciplines to be applicable to export credits, export credit guarantees, and insurance programmes. Unable to reach agreement on such disciplines within the Uruguay Round, Members opted to continue discussions in an appropriate forum, deferring the imposition of substantive disciplines until a consensus was achieved.

36. Following the entry into force of the WTO Agreement, numerous WTO Members commenced negotiations under the auspices of the OECD to achieve such internationally agreed disciplines. When such negotiations failed to achieve an agreement, negotiations on disciplines for export credits and export credit guarantees have subsequently continued both under the reform process contemplated under Article 20 of the Agriculture Agreement and the mandate of the Doha Ministerial Declaration.

37. The scope and detail of the current agriculture negotiations as reflected in the Harbinson text demonstrate that the Members are currently engaged in active negotiations on disciplines for export credits and credit guarantees. Among the areas under active discussion include disciplines on the relationship between premiums, term, and long-term operating costs and losses. These discussions would be unnecessary if existing disciplines applied to such programmes in agriculture. The Panel should not pre-empt such negotiations.

38. The text of Article 10.2 of the Agriculture Agreement reflects the deferral of disciplines on export credit guarantee programmes contemplated by WTO Members. As simply reflected in the structure and text of the Agriculture Agreement, Members came to no agreement with respect to substantive disciplines on export credit guarantee programmes. Article 10.2 stands in stark contrast to Article 9.1. Article 9.1 sets forth a list of six very specific practices known to the drafters and deemed to constitute export subsidies under the Agriculture Agreement. Significantly, the Illustrative List of Export Subsidies in the Subsidies Agreement explicitly addresses export credit and credit guarantee practices in its item (j). Conspicuously absent in Article 9.1 is any provision addressing such practices, even though US export credit guarantee programmes had been in existence for nearly fifteen years preceding the inception of obligations under the WTO.

39. To include US export credit guarantee programmes within the ambit of Article 10.1 or within the definition of export subsidy under Article 1(e) of the Agreement would render the work programme envisioned by Article 10.2 unnecessary. Further, to adhere to the approach that Brazil advocates would allow for the utter irrelevance of Article 10.2. Indeed, Brazil unabashedly makes not one reference to Article 10.2 in its initial submission.

40. **CCC Export Credit Guarantees are Not Prohibited Export Subsidies Under the Subsidies Agreement**: Brazil has alleged that the CCC export credit guarantee programmes are prohibited subsidies under Article 3.1(a) of the Subsidies Agreement. The very first words of Article 3.1 of the Subsidies Agreement, however, are: "Except as provided in the Agreement on Agriculture." Article 10.2 of the Agriculture Agreement, as noted above, provides for the deferral of disciplines unless and until internationally agreed disciplines are in fact achieved. Brazil has conveniently ignored both Article 10.2 and the explicit introductory words of the Subsidies Agreement Article 3.1 in its first submission. However, Brazil concedes that the export credit guarantees are "exempt from action under ASCM Article 3.1(a) if they fully conform to the provisions of [Agreement

on Agriculture] Part V". These programmes are in conformity with Article 10.2, which is within such Part V. In addition, Article 21.1 explicitly provides that the Multilateral Trade Agreements in Annex 1A to the WTO Agreement, which include the Subsidies Agreement, shall apply *subject* to the Agriculture Agreement.

41. Brazil alleges that the export credit guarantee programmes constitute an export subsidy for purposes of the Subsidies Agreement because such programmes fall within item (j) of the Illustrative List of Export Subsidies. Brazil alleges the United States provides export credit guarantees for cotton "at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes" and that a ten-fiscal-year period "fulfils the criterion of being 'long-term' within the meaning of item (j)". Quite simply, with respect to cotton, for the last 10 fiscal years for which complete data is available, premiums paid exceed claims paid. As with any other insurance-type programme, moreover, a proper analysis of "losses" should involve the calculation of the net result of premiums collected, plus claims amounts repaid or rescheduled, minus claims paid. Such calculation would properly reflect the net position of the programme.

42. For the 10-year period from fiscal year 1993 through fiscal year 2002, premiums collected total $16,026,202 and losses incurred via claims total $4,768,096. Consequently, even *before* any post-default recoveries, premiums exceeded claims paid. Of claims incurred, $1,015,365 were subsequently directly recovered, and an additional $8,175,570 have been rescheduled. Brazil argues that the United States "must at the very least recover their operating costs by virtue of fees or premiums collected". Without conceding that this is the applicable test by which the conformity of export credit guarantee programmes with WTO obligations should be assessed, nevertheless, the US programmes for cotton satisfy this Brazilian suggestion.

43. Brazil, like any complainant, bears the burden of establishing that export credit programmes fall within the terms of item (j). Brazil, the United States, and the Appellate Body would apparently agree, however, that *a contrario*, to the extent a WTO Member provides, as the United States has already demonstrated with respect to cotton, export credit guarantees at premium rates which *do* cover long-term operating costs and losses of the programmes, then it is *not* an export subsidy within the meaning of item (j) and the Subsidies Agreement. Premiums collected for US export credit guarantees in connection with cotton transactions over the last 10 fiscal years exceed long-term operating costs and losses. Under the criteria of item (j) alone, these programmes do not constitute a prohibited export subsidy within the meaning of the Subsidies Agreement and are not prohibited under Article 3.1(a) nor inconsistent with Article 3.2.

44. **Brazil Has Failed to Make a Prima Facie Case Regarding the FSC Repeal and Extraterritorial Income Exclusion Act of 2000**: With respect to its claims concerning the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 ("ETI Act"), in its first submission Brazil has not presented any evidence regarding the ETI Act itself and does nothing more than "reiterate[] the claims brought by the European Communities under the [Agriculture Agreement] and the Subsidies Agreement in *US – FSC (21.5)*, and ask[] the Panel to apply the reasoning as developed by the panel and as modified by the Appellate Body in that case *mutatis mutandis*". In so doing, Brazil has failed to make a *prima facie* case with respect to the ETI Act. Brazil's approach would put the Panel in the position of having to violate its obligation under DSU Article 11 to "make an *objective assessment of the matter* before it, including an *objective assessment of the facts* of the case and the *applicability of and conformity with* the relevant covered agreements". As a result of Brazil's approach, the Panel is in no position to exercise its judgment to follow, or decline to follow, prior reports concerning the ETI Act, nor even in a position to make factual findings concerning the Act. In the absence of a *prima facie* case by Brazil, the Panel should reject Brazil's claims concerning the ETI Act.

# ANNEX B-3

THIRD-PARTY SUBMISSION BY ARGENTINA

15 July 2003

**TABLE OF CONTENTS**

## I. INTRODUCTION

1. Argentina thanks the Panel for this opportunity to present its views as a third party to these proceedings and will address Brazil's claims[1] of inconsistency of the subsidy programmes provided by the United States to US producers, users and exporters of upland cotton, as well as legislation, regulations and statutory instruments and amendments thereto providing such subsidies.

In addition, Argentina will discuss the export credit guarantee programmes provided by the United States for exports of cotton and other commodities that are also exported by Argentina.

2. Given the little time available between the receipt on 11 July of the responding party submission of the United States and the date fixed for this third-party submission, Argentina will comment on the US submission at the meeting of the Panel with the parties and third parties scheduled on 24 July.

3. Firstly, Argentina proposes to argue the absence of US protection under Article 13(b)(ii) and (c)(ii) of the Agreement on Agriculture (hereinafter "AoA"), since the United States does not fulfil the legal requirements for protection against claims under Article XVI of the GATT 1994 and Articles 3, 5 and 6 of the Agreement on Subsidies and Countervailing Measures (hereinafter "SCM Agreement").

4. Secondly, Argentina will argue that the domestic support measures challenged by Brazil are inconsistent with Articles 5 and 6 of the SCM Agreement to the extent that they cause adverse effects to the interests of other Members, including Argentina. It will also argue that the United States grants export subsidies that are prohibited under Article 3(a) and (b) of the SCM Agreement.

5. Nevertheless, Argentina has taken note of the Panel's decision of 20 June to express its views, by 1 September next, on whether the measures at issue satisfy the conditions in Article 13 of the AoA and to differ its consideration of the claims under Article XVI of the GATT 1994 and Articles 3, 5 and 6 of the SCM Agreement as those provisions are referred to in Article 13 of the AoA.

6. Argentina will therefore address the inconsistency of the US subsidies with Articles 5 and 6 of the SCM Agreement in the submission of 22 September next, providing evidence that the US may not invoke protection under Article 13 of the AoA since it does not fulfil the conditions for protection under that provision.

7. Lastly, Argentina maintains that US cotton export subsidies are inconsistent with Articles 3.3, 8 and 10.1 of the AoA, since the Peace Clause cannot be used as a defence in respect of such claims.

## II. WORLD COTTON MARKET SITUATION AND IMPACT OF THE US SUBSIDIES IN ARGENTINA

### II.1. WORLD COTTON MARKET SITUATION

8. According to data from the Statement of the 61st Plenary Meeting of the International Cotton Advisory Committee (ICAC), held in Cairo, Egypt, from 20 to 25 October 2002[2], world cotton

[1] "Brazil´s First Submission to the Panel regarding the 'Peace Clause' and Non-Peace Clause Related Claims", 24 June 2003. (Hereinafter "Brazil's Submission").

[2] Representatives of 38 governments and eight international organizations took part in the meeting. MEMBER GOVERNMENTS: Argentina, Australia, Belgium, Brazil, Burkina Faso, Cameroon, Chad, Chinese Taipei, Colombia, Côte d'Ivoire, Egypt, Finland, France, Germany, Greece, India, Iran, Israel, Italy, Japan, Republic of Korea, Mali, Netherlands, Nigeria, Pakistan, Paraguay, Philippines, Poland, Russia, South Africa,

production reached a record 21.5 million tons in marketing year 2001/2002, exceeding global consumption by 1.3 millions tons.

9. Over the same period, world cotton exports increased by 10 per cent to an unprecedented 6.5 million tons, while international cotton prices fell to the lowest average level in 30 years of US$0.418 per pound (according to Cotlook Index A).

10. The value of world production declined by US$5 billion from the previous season, affecting the incomes of millions of growers, input suppliers and service providers in unsubsidized countries.

11. Since the mid-1990s, the world cotton economy has been marked by chronic price depression. Average international cotton prices, adjusted for inflation, are at their lowest since the Great Depression of 1930, having remained below US$0.60 per pound for the last four consecutive years (1998/1999 to 2001/2002) against an average of US$0.725 per pound over the past 25 years.

12. According to the ICAC, at 1 July 2003 the average international cotton price in marketing year 2002/2003 was estimated at US$0.56 per pound, still well below the average of the last 30 years. Under such conditions, even the most efficient producers find themselves operating at a loss, unable to cover even their production costs. ICAC projections suggest that prices will remain chronically depressed for the foreseeable future. Forecasts point to a modest recovery in 2003/2004, but prices will stay within the US$0.50-0.60/lb range until 2015.

## II.2. COTTON SITUATION IN THE UNITED STATES

13. As a rule, when prices slump production undergoes a similar downturn. However, while world cotton prices have fallen by 54 per cent since the mid-1990s, the United States has increased its output and exports.

14. Since 1998, US cotton production has experienced 42 per cent growth from 14 million metric tons to a record 20.3 million metric tons in 2001.

15. Likewise, at a time of dramatically declining international cotton prices the volume of US exports has expanded to unprecedented levels, from 946,000 tons in 1998 to 2,395,000 tons in 2002.[3]

16. In addition, US cotton production costs are among the highest in the world. According to a recent ICAC study[4], the cost of production in the United States was US$0.81 per pound of cotton in marketing year 1999,[5] while US producers market prices fell from US$0.60 to US$0.30 per pound.

17. The only possible explanation how the United States bridged the widening gap between production costs and market prices is subsidies, for without them many US producers would have been compelled to cease production.

18. Hence the factor underlying the world cotton market crisis is the US subsidies. As Brazil points out at paragraph 2 of its Submission, it was the subsidies that enabled the United States to

---

Spain, Sudan, Switzerland, Syria, Tanzania, Togo, Turkey, Uganda, United Kingdom, United States, Uzbekistan and Zimbabwe.

[3] According to data from "*Cultivating Poverty: The Impact of U.S. Cotton Subsidies on Africa*", Oxfam Briefing Paper 30, 27 September 2002 (See Exhibit Bra-15) and ICAC Secretariat.

[4] "Cotton: World Statistics". Bulletin of the International Cotton Advisory Committee, September 2002. (Exhibit Bra-9).

[5] As stated by Brazil at paragraph 32 of its Submission, the cost of production in Argentina averaged 59 cents/lb of cotton, according to the ICAC study (See Exhibit Bra-9).

increase production and exports while market prices remained far below the cost of production over marketing years 1999 to 2002.

19. The total value of US cotton subsidies during this period – as stated at paragraph 3 of Brazil's Submission – amounted to almost US$13 billion and the average cotton subsidization rate was 95 per cent.[6]

20. While there are a great many cotton producing countries, four of them (China, the United States, India and Pakistan, in descending order) alone account for two thirds of world cotton production. Most of the cotton is used in the producing country itself. The great exception to this rule is the United States, which exports over half of the cotton it produces[7] and is the world's leading exporter. This is why the level of subsidization in the United States is so important as far as the world cotton market is concerned.

## II.3. COTTON SITUATION IN ARGENTINA

21. Argentina's cotton sector is a substantial source of employment and income for many of the country's provinces. The Argentine cotton sector has been contracting since 1998, as a result of declining international prices. In 2001/2002, cultivated area and production plummeted to historic low levels. Cultivated area has shrunk by 76 per cent since 1998, with 174,000 hectares planted to cotton, and production has fallen by 63 per cent compared to 1998, with an estimated 73,000 tons of cotton fibre produced.[8]

22. According to the Argentine Ministry of Agriculture, Livestock, Fisheries and Food, provisional estimates as at 13 June 2003 for marketing year 2002/2003 were 157,930 hectares of cultivated area and 60,000 tons of cotton produced.

23. The decline is even more significant when considered in terms of a 10-year annual average, record prices in 1994/1995 (US$0.9275/lb Cotlook A Index) having led to record figures for both cultivated area and production (1,010,000 hectares and 437,000 tons of cotton fibre in 1995/1996).

24. The contraction of the cotton sector started in 1997/1998. Since then, steadily falling prices and increased US government support have gradually driven raw cotton[9] producer prices down to their lowest level (US$192/ton) since 1991/1992, which in turn has entailed constant reductions in cultivated area and production.

25. Although domestic consumption is dwindling, Argentine exports of cotton fibre set another historic low record of 18,366 tons in 2001/2002. Data updated at 31 May 2003 show even worse results, since exports for marketing year 2002/2003 barely reached 2,000 metric tons.

### *(a) Impact of low international prices on Argentine production*

26. Over the last three years, low international prices – because of the huge US subsidies – have impacted heavily on producers' decisions, with only 309,287 cultivated hectares, representing a 58 per cent reduction from a 10-year annual average (1989/1990 to 1998/1999). This has led to sharp reductions in cotton fibre production. Over that same three-year period (1999/2000 to 2001/2002), production averaged 122,883 tons – a 62 per cent fall from the annual average of 327,360 tons

[6] USDA Fact Sheet: Upland Cotton (January 2003). (See Exhibit Bra-4).

[7] As indicated at paragraph 10 of Brazil's Submission, domestic cotton consumption in the United States is dwindling steadily.

[8] "Argentina: Economic Injury to the Cotton Sector as a Result of Low Prices", Working Group on Government Measures of the International Cotton Advisory Committee, 2002.

[9] Seed cotton; unginned.

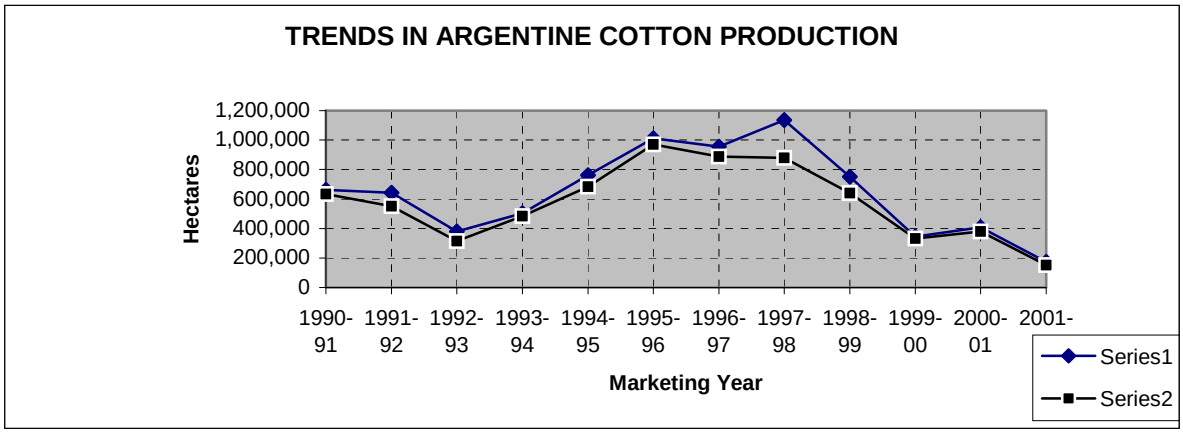
between 1994/1995 and 1998/1999. Worse still, production in 2001/2002 was estimated at 69,810 tons and in 2002/2003 at 60,000 tons, against 163,000 tons in 2000/2001.

27. This collapse of the Argentine cotton sector is reflected in the high level of indebtedness of producers estimated at US$600 million and equivalent to twice the size of agricultural GDP of Argentina's largest cotton producing province.

28. The table below shows the direct relationship between the area of cultivated and harvested cotton and fibre production in Argentina, and trends in world cotton prices according to Cotlook A Index.

| **Season** | **Cotton area (hectares)** | | **Fibre production** | **World price A Index** |
|---|---|---|---|---|
| | ***Cultivated*** | ***Harvested*** | ***(Metric tons)*** | ***(US cents/lb)*** |
| **1995/96** | **1,010,000** | **969,400** | **437,000** | **85.60** |
| 1996/97 | 955,600 | 887,140 | 338,000 | 78.55 |
| 1997/98 | 1,133,500 | 877,900 | 311,000 | 72.20 |
| 1998/99 | 751,000 | 639,700 | 200,000 | 58.90 |
| 1999/00 | 345,950 | 332,100 | 134,000 | 52.80 |
| 2000/01 | 407,980 | 384,850 | 165,000 | 57.20 |
| 2001/02 | 173,930 | 170,000 | 73,000 | 41.80 |
| **2002/03*** | **157,930** | **147,410** | **60,000** | **55.30** |

* Estimate



*(b) Impact of low international prices on employment*

29. Total employment in raw cotton production in Argentina amounts to 93,470 workers; this figure includes 32,060 cotton producers and is based on an average harvested area of 810,828 hectares. The ginning sector employs 3,946 workers and the marketing and input supply chain represents 12,550 additional jobs.

30. Between 1999/2000 and 2001/2002, employment in the cotton sector decreased to an average of 70,400 workers, i.e. a **reduction in employment of 64 per cent**. These figures were obtained from the official employment records of registered workers but they are probably underestimated. According to private estimates, there are 50,000 non-registered workers, which would increase labour loss to 102,000 jobs.

31. Argentina's cotton production is concentrated in 11 provinces and, according to a 1999 World Bank study, 56.6 per cent of the population in these provinces live under the poverty line and 18.2 per cent below the indigence line. The same study shows that 36.1 per cent of Argentina's population live

under the poverty line and 8.6 per cent below the indigence line, which reflects the higher level of poverty in the cotton producing provinces.[10]

*(c) Impact of low international prices on income*

32. Between 1999/2000 and 2001/2002, average raw cotton production[11] was 652,872 tons lower than the 1994/1995 to 1998/1999 average. Using an average price received by producers of US$358/ton[12] between 1994/1995 and 1998/1999, annual gross revenue has dropped by US$255 million over the past three years.

*(d) Impact of low international prices on the value and volume of Argentine exports*

33. In marketing year 2002/2003, planted area shrank to a mere 157,930 hectares, its lowest level in the last 66 years, and production will not even succeed in meeting domestic demand. Even in circumstances like these, it might have been possible to generate sufficient export supply had international prices not been artificially depressed.

34. It should be emphasized that in 1996 Argentina exported 70 per cent of its production, ranking that year as the world's fourth largest exporter.

35. The table below shows the trends in Argentine cotton exports.

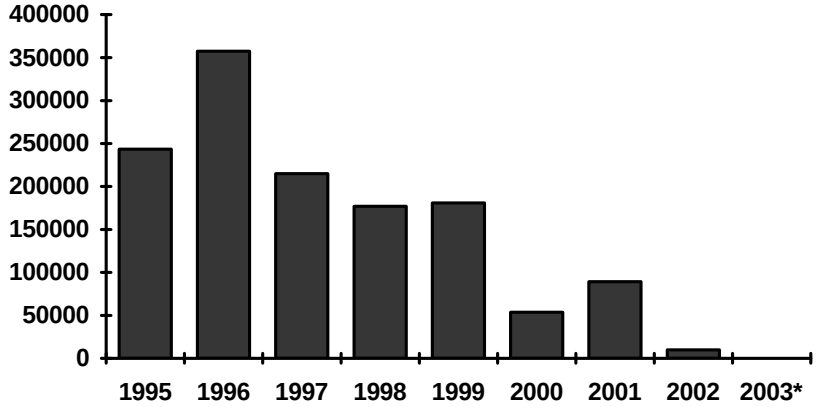
**TRENDS IN ARGENTINE COTTON EXPORTS**

| Years | Volume (tons) | FOB value (US$ millions) | Argentina's per cent share of world exports |
|---|---|---|---|
| **1995** | 243,474 | 432.8 | 4% |
| **1996** | 357,447 | 497.0 | 6% |
| **1997** | 214,904 | 332.3 | 3.6% |
| **1998** | 177,025 | 224.3 | 3.2% |
| **1999** | 180,897 | 177.9 | 3% |
| **2000** | 53,637 | 53.2 | 0.9% |
| **2001** | 89,262 | 72.8 | 1.5% |
| **2002** | 18,366 | 11.9 | 0.1% |
| **2003*** | **1,985** | **1.6** | -- |

*****(Estimate at 31 May 2003)

[10] *Id.*
[11] Seed cotton; unginned.
[12] For a quality equal to a C-1/2 grade.

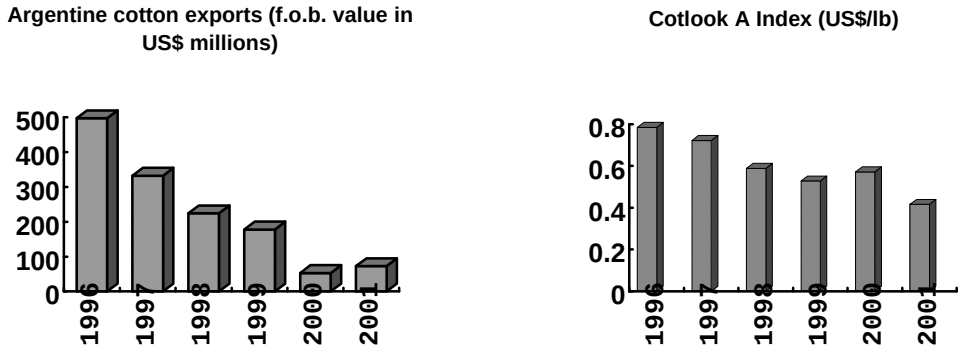
36. In chart form, Argentine cotton exports (tons) since 1995 show the following trends:



37. This chart shows – as does the table below – a direct relationship between the decline in international cotton prices, which began in 1996/1997, along with the implementation of the 1996 US Farm Act, and the collapse of the Argentine cotton economy.

| **Years** | **Argentine cotton exports (FOB value in US$ millions)** | **Cotlook A Index (US$/lb)** |
|---|---|---|
| **1996** | 497.0 | 0.7855 |
| **1997** | 332.3 | 0.7220 |
| **1998** | 224.3 | 0.5890 |
| **1999** | 177.9 | 0.5280 |
| **2000** | 53.2 | 0.5720 |
| **2001** | 72.8 | 0.4180 |
| **2002** | 11.9 | 0.5530 |
| **2003*** | 1.6 | --- |

38. The following chart clearly illustrates the direct relationship (except for the year 2000) between Argentine exports and international cotton prices.



## III. LOSS OF PROTECTION UNDER THE PEACE CLAUSE: ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE (AOA)

39. As stated in paragraph 6 above, Argentina will address the inconsistency of the United States subsidies with Articles 5 and 6 of the SCM Agreement in the 22 September submission. On that occasion, Argentina will explain why the United States cannot seek the protection of Article 13 of the AoA because of non-compliance with the legal requirements for protection under that provision.

PEACE CLAUSE DEFENCE SUBJECT TO CONDITIONS

40. The "Peace Clause" – Article 13 of the AoA – precludes actions against a Member's agricultural subsidies up to 1 January 2004 if such measures comply with certain legal requirements.

41. As stated by Argentina in its Third Party Initial Brief:

> "… a textual analysis of Article 13 of the AoA reveals that *"actions"*… can only be precluded if all conditions established in paragraphs (b) (ii) or (c) (ii) of the referred Article 13 are met".[13] (Emphasis added).
>
> …
>
> " … *'Exempt from actions'* means that a finding of inconsistency with Article XV1 of GATT 1994 or Articles 3, 5 and 6 of the SCM Agreement will not be possible if the legal requirements for the exemption are fulfilled. The immediate context of the term *'exempt from actions'* – i.e., paragraphs (b) and (c) – confirms this interpretation since that exemption requires a particular threshold, i.e. that domestic support measures and export subsidies 'conform fully' (to different provisions of the AoA)".[14]
>
> …
>
> " … A different interpretation would imply giving the measures allegedly covered by the Peace Clause a character of absolute immunity, independent of whether the legal requirements established in Article 13 are fulfilled or not. This would contradict the principle of *in dubio mitius*, constituting a more onerous interpretation of the treaty provisions".[15]
>
> …
>
> " … Indeed, the key words in Article 13 (b) (ii) and (c) (ii) of the AoA are *"that conform fully"* and *"provided that"* and *"that conform fully"*, respectively. These words imply that the exception is not absolute, but rather subject to the fulfilment of certain conditions … ".[16]

BURDEN OF PROOF WITH RESPECT TO THE CONDITIONS FOR THE PEACE CLAUSE DEFENCE

42. As Argentina stated in its Third Party Initial Brief, the defence under Article 13 of the AoA is in the nature of an exception (affirmative defence).

43. It follows that in accordance with the WTO rules on the burden of proof (laid down by the Appellate Body in (*United States – Shirts and Blouses from India)*, the burden is on the party invoking the exception to show that its use is justified. In the present case, it is clearly for the party invoking the protection of Article 13 of the AoA to show that the conditions stipulated in that Article are satisfied.

44. Accordingly, for the United States domestic support measures to be exempt from actions based on Article XVI.1 of GATT 1994 or Articles 5 and 6 of the SCM Agreement, the United States must show that:

---

[13] See Argentina's Third Party Initial Brief of 10 June 2003, paragraph 3.
[14] *Ibidem* paragraph 5.
[15] *Ibidem*, paragraph 6.
[16] *Ibidem*, paragraph 8.

- The domestic support measures for cotton conform fully to the provisions of Annex 2 to the AoA (or belong in the "green box", at the risk of being included in the Current Total AMS in accordance with Article 7.2 (a) of the AoA), or that

- the domestic support measures that do not belong in the "green box" and grant support to cotton do not exceed the support decided during the 1992 marketing year.

45. Likewise in order for the export subsidies granted by the United States to be exempt from actions based on Article XVI of GATT 1994 and Articles 3, 5 and 6 of the SCM Agreement the United States must show that these export subsidies conform fully to Articles 8 to 11 of the AoA (Part V).

III.1 LOSS OF PEACE CLAUSE PROTECTION IN RELATION TO DOMESTIC SUPPORT MEASURES: ARTICLE 13 (B) (II) OF THE AoA

46. In particular, in relation to domestic support measures, Article 13 (b) (ii) of the AoA states that:

> *"During the implementation period, notwithstanding the provisions of GATT 1994 and the Agreement on Subsidies … :*
>
> *… domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within de minimis levels and in conformity with paragraph 2 of Article 6, shall be:*
>
> …
>
> *exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year; …" (emphasis added).*

47. In Argentina's opinion, in the present case, for lack of a specific WTO notification or known US laws or regulations, the support *"decided during the 1992 marketing year"* by the United States should be considered to be the non-"green box" domestic support granted by that country to cotton during the 1992 marketing year.

48. Argentina agrees with Brazil that the level of subsidies granted by the United States to its cotton sector during marketing years 1999 to 2002 exceeded that of 1992, thereby depriving the United States of Peace Clause protection, for non-compliance with the legal requirements of Article 13 (b) (ii) of the AoA.

49. In this respect, the Oxfam Briefing Paper ("*Cultivating Poverty*: The impact of USCotton Subsidies on Africa")[17] states that:

> *"The US has lost this protection (the Peace Clause protection) by virtue of the fact that* ***the level of subsidies it provided in 2001 was double that provided in 1992****".*
>
> …

[17] See Exhibit Bra – 15.

*"Every acre of cotton farmland in the US attracts a subsidy of $230, or around five times the transfer for cereals.* ***In 2001/02 farmers reaped a bumper harvest of subsidies amounting to $3.9bn – double the level in 1992.*** *This increase in subsidies is a breach of the "Peace Clause" in the WTO Agreement on Agriculture …"*

…

*"The United States accounts for approximately one-half of the world's production subsidies for cotton.* ***In 2001/02 the value of US cotton production amounted to $3bn at world market prices. In the same year, the value of outlays in the form of subsidies to cotton farmers by the USDA's Commodity Credit Corporation (CCC) was $3.9bn.*** *In other words, cotton was being produced at a net cost to the American economy".*

50. The domestic support measures which, in Argentina's view, do not enjoy Peace Clause protection under Article 13 (b) (ii) are the following programmes established in the United States legislation as described by Brazil in its First Submission: Deficiency Payments[18], Loan Deficiency Payments[19], Production Flexibility Contract Payments[20], Direct Payments[21], Market Loss Assistance[22], Counter-Cyclical Payments[23], Marketing Loan Gains[24], Crop Insurance Subsidies[25], Step 2 Domestic Payments[26], and Cottonseed Payments[27].

51. It should be pointed out that in the consultations held on 3, 4 and 19 December 2002 – in which Argentina was joined – in relation to the above-mentioned programmes Argentina requested the United States for information on the amount of support granted to cotton producers in the years 1999, 2000 and 2001, considering that the last domestic support notification had been for the year 1998[28].

52. In this connection, the United States confined itself to pointing out that various answers to the Argentine questions could be found in US domestic support notifications in the process of being submitted to the Committee on Agriculture, without specifying what these answers were or when these notifications would be made.

*The programmes Production Flexibility Contract (PFC), Direct Payment (DP) and Counter-Cyclical Payment (CCP) are non-"green box"*

53. As Brazil shows in its Submission, the PFC, DP and CCP programmes are not subsidies that can be classified as "domestic support measures that conform fully to the provisions of Annex 2" of the AoA.

54. Accordingly, the amounts granted to cotton producers under these programmes must be treated as domestic support in calculating total support under Article 13(b)(ii).

55. These three programmes are inconsistent with Annex 2 of the AoA, *inter alia*, because they are not in accordance with the provisions of paragraph 6 (b) of that Annex in as much as the amount of

[18] Submission by Brazil, paragraphs 45 to 47.
[19] *Ibidem*, paragraphs 70 to 78 and Exhibits Bra – 28, Bra – 29 and Bra – 36.
[20] *Ibidem*, Sections 2.6.1 and 3.2.6.
[21] *Ibidem*, Sections 2.6.2 and 3.2.7.
[22] *Ibidem*, Section 2.6.3.
[23] *Ibidem*, Sections 2.6.4 and 3.2.8.
[24] *Ibidem*, Section 2.6.5.
[25] *Ibidem*, Section 2.6.6
[26] *Ibidem*, Section 2.6.8
[27] *Ibidem*, Section 2.6.10.
[28] It should be noted that after the consultations the United States notified the Committee on Agriculture of the amount of domestic support for the year 1999 (G/AG/N/USA/43; Exhibit Bra – 47).

payments is related with the type of production undertaken by the producer in years after the base period.

56. In this respect, Argentina agrees with Brazil that the term "type … of production …" means the type of crop planted and not the production method employed.

*Failure of the United States to comply with its notification obligations*

57. Considering (i) that the last domestic support notification available is that for the year 1999[29] and (ii) the delay of more than three years, since the end of that year, in submitting a notification, Argentina wishes to make the following points:

58. Argentina considers that the United States has failed to fulfil its notification obligations under Article 18.2 of the AoA, the Decision on Notification Procedures adopted on 15 December 1993 and the Notification Requirements and Formats (G/AG/2) adopted by the Committee on Agriculture on 8 June 1995.

59. This failure to comply with notification obligations makes it very difficult to verify the domestic support provided from 2000 onwards as regards compliance with the commitments under Article 3.2 of the AoA, that is to say, whether or not the United States' non-"green box" subsidy programmes remain within the limits to which it is committed in its Schedule. The lack of notification also makes it difficult to verify whether the domestic support measures "conform fully to Article 6" of the AoA.

60. It is also difficult to review the implementation of the AoA by the United States under Article 18.2 in relation to the categorization of its subsidies, in particular whether some of them are "green box" or not.

61. The seriousness of failure to comply with the obligation to inform Members is such that paragraph 7 of Annex V to the SCM Agreement actually sanctions instances of non-cooperation by requiring the Panel to draw adverse inferences.

62. Argentina considers that this failure should be taken into account in deciding whether the United States' domestic support is consistent with Article 3.2 of the AoA and whether that domestic support should be included among the subsidies of Annex II to the Agreement.

THE US LEVELS OF DOMESTIC SUPPORT FOR COTTON EXCEED THE 1992 LEVEL

63. Argentina agrees with Brazil's figures in paragraphs 144, 148 and 149 of its First Submission showing that the United States budgetary outlays for domestic support for the cotton sector have been as follows (in millions of dollars), on the basis of information supplied by the USDA itself[30]:

[29] G/AG/N/USA/43 (Exhibit Bra-47).
[30] See Exhibits Bra-6, Bra-76, Bra-4, Bra-57, Bra-55, Bra-47, and footnotes 301 and 321.

| Domestic Support | Marketing Year 1992 | Marketing Year 1999 | Marketing Year 2000 | Marketing Year 2001 | Marketing Year 2002* |
|---|---|---|---|---|---|
| **Loan Deficiency Payments** | 268 | 685 | 152 | 743 | 206[31] |
| **Marketing Loan Gains** | 476 | 860 | 390 | 1.763 | 602[32] |
| **(Total Marketing Loan Payments)** | --- | --- | --- | --- | 952[33] |
| **Deficiency Payments** | 1,017 | --- | --- | --- | --- |
| **Production Flexibility Contract Payments[34]** | --- | 616 | 575 | 474 | --- |
| **Direct Payments[35]** | --- | --- | --- | --- | 523 |

| **Crop Insurance Payments** | 26.5 | 170 | 161 | 263 | 194 |
| **Market Loss Assistance Payments** | --- | 613 | 612 | 654 | --- |
| **Counter-Cyclical Payments[36]** | --- | --- | --- | --- | 1,077 |
| **Cottonseed Payments** | --- | 79 | 185 | --- | 50 |
| **TOTAL** | **1,994.5** | **3,445** | **2,311** | **4,093** | **3,113** |

* The information relating to United States support for cotton during marketing year 2002 is not yet complete as the marketing year does not end until 31 July 2003. Nevertheless, Argentina has used the best available evidence provided by Brazil in paragraph 149 of its Submission using partial USDA data and estimates based on criteria and provisions of support under the 1996 FAIR Act.

64. Thus, the subsidy levels for cotton in 1999, 2000, 2001 and 2002 are considerably in excess of the level for 1992 and, as already pointed out, the United States therefore lacks a basis for its claim,

[31] See Exhibit Bra-55.
[32] See Exhibit Bra-55.
[33] See footnote 338 of Brazil's Submission.
[34] According to paragraph 45 of Brazil's Submission, PFC payments replaced the Deficiency Payment Programme that had existed for years and had been renewed in the 1990 FACT Act.
[35] As indicated by Brazil in paragraph 49 of its Submission, direct payments began to be paid in marketing year 2002 with the passage of the new Farm Act in May 2002 (2002 FSRI Act) and will be paid until the end of marketing year 2007, in place of the Production Flexibility Contract payments.
[36] As indicated by Brazil in paragraph 63 of its Submission, the 2002 Farm Act (2002 FSRI Act) institutionalized the market loss assistance payments that the United States enacted in marketing years 1998- 2001 with a new programme of counter-cyclical payments up to the end of marketing year 2007.

under Article 13(b)(ii) of the AoA, that its domestic support measures for cotton are exempt from actions based on Article XVI.1 of GATT 1994 or Articles 5 and 6 of the SCM Agreement.

III.2 LOSS OF PEACE CLAUSE PROTECTION IN RELATION TO EXPORT SUBSIDIES: ARTICLE 13(c)(ii) OF THE AoA

65. With respect to export subsidies, Article 13(c)(ii) of the AoA states that:

> *"During the implementation period, notwithstanding the provisions of GATT 1994 and the Agreement on Subsidies … :*
>
> …
>
> *export subsidies that conform fully to the provisions of Part V of this Agreement, as reflected in each Member's Schedule, shall be:*
>
> …
>
> *exempt from actions based on Article XVI of GATT 1994 or Articles 3, 5 and 6 of the Subsidies Agreement".* (Emphasis added).

66. In relation to export subsidies, the Peace Clause could only be invoked by the United States if its export subsidies conformed fully to the provisions of Part V of the AoA, that is, Articles 8-11 of the AoA.

67. According to Article 8 of the AoA, "Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and with the commitments as specified in that Member's Schedule".

68. Thus, as Brazil asserts in paragraph 222 of its Submission, the United States can provide export subsidies for agricultural products if it satisfies two conditions: (i) has a reduction commitment for the product in question and (ii) the amount of export subsidies provided does not exceed this reduction commitment.

69. In this case, the measures that Argentina considers to be inconsistent with WTO rules are:

I. the export subsidies for US (upland) cotton established in the United States legislation under the Step 2 Export Program[37];

II. the export credit guarantee programmes for cotton and other products, General Sales Manager 102 (GSM 102), General Sales Manager 103 (GSM 103), and Supplied Credit Guarantee Programme (SCGP), as described by Brazil in its First Submission[38]; and

III. the cotton export subsidies granted under the FSC Repeal and Extraterritorial Income Act of 2000(ETI Act).

[37] CFR 1427.103 to 1427.107.
[38] Submission by Brazil, sections 2.6.7, 4.1 and 4.1.1 and 2.6.9.

*Inconsistency with the provisions of Part V (Articles 8 to 11) of the AoA*

70. Article 3.3 of the AoA prohibits the granting of export subsidies in respect of agricultural products not specified in Section II of Part IV of a Member's Schedule[39]. This provision forms part of the reference to "unconformity with this Agreement and with the commitments as specified in that Member's Schedule" in Article 8 of the AoA.[40]

71. In fact, Schedule XX of the United States, Part IV (Agricultural Products: Commitments Limiting Subsidization), Section II (Export Subsidies: Budgetary Outlay and Quantity Reduction Commitments)[41], **does not specify cotton among the products subject to commitments**.

72. Consequently, because its export subsidies are not in conformity with the provisions of Part V of the AoA, the United States has no basis for invoking, under Article 13 (c) (ii) of the AoA, the exception to the effect that its cotton export subsidies are exempt from actions based on Article XVI of GATT 1994 or Articles 3, 5 and 6 of the SCM Agreement.

73. Moreover, as described in Section IV of this submission, neither the US (upland) cotton export subsidies established in the United States legislation under the Step 2 Export programme, nor the export credit guarantee programmes for cotton and other products General Sales Manager 102 (GSM 102), General Sales Manager 103 (GSM 103) and Supplied Guarantee Programme (SCG), nor the subsidies granted to cotton exports under the FSC Repeal and Extraterritorial Income Act of 2000 (ETI Act) are in conformity with Part V of the AoA since they are inconsistent with Articles 3.3, 8 and 10.1 of the AoA.

## IV. INCONSISTENCY WITH ARTICLES 3.3, 8 AND 10.1 OF THE AoA AND ARTICLE 3 OF THE SCM AGREEMENT

74. In accordance with paragraph 7 above, Argentina maintains that the United States cotton export subsidies are inconsistent with Articles 3.3, 8 and 10.1 of the AoA.

75. As already pointed out, Schedule XX of the United States, Part IV (Agricultural Products: Commitments Limiting Subsidization), Section II (Export Subsidies: Budgetary Outlay and Quantity Reduction Commitments)[42], **does not specify cotton among the products subject to commitments**.

76. Consequently, as noted by Brazil in paragraph 237 of its Submission, any export subsidy provided by the United States to its cotton industry will be inconsistent with Articles 3.3 and 8 of the AoA. In other words, as it has not specified cotton as a product subject to subsidy reduction commitments, the United States has no right to grant this type of support for the product in question, any support granted or proposed constituting a breach of the provisions of Articles 3.3 and 8 of the AoA:

[39] Article 3.3 of the AoA reads as follows: *"…a Member shall not provide export subsidies listed in paragraph 1 of Article 9 in respect of the agricultural products or groups of products specified in Section II of Part IV of its Schedule in excess of the budgetary outlay and quantity commitment levels specified therein and shall not provide such subsidies in respect of any agricultural product not specified in that Section of its Schedule"*. (Emphasis added).

[40] Article 8 of the AoA reads as follows:

*"Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and with the commitments as specified in that Member's Schedule"*.

[41] See Exhibit Bra-83.

[42] See Exhibit Bra-83.

ARTICLE 10.3 OF THE AoA

77. Argentina wishes to point out that, in accordance with Article 10.3 of the AoA and the Appellate Body's interpretation in "*Canada - Dairy Products: Article 21.5 DSU (II)*[43]", it is for the United States to show that quantities exported in excess of the export subsidy reduction commitment level have not been subsidized.

78. Figures 18 and 19 in paragraphs 265 and 266 of Brazil's submission clearly indicate that in the case of both cotton and other agricultural commodities exports of which qualify for the export credit guarantee programmes GSM 102, GSM 103 and SCGP United States exports during the year 2001 were well in excess of the reduction commitments in its Schedule.

79. Consequently, the United States bears the burden of proving that both for cotton and for other products that benefit from export credit guarantee programmes the export segment in excess of the scheduled reduction commitment has not received any export subsidy.

THE INDIVIDUAL EXPORT SUBSIDY PROGRAMMES

- *Step 2 Export Programme*

80. Referring to Brazil's observations in paragraphs 244 and 245 of its Submission, Argentina agrees that Section 1207(a) of the Farm Act of 2002 (*2002 FSRI Act*)[44] – establishing the *Step 2 Export Programme* – constitutes a *per se* violation of AoA Articles 3.3 and 8 as it is a mandatory provision, in the same way that the *Step 2 Export Programme* also constitutes a *per se* violation of those provisions because of its mandatory nature.

81. Both the corresponding section of the 2002 FSRI Act and the provisions of Section 1427.100 ff. of the *Code of Federal Regulations* clearly establish that the *Commodity Credit Corporation* (CCC) *must* issue marketing certificates or cash payments to exporters and/or users of US (upland) cotton.

82. The purpose of the programme is to provide a direct incentive for US cotton exports and consists of a direct payment to exporters based on the difference between the US domestic cotton price and the world market price. There can be no doubt that whenever the former is higher than the latter an export subsidy is present in as much as the existence of these payments enables the US product to compete artificially with the lower-cost products of more efficient producers. All these aspects are dealt with *in extenso* by Brazil in its Submission dated 24 June 2003[45], and Argentina therefore considers it unnecessary to dwell on a description of the operational details of the programme itself.

83. What Argentina wishes to make clear is the fact – to which attention has already been drawn by Brazil – that the programme known as *Step 2* establishes the right of exporters to receive a subsidy for shipments made in connection with foreign sale operations, while establishing an obligation upon the CCC to grant that subsidy once the particular requirements are satisfied.

84. In "*US EXPORT CREDITS: Denials and Double Standards*"[46], published by Oxfam America, it is noted that:

> *"In the case of cotton, developing countries are clearly losing out because of the unfair competitive advantage given to US cotton exports. For the marketing year*

[43] WT/DS103/AB/RW2, WT/DS113/AB/RW2, adopted17 January 2003.
[44] See Exhibit Bra-29.
[45] Submission by Brazil, Sections 4.1, 4.1.1, 4.1.2, 4.2 ff.
[46] Oxfam American Briefing Note, March 2003.

> *2001/2002, US subsidies to cotton amounted to $4 billion, including, among other programs, export credits. In the 2001/2002 marketing year, the transfer linked with Step 2 cotton subsidies ranged from 0-7 cents per pound, or up to 18 per cent of the world market price. Total export subsidization under this heading was around $197 million in 2001".*

85. Insofar as the United States does not specify Upland Cotton in its Schedule of Commitments (see paragraphs 72 and 75 above) and this type of subsidy is granted to cotton under the *Step 2* programme, any provision in the legal texts with respect to the granting of such a subsidy makes those texts inconsistent *per se* with Articles 3.3 and 8 of the AoA, while for the same reason any sum distributed, budgeted or provided for under this programme constitutes a prohibited subsidy within the meaning of Article 3 of the SCM Agreement, which expressly establishes a reservation in respect of the Agreement on Agriculture.

- *The programmes GSM 102, GSM 103 and SCGP:*

86. In its submission of 24 June, Brazil establishes unequivocally that the US export credit guarantee programmes constitute export subsidies. For this purpose Brazil carries out a combined analysis of the provisions of the AoA and the SCM Agreement, while also basing its arguments on the relevant WTO case-law[47].

87. Argentina agrees with the Brazilian analysis and therefore considers it unnecessary to repeat the description of the operational programmes or the analysis of their legal coverage under the Agreement on Agriculture and the SCM Agreement. Suffice it to note that Argentina also considers that these programmes constitute export subsidies under item (j) of the Illustrative List in Annex I to the SCM Agreement – in as much as the export credit guarantees are granted "*at premium rates which are inadequate to cover the long term operating costs and losses of the programmes*" – thereby resulting in a violation of the provisions of Article 10.1 of the AoA.

88. At the same time, Argentina wishes to emphasize the impact and distorting effect on trade of these export credit guarantees.

89. The export credit guarantee programmes provide incentives for exports for United States agricultural products, in this case cotton and other agricultural products, and the credits are granted on terms more favourable than those available on the market. This situation is clearly reflected in paragraphs 275 to 286 of Brazil's First Written Submission and further illustrated by the Oxfam study "*US EXPORT CREDITS: Denials and Double Standards*"[48] which on page 3 states:

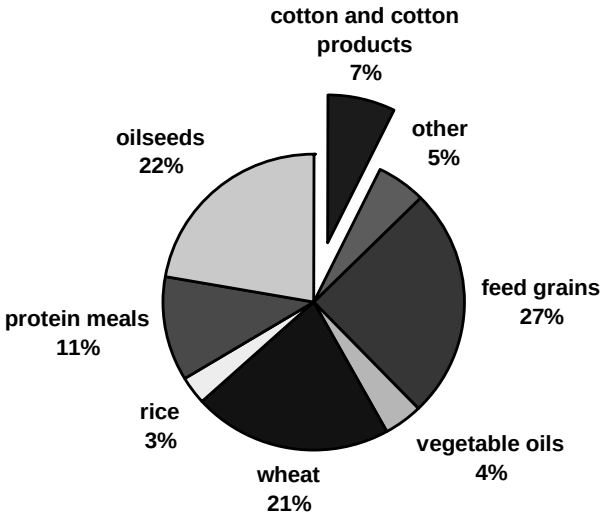
> *" … those favourable conditions include lower interest rates, a longer loan repayment period, a smaller down payment, less frequent payments per year and/or the virtual waiver of a fee or premium designed to provide the US government with adequate protection against potential defaults".*

90. Likewise, a study carried out by the OECD in 2000, in which the effects of export subsidies granted by various countries are evaluated, indicates that the United States credit guarantee programmes are the most trade-distorting of all those analyzed, in as much as the premiums paid by the beneficiaries are too low to cover the high level of the guarantees granted for long term credits.[49]

[47] Submission by Brazil, Section 4.2.1.4.2.
[48] Oxfam America Briefing Note, March 2003.
[49] "An analysis of officially supported export credits in agriculture", OECD, 2000.

91. According to the "*Summary of FY 2002 Export Credit Guarantee Programme Activity*", published on the Federal Agricultural Service (FAS) Website[50], the percent shares of export credit guarantee applications, by commodity, for fiscal year 2002 were as follows:

**Applications for export credit guarantees, by commodity,**
**Fiscal year 2002, Percent share**



92. Thus, as the United States does not have export subsidy reduction commitments specified in its Schedule for cotton and other products such as soya, maize (corn) and oilseeds and given the existence of United States export subsidies for cotton and other products, the United States is in violation of Articles 3.3, 8 and 10.1 of the Agreement on Agriculture.

93. Finally, it should be noted that the GSM 102, GSM 103 and SCGP programmes can be granted both to products for which reduction commitments exist and to those for which no such commitments exist[51]. With the respect to the products for which there are reduction commitments, the amounts exported by the United States are well in excess of the levels of those commitments.[52] Accordingly, Argentina considers – as indicated by Brazil[53]- that the burden lies with the United States to prove that its excess exports did not benefit from export subsidies, including export credit guarantees.

94. Moreover, since the GSM 102, GSM 103 and SCGP programmes are intended to promote exports of cotton, confirmation of their export subsidy component would imply the presence of a subsidy prohibited within the meaning of Article 3.1 (a) of the SCM Agreement and a violation of Article 10.1 of the AoA –

[50] "US EXPORT CREDITS: Denials and Double Standards", Oxfam America Briefing Note, March 2003.
[51] See Exhibit Bra-84, pages 9, 12 and 17, and Exhibit Bra-73.
[52] Submission by Brazil, paragraphs 265 and 266.
[53] Submission by Brazil, paragraph 268.

- *ETI ACT*

95. With respect to the export subsidies granted to cotton under the ETI Act, which provides tax exemptions for US exporters who sell products outside the United States, Argentina refers to the fact that this Act was declared inconsistent with Article 3.1 (a) of the SCM Agreement and Articles 10.1 and 8 of the AoA in the "*United States - FSC*[54]" dispute.

## V. CONCLUSION

96. For the above reasons Argentina considers that both the domestic support measures and the export subsidies granted by the United States to its cotton sector and called into question in these proceedings do not qualify for the protection provided under Article 13, paragraphs (b) (ii) and (c) (ii) of the Agreement on Agriculture.

97. Furthermore, the export subsidies for cotton and other products provided for in the United States legislation in the form of export credit guarantees (GSM 102, GSM 103, and SCGP) are likewise not protected by Article 13 (c) (ii).

98. Argentina also maintains that the subsidies for cotton exports provided for in the United States legislation are inconsistent with Articles 3.3, 8 and 10.1 of the Agreement on Agriculture.

[54] WT/DS108/AB/R adopted on 20 March 2000.

# ANNEX B-4

## AUSTRALIA'S THIRD PARTY SUBMISSION

### TABLE OF CONTENTS

## I. INTRODUCTION

1. Australia welcomes the opportunity to present its views in this proceeding on US subsidies for upland cotton.

2. Australia notes that this dispute is the first to involve the interpretation and application of Article 13 of the *Agreement on Agriculture* (AA), the so-called "peace clause". As such, this dispute has particular systemic as well as commercial significance.

3. In this third party Submission, Australia addresses:

I. the nature of AA Article 13 as an affirmative defence, and the meaning of Article 13(b)(ii);

II. whether "production flexibility contract payments" and their successor "direct payments" may be claimed as "green box" support within the meaning of AA Annex 2;

III. whether s.1207(a) of the Farm Security and Rural Investment Act of 2002 ("the FSRI Act") mandating payments to exporters of US cotton ("Step 2" export payments) is inconsistent with AA Articles 3.3 and 8 and thus is also inconsistent with Article 3 of the *Agreement on Subsidies and Countervailing Measures* (the *SCM Agreement*); and

IV. whether s.1207(a) of the FSRI Act mandating payments to domestic users of US cotton ("Step 2" domestic payments) is inconsistent with Article 3 of the *SCM Agreement*.

4. Because of the very limited time that has been available to consider the First Written Submission of the United States, Australia will address issues raised in that Submission in its oral statement before the Panel.

## II. ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE

### A. AA ARTICLE 13 IS IN THE NATURE OF AN AFFIRMATIVE DEFENCE AND THE UNITED STATES HAS THE BURDEN OF PROOF

5. Australia agrees with Brazil that AA Article 13 is in the nature of an affirmative defence and that the United States has the burden of proof on the question of whether the measures at issue fully conform with the applicable conditions of Article 13.

6. Like Article XX of the *General Agreement on Tariffs and Trade* ("GATT"), AA Article 13 "does not establish any 'positive obligations' relevant to determining the proper scope of the obligations under *[the specified provisions of GATT 1994 and the SCM Agreement]*. Instead, it sets out circumstances in which Members are entitled to 'adopt or maintain' measures that are inconsistent with the obligations imposed under other provisions of *[the GATT 1994 and the SCM Agreement]*".[1]

7. AA Article 13 does not of itself impose any obligation on a Member granting domestic support measures falling within Annex 2 or Article 6 or granting export subsidies falling within Part V of the *Agreement on Agriculture*.

[1] *United States – Tax Treatment for "Foreign Sales Corporations"*, Recourse to Article 21.5 of the DSU by the European Communities, Report of the Appellate Body, WT/DS108/AB/RW, paragraph 127.

8. Instead, AA Article 13 sets out the circumstances in which Members will be immune, either wholly or partially, from the consequences of granting domestic support measures or export subsidies that otherwise constitute grounds for a claim of infringement of the obligations contained in the provisions of GATT 1994 and the *SCM Agreement* specified in that Article. Thus, for example, under AA Article 13(b)(ii), "domestic support measures that conform fully to the provisions of Article 6 of *[the Agreement on Agriculture]* … shall be: … exempt from actions based on" the specified provisions of GATT 1994 and the *SCM Agreement*, "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year".

9. The nature of AA Article 13 as an affirmative defence is confirmed by an examination of the protection afforded by Article 13.

10. Under AA Article 13(a)(i), domestic support measures that conform fully to the provisions of AA Annex 2 "shall be non-actionable subsidies for purposes of countervailing duties". Under AA Article 13(b)(i), domestic support measures that conform fully to AA Article 6 shall be "exempt from the imposition of countervailing duties unless …". Under AA Article 13(c)(i), export subsidies that conform fully to the provisions of AA Part V shall be "subject to countervailing duties only upon a determination of …".

11. Under the other provisions of AA Article 13, domestic support measures or export subsidies that conform fully with the prescribed conditions "shall be exempt from actions based on …" the specified provisions of GATT 1994 and the *SCM Agreement*. If domestic support measures or export subsidies infringe the relevant provisions specified in Article 13, they are nevertheless "free or released from a duty or liability to which others are held"[2] in relation to a proceeding[3] "found[ed], buil[t] or construct[ed] on"[4] those provisions, as long as the measures meet the relevant conditions specified in Article 13.

12. Thus, the protection afforded by AA Article 13 becomes available only in circumstances where the domestic support measures or export subsidies at issue have been found:

V. to be actionable subsidies, or to be otherwise countervailable, under Article 13(a)(i), 13(b)(i) or 13(c)(i); or

VI. in all other cases, to be inconsistent with the relevant specified provisions of GATT 1994 and/or the *SCM Agreement*;

and if the applicable conditions for the availability of that protection as specified in Article 13 are met.

13. Further, had the negotiators of the *Agreement on Agriculture* intended that AA Article 13 should mean that a Member would not be liable to a legal process of dispute, it is reasonable to assume that they would have said so. For example, the negotiators could have provided that the specified provisions of GATT and the *SCM Agreement* could not be "invoked", as they did in footnote 35 to Article 10 of the *SCM Agreement* in relation to non-actionable subsidy measures.

[2] *Black's Law Dictionary*, Seventh Edition, Bryan A Garner, Editor in Chief, West Group, St Paul, Minn., 1999, page 593.

[3] *Black's Law Dictionary*, page 593, defines "action" as "1. The process of doing something; conduct of behaviour. 2. A thing done; act. 3. A civil or criminal judicial proceeding."

[4] *The New Shorter Oxford English Dictionary*, Ed. Lesley Brown, Volume 1, Clarendon Press, Oxford, 1993, page 187.

14. The Appellate Body has previously clarified that "the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence"[5], and that "[i]t is only reasonable that the burden of establishing *[an affirmative defence]* should rest on the party asserting it".[6]

15. Thus, in order to qualify for the protection afforded by AA Article 13, the United States must prove that the measures at issue conform fully to the applicable provisions of the *Agreement on Agriculture*. Further, in the case of the protection potentially afforded by Article 13(b)(ii), as well as by Article 13(b)(iii), the United States must prove that it has not granted, and does not grant, support to a specific commodity in excess of that decided during the 1992 marketing year.

## B. THE MEANING OF AA ARTICLE 13(B)(II)[7]

16. In its First Written Submission, Brazil correctly highlights that there are a number of interpretative issues raised by the text of AA Article 13(b)(ii).[8]

### (i) "Implementation period"

17. Under AA Article 1(f) and 1(i) read together, the "implementation period" is, for the purposes of Article 13, defined as the nine-year period commencing in 1995 according to the calendar, financial or marketing year specified in the Schedule relating to that Member.

### (ii) "Domestic support measures that conform fully to the provisions of *[AA]* Article 6"

18. Australia supports Brazil's interpretation that the chapeau of AA Article 13(b) includes all non-"green box" domestic support measures, including product specific and non-product specific, *de minimis* and production-limiting domestic support, as well as investment subsidies and "diversification" support in developing countries.[9]

---

[5] *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses from India*, Report of the Appellate Body, WT/DS33/AB/R, page 14.

[6] *United States – Woven Wool Shirts and Blouses* , WT/DS33/AB/R, page 16.

[7] Article 13(b)(ii) of the *Agreement on Agriculture* provides as follows:

> During the implementation period, notwithstanding the provisions of GATT 1994 and *[the SCM Agreement]*:
>
> …
>
> (b) domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, shall be:
>
> …
>
> (ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the *[SCM Agreement]*, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year; and
>
> …

[8] First Submission of Brazil, paragraph 127.

[9] First Submission of Brazil, paragraph 133.

(iii) "Exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the *[SCM Agreement]*"

19. As noted in Section II.A above, if domestic support measures within the scope of the chapeau of AA Article 13(b) infringe the specified provisions, they are nevertheless "free or released from a duty or liability to which others are held"[10] in relation to a proceeding[11] "found[ed], buil[t] or construct[ed] on"[12] those provisions as long as the conditions specified in Article 13 are met. Again, had the negotiators of the *Agreement on Agriculture* intended that a Member would not be liable to a legal process of dispute, it is reasonable to assume that they would have said so, for example, by providing that the specified provisions may not be "invoked" as in footnote 35 to Article 10 of the SCM Agreement in relation to non-actionable subsidy measures.

20. Australia notes, however, that only actions based on paragraph 1 of GATT Article XVI and Articles 5 and 6 of the SCM Agreement are covered under AA Article 13(b)(ii). Thus, for example, any actions based on paragraph 3 of GATT Article XVI or on SCM Article 3 would not benefit from the protection afforded by AA Article 13(b)(ii). In Australia's view, the limitation of protection under Article 13(b)(ii) to actions based on GATT Article XVI:1 and on SCM Articles 5 and 6 is consistent with the object and purpose of the *Agreement on Agriculture* as expressed in the preamble to the Agreement, including to "[prevent] … distortions in world agricultural markets" and "to [achieve] specific binding commitments in … export competition". The attainment of those objectives would be too easily subverted if commitments in regard to export subsidies could be circumvented through the provision of domestic support.

(iv) "Such measures"

21. In Australia's view, the phrase "such measures" in AA Article 13(b)(ii) refers to the universe of non-"green box" measures covered by the chapeau of Article 13(b), consistent with the ordinary meaning of "such" as "of the kind, degree, or category previously specified or implied contextually".[13]

(v) "Grant support"

22. In Australia's view, having regard to the ordinary meaning of the words in their context and in light of the object and purpose of the *Agreement on Agriculture*, "support" means the actual support, other than legitimate "green box" support, provided to an agricultural product. Thus, to "grant support" is to "agree to", "promise", "bestow", "allow", "give", "confer" or "transfer"[14] non-"green box" domestic support of the type referred to in the chapeau of AA Article 13(b), which calculation must include that portion of non-product specific support that benefits the specific commodity at issue.

(vi) "To a specific commodity"

23. Australia agrees with Brazil's interpretation[15] that the ordinary meaning of this phrase, read in its context and in light of the object and purpose of the *Agreement on Agriculture*, is support granted

[10] *Black's Law Dictionary*, page 593.
[11] *Black's Law Dictionary*, page 28, defines "action" as "1. The process of doing something; conduct of behaviour. 2. A thing done; act. 3. A civil or criminal judicial proceeding."
[12] *The New Shorter Oxford English Dictionary*, Volume 1, page 187.
[13] *The New Shorter Oxford English Dictionary*. Volume II, page 3129.
[14] *The New Shorter Oxford English Dictionary*. Volume I, page 1131.
[15] First Submission of Brazil, paragraph 136.

to an individual agricultural commodity covered by AA Annex 1, such as upland cotton, whether through product specific, or non-product specific, support.

(vii) "That decided during the 1992 marketing year"

24. In Australia's view, this phrase, read in its context and in light of the object and purpose of the *Agreement on Agriculture*, means the level of non-"green box" domestic support, including support provided through non-product specific non-"green box" domestic support measures, "decided" by a Member in the course of the 1992 marketing year to be provided to the benefit of a specific agricultural commodity in the future.

25. The use of the word "decided" in this context was deliberate.

26. Australia notes that the other operative provision of the *Agreement on Agriculture* in which the word "decided" is used is Article 13(b)(iii), which relates to non-violation nullification or impairment actions. Australia notes too that Article 13(b)(iii) contains precisely the same language – "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year" – as used in Article 13(b)(ii). Thus, the meaning of the word "decided" in the context of Article 13(b)(ii) must be capable of having that same meaning in the context of non-violation nullification and impairment actions under Article 13(b)(iii).

(viii) Summary of the meaning of AA Article 13(b)(ii)

27. During the nine calendar, financial or marketing year period specified in a Member's Schedule period commencing in 1995, all non-"green box" domestic support measures that conform fully to the provisions of AA Article 6 are immune from the consequences of infringing GATT Article XVI:1 or Part V of the SCM Agreement, provided that the level of support to an individual commodity does not exceed the level of support for that commodity that was decided by the Member to be made available during the relevant 1992 marketing year.

## III. "PRODUCTION FLEXIBILITY CONTRACT PAYMENTS" AND "DIRECT PAYMENTS" MAY NOT BE CLAIMED AS "GREEN BOX" MEASURES UNDER ANNEX 2 TO THE AGREEMENT ON AGRICULTURE

28. The United States has previously notified "Production Flexibility Contract (PFC) Payments"[16] as AA Annex 2 "green box" measures.[17] The United States has not made a domestic support notification since PFC payments were replaced by "Direct Payments" (DP)[18] under the 2002 FSRI Act. Like Brazil[19], Australia considers that neither of these payments programs may be claimed as "green box" measures for the reasons outlined below.

### A. THE RELEVANT REQUIREMENTS OF PARAGRAPHS 1 AND 6(B) OF AA ANNEX 2

29. AA Annex 2.1 provides that "[d]omestic support measures for which exemption from reduction commitments is claimed shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production".

[16] "Production Flexibility Contract Payments" are described at Section 2.6.1 of the First Submission of Brazil.

[17] See, for example, WTO document G/AG/N/USA/43 of 5 February 2003, page 8, Exhibit Bra-47.

[18] "Direct Payments" are described at Section 2.6.2 of the First Submission of Brazil.

[19] First Submission of Brazil, Sections 3.2.6 and 3.2.7.

30. In addition, in relation to decoupled income support, AA Annex 2.6(b) provides that "[t]he amount of such payments in any given year shall not be related to, or based on, the type or volume of production (including livestock units) undertaken by the producer in any year after the base period".

(i) "No, or at most minimal, trade-distorting effects or effects on production"

31. In requiring that domestic support measures "shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production", AA Annex 2.1 imposes a stringent standard. Annex 2.1 requires that such measures must, as a primary or essential condition, not "bias" or "unnaturally alter"[20] trade or production. Alternatively, Annex 2.1 requires that, at most, such measures must have "extremely small; of a minimum amount, quantity or degree; very slight, negligible"[21] effects on trade or production.

32. In Australia's view, this standard cannot be met if the domestic support measure at issue directly and specifically stimulates production and/or trade of a particular commodity, or if that support measure directly retards or halts the transfer of economic resources to other forms of economic activity, other than as specifically provided for under paragraphs 2-13 of AA Annex 2. If a domestic support measure results in a level of production and/or trade in a particular product or group of products higher than would otherwise be the case except as specifically provided for in Annex 2, the support measure cannot meet the standard established in Annex 2.1. Thus, if the direct effect of a support measure is that farmers keep producing, or keep producing a particular product, in circumstances that would be uneconomic but for the support measure, that measure cannot meet the requirements of Annex 2.1.

(ii) "The amount of such payments in any given year shall not be related to, or based on, the type or volume of production (including livestock units) undertaken by the producer in any year after the base period"

33. Paragraph 6 of AA Annex 2 is headed "decoupled income support". Paragraph 6(a) provides that "[e]ligibility for *[decoupled income support]* payments shall be determined by clearly defined criteria such as income, status as a producer or landowner, factor use or production level in a defined and fixed base period". Thus, consistent with the customary rules of interpretation codified at Article 31 of the *Vienna Convention on the Law of Treaties*, "after the base period" in paragraph 6(b) means after the base period defined and fixed pursuant to paragraph 6(a).

34. Accordingly, the meaning of paragraph 6(b) of AA Annex 2 is clear. Once a base period has been defined and fixed pursuant to paragraph 6(a), decoupled income support payments may not be "connected"[22] to or "found[ed], buil[t] or construct[ed] on"[23] the type of production or the volume of production undertaken by a producer in a later period.

[20] *The New Shorter Oxford English Dictionary*. Volume I, page 707.
[21] *The New Shorter Oxford English Dictionary*. Volume I, page 1781.
[22] *The New Shorter Oxford English Dictionary*. Volume II, page 2534.
[23] *The New Shorter Oxford English Dictionary*, Volume 1, page 187.

B. "PRODUCTION FLEXIBILITY CONTRACT (PFC) PAYMENTS" COULD NOT BE CLAIMED AS "GREEN BOX" PAYMENTS

(i) PFC payments had more than a negligible trade-distorting effect or effect on production, contrary to paragraph 1 of AA Annex 2$

35. Like Brazil, Australia considers that PFC payments directly stimulated, and stimulated by more than a negligible amount, US production of, and trade in, upland cotton and Australia endorses Brazil's arguments in this respect.[24]

36. Further, the value of PFC payments rates as a proportion of the marketing year average farm price received by US upland cotton growers can be seen from data published by the United States Department of Agriculture (USDA) and included in Table 1 below.

*Table 1: The value of PFC payments as a percentage proportion of the marketing year average farm price received by US upland cotton growers*

| *Marketing or Crop Year* | *Production flexibility contract (PFC) payment rates US¢/lb.*[25] | *Average farm price US¢/lb.*[26] | *PFC payment rates as a proportion of the marketing year average farm price %* |
|---|---|---|---|
| 1996/97 | 8.882 | 69.3 | 12.82 |
| 1997/98 | 7.625 | 65.2 | 11.69 |
| 1998/99 | 8.173 | 60.2 | 13.58 |
| 1999/2000 | 7.990 | 45.0 | 17.76 |
| 2000/01 | 7.330 | 49.8 | 14.72 |
| 2001/02 | 5.990 | 29.8 | 20.10 |

37. In addition, data published by the USDA for this period show that PFC payments constituted 26.37%, 36.5% and 22.90% of government payments by crop year for the 1999, 2000 and 2001 years respectively.[27]

38. PFC payments constituting such high proportions of the marketing year average farm prices and of domestic support measures must have a production and trade-distorting effect.

39. But this view is further confirmed when the marketing year average farm prices as shown in Table 1 are considered against the fact that in 1997 the average of total economic costs for all US cotton farms was approximately 73 cents per pound and operating costs averaged 38 cents per pound[28]. In such circumstances, economically rational producers should have begun to transfer resources to other forms of economic activity. This did not happen. USDA data shows that the area planted to cotton in the United States over this period increased, from 13.1 million acres in 1998 to 15.5 million acres in 2001.[29] It is clear that many US producers of upland cotton could only have

[24] First Submission of Brazil, Section 3.2.6.2.

[25] Figures extracted from *Agricultural Outlook*, USDA, May 2000 and May 2002, Table 19, available at http://www.ers.usda.gov/publications/agoutlook/may2000/ao271k.pdf and http://www.ers.usda.gov/publications/agoutlook/May2002/ao291j.pdf respectively.

[26] . *Fact Sheet: Upland Cotton: Summary of 2002 Commodity Loan and Payment Program*, USDA, January 2003, page 5, Exhibit Bra-4.

[27] *Fact Sheet: Upland Cotton*, page 6, Exhibit Bra-4.

[28] *Cotton: Background and Issues for Farm Legislation*, USDA, July 2001, page 6, Exhibit Bra-46.

[29] *Fact Sheet: Upland Cotton*, page 4, Exhibit Bra-4.

remained viable over this period through subsidisation. Further, US exports of upland cotton increased from 4.1 million bales in 1998 to 10.6 million bales in 2001.[30]

40. In Australia's view, PFC payments during this period contributed directly to increased production and export levels and that they did so contrary to the express requirement of AA Annex 2.1 that the domestic support measures at issue not, or only negligibly, bias or unnaturally alter trade or production.

(ii) PFC payments were related to the type of production undertaken by the producer, contrary to paragraph 6(b) of AA Annex 2

41. By excluding fruits and vegetables (other than lentils, mung beans, and dry peas) from the planting flexibility otherwise available in respect of the contract acreage for which PFC payments could be made, s.118 of the Federal Agriculture Improvement and Reform Act of 1996 (the FAIR Act) related, or connected, PFC payments to the type of production undertaken by the producer in any year after the base period, contrary to the requirements of AA Annex 2.6(a).

C. "DIRECT PAYMENTS" FOR UPLAND COTTON MAY NOT BE CLAIMED AS "GREEN BOX" PAYMENTS

(i) Direct payments are likely to have more than a negligible trade-distorting effect or effect on production, contrary to paragraph 1 of AA Annex 2

42. Australia considers that direct payments for upland cotton are likely to stimulate, by more than a negligible amount, US production of, and trade in, upland cotton. The 2002 FSRI Act has established a direct payment rate for upland cotton of 6.67 cents per pound for each of the 2002 through 2007 crop years.

43. In addition to the arguments put forward by Brazil[31], which Australia endorses, Australia considers that, so long as there is a reasonable possibility of continuing and significant longer-term volatility in the gross returns to producers (as measured by the marketing year average farm price), the assured availability of a direct payment for upland cotton at the rate of 6.67 cents per pound must be presumed to influence directly and specifically the decisions of growers to continue producing upland cotton, notwithstanding significant peaks and troughs in their income, rather than to transfer resources to other forms of economic activity.

(ii) Direct payments are related to the type of production undertaken by the producer, contrary to paragraph 6(b) of Annex 2 of the Agreement on Agriculture

44. Under s.1106(b) of the 2002 FSRI Act, fruits, vegetables (other than lentils, mung beans and dry peas) and wild rice are generally prohibited from being planted on base acreage unless the commodity, if planted, is destroyed before harvest except that trees and other perennial plants are prohibited. The implementing regulations make clear that, where it is determined that a producer made a good faith effort to comply with the "planting flexibility" provisions of s.1106 of the FSRI Act but that that producer's acreage report of fruits, vegetables or wild rice planted on a farm's base acreage is inaccurate and exceeds the allowed tolerance levels, the producer "shall accept a reduction in the direct and counter-cyclical payments for the farm …".[32]

[30] *Fact Sheet: Upland Cotton*, page 5, Exhibit Bra-4.
[31] First Submission of Brazil, at Section 3.2.7.3.
[32] 7 CFR 1412.602(a)(2), Exhibit Bra-35.

45. Thus, direct payments are related, or connected, to the type of production undertaken by the producer, contrary to paragraph 6(a) of AA Annex 2.

(iii) Direct payments are related to, or based on, the type or volume of production undertaken by the producer in a year after the base period, contrary to paragraph 6(b) of Annex 2 of the Agreement on Agriculture

46. Sections 1101 and 1102 of the 2002 FSRI Act allow producers to update their base acres and payment yields respectively for the purposes of receiving direct payments. As set out in Section III.A.ii above, only one base period is possible for the purposes of paragraph 6 of AA Annex 2. Once the base period has been defined and fixed, no further updating of either the type or volume of production is permissible if a support program is to comply with the conditions of paragraph 6 of Annex 2.

47. Under the 2002 FSRI Act, direct payments replaced PFC payments.[33] Since the United States has claimed PFC payments as "green box" decoupled income support[34], Australia considers that the United States has selected the base period that it used to determine base acres and payment yields under the 1996 FAIR Act as its defined and fixed base period for the purposes of paragraph 6 of AA Annex 2.

48. By providing for base acres and payment yields to be updated under the 2002 FSRI Act, the United States has related the amount of direct payments to, or based the amount of direct payments on, the type and volume of production undertaken by a producer in any year after the base period, contrary to paragraph 6(b) of AA Annex 2.

## IV. "STEP 2" PAYMENTS ARE PROHIBITED SUBSIDIES CONTRARY TO ARTICLES 3.3 AND 8 OF THE AGREEMENT ON AGRICULTURE AND/OR ARTICLE 3 OF THE SCM AGREEMENT

49. Section 1207(a)(1) of the 2002 FSRI Act provides: "… the Secretary shall issue marketing certificates or cash payments … to domestic users and exporters for documented purchases by domestic users and sales for export by exporters …". Section 136 of the 1996 FAIR Act provided similarly that "… the Secretary shall issue marketing certificates or cash payments to domestic users and exporters …".

50. The regulations to implement s.1207(a)(1) of the FSRI Act provide:

> Eligible upland cotton must not be: … (2) imported cotton …[35]
>
> Payments … shall be made available to eligible domestic users and exporters who have entered into an Upland Cotton Domestic User/Export Agreement with CCC and who have complied with the terms and conditions in this subpart, the Upland Cotton Domestic User/Exporter Agreement and instructions issued by CCC.[36]

51. The standard Upland Cotton Domestic User/Export Agreement[37] provides *inter alia*:

[33] *Fact Sheet: Upland Cotton*, Exhibit Bra-4.
[34] WTO document G/AG/N/USA/43, page 8, Exhibit Bra-47.
[35] 7 CFR 1427.103(c), Exhibit Bra-37.
[36] 7 CFR 1427.105(a), Exhibit Bra-37.
[37] Exhibit Bra-65.

> Upland cotton eligible for payment is cotton consumed by the Domestic User in the United States … (Section B-2)
>
> Eligible upland cotton will be considered consumed by the Domestic User on the date the bagging and ties are removed from the bale in the normal opening area, immediately prior to use, … (Section B-3(b))
>
> Upland cotton eligible for payment is cotton which is shipped by an eligible Exporter … (Section C-2)
>
> Eligible upland cotton will be considered exported based on the on-board-vessel-date as shown on the bill of lading. (Section C-3)

52. A "Step 2" payment is unquestionably a subsidy within the meaning of the *Agreement on Agriculture* and the *SCM Agreement*. A "Step 2" payment involves a direct transfer of economic resources (cash or the equivalent value in ownership of goods) to a domestic user or exporter of US upland cotton.

53. The Article 21.5 stage of *United States – Tax Treatment for "Foreign Sales Corporations" (US – FSC (21.5))* involved provisions under which more favourable tax treatment was available in either of two, mutually exclusive, situations. The availability of the favourable tax treatment was found to be a prohibited export subsidy in one of those situations notwithstanding that the favourable tax treatment was freely available in both situations, subject to the prescribed conditions for entitlement being met. The Appellate Body said:

> In our view, it is … necessary, under Article 3.1(a) of the *SCM Agreement*, to examine separately the conditions pertaining to the grant of the subsidy in the two different situations addressed by the measure. We find it difficult to accept the United States' arguments that such examination involves an 'artificial bifurcation" of the measure. The measure itself identifies the two situations which must be different since the very same property cannot be produced both within and outside the United States.[38]

54. The availability of "Step 2" payments under s.1207(a)(1) is analogous to the situation examined in *US – FSC (21.5)*. "Step 2" payments are available only to exporters ("Step 2" export payments) or to domestic users ("Step 2" domestic payments). Section 1207(a)(1) "identifies the two situations which must be different since the very same property cannot be" exported or used within the United States.

A. "STEP 2" EXPORT PAYMENTS ARE PROHIBITED EXPORT SUBSIDIES CONTRARY TO ARTICLES 3.3 AND 8 OF THE AGREEMENT ON AGRICULTURE AND ARTICLE 3.1(A) AND 3.2 OF THE SCM AGREEMENT

(i) "Step 2" export payments are subsidies contingent upon export performance

55. For "Step 2" export payments, the export contingency is expressly provided for in s.1207(a)(1), which provides "… the Secretary shall issue marketing certificates or cash payments … to exporters for … sales for export by exporters …" and in the implementing regulations.

[38] *United States – Tax Treatment of "Foreign Sales Corporations"*, Recourse to Article 21.5 of the DSU by the European Communities, WT/DS108/AB/RW, paragraph 115.

56 "Step 2" export payments are only payable once US-produced upland cotton has been placed aboard a vessel: they are "conditional" upon the cotton actually being exported. Thus, "Step 2" export payments are contingent upon export performance.

(ii) "Step 2" export payments are export subsidies contrary to Articles 3.3 and 8 of the Agreement on Agriculture

57. "Step 2" export payments are a type of export subsidy expressly foreseen by AA Article 9.1(a) and subject to budgetary outlay and quantity reduction commitments thereunder. They are a direct subsidy, including through payment-in-kind, to an industry, to producers of an agricultural product, or to a cooperative or other association of such producers, contingent on export performance.

58. The United States has not specified any reduction commitments in its Schedule for upland cotton.

59. Consequently, by providing "Step 2" export payments under both the 1996 FAIR Act and the 2002 FSI Act, the United States has provided export subsidies contrary to its obligations:

VII. pursuant to AA Article 3.3 not to provide export subsidies in respect of any agricultural product not specified in Section II of Part IV of its Schedule; and

VIII. pursuant to its obligation pursuant to Article 8 not to provide export subsidies otherwise than in conformity with this Agreement and with the commitments as specified in its Schedule.

(iii) "Step 2" export payments are prohibited export subsidies contrary to SCM Article 3

60. Because "Step 2" export payments are export subsidies that do not conform fully to the provisions of Part V of the *Agreement on Agriculture*, Article 13(c)(ii) of that Agreement is not applicable and the payments are not protected from the operation of SCM Article 3.

61. A "Step 2" export payment is a subsidy within the meaning of SCM Article 1.1(a)(1)(i) for the purposes of SCM Article 3.1: it involves a direct transfer of economic resources to a domestic user or exporter of US upland cotton, and confers a benefit on the recipient by making US upland cotton commercially competitive.

62. Further, a "Step 2" export payment is contingent upon export performance: it is only payable once the upland cotton has been placed aboard a vessel for export. The Appellate Body has said:

> We see no reason, and none has been pointed out to us, to read the requirement of "contingent upon export performance" in the *Agreement on Agriculture* differently from the same requirement imposed by the *SCM Agreement*.[39]

63. As a consequence, because "Step 2" export payments mandated by s.1207(a)(1) of the FSRI Act are export subsidies that are not being made "as provided in the *Agreement on Agriculture*", they are prohibited export subsidies pursuant to SCM Article 3.1(a), and the United States is acting contrary to its obligations under SCM Article 3.2 by granting or maintaining such subsidies pursuant to s.1207(a)(1) of the FSRI Act. Consistent with the provisions of SCM Article 4.7, Australia

[39] *United States – Tax Treatment for "Foreign Sales Corporations"*, Report of the Appellate Body, WT/DS108/AB/R, paragraph 141.

endorses Brazil's request[40] that the Panel recommend that the United States withdraw the "Step 2" export payments without delay.

B. "STEP 2" DOMESTIC PAYMENTS ARE LOCAL CONTENT SUBSIDIES CONTRARY TO ARTICLE 3 OF THE SCM AGREEMENT

64. For "Step 2" domestic payments, the local content requirement is expressly provided for in s.1207(a)(1), which provides "… the Secretary shall issue marketing certificates or cash payments … to domestic users … for documented purchases by domestic users …" and in the implementing regulations, which provide that "eligible cotton must not be … imported cotton".

65. "Step 2" domestic payments are only payable once US-produced upland cotton is consumed by a domestic user. "Step 2" domestic payments are contingent upon the use of domestic over imported goods.

66. Thus, s.1207(a)(1) of the FSRI Act mandates the payment of subsidies which are prohibited pursuant to SCM Article 3.1(b), and the United States is acting contrary to its obligations under SCM Article 3.2 by granting or maintaining such subsidies. Consistent with the provisions of SCM Article 4.7, Australia endorses Brazil's request[41] that the Panel recommend that the United States withdraw the "Step 2" domestic payments without delay.

C. THE UNITED STATES CANNOT AVOID ITS OBLIGATIONS RELATING TO PROHIBITED SUBSIDIES BY DESIGNING A MEASURE UNDER WHICH ENTITLEMENTS ARE OSTENSIBLY AVAILABLE IN MULTIPLE CIRCUMSTANCES

67. In Australia's view, the United States cannot avoid its obligations relating to prohibited subsidies under the *Agreement on Agriculture* and the *SCM Agreement* by designing a measure under which entitlements are ostensibly available in multiple circumstances. As the Appellate Body concluded in *US – FSC (21.5)*:

> Our conclusion that the ETI measure grants subsidies that are export contingent in the first set of circumstances is not affected by the fact that the subsidy can also be obtained in the second set of circumstances. The fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances.[42]

68. Moreover, in the circumstances of the present case, it would be a manifestly inequitable outcome if a WTO Member was able to avoid its obligations relating to prohibited subsidies under the *Agreement on Agriculture* and the *SCM Agreement* on the basis that there is a second set of circumstances in which a subsidy can be paid, when the second set of circumstances is itself a prohibited subsidy.

69. Australia considers that, through the "Step 2" payments mandated by s.1207(a)(1) of the FSRI Act, the United States is paying: (1) export subsidies contrary to its obligations pursuant to AA Articles 3.3 and 8 and SCM Article 3.1(a) and 3.2; and (2) local content subsidies contrary to its obligations pursuant to SCM Article 3.1(b) and 3.2.

## V. CONCLUSION

70. This dispute raises fundamental issues concerning the object and purpose of the *Agreement on Agriculture*, and the balance of rights and obligations accepted by all Members under the *Marrakesh Agreement Establishing the World Trade Organization*. The outcome of this dispute will determine whether, in fact, Members accepted any meaningful obligations in relation to domestic support measures pursuant to the *Agreement on Agriculture*.

71. In Australia's view, Brazil has provided *prima facie* evidence that the United States has not acted consistently with its obligations in relation to domestic support measures and export subsidies provided to upland cotton under the *Agreement on Agriculture*. Further, Australia considers that the "Step 2" payments for domestic users and exporters of upland cotton are clearly subsidies prohibited by the *SCM Agreement*, and endorses Brazil's request that these be withdrawn without delay.

# ANNEX B-5

## THIRD PARTY SUBMISSION OF BENIN

15 July 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. The issue in this dispute is of critical importance for Benin, West Africa, and many developing countries: whether WTO Members must respect agreed disciplines for the provision of agricultural subsidies.

2. The right to grant agricultural subsidies is by no means absolute. During the Uruguay Round, the drafters of the *Agreement on Agriculture* and the SCM Agreement established a number of preconditions for the provision of WTO-consistent subsidies. These preconditions, including those embodied in Article 13 of the *Agreement on Agriculture* - the so-called "peace clause" - were part of the overall balance of rights and obligations accepted by the United States and other participants at the conclusion of the Round.

3. Benin, upon its accession to the WTO in 1996, accepted the Uruguay Round package. In doing so, it expected that the subsidies provided by its trading partners, including the United States, would remain within these agreed parameters.

4. However, contrary to its WTO obligations, the United States has provided huge subsidies for the production, use and export of US cotton. These WTO-inconsistent subsidies have been highly damaging to Benin.

5. Benin supports the positions advanced by Brazil in this dispute, particularly those set out in Brazil's first submission of June 24. Benin welcomes the opportunity to provide its views to the Panel, divided into two headings:

(a) Benin and US cotton subsidies, which provides appropriate additional context to the issues facing the Panel; and

(b) WTO legal issues.

## II. BENIN AND US COTTON SUBSIDIES

6. Benin is a least-developed country, with a GNP per capita of US $380. Of the 175 countries listed in the 2003 Human Development Index of the United Nations Development Programme, Benin is ranked 159th.[1]

7. Cotton plays a crucial role in the development of Benin. It is the most important cash crop in the national economy. Cotton accounts for 90 per cent of agricultural exports, and has provided around 75 per cent of the country's export earnings over the past four years. Benin is the 12th largest exporter of cotton in the world.

8. Cotton generates 25 per cent of the country's revenues. A third of all households in Benin depend on the cultivation of cotton, and a fifth of wage-earning workers are employed in the cotton sector. Overall, about a million people in Benin – out of a population of six million – are dependant on cotton, or cotton-related activities.

9. The cotton sector in Benin, which is mainly in the rural regions, has suffered considerable hardship. As the International Monetary Fund noted in a report earlier this year, "poverty is prevalent in cotton-producing areas".[2] Cotton growers are concentrated in the north of the country, a more arid region where the potential for any agricultural diversification is lower, and where opportunities for non-farm employment are scare.[3]

10. Despite these problems of persistent poverty, the cotton sector in Benin and the region remains highly competitive by world standards. The cost of producing cotton in West Africa is 50 per cent lower than comparable costs in the United States.[4]

11. As recent report noted: "West Africa is one of the world's most efficient cotton producing regions. The IMF estimates that the sector can operate profitably at world price levels of around 50 cents/lb. Few producers in the US could compete at this price. Indeed, the USDA estimates average production costs at 75 cents/lb."[5]

12. Moreover, the sector has also undergone major structural reforms in recent years to increase efficiency. The IMF reported that: "Benin has moved away from the integrated monopoly that characterized the organization of cotton production and marketing of seed cotton in western and central Africa. Benin's reform process is among the most advanced in the region."[6]

13. Unfortunately, the benefits of such reforms have been completely negated by massive US subsidies. As noted by Brazil in its First Submission, total upland cotton subsidies amounted to

US$12.9 billion during the 1999-2002 marketing years.[7] The International Cotton Advisory Cotton estimates that US subsidies are equivalent to 24 cents per pound of cotton produced.[8]

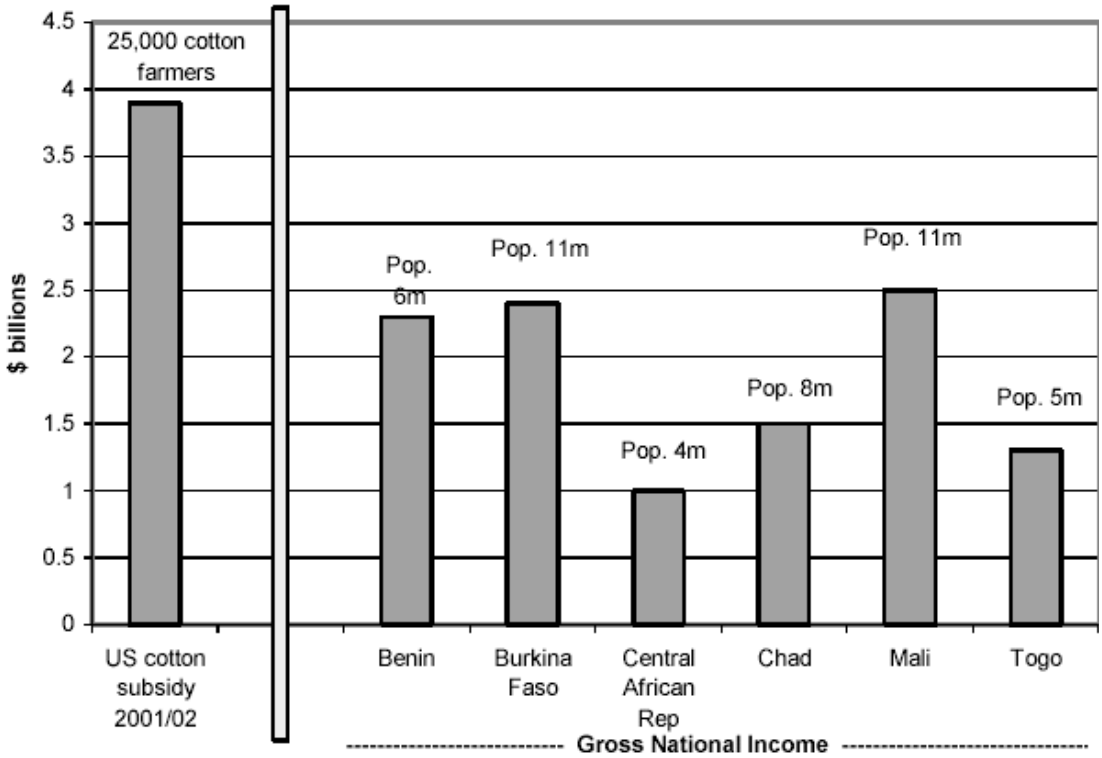
14. Subsidies of this magnitude have sharply increased supplies on the international market, thereby producing a collapse in global cotton prices. From January, 2001 to May, 2002, world cotton prices fell by nearly 40 per cent, from 64 cents to about 39 cents per pound, the lowest level since the 1930s. Although prices have improved since last year, the world market for cotton remains characterized by oversupply as a result of US subsidies. This has extremely serious consequences for Benin and other West African countries.

15. Benin is highly vulnerable to changes in the world price of this cash crop. The International Food Policy Research Institute has estimated that a 40 per cent reduction in farm-level prices of cotton results in an increase in rural poverty in Benin of 8 per cent in the short term, and 6-7 per cent in the long term. An increase of 8 per cent is equivalent to pushing an additional 334,000 people below the poverty line.[9] This, in turn, has produced a deterioration in the social conditions of many rural communities, including conditions pertaining to housing, schooling, sanitation, nutrition and other basic needs.

16. The overwhelming magnitude of US cotton subsidies, and the impossibility of Benin competing with them, are well illustrated in the table below.[10] As the table indicates, the subsidies paid by the United States to 25,000 US cotton farmers exceeds the gross national income of Benin. These subsidies also exceed the gross national income of Burkina Faso, the Central African Republic, Chad, Mali and Togo.

[7] First Submission of Brazil, paragraph 3.
[8] Minot and Daniels, *op. cit*, page 1.
[9] Minot and Daniels, *op cit*., page 50.
[10] This table is from *Cultivating Poverty: The Impact of US Cotton Subsidies on Africa.* Oxfam Briefing Paper 30. 27 September 2002. Brazil has filed the full Oxfam report as exhibit Bra–15.

**Figure 3: US cotton subsidy and the gross national incomes for selected West African countries in 2000 ($billions)**



*Source: World Development Indicators, World Bank, 2002, and US Department of Agriculture*

17. Thus, when cotton from Benin enters world markets, it must compete against such massively subsidized US cotton.

18. Oxfam has estimated that US subsidies have caused Benin to lose US $33 million in foreign exchange earnings, equivalent to 9 per cent of the country's export earnings.[11]

19. Indeed, the shock of such subsidies, and their attendant effect on prices, threatens the very existence of the cotton sector in Benin. It has created a genuine economic crisis in the sector, and it is possible that the cotton sector in Benin could simply disappear during the 2003/04 marketing year. This would have catastrophic effects both for the national economy, and for the social cohesion of the country in regions where cotton production predominates. This also poses a significant threat to Benin's efforts at poverty alleviation in economically precarious rural areas.

20. With these preliminary comments as additional context, Benin now comments briefly on some of the legal issues raised in Brazil's submission.

## III. WTO LEGAL ISSUES

21. Benin agrees with Brazil that the United States cannot successfully invoke the peace clause to bar the actionable subsidy claims that have been advanced in this dispute.

[11] *Ibid*., page 17.

22. The peace clause is an affirmative defence. The United States, not Brazil, must bear of burden of demonstrating that US domestic support and export subsidies comply with the requirements of Article 13.

23. Affirmative defences, as the Appellate Body made clear in *United States – Wool Shirts and* Blouses, are "limited exceptions from obligations under certain other provisions", not "positive rules establishing obligations in themselves". In the view of the Appellate Body, "[i]t is only reasonable that the burden of establishing such a defence should rest on the party asserting it".

24. The language in Article 13 shows the clear intent of the drafters that the Member seeking to invoke the peace clause must bear the burden of demonstrating full compliance with all of the preconditions set out in this provision.

25. In addition to the arguments advanced by Brazil, Benin would note that the use of the proviso "provided that" in Article 13(b)(ii) and (iii) also shows the intent of the drafters to shift the burden to the Member seeking to invoke this exception. In both subsections, the exemption from actions has been qualified by the addition of this proviso:

(b) domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, shall be:

(ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year; and

(iii) exempt from actions based on non-violation nullification or impairment of the benefits of tariff concessions accruing to another Member under Article II of GATT 1994, in the sense of paragraph 1(b) of Article XXIII of GATT 1994, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year…" [emphasis added]

26. A similar proviso can be found in GATT Article XVIII:11, dealing with the elimination of restrictions imposed for balance of payments purposes:

> "[T] he contracting party concerned… shall progressively relax any restrictions applied under this Section as conditions improve, maintaining them only to the extent necessary under the terms of paragraph 9 of this Article and shall eliminate them when conditions no longer justify such maintenance; Provided that no contracting party shall be required to withdraw or modify restrictions on the ground that a change in its development policy would render unnecessary the restrictions which it is applying under this Section." [emphasis added]

27. In construing GATT Article XVIII:11, the Appellate Body made clear in the *Quantitative Restrictions* case that the burden of proof lay clearly on the responding party – in that case, India – seeking to invoke the proviso:

> "The proviso precludes a Member, which is challenging the consistency of balance-of payments restrictions, from arguing that such restrictions would be unnecessary if the developing country Member maintaining them were to change its development policy. In effect, the proviso places an obligation on Members not to require a developing country Member imposing balance-of payments restrictions to change its development policy….

> [W]e do not exclude the possibility that a situation might arise in which an assertion regarding development policy does involve a burden of proof issue. Assuming that the complaining party has successfully established a *prima facie* case of inconsistency with Article XVIII:11 and the Ad Note, the responding party may, in its defence, either rebut the evidence adduced in support of the inconsistency or invoke the proviso. In the latter case, it would have to demonstrate that the complaining party violated its obligation not to require the responding party to change its development policy. This is an assertion with respect to which the responding party must bear the burden of proof. We, therefore, agree with the Panel that the burden of proof with respect to the proviso is on India."[12]

28. Although the use of the proviso "provided that" is not determinative, it does provide strong textual support for the proposition that the drafters of Article 13 of the *Agreement on Agriculture*, like the drafters of GATT Article XVIII:11, intended the burden of proof to shift to the party seeking to invoke the proviso.

29. Indeed, the situation in the Cotton dispute is very similar to that examined by the Appellate Body in the *Quantitative Restrictions* case. The United States is seeking to invoke the "provided that" proviso set out in Article 13. This is, as the Appellate Body reasoned, "an assertion with respect to which the responding party must bear the burden of proof". Therefore, as with India in *Quantitative Restrictions*, the burden of proof with respect to the proviso is on the United States.

30. Article 13, construed as a whole, also supports the position that if the United States seeks entry into the "safe harbour", it bears the burden of demonstrating that it has met the preconditions necessary to justify entry.

31. For example, the chapeau to paragraphs (a), (b) and (c) all provide that the measures or subsidies "must conform fully" with the applicable disciplines. Domestic support measures or export subsidies that do not "conform fully" to the specified provisions cannot benefit from the peace clause. Since the United States claims that it "conforms fully" to the relevant provisions of the *Agreement on Agriculture*, the SCM Agreement, and the GATT 1994, and it is up to the United States to provide sufficient evidence in support of this defence.

32. Thus, as argued above, the burden falls on the United States if it wishes successfully to invoke the affirmative defence of Article 13.

33. However, even if the burden rested on Brazil – which it does not – Brazil has amply demonstrated in its First Submission that the United States is providing domestic support and export subsidies far in excess of WTO commitments.

34. For example, as Brazil demonstrated in its submission, US non-"green box" domestic support to upland cotton in the 1992 marketing year was $1,994.4 million. By 2001, US non-"green box" domestic support increased to $4,093 million. Thus, the defence that may have been conditionally available to the United States – had it "conformed fully" to the requirements of Article 13 – is unavailable.

35. Brazil presents compelling evidence on the WTO-inconsistency of all of the impugned US measures, encompassing both domestic support payments and export payments. Benin agrees with Brazil that the US measures violate the *Agreement on Agriculture*, the SCM Agreement, and the GATT 1994.

---

[12] Appellate Body Report, *India – Quantitative Restrictions on Imports of Agricultural, Textile an Industrial Products*, WT/DS90/AB/R, paragraph 134 and 136.

36. The United States, in its submission of July 11, has done nothing to rebut the presumption of WTO-inconsistency established by Brazil.

## IV. CONCLUSIONS

37. As noted above, US cotton subsidies exceed the Gross National Income of Benin. Benin has few options available to it to respond to subsidies of such magnitude. The resulting impact on the economy of the country has been devastating.

38. Benin is not seeking any special and differential treatment in this dispute. It simply asks the Panel to ensure that the relevant provisions of the WTO Agreements, including Article 13 of the *Agreement on Agriculture*, are interpreted and applied as negotiated. The United States must respect the disciplines that it, and other WTO Members, agreed to at the end of the Uruguay Round.

39. Benin is grateful for the opportunity to present its views to the Panel in this extremely important dispute. Benin notes that further submissions are intended, and reserves the right to provide additional views to the Panel (including in response to the US First Written Submission of 11 July) as necessary and appropriate, at a later stage.

# ANNEX B-6

## THIRD PARTY SUBMISSION OF CANADA

15 July 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. Canada has a systemic interest in the correct interpretation of Annex 2 of the *Agreement on Agriculture* (*Agriculture Agreement*), as well as the export subsidy provisions of both the *Agriculture Agreement* and the *Agreement on Subsidies and Countervailing Measures* (*SCM Agreement*).

2. In its first written submission, Brazil makes a number of claims. Canada's comments relate to the claims of Brazil in respect of the following:

IX. Whether US production flexibility contract payments (PFC payments) made under the Federal Agriculture Improvement and Reform Act of 1996 and US direct payments made under the US Farm Security and Rural Investment Act of 2002 (2002 FSRI Act) satisfy the policy-specific criteria for decoupled income support in Annex 2, paragraph 6(b) of the *Agriculture Agreement*; and

X. Whether US GSM-102, GSM-103, and the SCG export credit guarantee programmes provide export subsidies in violation of Articles 8 and 10.1 of the *Agriculture Agreement*.

## II. CLAIMS REGARDING US DOMESTIC AGRICULTURAL SUPPORT MEASURES

3. Among the claims brought by Brazil against the United States in this dispute are those concerning the conformity of US domestic subsidies with US obligations under Part III of the *SCM Agreement* and Article XVI of the *General Agreement on Tariffs and Trade 1994* (*GATT 1994*).

4. On 20 June 2003, the Panel preliminarily ruled that it would defer consideration of Brazil's claims under Part III of the *SCM Agreement* and Article XVI of *GATT 1994* until after it had expressed views on whether the US measures satisfy the conditions of Article 13 of the *Agriculture Agreement* (the so-called "Peace Clause"). Accordingly, Brazil argues in its first written submission that PFC payments and direct payments (US measures involving direct payments to US agricultural producers) are not exempt from action under the Peace Clause because they do not conform fully to the criteria in Annex 2 of the *Agriculture Agreement*.[1] The United States argues in response that PFC payments are not within the Panel's terms of reference because they were no longer in effect at the time of the consultation or panel requests.[2] Regarding direct payments, the United States argues that these measures are exempt from action because they conform fully to the provisions of Annex 2 and are therefore covered by Article 13(a)(ii) of the *Agriculture Agreement*.[3]

5. Canada provides views in this submission on the conformity of PFC payments and direct payments with criteria in Annex 2 of the *Agriculture Agreement*.

### A. PFC PAYMENTS AND DIRECT PAYMENTS DO NOT QUALIFY AS EXEMPT DECOUPLED INCOME SUPPORT UNDER THE *AGRICULTURE AGREEMENT*

6. It is Canada's view that PFC payments and direct payments do not fully conform to the provisions of paragraph 6(b) of Annex 2 of the *Agriculture Agreement* for the reasons set out below.

[1] First Written Submission of Brazil, 24 June 2003 , at paras. 153 and 173 [hereinafter Brazil First Written Submission].

[2] First Written Submission of the United States, 11 July 2003, at paras. 190 and 207-211 [hereinafter "US First Written Submission"].

[3] US First Written Submission, paras. 64-68.

**1. Decoupled income support under Annex 2 of the *Agriculture Agreement* is exempt from action under the *SCM Agreement* and *GATT 1994***

7. Annex 2 of the *Agriculture Agreement* is relevant to actionable subsidy cases under the *SCM Agreement* and *GATT 1994* because the *Agriculture Agreement* provides for certain conditional exemptions. In this section, Canada sets out the relationship between these three agreements in this respect.

8. Action under Part III of the *SCM Agreement* and Article XVI of *GATT 1994* depends on a determination of the existence of a "subsidy".[4] Article 1.1 of the *SCM Agreement* sets out the definition of a subsidy:

**1.1 For the purpose of this Agreement, a subsidy shall be deemed to exist if:**

(a)(1) there is a financial contribution by a government or any public body within the territory of a Member…

or

(a)(2) here is any form of income or price support in the sense of Article XVI of GATT 1994;

and

(b) a benefit is thereby conferred.

9. Article 1.2 provides that a subsidy is actionable under Part III of the Agreement if it is "specific" in accordance with the provisions of Article 2.

10. Article 5 begins Part III of the *SCM Agreement* on actionable subsidies by providing that "[n]o Member should cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members...". Articles 5 and 6 describe "adverse effects" and set out the basis for determining whether they exist. Article 7 sets out the available remedies where adverse effects do exist. All of these provisions are subject to Article 13 of the *Agriculture Agreement*.[5]

11. Article 13 of the *Agriculture Agreement* conditionally exempts domestic support measures from actionable subsidy complaints. It provides in relevant part:

---

[4] See *United States – Tax Treatment for "Foreign Sales Corporations"*, Report of the Appellate Body, WT/DS108/AB/R, adopted March 20, 2000 at para. 93 [hereinafter *US FSC* AB Report]:

> Article 1.1 sets forth the general definition of the term "subsidy" which applies "for the purpose of this Agreement". This definition, therefore, applies wherever the word "subsidy" occurs throughout the *SCM Agreement* and conditions the application of the provisions of that Agreement regarding *prohibited* subsidies in Part II, *actionable* subsidies in Part III, *non-actionable* subsidies in Part IV and countervailing measures in Part V [emphasis in original].

[5] Article 5 ends with: "This Article does not apply to subsidies maintained on agricultural products as provided in Article 13 of the Agreement on Agriculture". Article 6.9 contains identical language. Article 7.1 begins: "Except as provided in Article 13 of the Agreement on Agriculture, …".

> Regarding action under Article XVI of *GATT 1994*, in addition to the provisions in Article 13 of the *Agriculture Agreement*, Article 21.1 states: "The provisions of GATT 1994… shall apply subject to the provisions of this Agreement."

> During the implementation period, notwithstanding the provisions of *GATT 1994* and the SCM Agreement on Subsidies and Countervailing Measures (referred to in this Article as the "Subsidies Agreement"):
>
> (a) domestic support measures that conform fully to the provisions of Annex 2 to this Agreement shall be:
>
> …
>
> (ii) exempt from actions based on Article XVI of *GATT 1994* and Part III of the Subsidies Agreement;
>
> …
>
> (b) domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, shall be:
>
> …
>
> (ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year…

12. Accordingly, domestic subsidies are exempt from application of the provisions in Part III of the *Subsidies Agreement* and of Article XVI of *GATT 1994* if they conform to Annex 2 of the *Agriculture Agreement*. Domestic subsidies that do not conform to Annex 2 are exempt if such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year.

**2. Decoupled income support must not be linked to the type of commodity produced in any year after the base period**

13. To determine whether a measure is exempt under Article 13(a) of the *Agriculture Agreement*, it must be assessed under the criteria of Annex 2. Canada sets out the relevant Annex 2 provisions.

14. Annex 2 is the basis for the conditional exemption of domestic subsidies, under Article 13(a) of the *Agriculture Agreement*, from the application of Part III of the *SCM Agreement* and Article XVI of *GATT 1994*. Annex 2 also conditionally (and principally) exempts domestic support measures from reduction commitments pursuant to exceptions under Articles 3.2, 6 and 7 of the Agreement. Paragraph 1 of Annex 2 reads as follows:

> 1. Domestic support measures for which exemption from the reduction commitments is claimed shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production. Accordingly, all measures for which exemption is claimed shall conform to the following basic criteria:
>
> (a) the support in question shall be provided through a publicly-funded government programme (including government revenue foregone) not involving transfers from consumers; and,
>
> (b) the support in question shall not have the effect of providing price support to producers;
>
> plus policy-specific criteria and conditions as set out below.

15. The policy-specific criteria are for each of the following measures: general services (paragraph 2); public stockholding (paragraph 3); domestic food aid (paragraph 4); and direct payments to producers (paragraphs 5-13).

16. Paragraph 5 of Annex 2 provides that direct payments to producers are exempt only if they meet the basic criteria in paragraph 1 of Annex 2 and the "specific criteria applying to individual types of direct payment as set out in paragraphs 6 through 13…". Paragraph 5 further specifies that, to be exempt, any measure that does *not* constitute a type of direct payment covered by paragraphs 6-13 must conform to the criteria in paragraph 6(b) through (e) as well as the basic criteria listed in paragraph 1.

17. Paragraph 6 of Annex 2 reads:

> 6. Decoupled income support
>
> (a) Eligibility for such payments shall be determined by clearly-defined criteria such as income, status as a producer or landowner, factor use or production level in a defined and fixed base period.
>
> (b) The amount of such payments in any given year shall not be related to, or based on, the type or volume of production (including livestock units) undertaken by the producer in any year after the base period.
>
> (c) The amount of such payments in any given year shall not be related to, or based on, the prices, domestic or international, applying to any production undertaken in any year after the base period.
>
> (d) The amount of such payments in any given year shall not be related to, or based on, the factors of production employed in any year after the base period.
>
> (e) No production shall be required in order to receive such payments.

18. For direct payments to qualify as decoupled income support, paragraph 6(b) requires that the amount of the payments not be "related to, or based on, the type… of production… undertaken by the producer in any year after the base period." The ordinary meaning of "production" is "something which is produced by an action, process, etc.; a product".[6] Nothing in the context or in the object and purpose of this subparagraph, of Annex 2, or of the *Agriculture Agreement* as a whole detracts from this ordinary meaning. Accordingly, under paragraph 6(b), the amount of the payment must not be linked to the kind of product that is produced.

### 3. PFC payments and direct payments do not conform to Annex 2 of the *Agriculture Agreement* because the amount of these payments is linked to the type of commodity produced after the base period

19. Based on the evidence and arguments presented in the submissions of the disputing parties at this stage of the proceedings, it is Canada's assessment that the amount of PFC payments and direct payments are based on the type of commodity produced after the base period. Were the Panel to accept the evidence submitted by Brazil, it would find that PFC payments and direct payments are inconsistent with paragraph 6(b) of Annex 2 of the *Agriculture Agreement*.

[6] *The New Shorter Oxford English Dictionary*, p. 2367 [Exhibit CDA-1.].

20. Brazil asserts that under US law implementing PFC payments, the amount of such payments "could fluctuate from 100 percent of the PFC payments if [a producer] did not grow any fruits and vegetables, to zero percent in case such prohibited products are grown" or "[to] a reduced and pro-rated decrease based on acreage and/or value of the fruit or vegetable crop grown on PFC contract acres."[7] According to Brazil, US implementing law also provides that "PFC payments are reduced for each acre of wild rice that is produced." [8] Regarding direct payments, Brazil argues that under US implementing law, current fruit, vegetable, or wild rice production affects the amount of the direct payment in the same manner as such production affects the amount of the PFC payment. [9]

21. The United States describes direct payments under the 2002 FSRI Act as direct payments "to persons (farmers and landowners) with farm acres that formerly produced any of a series of commodities during the base period."[10] The United States claims that these payments constitute "decoupled income support" under Annex 2 of the *Agriculture Agreement* because they: (1) are provided through a publicly-funded government programme not involving transfers from consumers; (2) do not have the effect of providing price support to producers; and (3) conform to the five policy-specific criteria and conditions set out in paragraph 6.[11] The United States claims in particular that the direct payments are "decoupled from production" because the amount of the payments is not based on the type of production undertaken after the base period, in conformity with paragraph 6(b). In this respect, the United States argues:

> Not only is there no requirement that a direct payment recipient engage in any *particular* type or volume of production, a recipient need not engage in *any* current agricultural production in order to receive the direct payment.[12] [emphasis in original]

22. The United States does not describe or assess PFC payments, given its request for a preliminary ruling by the Panel that such payments are not within its terms of reference.[13]

23. Canada's assessment of the facts and arguments presented so far in this case is that the United States has incorrectly classified PFC payments as decoupled income support,[14] and that US direct payments do not qualify as such support.[15] Nowhere in its submission does the United States address the evidence of implementing legislation and regulations regarding either measure. Its argument that direct payment recipients are not required to engage in any particular type or volume of production (or any current agricultural production at all) to receive direct payments fails to address the evidence indicating that the amount of the payment may change based on whether base acreage is used for current production of fruits, vegetables, or wild rice. For both measures, the evidence indicates that the amount of the payment is based on the type of production: payments are full, nil, or some amount in between where base acres are used for current fruit, vegetable or wild rice production.

## III. CLAIMS REGARDING US EXPORT CREDIT GUARANTEE PROGRAMMES

24. Brazil asserts that the US GSM-102, GSM-103, and SCG programmes provide export subsidies with respect to upland cotton and other agricultural commodities in violation of Articles 8 and 10.1 of the *Agriculture Agreement*.[16] According to Brazil, the United States violates Articles 8 and 10.1 of the *Agriculture Agreement* because these programmes:

XI. provide export subsidies under item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement;*[17] and

XII. provide "subsidies" that are "contingent upon export performance" under Articles 1.1 and 3.1(a) of that Agreement.[18]

25. As a result, Brazil argues, these measures do not fully conform to the provisions of Part V of the *Agriculture Agreement* and the Peace Clause, therefore, does not exempt them from actions based on Article 3 of the *SCM Agreement.*[19] Brazil also argues that these programmes provide prohibited export subsidies within the meaning of Article 3.1(a) of the *SCM Agreement* and requests the Panel to recommend to the DSB that the measures be withdrawn without delay under Article 4.7.[20]

26. The United States argues in response that its export credit guarantee programmes are not export subsidies subject to Article 10.1 of the *Agriculture Agreement* because Article 10.2 permits export credit guarantee practices "to continue, unaffected by export subsidy disciplines otherwise negotiated and reflected in the text of the Agreement".[21] The United States asserts that these programmes do not provide prohibited export subsidies under Article 3.1(a) of the *SCM Agreement* because export credit guarantees are carved out from export subsidy commitments by virtue of Article 10.2 of the *Agriculture Agreement* and any application of Article 3 of the *SCM Agreement* is subject to the provisions of the *Agriculture Agreement*.[22] Finally, according to the United States, its measures do not satisfy the standard in item (j) of Annex I of the *SCM Agreement* and are not, for that reason alone, export subsidies under Article 3.1(a).[23]

27. The United States also requests the Panel to rule preliminarily that Brazil's arguments in connection with all commodities other than upland cotton are not properly before the Panel, and limits its arguments to upland cotton accordingly.[24]

28. In this submission, Canada limits its views to whether the United States has violated Articles 8 and 10.1 of the *Agriculture Agreement* by providing export subsidies in the form of export credit guarantees resulting in the circumvention of US export subsidy commitments with respect to upland cotton. Canada notes that this aspect of Brazil's claim is both independent and determinative of the applicability in this dispute of the Peace Clause under Article 13(c)(ii) of the *Agriculture Agreement*. That is, a violation of Articles 8 and 10.1 in this case would itself form the basis for both a recommendation by the DSB to the United States to bring its measures into conformity and would also form the basis for continued action by Brazil under Article 3 of the *SCM Agreement.*

A. EXPORT CREDIT GUARANTEES MAY PROVIDE "EXPORT SUBSIDIES" UNDER THE *AGRICULTURE AGREEMENT*

29. Under the *SCM Agreement*, export subsidies are prohibited. Under the *Agriculture Agreement*, certain export subsidies are allowed up to certain limits. The export subsidy disciplines of the *SCM Agreement* apply subject to the export subsidy disciplines of the *Agriculture Agreement*.[25] The Appellate Body confirmed in its first *Canada - Dairy* implementation report that "the WTO-consistency of an export subsidy for agricultural products has to be examined, in the first place, under the *Agreement on Agriculture*."[26] Canada sets out the relevant provisions of both Agreements in this section.

30. Article 1(e) of the *Agriculture Agreement* defines "export subsidies" as "subsidies contingent upon export performance, including the export subsidies listed in Article 9 of this Agreement". Article 3.3 sets out the obligation of Members not to provide export subsidies listed in Article 9 in excess of scheduled commitment levels:

> Subject to the provisions of paragraphs 2(b) and 4 of Article 9, a Member shall not provide export subsidies listed in paragraph 1 of Article 9 in respect of the agricultural products or groups of products specified in Section II of Part IV of its Schedule in excess of the budgetary outlay and quantity commitment levels specified therein and shall not provide such subsidies in respect of any agricultural product not specified in that Section of its Schedule.

31. Article 8 of the *Agriculture Agreement* confirms the fundamental obligations of Members with respect to the provision of export subsidies:

> Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and with the commitments as specified in that Member's Schedule.

32. Article 9 of the *Agriculture Agreement* lists and describes certain export subsidies that are subject to reduction commitments. All other export subsidies fall within the scope of Article 10.1, which reads:

> Export subsidies not listed in paragraph 1 of Article 9 shall not be applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments; nor shall non-commercial transactions be used to circumvent such commitments.

33. The *Agriculture Agreement* does not define the term "subsidy" in the definition of "export subsidy" in Article 1(e) of the Agreement. The Appellate Body drew upon the definition of a "subsidy" in Article 1.1 of the *SCM Agreement* as context to the term "subsidy" in Article 1(e) of the *Agriculture Agreement* in both its original *Canada – Dairy* report and its original and implementation

[25] See Article 3.1 of the *SCM Agreement* and Articles 13(c)(ii) and 21.1 of the *Agriculture Agreement*.

[26] *Canada - Measures Affecting the Importation of Milk and the Exportation of Dairy Products: Recourse to Article 21.5 of the DSU by New Zealand and the United States*, Report of the Appellate Body, WT/DS103/AB/RW, WT/DS113/AB/RW, adopted 18 December 2001, paras. 123-124.

reports in *US - FSC*.[27] The Appellate Body also held in *US - FSC* that the "contingent upon export performance" requirements in the *Agriculture Agreement* and the *SCM Agreement* are the same.[28]

34. Article 1.1 of the *SCM Agreement* sets out the definition of a subsidy, which reads in relevant part:

> 1.1 For the purpose of this Agreement, a subsidy shall be deemed to exist if:
>
> (a)(1) there is a financial contribution by a government or any public body within the territory of a Member…, i.e. where:
>
> (i) a government practice involves… potential direct transfers of funds or liabilities (e.g. loan guarantees); …
>
> and
>
> (b) a benefit is thereby conferred.

35. Article 3.1(a) of the *SCM Agreement* describes export subsidies as follows:

> 3.1 Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited:
>
> (a) subsidies contingent, in law or in fact, whether solely or as one of several other conditions, upon export performance, including those illustrated in Annex I…

36. Annex I of the *SCM Agreement* includes in particular item (j), which reads:

> The provision by governments (or special institutions controlled by governments) of export credit guarantee or insurance programmes, of insurance or guarantee programmes against increases in the cost of exported products or of exchange risk programmes, at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes.

37. Canada provides views only on key elements of Articles 1 and 3.1(a) of the *SCM Agreement* that are applicable to a determination of whether the US programmes provide "export subsidies" under Article 1(e) of the *Agriculture Agreement.* If they do, then they are subject to US obligations under Articles 8 and 10.1 of the *Agriculture Agreement*.

## B. US EXPORT CREDIT GUARANTEES MAY GRANT EXPORT SUBSIDIES UNDER ARTICLE 1(E) OF THE *AGRICULTURE AGREEMENT* AND ARTICLE 3.1(A) OF THE *SCM AGREEMENT*

38. Based on the evidence and arguments presented by the disputing parties at this stage in the proceedings, it is Canada's assessment that US export credit guarantee programmes may provide "subsidies contingent upon export performance" under Article 1(e) of the *Agriculture Agreement* that

[27] See *Canada - Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, Report of the Appellate Body, WT/DS103/AB/R, WT/DS113/R, adopted 27 October 1999, para. 87; *US – FSC* AB Report, paras. 136-137; *United States – Tax Treatment for "Foreign Sales Corporations: Recourse to Article 21.5 of the DSU by the European Communities*, Report of the Appellate Body, WT/DS108/AB/RW, adopted 29 January 2002, para. 194 [hereinafter *US – FSC* Article 21.5 AB Report].

[28] *US – FSC* AB Report, paras. 141-142; *US – FSC* Article 21.5 AB Report, para. 192.

are "not listed in paragraph 1 of Article 9", pursuant to Article 10.1. Because the United States has no export subsidy reduction commitments for upland cotton, it may have violated Article 10.1 by applying such subsidies in a manner that results in circumvention of its export subsidy commitments. The United States may have also therefore violated Article 8 by providing export subsidies "otherwise than in conformity with this Agreement".

39. Evidence submitted by Brazil indicates that the United States has exceeded its quantitative export subsidy reduction commitment level for various agricultural commodities, including upland cotton.[29] Accordingly, were the Panel to accept such evidence, the United States would bear the burden of establishing that no export subsidies have been granted in respect of the quantity of exports in question pursuant to Article 10.3 of the *Agriculture Agreement*.[30]

40. The United States cannot deny that US export credit guarantees involve a "financial contribution" in the form of a "potential direct transfer of funds" under Article 1.1(a)(1)(i) of the *SCM Agreement*. Export credit guarantees are loan guarantees. Nor can the United States deny that the export guarantees are contingent upon export performance under Article 3.1(a) of the Agreement. Canada therefore addresses only the "benefit" requirement of the subsidy definition under Article 1.1(b) of the *SCM Agreement*.

41. The determination of a "benefit" in transactions involving agricultural commodities is necessarily factual. However, any assessment of the facts in this dispute must be undertaken within an appropriate legal framework. The applicable framework in this dispute is based on well-established WTO case law.

42. In *Canada – Aircraft*, the panel found that:

> … a financial contribution will only confer a "benefit", *i.e.*, an advantage, if it is provided on terms that are more advantageous than those that would have been available to the recipient on the market.[31]

43. The Appellate Body upheld this finding:

> We ... believe that the word "benefit", as used in Article 1.1(b), implies some kind of comparison. This must be so, for there can be no "benefit" to the recipient unless the "financial contribution" makes the recipient "better off" than it would otherwise have been, absent that contribution. In our view, the marketplace provides an appropriate basis for comparison in determining whether a "benefit" has been "conferred", because the trade-distorting potential of a "financial contribution" can be identified by determining whether the recipient has received a "financial contribution" on terms more favourable than those available to the recipient in the market.[32]

44. Based on this reasoning, the question is whether there is a difference between the amount that the firm receiving the guarantee pays on credit guaranteed under the US programmes and the amount that the firm would pay on a comparable commercial loan absent that guarantee. The benefit is the

[29] Brazil First Written Submission, paras. 265-266.

[30] See *Canada – Measures Affecting the Importation of Milk and the Exportation of Dairy Products: Second Recourse to Article 21.5 of the DSU by New Zealand and the United States*, Report of the Appellate Body, WT/DS103/AB/RW2, WT/DS113/AB/RW2, adopted 17 January 2003, para. 73.

[31] *Canada – Measures Affecting the Export of Civilian Aircraft*, Report of the Panel, WT/DS70/R, adopted 20 August 1999, para. 9.112.

[32] *Canada – Measures Affecting the Export of Civilian Aircraft*, Report of the Appellate Body, WT/DS70/AB/R, adopted August 20, 1999 at para. 157.

difference between these two amounts adjusted for any differences in fees. The useful context provided by Article 14(c) of the *SCM Agreement* supports such a standard. Article 14(c) reads:

> [A] loan guarantee by a government shall not be considered as conferring a benefit, unless there is a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed by the government and the amount that the firm would pay on a comparable commercial loan absent the government guarantee. In this case the benefit shall be the difference between these two amounts adjusted for any differences in fees[.]

45. The panel in *Canada - Aircraft II* established a similar standard in respect of equity guarantees provided through a Canadian provincial government financing institution called *Investissement Québec* (IQ).[33] The panel reasoned as follows:

> Consistent with the findings of the panel and Appellate Body in *Canada – Aircraft*, we consider that *IQ* equity guarantees will confer a "benefit" to the extent that they are made available to Bombardier customers on terms more favourable than those on which such Bombardier customers could obtain comparable equity guarantees in the market. We note that the parties appear to agree that this standard can be applied by reviewing the fees, if any, charged by *IQ* for providing its equity guarantees. We agree that the "benefit" standard could be applied to *IQ* equity guarantees in this manner. Thus, to the extent that *IQ*'s fees are more favourable than fees that would be charged by guarantors with Québec's credit rating in the market for comparable transactions, *IQ*'s equity guarantees may be deemed to confer a "benefit".[34]

46. The panel went on to find that:

> … a "benefit" could arise if there is a difference between the cost of equity with and without an *IQ* equity guarantee, to the extent that such difference is not covered by the fees charged by *IQ* for providing the equity guarantee. In our opinion, it is safe to assume that such cost difference would not be covered by *IQ*'s fees if it is established that *IQ*'s fees are not market-based.[35]

47. Regarding IQ loan guarantees, the panel applied the same reasoning:

> In considering precisely what Brazil must show in order to demonstrate the existence of a "benefit", we note the findings of the panel and Appellate Body in *Canada – Aircraft*. We therefore consider that *IQ* loan guarantees will confer a "benefit" to the extent that they are made available to Bombardier customers on terms more favourable that those on which such Bombardier customers could obtain comparable loan guarantees in the market. In applying this standard, we are guided by Article 14(c) of the SCM Agreement, which provides contextual guidance for interpreting the term "benefit" in the context of loan guarantees.
>
> (…)
>
> In our view, and taking into account the contextual guidance afforded by Article 14(c), we consider that an *IQ* loan guarantee will confer a "benefit" when

---

[33] *Canada – Export Credits and Loan Guarantees for Regional Aircraft*, Report of the Panel, WT/DS222/R, adopted 19 February 2002, para. 7.397 [hereinafter *Canada – Export Credits*, Panel Report].

[34] *Canada – Export* Credits, Panel Report, para. 7.344.

[35] *Canada – Export* Credits, Panel Report, para. 7.345.

> "there is a difference between the amount that the firm receiving the guarantee pays on a loan guaranteed by [*IQ*] and the amount that the firm would pay on a comparable commercial loan absent the [*IQ*] guarantee. In this case the benefit shall be the difference between these two amounts adjusted for any differences in fees". In other words, there will be a "benefit" when the cost-saving for a Bombardier customer for securing a loan with an *IQ* loan guarantee is not offset by *IQ*'s fees. In our opinion, it is safe to assume that this will be the case if it is established that *IQ*'s fees are not market-based.[36]

48. The same standard applies in the current dispute.

49. The United States avoids addressing the standard under Article 1.1(b) and argues simply that its export credit guarantee programmes "do not run afoul of the criteria of item (j)" of Annex I of the *SCM Agreement* and that, therefore, "…they are not a prohibited export subsidy under Article 3.1(a) of the Subsidies Agreement."[37] The United States asks the panel to interpret item (j) *a contrario*, meaning that if its measures meet the description of the programmes in the provisions but do not meet the standard for being considered a subsidy *per se*, the measures must be deemed not to confer export subsidies. However, item (j) does not create a "safe haven" for export credit guarantees where "premium rates… are [adequate] to cover the long-term operating costs and losses of the [programme]." To the contrary, item (j) "sets out the circumstances in which the grant of loan guarantees is *per se* deemed to be an export subsidy."[38] It simply "illustrates" deemed export subsidy practices. Nothing in the context or object and purpose of the *SCM Agreement* supports the US interpretation.

50. The issue of whether the premium rates under the US programmes are adequate under item (j) of Annex I of the *SCM Agreement* is necessarily factual. However, even if the US programmes charge adequate fees under the item (j) standard, the United States must nevertheless demonstrate that no export subsidies have been granted in respect of the quantity of exports in question in accordance with Articles 10.1 and 10.3 of the *Agriculture Agreement*. In other words, it must demonstrate the absence of subsidization on a transaction-by-transaction basis under Articles 1 and 3.1(a) of the *SCM Agreement*.

51. The United States also argues at length that Article 10.2 of the *Agriculture Agreement* exempts export credit practices from subsidy disciplines under the Agreement. This argument is untenable.

52. Article 10.2 of the Agreement on Agriculture reads:

> Members undertake to work toward the development of internationally agreed disciplines to govern the provision of export credits, export credit guarantees or insurance programmes and, after agreement on such disciplines, to provide export credits, export credit guarantees or insurance programmes only in conformity therewith.

53. Article 10.2 refers to "disciplines to govern the provision of export credits, export credit guarantees or insurance programmes" and not to "disciplines to govern the provision of *export subsidies in the form of* export credits, export credit guarantees or insurance programmes". This provision sets out an intention on the part of Members to undertake further work regarding these measures – the simple fact of agreeing to do so, however, does not amount to a permission to use those measures to confer export subsidies without consequence and without limit. The US

[36] *Canada – Export Credits*, Panel Report, paras. 7.397 and 7.398.
[37] US First Written Submission, para. 183.
[38] *Canada – Export Credits*, Panel Report, para. 7.395.

interpretation of Article 10.2 ignores the important context provided by Article 10.1. It also directly contradicts the stated object and purpose of Article 10 as a whole: "Prevention of Circumvention of Export Subsidy Commitments".[39]

54. Article 10.2 of the *Agriculture Agreement* does not exempt the United States from its obligation to demonstrate, under Article 10.3, that no export subsidies have been granted in respect of the quantity of exports in question in this dispute contrary to Article 10.1. For the United States to meet the requirements of Article 10.3, it must demonstrate the absence of subsidization as understood under Article 1(e) of the *Agriculture Agreement*. Indeed, the United States does not address Articles 1(e) or 10.1, or any prior panel and Appellate Body findings thereon.

## IV. CONCLUSION

55. At this stage of the proceedings, it is Canada's view that if the panel accepts the evidence presented by Brazil in its first written submission, it would find that PFC payments and direct payments do not satisfy the policy-specific criteria in paragraph 6(b) of Annex 2 of the *Agriculture Agreement*. Contrary to those requirements, the amount of these payments would be found to vary based on current production of certain fruit, vegetables and wild rice.

56. Regarding the US export credit guarantee programmes, in Canada's view, were the Panel to find that these programs provide export subsidies within the meaning of Article 1(e) of the *Agriculture Agreement*, then it would also find that the United States has violated Articles 8 and 10.1 at the very least in respect of exports of upland cotton.

[39] See also "Export Credits and Related Facilities", Background Paper by the Secretariat, G/AG/NG/S/13, 26 June 2000 [Exhibit CDA-2.] at para. 44:

> [A]s matters currently stand the only rules and disciplines on agricultural export credits are those of the Agreement on Agriculture but only to the extent that such measures constitute export subsidies for the purposes of the Agreement on Agriculture. Where exports of an agricultural product are considered to be subsidised through export credits or related facilities, ascertaining the exported quantities benefitting [sic] from such measures for the purposes of determining conformity with export quantity reduction commitments would be reasonably straight forward. Quantifying related budgetary outlays and revenue foregone for the annual commitment level in question, using market-related premium or interest rate benchmarks for example (it is not clear what, if any, role there might be for export credit "subsidy equivalents" in this context), may be less straight forward but not necessarily problematic.

# ANNEX B-7

## THIRD PARTY SUBMISSION OF CHINA

15 July 2003

TABLE OF CONTENTS

## 1. INTRODUCTION

1. China is appreciative of this opportunity to present its views to the Panel in this proceeding on various domestic supports and export subsidies granted by the United States (the "US") for the production, use and export of US upland cotton.

2. In line with this Panel's decision dated 20 June 2003, China will focus its submission to issues relating to

(1) the burden of proof under Article 13 of the *Agreement on Agriculture* (the "Peace Clause");

(2) proper categorization of direct payments under the US. Farm Security and Rural Investment Act of 2002 ("FSRI"); and

(3) treatment of a non-complying measure by this Panel.

In China's opinion, these three issues, amongst others, call for close attention and analysis by the Panel.

## 2. ARGUMENTS

### 2.1. The Burden Of Proof Under The Peace Clause

3. China agrees with Brazil that "the [P]eace [C]lause is in the nature of an affirmative defense, and that the burden of proof that US domestic support and export subsidies to upland cotton are provided in conformity with the requirements of the [P]eace [C]lause lies with the United States and not with Brazil as the complainant"[1].

4. The burden of proof issue has been squarely dealt with by the Appellate Body in the *US – Shirts and Blouses* Case[2]. It stated that a complaining party asserting a claim under a positive rule, establishing obligations in themselves, first has the burden of proof to establish a prima facie case of an infringement of obligations by the responding Member, then the burden shift to the responding Member to adduces sufficient evidence to rebut the presumption[3]. However, with respect to rules providing "limited exceptions from obligations under certain other provisions of the GATT 1994", the Appellate Body is of the view that they are "in the nature of affirmative defense, thus it is only reasonable that the burden of establishing such a defense should rest on the party asserting it"[4].

5. The parties to this dispute disagree on the nature of the Peace Clause. The US does not see the Peace Clause as an affirmative defense; it argues that portions of the Peace Clause impose positive obligations. It cites Articles 13(a)(i), 13(a)(ii) and 13(b)(ii) of the Peace Clause to prove that by incorporating obligations under Article 6 and Annex 2 within the "conform fully to" requirement, the Peace Clause contains positive obligations on members[5].

---

[1] Para. 107, Page 50, *First Submission of Brazil*, 24 June 2003.

[2] Section IV, Appellate Body Report, *US - Shirts and Blouses, WT/DS33/AB/R*.

[3] Page13-14, Section IV Burden of Proof, Appellate Body Report, *US - Shirts and Blouses, WT/DS33/AB/R*.

[4] Page 15-16, Section IV and Text at Note 23, Appellate Body Report, *US - Shirts and Blouses, WT/DS33/AB/R* .

[5] Paras. 43 and 45, *US First Written Submission*, 11 July 2003.

6. China has a different opinion. When stand-alone, Article 6 in and Annex 2 to the *Agreement on Agriculture* and may contain positive obligations on Members. However, when cross-referred to by Articles 13(a)(ii) and 13(b)(ii) respectively, they are brought under the Peace Clause to form part and parcel of pre-conditions to its application. Generic components of the relevant Peace Clause provisions[6] are (i) domestic support measures or export subsidies; (ii) that fully conform to Annex 2 and/or Article 6 of the *Agreement on Agriculture*; (iii) are exempt from actions; (iv) provided that…[7] The thrust of the relevant provisions of the Peace Clause lies in its exemption of measures from certain actions. To qualify under the exemption, a measure under item (i) above must first meet the requirements under items (ii) and (iv) above. The moment either Annex 2 or Article 6 are brought into "fully conform to" formula under item (ii) above, it ranks *pari passu* with the other requirement under item (iv) above to form conditions precedent to a successful exemption.

7. China believes the US errs on seeing no distinction between "obligation" and "condition". The Peace Clause requirement for full conformity to Article 6 and Annex 2 does not create new obligations because Members have to comply with Article 6 and Annex 2 whether Article 13 exists or not. Within the Peace Clause, these requirements do not stand to impose obligations on Members, but to set conditions precedent for a Members intending to invoke Peace Clause protection. Positive obligations to comply with Article 6 and Annex 2, lie under where they are, i.e. under Article 6 and Annex 2, but not under the Peace Clause.

8. China does not see any "absurdity" as described by the United States in its written submission[8]. No such "absurdity" would be instilled into the process if at the first stage, the party alleging protection of Peace Clause for its measures is required to discharge its burden to prove that such measures do conform to the relevant Peace Clause conditions; if it cannot so prove, the measures would lose Peace Clause protection. A second stage will follow for the party claiming against the measures to establish its substantive case, without the Peace Clause shield.

9. China hopes the above two-step approach will help both this Panel and the parties to move the procedures on towards resolution of the case.

### 2.2 Proper Categorization Of US FSRI 2002 Direct Payments

10. The United States in its first written submission argues that direct payments ("DP") under FSRI conforms fully to Annex 2 of the *Agreement on Agriculture*[9] and are therefore "Green Box" in nature. Brazil argues that DP programme is inconsistent with Paras. 1, 6(a) and (b) of Annex 2 to the *Agreement on Agriculture*, as

(1) it conditions the type of production undertaken by the producer[10];

(2) it sanctions base period updating[11]; and

(3) it has production and trade-distorting effects[12].

11. Para. 6(a) of Annex 2 to the *Agreement on Agriculture* provides to the effect that eligibility for "Green Box" direct payment support measures "shall be determined by clearly-defined criteria"

[6] Articles 13(b)(ii), 13(b)(iii) and 13(c)(ii), the *Agreement on Agriculture*.
[7] Note that Article 13(c)(ii) of the Peace Clause has no such proviso.
[8] Para. 36, *US First Written Submission*, 11 July 2003.
[9] Paras. 54 through to 68, *US First Written Submission*, 11 July 2003.
[10] Para. 174, *First Submission of Brazil*, 24 June 2003.
[11] Paras. 176 through to 182, *First Submission of Brazil*, 24 June 2003.
[12] Paras. 183 through to 191, *First Submission of Brazil*, 24 June 2003.

"*in* a defined and fixed base period." The word "in" requires a link between the "criteria" and the "defined and fixed base period". In other words, to qualify for "Green Box" direct payment measure under Para. 6(a), a criterion adopted by a Member must be tied, in a chronological sense, to a starting time frame that cannot be moved up on the calendar.

12. As the United States concedes, production acreage is a criterion for making FSRI DP[13]. However, under FSRI, production acreage for the purpose of DP is not tied to a defined and fixed base period. It moves progressively along the calendar.

13. Under the FSRI DP scheme, payment acreage, being one factor in calculating payment[14], is 85% of a person's base acreage. Base acreage, in turn, are either (i) "a four year average (1998-2001) of plantings of covered commodities (including upland cotton)", or (ii) the total of production flexibility contract ("PFC") acreage under the US 1996 Federal Agricultural Reform Improvement and Reform Act ("FAIR") and the four-year average (1998-2001) of plantings of eligible oilseeds[15]. With respect to base acreage calculation method (i) above, the United States explains, FSRI DP allowed landowners to retain PFC base acres and "add 1998-2001 acres of eligible oilseeds or simply declare base acreage for all covered commodities" (including upland cotton)[16]. With respect to base acreage calculation method (ii) above, the United States explains that while a landowner may elect to simply utilize acres devoted to covered commodities during the 1998-2001 period for purpose of DP, a landowner need not do so; base acres may remain those under FAIR, implying no cotton production need have occurred since the 1993-1995 period for a landowner to have "cotton base acres". The United States then concludes that "[t]hese … base acres are defined in the 2002 [FSRI] Act and fixed for the duration of the legislation (that it, from marketing year 2002-2007)"[17]. Such a conclusion ignores the fact that during the progression from PFC to DP, the requisite link between the programme acreage as a criterion and the "defined and fixed" starting time frame is broken. The change of legislation from FAIR to FSRI and the replacement of PFC with DP were utilized for producers to leap from their previous coverage acreage, which should have been tied to the base period, to a new updated acreage in 2002.

14. Enticement certainly exists for a producer to obtain more payments by leaping over the calendar and updating production acreage. The fundamental requirement that "no, or at most minimal trade distorting effects or effects on production" as required by Article 1 of Annex 2 to the *Agreement on Agriculture* is therefore not met.

15. In China's opinion, without dwelling upon the burden of proof issue, the preponderance of evidence as produced by the parties indicates that the US DP under FSRI fails to meet the "tie" requirement under Para. 6(a) of Annex 2 of the *Agreement on Agriculture* and shall be properly categorized as non-"Green Box" measures.

### 2.3 Panel Treatment Of Measures Found By Earlier Proceedings To Be In Violation

16. Brazil also brought claims against export subsidy support granted for upland cotton export sales by US "Foreign Sales Corporations" ("FSCs") under the "FSC Repeal and Extraterritorial Income Act of 2000" ("ETI Act") [18].

[13] Paras. 56 and 67, *US. First Written Submission*, July 11, 2003.,
[14] Para. 58, *Ibid.*
[15] Para. 59, *Ibid.*
[16] Para. 60, *Ibid.*
[17] Subpara. 67(1), *Ibid.*
[18] Paras. 315 through to 330, *First Submission of Brazil*.

17. The US ETI Act has previously been found to violate the *Agreement on Agriculture* and the *Subsidies Agreement* by both the panel[19] and the Appellate Body[20] in *US – FSC (21.5)*. On 29 January 2002, the WTO Dispute Settlement Body (the "DSB") adopted the panel and Appellate Body reports, declaring that the ETI Act violates Articles 3.1(a) and 4.7 of the *Subsidies Agreement*, Articles 8 and 10.1 of the *Agreement on Agriculture* and Article III:4 of *GATT 1994*.

18. As the United States had failed to implement the DSB recommendations and rulings within the prescribed time framework, on 25 April 2003, the European Communities (the "EC") requested the DSB authorization to take appropriate countermeasures and to suspend concessions pursuant to Article 4.10 of the *Subsidies Agreement* and Article 22.7 of the *DSU*[21]. On 7 May 2003, the DSB authorized the EC to impose countermeasures against the US.

19. Brazil quoted main EC arguments and portions of the panel's and the Appellate Body's reasoning from *their* respective reports in *US – FSC (21.5)*, all to persuade this Panel into taking the same reasoning and conclusion[22].

20. China believes that the panel and the Appellate Body's reasoning and their conclusion in *US – FSC (21.5)* are of extraordinary value to the current Panel.

21. First, "[a]dopted panel reports are an important part of the GATT *acquis*. They are often considered by subsequent panels. They create *legitimate expectations* among WTO members, and, therefore, *should be taken into account where they are relevant to any dispute*. [emphasis added]." [23] Export subsidy support provided to upland cotton export sales by US "Foreign Sales Corporations" under the ETI Act as challenged by Brazil in this case, is exactly the very same one challenged by the EC and found to violate the *Agreement on Agriculture* and the *Subsidies Agreement* by the panel[24] and the Appellate Body[25] in *US – FSC (21.5)*. The panel and the Appellate Body's decisions, as well as DSB's adoption of same in *US – FSC (21.5)*, have already created "legitimate expectations" among WTO members. Should this Panel re-consider the arguments, analysis and conclusions in respect of the same measure adopted by the same Member in dispute, and re-decide with even the slightest difference, the WTO Members' legitimate expectations will be seriously disturbed and offended. Unless the current Panel finds the FSC export subsidies under the ETI Act challenged by Brazil in this case different from the FSC export subsidies under the ETI Act challenged by the EC in the *US – FSC (21.5)*, relevancy is fulfilled to the maximum extent possible. The very same export subsidies shall be governed by the same juridical analysis, rule and conclusion. Substantive deviation from that the reasoning and conclusion of the earlier case on the same measure may well cast misgivings on the established DSB authority and reputation.

22. The United States in its *First Written Submission* argues that:

---

[19] Panel Report, *US - FSC (21.5)*, WT/DS108/RW, adopted on 29 January, 2002.

[20] Appellate Body Report in *US - FSC (21.5)*, AB-2002-1, WT/DS108/AB/RW,adopted on 29 January, 2002.

[21] Recourse by the European Communities to Article 4.10 of the *Subsidies Agreement* and Article 22.7 of the *DSU*, WT/DS/108/26, circulated on April 25, 2003.

[22] Paras. 315 through to 327, *First Submission of Brazil*.

[23] Para. E, Report of the Appellate Body, *Japan - Taxes on Alcoholic Beverages*, AB-1996-2, adopted on 1 November 1996).

[24] Paras.8.30, 8.46, 8.48, 8.50, 8.74, 8.75, and 9.1(a.), Panel Report, *US - FSC (21.5)*, WT/DS108/RW, adopted on 29 January 2002.

[25] Paras.111, 116 through to 120, 122, 194, 196, and 256(d), Appellate Body Report, *US - FSC (21.5)*, AB-2002-1, WT/DS108/AB/RW, adopted on 29 January 2002.

> It also is well-established that even though panels may take into account prior panel and Appellate Body reports, "panels are not *bound* by previous decisions of panels or the Appellate Body even if the subject-matter is the same."[26]

China notes that US had omitted the immediate subsequent paragraph, in which the panel states:

> However, in the course of "normal dispute settlement procedures" required under Article 10.4 of the DSU, we *will take into account the conclusions and reasoning* in the Panel and Appellate Body reports in WT/DS50. Moreover, in our examination, we believe that we *should give significant weight to both Article 3.2 of the DSU,* which stresses the role of the WTO dispute settlement system in providing security and predictability to the multilateral trading system, *and to the need to avoid inconsistent rulings* (which concern has been referred to by both parties). In our view, these considerations form the basis of the requirement of the referral to the "original panel" wherever possible under Article 10.4 of the DSU.[27] [emphasis added]

China believes that second sentence following the US quote from the panel's report could not be more relevant to the US ETI Act before this Panel.

23. Secondly, the DSB has already, upon request by the EC, authorized the EC to impose countermeasures against the US, for its failure to implement the DSB recommendations and rulings within the prescribed time framework. DSB's authorization to counteract

(1) further strengthens the weight of the panel and the Appellate Body's decisions in *US – FSC (21.5).* Authorization by the DSB for countermeasures against the very same measures is a collective reflection that the measures shall have been withdrawn, and;

(2) brings up the need for efficiency. Given the DSB's heavy caseload, as well as workload of this Panel, benefits of efficiency far overweighs whatever need for repeating the work that had been completely accomplished by a previous panel and the Appellate Body.

24. Thirdly, in light of difficulties encountered by the DSB in encouraging compliance subsequent to the *US – FSC (21.5)* proceedings, a different finding by this Panel in relation to ETI in the current dispute will frustrate WTO's effectiveness as reflected in the DSB mechanism. The essence of "[p]rompt compliance with recommendations or rulings of the DSB" "to ensure effective resolution of disputes to the benefit of all Members" called for under Article 21.1of the *DSU* will evaporate.

25. Being a multilateral system, the WTO cannot afford to permit non-compliance by any Member in its face. One dispute settled will definitively involve several legal issues having been clarified and practices of certain members adjudicated. Such clarification and adjudication in one case must serve to benefit all members in the multilateral system. As Article 3.2 of the *DSU* tries to impress, the dispute settlement system of the WTO is a pivotal element in providing uniform security and predictability to the multilateral trading system and to avoid multiplication of the same practices being disputed in separate but non-distinct cases. To compel panels in later instances to re-visit the

[26] Para. 185, *First Written Submission of the US,* 11 July 2003, quoting in quotation marks Para. 7.30, Panel Report, *India – Patent Protection for Pharmaceutical and Agricultural Chemical Products*, WT/DS79/R, adopted 22 September 1998.

[27] Para. 7.30, Panel Report, *India – Patent Protection for Pharmaceutical and Agricultural Chemical Product*, WT/DS79/R, adopted 22 September 1998.

same legal issue and re-adjudicate the same practices the DSB recommends against on a second or even indefinite analytical journey would relegate WTO dispute settlement regime into disrepute.

26. The concern is not unfounded. The fact that Brazil had to resort to the WTO dispute settlement system and bring the ETI Act before this Panel is distinctly telling. This current Panel must put an end to that concern by ruling that the panel and the Appellate Body's reasoning *and* their conclusion in *US – FSC (21.5)* be taken by this Panel, unless by the time the current Panel makes it decision, such measures will have already been withdrawn by the US.

## 3. CONCLUSION

27. To sum up, China is of the following opinion:

(1) The Peace Clause is an affirmative defense in nature, and a party seeking its protection bears the burden of proof;

(2) The US DP, which removes production acreage from its required nexus with a defined and fixed based period by allowing acreage updating, is not "Green Box" measure within the meaning of Para. 6(a) of Annex 2 to the *Agreement on Agriculture*; and

(3) The US ETI Act has been found by a prior panel and the Appellate Body to violate the *Agreement on Agriculture* and the *Subsidies Agreement*. In addition, the DSB has authorized the complaining party in the prior proceeding to take countermeasures. In light of coherency and efficiency of the WTO dispute settlement mechanism, this Panel shall take the reasoning and conclusion of the Appellate Body in the earlier case.

28. China thanks this Panel for granting this opportunity to present its views on issues related to this proceeding, and hopes that this Panel will finds the above points helpful.

# ANNEX B-8

## FIRST THIRD PARTY SUBMISSION BY THE EUROPEAN COMMUNITIES

15 July 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. This dispute raises a number of complex yet important questions in respect of the applicable WTO regime for trade in agricultural goods. In this First Third Party Submission, the European Communities has submitted arguments on a number of questions raised by Brazil's First Written Submission.[1] However, the present submission should not be seen as exhaustive. Given the very short period between the deadline for the US First Written Submission and the deadline for submissions from third parties, the European Communities has not been able to incorporate in this submission a response to all of the arguments brought in the US First Written Submission which might merit a comment. Consequently, the European Communities reserves its right to submit argument on other questions (or to further develop the arguments set out here) at the First Session of the First Substantive Meeting with the Parties.

2. Following the Panel's invitation of 20 June 2003, the European Communities has essentially limited itself to questions related to the interpretation of Article 13 of the *Agreement on Agriculture*, and some of the "non-peace clause" related claims brought by Brazil. The European Communities will therefore argue that :

- As a preliminary matter, Brazil is incorrect to consider that only legislation which mandates a particular action can be found inconsistent with the WTO Agreements;

- Article 13 *Agreement on Agriculture* is not an affirmative defence;

- The first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture* does not create a free-standing obligation, separate from the basic criteria set out in the second sentence of paragraph 1; and,

- Article 10.2 of the *Agreement on Agriculture* does not exempt export credits and export credit guarantees from the disciplines of the *Agreement on Agriculture*.

3. The European Communities does not express an opinion on the application of the relevant legal interpretations to the facts of this dispute.

## II. PRELIMINARY ISSUE - BRAZIL'S REFERENCE TO A "MANDATORY / DISCRETIONARY DOCTRINE" IS UNFOUNDED

4. Before turning to the substantive questions of interpretation the European Communities would like to touch briefly upon one systemic issue raised in Brazil's submission. Brazil states in its First Written Submission that:

> "It is established under WTO law that a Member can only challenge measures of another Member *per se* if such measures mandate a violation of the WTO Agreement."[2]

5. Brazil cites as authority for this position para. 88 of the Appellate Body's Report in *United States – 1916 Act*. However, the Appellate Body did not "establish" that measures can only be

[1] Brazil's First Submission to the Panel regarding the "Peace Clause" and Non-Peace Clause Related Claims, 24 June 2003 ("Brazil's First Written Submission").

[2] Brazil's First Written Submission, para. 244. See, in the same sense, paras. 250 and 341.

challenged if they mandate a violation of the WTO Agreements. In that case, the Appellate Body upheld the panel's finding that the legislation in question was not discretionary and thus;

> "[did] not find it necessary to consider [..] whether Article 18.4, or any other provision of the *Anti-Dumping Agreement*, has supplanted or modified the distinction between mandatory and discretionary legislation".[3]

6. Panels have taken different approaches to this issue. The panel in *United States – Section 301* found that discretionary legislation may violate certain WTO obligations.[4] This approach can be contrasted with that of the panel in *United States – Export Restraints*.[5] More recently, the Appellate Body in considering an EC claim against US legislation noted that;

> "[it did not] preclud[e] the possibility that a Member could violate its WTO obligations by enacting legislation granting discretion to its authorities to act in violation of its WTO obligations. We [the Appellate Body] make no finding in this respect".[6]

7. Consequently, it is far from established that only mandatory legislation can be found *per se* inconsistent with the WTO Agreements. The European Communities, for one, is convinced that discretionary legislation may, in certain circumstances, be found to be inconsistent with WTO obligations. However, further discussion of this issue does not appear necessary at present, since Brazil claims that the legislation in question permits of no discretion and the United States does not appear to dispute this point.[7] Consequently, the European Communities will not develop its arguments on this issue further in this submission.

## III. ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE CANNOT BE CONSIDERED AN AFFIRMATIVE DEFENCE

8. Brazil argues that Article 13 of the *Agreement on Agriculture* should be understood as an affirmative defence and thus that the United States bears the burden of proof.[8] The United States has indicated that it disagrees with this characterisation, and considers that Article 13 is not an affirmative defence.[9]

9. The European Communities shares the view of the United States that there are compelling reasons to consider that Article 13 is not an affirmative defence.[10] Article 13 cannot be considered an

---

[3] Appellate Body Report, *United States – Anti-Dumping Act of 1916 ("United States – 1916 Act")*, WT/DS136/AB/R, WT/DS162/AB/R, adopted 26 September 2000, para. 99

[4] Panel Report, *United States – Sections 301-310 of the Trade Act of 1974 ("United States – Section 301")*, WT/DS152/R, adopted 27 January 2000, footnote 23, paras. 7.53-7.54. Note that the Appellate Body in *United States – 1916 Act* mentioned this finding, without suggesting that it was incorrect (see footnote 59 of the Appellate Body Report).

[5] Panel report, *United States – Measures Treating Export Restraints as Subsidies*, WT/DS194/R, adopted 23 August 2001, paras. 8.8 and 8.9.

[6] Footnote 334, Appellate Body Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities*, WT/DS212/AB/R, adopted 8 January 2003.

[7] Brazil's First Written Submission, para. 245.

[8] Brazil's First Written Submission, paras. 110 to 121.

[9] Para. 38, Comments of the United States of America on the Comments by Brazil and the Third Parties on the Question Posed by the Panel,.13 June 2003. See also First Written Submission of the United States of America, 11 July 2003 ("US First Written Submission"), paras. 38 to 47.

[10] The European Communities is aware of the fact that it used the term "defence" in its Initial Submission to the Panel of 10 June 2003 (Para. 6 , Comments by the European Communities on certain issues raised on an initial basis by the Panel, 10 June 2003). It did so, however, in the context of a discussion of what

affirmative defence which will excuse a violation of another provision of the WTO Agreements. Rather, it seems to the European Communities, Article 13 is a form of "gateway" or "threshold" provision, which regulates the use of certain mechanisms (countervailing duties, serious prejudice claims, non-violation complaints) in respect of certain types of subsidies. Conformity with the conditions of Article 13 has the effect of providing an exemption from action under Article XVI GATT 1994 and the *SCM Agreement*. Consequently, once a panel has determined whether or not agricultural subsides conform to the conditions of Article 13, it need not, indeed cannot, rule on whether those agricultural subsidies are consistent with Article XVI GATT 1994 and the *SCM Agreement*. For that reason, it cannot be equated to a defence to a violation of a provision of a WTO Agreement, in the way, for instance, Article XX may be considered a defence to a violation of Article I or III GATT 1994.

10. Even assuming, *arguendo*, Brazil's contention that Article 13 of the *Agreement on Agriculture* is an exception to the otherwise applicable disciplines[11], the Appellate Body has pointed out in *EC-Hormones* that merely characterising a provision as an "exception" and consequently an affirmative defence is insufficient to shift the burden of proof in dispute settlement proceedings.[12] Any finding reversing the ordinary rule that the complaining party bears the burden of proof to establish a *prima facie* case must be derived from an application of the normal rules of treaty interpretation. The ordinary rules of treaty interpretation do not lead to such a conclusion in this case.

11. First, as noted above, the Panel is not asked to examine a general rule – exception situation with respect to Article 13. Article 13 is more akin to a threshold permitting further action if that threshold is not complied with.

12. Second, Article 13 is an integral part of the *Agreement on Agriculture*. In that sense, it is comparable to Article 6 of the *Agreement on Textiles and Clothing*, Article 3.3 of the *Sanitary and Phytosanitary Agreement* and the second sentence of Article 2.4 of the *Agreement on Technical Barriers to Trade* which were found not to be affirmative defences by the Appellate Body.[13] Article 13 incorporates the obligations which a WTO Member assumes under the *Agreement on Agriculture* should it decide to provide agricultural subsidies to its producers, and regulates the status of such subsidies with respect to potential dispute settlement and the application of countervailing duties. In a similar fashion, Article 6 of the *Agreement on Textiles and Clothing* provides certain obligations which a WTO Member assumes if it decides to dis-apply the disciplines of the ATC in the form of a "transitional safeguard measure". Likewise, Article 3.3 of the *Sanitary and Phytosanitary*

---

appeared to be the extreme logical conclusion of the arguments which the United States made, in order to refute the proposition that the issue of conformity with Article 13 could only be dealt with in a separate panel proceeding, divorced from a panel proceeding which dealt with the claims conditional upon Article 13 not being applicable. The term "defence" was used in a general sense to connote an argument which could be invoked in reaction to another argument. Moreover, the European Communities did not use the term "affirmative defence" and did not use the term "defence" in the sense of a "defence […] to a claim of violation of a GATT obligation" or as a "limited exception from certain other provisions of the [WTO Agreements]" (Appellate Body Report, *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses from India* ("United States – Shirts and Blouses"), WT/DS33/AB/R, adopted 23 May 1997, page 15-16). Finally, the European Communities was addressing only the question posed by the Panel and not the question of the burden of proof applicable to Article 13.

[11] Brazil's First Written Submission, para. 120.

[12] Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) ("European Communities – Hormones")*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, para. 104.

[13] Appellate Body Report, *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses from India* ("United States – Shirts and Blouses"), WT/DS33/AB/R, adopted 23 May 1997, page 16. *European Communities – Hormones* Para. 104, Appellate Body Report, *European Communities — Trade Description of Sardines (European Communities – Sardines)*, WT/DS231/AB/R, adopted 23 October 2002. Paras. 274-275.

*Agreement* sets out obligations on a Member wishing to maintain a higher level of sanitary or phytosanitary protection than provided for in international standards. These provisions, like Article 13 of the *Agreement on Agriculture* provide certain rights to WTO Members, but cannot be seen as exceptions.

13. Third, as pointed out by the United States, considering Article 13 as an affirmative defence leads to perverse effects.[14] If a complaining Member makes a claim that a Member has acted inconsistently with the *Agreement on Agriculture*, the complaining Member will bear the burden of proof to establish a breach of the Agreement. However, if Article 13 is considered an affirmative defence, where a complaining Member brings a claim arguing breach of both the *Agreement on Agriculture* and the *SCM Agreement* the complaining Member would bear the burden of establishing a breach of the *Agreement on Agriculture*, the responding Member would bear the burden of proving that it was in compliance with the same provisions of the *Agreement on Agriculture* in order to apply Article 13, and the complaining Member would bear the burden of proof under the *SCM Agreement*. This cannot be what WTO Members intended when they negotiated Article 13. Indeed, the negotiators were aware of the issue of burden of proof and explicitly reversed the burden of proof in Article 10.3 *Agreement on Agriculture* with respect to potential circumvention of export subsidy commitments. That they did not agree on similar language with respect to Article 13 suggests that they intended the ordinary rules of burden of proof to apply.

14. Consequently, the European Communities respectfully requests that the Panel find that Article 13 is not an affirmative defence.

## IV. THE INTERPRETATION OF ANNEX 2 OF THE AGREEMENT ON AGRICULTURE

### A. THE RELEVANCE OF THE FIRST SENTENCE OF PARAGRAPH 1 OF ANNEX 2

15. Brazil argues in several instances that the first sentence of paragraph 1 of Annex 2 of the *Agreement on Agriculture* is an independent obligation which must be satisfied in addition to the basic criteria set out in paragraph 1 and the policy-specific criteria set out in paragraphs 2 to 13 of Annex 2.[15] The European Communities considers that this interpretation is incorrect. The first sentence does not set out an independent obligation. It simply signals the objective of Annex 2.

16. Paragraph 1 of Annex 2 reads as follows:

> 1. Domestic support measures for which exemption from the reduction commitments is claimed shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production. Accordingly, all measures for which exemption is claimed shall conform to the following basic criteria:
>
> (a) the support in question shall be provided through a publicly-funded government programme (including government revenue foregone) not involving transfers from consumers; and,
>
> (b) the support in question shall not have the effect of providing price support to producers;
>
> plus policy-specific criteria and conditions as set out below.

[14] US First Written Submission, para. 44
[15] See, e.g. Brazil's First Written Submission, paras. 163-172, 183-191 and 199-201.

17. The European Communities will set out its understanding of the first sentence below. While some ambiguity as to the effect of the first sentence might arise when considering its ordinary meaning in isolation, as Brazil does, it is quite clear that, when seen in context, the first sentence should not be considered to be a free-standing obligation. This result also follows from a consideration of the objective of Annex 2.

18. It should be recalled that the provision of domestic subsidies for industrial products (i.e. non-export contingent subsidies) is not prohibited as such under the *SCM Agreement* or other *WTO Agreements*.[16] Such subsidies will only be actionable if they meet the requirements of Articles 1 and 2 of the *SCM Agreement*, and cause adverse effects to the interests of another Member in the sense of Article 5 of the *SCM Agreement*.

19. The *Agreement on Agriculture* initiated a process of reform for domestic support for agricultural products.[17] Negotiators recognised that domestic support for agricultural products required discipline and binding limits on the amount of domestic support. However, given that the provision of domestic subsidies to industrial products can be unlimited, provided there is no infringement of Article 5 of the *SCM Agreement*, it would have been inequitable to subject all types of domestic support to the strict discipline and limitations of the *Agreement on Agriculture* when the economic effects of different types of measures are not comparable. Consequently, it was necessary for the negotiators to differentiate between those types of support measures whose economic effect was deemed significant[18], and those types of measures whose economic effects were deemed less significant. This differentiation was achieved, not by defining those measures deemed to have a significant effect, but rather those deemed to have a less significant effect. The result was Annex 2 to the *Agreement on Agriculture*.

20. The first sentence of paragraph 1 announces the differentiation which is achieved by the criteria set out in Annex 2.[19] It sets out the logic for distinguishing between the types of domestic support which come under Annex 2 and are exempt from reduction commitments and other domestic support measures. That the first sentence does not set out an independent obligation can be seen from the next sentence of Paragraph 1 which starts with the word "accordingly". "Accordingly" means "in accordance with the logical premises; correspondingly".[20] "Accordingly" consequently links the "fundamental requirement" in the first sentence with the "basic criteria" in the second sentence making it clear that in order to be considered to have "no, or at most minimal, trade-distorting effects or effects on production" the measure must meet the basic criteria in the second sentence of paragraph 1 together with the policy-specific criteria set out in paragraphs 2 to 13.

---

[16] Provided the subsidisation is not contingent upon the use of domestic over imported goods, in the sense of Article 3.1(b) of the *SCM Agreement*.

[17] See the Preamble to the *Agreement on Agriculture*.

[18] Without analysing whether the effects would, in the absence of the *Agreement on Agriculture* and assuming the *SCM Agreement* to be applicable to agricultural goods, lead, in a particular case, for a particular product, to a finding of inconsistency with the *SCM Agreement*.

[19] It can be noted that one commentator, who has undertaken one of the most comprehensive reviews of the *Agreement on Agriculture*, notes that the requirement in the first sentence of paragraph 1 is:

> "[t]oo vague to translate into concrete and enforceable obligations. As an appreciation of this fact, the Agreement on Agriculture has gone to great lengths to provide a detailed and comprehensive [..] list of measures along with the general and specific criteria they have to satisfy before they are exempted from the reduction commitments."

P. 420-421, M. G. Desta, *The Law of International Trade in Agricultural Products* (Kluwer Law International 2002).

[20] The New Shorter Oxford English Dictionary, 1993.

21. Contextual support for this position can be found in Annex 2 itself and in Articles 6 and 7 of the *Agreement on Agriculture*.

22. Paragraph 5 of Annex 2 states that support provided through direct payments which are to be exempted from reduction commitments "shall meet the basic criteria set out in paragraph 1 above, plus specific criteria applying to individual types of direct payment as set out in paragraphs 6 through 13." It is quite clear that the "basic criteria" referred to here is the "basic criteria" referred to in the second sentence of paragraph 1 of Annex 1. There is no reference to the fundamental requirement and thus that the measures should have "no or at least minimal trade distorting effects or effects on production". Consequently, this fundamental requirement cannot be an additional criteria for a domestic measure to be exempted from reduction commitments under Annex 2.

23. Further support for this view is found in the *Agreement on Agriculture*. Article 6.1 applies to domestic support measures other than those "which are not subject to reduction in terms of the criteria set out in this Article and in Annex 2" (emphasis added). Article 7.1 obliges Members to ensure that domestic support measures "not subject to reduction commitments because they qualify under the criteria set out in Annex 2 to this Agreement are maintained in conformity therewith" (emphasis added). Article 7.2(a) goes on to state that "any measure that is subsequently introduced that cannot be shown to satisfy the criteria in Annex 2 to this Agreement […] shall be included in the Member's calculation of its Current Total AMS" (emphasis added). Annex 2 itself clearly distinguishes between the "fundamental requirement" of the first sentence of paragraph 1 and the "basic criteria" of the second sentence of paragraph 1 and the "policy-specific criteria" set out in paragraphs 1 to 13. The use of the word "criteria" in Articles 6 and 7, and its use in Annex 2 make it quite clear that in order to be exempted from reduction commitments by virtue of inclusion in the green box a domestic support measure must meet the criteria. It is obvious that the negotiators developed the criteria in order to determine whether a policy could be deemed to meet the "fundamental requirement" set out in paragraph 1 of Annex 2 and did not intend the first sentence to set out an independent obligation.

24. This interpretation is also supported by the objective behind Annex 2 and the *Agreement on Agriculture* more generally. In the administration of its agricultural policy, in order to ensure respect for their reduction commitments, a WTO Member must know how to classify its support measures. It is thus vital, for reasons of legal security and predictability, that a Member can determine the classification of its measures. The clear and specific criteria set out in Annex 2 provides WTO Members with guidance on how to approach this task. Assuming Brazil's argument to be correct, a Member would also have to determine whether a particular measure to be taken might have a more than minimal trade distorting effect or effect on production. This is inevitably a difficult exercise, based on a subjective appreciation of a particular situation, which often may only be performed on an *ex post facto* basis. This is not a reasonable basis for advancing reform of trade in agriculture, and promoting the predictability of the system. Moreover, it can be noted that there is no such "effects" text in respect of other exempted domestic support measures *viz.* "de minimis payments" under Article 6.4 of the *Agreement on Agriculture* and "blue box payments" under Article 6.5 of the *Agreement on Agriculture*.

25. On the basis of the above, the European Communities respectfully requests the Panel to conclude that the first sentence of Paragraph 1 of Annex 2 of the *Agreement on Agriculture* does not impose an obligation independent of the basic and policy-specific criteria set out in Annex 2.

B. INTERPRETATION OF PARAGRAPH 6 OF ANNEX 2

26. Brazil's first written submission raises a number of questions as to the correct interpretation of paragraph 6 of Annex 2. The European Communities attaches the utmost importance to the correct interpretation of these provisions. While the European Communities is still analysing the Brazilian

and US arguments, it already takes note of the fact that the US does not claim that its counter-cyclical payments qualify as exempt under the green box.[21]

## V. INTERPRETATION OF ARTICLES 10.1 AND 10.2 OF THE AGREEMENT ON AGRICULTURE (EXPORT CREDIT GUARANTEES)

27. Brazil argues that the US export credit guarantee schemes violate the *Agreement on Agriculture* and the *SCM Agreement*.[22] The European Communities can concur with this argument to the extent it can be confirmed that the export credit guarantees in question are to be considered export subsidies.

28. The European Communities points out, in this regard, that Article 10.2 of the *Agreement on Agriculture* cannot be considered to exempt export credit guarantees from the disciplines of Article 10.1 of the *Agreement on Agriculture*.[23] Article 10.2 states:

> Members undertake to work toward the development of internationally agreed disciplines to govern the provision of export credits, export credit guarantees or insurance programmes and, after agreement on such disciplines, to provide export credits, export credit guarantees or insurance programmes only in conformity therewith.

29. Article 10.2 makes it clear that the provision of export credit guarantees is not one of the types of export subsidies listed in Article 9.1 which a Member is given a limited authorisation to apply. Article 10.1 provides that non-listed export subsidies may not be applied in order to circumvent export subsidy commitments. Since export credit guarantees may be "export subsidies not listed in paragraph 1 of Article 9" they may be applied in a manner which "results in or threatens to lead to, circumvention of export subsidy commitments" and thus may be prohibited by Article 10.1. For unscheduled products, since the listed export subsidies cannot be provided, the Appellate Body has found that the transfer of economic resources in the form of non-listed export subsidies (e.g. export credit guarantees) threatens to circumvent the prohibition on giving listed export subsidies to such products.[24] Thus, export credit guarantees which qualify as export subsidies may be illegal under Article 10.1 where they might lead to circumvention of the export subsidy commitments.

30. Such a conclusion does not render Article 10.2 devoid of meaning. Article 10.2 is designed to develop disciplines of a broader nature than simply the regulation of export credits and export credit guarantees which operate as an export subsidy, since whether an export credit guarantee is an export subsidy depends on an analysis of the structure of that instrument. One reason why Article 10.2 was necessary is that export credits and export credit guarantees for agricultural commodities are not covered by the OECD Arrangement on Guidelines for Officially Supported Export Credits (see Article 3d).[25] Export credits which conform to this arrangement are considered not to be prohibited export subsidies.[26] Consequently, Article 10.2 sets up an obligation to develop disciplines for export credits and export credit guarantees irrespective of the question whether such instruments operate as

[21] US First Written Submission, para 5, para. 118.

[22] Brazil's First Written Submission, paras. 252-314.

[23] The European Communities notes that the US has made this argument in paras. 154-166 of its First Written Submission.

[24] Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations" ("United States – FSC")*, WT/DS108/AB/R, adopted 20 March 2000, para. 150.

[25] OECD Arrangement on Guidelines for Officially Supported Export Credits of 15 October 2002 available at www.oecd.org/dataoecd/52/3/2763846.pdf.

[26] See Item K of the Illustrative List of Export Subsidies, Annex 1 to the *SCM Agreement*.

export subsidies. It does not permit any differentiation in treatment between export credits, export credit guarantees or insurance programmes and other non-listed export subsidies.[27]

31. The European Communities submits, therefore, that Article 10.2 cannot be seen as exempting export credit guarantees granted to agriculture products from WTO disciplines.

## VI. CONCLUSION

32. By way of conclusion, the European Communities respectfully requests the Panel to find that:

- Article 13 *Agreement on Agriculture* should not be considered an affirmative defence;
- The first sentence of the first paragraph of Annex 2 to the *Agreement on Agriculture* should not be interpreted as a free-standing obligation; and,
- Article 10.2 of the *Agreement on Agriculture* does not exempt export credits and export credit guarantees, which are export subsidies, from the disciplines of the *Agreement on Agriculture*.

33. The European Communities reserves its right to address new arguments, and further develop the arguments set out herein, in its oral statement to the first session of the first substantive meeting.

[27] Note that Desta arrives at a similar conclusion:

> "To the extent that no such agreement [on the provision of export credits etc] has been reached, this provision simply remains to be an agreement to maintain good faith for a planned future negotiation devoid of any substantive additional obligation for some time to come. Until then, there seems to exist no legal distinction in the treatment of these three practices and the other forms of export subsidies not listed under Article 9.1."

# ANNEX B-9

## THIRD PARTY SUBMISSION OF NEW ZEALAND

15 July 2003

CONTENTS

## I. INTRODUCTION

1.01 The present dispute between Brazil and the United States regarding United States subsidies to upland cotton, as well as being important in respect of addressing the rights and obligations of the parties concerned, is also timely. New Zealand hopes this dispute will give greater clarity to the proper interpretation of important WTO disciplines applicable to agricultural trade. Although New Zealand is not a producer or exporter of cotton, New Zealand has a systemic interest in ensuring the continued integrity of these disciplines and has therefore joined this dispute as a third party.

1.02 New Zealand also acknowledges the importance of the cotton sector for a number of developing countries. In this regard New Zealand recalls the recent joint proposal made in the context of the Doha Development Agenda negotiations by Benin, Burkina Faso, Chad, Mali entitled 'Poverty Reduction: Sectoral initiative in favour of cotton'.[1] The joint proposal calls for recognition of the strategic nature of cotton for development and poverty reduction in many least developed countries and for the complete phasing out of support measures for the production and export of cotton. As the paper points out, the efforts of cotton producers in West and Central African countries towards liberalisation and competitiveness are virtually nullified by the fact that certain WTO Members continue to apply support measures to cotton that distort global markets.

1.03 The joint proposal outlines the damage caused by the very high levels of support given to cotton producers in certain WTO Member countries, including artificially increasing supply in international markets and bringing down export prices. This is the very same damage that Brazil is attempting to address through this dispute.

1.04 With respect to WTO disciplines, one of the biggest achievements of the Uruguay Round was the recognition that domestic support policies were instrumental in determining the overall nature of international agricultural trade. For the first time specific disciplines were placed on the ability of Members to use domestic support programmes in an unfettered manner. Trade-distorting or production-distorting domestic support measures became subject to reduction commitments.

1.05 New Zealand is concerned to ensure trade-distorting or "amber box" measures cannot be used contrary to the "peace clause" in a manner that negatively affects other Members.

1.06 At the same time as addressing trade-distorting support, Members recognized that some forms of domestic support were less trade-distorting than others and that certain types of programmes should continue to play a role in Members' policy "tool box". Accordingly the "green box", as set out in Annex 2 of the *Agreement on Agriculture*, was designed to allow Members to pursue agricultural objectives such as the provision of general services, disaster relief, food security and structural adjustment assistance and to support incomes as long as that was done in a way totally "decoupled" from production. The "green box" therefore allows WTO Members to meet legitimate non-trade objectives in a non-trade distorting way.

1.07 Strict eligibility criteria have been set down in Articles 6 and 7 and Annex 2 of the *Agreement on Agriculture* to ensure that only genuine non-trade distorting measures escape reduction commitments, including explicit inclusion of the "fundamental requirement" that such measures "have no, or at most minimal, trade-distorting effects or effects on production".[2]

1.08 The fact that basic and policy-specific criteria were included in the *Agreement on Agriculture* shows Members recognised the potential for the "green box" to be abused and domestic support commitments circumvented. In New Zealand's view it is critical that the integrity of the disciplines

[1] TN/AG/GEN/4
[2] *Agreement on Agriculture* Annex 2, paragraph 1.

on "green box" measures are not weakened or their legitimate purpose undermined through the inclusion of measures that fail to meet the strict requirements of Annex 2, including the fundamental criterion that such measures are non-trade or production distorting. Accordingly one of New Zealand's key objectives in joining this dispute as a third party is to ensure that the "green box" cannot be used to circumvent commitments on trade-distorting measures.

1.09 Under the Uruguay Round Members also agreed to a "peace clause" (Article 13 of the *Agreement on Agriculture*). Of particular relevance to this dispute is Members' agreement that provided non-"green box" measures meet the requirements of the *Agreement on Agriculture* and the levels of support did not exceed 1992 levels, such measures would be exempt during the implementation period of the *Agreement* from certain actions that would otherwise be available to Members under the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*") and *General Agreement on Tariffs and Trade 1994* (the "*GATT 1994"*). "Peace clause" protection was also extended to export subsidies conforming with the requirements of the *Agreement on Agriculture*.

1.10 Accordingly, New Zealand is also concerned to ensure that Members are able to utilise their rights under the *SCM Agreement* and *GATT 1994* to take action in respect of domestic support measures and export subsidies where the requirements of the "peace clause" have not been respected.

1.11 New Zealand believes that the arguments put forward by Brazil[3] show that the "peace clause" has not been respected in relation to domestic support and export subsidies provided by the United States to upland cotton in the marketing years ("MY") 1999, 2000, 2001 and 2002, and that accordingly Brazil is entitled to bring actionable and prohibited subsidy claims against the United States under the *GATT 1994* and the *SCM Agreement*.

1.12 This submission, as requested by the Panel[4], primarily addresses issues raised in the submissions of Brazil and the United States relating to the substantive interpretation of Article 13 of the *Agreement on Agriculture*. As further elaborated in this submission New Zealand supports the claims made by Brazil. New Zealand has had only limited time to consider the First Written Submission of the United States[5] and therefore addresses only some of the issues raised therein. In particular New Zealand addresses, at the end of this submission,[6] the request by the United States for a Preliminary Ruling on certain matters.[7] New Zealand looks forward to the next phase of the case which will examine Brazil's claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994*.

## II. DOMESTIC SUPPORT MEASURES

### A. THE UNITED STATES HAS NO "PEACE CLAUSE" PROTECTION AGAINST ACTIONABLE SUBSIDY CLAIMS RELATED TO SUPPORT PROVIDED TO UPLAND COTTON IN MARKETING YEARS 1999, 2000, 2001 AND 2002

2.01 New Zealand agrees with Brazil that Members may assert a "peace clause" defence under *Agreement on Agriculture* Article 13(b)(ii) only if the total quantity of support granted through all

[3] Brazil's First Submission to the Panel Regarding the "Peace Clause" and Non-"Peace Clause" Related Claims, 24 June 2003 ("First Written Submission of Brazil").

[6] Para 5.01-5.02.

[7] First Written Submission of the United States, Pt V.

non-"green box" domestic support measures to a specific commodity does not exceed the quantity of non-green box domestic support decided to be granted in MY 1992.

2.02 New Zealand endorses the process outlined by Brazil[8] for determining whether the United States can claim peace clause protection against serious prejudice claims under *SCM Agreement* Articles 5(c) and 6.3 and *GATT 1994* Article XVI.1.

2.03 Specifically New Zealand agrees that the first step is to identify and quantify all the United States non-"green box" support for the production of upland cotton in MY 1992. The second step is to identify and quantify all non-"green box" United States payments that grant support to upland cotton in MY 1999, 2000, 2001 and to provide estimates for MY 2002. The final step is to determine whether United States support to upland cotton in MY 1999-2002 exceeded its 1992 support to upland cotton.

2.04 The information provided by Brazil[9] demonstrates that the level of domestic support for upland cotton in each of those marketing years did in fact exceed the level decided during the 1992 marketing year and therefore such domestic support measures may be subject to claims based on *GATT 1994* Article XVI or *SCM Agreement* Articles 5 and 6.

2.05 New Zealand notes that the United States argues that the relevant concept for the comparison required by Article 13(b)(ii) is only the 'per pound' rate of support set by the relevant domestic support measures.[10] Using this concept the United States argues that the support currently granted to upland cotton ($0.52 per pound) does not exceed that granted to upland cotton in the 1992 marketing year ($0.729 per pound).[11]

2.06 New Zealand agrees that the measures concerned (the loan rate) contribute to the effect of guaranteeing a producer price at a specified rate per pound of production and that the per pound rate of guaranteed price for producers is one of the relevant factors in making the comparison required by Article 13(b)(ii). However New Zealand does not agree that the use of the word "decided" in Article 13(b)(ii) was intended to be, or should be, construed to mean that the per pound rate of guaranteed price to producers of a commodity is the only factor to be considered in determining the amount of support granted. Indeed, New Zealand sees no support for such an approach in either the specific wording of Article 13(b)(ii) or in its object and purpose.

2.07 New Zealand considers that the comparison must take into account the totality of payments to upland cotton producers in order to reflect the true nature of the support that is being granted to a producer – the United States approach ignores this objective. For example, in relation to support granted to United States producers of upland cotton, Step 2 payments and crop insurance payments are also factors which affect farmers production decisions as is, of course, the "counter-cyclical" payments programme that effectively guarantees a price of $0.724 per pound. Therefore even under the United States assumption that the use of a "rate" is key, the story is very different from that claimed by the United States.

2.08 Further, New Zealand considers that an evaluation of budgetary payments is also essential in order to see the real effects of the support programmes. Focussing solely on a rate per pound ignores the actual levels of domestic support represented by budgetary outlays that must be granted in order to maintain those rates and the other payments received.

[8] First Written Submission of Brazil, para 123.
[9] *Ibid*, para 124.
[10] First Written Submission of the United States, paras 94 and 105.
[11] *Ibid*, para 125.

2.09 In this respect New Zealand recalls that the rationale behind the proviso in Article 13(b)(ii) that such measures not grant support to a specific commodity in excess of that decided during the 1992 marketing year is to create an upper limit in the level of trade or production distortion caused by such measures. The clear overarching intention of WTO Members in the negotiation of the *Agreement on Agriculture* was that henceforth such distortions would be reduced, consistent with the long term objective of "correcting and preventing restrictions and distortions in world agriculture markets".[12] Accordingly it would be inconsistent with the object and purpose of the *Agreement*, and Article 13(b)(ii) specifically, to adopt an interpretation that artificially limits consideration of the scope of support granted to that of a 'per pound rate' of guaranteed price to a producer rather than the totality of the support granted that creates the trade and production distortions.

2.10 In that respect the fact that United States budgetary outlays have increased from their 1992 levels is not coincidental. Such increases are due, at least in part, to the production and market distorting effects of the United States measures that have lead to higher export levels of upland cotton from the United States that have in turn pushed world market prices for cotton down. In essence, the level of trade distortion has increased as the gap between the price farmers expect to receive and the world price has increased. Looking at it the other way around, had the United States maintained the 1992 level of support its producers would be far more aware of the realities of the world market for cotton and have less incentive to add further to the trade distortion.

**1. Step 2 payments, loan deficiency payments, marketing loan gains and cottonseed payments**

2.11 These payments are clearly non-"green box" support, as implied by the notification by the United States to the WTO Committee on Agriculture for MY 1999.[13] As Brazil points out, the structure of most of these programmes is substantially the same in MY 2000-2001 and under the Farm Security and Rural Investment Act of 2002 (the "2002 FSRI Act")[14] as it was in MY 1999. New Zealand considers that these payments should continue to be treated as non-"green box" support to upland cotton and must therefore be used in calculating the total quantity of support granted to upland cotton in MY 1999-2002.

**2. Marketing loss payments, counter-cyclical payments and crop insurance payments**

2.12 The United States has notified crop insurance payments and marketing loss assistance payments as "amber box" domestic support.[15] Brazil notes that the 2002 FSRI Act institutionalised marketing loss assistance payments with a new program of "counter-cyclical" payments ("CCP").[16]

2.13 New Zealand notes that Brazil argues that CCP subsidies do not meet the criteria set out in *Agreement on Agriculture* Annex 2, specifically paragraphs 6(b) and (c), and fail to meet the fundamental requirement that "green box" measures "have no, or at most minimal, trade-distorting effects or effects on production".

2.14 Brazil argues that the CCP programme is not a "green box" measure because payments are not based on prices of upland cotton that took place in a prior base period but are linked to present prices for the product concerned, contrary to the requirements of Annex 2 paragraph 6(c).[17]

[15] G/AG/N/USA/43 page 37. Exhibit BRA-47.
[16] First Written Submission of Brazil, para 62.
[17] *Ibid*, para 197.

2.15 Paragraph 6(c) of Annex 2 makes it clear that the amount of decoupled income support payments "shall not be related to, or based on, the prices, domestic or international, applying to any production undertaken in any year after the base period." As Brazil notes, the amount of the payment under the CCP programme varies with fluctuations in the national average market price, that is, it is linked to a current price. Accordingly, in New Zealand's view this is sufficient to support a finding by the Panel that the CCP programme involves payments that are not "green box" support measures in accordance with Annex 2 of the *Agreement on Agriculture* and must therefore be used in calculating the total quantity of domestic support granted to upland cotton for MY 2002. Indeed, the United States endorses this approach.[18]

2.16 New Zealand notes, however, that the United States has argued that the term "support to a specific commodity" used in Article 13(b)(ii) should be interpreted to mean "product-specific support".[19] On this basis the United States argues that the CCP programme and crop insurance programme should be excluded from the scope of support granted to upland cotton for the purposes of Article 13(b)(ii). [20]

2.17 While New Zealand notes that the United States has notified marketing loss assistance and crop insurance (and presumably will notify CCP payments) as non-product specific domestic support,[21] it is clear from discussion in the WTO Committee on Agriculture that Members, including New Zealand, have questioned whether that is appropriate.[22]

2.18 The United States asserts that CCP payments are non-product specific because they are not coupled to current production of any specific commodity but rather are based on historical fixed base acreage and yields.[23] However in New Zealand's view Brazil has brought forward significant evidence of a strong linkage between the CCP payments and production of upland cotton, such that farmers with upland cotton base acreage are likely to continue to produce upland cotton.

2.19 In particular Brazil points out that most cotton farmers have made considerable investments in cotton-specific equipment, or farm in locations where cotton is the most productive crop, and are therefore more likely to continue to produce cotton.[24] The linkage between the receipt of CCP payments and production of cotton is further reinforced by the CCP payments being explicitly calculated on the basis of current cotton prices.

2.20 Brazil also points out that CCP payments create incentives for farmers with upland cotton base acreage to maintain upland cotton production.[25] In fact under the CCP programme the only way a farmer can guarantee a particular outcome is to continue to grow the same crop, otherwise the farmer runs the risk of missing out. For example, if he or she chooses to produce wheat and cotton prices are high enough that no CCP payment is made but wheat prices fall, the farmer will make a loss they would not have made had they stayed with cotton production.

2.21 Irrespective of whether or not these payments are notified as product-specific or not, they must still be considered "support granted to a specific commodity" for the purposes of Article 13(b)(ii). There is no foundation for the assertion by the United States that "support granted to a specific commodity" should be read as meaning "product-specific support". Given the detailed listing

[18] First Written Submission of the United States, para 118.
[19] *Ibid*, para 78.
[20] *Ibid*, para 122.
[21] G/AG/N/USA/43, Exhibit BRA-47.
[22] See for example, G/AG/R/34 'Summary report of the meeting held on 27 March 2003' at page 32.
[23] First Written Submission of the United States, para 115.
[24] First Written Submission of Brazil, para 207.
[25] *Ibid*, para 211.

of domestic support measures potentially exempt in the chapeau to Article 13(b)(ii) itself, had Members intended to exclude non-product specific support they would surely have said so. Further, had they meant that "support granted to a specific commodity" was to be read as "product specific" support they would have said so – the phrase was used at least five times elsewhere in the *Agreement*.

2.22 Rather, the reference to support to a "specific commodity" in Article 13(b)(ii) was used to distinguish the nature of the "peace clause" from the domestic support commitments more generally which are on a "Total" (i.e. over all agriculture) Aggregate Measurement of Support ("AMS") basis. Only if support increases for a particular product can it be open to challenge under the *SCM Agreement*. Without such clarification "peace clause" protection could potentially be lost for any agricultural product if Total AMS increases, even though support to that specific product had not increased. This would have unpredictable results for individual products and cannot have been the intended effect of the "peace clause".

2.23 Nothing in Article 6 suggests that treating product-specific and non-product specific support separately under Article 13 is warranted. New Zealand sees no basis on which to suggest that support to a specific commodity should be excluded simply because other commodities may receive similar support. Support provided through generally available programmes (which, New Zealand notes, the marketing loss assistance programme and now the CCP programme are not) is still support received for the individual products. Taking the United States argument to its logical extreme would effectively render all agricultural support non-product specific so long as the same kind of support was being provided to more than one product.

2.24 Accordingly, New Zealand considers that the United States incorrectly categorises CCP payments as non-product specific support. But whether they are product-specific or non-product specific is, in fact, irrelevant for the purposes of Article 13(b)(ii) as there is no basis upon which to read such a limitation on the kinds of domestic support to be considered within the meaning of that provision. Instead, the portion of any non-product specific support granted to a specific commodity, in this case to upland cotton, must be included in the comparative analysis required by Article 13(b)(ii). In this respect New Zealand notes that what Brazil is proposing is no more than what the United States has done in relation to export credits in its First Written Submission where it has allocated export credit administrative costs to the specific product of upland cotton.[26]

2.25 The same arguments can be made with respect to the payments under the crop insurance programmes.

## 3. Production Flexibility Contract Payments, Direct Payments

2.26 In New Zealand's view one important aspect of the "Direct Payments" ("DP") programme rules out inclusion of those payments in the "green box", specifically the ability of farmers to update the base acreage used for calculation of DP payments.[27] As outlined by Brazil, the DP programme is the successor to the Production Flexibility Contract Payments ("PFC") programme and to permit an updating of the 'fixed' base period by changing the name of the PFC programme to a DP program would render the provisions of paragraph 6(a) and (b) of *Agreement on Agriculture* Annex 2 a nullity.[28]

2.27 The option for farmers to update base acreage under the 2002 FSRI Act directly violates the requirement under Annex 2 paragraph 6 that decoupled income support be determined in relation to a

[26] First Written Submission of the United States, para 175.
[27] First Written Submission of Brazil, para 52; Exhibit BRA-35.
[28] *Ibid*, para 182.

"defined and fixed base period". New Zealand agrees with Brazil's interpretation that paragraph 6(a) and (b) contemplates only one base period that is fixed and unchanging.

2.28 As Brazil points out, permitting the updating of the base period to capture additional payment acreage (as one third of all United States farms with eligible acreage opted to do)[29] would link increased recent volumes of production with the amount of current payments.[30] Brazil is also correct to state that this is contrary to the object and purpose of "de-coupled income support", which is to break the link between production and the amount of support and thereby ensure that such measures "have no, or at most minimal" effects on production. As the evidence brought forward by Brazil shows, an expectation of being able to update base acreage and payment yields influences production in a number of ways,[31] particularly as, having had one opportunity to update their base acreage, farmers could reasonably expect further opportunities to do so in the future.

2.29 In New Zealand's view the updating of base acreage for the DP programme alone is sufficient to exclude it from the scope of permitted "green box" measures as set out in Annex 2. Instead such payments are "amber box" measures that, in accordance with Article 6 of the *Agreement on Agriculture*, are domestic support to upland cotton in MY 2002.

2.30 Brazil has also argued that the PFC and DP programmes have more than a minimal effect on production and trade and therefore fail to meet the "fundamental requirement" of "green box" domestic support measures.

2.31 New Zealand agrees with Brazil's interpretation that the "fundamental requirement" that "green box" domestic support measures "have no, or at most minimal, trade-distorting effects or effects on production" means that the quantity or level of production or trade distorting effects need only be very small to trigger denial of "green box" status under Annex 2 of the *Agreement on Agriculture*.[32] The language of paragraph 1 of Annex 2 makes it clear that this fundamental requirement and the other criteria set out in Annex 2 are to be strictly applied to any measures in order to obtain exemption from reduction commitments.

2.32 The trade-distorting effects or effects on production of any domestic support measure must be determined on a case-by-case basis, looking at the specific circumstances and characteristics of each particular measure. Brazil has provided comprehensive information regarding the effects of the PFC and DP programmes to enable the Panel to determine whether those payments have even very minimal production or trade distorting effects and thus fail to meet the "fundamental requirement" for "green box" measures as provided in *Agreement on Agriculture* Annex 2.

2.33 New Zealand notes that the United States provides no response to any of Brazil's arguments regarding the PFC/DP programme and the level of production distortion it causes other than to claim that changing the name of the programme indemnifies it from consideration. Accordingly Brazil's arguments should stand.

[31] *Ibid*, paras 185 – 190.
[32] *Ibid*, para 165.

## III. PROHIBITED EXPORT SUBSIDIES

### A. THE UNITED STATES HAS NO "PEACE CLAUSE" PROTECTION AGAINST PROHIBITED AND ACTIONABLE SUBSIDY CLAIMS RELATED TO EXPORT SUBSIDIES

3.01 New Zealand supports the arguments made by Brazil that the three types of export subsidies applied to upland cotton and other commodities by the United States (the Step 2 Export Programme, the Export Credit Guarantee Programme, and the FSC Replacement Programme) violate Articles 3.3, 8 and 10.1 of the *Agreement on Agriculture* and therefore fail to meet the requirement of conformity with Part V of the *Agreement*, with the result that such subsidies are not exempt from claims by Brazil based on Article XVI of *GATT 1994* or Articles 3, 5 and 6 of the *SCM Agreement*.

### B. THE UNITED STATES EXPORT SUBSIDIES VIOLATE THE AGREEMENT ON AGRICULTURE AND THE SCM AGREEMENT

#### 1. Step 2 Export Payments

(a) Per se violation of Articles 3.3 and 8 of the *Agreement on Agriculture*

3.02 As outlined by Brazil,[33] Step 2 export payments clearly fall within the description of an export subsidy set out in Article 9.1(a) of the *Agreement on Agriculture* in that it is a direct subsidy provided by the United States government to exporters of upland cotton contingent upon export.

3.03 Even if the Panel were to find that Step 2 export payments did not fall within the description set out in Article 9.1(a) of the *Agreement on Agriculture*, the Appellate Body has determined, as Brazil notes, that the effect of Article 10.1 is that a Member can only provide export subsidies in conformity with the *Agreement on Agriculture* if it has scheduled export subsidy reduction commitment levels for the agricultural product concerned.[34] The use of any other type of export subsidy will "at the very least" threaten circumvention of subsidy reduction commitments within the meaning of Article 10.1.

3.04 Accordingly New Zealand agrees with Brazil that the Step 2 export payments violate *per se* Articles 3.3 and 8 of the *Agreement on Agriculture*

3.05 New Zealand notes that the United States has argued that Step 2 export payments are not export subsidies as defined by Article 9.1(a) and 10 of the *Agreement on Agriculture* (and Article 3.1(a) of the *SCM Agreement*) because the Step 2 payments are available to domestic users as well as exporters of upland cotton.[35] As the Appellate Body in *US-FSC Recourse to Article 21.5*[36] recognised, the fact that a scheme allows for payments to be made otherwise than contingently on export does not diminish the export contingency of those that are.

3.06 In *US-FSC Recourse to Article 21.5* the United States argued that a measure that provided tax exclusion for exported products, but also allowed tax exclusion to be obtained without exportation, could not be considered to be 'contingent upon export performance'. The Appellate Body disagreed.

---

[33] *Ibid*, paras 238-243.

[34] Report of the Appellate Body, *United States – Tax Treatment for "Foreign Sales Corporations"*, WT/DS108/AB/R ("*US-FSC*"), para 150-152; First Written Submission of Brazil, para 237.

[35] First Written Submission of the United States, para 132.

[36] Report of the Appellate Body, *United States – Tax Treatment for "Foreign Sales Corporations" Recourse to Article 21.5 of the Dispute Settlement Understanding by the European Communities*, WT/DS108/AB/RW ("*US-FSC Recourse to Article 21.5"*).

3.07 The Appellate Body said that the measure "contemplates two different factual situations"; where property is produced within the United States and held for use outside the United States, and where property is produced outside the United States and held for use outside the United States. The Appellate Body said that "the fact that the subsidies granted in the second set of circumstances might not be export contingent does not dissolve the export contingency arising in the first set of circumstances".[37]

3.08 New Zealand considers that the fact that payments are also able to be made to domestic users of upland cotton does not 'dissolve' the export contingency of the payments that are made to exporters. Payments to eligible exporters of upland cotton are dependent on proof of export being provided and are therefore contingent on export performance.

3.09 Accordingly Step 2 export payments breach the obligation of the United States under Article 3.3 not to provide such subsidies in respect of any agricultural product that it has not specified in Section II of Part IV of its Schedule and therefore violates *per se* the undertaking by the United States in Article 8 not to provide export subsidies otherwise than in conformity with the *Agreement on Agriculture*.

(b) Violation of Article 3.1(a) and 3.2 of the *SCM Agreement*

3.10 New Zealand supports Brazil's conclusion that the Step 2 export payments meet the requirements of a subsidy under Article 1.1(a)(1)(i) and Article 1.1(a)(2) of the *SCM Agreement* and are contingent upon export within the meaning of Article 3.1(a) of the *SCM Agreement*.

3.11 Accordingly if the Panel finds, as New Zealand believes it should, that Step 2 export payments constitute *per se* prohibited subsidies under Article 3.1(a) and 3.2 of the *SCM Agreement*, the Panel is required to recommend under Article 4.7 of the *SCM Agreement* that the United States withdraw the programme without delay. New Zealand therefore supports Brazil's request that the Panel expressly make such a recommendation.

**2. Export Credit Guarantee Programme**

(a) Violation of Articles 8 and 10.1 of the *Agreement on Agriculture*

3.12 New Zealand supports Brazil's arguments that the export credit guarantee programme provides export subsidies that can lead to, or threaten to lead to, circumvention of export subsidy commitments under Article 10.1. As established by the Appellate Body in *US-FSC*,[38] Article 10.1 of the *Agreement on Agriculture* is violated where an export subsidy is available for unscheduled agricultural products for which no reduction commitments have been made, as, "at the very least", this threatens to lead to circumvention of export subsidy commitments.

3.13 It is evident that Members considered that export credit programmes could provide export subsidies through the specific reference to such programmes in *Agreement on Agriculture* Article 10.2. While not all government export credit programmes necessarily provide export subsidies, it is clear that the United States programme does so in both of the ways demonstrated by Brazil (ie because it clearly falls within Item j of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*[39] or is otherwise an export subsidy as defined in Articles 1.1 and 3.1(a) of the

[37] *Ibid*, para 119.
[38] Report of the Appellate Body, *US-FSC*, para 150-152.
[39] First Written Submission of Brazil, paras 272-286.

*SCM Agreement*).[40] The export credit scheme is therefore a subsidy contingent on export in the context of Article 10.1 of the *Agreement on Agriculture*.

3.14 New Zealand notes that the United States has argued that "the plain words of Article 10.2 (of the *Agreement on Agriculture*) indicate that the export credit guarantee programs are not subject in any way to the export subsidy disciplines of that *Agreement*."[41] New Zealand disagrees with this assertion. The heading of Article 10 is 'Prevention of circumvention of export subsidy commitments' and the inclusion of reference to export credits under that Article clearly reflects Members' concern that export credits can provide export subsidies.

3.15 Nor does Article 10.2 in any way suggest that it provides an exception from the disciplines of Article 10.1. New Zealand agrees with the United States that Article 10.2 does not say "in addition to the export subsidy commitments" of the *Agreement*.[42] That is because it did not have to, coming as it does directly after the general prohibition against circumvention in Article 10.1. While Article 10.1 currently provides the only discipline on the use of export credits, it is expected that the work envisaged in Article 10.2 will elaborate further and more specific disciplines that will presumably make identification of the extent to which such export credit programmes constitute export subsidies more straightforward. However it is incorrect to assume that there is a vacuum in the meantime. Item j of the Illustrative List of the *SCM Agreement* clearly already provides guidance on when export credit guarantee or insurance programmes are to be considered to be 'export subsidies' and beyond this the general definition in Articles 1.1 and 3.1(a) of the *SCM Agreement* also applies. While the provisions of Item j do not apply to agricultural products *mutatis mutandis* there is no reason to believe that the guidance there and elsewhere in the *SCM Agreement* is not appropriate for analyses under the *Agreement on Agriculture*.

3.16 Nor should the application of the disciplines in the *Agreement on Agriculture* in the meantime obviate the need for continued negotiations as envisaged by Article 10.2, as New Zealand hopes that those negotiations will result in clearer and more specific rules. Indeed it may even be that the result of the negotiations is that an export credit programme that is considered to be an export subsidy under the current, more generally applicable rules, will be deemed not to be an export subsidy in the future. However in that respect New Zealand notes, for example, that the United States Intermediate Export Credit Guarantee Program (GSM-103) provides for a repayment term of between 3 and 10 years[43], terms clearly well outside the scope of disciplines to govern the use of export credit guarantee programmes currently being considered in the negotiations.

(b) Violation of Articles 3.1(a) and 3.2 of the *SCM Agreement*

3.17 As export credits are not in conformity with Part V of the *Agreement on Agriculture* and thus do not benefit from protection under the "peace clause", they can equally be examined under the *SCM Agreement*. If the Panel finds, as New Zealand believes it should, that export credit guarantee payments are prohibited subsidies under Article 3.1(a) of the *SCM Agreement*, the Panel is required to recommend under Article 4.7 of the *SCM Agreement* that the United States withdraw the payments without delay. New Zealand therefore supports Brazil's request that the Panel expressly make such a recommendation.

[40] *Ibid*, paras 287-293.
[41] First Written Submission of the United States, para 164.
[42] *Ibid.*
[43] *Ibid*, para 151.

### 3. FSC Replacement Measure

3.18 New Zealand supports the claims made by Brazil,[44] based on the findings already made by the Appellate Body in *US-FSC Recourse to Article 21.5*, that the tax cuts under the FSC Repeal and Extraterritorial Income Act of 2000 threaten to circumvent United States export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture* and therefore cannot be exempt from actions under the *SCM Agreement* under Article 13(c)(ii) of the *Agreement on Agriculture*. In addition the Appellate Body found that there was a prohibited subsidy under Article 3.1(a) of the *SCM Agreement*.

3.19 Accordingly if the Panel finds, as New Zealand believes it should, that the tax cuts under the FSC Repeal and Extraterritorial Income Act of 2000 are prohibited subsidies under Article 3.1(a) of the *SCM Agreement*, the Panel is required to recommend under Article 4.7 of the *SCM Agreement* that the United States withdraw the subsidies without delay. New Zealand therefore supports Brazil's request that the Panel expressly make such a recommendation.

## IV. PROHIBITED SUBSIDIES

### A. STEP 2 DOMESTIC PAYMENTS VIOLATE THE SCM AGREEMENT AND GATT ARTICLE III:4

4.01 New Zealand supports Brazil's argument that the "peace clause" provides no immunity for "amber box" subsidies from prohibited subsidy claims under Article 3.1(b) of the *SCM Agreement.*[45] New Zealand believes that Brazil has demonstrated that Step 2 domestic payments are a prohibited subsidy under Article 3.1(b) in that the payments are contingent on the use of domestic over imported upland cotton. On that basis they also violate Article III.4 of *GATT 1994*.

4.02 Accordingly if the Panel finds, as New Zealand believes it should, that Step 2 domestic payments violate per se Article 3.2 of the *SCM Agreement*, the Panel is required to recommend under Article 4.7 of the *SCM Agreement* that the United States withdraw the payments without delay. New Zealand therefore supports Brazil's request that the Panel expressly make such a recommendation.

## V. UNITED STATES REQUEST FOR A PRELIMINARY RULING ON CERTAIN MATTERS

5.01 New Zealand rejects the arguments of the United States that measures no longer in effect are not within the Panel's terms of reference.[46] Such measures should be within the scope of the Panel's consideration, particularly when the programmes in question have effectively only been renamed and in fact continue in a slightly different form. In addition, the nature of serious prejudice claims may necessitate consideration of data beyond a single year and may in fact require a Panel to consider trends over a number of years. Accordingly New Zealand rejects the United States claim that market loss assistance payments and PFC payments should be excluded from the Panel's consideration of Brazil's claims.

5.02 New Zealand also considers that the Panel should reject the United States request that that Panel rule that export credit guarantee measures relating to eligible United States agricultural commodities (other than upland cotton) are not within its terms of reference.[47] While New Zealand did not participate in the consultations, in New Zealand's view Brazil had little choice but to look at a broader commodity coverage in relation to export credits because the information specific to upland

[44] First Written Submission of Brazil, paras 315-330.
[45] First Written Submission of Brazil, para 332.
[46] First Written Submission of the United States, paras 207-211.
[47] *Ibid*, paras 191-206.

cotton alone was not available. To prevent Brazil from doing so would unjustly allow a lack of transparency to preclude scrutiny of measures by Members taking disputes, especially where the information at a higher level of aggregation showed there was clearly a case to answer in respect of a particular measure, in this instance export credits. While more time is needed to analyse the information brought forward by the United States (which does not appear to be sourced from publicly available documents), at this stage of the Panel's consideration of Brazil's claims, New Zealand considers that the Panel should not make the ruling requested by the United States.

## VI. CONCLUSION

6.01 In conclusion, New Zealand believes that Brazil had demonstrated that the "peace clause" has not been respected in relation to domestic support and export subsidies provided by the United States to upland cotton in the marketing years 1999, 2000, 2001 and 2002, and that accordingly Brazil is entitled to bring actionable and prohibited subsidy claims against the United States under the *GATT 1994* and the *SCM Agreement*. New Zealand looks forward to the next phase of the case which will examine Brazil's claims under Articles 3, 5 and 6 of the *SCM Agreement* and Article XVI of the *GATT 1994*.

# ANNEX B-10

THIRD PARTY SUBMISSION BY PARAGUAY

## INTRODUCTION

1. Paraguay is grateful for the opportunity to express its views on the matter at issue in this dispute.

2. Because Paraguay is a firm believer in a fair system of international trade, it feels that it should explain its position on this issue which is of particular interest to its economy.

### Applicable rules

3. In the Marrakesh Ministerial Declaration of April 1994 itself, Ministers affirmed that the establishment of the WTO ushered in a new era of global economic cooperation, reflecting the widespread desire to operate in a fairer and more open multilateral trading system for the benefit and welfare of their peoples, and expressed their determination to resist protectionist pressures of all kinds as well as their belief that the strengthened rules achieved in the Uruguay Round would lead to a progressively more open world trading environment.

4. Moreover, in October 2002, on the occasion of the meeting of the International Cotton Advisory Committee, governments observed the critical situation that the world cotton industry was going through and its link to subsidies, suggesting the establishment of a schedule for the elimination of measures that distorted world production and trade in cotton, and stressing the need to submit complaints before the WTO for violation of the applicable rules.

5. Paraguay considers that the subsidies and support granted by the United States to its cotton production are inconsistent with the Agreement on Subsidies and Countervailing Measures, the Agreement on Agriculture and the rules and principles of the GATT 1994, and that for the purposes of this dispute it is therefore essential to take account of WTO legislation, which was carefully drafted to avoid causing distortions in international trade and prejudice to developing countries such as Paraguay.

6. WTO jurisprudence and the principles of interpretation of international law applied to the various cases suggests that the applicable rules should be read cumulatively, taking account of all elements applied to the case in order to support the system as an integrated whole.

7. Paraguay considers Brazil's complaint and the legal justifications invoked with respect to the inconsistency of the United States' laws, regulations and administrative procedures with the applicable WTO rules to be fully consistent with the law.

## PEACE CLAUSE

8. With respect to the applicability of Article 13(b)(ii) concerning domestic support measures that conform fully to the provisions of Article 6 of the Agreement including direct payments that conform to the requirements to paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, Paraguay considers they shall be exempt from actions based on paragraph 1 of Article XVI of GATT

1994 or Articles 5 and 6 of Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year.

9. This implies that it is not limited or confined to specific products. Thus, it can be concluded that the United States does not enjoy protection from actions relating to subsidies using 1999, 2001 and 2002 as a basis, as Brazil duly proved.

10. In interpreting the Peace Clause, account must be taken of the serious prejudice that Member economies could suffer, and an assessment made of the overall significance of all of the agreements relating to the case.

11. Paraguay does not grant subsidies, either under the Subsidies Agreement or under the Agreement on Agriculture. Paraguay did notify the Committee on Agriculture, on 22 July 2002, of its domestic support commitments for 2000 and 2001 (G/AG/N/PRY/10, supporting table DS.1 and related supporting tables) as required under the Agreement on Agriculture and the Agreement on Subsidies and Countervailing Measures.

12. Consequently, as long as discriminatory support not provided for under WTO Agreement on Agriculture or the WTO Agreement on Subsidies on Countervailing Measures continues to be granted, Paraguay will have no choice but to file complaints with the relevant bodies.

**Inconsistency with the Agreement on Agriculture**

13. The Step 2 programme introduced by the United States to stimulate exports and the competitiveness of its products on the international market is inconsistent with Articles 3.3 and 8 of the Agreement on Agriculture.

14. Article 3 of the Agreement on Agriculture refers to the incorporation of concessions and commitments. Paragraph 3 thereof stipulates that:

> *Subject to the provisions of paragraphs 2(b) and 4 of Article 9 of this Agreement, a Member shall not provide export subsidies listed in paragraph 1 of Article 9 in respect of the agricultural products or groups of products specified in Section II of Part IV of its Schedule in excess of the budgetary outlay and quantity commitment levels specified therein and shall not provide such subsidies in respect of any agricultural product not specified in that Section of its Schedule.*

15. The above paragraph enables Members to provide the subsidies listed in Article 9.1 of the Agreement on Agriculture subject to fulfilment of the commitments assumed.

16. Similarly, Article 8 of the said Agreement regulates export competition commitments, stipulating that:

> *Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and the commitments as specified in that Member's Schedule.*

17. For the above reasons, and because it does not consider the provisions of the Agreement on Agriculture to have been complied with, Paraguay believes that the export subsidies granted by the United States to its cotton industry are inconsistent with Articles 3.3, 8 and 9.1 of the Agreement on Agriculture.

**Inconsistency with the Agreement on Subsidies and Countervailing Measures**

18. The agricultural subsidies cause "serious prejudice" to the domestic industry of other Members under Articles 5 and 6 of the Agreement on Subsidies and Countervailing Measures.

19. The introductory paragraph of part III, Article 5 of the said Agreement provides that no Member should cause, through the use of any subsidy – specific and not exempted under the Agreement – adverse effects to the interests of other Members, more specifically, as categorically stated in the indents that follow, (a) injury to the domestic industry of another Member and (c) serious prejudice to the interests of another Member.

20. Article 6 specifically refers to cases in which "serious prejudice" is deemed to exist in the sense of paragraph (c) of Article 5.

**Effects of agricultural subsidies**

21. Agricultural subsidies have effects on world trade, and measures such as those applied by the United States have a significant impact on developing countries like Paraguay.

22. Indeed, Paraguay is all the more affected by the said measures in that it is precisely cotton production that provides sustenance for the most needy segments of the population.

23. Paraguay has a total population of approximately 5,300,000, of which more than 500,000 are linked to cotton production. If we add the related industries and activities, the figure reaches an estimated 1,500,000, or approximately 30 per cent of the country's total population.

24. Any slump in the cotton trade causes an exodus of rural population towards the urban areas which do not offer any relief or solution, and this further undermines the economic situation of a country that depends on its agriculture.

25. As regards exports, in 1991, the foreign exchange revenue generated by sales of cotton and byproducts thereof reached US$318,912,000, approximately 43 per cent of the total for the country's exports that year. At the time, a total of 299,259 farms, 190,000 were cultivating cotton.

26. By 2001, the figures had changed considerably. Export revenue had fallen to US$90,505,000, a 72 per cent drop in the value of exports. The number of farms producing cotton decreased to about 90,000, representing a 52 per cent decrease in farms, employment and small farmer income. In other words, the impoverishment was real.

27. Regarding international cotton fibre prices, in 1991, the price per ton of Paraguayan type fibre was quoted on the New York Exchange at US$1,624, while in 2001, it was quoted at US$934.

28. In Paraguay, some 60 per cent of cotton is produced on farms of less than 10 hectares, making it the main or only source of income for small farmers and the main source of employment for the rural workforce in the most disadvantaged segment of society where access to capital and technology is more restricted and the leading socio-economic welfare indicators are lower than anywhere else.

**CONCLUSION**

29. Paraguay is a small economy. It is a land-locked country that has no oil, gas, gold or other natural resources of a kind that could make it of particular interest to the developed countries. The Paraguayan economy is essentially based on agricultural production, including the production and sale of cotton.

30. Paraguay therefore considers that the measures adopted by the United States cause serious prejudice to world trade, affecting Paraguay in particular, and that the necessary steps should be taken to eliminate the adverse effects and seek to achieve a balance in world trade.

31. Paraguay respectfully requests the Panel to conclude that the measure applied by the United States is inconsistent with its WTO obligations under the various provisions of the Agreement on Agriculture, the GATT 1994 and the Agreement on Subsidies and Countervailing Measures.

# ANNEX B-11

## THIRD PARTY SUBMISSION OF THE SEPARATE CUSTOMS TERRITORY OF TAIWAN, PENGHU, KINMEN AND MATSU.

15 July 2003

1. In its fax of 28 May 2003 to the parties to this dispute, the Panel poses questions regarding the correct interpretation of Article 13 of the Agreement on Agriculture and the on the issue of preliminary rulings. As the Panel's questions raise an important point of law and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu has a systemic interest in the proper interpretation and operation of these and other relevant provisions involved in the procedures, we would like to submit our views on the following aspects:

**I. THE BURDEN OF PROOF REQUIRED BY ARTICLE 13 OF THE AGREEMENT ON AGRICULTURE (THE "PEACE CLAUSE"), AND**

**II. THE QUESTION OF PRELIMINARY RULINGS.**

### I. BURDEN OF PROOF IN THE "PEACE CLAUSE"

2. In attempting to arrive at a proper interpretation of the burden of proof as provided in Article 13 of the Agreement on Agriculture, we suggest comparing different types of exemptions, defences, or carving-out under different agreements.

3. It could happen that a matter is brought under an agreement not covered by the DSU. Since Article 1 of the DSU provides that the DSU shall apply to disputes brought pursuant to the consultation and dispute settlement provisions of the agreements listed in Appendix 1 to the DSU and the WTO Agreement, it follows that consultation or dispute arising from or in connection with any non-covered agreement would not be within the scope of the dispute settlement procedures under the DSU. Thus, if a Member brings a complaint alleging a breach of certain international environmental treaties, for example, the complaining party would bear the burden to prove that the issue in dispute falls within the purview of the DSB.

4. It could also be that a matter is specifically excluded from the dispute settlement procedures by certain relevant agreements. A typical example of this would be the provision in Article 6 of the TRIPS agreement, which provides that "for the purposes of dispute settlement under this Agreement, subject to the provisions of Articles 3 and 4 nothing in this Agreement shall be used to address the issue of the exhaustion of intellectual property rights". It is apparent that as long as it is an "issue of the exhaustion of intellectual property rights," the dispute settlement procedure shall not be used. There is no threshold or prerequisite for applying such provision. The Member applying this provision would be able to prevent such dispute settlement procedures unless the complaining party asserts and proves that the measure concerned is not such an "exhaustion issue".

5. It could also happen that exceptions or exemptions are granted under relevant agreements providing specific obligations. There are different ways of providing exceptions for specific activities or measures. Examples include paragraph 2 of Article XI of the GATT stating "...shall not extend to the following"; Articles XX and XXI of the GATT stating "nothing in this Agreement shall be

construed to..." These are in the nature of an affirmative defence. Here, the burden of proof rests on the party invoking the exception.

6. It is clear that Article 13 of the Agreement on Agriculture is not a "matter under an agreement not covered under the DSU". Neither is it a matter specifically excluded from the dispute settlement procedures as provided in Article 6 of the TRIPS Agreement. It is also not typical of the type of exception as contained in Articles XI, XX or XXI of the GATT. In our view, Article 13 falls between the type of exception in Article 6 of the TRIPS and that in Article XI, XX or XXI of the GATT. Thus the procedures for applying the provision should be interpreted differently.

7. In its First Written Submission, Brazil asserted that, "Article 13 is in the nature of an affirmative defense, because it provides an exception to a legal regime otherwise applying to agricultural support measures. It does not alter the scope of other provisions providing positive obligations on Members, and is not itself a positive obligation" and as a consequence, in this proceeding the United States has the burden of proof on the question of whether its subsidies "are in conformity with the AOA Article 13"[1].

8. In our view, the very nature of Article 13 is such that it is not appropriate for any particular description or "label" such as an "affirmative defence", or "exception", to be ascribed to it, simply for the convenience of resolving the question of burden of proof.[2] We consider that Article 13 in itself contains both rights and obligations of Members. The right conferred by Article 13, i.e. entitlement to "exempt from actions" is conditional; conditional upon a positive obligation of full conformity to the requirements as set out in the relevant provisions of the Agreement on Agriculture. We agree with the view put forward by the United States at paragraph 43 of its First Written Submission which purports to identify such positive obligations. If the contention that Article 13 confers a right as well as imposes a positive obligation, is accepted, then, as a complainant, it is for Brazil to prove a breach of this positive obligation by demonstrating non-conformity rather than for the United States to bear the burden of proving conformity. We consider that the above contention is the only logical conclusion in giving effect to Article 13. Since there is no scheme for a Member under Article 13 to prevent the initiation and the establishment of a panel, suppose Article 13 is interpreted in such a way as to still require the United States to bear the burden of proving the conformity of relevant provisions of the Agreement of Agriculture, it would mean Article 13 having less than its originally intended effect.

9. In addition to the above, drafters' intent should be taken into account when interpreting this Article. Domestic support measures are expressly allowed under this Article with the intention of giving Members some flexibility on domestic support measures to help the progressive liberalization of their agriculture. Requiring the respondent to bear the burden to prove that the subsidy measure in question is consistent with this Agreement will, to a certain degree, offset the respondent's right to claim for the exceptions provided by this Provision, which is contrary to the drafters' intention.

10. To impose the burden of proof on the respondent has another negative implication. In the case before us, if Brazil's argument stands, it would render the words "exempt from actions" pointless as the result would inevitably be a full-blown dispute settlement proceeding with Brazil submitting evidence to substantiate its complaints and the US filing its defence by invoking Article 13 and submitting proof of conformity thereto.

---

[1] Brazil first Written Submission, paragraph 23.

[2] In *EC-Hormones*, the Appellate Body is of the view that the particular description of "exception" did not discharge the burden of the complaining party in establishing a prima facie case. At para 104, the Appellate Body stated: the general rule in a dispute settlement proceeding requiring a complaining party to establish a prima facie case of inconsistency of a provision…before the burden of showing consistency with that provision is taken by the defending party is not avoided by simply describing the same provision as an exception."

## II. THE QUESTION OF PRELIMINARY RULINGS

11. Although on the evidence of past dispute settlement cases the normal practice of the Panel tends to be that it hears preliminary issues, provides indicative rulings and consolidates detailed reasoning only in the final Panel report, the questions associated with the correct interpretation of Article 13 are such that they merit the Panel's consideration and disposition at the earliest opportunity.

12. We consider that the preliminary issues raised in this dispute determine the manner in which the parties to this proceeding prepare their case. If the question of the correct interpretation of the words "exempt from actions" is not resolved along with the question of the allocation of burden of proof, considerable resources will be wasted both by complaining and defending claims. Needless to say, due process will not be properly served in such a case. Accordingly, we respectfully urge this Panel to adopt a special procedure to deal with this preliminary issue at the earliest opportunity so that parties to this dispute will not be prejudiced.[3]

[3] This Panel may recall that the Appellant Body in *EC-Banana* indicated its opinion that "…this kind of issue could be decided early in panel proceedings, without causing prejudice and unfairness to any party or third party,.." WT/DS27/AB/R, at para. 144.

# ANNEX C

## ORAL STATEMENTS OF PARTIES AND THIRD PARTIES AT THE FIRST SESSION OF THE FIRST SUBSTANTIVE MEETING

# ANNEX C-1

## EXECUTIVE SUMMARY OF THE ORAL STATEMENT OF BRAZIL AT THE FIRST SUBSTANTIVE MEETING OF THE PANEL WITH THE PARTIES

### I. INTRODUCTION

1. Brazil addresses first various peace clause issues, followed by Step 2 export and domestic payments, export credit guarantees and the ETI Act subsidies. Finally, Brazil addresses the "preliminary issues" raised by the United States.

### II. PEACE CLAUSE ISSUES

**The Peace Clause is an Affirmative Defence**

2. The peace clause is in the nature of an affirmative defence and it is, thus, the US burden to prove that Brazil's claims under the SCM Agreement are "exempt from actions". An affirmative defence is a provision that does not set out any positive obligations but enables Members to maintain measures that are otherwise inconsistent with its WTO obligations. The peace clause does not in itself set out any positive obligations for Members, but simply provides a conditional shelter against certain actionable and prohibited export subsidy claims under the SCM Agreement. The peace clause meets the criteria set forth by the Appellate Body for an affirmative defence in *US – FSC* and in the *Aircraft* disputes, by being an exception to a legal regime otherwise applicable. Given the extraordinary protection it provides, it is not "bizarre", as the United States argues, that the peace clause requires the defending Member to prove that its domestic and export subsidies meet the conditions for peace clause protection.

**"such measures do not grant support to a specific commodity"**

3. This phrase in AoA Article 13(b)(ii) means that in calculating the amount of support for any marketing year between 1995-2003, all non-"green box" support provided to a specific commodity must be tabulated, regardless of whether the *type* or *form* of the support is "product-specific", "non-product specific", *de minimis*, or "blue box". This is certainly evidenced by the decision of negotiators *not* to use the phrases "product-specific" and "AMS" in Article 13(b)(ii) to qualify the type of support to a specific commodity. The US attempt to read "product-specific" into Article 13(b)(ii) is inconsistent not only with the text but also the context of the phrase "such measures" in Article 13(b)(ii). The US interpretation of "product-specific support" is further incompatible with the object and purpose of the Agreement on Agriculture. It would create a new category of non-actionable trade-distorting non-"green box" subsidies and sanction huge increases in spending for "amber box" and, therefore trade-distorting, domestic support as long as it took the form of support for *multiple* commodities. This is contrary to the presumption of trade and production-distorting effects for individual products from non-"green box" domestic support, which flows from a domestic measure being inconsistent with the "green box" requirements of AoA Annex 2.

**"that decided during the 1992 marketing year"**

4. This word "decided" does not require any particular *type* of "decision". As a neutral term, the meaning of "decided" must be interpreted in a way that does justice to the ordinary meaning of other terms in Article 13(b)(ii) that are *not* neutral. Most importantly, the term "decided" must be interpreted in a manner that permits a comparison between a "*grant*" of non-"green box" "*support*" to a specific commodity for individual marketing years between 1995-2003, and a "decision" regarding such support in MY 1992. A textual interpretation reveals that the term "that" refers back to "support" and that support is accompanied by the term "granted".

5. The Appellate Body agreed with the panel in *Brazil – Aircraft* that the phrase "the *level* of export subsidies *granted*" meant "something actually provided", which means actual budgetary expenditures. Thus, the neutral term "decision" (for MY 1992) can only be read harmoniously with the term "grant support" (for MY 1995-2003) where the "decision" is to fund non-"green box" support to a specific commodity for marketing year 1992.

6. In addition, even if Article 13 would refer to a *level* of (income) support, as the United States alleges, the Appellate Body has held in *Brazil – Aircraft* that the "level" of export subsidies refers to actual expenditures.

7. The US interpretation of a "level of support" is furthermore inconsistent with its own interpretation of Article 13(b)(ii) in its Statement of Administrative Action (SAA). In the SAA, it stated that governments would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year". Brazil strongly disagrees with the notion of "AMS" as the relevant standard for the peace clause, *but* this official US interpretation of the peace clause in 1995 is nevertheless compelling evidence of the United States view of the "decision" it had taken during MY 1992. The calculation of the AMS for a particular commodity requires the calculation of the support provided in monetary terms. AoA Annex 3 offers two options for the calculation of AMS: budgetary outlays or the price gap formula detailed on paragraphs 10 and 11. Under either option, the AMS represents a measurement of support in monetary terms.

8. In sum, Brazil is of the firm view that the text of Article 13(b)(ii) requires comparing MY 1992 support with MY 1995-2003 support by comparing actual expenditures. This methodology produces an "amount" of support – not a "rate". Thus, any decision under Article 13(b)(ii), by definition, must relate in some way to an "amount" of expenditures. Only this methodology allows a clear comparison between the two time periods, regardless of the *type* of support.

9. However, even if the Panel were to decide that the relevant standard is a "rate of support" standard, Brazil has provided the testimony of Professor Daniel Sumner indicating that – following the US approach to measuring "support to upland cotton" – the "rate of support" to upland cotton in MY 1999-2002 was much higher than the "rate of support" to upland cotton in MY 1992. Based on the evidence and analysis presented by Professor Sumner, Brazil also asserts that even under the US "rate of support" methodology, the United States has failed to demonstrate that its MY 1999-2002 support does not exceed its support to upland cotton decided in MY 1992.

**US "statute of limitations" interpretation of the peace clause**

10. There is no express or implied "statute of limitations" in the peace clause. Subsidizing Members such as the United States are offered conditional protection under the peace clause during a 9-year period. But the rights of Members injured by subsidies provided in excess of 1992 marketing year levels are preserved throughout the implementation period as well. This is the balance struck by the peace clause.

11. The US "statute of limitations" argument in this case is very similar to one rejected by the Appellate Body in *US – Lead Bars*. This argument is further inconsistent with the views of the *Indonesia – Automobiles* panel, which held that measures applied in the past must be examined to assess present serious prejudice. The US interpretation would cut off a Member's right to challenge such measures because it missed an imaginary deadline. This US interpretation is inconsistent with the object and purpose of the AoA because it would permit Members to provide huge "non-green" box support one year without peace clause protection, and then claim absolution as soon as the next marketing year began.

**"Support to Upland Cotton"**

12. Brazil has produced extensive evidence providing the factual basis for the Panel to find that CCP, DP, market loss, and PFC payments are "support to" upland cotton within the meaning of the peace clause. USDA categorizes the PFC and market loss payments as part of "total payments" to upland cotton. US National Cotton Council officials repeatedly testified and produced documents revealing that their producer members requested, received, and depended on all four of these subsidies. Crop insurance is also support to cotton as evidenced by specific upland cotton crop insurance policies and groups of policies for upland cotton. Moreover, USDA specifically identifies and tabulates crop insurance subsidies for upland cotton. In addition, all five domestic support measures fail to meet the requirements of AoA Annex 2. Therefore, they constitute non-"green box" support that is presumed to be production and trade distorting. Such distortions can, however, only occur with respect to the production of or the trade in a particular commodity. Because, PFC, market loss assistance, direct and counter-cyclical payments as well as crop insurance subsidies are available to producers of upland cotton, these production and trade-distorting subsidies affect the production of and trade in upland cotton. The Panel should, therefore, find that all five of these programmes granted support to upland cotton in MY 1999-2002.

**Restrictions on Plantings of Fruits and Vegetables under the PFC and DP Programmes**

13. Brazil presents evidence that PFC and direct payments are not "decoupled" domestic support. These payments are dependent on the requirement that a farmer does not produce fruits, vegetables, nuts or wild rice on the contract acreage. This restrictions has the effect of channelling production on contract acreage into production of programme crops, including upland cotton, and is of particular importance for upland cotton base acreage located in regions of the United States where production of fruits and vegetables is a viable alternative to the production of upland cotton.

## III. STEP 2 EXPORT AND DOMESTIC PAYMENTS

14. The US Step 2 export payments clearly constitute subsidies contingent upon proof of export of US upland cotton. Step 2 export payments are export subsidies that violate AoA Articles 3.3 and 8 and that are prohibited by ASCM Articles 3.1(a) and 3.2.

15. Similarly, US Step 2 domestic payments are prohibited local content subsidies in violation of ASCM Article 3.1(b). There is no explicit derogation of ASCM Article 3.1(b) built into the Agriculture Agreement. In fact, the opposite is true, since AoA Article 13(b)(ii) provides a conditional exemption only for claims under ASCM Articles 5 and 6, but not for claims under ASCM Article 3. There is also no conflict between ASCM Article 3.1(b) and AoA Article 6 or Annex 3, paragraph 7, because there are two types of domestic support, including domestic support to processors of agricultural commodities – those that comply with Article 3.1(b) of the SCM Agreement and those that do not.

## IV. EXPORT CREDIT GUARANTEES

16. With respect to the consultations regarding the US export credit guarantee programmes, there is no doubt that the United States and Brazil consulted on three occasions about the GSM 102, GSM 103, and SCGP programmes as they relate to all eligible products. Thus, these measures are properly within the Panel's terms of reference and the Panel should reject the US request for a preliminary ruling.

17. With respect to Brazil's claims regarding the GSM 102, GSM 103 and SCGP export credit guarantee programmes, the United States interpretation of AoA Article 10.2 should be rejected. AoA Article 10.2 does not carve out export credit guarantees from the disciplines on export subsidies under the AoA. Nowhere does the provision exempt export credit guarantees from the disciplines on export subsidies, while exemption need to be made explicit in the text of an agreement following the Appellate Body reports in *EC – Hormones* and *EC – Sardines*. Similarly the context of AoA Article 10 as well as its object and purpose do not support the US view of AoA Article 10.2 as enabling Members to grant export credit support at zero percent interest and for unlimited terms – all for *free* – until Members complete negotiations on specific disciplines for export credits.

18. Concerning the substance of Brazil's claims against export credit guarantees, the United States has not even addressed Brazil's claim that since there is no commercial market for export credit guarantees on terms such as those provided by the CCC programmes, those programmes confer benefits *per se*. Brazil furthermore demonstrates that under the US formula accounting for the budgetary costs of contingent liabilities of CCC export credit guarantees, operating costs and losses for GSM 102, GSM 103 and SCGP have outpaced premiums collected in every single year since the United States started applying the formula in 1992. These figures represent *actual* costs and losses of the US export credit guarantee programmes.

19. Thus, the programmes constitute export subsidies within the meaning of ASCM Articles 1.1 and 3.1(a), item (j) of the Illustrative List, and AoA Articles 10.1, 1(e) and 8. They "at the very least" threaten to circumvent US export subsidy commitments, in violation of Articles 10.1 and 8 and are prohibited under ASCM Articles 3.1(a) and 3.2.

## V. ETI ACT

20. Lastly, the United States argues that Brazil has failed to meet is burden of proof that ETI Act subsidies constitute export subsidies violating the AoA and prohibited by the SCM Agreement. Brazil has adopted and reiterated all of the successful arguments of the EC in the *US – FSC (21.5)* dispute. Brazil asks the Panel to follow the panel in *India – Patents (EC)* and to give "significant weight" to the rulings in the *US – FSC (21.5)* dispute and to avoid "inconsistent rulings", while recognizing that the Panel is not formally bound by that decision.

## VI. PRELIMINARY ISSUES

21. Brazil has addressed the US request for a preliminary ruling on export credit guarantees above.

22. Concerning the US request for a preliminary ruling on the MY 2002 cottonseed payments, the record indicates that Brazil's consultation request covered "future" measures related to existing measures; it indicates further that Brazil and the United States consulted about the "Cottonseed Payment Programme", and that the Agricultural Assistance Act of 2003 provided funding for the existing administrative structure of the Cottonseed Payment Programme. Therefore, following the Appellate Body decision in *Chile – Agricultural Products (Price Band)*, the Agricultural Assistance Act of 2003 is properly within the Panel's terms of reference. In any event, the $50 million in

cottonseed payments are properly treated as "support to cotton" for the purposes of the peace clause calculation of the amount of support granted in MY 2002.

23. Regarding the US arguments that PFC and market loss assistance payments are outside the Panels terms of reference, as they constitute expired measures, Brazil asks the Panel to reject this third US request for a preliminary ruling. Brazil has properly included PFC and market loss assistance payments as part of its claims relating to *present* serious prejudice. Consultations under DSU Article 4.2 may be held concerning measures affecting the operation of a covered agreement. ASCM Article 5 requires a Member to avoid causing adverse effects, which may be the effects of current or previous, expired subsidies. As in the *Indonesia – Automobiles* dispute, expired measures are eminently within the Panel's terms of reference. Denying Members the possibility to challenge expired measures would yield the result that a Member could enact "one-time" subsidy measures that could never be challenged and the provisions of ASCM Articles 5 and 6 would thereby be rendered a nullity.

## VI. CONCLUSION

24. Brazil requests the Panel to reject all three US requests for preliminary rulings and to rule that AoA Article 13 does not exempt US domestic support and export subsidies from actions under the SCM Agreement.

# ANNEX C-2

## EXECUTIVE SUMMARY OF THE CLOSING STATEMENT OF BRAZIL AT THE FIRST SUBSTANTIVE MEETING OF THE PANEL WITH THE PARTIES

### I. INTRODUCTION

1. Brazil addresses first the "preliminary issues" raised by the United States, and then the various peace clause issues. Finally, Brazil addresses the Step 2, ETI Act and export credit guarantee measures.

### II. PRELIMINARY ISSUES

2. With respect to the consultations regarding the US export credit guarantee programmes, there is no doubt that the United States and Brazil consulted on three occasions about the GSM 102, GSM 103, and SCGP programmes as they relate to all eligible products. Thus, these measures are properly within the Panel's terms of reference.

3. Regarding the MY 2002 cottonseed payments, the record indicates that Brazil's consultation request covered "future" measures related to existing measures; it indicates further that Brazil and the United States consulted about the "Cottonseed Payment Programme", and that the Agricultural Assistance Act of 2003 provided funding for the existing administrative structure of the Cottonseed Payment Programme. Therefore, the Agricultural Assistance Act of 2003 is properly within the Panel's terms of reference. In any event, the $50 million in cottonseed payments are properly treated as "support to cotton" for the purposes of the peace clause calculation of the amount of support granted in MY 2002.

4. Regarding the US arguments that PFC and market loss assistance payments are outside the Panels terms of reference, as they constitute expired measures, Brazil asks the Panel to reject this third US request for a preliminary ruling. Brazil has properly included PFC and market loss assistance payments as part of its claims relating to *present* serious prejudice. ASCM Article 5 requires a Member to avoid causing adverse effects, which may be the effects of current or previous, expired subsidies. Adverse present effects caused by both types of measures are eminently within the Panel's terms of reference. As a factual matter, the Panel must decide on the question whether a particular expired subsidy has an actual causal connection with currently existing adverse effects. Yet, by granting the US request for a preliminary ruling the Panel would effectively dismiss Brazil's claim. Therefore, the fact that a subsidy measure has expired cannot be the basis for *a priori* excluding it from the Panel's terms of reference.

5. Furthermore, DSU Article 4.2 and 6.2 – invoked by the United States – must be applied in the context of the remedies provided for actionable subsidies under ASCM Articles 7.2-7.10. Under DSU Article 19 a panel can only recommend that the Member bring a wrongful measure into conformity with the covered agreement(s) at issue. However, for disputes concerning ASCM Articles 5 and 6, ASCM Article 7.8 contemplates two different remedies: removal of the adverse effects or withdrawal of the subsidy. While a Member cannot bring an expired measure into conformity with the covered agreements, both of the ASCM Article 7.8 remedies are valid options even for remedying the effects of a subsidy measure no longer in effect (as in the *Australia – Leather* dispute). As ASCM Articles 7.2-7.10 are "special and additional rules and procedures" under DSU Article 1.2 and DSU Appendix 2, they must prevail to the extent there is a difference between them and DSU Articles 4

and 6. This means that contrary to disputes involving other covered agreements, the Panel is required to address the adverse effects of expired subsidy measures.

6. Further, ASCM Articles 5 and 6.3 make no distinction between subsidies that are now being paid and subsidies that are no longer being paid but have a causal relationship to continuing adverse effects, as evidenced by the Panel report in *Indonesia – Automobiles*, which found serious prejudice arising, *inter alia*, from expired subsidy measures that had been provided for one year and – like the market loss assistance payments – been terminated.

## III. PEACE CLAUSE ISSUES

**"such measures do not grant support to a specific commodity"**

7. This phrase in Article 13(b)(ii) means that in calculating the amount of support for any marketing year between 1995-2003, all non-"green box" support provided to a specific commodity must be tabulated, regardless of whether the *type* or *form* of the support is "product-specific," "non-product specific", *de minimis*, or "blue box". This is certainly evidenced by the decision of negotiators *not* to use the phrases "product-specific" and "AMS" in Article 13(b)(ii) to qualify the type of support to a specific commodity. The US attempt to read "product-specific" into Article 13(b)(ii) is inconsistent not only with the text but also the context of the phrase "such measures" in Article 13(b)(ii). The US interpretation is further incompatible with the object and purpose of the Agreement on Agriculture. It would create a new category of non-actionable trade-distorting non-"green box" subsidies and sanction huge increases in spending for "amber box" and, therefore trade-distorting, domestic support as long as it took the form of support for *multiple* commodities. This is contrary to the presumption of trade and production-distorting effects for individual products from non-"green box" domestic support, which flows from a domestic measure being inconsistent with the "green box" requirements of Annex 2 of the Agriculture Agreement.

**"that decided during the 1992 marketing year"**

8. This word "decided" does not require any particular *type* of "decision". As a neutral term, the meaning of "decided" must be interpreted in a way that does justice to the ordinary meaning of other terms in Article 13(b)(ii) that are *not* neutral. Most importantly, the term "decided" must be interpreted in a manner that permits a comparison between a "*grant*" of non-"green box" "*support*" to a specific commodity for individual marketing years between 1995-2003, and a "decision" regarding such support in MY 1992. The Appellate Body agreed with the panel in *Brazil – Aircraft* that the phrase "the *level* of export subsidies *granted*" meant "something actually provided", which means actual budgetary expenditures. Thus, the neutral term "decision" (for MY 1992) can only be read harmoniously with the term "grant support" (for MY 1995-2003) where the "decision" is to fund non-"green box" support to a specific commodity for marketing year 1992.

9. The US argument that the only decision it took during MY 1992 was a "fixed rate of support" for MY 1992 is totally inconsistent with the US Statement of Administrative Action (SAA), in which the United States provided its official interpretation of the peace clause. In the SAA, the United States stated that governments would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year." Brazil strongly disagrees with the notion of "AMS" as the relevant standard for the peace clause, and draws the attention of the Panel to the fact that the United States now admits that "AMS" is nowhere found in the text of Article 13(b)(ii). *But* this official US interpretation of the peace clause in 1995 is nevertheless compelling evidence of the United States view of the "decision" it had taken during MY 1992. And this interpretation did not reflect a decision regarding only a rate of support. Instead, the only two "decision" options were set out in the AoA Annex 3, where "AMS" is calculated. This calculation is based on either budgetary

outlays, or a calculated *amount* based on the difference between a fixed reference price and the applied administered price multiplied by the amount of production eligible to receive the administered price. Under either option, the United States' interpretation indicates that an "amount" (not a "rate of support") is the measure of support under the peace clause.

10. The SAA statement is also strong evidence that the alleged US "decision" to continue the 1990 FACT Act level of support at 72.9 cents per pound is simply *post hoc* rationalization. Brazil presents evidence that prior to this dispute, the United States had not made up its mind on what would constitute the relevant decision for peace clause purposes. A series of questions asked by Brazil in the Committee on Agriculture and answers provided by the United States reveals that as of 28 June 2002, the United States had not yet made a "decision" regarding which year the United States was using with respect to Article 13(b)(ii). These questions provided the United States with every opportunity to announce the decision that it had allegedly taken 10 years before. Yet, it said nothing about a "rate of support".

11. In sum, Brazil is of the firm view that the text of Article 13(b)(ii) requires comparing MY 1992 support with MY 1995-2003 support by comparing actual expenditures. This methodology produces an "amount" of support – not a "rate". Thus, any decision under Article 13(b)(ii), by definition, must relate in some way to an "amount" of expenditures. Only such methodology allows a clear comparison between the two time periods, regardless of the *type* of support.

12. However, even if the Panel were to decide that the relevant standard is a "rate of support" standard, Brazil has provided the testimony of Professor Daniel Sumner indicating that the "rate of support" to upland cotton in MY 1999-2002 was much higher than the "rate of support" to upland cotton in MY 1992. Based on the evidence and analysis presented by Professor Sumner, Brazil also asserts that even under the US "rate of support" methodology, the United States has failed to demonstrate that its MY 1999-2002 support does not exceed its support to upland cotton decided in MY 1992.

**US "statute of limitations" interpretation of the peace clause**

13. There is no express or implied "statute of limitations" in the peace clause. Subsidizing Members such as the United States are offered conditional protection under the peace clause during a 9-year period. But the rights of Members injured by subsidies provided in excess of 1992 marketing year levels are preserved throughout the implementation period as well. This is the balance struck by the peace clause.

14. The US "statute of limitations" argument in this case is very similar to one rejected by the Appellate Body in *US – Lead Bars*. This argument is further inconsistent with the views of the *Indonesia – Automobiles* panel, which held that measures applied in the past must be examined to assess present serious prejudice. The US interpretation would cut off a Member's right to challenge such measures because it missed an imaginary deadline. This US interpretation is inconsistent with the object and purpose of the AoA because it would permit Members to provide huge "non-green" box support one year without peace clause protection, and then claim absolution as soon as the next marketing year began.

**"Support to Upland Cotton"**

15. Brazil has produced extensive evidence providing the factual basis for the Panel to find that CCP, DP, market loss, and PFC payments are "support to" upland cotton within the meaning of the peace clause. USDA categorizes the PFC and market loss payments as part of "total payments" to upland cotton. US National Cotton Council officials repeatedly testified and produced documents revealing that their producer members requested, received, and depended on all four of these subsidies. Crop insurance is also support to cotton as evidenced by specific upland cotton crop insurance policies and groups of policies for upland cotton. Moreover, USDA specifically identifies and tabulates crop insurance subsidies for upland cotton. Thus, the Panel should find that all five of these programmes granted support to upland cotton in MY 1999-2002.

## IV. STEP 2 PAYMENTS

16. The US Step 2 export subsidies clearly constitute export subsidies that violate Articles 3.3 and 8 of the Agriculture Agreement and that are prohibited by Articles 3.1(a) and 3.2 of the SCM Agreement because they are contingent upon proof of export of US upland cotton.

17. Similarly, US domestic Step 2 subsidies are prohibited local content subsidies in violation of Article 3.1(b) of the SCM Agreement. There is no explicit derogation of Article 3.1(b) built into the Agriculture Agreement. In fact, the opposite is true, since Article 13(b)(ii) provides a conditional exemption only for claims under Articles 5 and 6 of the SCM Agreement, but not for claims under Article 3 of the SCM Agreement. There is also no conflict between Article 3.1(b) of the SCM Agreement and Agriculture Agreement Article 6 or Annex 3, paragraph 7, because there are two types of domestic subsidies – those that comply with Article 3.1(b) of the SCM Agreement and those that do not.

## V. EXPORT CREDIT GUARANTEES

18. With respect to Brazil's claims regarding the GSM 102, GSM 103 and SCGP export guarantee programmes, the United States interpretation of AoA Article 10.2 should be rejected. Under the US view of Article 10.2, it can grant export credit support at zero percent interest and for unlimited terms – all for *free* – at least until Members complete negotiations on specific disciplines for export credits. This interpretation is not supported by a Vienna Convention analysis.

19. The United States has not even addressed Brazil's claim that since there is no commercial market for export credit guarantees on terms such as those provided by the CCC programmes, those programmes confer benefits *per se*. And Brazil has demonstrated that under the cost formula used by the White House, the US Congress, US government accountants and the CCC itself, operating costs and losses for GSM 102, GSM 103 and SCGP have outpaced premiums collected in every single year since the United States started applying the formula in 1992. These figures represent *actual* costs and losses of the US export credit guarantee programmes. The programmes therefore constitute export subsidies within the meaning of ASCM Articles 1.1 and 3.1(a), item (j) of the Illustrative List, and AoA Articles 10.1, 1(e) and 8. They "at the very least" threaten to circumvent US export subsidy commitments, in violation of Articles 10.1 and 8 and are prohibited under ASCM Articles 3.1(a) and 3.2.

## VI. CONCLUSION

20. Brazil requests the Panel to reject the numerous attempts by the United States to delay the initiation of Brazil's serious prejudice claims. Brazilian upland cotton producers are experiencing present serious prejudice from continued huge amounts of US subsidies to upland cotton. Applying

either methodology of calculating the support for peace clause purposes, the United States has no basis to claim peace clause protection.

# ANNEX C-3

## EXECUTIVE SUMMARY OF THE OPENING STATEMENT OF THE UNITED STATES AT THE FIRST MEETING OF THE PANEL WITH THE PARTIES

1. The United States has stayed within the disciplines and acted consistently with its WTO obligations negotiated and agreed in the Uruguay Round. We share many of Brazil's objectives with respect to reform of measures that affect agricultural trade, but we obviously do not endorse the means by which Brazil is attempting to obtain changes to WTO-consistent US support measures for upland cotton. Brazil seeks to impose disciplines and achieve results through this litigation that were not agreed in the Uruguay Round through negotiation.

2. Brazil suggests that whether a Member's measures are in breach of the Peace Clause should be judged by comparing the *aggregate outlays* that may be *attributed* to a commodity to the aggregate outlays that were made during the 1992 marketing year that, again, may be attributed to that commodity. Brazil's erroneous analysis stems from three interpretive missteps.

3. First, with respect to measures currently in effect, Brazil mistakenly suggests that support under previous measures in past years is relevant to the Peace Clause comparison. The proviso, however, is written in the present tense and thus, with respect to measures *currently* in effect, calls for a determination of the support that challenged measures *currently* grant. Brazil *nowhere* explains how the support in any previous years is relevant to the present-tense criterion that Peace Clause-exempted measures "do not grant support" in excess of a certain level. In fact, Brazil's analysis of the ordinary meaning and context of the phrase "grant support" assigns no meaning to Members' choice of verb tense.

4. Second, Brazil misunderstands the support that is relevant to the Peace Clause comparison because it misreads the phrase "support to a specific commodity". Brazil and New Zealand have asserted that, had Members intended for the phrase "support to a specific commodity" to mean "product-specific support", they would have used the latter phrase. With respect, this pushes the general interpretive aid of reading different word choices to carry different meanings too far. It ignores the relevant task for an interpreter, which is to read the text according to its ordinary meaning, in context, and in light of the object and purpose of the agreement. The ordinary meaning of the phrase "support to a specific commodity," in the context of the Agriculture Agreement, is "product-specific support".

5. We note that the Agriculture Agreement suggests that domestic support consists, in part, of product-specific and non-product-specific support. Brazil's interpretation of "support to a specific commodity," however, would apparently also capture "non-product-specific support". Absent a clear indication that such a contrary-to-logic result was intended, the interpreter should read "support to a specific commodity" to exclude "non-product-specific support". We note that the Agriculture Agreement suggests that domestic support consists, in part, of product-specific support and non-product-specific support. Brazil's interpretation of "support to a specific commodity", however, would apparently also capture "non-product-specific support". Absent a clear indication that such a contrary-to-logic result was intended, the interpreter should read "support to a specific commodity" to exclude "non-product-specific support".

6. Third, Brazil ignores the way in which the United States "decided" (that is, "determined" or "pronounced") the product-specific support for upland cotton during the 1992 marketing year. As

Brazil explained in its first submission, the Peace Clause text resulted from the EC's desire to protect from challenge measures "decided" in 1992 for purposes of CAP reform, rather than support "provided" during marketing year 1992. That is precisely the approach the United States suggests: examine the product-specific support "decided" during marketing year 1992 and compare it to the product-specific support that measures currently in effect grant. Brazil fails to explain to the Panel how US measures *actually* decided support during the 1992 marketing year in favour of Brazil's pre-baked conclusion that the "term 'decided during the 1992 marketing year' requires an examination of the *amount or quantity of support* . . . for a specific commodity that a WTO Member 'decided' to provide during the 1992 marketing year". In fact, US measures "decided" support in the 1992 marketing year by ensuring upland cotton producer income at a rate of 72.9 cents per pound. Brazil nowhere explains how US domestic support measures could have "decided" the amount of outlays since those outlays resulted from the difference between the income support level and world prices during Marketing Year 1992 beyond the US Government's control.

7. Brazil has argued that the US approach would create an annual "statute of limitations" for the applicability of the Peace Clause and that the problem with this approach is budgetary outlays are not known until after a given marketing year is completed. This comment, rather, points out the difficulties of *Brazil's* approach that *only* budgetary outlays may be examined under the Peace Clause. That is, Brazil effectively concedes that under *its* approach there would be no certainty for Members whether measures are exempt from actions. For example, it would be difficult to know whether budgetary outlays under the 2002 Act exceeded 1992 outlays as of Brazil's panel request in February 2003.

8. With respect to US direct payments, which the United States believes are "green box" measures, Brazil argues that these payments do not satisfy the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production" under the first sentence of paragraph 1 of Annex 2. However, the text of Annex 2 indicates that "domestic support measures" shall be deemed to have met this "fundamental requirement" if the measures "conform to the . . . basic criteria" of the second sentence, plus any applicable policy-specific criteria, by beginning the second sentence with "accordingly". This interpretation is supported by relevant context in the Agreement; as the European Communities notes in its third party submission, Articles 6.1, 7.1, and 7.2 refer to the measures "which are not subject to reduction commitments because they qualify under the *criteria* set out in Annex 2".

9. In addition to the basic criteria in paragraph 1, US direct payments must also conform to the five "policy-specific criteria and conditions" set out in paragraph 6 of Annex 2. Brazil brings forward two arguments that direct payments do not satisfy the criterion under paragraph 6(b) of Annex 2 that the amount of payments not be related to, or based on, production undertaken in any year after the base period. First, Brazil argues that by eliminating or reducing payments if recipients harvest certain fruits or vegetables, payments are related to production in a year after the base period. However, no particular type of production is required in order to receive such payments – indeed, no production is necessary at all. Brazil's argument, moreover, proves too much. Under Brazil's analysis, *any* limitation on a producer's choices in a year after the base period that would alter the amount of payment would be inconsistent with paragraph 6(b). However, a requirement that a recipient of direct payments produce *nothing at all* (or see the payment reduced or eliminated) *would* link the amount of payment to the type or volume of production in the current year. Such a requirement would also *ensure* that such payments meet the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production" because there would be no production at all. Thus, under Brazil's analysis, paragraph 6(b) would *prevent* a payment that would demonstrably achieve the "fundamental requirement" of Annex 2. This result is not required by the text of paragraph 6(b) and should be avoided.

10. Second, Brazil argues that direct payments are based on production in a year after the base period because once one type of direct payment to producers under Annex 2 has been made, *all*

subsequent measures providing direct payments must be made with respect to the same base period. The Annex 2 text does not support such a reading, however. Annex 2 says that "[d]omestic support measures for which exemption from the reduction commitments is claimed" shall meet the fundamental requirement of the first sentence through the relevant basic and policy-specific criteria of the second sentence. For example, in the case of decoupled income support, the particular "domestic support measure" must meet "policy-specific criteria and conditions as set out" in paragraph 6. Paragraph 6(a), (b), (c), and (d) relate "such payments" to "a defined and fixed base period". Thus, payments with respect to a given "domestic support measure for which exemption from the reduction commitments is claimed" must satisfy conditions relating to "*a* defined and fixed base period". There is no textual requirement that *all* domestic support measures for which exemption from the reduction commitments is claimed utilize the *same* "defined and fixed base period". Brazil also reads paragraph 6 as though the text were "*the* defined and fixed base period". However, this is not what the text says nor what the negotiators agreed.

11. Brazil and the rest of the Cairns Group seek to address this very issue by proposing in the ongoing agriculture negotiations that Annex 2, paragraph 6, be amended to change the reference from "a defined and fixed base period" to "a defined, fixed *and unchanging historical* base period". The revised Harbinson text, in Attachment 8, incorporates this Cairns Group proposal by proposing adding to paragraphs 5, 6, 11, and 13 of Annex 2 the text: "Payments shall be based on activities in a fixed and *unchanging historical* base period." Again, Brazil is seeking to gain through litigation what it has not yet gained through negotiation.

12. The Step 2 programme has been constructed and implemented in a manner to support the price paid to US upland cotton producers by purchasers of their product. Step 2 is a single programme that provides for payments on all sales of all upland cotton produced in the United States in a given marketing year – whether those sales are for export or for domestic consumption. Step 2 payments are provided to merchandisers or manufacturers who use upland cotton as they represent the first step in the marketing chain where these payments could be made and have the greatest impact on producer prices.

13. The authorizing statute plainly does not state that the Step 2 payment is contingent upon export. The statute provides for Step 2 payments to a class of eligible users who constitute the entire universe of potential purchasers of upland cotton from producers. Payment occurs upon demonstration of the requisite use of the cotton. Unlike the facts of *United States - FSC (Recourse to Article 21.5)* , the Step 2 subsidy involves a universally available subsidy on sales of one agricultural product produced entirely in the United States, not tied to exportation or foreign commerce. Stated most simply, US upland cotton does *not* have to be exported to receive the payment. Assuming the conditions in the payment formula are met, all US upland cotton is sold with an entitlement to the Step 2 subsidy, whether it leaves the United States or is consumed there.

14. For nearly 15 years before the inception of obligations under the Agreement on Agriculture, as well as since that time, the core features of the two main agricultural export credit guarantee programmes of the United States (GSM-102 and GSM-103) have remained substantially the same. They are well-known and well-established export credit guarantee programmes, specifically discussed by negotiators during the Uruguay Round, as well as in the OECD and in the current Doha Round.

15. Article 9.1 of the Agriculture Agreement identifies and lists specific export subsidy programmes, also well-known to the negotiators, who wanted to assure that such specific practices were embraced within the definition of an export subsidy for purposes of the Agreement on Agriculture. Other export subsidies are captured within the anti-circumvention provision of Article 10.1. In contrast, export credit guarantees were not included in either Article 9.1 or 10.1. Instead, as part of the balance struck in the Uruguay Round, negotiators opted to extend the negotiations on this subject but determined to hold Members to a commitment that if and when internationally agreed disciplines emerged, the United States, like all other WTO Members, could

only grant export credit guarantees in conformity with such disciplines. To do otherwise would at that time constitute a violation of the Member's obligations under the Agreement on Agriculture.

16. Article 10.2 expresses the two commitments of the Members in this regard: (1) to engage in such negotiations notwithstanding the conclusion of the Uruguay Round and (2) upon development of internationally agreed disciplines to render them WTO commitments through the portal of Article 10.2. Article 10.2 does not state that export credit guarantees shall be subject to such future negotiated disciplines *in addition to* the anti-circumvention provisions of Article 10.1. To the contrary, Article 10.2 and the reference to export credit guarantees is juxtaposed to Article 10.1 to reflect the intention of the drafters to distinguish export credit guarantee programmes from other programmes that otherwise would be export subsidies subject to Article 10.1.

17. For the foregoing reasons and those set out in our first written submission, the United States believes that US non-green box measures are exempt from actions pursuant to Agriculture Agreement Article 13(b)(ii); US direct payments are exempt from actions pursuant to Agriculture Agreement Article 13(a)(ii); and US export credit guarantee programmes for upland cotton and Step 2 payments are consistent with our WTO obligations.

# ANNEX C-4

## EXECUTIVE SUMMARY OF THE CLOSING STATEMENT OF THE UNITED STATES AT THE FIRST MEETING OF THE PANEL WITH THE PARTIES

1. On the US requests for preliminary rulings, the Panel expressed some interest in the question of what prejudice would result to the United States if we were forced to defend export credit guarantees with respect to commodities other than upland cotton. First and foremost, the United States would have lost the benefit of consultations on these measures. Consultations serve a number of important functions, including helping the parties to understand each others' concerns and aiding in efforts to resolve the dispute. The DSU affirms the importance of consultations and requires that a Member cannot proceed to a panel unless the Member has consulted on that measure.

2. Moreover, to require the United States to address Brazil's allegations on these measures would impose additional burdens on the United States and detract from the time and resources available to respond for those measures that *are* within the terms of reference. The United States has export subsidy reduction commitments with respect to 12 commodities. Each such commodity is therefore subject to individual Peace Clause analysis under Article 13(c). In addition, under Brazil's approach, the type of analysis the United States has offered for upland cotton concerning item (j) of the Subsidies Agreement would be appropriate for all commodities subject to the coverage of the Agriculture Agreement. This would necessitate a commodity-by-commodity analysis of the export credit guarantee programmes, as applied, concerning premiums and long-term operating costs and losses (if any).

3. But in the end, the issue of prejudice to the United States does not figure in the question of whether a measure is within the Panel's terms of reference. It is *that* question that underlies the United States' preliminary ruling requests.

4. First, the United States has requested that the Panel find that export credit guarantee measures relating to other eligible agricultural commodities are not within the Panel's terms of reference. While Brazil's *panel* request *did* refer to "export credit guarantees . . . to facilitate the export of US upland cotton and other eligible agricultural commodities," its *consultation* request did not. That consultation request nowhere included the "other eligible agricultural commodities" language, nor did Brazil include these measures in its statement of available evidence. Thus, those measures on other eligible agricultural commodities were not part of the "measures at issue" that Brazil identified in its consultation request as it is required to do under DSU Article 4.4. Contrary to Brazil's statement a few moments ago, the United States and Brazil never consulted on export credit guarantees on commodities other than cotton – not once and certainly not three times. Brazil said as much on the first day of the first panel meeting when it acknowledged that the United States told Brazil at the first consultation that its questions were beyond the scope of the consultations.

5. On the question whether the export credit guarantee programmes were one measure or multiple measures: There is no reason why export guarantees for multiple products cannot be multiple measures. Under DSU Article 4.4, it is incumbent upon Brazil to identify in its consultation request "the measures at issue." Here, Brazil identified the measure as the "export credit guarantees . . . to facilitate the export of US upland cotton," and the United States may, and did, rely on that consultation request (including the attached statement of evidence) for notice.

6. For example, if a Member banned imports of all animal products for a stated health reason, and another Member filed a consultation request on the ban solely with respect to imports of beef, that complaining Member could not then expand the scope of the dispute through its written consultation questions or its panel request to challenge that ban with respect to other affected agricultural commodities. This is, however, what Brazil is attempting to do here.

7. Brazil also relies on footnote 1 of its consultation request, which refers to an explanation "below". Such an explanation expanding the scope of the request to include "other eligible agricultural commodities" is *not* found in the consultation request. DSU Article 4.4 requires Brazil to provide "an identification of the measures at issue," not a cryptic reference that is not explained further. Despite notice from the United States and despite ample opportunity to submit a new consultation request, Brazil never did so. Therefore, export credit guarantee measures relating to eligible US agricultural commodities other than US upland cotton were not the subject of consultations and pursuant to DSU Articles 4.4, 4.7, and 6.2 do not form part of the Panel's terms of reference.

8. With respect to production flexibility contract payments and market loss assistance payments, we have explained that these payments were completed, the programmes terminated, and the statutory instruments providing them were superseded before Brazil's consultation request was filed. The measures that Brazil challenges are subsidies or payments provided by these programmes. The laws authorizing these payments designated that each such payment was *allocated* to a particular crop or fiscal year. Thus, pursuant to the 1996 Act, the last production flexibility contract payment for fiscal year 2002 was made no later than the end of fiscal year 2002. As Brazil states in its first submission, "[w]ith the passage of the new FSRI Act in May 2002, PFC payments were discontinued". The last market loss assistance payment was made with respect to the 2001 marketing year (1 August 2001-31 July 2002) pursuant to legislation enacted on 13 August 2001. Because the relevant fiscal year and the relevant marketing year, respectively, had been completed by the time of Brazil's consultation and/or panel requests, these measures cannot have been consulted upon within the meaning of DSU Article 4.2 *nor* have been "measures at issue" within the meaning of DSU Article 6.2. They therefore do not fall within the Panel's terms of reference. Brazil's suggestion that Articles 7.2 to 7.10 of the Subsidies Agreement should supersede the DSU provisions concerning this Panel's terms of reference is novel. Preliminarily, we note that Article 7.4 does mention the Panel's terms of reference, but only in the context of setting a 15-day deadline for establishing them, as opposed to the time line under DSU Article 7.1.

9. Finally, with respect to subsidies provided under the Agricultural Assistance Act of 2003 – the cottonseed payment – these are measures that were not even in existence at the time of Brazil's panel request. As the cottonseed payment had not been made (implementing regulations were not even issued until 25 April 2003) and the legislation authorizing the payments had not been enacted at the time of Brazil's panel request, this subsidy or measure was not consulted upon and could not have been a measure at issue between the parties. Therefore, the United States requests that the Panel make preliminary rulings that these three sets of measures are not within its terms of reference.

10. To summarize briefly where our discussions on the Peace Clause have brought us: Brazil suggests in *this* dispute that the word " actions" in the phrase "exempt from actions" only refers to "collective action" by the DSB. However, we note that Brazil's interpretation runs directly contrary to the view it expressed in its consultation request in the dispute *European Communities – Export Subsidies on Sugar* (WT/DS266/1). With respect to Article 13(c)(ii), which uses the same phrase "exempt from actions" at issue in this dispute, Brazil wrote: "In respect of the claims based on Article 3 of the SCM Agreement, because the export subsidies provided by the EC on sugar do not conform fully to the provisions of Part V of the Agreement on Agriculture, those export subsidies are not *exempt from challenge* by virtue of Article 13(c)(ii) of the Agreement on Agriculture." That is, in that WTO document Brazil does *not* read the phrase "exempt from actions" to mean "exempt from remedies" or "exempt from collective action by the DSB" but rather "exempt from *challenge*".

Brazil's interpretation in that WTO consultation request could only result if "exempt from action" in the Peace Clause means "not subject to" the "taking of legal steps to establish a claim" – as the United States has been contending in this dispute. We submit that *this* interpretation by Brazil is correct.

11. The Peace Clause – in Brazil's words – "exempt[s] from challenge" certain measures. It follows that the Peace Clause is not an affirmative defence but rather a threshold issue for Brazil in this dispute. As Brazil implicitly recognized in both its panel and consultation requests, to even reach the point where it will, as the complaining party, be allowed to pursue its substantive claims, Brazil must first demonstrate that the Peace Clause does not exempt US measures from action – that is "from challenge".

12. On US direct payments, which the United States believes are "green box" measures because they satisfy the criteria set out in Annex 2: As a question from the Chair to Brazil suggested, assessing the conformity of a claimed green box measure against the "fundamental requirement" of the first sentence of paragraph 1 would be a difficult, if not impossible task, for a Panel. Members foresaw the problem and therefore provided guidance on how a measure would fulfill that fundamental requirement – that is, if the measures "conform to the . . . basic criteria" of the second sentence plus any applicable policy-specific criteria, they shall be deemed to have met the fundamental requirement.

13. With respect to the criterion in paragraph 6(b) that the amount of decoupled income support payments not be based on, or linked to, production undertaken in any year after the base period, this provision need not and should not be read as Brazil suggests. The text supports a reading that a Member may not base or link payments to production requirements. The EC endorsed this view this morning. US direct payments require no particular type of production – indeed, no production is necessary at all. As we have suggested, Brazil's reading of paragraph 6(b) would prevent a Member from prohibiting a recipient from producing crops – that is, would prevent a measure that bases or links payments to a type or volume of production: none at all. If there is no production at all as a result of the measure, such a measure necessarily can have no "trade-distorting effects or effects on production". Thus, Brazil's reading of paragraph 6(b) would *preclude* a Member from establishing a measure that meets the "fundamental requirement" of Annex 2. Paragraph 6(b) need not and should not be read in opposition to that fundamental requirement. In the context provided by the first sentence of Annex 2, then, paragraph 6(b) should be read as establishing that a Member may not base or link payments to requirements to produce any crop in particular – again, US direct payments require no upland cotton production and do not require any production at all.

14. Brazil has repeatedly raised the spectre of unchecked US domestic subsidies should the Panel agree with the US interpretation of the Peace Clause. Brazil's fears are groundless. Of course the United States may not provide subsidies without any limit. US subsidies are disciplined in several ways, and the US has deliberately kept itself within those limits. There are two main disciplines that apply. The first is the US final bound commitment level under the Current Total Aggregate Measurement of Support. The second, as we have discussed at length, is the Peace Clause itself and its effective limitation to a level of producer support of 72.9 cents per pound. The United States has stayed within the boundaries of those limits despite, as outlined in Brazil's filings, pressure to do otherwise. We are entitled to the benefit of that compliance.

15. We can understand that Brazil might feel that these limits are not enough. New limits may be negotiated in the ongoing agriculture negotiations, in which the United States shares many of the same goals as Brazil. Until that happens, however, Brazil may not seek to overturn the balance of rights and obligations negotiated and agreed by Members in the Uruguay Round. Brazil's Peace Clause interpretation would do violence to the text of the Agriculture Agreement and would penalize the United States for deciding support to upland cotton producers within the limits set by the Agreement. We therefore ask the Panel to find that Brazil has not established that US domestic

support measures breach the Peace Clause and that such measures are therefore exempt from Brazil's action at this time.

# ANNEX C-5

## ORAL THIRD PARTY COMMUNICATION BY THE ARGENTINE REPUBLIC

24 July 2003

## I. INTRODUCTION

1. The Argentine Republic thanks the Panel for the opportunity to present its views as a third party to these proceedings and, in pursuant to its Submission dated 15 July[1], will comment on the claims contained in the First Written Submission of the United States, dated 11 July.

2. In this connection, Argentina will comment more particularly on:

(a) The US interpretation of the provisions of the Peace Clause, particularly in Article 13(b)(ii);

(b) the US interpretations regarding Annex 2 of the Agreement on Agriculture and, lastly;

(c) the US interpretation whereby Article 10.2 of the Agreement on Agriculture excludes export credit guarantees from the general export subsidy disciplines in the Agreement on Agriculture and the Agreement on Subsidies and Countervailing Measures.

## II. UNITED STATES CLAIMS

(a) Interpretation of the Peace Clause

3. Argentina will discuss what it regards as a mistaken US interpretation of the terms of the Peace Clause, particularly in Article 13(b) of the Agreement on Agriculture[2], whereby it draws the conclusion – equally mistaken – that its domestic support measures are exempt from the measures based on Article XVI.I of the GATT 1994 or Articles 5 and 6 of the Agreement on Subsidies (ASCM).

*(i) Grant support to a specific commodity*

4. First, the United States mistakenly interprets the phrase "grant support to a specific commodity".

5. In paragraph 71 of its Submission, the United States says that counter-cyclical payments and crop insurance payments do not constitute "support to a specific commodity" because they are not linked to specific commodity but are based on *historical* acreage and payment yields.[3]

6. The United States contends that "support to a specific commodity", in Article 13(b)(ii), means "product-specific support". Its argument is thus based on trying to incorporate the phrase "product-

[1] "Third party Submission by Argentina", paragraph 2.
[2] First Written Submission of the United States of America, 11 July 2003, Section III.D.
[3] *Ibid.*, paragraph 115.

specific support" into Article 13(b)(ii) when the phrase is not to be found in the wording of the article.[4]

7. If the negotiators had meant to say that "product-specific support" was exempt, they would have introduced that phrase into the wording of the article, but they did not do so.[5] Hence, AA Article 13(b)(ii) refers to a Member's non-Green Box domestic support measures, including domestic support measures granted only to individual specific products and also those relating to several specific products.

8. In other words, "support to a specific commodity", in Article 13(b)(ii), includes any non-Green Box domestic support measure providing identifiable support to an individual commodity, regardless of whether the measure can provide support to a larger number of commodities.[6]

9. In its argument, the US ignores the most relevant context of Article 13(b)(ii), namely the chapeau, which refers not to "product-specific support" but to "domestic support measures" in general. This means that the measures which, under Article 13(b)(ii) are relevant in determining whether a Member has granted support to a specific commodity in excess of that decided during the 1992 marketing year necessarily includes non-product-specific domestic support.

10. The US interpretation would mean no claim could be made against any Amber Box domestic support measure granted to more than one commodity. The US argument would thus allow Members to make enormous increases in domestic support to a relatively small number of commodities (such as the ten crops covered by the counter-cyclical payments programme), something which is inconsistent with the object and purpose of the AA, namely, cutting down the level of domestic support, as is apparent from the Preamble.[7]

11. Argentina considers that "support to a specific commodity", in Article 13(b)(ii), indicates that, in calculating the domestic support granted by a Member, the support must relate to a particular or precise commodity, regardless of whether the support is product-specific or specific to more than one product.[8]

12. Contrary to the US suggestion, the phrase "support to a specific commodity" does not mean "support exclusively or only" to a specific commodity. The fact that, through the same domestic

---

[4] According to the Appellate Body in the *India-Patents Case* (WT/DS50/AB/R, adopted 16 January 1998, paragraph 45):

"*The duty of a treaty interpreter is to examine the words of the treaty to determine the intentions of the parties. This should be done in accordance with the principles of treaty interpretation set out in Article 31 of the Vienna Convention. But these principles of interpretation neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended".* (Emphasis added)

[5] "*… had Members intended to exclude non-product specific support they would surely have said so", "Third Party Submission of New Zealand*", 14 July 2003, paragraph 2.21.

[6] In this respect, Argentina agrees with New Zealand: "*… New Zealand sees no basis on which to suggest that support to a specific commodity should be excluded simply because other commodities may receive similar support*". Third-party submission of New Zealand, 15 July 2003, paragraph 2.23.

[7] *"... the above-mentioned long-term objective is to provide substantial progressive reductions in agricultural support and protection sustained over an agreed period of time, resulting in correcting and preventing restrictions and distortions in world agricultural markets"* (Agreement on Agriculture, third preambular paragraph).

[8] Australia's Third Party Submission to the Panel, 15 July 2003, paragraph 23: "*... the ordinary meaning of this phrase* ("To a specific commodity"), *read in its context and in light of the object and purpose of the Agreement on Agriculture, is support granted to an individual agricultural commodity covered by AA Annex 1, such as upland cotton, whether through product specific, or non-product specific, support*".

support measures, the United States grants support to different products does not cancel out the fact that part of the support is granted to one specific product.

*(ii) Support "decided during the 1992 marketing year"*

13. After analysing the phrase "*that decided during the 1992 marketing year*", the United States reaches the conclusion that the phrase does not relate to support actually provided to a specific product during that year[9], but to support *determined* during the 1992 marketing year and that it consisted in "deciding" or "determining" a level of income support for cotton producers of US$0.72 per pound.

14. With this interpretation, the United States can get around the need to respond to Brazil's contention[10] - supported by Argentina[11] - that the US budgetary outlays on domestic support for the cotton sector for the 1999, 2000, 2001 and 2002 marketing years were far in excess of the US$1,994 million granted in 1992.

15. Argentina considers that, under Article 13(b)(ii), the word "decided" means a decision to make payments. The US argument ignores the fact that the text first uses the term "grant support" with reference to the support granted or provided to a specific commodity during the period of implementation (1995-2003). The phrase "grant support", however, is necessarily tied in with the support "decided during the 1992 marketing year"; otherwise, there would be no basis for comparison if one case involved the support granted and the other involved only the support scheduled.

16. In this connection, Argentina contends that the word "decided", in Article 13(b)(ii), should not be interpreted in such a way that the per pound guaranteed price for commodity producers (scheduled support) is the factor to be taken into consideration in determining the amount of support granted. If the criterion advanced by the United States were accepted, it would mean that an unlimited amount of domestic support could be granted to each product provided the total AMS is not exceeded.

17. In other words, the comparison required in Article 13(b)(ii) necessarily entails comparing the same type of support in each of the periods in question (period of implementation versus 1992 marketing year), in other words "comparing the comparable". The "support granted" in each marketing year during the period of implementation must necessarily be tied in with the budgetary outlays in those years.

18. In this respect, the definition of "granted" formulated by the Appellate Body in the "Brazil-Aircraft" case is relevant, namely that it is "*something actually provided*" and, thus, "*to determine the amount of export subsidies "granted" in a particular year, we believe that the actual amounts provided by a government, and not just those authorized or appropriated in its budget for that year, is the proper measure … Therefore, … we believe that the proper reference is to actual expenditures by a government …*".

19. Similarly, Argentina considers that, under AA Article 13(b)(ii), the definition of the term "support granted" must refer to a government's actual expenditures and not to a scheduled level of costs or a rate of support per unit of production.

20. Accordingly, Argentina takes the view that the support "decided during the 1992 marketing year" refers to payments actually made during that marketing year.

---

[9] First Written Submission of the United States of America, paragraph 94: "… *no amount of outlays was 'decided' … during the 1992 marketing year …*".

[10] First Written Submission by Brazil, paragraphs 144-149.

[11] Third Party Submission by Argentina, paragraphs 64-65.

*(iii) The time dimension of Peace Clause protection*

21. In contrast to the US interpretation, Argentina contends that the domestic support measures granted in any of the marketing years in the period from 1995 to 2003 are relevant in determining compliance with Article 13(b)(ii). In this connection, we consider that any injurious effects of the subsidies are extended time-wise.

22. An interpretation like the one postulated by the United States would seriously restrict the possibility of questioning whether such subsidies are consistent with ASCM Articles 5 and 6, while effects causing injury, nullification or impairment or serious prejudice can be linked to domestic support measures granted in previous marketing years.

(b) Annex II of the Agreement on Agriculture

*(i) Interpretation of paragraph 1*

23. The United States claims that its direct payments programme is in conformity with AA Annex II[12] and, therefore, is exempt from measures under the protection afforded by Article 13(a). In reaching this conclusion, however, the United States makes a mistaken interpretation of paragraph 1 of AA Annex II.

24. The United States maintains that the structure of this provision, where the second sentence starts with the word "Accordingly", suggests that measures that conform to the two basic criteria set out in paragraph 1(a) and (b), plus the policy-specific criteria and conditions set out in the subsequent paragraphs of Annex II are designed to meet the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production"[13].

25. Argentina considers this interpretation to be erroneous, since the text of the first sentence establishes a clear obligation that the domestic support measures to be exempted from the reduction commitments "… *shall meet the fundamental requirement that they have no … trade-distorting effect or effects on production …*". In Argentina's opinion, the language of this first sentence establishes a general requirement governing the application of all Green Box measures.

26. The structure of paragraph 1 of AA Annex 2 thus creates four types of obligation:

(i) The fundamental requirement of no, or at least minimal, trade-distorting effects or effects on production;

(ii) the support given in a government-financed programme does not entail transfers from consumers;

(iii) the support does not have the effect of providing producers with price support; and

(iv) the policy-specific criteria and conditions set out in paragraphs 2 to 13 of Annex 2 are also taken into account.

27. In this connection, Argentina believes that Green Box measures must respect the guiding principle of avoiding trade-distorting or production effects or at most minimal effects. A measure that meets the two basic criteria set out in paragraph 1(a) and (b), plus the policy-specific criteria and conditions set out in the subsequent paragraphs of Annex 2 could also be at variance with the general

[12] First Written Submission by the United States of America, paragraph 53.
[13] *Ibid.,* paragraph 50.

principle. The opposite interpretation would render meaningless the first sentence of paragraph 1 of Annex 2, which the text describes as a "fundamental requirement".

28. Therefore, it is Argentina's view that, however much the United States claims that its direct payments programme conforms to the requirement established in the second sentence of paragraph 1 of Annex 2[14], since it does not meet the fundamental requirement established in the first sentence it cannot be viewed as a Green Box programme.

29. In this respect, Argentina concurs with Australia and New Zealand that the first sentence of Annex 2 paragraph 1, imposes a stringent standard by requiring that the measures to be exempted from reduction commitments must, as a primary or essential condition, not artificially alter trade or production.[15]

30. Consequently, if a domestic support measure leads to a higher level of production of trade in a particular product or group of products, the measure does not meet the standard established in Annex 2, Article 1.

31. It should be emphasized that the US has in no sense answered the statements by Brazil in paragraphs 183 to 191 of its Submission concerning the trade-distorting and production effects of the direct payments programme, according to studies made by the US Department of Agriculture's own economists.

32. In other words, because the direct payments programme does have trade-distorting and production effects, it cannot be included among the domestic support measures exempted from reduction commitments.

*(ii) Interpretation of paragraph 6(b)*

33. The United States maintains that the Production Flexibility Contract Payments (PFC) and Direct Payments programmes are not tied in with production and, therefore, are not Green Box domestic support.

34. Argentina considers that the alleged "flexibility" of producers to plant different crops is in fact seriously restrictive. The amount of payments made depends on the type of production. Indeed, particular crops (fruits, vegetables, etc.) are excluded from these programmes. The effect of this is to channel production to the remaining crops, which do benefit from the programmes. This shows that the amount of the payments made is linked to the type of product sown, as Argentina pointed out in its Third Party Submission[16] and, therefore, the payments are not in conformity with AA Annex 2 paragraph 6(b).

(c) Article 10.2 of the Agreement on Agriculture does not exclude export credit guarantees from the general export subsidy disciplines of the Agreement on Agriculture and the Agreement on Subsidies.

---

[14] *Ibid.*, paragraphs 64-68.

[15] Australia's Third Party Submission to the Panel, 15 July 2003, paragraph 31: "… *AA Annex 2.1 imposes a stringent standard. Annex 2.1 requires that such measures must, as a primary or essential condition, not "bias" or "unnaturally alter trade or production …*"; Third Party Submission of New Zealand, 15 July 2003, paragraph 1.08: " … *In New Zealand's view it is critical that the integrity of the disciplines on "Green Box" measures are not weakened or their legitimate purpose undermined through the inclusion of measures that fail to meet the strict requirements of Annex 2, including the fundamental criterion that such measures are non-trade or production distorting …*".

[16] Third Party Submission by Argentina, 15 July 2003, paragraphs 54-57.

35. The United States asserts that the text of Article 10.2 of the Agreement on Agriculture permits Members to continue export credit guarantee programmes unaffected by export subsidy disciplines,[17] since the text reflects the fact of that, during the Uruguay Round, Members came to no agreement on the substantive disciplines applicable. In other words, the United States contends that the actual text of Article 10.2 of the Agreement on Agriculture indicates that the export credit guarantee programmes are not subject in any way to the Agreement's export subsidy disciplines.[18]

36. In this regard, Argentina would point out that the fact that WTO Members are negotiating disciplines in order to implement Article 10.2 does not in any way support the US reading to the effect that Article 10.2 excludes export credit guarantees from the general disciplines on export subsidies.[19] A commitment "to work towards the development" of specific international disciplines on the granting export credits, export guarantees or insurance programmes is not the same as excluding them from the general disciplines on export subsidies. If that had been the intention, then the negotiators would have expressly said so.

37. Contrary to the US contention, Argentina does not find any indication of this type in the wording of Article 10.2. The fact that the negotiators did not include an express reference to the effect that export credit guarantees are not included in the definition of export subsidies or are not subject to the disciplines established in AA Articles 3.3, 8 or 10.1 means that such disciplines apply to export credit support measures.

38. In other words, in conformity with the wording of AA Article 10.2, export credit guarantees are not exempt from the general disciplines of the Agreement on Agriculture, and where the measures are not in conformity with that Agreement, from the disciplines of the Agreement on Subsidies.

39. This interpretation is reinforced by the immediate context and the object and purpose of AA Article 10.2. Paragraph 2 forms part of Article 10, which is entitled *"Prevention of Circumvention of Export Subsidy Commitments"*. Paragraph 1 of Article 10 establishes that export subsidies not listed in paragraph 1 of Article 9 *"… shall not be applied in a manner which results in … circumvention of export subsidy commitments …"*. This provision imposes disciplines on export credit guarantees, just as it imposes disciplines on the whole universe of export subsidies not covered by Article 9.1.

40. In turn, the object and purpose of AA Article 10 is to prevent any form of circumvention of export subsidy commitments.[20] Consequently, the US interpretation of Article 10.2 is completely at variance on the context of the provision and the object and purpose of AA Article 10, since it contributes to circumvention of the export subsidy commitment by excluding an entire category of export subsidies from the general disciplines.

41. Lastly, contrary to what the US maintains,[21] the fact that an export subsidy is not included in AA Article 9.1 does not mean that it is not an export subsidy, for Article 9.1 is not an exhaustive list,

[17] First Written Submission of the United States of America, paragraph 160.

[18] *Ibid.*, paragraph 164.

[19] Third Party Submission of Canada, 15 July 2003, paragraph 53: "*This provision (*Article 10.2) *sets out an intention on the part of Members to undertake further work regarding these measures – the simple fact of agreeing to do so, however, does not amount to a permission to use those measures to confer export subsidies without consequence and without limit. The US interpretation of Article 10.2 ignores the important context provided by Article 10.1. It also directly contradicts the stated object and purpose of Article 10 as a whole …"*. Similarly, in its Third Party Submission, New Zealand states: "*Nor does Article 10.2 in any way suggest that it provides an exception from the disciplines of Article 10.1…*", paragraph 3.15.

[20] Article 10.3 reverses the burden of proof in cases of export subsidies under the Agreement on Agriculture where exports are in excess of the reduction commitment level. Article 10.4 establishes disciplines on international food aid.

[21] First Written Submission of the United States of America, paragraphs 161-162.

as is evidenced by the wording of Article 10.1.[22] Nor does it mean that such an export subsidy is not subject to the export subsidy disciplines of the Agreement on Agriculture.

42. Argentina agrees with the European Committees[23] that Article 10.2 makes it clear export credit guarantees are not one of the types of export subsidy listed in Article 9.1 and, in that connection, Article 10.1 establishes that non-listed export subsidy must not be applied in a manner which results in circumvention of export subsidy commitments.

43. Hence, as the European Communities contend, wherever export credit guarantees are export subsidies not listed in Article 9.1, those guarantees could be applied in a manner which would result in circumvention of commitments and, therefore, would be prohibited under Article 10.1.

## III. CONCLUSION

44. In accordance with the foregoing, Argentina considers that the United States has mistakenly interpreted the provisions of the Peace Clause, in particular in Article 13(b)(ii), has failed to bear the burden of proving that the domestic support measures it granted to cotton during the 1999, 2000, 2001 and 2002 marketing years were not in excess of the support "decided during the 1992 marketing year".

45. Second, Argentina considers that the US interpretations regarding Annex 2 of the Agreement on Agriculture are mistaken and that, therefore, the Direct Payments and PFC programmes do not fall under the protection of Article 13(a) of the Agreement on Agriculture for Green Box measures.

46. Third, Argentina considers that the United States export credit guarantee schemes (GSM 102, 103 and SGCP) constitute export subsidies subject to the general export subsidy disciplines of the Agreement on Agriculture (Articles 3.3, 8 and 10.1) and the Agreement on Subsidies and Countervailing Measures (Article 3.1(a) and 3.2).

[22] Third Party Submission of Canada, 15 July 2003, paragraph 32; *"Article 9 of the Agriculture Agreement lists and describes certain export subsidies that are subject to reduction commitments. All other export subsidies fall within the scope of Article 10-1…*".

# ANNEX C-6

## ORAL STATEMENT BY AUSTRALIA

24 July 2003

Mr Chairman, Members of the Panel,

1. I appreciate this further opportunity to present Australia's views on matters at issue in this dispute.

2. In this statement, I will provide some elaboration of Australia's views on the meaning of Article 13(b)(ii) of the *Agreement on Agriculture*. I will also address some of the matters raised in the First Written Submission of the United States and in the First Third Party Submission of the European Communities.

Mr Chairman, Members of the Panel,

3. I will begin with matters relating to the meaning of Article 13(b)(ii) of the *Agreement on Agriculture*.

4. As Australia noted in its Written Submission[1], the word "decided" appears twice in the operative provisions of the *Agreement on Agriculture* – in subparagraphs (ii) and (iii) of Article 13(b). Further, the immediate context for the word "decided" is exactly the same in each case: "provided that such measures do not grant support to a specific commodity in excess of that *decided* during the 1992 marketing year". Yet Article 13(b)(iii) deals with a completely different type of action: one based on non-violation or impairment under GATT Article XXIII:1(b).

5. Thus, Australia believes that it will be necessary for the Panel to consider two key threshold questions.

6. Firstly, is the meaning of the phrase "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year" the same in each of Article 13(b)(ii) and (iii)?

7. Australia recalls that the phrase, as well as draft text for what became Article 13, first appeared in the "Blair House Accord". Also included in the Accord were provisions concerning the *EEC – Oilseeds* dispute.[2]

8. In Australia's view, that dispute is crucially relevant to the interpretation of Article 13(b)(ii) and (iii).

9. Australia recalls that it clearly understood in the resumed Uruguay Round agriculture negotiations in 1993 that the words "decided during the 1992 marketing year" had been chosen to

[1] Third Party Submission of Australia, paragraph 26.

[2] *European Economic Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins ("EEC – Oilseeds")*, Report of the Panel, adopted 25 January 1990, BISD 37S/86, and *Follow-Up on the Panel Report "European Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins*, DS28/R, BISD 39S/91.

incorporate into the text of Article 13(b)(ii) and (iii) the sense of expectations of "conditions of price competition" as this had been interpreted and applied in the *EEC – Oilseeds* dispute.

10. The panel in *EEC – Oilseeds* described the purpose of GATT Article XXIII:1(b) in the following terms:

> … The panel noted that these provisions, as conceived by the drafters and applied by the contracting parties, serve mainly to protect the value of tariff concessions.[…] The idea underlying them is that the improved competitive opportunities that can legitimately be expected from a tariff concession can be frustrated not only by measures proscribed by the General Agreement but also by measures consistent with that Agreement. …[3]

11. That Panel went on to say:

> … The Panel considered that the main value of a tariff concession is that it provides an assurance of better market access through improved price competition. Contracting parties negotiate tariff concessions primarily to obtain that advantage. They must therefore be assumed to base their tariff negotiations on the expectation that the price effect of the tariff concessions will not be systematically offset. …[4]

12. In any case, having regard to the customary principles of interpretation, Australia considers that the phrase "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year" must have the same meaning in both Article 13(b)(ii) and (iii).

13. Thus, there is a second threshold question that the Panel needs to consider. That question is: could conditions of price competition for the purposes of a non-violation nullification or impairment claim be assessed solely on the basis of budgetary outlay figures, as argued by Brazil, or on the basis of a rate of payment, as argued by the United States? In Australia's view, both factors put forward by Brazil and the United States would properly form a part of that assessment, but not the whole.

Mr Chairman, Members of the Panel,

14. I would now like to comment on some matters raised in the First Written Submission of the United States.

15. Firstly, Australia disagrees with the United States' approach to interpreting the "peace clause" and the meaning of "exempt from action based on".[5]

16. If the United States' interpretation is correct and the WTO Agreement negotiators intended the interpretation offered by the United States, surely the negotiators would have included provisions clarifying how such situations should be resolved? At the very least, surely Article 13 of the *Agreement on Agriculture* would have been listed in the Special or Additional Rules and Procedures Contained in the Covered Agreements at Appendix 2 to the *Dispute Settlement Understanding*? Yet the negotiators did neither of these things.

17. The United States argues as well that its interpretation is supported by the fact that the peace clause applies "[n]otwithstanding the provisions of GATT 1994 and the Agreement on Subsidies and

[3] *EEC – Oilseeds*, paragraph 144.
[4] *EEC – Oilseeds*, paragraph 148.
[5] First Written Submission of the United States, paragraph 33.

Countervailing Measures".[6] However, the United States ignores that, for its argument to be valid, the peace clause would also have to apply "notwithstanding the provisions of the *Dispute Settlement Understanding*".

18. The United States argues too that Brazil is in error by asserting that the peace clause itself "provides no positive obligations".[7] In Australia's view, however, this argument confuses obligations and conditions: the United States is equating a binding requirement to act in a certain way with a prerequisite for the availability of a right or privilege. Article 13 of the *Agreement on Agriculture* does not of itself establish any binding requirements with which WTO Members are required to comply.

19. That confusion between rights and obligations continues when the United States argues that "Brazil's approach would produce bizarre results".[8] Indeed, the United States' arguments could be considered to confirm the nature of Article 13 as an affirmative defence. Had Brazil alleged a breach of the United States' obligations under Article 6, Brazil would have had the initial burden of making a *prima facie* case of inconsistency. Article 13, however, is a right or privilege available to the United States, provided that its measures fully conform to the relevant conditions. Thus, it is for the United States to demonstrate that it is entitled to invoke that right or privilege.

20. Secondly, the United States argues that "support to a specific commodity" is equivalent to "product-specific support".[9]

21. The United States asserts that the definition of Aggregate Measurement of Support – or AMS – at Article 1(a), and Article 6 concerning Domestic Support Commitments, provide relevant context. The United States asserts that because the calculation of AMS, and exemptions from Current Total AMS, differentiate between product specific and non-product specific domestic support, "support" in the context of Article 13(b)(ii) and (iii) means product-specific AMS.

22. Australia does not agree. AMS is defined by Article 1(a) to mean "the annual level of support … provided for an agricultural product in favour of the producers of the basic agricultural product". However, Article 13(b)(ii) and (iii) refer to "support to a specific commodity".

23. Had the negotiators intended that "support to a specific commodity" in the context of Article 13(b)(ii) and (iii) mean product-specific AMS only, they would have said so in the text. They did not. Further, the United States' argument ignores that a Member's reduction commitments include both product specific and non-product specific domestic support measures unless they are exempt from inclusion.

24. Thus, in Australia's view, "support to a specific commodity" means: all non-"green box" support that benefits a specific commodity, whether that support be through product specific, or non-product specific, programmes. Indeed, Australia believes that "support to a specific commodity" in the context of Article 13(b)(ii) and (iii) can include forms of support additional to those captured in an AMS calculation.

25. It follows, of course, that Australia considers – in the context of this dispute – that the portions of the direct payment and counter-cyclical payment programmes that benefit upland cotton should be included in the calculation of "support to a specific commodity" within the meaning of Article 13(b)(ii). Moreover, Australia notes that the counter-cyclical payment programme provides a

[6] First Written Submission of the United States, paragraph 39.
[7] First Written Submission of the United States, Paragraph 43.
[8] First Written Submission of the United States, paragraph 44.
[9] First Written Submission of the United States, paragraph 78.

target price of 72.4 cents per pound for upland cotton,[10] and that entitlements to "Step 2" payments and some other domestic support programmes are additional to the target price, as they were to the 1992 target price of 72.9 cents per pound.

26. Thirdly, the United States argues that direct payments under the 2002 Farm Act meet the criteria of Annex 2 Decoupled Income Support payments. Australia has already addressed the issue of planting restrictions on fruit and vegetables and wild rice in its Written Submission.

27. The United States argues that "eligibility for direct payments is defined by clearly defined criteria … in a defined and fixed base period" and that "payment yields and base acres are defined in the 2002 Act and fixed for the duration of the legislation".[11] The United States' interpretation means that a WTO Member could re-define and re-fix a base period every time it introduced new domestic support legislation. This cannot be a correct interpretation of the provisions of paragraph 6 of Annex 2 to the *Agreement on Agriculture*.

28. Fourthly, the United States argues that "a Member may choose to provide 'amber box' support in any … manner so long as that Member's Current Total AMS does not exceed … *[its]* commitment level".[12]

29. Australia disagrees. The United States' argument ignores that Article 13(b)(ii) does not exempt non-"green box" domestic support measures from actions based on Article 3 of the *SCM Agreement*. It also ignores the provisions of Article 21.1 of the *Agreement on Agriculture*. In an analogous situation in the *EC – Bananas* dispute, the Appellate Body said: "… the provisions of the GATT 1994 … apply … except to the extent that the *Agreement on Agriculture* contains specific provisions dealing specifically with the same matter".[13] The Appellate Body went on to say in that dispute:

> … [T]he negotiators of the *Agreement on Agriculture* did not hesitate to specify … limitations elsewhere in that agreement; had they intended to do so with respect to Article XIII of the GATT 1994, they could, and presumably would, have done so. …[14]

30. The Appellate Body's statement is equally applicable in the context of this dispute. Had the negotiators of the *Agreement on Agriculture* intended that non-"green box" domestic support measures be "exempt from actions based on" Article 3 of the *SCM Agreement*, they would have said so. The negotiators did expressly exempt export subsidies from actions based on SCM Article 3 to the extent that such export subsidies conformed fully to the provisions of Part V of the *Agreement on Agriculture*. In Australia's view, therefore, the omission from Article 13(b)(ii) of the *Agreement on Agriculture* of an express exemption from actions based on SCM Article 3 for local content subsidies has meaning.

31. Fifthly, the United States has requested that the Panel issue a preliminary ruling that Production Flexibility Contract and Market Loss Assistance payments are not within the Panel's terms of reference because these programmes have expired. The fact that a measure has expired cannot be sufficient to remove it from the Panel's purview. If the Panel were to grant the United States' request solely on that basis, it would mean that any Member could authorise WTO-inconsistent domestic support programmes through short-lived measures and avoid the consequences of such actions.

[13] *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, Report of the Appellate Body, WT/DS27/AB/R, paragraph 155.

[14] *EC – Bananas*, paragraph 157.

Mr Chairman, Members of the Panel,

32. The final matter on which I will comment today concerns the Third Party Submission of the European Communities and its arguments in relation to the interpretation of the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture*. The European Communities argues that the first sentence "simply signals the objective of Annex 2" and does not set out an independent obligation.[15]

33. That argument ignores the plain meaning of the text and renders the first sentence of paragraph 1 inutile, which of course a treaty interpreter may not do. If an exemption from reduction commitments is being claimed for any domestic support measures, the first sentence says they "shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production". As explained in Australia's written submission,[16] a fundamental requirement is a primary or essential condition. To interpret a "fundamental requirement" other than as a separate and independent obligation would be contrary to the plain meaning of the words and thus to the normal rules of treaty interpretation. The use of the words "shall meet" establishes an express obligation to comply with the specified condition that such measures not, or only minimally, bias or unnaturally alter trade or production.[17]

34. The European Communities argues that the word "accordingly" at the beginning of the second sentence of paragraph 1 links the 'fundamental requirement' in the first sentence with the 'basic criteria' in the second sentence" and thus makes clear that the fundamental requirement is complied with if the basic criteria in the second sentence and the policy-specific criteria set out in paragraphs 2 to 13 are met.[18]

35. However, the meanings for "accordingly" cited by the European Communities – "in accordance with the logical premises" and "correspondingly" – do not compel the interpretation it has offered. Moreover, there are other, equally valid meanings of the word "accordingly", provided by the same dictionary, such as "harmoniously" and "agreeably".[19]

36. It is possible to interpret the whole of paragraph 1 to Annex 2 so as to give effect to all of its provisions:

- domestic support measures for which exemption from the reduction commitments is claimed shall not, or shall only minimally, distort trade or production; and

- to the extent that measures of the type described in paragraphs 2 to 13 of the Annex are consistent and harmonious with that fundamental requirement and conform to the basic and policy-specific criteria as set out in the second sentence, they are exempt from reduction commitments.

37. Thus, notwithstanding that they may meet the basic and policy-specific criteria set out in paragraphs 1 and 6 of the Annex, a Member may not claim Decoupled Income Support payments as "green box" where those payments do not meet the fundamental requirement that they shall not, or shall only minimally, distort trade or production. Such could be the case, for example, where the level of Decoupled Income Support payments are sufficient to affect directly producer decisions concerning the allocation of economic resources to production of a particular commodity.

Mr Chairman, Members of the Panel,

38. Should you have questions on any matters concerning Australia's Written Submission and Oral Statement, I would be pleased to take these on notice and arrange for written answers to be provided.

Thank you, Mr Chairman, Members of the Panel.

# ANNEX C-7

## THIRD PARTY ORAL STATEMENT OF BENIN

24 July 2003

Mr. Chairman, members of the Panel,

It is my honour to represent Benin at this Third Party session today. The other two members of our delegation are Mr. Eloi Laourou of the Permanent Mission of Benin, and Mr. Brendan McGivern of White & Case, our legal adviser.

Although Benin acceded to the WTO back in 1996, this marks our first entry into WTO dispute settlement. We have been led to take this unprecedented step by the magnitude of the threat posed by US cotton subsidies, and the highly damaging effect that such subsidies have on the exports and economy of our country.

In our third party submission, we sought to provide to the Panel, at the earliest possible stage, information on the impact of the WTO-inconsistent US subsidies on Benin. In our view, this provides essential additional context to the issues facing the panel.

I do not intend to repeat what was in our submission, but it is worth highlighting some key facts.

The importance of the cotton sector to Benin can hardly be overstated. As noted in our submission, it accounts for 90 per cent of our agricultural exports, and three-quarters of our export earnings over the past four years. It generates 25 per cent of national revenues. In total, about a million people in Benin – out of a total population of six million – depend on cotton or cotton-related activities. Cotton plays a particularly important role in rural areas, where national poverty reaches its highest levels.

Mr. Chairman, Members of the Panel: the results of US cotton subsidies are readily apparent in West Africa. The United States provides huge, and WTO-inconsistent, subsidies for cotton. This leads to an oversupply of cotton on the world market, and a consequent decline in prices. Moreover, when cotton from Benin enters world markets, it must compete against massively-subsidized US cotton.

The dollar value of these subsidies dwarfs all other economy activity in Benin. As indicated in our submission, the subsidies paid by the United States to its 25,000 cotton farmers exceed the entire gross national income of Benin – and indeed the other countries in the region as well.

This demonstrates, rather dramatically, the impossibility of Benin ever competing with such subsidies. It is inconceivable that any developing country – let alone a least-developed country in West Africa – could ever match the virtually limitless resources of the United States.

Therefore, for us, the solution to this problem lies in the WTO. We ask simply that the United States respect its WTO obligations regarding subsidies.

Mr. Chairman, we agree with Brazil that the United States cannot invoke the peace clause to bar the claims that have been advanced in this dispute. We agree that the peace clause constitutes an

affirmative defence, and that the burden lies on the United States to demonstrate that has met all the conditions for the successful invocation of this affirmative defence. This it has failed to do.

In any event, whether the peace clause constitutes an affirmative defence, as we believe, or is part of the "balance of rights and obligations of Members", as the United States argues, the result is the same. Brazil's First Submission has established, clearly and unambiguously, that the United States is in breach of its WTO obligations. The US First Submission has provided no convincing rebuttal of Brazil's claims.

Mr. Chairman, Members of the Panel:

In its submission of July 11, the United States argued that the phrase "support to a specific commodity" should be understood to mean "product-specific support". However, the term "product-specific" does not appear in Article 13(b)(ii). If the drafters of the Agreement on Agriculture had wanted to use this term in Article 13(b)(ii), they obviously could have done so, as they did elsewhere in Agreement, such as in Article 6(4), or in Annex 3. Moreover, if the US interpretation were accepted, measures providing support to more than one commodity could not be challenged under Article 13(b)(ii). This elevates form over substance, and is contrary to both the language and the object and purpose of this provision.

Finally, the United States asks this Panel to exclude from its terms of reference certain measures that it argues were not the subject of consultations. We were not part of the consultations, and will not delve into the facts of this disagreement. However, Benin would recall the statement of the Appellate Body in *Brazil Aircraft* (DS46):

> "We do not believe….that Articles 4 and 6 of the DSU, or paragraphs 1 to 4 of the SCM Agreement, require a <u>precise and exact identity</u> between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel. As stated by the Panel, '[o]ne purpose of consultations, as set forth in Article 4.3 of the SCM Agreement, is to 'clarify the facts of the situation', and it can be expected that information obtained during the course of consultations may enable the complainant to focus the scope of the matter with respect to which it seeks establishment of a panel." [emphasis added]

Indeed, Benin notes that the United States itself took a similar approach in the recent *Japan – Apples* case. In the US replies to the Panel on October 16, 2002, USTR stated that:

> "[T]here is no requirement in the DSU to consult on a particular claim in order to include that claim in a panel request and to have such a claim form part of the panel's terms of reference. The purpose of consultations is to provide a better understanding of the facts and circumstances of a dispute; logically, then, a party may identify new claims in the course of consultations."

Although this US reply dealt with claims rather than measures, it is consistent with the ruling of the Appellate Body in *Brazil Aircraft* that panels should not require a "precise and exact identity" between the measures that were the subject of consultations and the measures identified in the panel request.

Mr. Chairman, Members of the Panel:

For Benin, this dispute is of critical national importance. As we stated in our Third Party submission, we are not seeking any special and differential treatment in the present case. We are simply asking that the United States abide by the disciplines that it agreed to at the end of the Uruguay Round.

Thank you for allowing Benin to present its views to the Panel. We would be pleased to reply to any questions you may have.

# ANNEX C-8

## THIRD PARTY ORAL STATEMENT OF CANADA

24 July 2003

### I. INTRODUCTION

1. Mr. Chairman, members of the Panel, on behalf of my Government, I thank you for your consideration of Canada's views in this dispute.

2. Canada's statement today conveys our systemic interest in the interpretation of certain provisions of the Agriculture Agreement and the SCM Agreement regarding certain aspects of Brazil's claims. The first two points we address relate to US domestic support measures and the applicability of the Peace Clause. In this respect, we set out why:

- first, the updating of the base period for US direct payments renders these payments inconsistent with paragraphs 6(a) and (b) of Annex 2 of the Agriculture Agreement; and

- second, US counter-cyclical payments to producers of upland cotton must be counted as "support to a specific commodity" under Article 13(b)(ii) of the Agriculture Agreement.

3. The last point we address is whether there is any exemption for US export credit guarantee programmes from US export subsidy commitments under the Agriculture Agreement. Here, we set out why:

- first, item (j) of the SCM Agreement may not be interpreted a contrario to deem export credit guarantee practices as not providing export subsidies under Article 10.1 of the Agriculture Agreement; and

- second, Article 10.2 of the Agriculture Agreement does not exempt export subsidies granted under export credit guarantee programmes from US export subsidy commitments in the Agriculture Agreement.

### II. US DOMESTIC AGRICULTURAL SUPPORT MEASURES

#### A. TO BE EXEMPT UNDER ANNEX 2, DIRECT PAYMENTS MUST HAVE THE SAME BASE PERIOD AS PFC PAYMENTS

4. We turn first to US direct payments. The United States defends these measures by asserting, among other things, that the 2002 FSRI Act redefines and fixes the base period for the duration of the legislation.[1] According to the United States, direct payments therefore fully conform to Annex 2 of the Agriculture Agreement.

5. This, in Canada's view, raises form over substance. In addition to the views we provided in our written third party submission, Canada observes that US direct payments also do not conform to the base period requirement in paragraphs 6(a) and (b) of Annex 2. The structure of the PFC payment

[1] US First Written Submission, para. 67.

and direct payment programmes are essentially the same[2], so are the payment parameters.[3] The applicable base period therefore is that for PFC payments. However, the United States allows base acreage determining the receipt and the amount of direct payments to be updated.[4] The base period is therefore not "fixed", contrary to subparagraph (a). The amount of the payments may also be increased based on the volume of production undertaken by a producer in a year after the applicable base period, contrary to subparagraph (b).

6. The United States itself demonstrates the linkage between PFC payments and direct payments; they are closely related and successor programmes.[5] Yet, the United States takes the position that because the payments are continued under a separate piece of legislation and new regulations, an updating of the base period does not affect their exempt status.[6] In Canada's view, such formalistic arguments cannot prevail.

B. COUNTER-CYCLICAL PAYMENTS ARE "SUPPORT TO A SPECIFIC COMMODITY"

7. Mr. Chairman and members of the Panel, the formalism of US arguments does not stop there. In an effort to avoid the logical conclusion that counter-cyclical payments "grant support to a specific commodity" within the meaning of Article 13 of the Agriculture Agreement, the United States cites varied meanings of the term "specific" and inappropriately incorporates into Article 13 concepts relating to the calculation of the AMS. These arguments are an attempt to detract from the plain text of Article 13 and its straight-forward application to the facts of this case.

8. In Canada's view, counter-cyclical payments "grant support to a specific commodity" under Article 13(b)(ii) of the Agriculture Agreement.[7] It is hard to see how a measure that grants support that is specific to a "specific commodity" would not be included in the assessment under Article 13(b). It is uncontested that the US measure provides payments in an amount determined by target prices that are specific to certain covered products.[8] The setting of commodity-specific target prices necessarily leads to different levels of support for different products. The cotton-specific support granted in this respect must be taken into account for the purposes of Article 13(b).

## III. US EXPORT CREDIT GUARANTEE PROGRAMMES

9. I now turn to US export credit guarantee programmes.

10. In Canada's written third party submission we set out the applicable standard for determining whether transactions under these programmes are subsidized within the meaning of Articles 1(e) and 10.1 of the Agriculture Agreement. Canada takes no position on the facts in this respect, but notes that USDA's own description of its guarantee programmes implies that a benefit is conferred. I quote: "The programmes encourage exports to buyers in countries where credit is necessary to maintain or increase US sales, but where financing may not be available without CCC guarantees."[9] The Panel should assess CCC premiums in the light of this admitted reality.

---

[3] US First Written Submission, paras. 58-63.

[4] US First Written Submission, para. 59.

[5] US First Written Submission, fn. 47.

[6] US First Written Submission, para. 67.

[7] See also Exhibit Br-27 ("Title I - *Commodity Programmes*"; "Counter-cyclical payments *for* wheat, feed grains, upland cotton, rice, and oilseeds" (emphasis added)).

[8] See US First Written Submission, para. 117.

[9] USDA, "Export Credit Guarantee Programmes", FAS Online at http://www.fas.usda.gov/excredits/exp-cred-guar.html, (second sentence) [Exhibit CDA-3].

11. Today, Canada addresses the two exemptions alleged by the United States in support of its assertion that the US programmes do not grant export subsidies in violation of US export subsidy commitments under Articles 8 and 10.1 the Agriculture Agreement. The claimed exemptions are the following:

- First, item (j) of the SCM Agreement sanctions any US export subsidy provided through CCC-guaranteed credit transactions because the programmes come within the scope of item (j) yet do not meet the standard it establishes. According to the United States, item (j) may be interpreted a contrario to allow subsidized export credit transactions. It follows for the United States that its programmes do not confer export subsidies within the meaning of Article 3.1(a) of the SCM Agreement and Article 1(e) of the Agriculture Agreement;

- Second, Article 10.2 of the Agriculture Agreement exempts outright any subsidized export credit transactions from US export subsidy commitments.

12. The panel in Brazil – Aircraft considered the first type of alleged exemption at length in its first implementation report. The United States was a third party in that case, and argued for an a contrario interpretation of the first paragraph of item (k) of the Illustrative List.[10] The panel rejected all arguments in this respect and concluded that the provision could not be used to establish that a prohibited export subsidy under the SCM Agreement is otherwise permitted.

13. The panel's reasoning in that case applies with equal force here. Briefly, the panel found that:

- First, Annex I is purely "illustrative" and does not purport to exhaustively list all export subsidy practices[11],

- Second, a measure that falls within the scope of Annex I is deemed to be a prohibited export subsidy such that where a Member demonstrates that the measure meets the standard in any of the listed items, it does not also have to demonstrate that the measure comes within the scope of Articles 1 and 3.1(a) of the SCM Agreement[12], and

- Third, footnote 5 of the SCM Agreement provides that practices described in Annex I may be properly considered not to constitute an export subsidy only in two situations. The first situation is where an affirmative statement in the Agreement provides that the measure in question is not an export subsidy; the second is where an affirmative statement in the Agreement provides that measures satisfying the conditions of an item in Annex I are not prohibited.[13] Footnote 5 reads "Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement".

14. In its second implementation report in Brazil – Aircraft, the panel applied the same reasoning.[14] Applying this reasoning to the case at hand, footnote 5 to the SCM Agreement precludes reliance on an a contrario interpretation of item (j) as an implied exclusion to any finding of subsidized transactions under the US programmes.

---

[10] *Brazil – Export Financing Programme for Aircraft: Recourse by Canada to Article 21.5 of the DSU*, Report of the Panel, WT/DS46/RW, adopted 4 August 2000, paras. 6.24-6.67 [*Brazil – Aircraft, First Recourse*].

[11] *Ibid.*, para. 6.30.

[12] *Ibid.*, para. 6.31.

[13] *Ibid.*, paras. 6.37.

[14] *Brazil – Export Financing Programme for Aircraft: Second Recourse by Canada to Article 21.5 of the DSU*, Report of the Panel, WT/DS46/RW2, adopted 23 August 2001 at paras. 5.274 and 5.275.

15. Regarding Article 10.2 of the Agriculture Agreement, Canada's view is that the words of that provision speak for themselves. Members have undertaken to work towards internationally agreed disciplines to govern the provision of export credit guarantees. Nothing in that provision states that the export subsidy obligations in Article 10.1 of the Agreement do not apply to US export credit guarantee practices. Where Members have wanted to exempt measures from export subsidy obligations, they have been clear– such as in the second paragraph of item (k) of the SCM Agreement.[15]

16. In addition, the US interpretation of this provision does not accord with its object and purpose. Canada shares the views of other third party participants in this dispute that the ongoing work under Article 10.2 is expected to further elaborate on current disciplines regarding export credit practices and to perhaps more clearly identify when such practices shall or shall not be deemed to confer export subsidies within the meaning of Article 1(e) of the Agriculture Agreement.[16] The obvious precedent in this respect is the second paragraph of item (k) of the SCM Agreement.

## IV. CONCLUSION

17. In conclusion, Mr. Chairman and members of the Panel, the Panel should find that the United States rendered direct payments inconsistent with Annex 2 of the Agriculture Agreement by allowing the base period to be updated. This finding would be in addition to a finding that PFC payments and direct payments do not conform to Annex 2 because the amount of the payment is linked to the type of production after the base period. Regarding counter-cyclical payments, the Panel should find that this support to US producers of upland cotton must be counted as "support to a specific commodity" under Article 13(b)(ii) of the Agreement. Finally, regarding US export credit guarantee programmes, the Panel should confirm that neither the Agriculture Agreement nor the SCM Agreement contain an exemption for any US export credit guarantee subsidy found in this case. Were the Panel to find that such subsidies exist – which in Canada's view is the most likely outcome to the Panel's assessment of the facts – then the Panel must conclude that the United States grants export subsidies in violation of its export subsidy commitments under Articles 8 and 10.1 the Agriculture Agreement and that Article 13(c)(ii) therefore does not apply.

# ANNEX C-9

## ORAL STATEMENT OF CHINA AT THE THIRD PARTY SESSION

24 July 2003

1. Thank you, Mr. Chairman, and members of the Panel. China is appreciative of this opportunity to present its views on the issues raised in this Panel proceeding. In its third party written submission of 15 July, China explained its views in relation to three issues. In this statement, I will summarize China's major points.

2. The first issue that China would like to have this Panel's attention is about the burden of proof issue under the Peace Clause.

3. China agrees with Brazil's argument that the Peace Clause is an affirmative defence in nature. If the United States claims that defence, the burden of proof is on the United States.

4. Contrary to what the United States see, China believes that the Peace Clause does not impose positive obligations. Stand-alone, Annex 2 and Article 6 of the *Agreement on Agriculture* may have positive obligations; but when they are cross-referred to by the Peace Clause, they become part and parcel of conditions that must be met before a Member can move under its safety.

5. China believes the US errs on seeing no distinction between "obligation" and "condition". The Peace Clause requirement for full conformity with Article 6 and Annex 2 does not create new obligations because Members have to comply with Article 6 and Annex 2 whether Article 13 exists or not. Within the Peace Clause, these requirements do not stand to impose obligations on Members, but to set conditions precedent for a Members intending to invoke Peace Clause protection. Positive obligations to comply with these requirements, if there is any, lie under where they are, i.e. under Article 6 and Annex 2, but not under the Peace Clause.

6. China does not see any "absurdity" as described by the United States in its written submission. No such "absurdity" would be instilled into the process if at the first stage, the party alleging protection of Peace Clause for its measures is required to discharge its burden to prove that such measures do conform to the relevant Peace Clause conditions; if it cannot so prove, the measures would lose Peace Clause protection. A second stage will follow for the party claiming against the measures to establish its substantive case, without the Peace Clause shield.

7. With respect, China submits that the burden of proof issue must be resolved first. China also hopes that the above two-step approach will help this Panel and the parties to move the procedures on towards resolution of the case.

8. The second point that China made in its written submission relates to proper categorization of US Direct Payments (shortened as "DP") under the US Fair Security and Rural Investment Act of 2002 (shortened as "FSRI"). Allow me to shorten that act to FSRI. Without repeating the issue of burden of proof, preponderance of evidence suggests that such Direct Payments are not "Green Box" in nature.

9. One of the requirements for "Green Box" Direct Payment support measures lies under Para. 6(a) of Annex 2 to the *Agreement on Agriculture*. The paragraph provides to the effect that eligibility shall be determined by "clearly-defined criteria" "in a defined and fixed base period".

10. The word "in" requires a link between the "criteria" and the "defined and fixed base period". In other words, to qualify for "Green Box" direct payment measure under Para. 6(a), a criterion adopted by a Member must be tied, in a chronological sense, to a starting time frame that cannot be moved up on the calendar.

11. As the United States has explained, 2002 FSRI DP allowed landowners to retain PFC base acreage under the 1996 Federal Agriculture Improvement and Reform Act (shortened as "FAIR") and "add 1998-2001 acres of eligible oilseeds or simply declare base acreage for all covered commodities" (including upland cotton). In addition, while a landowner may elect to simply utilize acres devoted to covered commodities during the 1998-2001 period for purpose of DP, a landowner need not do so; base acres may remain those under FAIR of 1996, implying no cotton production need have occurred since the 1993-1995 period for a landowner to have "cotton base acres" Consideration the progression from PFC to DP, one can see that contrary to the US argument that "base acres are defined in the 2002 [FSRI] Act and fixed for the duration of the legislation", the requisite link between the programme acreage as a criterion and the starting time frame under the DP is broken. The change of legislation from FAIR to FSRI and the replacement of PFC with DP were utilized to for producers to leap from their previous coverage acreage, which should have been tied to the base period, to a new updated acreage in 2002.

12. Therefore, in China's opinion, preponderance of evidence proves that the US direct payments under the FSRI shall be properly categorized as non-"Green Box" measures.

13. The last issue that China considers important is about export subsidy support granted by US "Foreign Sales Corporations" for upland cotton export sales under the "FSC Repeal and Extraterritorial Income Act of 2000". Its short name is ETI Act.

14. The ETI Act has previously been found to violate the *Agreement on Agriculture* and the *Subsidies Agreement* by both the panel and the Appellate Body in *US – FSC (21.5)* case. On 29 January 2002, the DSB adopted the panel and Appellate Body reports. Following US failure to withdraw such export subsidy support, on 7 May 2003, the DSB authorized the EC to impose countermeasures against the US.

15. China believes that the panel and the Appellate Body's reasoning and their conclusion in *US – FSC (21.5)* should be considered and taken by this Panel.

16. The measures challenged by Brazil in the current proceeding are exactly the same challenged by the EC in *US – FSC (21.5)*. Reasoning and conclusion by the earlier panel and the Appellate Body are more than relevant to the current case. Their reports, once adopted by DSB not only create legitimate expectations, but also reflect the collective will of the WTO membership.

17. In that respect, allow me to quote the panel in *India – Patent Protection for Pharmaceutical and* Agricultural *Chemical Products*, for this Panel:

> [I]n the course of "normal dispute settlement procedures" required under Article 10.4 of the DSU, we *will take into account the conclusions and reasoning* in the Panel and Appellate Body reports in WT/DS50. Moreover, in our examination, we believe that we *should give significant weight to both Article 3.2 of the DSU*, which stresses the role of the WTO dispute settlement system in providing security and predictability to the multilateral trading system, *and to the need to avoid inconsistent rulings* (which

concern has been referred to by both parties). In our view, these considerations form the basis of the requirement of the referral to the "original panel" wherever possible under Article 10.4 of the DSU.

18. This concludes my oral presentation. China welcomes questions from the Panel regarding these issues.

# ANNEX C-10

## ORAL STATEMENT BY THE EUROPEAN COMMUNITIES

24 July 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. Mr. Chairman, Distinguished Members of the Panel, the European Communities is grateful for the opportunity to express its views in this third party session.

2. We would first like to welcome the involvement of Benin in this procedure. The European Communities is of the view that the involvement of least developed countries in dispute settlement is highly desirable. We hope that other least developed countries follow Benin's lead.[1]

3. This is a complex case which raises many difficult and important interpretative issues. Those responsible for drafting Article 13 of the *Agreement on Agriculture* have left you with some difficult questions. Despite those difficulties, Article 13 in particular, and the *Agreement on Agriculture* more generally, represent a finely balanced and much fought over package of rights and obligations assumed by WTO Members. The European Communities is confident that this Panel will undertake a careful examination of these very precise terms and preserve the delicate balance of rights and obligations which has been negotiated.

4. This dispute raises a large number of issues. In our interventions, we have concentrated on those issues of principle which we consider are of systemic concern. Today, we will largely address issues which were not addressed in our written submission. At the same time, we also consider it necessary to revisit some issues which we have already addressed in order to rebut some of the arguments raised by other parties.

5. The European Communities starts by setting out its conception of the role of the peace clause (section II). We will then address several questions of interpretation relating to the peace clause (section III). We then turn to consider the interpretation of Annex 2 of the *Agreement on Agriculture* (the Green Box) (Section IV) before considering the status of domestic content subsidies and export credits under the *Agreement on Agriculture* (Section V). We conclude with some comments on one of the requests for preliminary rulings raised by the United States (Section VI).

## II. THE ROLE OF THE PEACE CLAUSE

6. We turn first to consider the role of the Peace Clause (Article 13).

7. The European Communities views Article 13 as one element regulating the interface between the *Agreement on Agriculture* and the *SCM Agreement*. It defines, in some cases, how subsidies granted pursuant to the *Agreement on Agriculture* should be treated for the purposes of countervailing duty investigations, and in other cases exempts such subsidies from actions under the *SCM Agreement*. The European Communities disagrees with both Brazil and the United States as to how the term "exempt from action" should be understood. However, while we disagree with the United States' logic, we do not disagree with the practical result of the application of its logic.

8. The term "exempt from action" cannot mean, as Brazil claims, that, even if the peace clause is applicable, the Panel must examine Brazil's claims under the *SCM Agreement*, and that if the Panel finds that the United States has acted inconsistently with the *SCM Agreement*, the DSB should somehow "refrain" from recommending the United States to bring itself into conformity with the *SCM Agreement*. The European Communities finds it difficult to imagine how the DSB, operating under the negative consensus rule, could refrain from recommending the United States bring itself into conformity should the Panel find that the United States had acted inconsistently with the *SCM Agreement*. Moreover, the United States can reasonably argue that it is not required to bring itself

[1] This text was not in the written statement circulated at the third party session, but reflects unscripted comments made during that session.

into conformity with the *SCM Agreement* by withdrawing measures which it is perfectly entitled to maintain under the *Agreement on Agriculture*, pursuant to both Article 13 and Article 21. The only answer to this question is that if the United States is entitled to peace clause protection, the Panel cannot find in favour of Brazil's *SCM Agreement* claims.

9. The European Communities does not agree with the United States that Article 13 prevents a Member from requesting consultations or the establishment of a panel with respect to a measure which might be entitled to Article 13 protection. It is not, as the US argues, the mere fact that the defendant Member is unable to block a request for consultations, or for establishment of a panel, that the applicability of the peace clause has come before this Panel. The need for the Panel to adjudicate this issue flows from the fundamental principle underlying the WTO Agreement that every question of interpretation of the WTO Agreements which "affects the operation of any covered agreement" must be subject to the DSU.[2] However, as we have noted, if the Panel determines that the US measures in question are protected by Article 13, it cannot find in favour of Brazil's claims under the *SCM Agreement*.

## III. INTERPRETATION OF THE PEACE CLAUSE

10. The Panel has a number of challenging questions before it on the interpretation of various aspects of Article 13(b). The European Communities turns now to set out its position on some of the issues before the Panel.

### A ARTICLE 13 IS NOT AN AFFIRMATIVE DEFENCE

11. The European Communities will only briefly touch upon the issue of the burden of proof for Article 13. The European Communities has yet to hear a credible response to the argument that putting the burden of proof on the defendant has perverse effects. As the European Communities and the United States have pointed out, when a complainant brings a case only under the *Agreement on Agriculture* (for instance alleging breach of Article 6) it will bear the burden of proof. However, if Article 13 is considered an affirmative defence, when a complainant brings a dispute under Articles 5 and 6 of the *SCM Agreement* and, for instance, Article 6 of the *Agreement on Agriculture*, the complainant would be required to prove a breach of Article 6 while at the same time the defendant would also be required to prove that it had not infringed Article 6 of the Agreement. The burden of proof cannot switch between parties simply on the basis of whether the complainant cites the *SCM Agreement* or not, but this would be the result of interpreting Article 13 as an affirmative defence.

12. Further confirmation that Article 13 is not an affirmative defence can be drawn from the fact that Article 13 also regulates the application of countervailing duties on agricultural subsidies. In this context, a determination that the subsidy in question is not protected by Article 13 must be taken by an investigating authority before it may impose countervailing duties. Article 13 is consequently a pre-condition for an individual Member in taking action against subsidised exports. It cannot, in that context, be considered as a defence for exporters co-operating in an investigation and may, as the United States have pointed out, be used as the foundation for a claim in a WTO dispute by the exporting Member that countervailing duties have been illegally imposed. There is no reason why that conception of Article 13 should change simply because the issue arises in WTO dispute settlement.

[2] Article 4.2 DSU.

B. RELEVANT COMPARISON FOR THE PURPOSES OF ARTICLE 13

13. Brazil has argued that any breach of the 1992 level during the 9 year implementation period removes the protection of Article 13.[3] The European Communities agrees with the United States that this is incorrect.[4] The present tense of the phrase "do not grant support" makes this clear. The comparison for the purpose of Article 13(b) must be between the level of support decided in the 1992 marketing year and that granted by virtue of the measures being challenged. This would typically mean the most recent marketing year.

C. THE MEANING OF "DECIDED DURING THE 1992 MARKETING YEAR"

14. We now turn to consider the meaning of the phrase "decided during the 1992 marketing year". Brazil argues that the term "decided" refers to a decision to budget a specific amount of domestic support over a number of years.[5] Brazil then goes on to suggest that because the United States did not make a "decision" during marketing year 1992 with respect to upland cotton, the only decision which the United States can be said to have made during marketing year 1992 was the continued funding of its programmes for upland cotton. Brazil then calculates the US' budgetary outlays in respect of upland cotton in 1992; in other words, Brazil looks at the support actually granted.[6]

15. The European Communities is concerned that Brazil appears to consider that the support "decided" in the sense of Article 13 can be equated with the support granted as Brazil has done in its use of US budgetary outlays. Such an interpretation ignores the meaning of the word "decided". That the use of the word "decided" cannot be equated with the term "granted" is illustrated by the following.

16. First, the use of the word "decided" itself is notable. It is, however, notable primarily for what it is not. WTO Members did not use the word "granted" which is the word which one would expect to be used had this phrase been intended to refer only to the domestic support actually used during the 1992 marketing year. The use of the word "decided" stands out particularly when it is compared to the use of the word "grant" in the very same sentence. The United States has made the same point with respect to the decision not to use the word "provided".[7] If WTO Members had intended that the support granted in the most recent period was to be compared to that granted in marketing year 1992 the word "decided" would not have been used. For this reason, Brazil's use of US budgetary outlays for marketing year 1992 is clearly flawed.

17. Second, the word "decided", meaning "settled, certain",[8] also implies a one-off decision. It would be odd to talk of an administration "deciding" countless applications for support under a particular programme. However, this is what Brazil's use of US budgetary outlays implies.

18. Finally, the use of the word "during" confirms that WTO Members intended that the decision need not be of application only in marketing year 1992 but may also cover future periods. The use of the word "during" (meaning "in the course of"[9]) implies a one-off decision, and does not suggest that the period of application of the decision must be limited to marketing year 1992. Had WTO Members intended a limitation to the support provided or granted in 1992 the word "for" would have been used

[3] Brazil's First Written Submission, paras.142 and 146-150.
[4] US First Written Submission, para. 79 and 90.
[5] Brazil's First Written Submission, paras. 139 and 140.
[6] Brazil's First Written Submission, paras. 141-145.
[7] US First Written Submission, paras.83-84.
[8] The New Shorter Oxford English Dictionary, 1993.
[9] The New Shorter Oxford English Dictionary, 1993.

in place of "during". This further confirms that Brazil's use of US budgetary outlays cannot be considered correct.

19. Consequently, Article 13(b)(ii) and (iii) are intended to set up as a benchmark an amount of support adopted by some form of decision (be it political, legislative or administrative) in which support for a specific product is decided and allocated for future years. It is clearly not intended to set up a comparison between domestic support granted in 1992 and domestic support granted in a more recent period. The European Communities respectfully requests the Panel not to follow Brazil's equation of the term decided with the term granted.

20. For the European Communities, the question of what decision was adopted during 1992 by the United States is a question of fact which we do not take a position on, especially as we are not fully aware of all the elements which might be relevant.

### D. THE MEANING OF THE TERM "SUPPORT TO A SPECIFIC COMMODITY"

21. The United States has argued that the term "support to a specific commodity" is synonymous with the term "product-specific support".[10] Brazil had, in its First Written Submission, taken all support which was specific to cotton, and added to it a proportion of generally available support intended to represent the amount of such support which could be attributed to cotton.[11]

22. The European Communities shares the approach of the United States. Quite simply, support which is provided to a number of crops cannot at the same time be considered "support to a specific commodity". Such support is "support to several commodities" or "support to more than one commodity".

23. With respect, Brazil and New Zealand are wrong to suggest that the word "specific" was added to make clear that the applicable benchmark under Article 13 was not the overall level of subsidies decided but rather was to be undertaken on a product-by-product basis.[12] A brief glance at the *SCM Agreement* finds it replete with references to "a product" or "a subsidised product".[13] Consequently, it could make no sense to interpret Article 13 as being based on overall support. The word "specific" was not, therefore, inserted to differentiate the use of Article 13 in respect of specific products to the application of Article 6 to overall agricultural support, but rather as a qualifier to the word "support".

24. Consequently, the Panel should conclude that the correct comparison is between product specific support decided in 1992 and product specific support currently provided.

## IV. THE INTERPRETATION OF ANNEX 2 OF THE *AGREEMENT ON AGRICULTURE* (THE "GREEN BOX")

### A. FIRST SENTENCE OF THE FIRST PARAGRAPH OF ANNEX 2[14]

25. Australia has argued in its comments today that the European Communities is incorrect to consider that the first sentence of the first paragraph of Annex 2 does not impose a separate obligation. The European Communities notes, however, that Australia does not comment and does not

[10] US First Written Submission, paras. 77-78.
[11] Brazil's First Written Submission, para. 143.
[12] Brazil's First Written Submission, para. 136; New Zealand Third Party Submission Para. 2.22.
[13] See, in particular, Article 6.3.
[14] This section was not in the written statement circulated at the third party session, but reflects unscripted comments made during that session.

attempt to rebut the compelling contextual arguments that the European Communities has made in its written submission.[15] The European Communities pointed out that in several instances that the *Agreement on Agriculture* refers to the "criteria" for inclusion in the green box, specifically in Articles 6 and 7, and most importantly, in paragraph 5 of Annex 2. There is no such reference to the "fundamental requirements". The European Communities recalls that a panel is obliged to follow the accepted canons of interpretation of international law, and therefore, to view the ordinary meaning of the words concerned in light of their context and objective. Consequently, it is clear that the first sentence of paragraph 1 of Annex 2 is not, in and of itself, an independent obligation. This does not render it inutile, as Australia charges. The first sentence sets out an objective and indicates the type of effects which respect for the criteria in the green box is deemed to create. The European Communities urges the Panel to reject Australia's unsubstantiated arguments.

B. TYPE OF PRODUCTION

26. Brazil has argued that the fact payments are reduced where fruits and vegetables, and certain other crops are grown on contract acreage for the purposes of PFC and direct payments means that the "amount of such payments [is] related to or based on, the type or volume of production [ ..] in any year after the base period" (Paragraph 6(b) of Annex 2). However, Brazil also appears to recognise that farmers claiming the benefit of direct payments may plant crops other than the programme crops, and may even not produce any crops.[16] The United States asserts that no current agricultural production is required in order to benefit from direct payments.[17]

27. Assuming the US' assertion to be correct (as seems to be acknowledged by Brazil) the Panel is faced with a dilemma. Is the amount of funding provided by a programme, from which a farmer can benefit without producing anything, to be considered to be "based on or linked to a certain type of production", when payments under that programme can be reduced by growing certain crops? Brazil and some third parties simply assume that where payments can be reduced by growing certain crops, the programme is based on or linked to a certain type of production. Such a view does not, however, take account of the complexity of the situation.

28. In the view of the European Communities, reducing payments under a programme, where a farmer grows fruit or vegetables does not mean that the amount of the payment is linked to type of production. This is because the farmer is free to produce a whole range of other crops, or even not to produce at all and receive the full payment.

29. What Brazil and other third parties fail to realise is that the reduction in payment for fruits and vegetables, if the European Communities understands correctly, is in fact designed to avoid unfair competition within the subsidising Member. Brazil and the other third parties have not challenged the right of a subsidising Member to decide decoupled payments based on past production of, or acreage utilised for, certain crops. Indeed, this is permitted in paragraph 6(a) of Annex 2. However, in the case where, for instance, upland cotton production enjoyed support, while fruit and vegetable production did not, decoupled payments based on past cotton production would allow subsidised former cotton farmers to grow fruit and vegetables, and thus unfairly compete with pre-existing fruit and vegetable producers who could not benefit from the decoupled payments because they had not produced cotton or other supported products in the base period. Thus, the reduction in payments is a necessary element in ensuring that the equilibrium established by the market for the production of fruit and vegetables is not artificially disturbed by the introduction of decoupled support.

[15] EC's First Third Party Submission, paras. 15-25 and in particular paras. 22 and 23.
[16] Brazil's First Written Submission, para. 49.
[17] US First Written Submission, para. 68.

30. Furthermore, finding that Brazil and the other third parties are correct would have perverse effects. The whole *Agreement on Agriculture* is geared at gradually reducing certain types of domestic support. However, if a Member could not reduce decoupled payments when certain types of products which had previously not enjoyed any support are grown, the net effect would be that WTO Members wishing to provide decoupled support would have to increase overall support, and provide producers previously excluded with support which they had not previously enjoyed. This is clearly not an effect which the negotiators of the *Agreement on Agriculture* intended.

31. In this light, this potential reduction of payment is very different from the prohibition set down in paragraph 6(b) of Annex 2. Paragraph 6(b) is intended to prevent an artificial pressure to produce certain crops in order to obtain decoupled payments. Reducing payments where fruit and vegetables are produced does not act to pressure farmers into growing a particular type of crop. Rather, it prevents internal unfair competition. At the same time, as we understand the US measure, it does not oblige a farmer to produce any particular type of crop, in fact requires no production, and therefore should not be considered inconsistent with paragraph 6(b).

### C. A DEFINED AND FIXED BASE PERIOD

32. The European Communities would also like to comment briefly on the arguments raised by Brazil and some of the third parties with respect to the updating of the base periods in the 2002 FRSI Act. We take note of the US statement that the updating of the base period was necessary in order to bring support for oilseeds production under the direct payments scheme.[18] In order to ensure the progressive movement of production distorting subsidies to decoupled subsidies we consider that it must be possible to have different reference periods where eligibility is based on previous eligibility for production distorting subsidies. We see nothing in paragraph 6 of Annex 2 which might prevent this. At the same time, however, the European Communities is concerned that continued updating of reference periods in respect of the same already decoupled support, creating an expectation that production of certain crops will be rewarded with a greater entitlement to supposedly decoupled payments, tends to undermine the decoupled nature of such payments.

## V. INTERPRETATION OF THE *AGREEMENT ON AGRICULTURE* /RELATIONSHIP WITH THE *SCM AGREEMENT* AND GATT 1994

### A. ARE DOMESTIC CONTENT SUBSIDIES EXPRESSLY PERMITTED BY THE AGREEMENT ON AGRICULTURE ?

33. Brazil has argued that US Step 2 payments, which it alleges are conditional upon use of domestic goods, are inconsistent with Article 3 of the *SCM Agreement* and Article III.4 GATT 1994. New Zealand supports this claim. However, as with other claims, their analysis does not take fully into account the complexities of the situation. The European Communities agrees with the United States that subsidies contingent upon the use of domestic goods, which are maintained consistently with the *Agreement on Agriculture* are not inconsistent with either the *SCM Agreement* or GATT 1994.

34. The first question is whether subsidies contingent upon the use of domestic goods are consistent with the *Agreement on Agriculture*. The answer is a clear yes. Article 3.2 of the *Agreement on Agriculture* requires Members not to:

> "…provide support <u>in favour of</u> domestic producers in excess of the commitment levels specified in Section I of Part IV of its Schedule." (emphasis added).

[18] US First Written Submission, para. 60.

35. We have emphasised the phrase "in favour of". This is significant because it does not require that support be "to" domestic producers. The same term is used in Article 1(a) (the definition of AMS) and in Article 1(h) (definition of Total AMS). Moreover, it is established with respect to Article 1 of the *SCM Agreement* that a financial contribution and benefit need not be bestowed on the same person.[19] Consequently, it is simply logical that support may be provided in favour of domestic producers through the provision of funds to processors of the product concerned, and consequently that access to such subsidies be limited to domestic produce, in order to ensure that it is domestic producers who benefit from this subsidy. Indeed, WTO Members, in their wisdom, recognised precisely this possibility in Annex 3 to the *Agreement on Agriculture* where they explained how the AMS was to be calculated. Paragraph 7 thereof explicitly contemplates that:

> "measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products."

36. Consequently, it is clear that a Member has a right to provide subsidies contingent upon use of domestic products under the *Agreement on Agriculture*. On this, the US and the European Communities agree.

37. The second question for the Panel is how does that right relate to the prohibition in Article 3 of the *SCM Agreement* and the national treatment obligation in Article III.4 of GATT. Here, again, we agree with the United States.

38. Article 21.1 of the *Agreement on Agriculture* provides that the other goods agreements will apply "subject to" the provisions of the *Agreement on Agriculture*. That is, the other Annex 1A Agreements will be subordinated to the *Agreement on Agriculture*.[20] A finding that a measure was a domestic content subsidy would mean that such a subsidy would be prohibited under Article 3.1(b) of the *SCM Agreement* and would (in all likelihood) be inconsistent with Article III.4 GATT. In such an event, the consequences of such a finding would have to be subordinated to the right to adopt such measures under the *Agreement on Agriculture* (provided reduction commitments are respected). Moreover, the chapeau of Article 3.1 of the *SCM Agreement* clearly exempts from the scope of that Article domestic content subsidies which are maintained consistently with the *Agreement on Agriculture* and Article III.8 may be relevant to any claim under Article III.4. GATT.

39. Consequently, Brazil's claims that domestic content subsidies maintained consistently with the *Agreement on Agriculture* can be found to be inconsistent with the *SCM Agreement* and Article III.4 GATT should be dismissed.

## B. EXPORT CREDIT GUARANTEES WHICH OPERATE AS EXPORT SUBSIDIES ARE SUBJECT TO AGREEMENT ON AGRICULTURE OBLIGATIONS ON EXPORT SUBSIDIES

40. The United States maintains, in its first written submission, that Article 10.2 of the *Agreement on Agriculture* operates so as to exclude export subsidies in the form of export credits or export credit guarantees. This is not borne out by the text of Article 10.2. Article 10.2 provides for disciplines to be negotiated on the provision of export credits and export credit guarantees; it does not provide an exemption to the export subsidy obligations of the *Agreement on Agriculture*.

41. The United States provides numerous examples of instances in which the WTO has foreseen further negotiations. However, none of these examples support the United States argument that there are no disciplines for export credit guarantees which operate as export subsidies.

---

[19] See, Appellate Body Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities*, WT/DS212/AB/R, adopted 8 January 2003, para. 110.

[20] The New Shorter Oxford English Dictionary, 1993.

42. The best example to illustrate this point is the agreement to negotiate disciplines on harmonised rules of origin. The fact that it was agreed to have negotiations on rules of origin simply means that there is no requirement for a WTO Member to apply an as yet un-finalised set of harmonised rules of origin. However, this does not imply that a WTO Member is exempted from other WTO obligations when it comes to apply rules of origin. A WTO Member must, for instance, in applying its rules of origin, respect the most-favoured nation principle set out in Article 1 GATT. Similarly, while there may not be disciplines on the provision of export credits and export credit guarantees, clearly export credits or export credit guarantees which operate as export subsidies are subject to the export subsidy disciplines of the *Agreement on Agriculture* and the *SCM Agreement*.

43. Other examples are equally illustrative. The US cites provisions in the GATS providing for negotiations on government procurement, emergency safeguards and subsidies on trade in services. However, it does not point out the fact that these subjects are clearly not subject to GATS disciplines, and thus negotiations are required to develop even minimal disciplines. Government procurement in services is the best example – GATS disciplines are explicitly excluded by Article XIII GATS. In contrast, there is no clear exclusion of export credits or export credit guarantees which operate as export subsidies from the *Agreement on Agriculture*.

44. Finally, contrary to the US suggestions, such an interpretation does not render Article 10.2 meaningless. Article 10.2 is not intended to regulate export credits and export credit guarantees as export subsidies but rather to provide for a general set of disciplines comparable to the OECD guidelines for export credits for industrial goods. That the Harbinson text (which of course has yet to be agreed) contains provisions on export credit and export credit guarantees is a recognition that disciplines must be negotiated and that clarification must be provided as to which export credits or export credits guarantees are, in the case of agricultural products, to be considered export subsidies, but is not a recognition that such support which operates as an export subsidy are not currently subject to the obligations of the *Agreement on Agriculture*.

## VI. MEASURES BEFORE THE PANEL (FSC REPLACEMENT SCHEME)

45. The United States has argued that Brazil has failed to make a prima facie case of the inconsistency of the FSC Replacement scheme (the ETI) with the covered agreements. The European Communities must admit to being surprised that the United States considers that Brazil has to present a prima facie case of inconsistency. According to Article 17.14 of the DSU parties to a dispute must "unconditionally accept" adopted Appellate Body Reports as "a final resolution to that dispute."[21] Given that the United States must be assumed to have unconditionally accepted the findings of the Appellate Body in the FSC 21.5 dispute, which, by definition also included a finding that the United States was illegally providing export subsidies to unscheduled agricultural products such as upland cotton, the European Communities fails to see how the United States can argue that Brazil needs to establish a prima facie case. On the contrary, Brazil simply needs to assert a claim.

## VII. CONCLUSION

46. This brings us to the end of our statement today. Thank you for bearing with us through a statement which was inevitably long, given the complexity of the issues, and the very short time we had to prepare our written submission.

47. There are a few central points which we would like to leave you with:

- The peace clause is not an affirmative defence;

[21] Appellate Body Report US- Shrimp (21.5 – Malaysia) para. 97.

- The term "decided" cannot be equated with "granted";

- Reducing payments where certain crops are grown for reasons of internal competition does not amount to basing payments on a certain type of production;

- Domestic content subsidies in favour of domestic producers are permitted under the *Agreement on Agriculture*, and can be maintained irrespective of other provisions; and,

- Export credit guarantees which operate as export subsidies are subject to the *Agreement on Agriculture*.

48. Thank you for your attention. We are, of course, happy to answer your questions, here or in writing.

# ANNEX C-11

## INDIA'S ORAL STATEMENT

Mr. Chairman and Members of the Panel,

I thank you for the opportunity to present India's views in this third party session. India has a few short comments to make on the issues in the dispute.

1. Brazil has challenged the US Subsidy programme relating to cotton. The main schemes challenged are

(i) Step 2 export payments
(ii) US export credit guarantee programmes, and
(iii) Extra Territorial Income (ETI) Act export subsidies.

2. These schemes do not conform to the provisions of Part V of the Agreement on Agriculture and thus have no "peace clause" protection from claims under the Subsidies Agreement. These schemes also violate Article 3.1(a) & 3.2 of the Subsidies Agreement.

3. The scheme relating to Step 2 export payments constitutes an export subsidy within the meaning of the Agreement on Agriculture. It also violates the Subsidies Agreement as

(i) It involves grants within the meaning of the Subsidies Agreement as the US Government pays money to its exporters
(ii) These grants involve direct transfer of economic resources for which the US Government receives no consideration
(iii) The scheme confers a benefit within the meaning of Article 1.1(b) of the Subsidies Agreement as they constitute "free money" for which exporters incur no corresponding obligations and they are made for " less than full consideration" and
(iv) The Scheme is also export contingent within the meaning of Article 3.1(a) of the Subsidies Agreement because exporters are only eligible for payments if they produce evidence that they have exported an amount of US upland cotton.

4. The three Export Credit Guarantee Programmes (GSM 102, GSM 103 & SCGP) are export subsidies within the meaning of the Agreement on Agriculture (AOA) as

(i) They are operated " at premium rates which are inadequate to cover the long term operating costs and losses of the program" as per item (j) of the illustrative list of export subsidies in ASCM.
(ii) They involve financial contributions that confer "benefits" and are contingent upon export performance within the meaning of Article 1.1 & 3.1(a) of the Subsidies Agreement. The US itself treats them as subsidies in its budget.

5. The ETI Act constitutes export subsidies within the meaning of Article 10.1 of the Agreement on Agriculture. This Act operates to circumvent the US export subsidy commitments by providing an export subsidy to upland cotton while the US does not have any export subsidy reduction commitments for cotton in violation of Articles 10.1 & 8 of the AOA.

6. The Step 2 Domestic Payment Scheme grants are direct transfers of funds and constitute a financial contribution by a Government within the meaning of Article 1.1(a)(1)(i) of the Subsidies Agreement. They also confer a "benefit" within the meaning of Article 1.1(h) of the Subsidies Agreement because the domestic user of US upland cotton receives the financial contribution on terms more favourable than those available in the market. Moreover these payment are contingent upon the use of domestic over imported goods.

Mr. Chairman, Members of the Panel,

7. Brazil has provided the legal arguments as to why the US has no basis to assert a "peace clause" defence against Brazil's claims on actionable/prohibited subsidies being given by the US.

8. According to Brazil, the "peace clause" of AOA Article 13 is in the nature of an affirmative defence. The US has indicated that it will invoke a "peace clause" defence in the matter. This means that the burden of proof will be on US to show that the US domestic support and export subsidies to upland cotton are provided in conformity with the requirements of the "peace clause".

9. Brazil has argued that US has no "peace clause" protection under AOA Article 13(c) as the US while invoking an affirmative defence must demonstrate that its export subsidies confirm fully to the provisions of Part V of the AOA. Part V of the AOA consists of Articles 8 to 11. A member violates Part V of the AOA if it provides export subsidies for products for which it has not undertaken any export subsidy reduction commitments.

10. Issues relating to affirmative defence and peace clause defence are mainly legal in nature and should be subject to interpretation under the Vienna Convention on the Law of Treaties and the WTO jurisprudence as seen through Appellate Body findings.

11. As regards subsidies contingent upon export performance, export credit guarantees and premiums, and use of domestic over imported inputs, Mr. Chairman, India believes that they all fall in the category of prohibited subsidies and are actionable under the ASCM.

Thank you for your kind attention.

# ANNEX C-12

## NEW ZEALAND'S ORAL STATEMENT

24 July 2003

1. Mr Chairman, Members of the Panel, New Zealand's views on the issues of concern in this dispute are set out in our Third Party Submission of 15 July and in the time available today it is clearly not possible to canvass all of those views. Accordingly, and as suggested by you in your opening remarks Mr Chairman, I will focus only on some key points.

**(i) New Zealand's systemic interest in the dispute**

2. First, as outlined in our Third Party Submission, New Zealand has joined this dispute because of our systemic interest in ensuring the continued integrity of WTO disciplines applicable to agricultural trade. In particular we are concerned to ensure that trade-distorting or "amber box" measures cannot be used contrary to the "peace clause" in a manner that negatively affects other Members.

3. It is equally important that where the requirements of the "peace clause" have not been respected Members are able to utilise their rights under the *SCM Agreement* and *GATT 1994* to take action in respect of domestic support measures and export subsidies.

**(ii) Brazil's demonstration that the United States cannot claim "peace clause" protection for domestic support provided in marketing years 1999, 2000, 2001 and 2002**

4. Second, Brazil has demonstrated that the level of domestic support for upland cotton granted by the United States in each of the marketing years in question did in fact exceed the level decided during the 1992 marketing year and that there is therefore no "peace clause" protection for those support measures.

5. The United States argues that this is not the case, on the basis that the comparison required by the "peace clause" should be between the 'per pound' rates of support set by the relevant domestic support measures and that certain domestic support measures should be excluded from the comparison.

6. Turning first to the United States claim that the relevant comparison should be between 'per pound' rates of support, in New Zealand's view such an interpretation would be inconsistent with the object and purpose of Article 13(b)(ii). Instead, Article 13(b)(ii) requires a comparison that takes into account the totality of payments to upland cotton producers in order to reflect the true nature of the support that is being granted, including for example, total budgetary outlays. This is especially so when those budgetary outlays have been increasing because of falling world market prices. And those prices are falling due, at least in part, to the fact that United States producers are shielded from true price signals by the guaranteed 'per pound' rates.

7. Furthermore, New Zealand sees no basis for excluding certain domestic support measures from the calculation required by the "peace clause" as requested by the United States.

8. The "counter-cyclical" payments are plainly not "green box" support measures in accordance with Annex 2 of the *Agreement on Agriculture*, as the amount of the payment is linked to current prices for upland cotton, in direct contravention of Annex 2 paragraph 6(c).

9. Nor is the scope of support to be measured under Article 13(b)(ii) limited to "product-specific" support in the sense proposed by the United States. There is no basis for such an interpretation in either the wording or the intent of Article 13(b)(ii). [Just to depart from the prepared statement for a moment, the EC has reminded us this morning of the importance of taking context into account when interpreting WTO Agreements. We would note that it is also important to consider the ordinary and natural meaning of the actual words appearing in the Agreements. Here the words used are "support to a specific commodity" – the text does not say "product-specific support". If the drafters had intended to mean "product-specific support", they surely would have said so. After all, the phrase "product-specific support" is used at least five times elsewhere in the *Agreement on Agriculture*. Returning now to the prepared text,] even if such an interpretation as suggested by the US, could be supported, "counter-cyclical" payments are in any event product-specific support because, as Brazil has demonstrated, there is a strong linkage between those payments and production of upland cotton.

10. New Zealand also considers that there is no basis for excluding the Production Flexibility Contract payments or Direct Payments from the required calculation. The ability of farmers to update the base acreage used for calculation of Direct Payments rules out inclusion of those payments in the "green box", which contemplates only one base period that is fixed and unchanging. To permit a Member to avoid this limitation by simply changing the names of its domestic support programmes would seriously undermine the requirement that there be no link between production and the amount of support.

**(iii) Brazil's demonstration that the United States cannot claim "peace clause" protection in respect of export subsidies;**

11. Looking now at export subsidies, New Zealand agrees with Brazil that the three types of export subsidies applied to upland cotton and other commodities by the United States (the Step 2 Export Programme, the Export Credit Guarantee Programme, and the FSC Replacement Programme) violate Articles 3.3, 8 and 10.1 of the *Agreement on Agriculture*.

12. New Zealand rejects the argument made by the United States that Step 2 export payments are not export subsidies because payments are available to domestic users as well as exporters of upland cotton. The Appellate Body (in *US-FSC Recourse to Article 21.5*) has made it clear that the fact that payments are also able to be made to domestic users of upland cotton does not 'dissolve' the export contingency of the payments that are made to exporters.

13. New Zealand also finds no basis for the assertion by the United States that export credit guarantee programmes are not subject in any way to the export subsidy disciplines of the *Agreement on Agriculture*. In fact the inclusion of reference to such programmes in the context of Article 10 supports the opposite conclusion and demonstrates that Members were in fact concerned at the potential for such programmes to circumvent Members' export subsidy reduction commitments.

14. In summary Brazil has demonstrated that the export subsidies to upland cotton do not have "peace clause" protection, and also that they are prohibited subsidies under Article 3.1(a) and 3.2 of the *SCM Agreement*.

**(iv) The request by the United States for a Preliminary Ruling**

15. Finally Mr Chairman, New Zealand does not consider that the Panel should grant the preliminary ruling requested by the United States.

16. First, New Zealand believes that measures no longer in effect are not outside the scope of the Panel's consideration, particularly where the programmes in question, while renamed, in fact continue in a slightly different form. Furthermore, the nature of serious prejudice claims means that Panels may need to consider data beyond a single year and consider trends over a number of years.

17. Second, New Zealand considers that export credit guarantee measures relating to eligible United States agricultural commodities (other than upland cotton) are within the Panel's terms of reference. To determine otherwise would be to allow a lack of transparency in the operation of particular measures to shield them from scrutiny by Members taking disputes.

**Conclusion**

18. In conclusion, Mr Chairman, New Zealand believes that Brazil has demonstrated that the "peace clause" has not been respected in relation to domestic support and export subsidies provided by the United States to upland cotton in the marketing years 1999, 2000, 2001 and 2002, and that accordingly Brazil is entitled to bring actionable and prohibited subsidy claims against the United States under the *GATT 1994* and the *SCM Agreement*. New Zealand looks forward to the next phase of the case which will examine those claims.

# ANNEX C-13

## ORAL SUBMISSION BY PARAGUAY

24 July 2003

Mr Chairman, members of the Panel:

1. Paraguay is grateful for the opportunity to participate in these proceedings and to present its views on the matter at issue in this dispute.

2. Because Paraguay is a firm believer in a fair system of multilateral trade, it feels that it should explain its position on this issue as a third party because it is an issue of particular interest to its economy.

3. Paraguay considers that the subsidies and support granted by the United States to its cotton production are inconsistent with the Agreement on Subsidies and Countervailing Measures, the Agreement on Agriculture and the rules and principles of the GATT 1994, and that for the purposes of this dispute it is therefore essential to take account of WTO legislation, which was carefully drafted to avoid causing distortions in international trade and prejudice to developing countries such as Paraguay.

4. WTO jurisprudence and the principles of interpretation of international law applied to the various cases suggests that the applicable rules should be read cumulatively, taking account of all elements applied to the case in order to support the system as an integrated whole.

5. With respect to the applicability of Article 13(b)(ii) concerning domestic support measures that conform fully to the provisions of Article 6 of the Agreement including direct payments that conform to the requirements to paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, Paraguay considers they shall be exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year.

6. This implies that it is not limited or confined to specific products. Thus, it can be concluded that the United States does not enjoy protection from actions relating to subsidies using 1999, 2001 and 2002 as a basis, as Brazil duly proved.

7. In interpreting the Peace Clause, account must be taken of the serious prejudice that Member economies could suffer, and an assessment made of the overall significance of all of the agreements relating to the case.

8. Regarding inconsistency with the Agreement on Agriculture, the Step 2 programme introduced by the United States to stimulate exports and the competitiveness of its products on the international market is inconsistent with Articles 3.3 and 8 of the Agreement on Agriculture.

9. Article 3 of the Agreement on Agriculture refers to the incorporation of concessions and commitments. Paragraph 3 thereof stipulates that:

> *3.3 "Subject to the provisions of paragraphs 2(b) and 4 of Article 9 of this Agreement, a Member shall not provide export subsidies listed in paragraph 1 of Article 9 in respect of the agricultural products or groups of products specified in Section II of Part IV of its Schedule in excess of the budgetary outlay and quantity commitment levels specified therein and shall not provide such subsidies in respect of any agricultural product not specified in that Section of its Schedule."*

10. The above paragraph enables Members to provide the subsidies listed in Article 9.1 of the Agreement on Agriculture subject to fulfilment of the commitments assumed.

11. Similarly, Article 8 of the said Agreement regulates export competition commitments, stipulating that:

> *"Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and the commitments as specified in that Member's Schedule."*

12. For the above reasons, and because it does not consider the provisions of the Agreement on Agriculture to have been complied with, Paraguay believes that the export subsidies granted by the United States to its cotton industry are inconsistent with Articles 3.3, 8 and 9.1 of the Agreement on Agriculture.

13. The agricultural subsidies cause "serious prejudice" to the domestic industry of other Members under Articles 5 and 6 of the Agreement on Subsidies and Countervailing Measures.

14. The introductory paragraph of part III, Article 5 of the said Agreement provides that no Member should cause, through the use of any subsidy – specific and not exempted under the Agreement – adverse effects to the interests of other Members, more specifically, as categorically stated in the indents that follow, (a) injury to the domestic industry of another Member and (c) serious prejudice to the interests of another Member.

15. Article 6 specifically refers to cases in which "serious prejudice" is deemed to exist in the sense of paragraph (c) of Article 5.

16. Agricultural subsidies have effects on world trade, and measures such as those applied by the United States have a significant impact on developing countries like Paraguay.

17. Paraguay has a total population of approximately 5,300,000, of which more than 500,000 are linked to cotton production. If we add the related industries and activities, the figure reaches an estimated 1,500,000, or approximately 30 per cent of the country's total population.

18. Any slump in the cotton trade causes an exodus of rural population towards the urban areas which do not offer any relief or solution, and this further undermines the economic situation of a country that depends on its agriculture.

19. As regards exports, in 1991, the foreign exchange revenue generated by sales of cotton and byproducts thereof reached US$318,912,000, approximately 43 per cent of the total for the country's exports that year. At the time, of a total of 299,259 farms, 190,000 were cultivating cotton.

20. By 2001, the figures had changed considerably. Export revenue had fallen to US$90,505,000, a 72 per cent drop in the value of exports. The number of farms producing cotton decreased to about 90,000, representing a 52 per cent decrease in farms, employment and small farmer income. In other words, the impoverishment was real.

21. Regarding international cotton fibre prices, in 1991, the price per ton of Paraguayan type fibre was quoted on the New York Exchange at US$1,624, while in 2001, it was quoted at US$934.

22. In Paraguay, some 60 per cent of cotton is produced on farms of less than 10 hectares, making it the main or only source of income for small farmers and the main source of employment for the rural workforce in the most disadvantaged segment of society where access to capital and technology is more restricted and the leading socio-economic welfare indicators are lower than anywhere else.

23. In spite of its marked decline, cotton continues to be an important cash crop for the "capitalized" farms, and the main – if not only – cash crop of the farms that are on the decline.

24. The agricultural sector is fundamental to the Paraguayan economy, accounting for 90 per cent of exports, 35 per cent of employment and 25 per cent of GDP, in addition to which it supports an agro-industry that accounts for 11 per cent of GDP and 10 per cent of total employment.

Mr Chairman, members of the Panel:

25. The importance of cotton for Paraguay, both in social and economic terms, is such that an increase in international cotton fibre prices as a result of the elimination of significant market distortions such as subsidization of production would not only bring about a general improvement in the standard of living of the country's inhabitants, in a very fragile sector in particular, but it would also lead to an improvement in macroeconomic conditions, balance-of-payments, monetary reserves, etc. that would enable Paraguay to be more reliable in meeting its international financial commitments.

26. For the above reasons, and because it does not consider that the provisions of the Agreement on Agriculture have been complied with, Paraguay believes that the export subsidies granted by the United States to its cotton industry are inconsistent with Articles 3.3, 8 and 9.1 of the Agreement on Agriculture.

27. Paraguay therefore considers that the measures adopted by the United States cause serious prejudice to world trade, affecting Paraguay in particular, and that the necessary steps should be taken to eliminate the adverse effects and seek to achieve a balance in world trade.

28. Finally, Paraguay respectfully requests the Panel to conclude that the measure applied by the United States is inconsistent with its WTO obligations under various provisions of the Agreement on Agriculture, the GATT 1994 and the Agreement on Subsidies and Countervailing Measures.

# ANNEX C-14

## ORAL STATEMENT BY THE SEPARATE CUSTOMS TERRITORY OF TAIWAN, PENGHU, KINMEN AND MATSU AS A THIRD PARTY ON THE CASE OF THE UNITED STATES SUBSIDIES ON UPLAND COTTON

The Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu is pleased to be here as a third party in this case. We have a systemic interest in the particular question of the burden of proof required by Article 13 of the AOA, and would like to focus on this issue in our remarks. We have previously submitted our views in writing accordingly.

**The Burden of Proof (the "Peace Clause")**

In the case in point, Brazil asserts in its first written submission that Article 13 is by nature an "affirmative defence" or "exception" and "not itself a positive obligation", therefore the United States carries the burden of proof on whether its subsidies are in conformity with Article 13.

Our view, in summary, is that it is inappropriate to label Article 13 as an "affirmative defence" or "exception". Indeed this would mean the Article having much less than its originally intended effect. Article 13 in itself confers rights and imposes positive obligations on Members. It is not there simply for the convenience of resolving the question of the burden of proof. The right that it confers of entitlement to being "exempt from actions", for example, would be rendered pointless if the burden of proof were on the respondent. It is surely for Brazil, therefore, as a complainant, to prove a breach of a positive obligation by demonstrating non-conformity, rather than for the United States to bear the burden of proof.

In our written submission, we suggest that in arriving at a proper interpretation of the burden of proof in Article 13, it might also be helpful to make some comparisons with the different types of exceptions, exemptions and defences that exist in other Articles of WTO Agreements.

We mention, for example, disputes arising in connection with agreements not covered by the DSU, where the complaining party would bear the burden to prove that the issue in dispute falls within the purview of the DSB.

Also, where a matter is specifically excluded from the dispute settlement procedures by certain relevant agreements – such as Article 6 of the TRIPS agreement - the provision concerned allows the Member applying it to prevent dispute settlement procedures and the burden of proof falls on the complaining party.

And by way of further comparison, we refer to other cases where exceptions or exemptions are granted under relevant agreements providing specific obligations.

While Article 13 of the AOA is clearly in this case not dealing with a matter under a non-covered agreement or a matter that is specifically excluded from the dispute settlement procedures as in Article 6 of TRIPS, it is also not typical of the type of exception contained in a number of the GATT Articles. By its singular nature, Article 13, in our view, falls between these examples, therefore the procedures for applying its provision should be interpreted separately and differently.

And finally, as far as the burden of proof is concerned, we submit that requiring the respondent to prove that the subsidy measure in question is in conformity with the Agreement on Agriculture will, to a certain extent, offset the respondent's right to claim for the exceptions provided by the Article 13 provisions, which is surely contrary to the drafters' intent.

# ANNEX D

## REBUTTAL SUBMISSIONS OF PARTIES

# ANNEX D-1

## BRAZIL'S REBUTTAL SUBMISSION TO THE PANEL REGARDING THE "PEACE CLAUSE" AND NON-PEACE CLAUSE RELATED CLAIMS EXECUTIVE SUMMARY

TABLE OF CONTENTS

## 1. The United States Has No Peace Clause Protection for Non-Green Box Domestic Support Measures to Upland Cotton for MY 1999-2002

### 1.1. Production Flexibility Contracts and Direct Payments Are Non-Green Box Domestic Support

#### 1.1.1. The Amounts of PFC and Direct Payments Depend on the "Type" of Production

1. PFC payments and direct payments are non-green box support because both limit the "amount" of payment based on the "type" of production inconsistent with the requirements of Annex 2, paragraph 6(b) of the Agreement on Agriculture. The relevant text of paragraph 6(b) prohibits any linkage of the "amount of payments" to any "type of production" of an agricultural product. The "amount" of payments under the PFC and direct payment programmes *falls* when base acres are used to produce fruits, vegetables and wild rice. Thus, the undisputed evidence demonstrates that PFC and direct payments do not meet the policy-specific criteria for "de-coupled income support" in Annex 2, paragraph 6(b).

2. Prohibiting payments if *certain* types of crops are produced while at the same time permitting payments if *other* types of crops are produced violates Annex 2, paragraph 6(b). Contrary to the US argument, requiring no production, *i.e.*, prohibiting production, does not relate the amount of payments to the "type" of production, as no individual "type" of production would be eligible to payments. The notion of "type of production" in paragraph 6(b) is necessarily linked to the amount of payment to some "type" of commodity that is "produced" and not to a production requirement itself.

3. In addition, Brazil also presented evidence that the US restrictions on fruits, vegetables and wild rice prevent producers with PFC and direct payment base acreage from growing these alternative crops. This restriction, therefore, channels production into particular "types of production" by prohibiting *other* "types of production" and, therefore, violates Annex 2, paragraph 6(b).

#### 1.1.2. Direct Payments Are Not Green-Box Because the Base Periods for Determining Eligibility Have Been Updated in the 2002 FSRI Act

4. Direct payments are also not properly in the green box because the amount of payments are based on an updated "base period" and not on a "fixed" base period as required by Annex 2, paragraphs 6(a) and (b). Paragraphs 6(a) and (b) require a fixed and, therefore, unchanging base period for de-coupled domestic support measures with the same structure, design, and eligibility criteria. The evidence demonstrates that there are no significant changes in the payment eligibility criteria between the PFC programme and its direct successor, the direct payment program. Indeed, PFC payments made during 2002 were deducted from the amount of direct payments due in 2002.

5. Further, the updating permitted under the 2002 FSRI Act for direct payments was significant – one-third of eligible farms updated their PFC base acreage as of June 2003 in order to *increase* the base acreage – and payments – under the direct payment programme. This updating creates production-distorting effects because it creates expectations of future updates and will incite farmers to produce more of the programme crops that qualify for support.

6. The United States interprets the word "fixed" in Annex 2, paragraph 6(a) and (b) as being "fixed" only for the life of a particular legal measure. A Member could change a measure every year, update the "base period" to reflect the prior year's acreage, increase current payments to reflect the updated (and increased) "historical" acreage, and label it differently under a new law. Thus, the US interpretation would permit payments to be completely "coupled" to production, just with a one-year time lag. It would render any disciplines reflected in the use of the term "a" and "fixed" "base

period" in Annex 2, paragraph 6(a) a nullity. This is contrary not only to the ordinary meaning of the term "fixed" but also to the object and purpose of Annex 2, paragraph 6(a) to not permit Members to increase payments over time in a manner linked to increases in production over time. The re-linkage of payments to production is also inconsistent with the "fundamental requirement" in Annex 2, paragraph 1.

### 1.2. PFC, Market Loss Assistance, Direct and Counter-Cyclical Payments (CCP) and Crop Insurance Subsidies Are "Support To" Upland Cotton

7. The narrow US specificity test of "tied to production" seeks to impose a "form" of specificity on the text of Article 13(b)(ii) that is not there. It further contradicts the only analogous criteria to Article 13(b)(ii) for calculating annual levels of support – the AMS calculation criteria of Annex 3. In addition, it contradicts the broad definition of "in favour of" in defining AMS in Article 1(a) of the Agreement on Agriculture, and the "in general" language of the same provision. The "substance" the United States seeks to avoid with this unjustified interpretation is the $12.9 billion dollars in payments for the production of upland cotton from MY 1999-present.

8. Applying its narrow specificity criteria, the United States argues that PFC, market loss assistance, direct and counter-cyclical payments as well as crop insurance subsidies are not "support to" upland cotton. Brazil presents evidence that all five domestic support measures provide "support to" the production of upland cotton between MY 1999-2002.

#### 1.2.1. Production Flexibility Contract Payments

9. Brazil has presented considerable evidence demonstrating that PFC payments to holders of upland cotton base acreage in MY 1999-2001 are support to upland cotton. The 1996 FAIR Act established a specific payment formula permitting those upland cotton farmers who had traditionally farmed upland cotton to continue to receive payments following the elimination of the deficiency payment program. The 1996 FAIR Act singled out upland cotton and only six other crops for such PFC payments. Recipients were "producers" who "shared in the risk of producing a crop", and who farmed one of the seven crops in the three immediate years prior to the 1996 FAIR Act (MY 1993-95). Only a small minority of the producers of crops in the United States received PFC (and market loss assistance) payments. Brazil has demonstrated that between MY 1999-2001, the seven types of programme crops receiving PFC represented on average between MY 1999-2001 only 14.19 per cent of total US farm revenue. In addition, the total acreage of the seven PFC and market loss assistance crops in MY 2001 represented only 22 per cent of total US farmland. Thus, PFC payments were not provided to US producers *in general*.

10. The best available evidence demonstrates that upland cotton producers during MY 1999-2001 received PFC (and market loss assistance) payments. USDA reported that 97 per cent of farms producing upland cotton representing 99 per cent of upland cotton acreage from MY 1993-95 signed up to receive upland cotton PFC payments for MY 1996-2001. Upland cotton base acreage under the PFC (and market loss assistance) programme was 16.2 million acres. Between MY 1999-2001, the average acreage planted to upland cotton was 15.24 million acres. In addition, USDA reported that 95.7 per cent of the 16.2 million US upland cotton base acreage was planted to PFC programme crops in MY 2001 – a higher percentage than for any of the other 6 types of PFC programme crops. Thus, the evidence suggests that upland cotton producers in MY 1999-2001 were receiving PFC (and market loss assistance) payments.

11. Brazil has presented evidence demonstrating that PFC payments have production and trade distorting effects that arise from the prohibition on planting fruits, vegetables, and wild rice, as well as from the various "wealth effects" that result from the size of the subsidy averaging more than 15 per cent of the market value of upland cotton between MY 1999-2001. These effects provide further

confirming evidence that the selected, targeted PFC (and market loss assistance) payments are support to upland cotton.

### 1.2.2. Market Loss Assistance Payments

12. The evidence provided by Brazil with respect to PFC payments is also relevant to market loss assistance payments because these payments were made only to farmers with PFC contracts for the seven PFC crops, and additionally to soybeans. Thus, historic upland cotton producers (producing upland cotton in MY 1993-1995) received "upland cotton-specific" market loss assistance payments in MY 1998-2001. Even with the addition of soybeans, these 8 crops only represented on average 20.75 per cent of total US farm revenue in MY 1999-2001. PFC crop base acreage and soybean acreage in MY 2001 represented only 29 per cent of total US farmland. Thus, as with PFC payments, market loss assistance payments were not paid to US agricultural producers *in general* but rather to only a select group of US producers.

13. The evidence presented by Brazil indicates that while producers holding PFC/market loss assistance base acreage had the legal "freedom to farm" different crops, if they produced upland cotton, they would suffer adverse financial consequences *unless* they produced upland cotton on *upland cotton*, *corn* or *rice* base acres. The evidence highlights the practical impossibility of growing upland cotton without any type of PFC and market loss assistance payment in MY 2001. This evidence confirms NCC statements and supports a conclusion that any upland cotton produced in MY 1999-2001 – as a matter of economic reality and viability – needed and received PFC and market loss assistance payments to meet the high cost of production.

14. Further evidence that market loss assistance payments are support to upland cotton stems from the fact that the United States notified these subsidies as trade and production distorting amber box support. The evidence demonstrates that the targeted market loss assistance payments triggered by market price declines have even more trade and production-distorting effects than PFC payments. Further, as with PFC payments, production and trade distortions occurred because of the prohibition or restriction on receiving such payments based on growing fruits, vegetables, or wild rice. The production and trade-distorting effects on upland cotton are further confirmed by the fact that market loss assistance payments represented on average 17.87 per cent of the market value of upland cotton between MY 1999-2001. Thus, even though upland cotton producers were not *required* to produce upland cotton to receive market loss assistance payments, the record demonstrates that they continued to produce upland cotton between MY 1999-2001, and they continued to benefit from the 17.87 per cent subsidies represented by these payments.

### 1.2.3. Direct Payments

15. Direct payments are targeted support to "producers" farming, *inter alia*, on upland cotton base acreage. The eligible upland cotton producers who grew upland cotton in MY 1998-2001 (or in MY 1993-95) – together with eligible producers of only nine other crops – are a select group, who grew crops representing only 23.49 per cent of total farm cash receipts and 30 per cent of total US farm acreage. Thus, direct payments are *not* available to the great majority of US producers of agricultural commodities, *i.e.*, they are not provided to US agricultural producers *in general.*

16. The United States argues that direct payments and CCP payments are not "support to upland cotton" because there is no *legal requirement* under the 2002 FSRI Act for holders of upland cotton base acreage to grow upland cotton. However, Brazil has demonstrated that the theoretical legal *planting flexibility* in the 2002 FSRI Act is not reflected in the *economic* reality of growing high-cost crops like upland cotton. Farmers who did plant the 14.2 million acres of upland cotton for MY 2002 could only have covered their costs by receiving *upland cotton*, *rice* or *peanut* direct payments and counter-cyclical payments. This evidence strongly confirms what the NCC officials have stated

repeatedly, that their members need, rely on, and *receive* direct payment and counter-cyclical payment support. And this evidence refutes the United States argument that the *legal* flexibility to grow other crops – or not produce at all – is the single relevant fact justifying a finding that direct payments and CCP payments did not support upland cotton in MY 2002.

17. Further evidence that direct payments are support to upland cotton is derived from the effects on upland cotton production caused by the updating of the base acreage between the PFC and the direct payment programmes. Brazil has presented evidence indicating that this updating creates a re-linkage between production and the direct (and counter-cyclical) payments. Production effects are also caused by channeling the payments into crops other than fruits, vegetables, and wild rice. Further, the size of the subsidy (over 15 per cent of the current upland cotton market value) also contributes to wealth creation that has production effects. These production effects demonstrate that the direct payments (and CCP payments) are not de-linked from production – as argued by the United States – and support a conclusion that they are support to upland cotton.

### 1.2.5. Counter-Cyclical Payments

18. The United States argues that because producers receiving CCP payments are not required to produce upland cotton to receive payments, these payments cannot, as a matter of law, be considered support to upland cotton within the meaning of Article 13(b)(ii). Nevertheless, the evidence provided by Brazil demonstrates that CCP funds in MY 2002 paid to "historic" (i.e., 1998-2001 or 1993-1995) upland cotton producers are paid to a tiny fraction of total US producers of agricultural commodities and not to US producers of agricultural products "in general". Further, the evidence supports the conclusion that the recipients of these payments in MY 2002 needed these payments to continue producing upland cotton. They constitute "support to upland cotton".

19. Moreover, CCP payments create additional production effects due to the "base-update" permitted under the 2002 FSRI Act for both base yields and base acreage compared to market loss assistance payments. Further, the fruits, vegetables, and wild rice prohibitions or restrictions channel production into upland cotton. This evidence collectively supports a conclusion that CCP payments are "support to upland cotton".

### 1.2.6. Crop Insurance Payments

20. Brazil has demonstrated that upland cotton farmer benefit from specialized and specific crop insurance policies provided under the 2000 Agricultural Risk protection Act. Premium subsidies are directly tied to the amount of acreage planted by an upland cotton farmer. Also the participation rate, the share of policies at higher buy-up levels and the crop insurance loss ratio are higher for upland cotton than for other crops. This is confirmed by USDA's own economists, who have found that crop insurance subsidies cause much higher production and export effects for upland cotton than for other crops. In sum, crop insurance subsidies tied directly to the production of upland cotton are "support to a specific commodity" for the purposes of Article 13(b)(ii).

## 1.3. The US Support to Upland Cotton in MY 1999-2002 Exceeded the Support Decided in MY 1992

21. The United States has raised a number of *post hoc* arguments related to a supposed "rate of support" decision it alleges to have made during MY 1992. In the SAA, the United States stated that Members would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year". The phrase "AMS for the particular commodity" is an explicit recognition by the United States of the test in Annex 3, paragraph 6 which states: "For each basic agricultural product, a specific AMS shall be established *expressed in total monetary terms.*" The US "rate of support"

methodology is not an expression in "total monetary terms," nor does it permit such a calculation. There are only two types of methodologies that would allow an expression in monetary terms of a decision (or decisions) taken by the United States in MY 1992 regarding its level of support to upland cotton: "using budgetary outlays" or the "gap between the fixed reference price and the applied administered price multiplied by the quantity of production eligible to receive the administered price".

22. Brazil disagrees with the United States' assertion that it did not "decide" on budgetary outlays. The alleged US decision to provide a rate of support must necessarily be accompanied by a decision to authorize whatever budgetary outlays would be necessary to meet the rate of support. The United States took specific administrative decisions which meant that the United States decided on the payment rates that resulted from the "rate of support" and, therefore, on the amount of budgetary outlays it would use from its unlimited spending authority. For the United States to argue, *post hoc,* that these decisions did not also include expenditures is inconsistent with its SAA interpretation of the peace clause that the 1992 decision must be expressed in "total monetary terms."

23. Brazil has demonstrated that expenditures for MY 1992 are lower than they are for any of the marketing years from 1999-2002. Therefore, under this methodology, the United States has no peace clause exemption for MY 1999-2002. While Brazil does not believe that calculating the upland cotton AMS based on the AMS methodology in Annex 3 is the appropriate methodology – based on the absence of the terms "AMS", "product-specific" and "non-product-specific" in Article 13(b)(ii) – Brazil has provided evidence that by using this methodology the United States support to the basic agricultural commodity "upland cotton" exceeded the support decided during the 1992 marketing year in all marketing years from 1999-2002.

24. In the event the Panel decides not to use a "total monetary value" methodology, then there are two "rate of support" methodologies: (1) budgetary outlays per pound of support, and (2) the expected guaranteed income rate of support set out in Professor Sumner's analysis. Brazil has provided extensive analysis of each of these two methodologies. However, Brazil does not endorse either methodology.

25. Brazil has demonstrated that the preferable methodology would be to rely on budgetary outlays per pound of upland cotton production. Professor Sumner's approach should be used only as an alternative to the simplistic US "72.9 methodology" because it is much more accurate than the United States approach accounting for eligibility criteria, effective programme limitations and costs that the US ignores. In any event, Brazil has demonstrated that also under both rate of support methodologies the US support in MY 1999-2002 exceeds the support decided during MY 1992

26. Any methodology that does not account for eligibility and effective participation criteria is inconsistent with Article 13(b)(ii). It is also inconsistent with the context of Article 13(b)(ii) which includes Annex 3, paragraphs 8 and 10 requiring calculation of the monetary value of support by factoring in "*production eligible to receive the administered price*." And it is also inconsistent with object and purpose of the Agreement on Agriculture, which is – after all – "correcting and preventing restrictions and distortions in world agricultural markets."

### 1.4. Challenges to Actionable Subsidies under Article 5 and 6 of the SCM Agreement and Article XVI of GATT 1994 Are Not Limited to the Marketing Year in which a WTO Panel Is Established

27. The United States argues that the Panel may only count *current* US non-green box support in determining whether the United States enjoys peace clause exemption under Article 13(b). Applying a strict "statute of limitations" approach, the United States argues that Brazil (1) cannot challenge any US trade and production-distorting agricultural support for MY 2001 (or MY 2000, or MY 1999) because it did not ensure that the Panel was established during MY 2001 (or MY 2000, or MY 1999), and (2) it cannot challenge *all* of the trade and production-distorting support for all of MY 2002 because it did not ensure that the Panel was established by 31 July 2003 – the last day of the 2002 marketing year. The United States goes so far as to argue that the Panel may only compare MY 1992 support decided with *partial* MY 2002 data through 18 March 2003 – the date the Panel was established. According to the US theory, the only date the Panel could have been established to ensure comparison with full MY 2002 data would have been 31 July 2003 – the last day of MY 2002.

28. Brazil has demonstrated that the United States has constructed an irrational interpretation of Article 13(b)(ii). It is bizarre to interpret Article 13(b)(ii) in a way that requires Members to carefully "time" a request for establishment of a panel to maximize the amount of support to be counted for the "current" marketing year. Nothing in the "present tense" of Article 13(b)(ii) compels this result. The Panel must interpret Article 13(b)(ii) according to its ordinary meaning and with regard to its context. The relevant context is Articles 1(h)(ii) and 6.3 of the Agreement on Agriculture. The *Korea – Beef* dispute exemplifies that a Member can challenge violations of "Current Total AMS" at any time after a marketing year ends. The ability of challenging Current Total AMS violations in later years by analogy suggests that non-conformity with the peace clause requirements in much the same way leads to lifting the peace clause exemption also for marketing years other than the current marketing year. Thus, the proper interpretation of Article 13(b)(ii) permits actionable subsidy challenges under the SCM Agreement and GATT Article XVI:1 for any marketing year for which peace clause exemption does not exist – under either its chapeau (Current Total AMS) or the proviso of Article 13(b)(ii).

### 2. The GSM 102, GSM 103 and SCGP Export Credit Guarantee Programmes Constitute Export Subsidies in Violation of Articles 10.1 and 8 of the Agreement on Agriculture, and Item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement

29. Brazil has demonstrated that the GSM 102, GSM 103 and SCGP export credit guarantee programmes administered by the CCC constitute export subsidies within the meaning of Articles 10.1, 1(e) and 8 of the Agreement on Agriculture, Article 3.1(a) of the SCM Agreement, and item (j) of the Illustrative List of Export Subsidies attached as Annex I to the SCM Agreement. Brazil also demonstrated that those export subsidies circumvent, or threaten to circumvent, the United States' export subsidy reduction commitments, in violation of Articles 10.1 and 8 of the Agreement on Agriculture. Additionally, because they violate the Agreement on Agriculture, these programmes are not exempt from actions by Article 13(c)(ii) of the Agreement on Agriculture, and constitute prohibited export subsidies within the meaning of item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement.

30. Article 10.2 does not, as the United States asserts, carve out export credit guarantees from the general export subsidy disciplines of the Agreement on Agriculture, including the anti-circumvention provisions of Article 10.1. The Appellate Body concluded that exemptions and carve-outs from general obligations must be provided for explicitly in the text of an agreement. Article 10.2 includes no such explicit carve-out or exemption. Rather, Article 10.2 announces Members' intent to work toward negotiations on specific disciplines for export credits. In the meantime, the general disciplines on export subsidies included in the Agreement on Agriculture apply to export credits.

### 2.1. CCC Export Credit Guarantees Constitute Export Subsidies under Articles 1 and 3.1(a) of the SCM Agreement

31. Brazil notes that CCC export credit guarantees are "financial contributions" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. Since CCC export credit guarantees are unique financing vehicles for agricultural commodity transactions that are not available on the commercial market, let alone on terms consistent with the market, they confer "benefits" within the meaning of Article 1.1(b) of the SCM Agreement. Brazil presents the affidavit of Marcelo Pinheiro Franco from the Brazilian Export Credit Insurance Agency who confirms that no

> comparable market-based export credit guarantees or financing instruments for international transactions involving agricultural commodities [exist] that provide these same terms [as the GSM and SCGP programmes].

32. Further, the United States compares agricultural export credit guarantees to export credit insurance for agricultural commodities, which it asserts is available on the private commercial market. However, it acknowledges that insurance coverage is structured altogether differently from guarantee coverage. Thus, even if the United States had proven its assertion with evidence, it acknowledges that the market for private insurance cannot serve as a benchmark against which to determine whether CCC guarantees confer "benefits".

33. Finally, CCC guarantees are contingent in law on export performance and therefore constitute prohibited export subsidies under Article 3.1(a) of the SCM Agreement.

34. Lastly, Brazil recalls that since the United States surpassed its quantity commitment levels, Article 10.3 of the Agreement on Agriculture allocates the burden to the United States to prove that its excess exports did not benefit from export subsidies, including export credit guarantees.

### 2.2. The CCC Export Credit Guarantee Programmes Constitute Export Subsidies under Item (j) of the Illustrative List of Export Subsidies

35. Brazil has demonstrated that the GSM 102, GSM 103 and SCGP programmes also constitute export subsidies because they charge premium rates that are inadequate to cover the long-term operating costs and losses of the programmes, within the meaning of item (j) of the Illustrative List. Item (j) does not require the Panel to endorse any particular methodology or formula for determining whether the CCC programmes cover their long-term operating costs and losses, or to decide by precisely how much those costs and losses exceed premiums collected. Rather, Brazil has provided the Panel with numerous alternatives, each of which demonstrates that long-term operating costs and losses for the GSM 102, GSM 103 and SCGP programmes outpace premiums collected, including data under the FCRA, Brazil' constructed formula, data from CCC's 2002 financial statements reporting large uncollectible amounts on post-1991 and pre-1992 guarantees, among others.

36. The United States criticizes the FCRA cost formula as inappropriate because it allegedly relies on "estimated" rather than "actual" data about the costs of the programmes. It is not true that the FCRA cost formula reflects only "an *estimate* of the long-term costs to the Government". A significant portion of the inputs into the FCRA cost formula reflect actual historical experience with borrowers, and actual contract terms such as interest rates, maturity, fees and grace periods.

37. Moreover, the results of the FCRA cost formula are modified throughout the lifetime of a cohort, pursuant to the "reestimation" process. The results of the reestimate process demonstrate that CCC has "los[t] money" during the period 1992-2002. When these total lifetime reestimates for all

cohorts of guarantees disbursed since 1992 are netted against the total *original* subsidy estimates adopted each budget year during the period 1992-2002, *the resulting loss is nearly $1.75 billion*.

38. The implication of the United States' position concerning "estimated data" is that it is impossible to judge whether premiums for the GSM 102, GSM 103 and SCGP programmes have covered operating costs and losses until all guarantee cohorts for a period constituting the "long term" are closed, so that purely "actual" rather than partial "estimate" data are available. Because all cohorts disbursed since the inception of federal credit reform remain open, the United States effectively argues that it is impossible for this Panel to judge whether the CCC guarantee programmes satisfy the elements of item (j). Brazil notes however that the US Congress and the President have endorsed the use of the FCRA cost formula as the principal way to "measure more accurately the costs of Federal credit programmes", *even in the budget year column of the US budget*, let alone several years out, when cohorts have been subject to successive rounds of reestimates.

39. In closing, Brazil reminds the Panel that the US criticism regarding the use of "estimated" data does not address the many other bases apart from the FCRA formula on which Brazil has demonstrated that the long-term operating costs and losses of the GSM 102, GSM 103 and SCGP programmes exceed premiums paid.

### 2.3. The CCC Export Credit Guarantee Programmes Threaten to Circumvent US Export Subsidy Reduction Commitments

40. At paragraphs 295-305 of its First Submission, Brazil demonstrated that with respect to both unscheduled and scheduled commodities, the GSM 102, GSM 103 and SCGP export subsidy programmes result in, or threaten to lead to, circumvention of the United States' export subsidy commitments, in violation of Article 10.1 of the Agreement on Agriculture. For the same reason, the United States violates Article 8, which requires a Member not to provide export subsidies otherwise than in conformity with the Agreement on Agriculture and with its scheduled commitments. The threat of circumvention for scheduled commodities is further enhanced by the fact that CCC is exempt from the requirement in the FCRA that a programme receive new Congressional budget authority before it undertakes new loan guarantee commitments. Mandatory programmes like the CCC export credit guarantee programmes must be available to all eligible borrowers, without regard to appropriations limits. In an important sense, this resembles the United States' FSC regime, which the Appellate Body found is available without limit. The Appellate Body considered that the unlimited nature of the regime posed a significant threat, under Article 10.1, that the United States would surpass its agricultural export subsidy reduction commitments.

### 2.4. The GSM 102, GSM 103 and SCGP Export Credit Guarantee Programmes Constitute Export Subsidies in Violation of Item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement

41. Since the CCC export credit guarantee programmes violate Articles 10.1 and 8 of the Agreement on Agriculture, the United States is not entitled to the "peace clause" exemption. Therefore, GSM 102, GSM 103 and SCGP programmes constitute prohibited export subsidies, in violation of item (j) of the Illustrative List of Export Subsidies, and of Articles 3.1(a) of the SCM Agreement.

## 3. The Step 2 Export and Domestic Subsidies Are Prohibited Subsidies in Violation of Articles 3.1(a) and 3.1(b) of the SCM Agreement

42. The United States asserts that all US upland cotton is eligible to receive Step 2 payments and that this removes the export and local content contingency. Brazil refutes the US assertion both as a

matter of law as well as fact. The Step 2 export provisions are not, as the United States now argues, simply domestic support payments made to US producers of upland cotton. Brazil again emphasizes that the *US – FSC* and *Canada – Aircraft* Appellate Body decisions are relevant jurisprudence and apply to the facts of the two situations set out in the regulations to Section 1207(a) of the 2002 FSRI Act. Thus, even if all US production since 1990 or even during MY 1999-2002 received Step 2 payments – which the United States has failed to document with any data – it would not remove the export and local content contingencies mandated by those regulations that violate SCM Agreement Articles 3.1(a) and (b).

43. US domestic Step 2 subsidies are prohibited local content subsidies in violation of Article 3.1(b) of the SCM Agreement. There is no explicit derogation of Article 3.1(b) built into the Agreement on Agriculture. The United States argues that there is an inherent conflict between Annex 3, paragraph 7 and Article 6.3 of the Agreement on Agriculture with Article 3.1(b) of the SCM Agreement because in the view of the United States, there can be no payments to processors of agricultural products included within AMS that do *not* violate Article 3.1(b) of the SCM Agreement. Brazil demonstrates that this is not true and that there are subsidies to agricultural processors that do not violate Article 3.1(b) and presents various examples to that respect.

44. Finally, Brazil notes the EC argument that applying Article 3.1(b) of the SCM Agreement "would lead to stricter disciplines being applied to domestic subsidies than are applicable for industrial goods". Local content subsidies – whether for agricultural and industrial products – are prohibited by Article 3.1(b). As "prohibited" subsidies, they are subject to the ultimate discipline – they cannot legally exist. The two packages of disciplines for agricultural and industrial products have both been negotiated during the Uruguay Round. The resulting rules have to be interpreted according to the customary rules of treaty interpretation as contained in the *Vienna Convention*. This interpretation results in agricultural local content subsidies being prohibited. Whether that results in there being more or less strict disciplines than would be applicable to industrial subsidies is not a relevant consideration for the interpretation of the disciplines.

### 4. The ETI Act Subsidies Violate Articles 10.1 and 8 of the Agreement on Agriculture and Are Prohibited by Articles 3.1(a) and 3.2 of the SCM Agreement

45. Brazil has made a *prima facie case* with respect to its claims against the ETI Act. Brazil challenges exactly the same measure based on the same claims asserted by the EC that the panel and the Appellate Body in *US – FSC (21.5)* held to violate the Agreement on Agriculture and the SCM Agreement. The sole difference is that Brazil limits its claims to ETI Act subsidies benefiting the export of upland cotton only.

# ANNEX D-2

## EXECUTIVE SUMMARY OF THE REBUTTAL SUBMISSION OF THE UNITED STATES

### Introduction and Overview

1. The comparison under the Peace Clause proviso in Article 13(b)(ii) must be made with respect to the support as "decided" by those measures. In the case of the challenged US measures, the support was decided in terms of a rate, not an amount of budgetary outlay. The rate of support decided during marketing year 1992 was ***72.9 cents*** per pound of upland cotton; the rate of support granted for the 1999-2001 crops was only ***51.92 cents*** per pound; and the rate of support that measures grant for the 2002 crop is only ***52 cents*** per pound. Thus, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.[1]

2. Brazil has claimed that additional "decisions" by the United States during the 1992 marketing year to impose a 10 per cent acreage reduction programme and 15 per cent "normal flex acres" reduced the level of support below 72.9 cents per pound. However, the 72.9 cents per pound rate of support most accurately expresses the revenue ensured by the United States to upland cotton producers. Even on the unrealistic assumption that these programme elements reduced the level of support by 10 and 15 per cent, respectively (that is, the maximum theoretical effect these programme elements could have had), the 1992 rate of support would still be ***67.625*** cents per pound, well above the levels for marketing years 1999-2001 and 2002.

3. Although such a comparison would not conform to the text, the result of the Peace Clause comparison is no different if one compares the support via an Aggregate Measurement of Support calculation. Using the price gap methodology (as provided under Annex 3 of the Agriculture Agreement) for US price-based deficiency payments and marketing loan payments, the upland cotton Aggregate Measurement of Support (in US $, millions) for these years is MY1992: 1,079; MY1999: 717; MY2000: 484; MY2001: 264; MY2002: 205. Again, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

4. Finally, the analysis presented by Brazil's expert at the first panel meeting actually supports the United States, not Brazil. Removing the non-product-specific support that Brazil erroneously tries to pass off as support to upland cotton, Brazil's own expert calculates the total support per unit

[1] Brazil has asserted that the United States' approach does not provide any way of taking Step 2 payments into account. Because the availability of Step 2 payments is contingent on certain price conditions existing during the marketing year, the level of support decided must relate to the payment parameters. These have remained the same for Step 2, with the exception of the suspension, through 2006, of the 1.25 cent price difference threshold and payment availability at slightly higher market prices. However, because Step 2 merely provides an alternative avenue of providing support (through processors rather than directly to producers), these minor adjustments do not alter the revenue ensured for producers by the marketing loan rate of 52 cents per pound. In addition, these minor adjustments cannot overcome the greater than 20 cents per pound difference in product-specific support between marketing years 1992 and 1999-2002. Similarly, and without prejudice to whether these measures are within the Panel's terms of reference, we note that cottonseed payments in 1999, 2000, and 2002 ranged in value between 0.6 to 2.3 cents per pound (factoring expenditures over production); thus, they too do not materially affect the comparison between marketing year 1992 and any other year.

(cents/lb.) as MY1992: 60.05; MY1999: 53.79; MY2000: 55.09; MY2001: 52.82; MY2002: 56.32. Again, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

5. Thus, whether gauged via the rate of support decided by US measures (whether or not adjusted for the acreage reduction programme and normal flex acres), *or* via the AMS for upland cotton (calculated through a price gap methodology), *or* via the calculations of Brazil's expert (limited to product-specific support), the result is exactly the same: in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

**US Green Box Measures are "Exempt from Actions" Pursuant to Article 13(a)(ii)**

6. A measure shall be deemed to meet the "fundamental requirement" of the first sentence of Annex 2 if it meets the basic criteria of the second sentence plus any applicable policy-specific criteria. As suggested by the use of the word "fundamental" ("from which others are derived") and the structure of Annex 2 (that is, beginning the second sentence with the word "accordingly"), compliance with the requirement ("something called for or demanded") of the first sentence will be demonstrated by conforming to the basic criteria of the second sentence plus the applicable policy-specific criteria of paragraphs 6 through 13.

7. ***Direct Payments:*** Eligibility for direct payments under the 2002 Act is based on criteria in a "defined and fixed base period " (paragraph 6(a)) in the ordinary meaning of those terms: a base period that is "definite" (set out in the 2002 Act) and "stationary or unchanging in a relative position" (does not change in relative position for the six-year duration of the 2002 Act).

8. Paragraph 6(a) establishes that eligibility for payments under a decoupled income support measure shall be determined by clearly-defined criteria in "*a* defined and fixed base period," not "*the* base period" (as in paragraph 9 of Annex 3, which is defined in that same paragraph as "the years 1986 to 1988"). Brazil's reading of "a defined and fixed base period" would read into that text the term "unchanging", language Brazil has proposed in the ongoing WTO negotiations but is not currently found in the Agreement.

9. Annex 2, by its terms, sets out the fundamental requirement and basic and (if applicable) policy-specific criteria to which green box "*domestic support measures*" must conform. Other provisions in the Agreement similarly establish that the criteria set out in Annex 2 apply to "domestic support measures". Thus, with respect to a given decoupled income support measure, eligibility for payments must be determined by criteria in a "defined and fixed base period".

10. Brazil argues that a *new* decoupled income support measure must be based on the same base period as a previous measure if the new measure "is essentially the same" or "[i]f the structure, design, and eligibility criteria have not significantly changed." There is no provision in Annex 2 or the Agreement on Agriculture that supports Brazil's approach. It is thus irrelevant whether two decoupled income support measures are "essentially the same".

11. Brazil would read paragraph 6(b) as requiring a Member to make support available for *any* type of production; a Member could not preclude a recipient from producing certain crops.[2] While direct payments are reduced if certain crops are produced, a recipient need not produce any "type of"

[2] Brazil's reading would also seemingly require a Member to make payments even if the recipient's production was illegal – for example, the production of narcotic crops such as opium poppy or the production of unapproved biotech varieties or environmentally damaging production (for example, planting on converted rain forest or wetlands) – because, under Brazil's approach, by reducing or eliminating payments for any of these production activities, a decoupled income support measure could be understood to base or relate the amount of payment to the "type" of production undertaken.

crop in particular in order to receive the full payment for which a farm is eligible; the recipient need merely refrain from producing the forbidden fruit or vegetable. Thus, it is not any "type . . . of production . . . undertaken by the producer" that results in the full direct payment but rather production *not* undertaken by the producer – that is, *ceasing* certain production.

12. ***Production Flexibility Contract Payments:*** Production flexibility contract payments (now expired) were made with respect to farm acreage that was devoted to agricultural production in the past, including acreage previously devoted to upland cotton production. The payments, however, were made regardless of whether upland cotton was produced on those acres or whether anything was produced at all. As with direct payments, because production flexibility contract payments were decoupled from production, they met the five policy-specific criteria set out in paragraph 6 for decoupled income support measures.

13. Brazil has failed to make a *prima facie* case that US green box measures do not satisfy the fundamental requirement of Annex 2.[3] In fact, Brazil's "evidence" consists simply of selectively quoting and emphasizing conceptual and theoretical statements from the economic literature. *None of the papers Brazil cites concludes that these payments in particular, or decoupled income support measures in general, have more than "minimal[] trade-distorting effects or effects on production."*

14. The Agreement on Agriculture does not define a numerical threshold on what degree of effects will be considered "minimal[] trade-distorting effects or effects on production". However, given that *no study has found that these payments have effects on production of more than one per cent*, it would appear that direct payments have and production flexibility contract payments had no more than "minimal[] trade-distorting effects or effects on production". Thus, not only has Brazil failed to present a *prima facie* case, but the United States has affirmatively shown that these payments satisfy the fundamental requirement of the first sentence of Annex 2.

**US Non-Green Box Domestic Support Measures are not in Breach of Article 13(b)(ii)**

15. **: Peace Clause Proviso – Support was "Decided" During Marketing Year 1992 Using a Rate, Not a Budgetary Outlay**: The Peace Clause proviso requires a comparison to the product-specific support "decided" during the 1992 marketing year. A Member cannot "decide" world market prices or actual production or any other element outside a government's control. Yet Brazil would read the Peace Clause as though Members were omnipotent and could "decide" every factor influencing support.

16. Brazil lists nine different "decisions taken by the United States in relation to MY 1992 upland cotton support programmes". At least three of these "decisions" relate to the rate of support and *not a single decision relating to budgetary outlays or market prices.* Thus, Brazil's own answer confirms that the proper analysis of the support "decided" by US measures is to look to the terms of the US measures, which set a rate of support.

17. The use of the term "grant" in the Peace Clause proviso with respect to challenged measures does not compel an examination of budgetary outlays. The ordinary meaning of "grant" is to "bestow as a favour" or "give or confer (a possession, a right, etc.) formally". Thus, the use of the term "grant" would permit an evaluation of the rate of support that challenged measures "give or confer . . . formally". Members did not choose to use the word "granted" in place of "decided," and a valid

[3] If, as Brazil has argued, the first sentence is "fundamental" and has independent force, then presumably if a measure meets that "fundamental requirement", it will be deemed to be green box, irrespective of whether it meets the subordinate basic and policy-specific criteria. Thus, on Brazil's reading, if a measure does not conform to the criteria in Annex 2, it still could meet the "fundamental requirement", and the complaining party would bear the burden of proof to demonstrate a measure's inconsistency with that provision.

interpretation must make sense of that choice rather than reading it out of the Agreement. In addition, had Members intended the Peace Clause comparison to be made *solely* on the basis of budgetary outlays, they could have used that term, which is a defined term in Article 1(c) and used frequently in the Agreement.

18. **Peace Clause Proviso – "Support to a Specific Commodity" Means Product-Specific Support**: The phrase "support to a specific commodity" means "product-specific support". That the Peace Clause does not use the phrase "product-specific support" is neither surprising nor telling. The basic definition of product-specific support is given in Article 1(a), as "support . . . provided for an agricultural product in favour of the producers of the basic agricultural product." Article 1(h) also refers to the concept but does not use the exact phrase "product-specific support"; in fact, the language this provision uses ("support for basic agricultural products") is strikingly similar to the Peace Clause proviso ("support to a specific commodity"). Neither Article 1(a) nor 1(h) *even uses the term "specific"* whereas the Peace Clause *contains all three elements of that phrase* (product, specific, and support).

**19. Brazil Simply Ignores the Definition of Product-Specific Support in the Agreement on Agriculture**: Brazil argues that certain challenged US measures are *not* "non-product-specific" and therefore must be "support to a specific commodity." Brazil focuses on the definition of "non-product-specific" support in Article 1(a) but simply fails to interpret that definition in light of the definition of product-specific support that immediately precedes it. The universe of domestic support measures under Article 1(a) consists of product-specific support and non-product-specific support; these two parts must be read together and in harmony.

20. The definition of product-specific support consists of two elements: First, the support must be provided "*for an agricultural product*," that is, the subsidy is given "in favour of" a product and not in respect of criteria not related to the product or in respect of multiple products. Second, such support is "in favour of the *producers of the basic agricultural product*", which suggests that subsidy benefits those who produce the product – that is, production is necessary for the support to be received. *Both* of these elements must be present for support to be product-specific since, should either be missing, the definition would not be satisfied.

21. The second category of support in Article 1(a) is defined as "non-product-specific support provided in favour of agricultural producers in general." The ordinary meaning of "in general" is "in general terms, generally". Non-product-specific support *cannot* be interpreted as support provided "for *an* agricultural product in favour of the *producers* of the basic agricultural product" because to do so would reduce the first half of the Article 1(a) definition to redundancy or inutility. Thus, non-product-specific support is support in favour of agricultural producers "generally" – that is, a residual category of support covering those measures that do not fall within the more detailed criteria set out in the definition of product-specific support.

22. **Counter-Cyclical Payments are Non-Product-Specific Support:** Counter-cyclical payments are non-product-specific support. The payment formula for counter-cyclical payments demonstrates that these payments are not "provided for an agricultural product" because a recipient need not currently produce upland cotton (or any other crop) to receive payment. In addition, it is not "the producers of the basic agricultural product" – that is, current upland cotton growers – that are entitled to receive the counter-cyclical payments but rather persons (farmers and landowners) on farm acres with *past histories* of producing covered commodities, including upland cotton, during the base period. Thus, counter-cyclical payments satisfy neither element of the definition of product-specific support and do not form part of the Peace Clause comparison.

23. Despite Brazil's attempts to mischaracterize the two as similar, counter-cyclical payments and deficiency payments differ in crucial respects. To receive a deficiency payment, a producer was

*required* to plant upland cotton for harvest and would be paid on the *acres planted to upland cotton for harvest* up to the maximum payment acreage. Thus, deficiency payments were support for an agricultural product (upland cotton) in favour of the *producers* of the product. By contrast, to receive the counter-cyclical payment a person with "upland cotton base acres" *need not plant for harvest or produce upland cotton* (nor any other crop nor any crop at all). Thus, counter-cyclical payments do not provide support for "an agricultural product" in favour of " the producers" of the basic agricultural product and do not form part of the Peace Clause comparison under the proviso in Article 13(b)(ii).

24. **Crop Insurance Payments Provide Non-Product-Specific Support**: Crop insurance is not support "provided for *an* agricultural product". For marketing year 2002, crop insurance payments are available to approximately 100 agricultural commodities, representing approximately 80 per cent of US area planted and greater than 85 per cent of the value of all US crops. Support which is provided to a number of crops is not "support to a specific commodity"; it is ' support to several commodities' or 'support to more than one commodity' and does not form part of the Peace Clause comparison. The United States notifies crop insurance as non-product-specific "amber box" domestic support subject to US reduction commitments. *No WTO Member has notified crop insurance programmes as product-specific*; in fact, Hungary, Canada, the EC, and Japan have notified crop insurance programmes as non-product-specific support. The United States is not aware of any other Member's crop insurance programme that has as broad product coverage as the US programme.

25. **Market Loss Assistance Payments are Non-Product-Specific Support**: As indicated in the US 1999 WTO domestic support notification (G/AG/N/USA/43), the expired market loss assistance payments were non-product-specific support. As with production flexibility contract payments, market loss assistance payments were made to persons with farm acres that previously had been devoted to production of certain crops, including upland cotton, during an historical base period. A recipient was not required to produce upland cotton or any other crop in order to receive payment, and no production was required at all. Thus, these payments are not product-specific support and would not form part of the Peace Clause proviso comparison.

26. **Direct Payments**: Were the Panel to conclude that direct payments do not conform fully to the provisions of Annex 2, direct payments would be non-product-specific support. As with counter-cyclical payments, direct payments are based on quantities of acreage that historically produced cotton, and there is no requirement to produce upland cotton (or any other crop) to receive these payments. Thus, direct payments would not be product-specific support.

27. **Production Flexibility Contract Payments**: Were the Panel to consider that these payments are within its terms of reference, the United States has explained that they would be green box support. Were the Panel to conclude further that production flexibility contract payments do not conform fully to the provisions of Annex 2, these payments would also be non-product-specific support for the reasons given with respect to direct payments. As such, they would not form part of the Peace Clause proviso comparison.

28. **Cottonseed Payments**: The Agricultural Assistance Act of 2003 and the cottonseed payment made pursuant to it is not within the Panel's terms of reference because the legislation authorizing the payments had not even been enacted at the time of Brazil's panel request, much less its consultation request. The "legal instruments" pursuant to which prior cottonseed payments were made, moreover, do not appear in Brazil's consultation or panel requests. Thus, it would appear that cottonseed payments for the 1999 and 2000 crops of cottonseed also do not form part of the Panel's terms of reference.

29. **Peace Clause Comparison – The Product-Specific AMS for Upland Cotton Also Demonstrates That Challenged US Measures Do Not Breach the Peace Clause**: The United States believes the Peace Clause compels comparing the rate of support decided by US

measures, whether or not adjusted for the acreage reduction programme and normal flex acres, with the current rate of support. Were the Panel to determine to use an Aggregate Measurement of Support calculation, however, the price gap methodology is the only appropriate one for Peace Clause purposes.

30. The price gap methodology eliminates the effect of prevailing market prices on the calculation of support. Instead, paragraphs 10 and 11 of Annex 3 designate that the support be calculated by multiplying the quantity of eligible production by the gap between the applied administered price (for example, the marketing loan rate) and the *fixed reference price* (that is, the actual price for determining payment rates for the years 1986 to 1988). Thus, by holding the reference price "fixed", support measured using a price gap calculation shows the effect of changes in the level of support (applied administered price) decided by a Member, rather than changes in outlays that result from movements in market prices that a Member does *not* control. In fact, the United States has calculated an AMS for upland cotton using the price gap methodology for both deficiency payments and marketing loan payments (marketing loan gains, certificate exchange gains, and loan deficiency payments) and using budgetary outlays for all other payments. The result is exactly the same as a rate of support comparison: in no marketing year from 1999 through 2002 is the support US measures grant in excess of the 1992 marketing year level.

**US Export Credit Guarantee Programme**

31. **The Negotiating History of Article 10.2 Reveals that the Negotiators Explicitly Deferred the Application of All Export Subsidy Disciplines on Export Credit Guarantees**: The GATT/WTO negotiating history regarding export credits and export credit guarantees in agriculture supports the US interpretation of Article 10.2. On 24 June 1991, Chairman Dunkel circulated a Note on Options in the Agriculture Negotiations requesting decisions by the principals on "whether subsidized export credits and related practices . . . would be subject to reduction commitments". Subsequently, on 2 August 1991, he circulated a proposed "Illustrative List of Export Subsidy Practices." Item (h) is explicitly "Export Credits provided by governments or their agencies on less than fully commercial terms." Similarly, item (i) is "Subsidized export credit guarantees or insurance programmes."

32. On 20 December 1991, the "Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations" was issued. Article 10.2 of the Draft Final Act states: "Participants undertake *not* to provide export credits, export credit guarantees or insurance programmes *otherwise than in conformity with* internationally agreed disciplines" (emphasis added). This draft text would clearly prohibit the use of export credit guarantees *except* in conformity with agreed disciplines. Such internationally agreed disciplines would include those contemplated by the SCM Agreement. This would be precisely the language necessary to support Brazil's reading.

33. Ironically, Brazil's interpretation would require export credit guarantees in agriculture to be subject to *greater* disciplines than any other practice addressed in the Agreement on Agriculture. Under Brazil's view, not only would export credit guarantees constitute export subsidies and be subject to *all* of the export subsidy disciplines, but Members would also be specifically obligated to work toward and then apply *additional* disciplines.

34. **Brazil's approach would result in gross injustice**: As part of the negotiations, the parties had to prepare and submit schedules of quantities and budget outlays during a base period to derive the export subsidy reduction commitments ultimately reflected in the respective schedules of the Members. Had Members' export credit guarantees been considered export subsidies for these purposes from the outset, then the export credit guarantee activity during the base period would also have to have been added to the base figures from which each Member's export subsidy reduction commitments were calculated. For example, the United States has no export subsidy reduction

commitment with respect to corn, yet during the 1986-1990 base period an average of over *5.5 million tons* of corn were exported *each year* under the GSM-102 and GSM-103 programmes. The United States would have reduction commitments for many more products than currently and would have had significantly increased commitments for the 13 products that are scheduled. However, Brazil would have the Panel impose the disciplines now but deny Members the corresponding changes in reduction commitments. Brazil's approach would be grossly inequitable and the Panel should reject it.

35. **The Application of Government-Wide Accounting Rules Indicates that the Export Credit Guarantee Programmes are Covering Long-Term Operating Costs and Losses:** The application of the Federal Credit Reform Act of 1990 ("FCRA") over time to the export credit guarantee programmes as a whole currently indicates that the net result of all activity associated with export credit guarantees issued in fiscal years 1994 and 1995 is a total net receipt to the United States of $29 million. The experience of 1994 and 1995 is viewed as representative, and the United States expects that the net results for other years will be similar to the experience for 1994 and 1995. Re-estimates thus far have resulted in a net reduction in the estimated costs of these programmes of over $1.9 *billion* since the inception of credit reform budgeting in fiscal year 1992. Based on those results, the Brazilian claim that "operating costs and losses for GSM 102, GSM 103, and SCGP have outpaced premiums collected in every single year since the United States started applying the formula in 1992" is not supportable.

36. The United States has gathered cumulative reestimates on a cohort basis: For example, for cohort 1992 (not yet closed) the current data reflects an estimate of a *profit* to the United States of approximately $124 million; for 1993 (not yet closed), the corresponding current figure is a *profit* of approximately $56 million; and, as indicated, cohorts 1994 and 1995 together project a *profit* of $29 million. With the exception of 2002, for which only very recent data is necessarily available, the Panel will note that the trend for all cohorts is uniformly favourable as compared to the original subsidy estimate.

37. Brazil asserts that "historically, the majority of GSM support that is rescheduled is 'in arrears'" and that this increases costs. Brazil largely relies, however, on a 1990 government report that is dated and precedes FCRA itself. No rescheduling applicable to export credit guarantees issued in fiscal year 1992 or later is in arrears.

38. **Brazil's Suggestion to Use Estimated Data to Determine Long-Term Costs and Losses Supports the View that the Export Credit Guarantees Do Not Provide Export Subsidies**: The United States notes Brazil's statement that "a certain degree of estimated data would be perfectly acceptable in an analysis of the costs and losses of guarantee programmes under item(j)" for two reasons. First, the re-estimate process for fiscal years 1994, 1995, and virtually every other year since fiscal year 1992 indicates a very strong net positive trend with respect to the programmes and that therefore current premium rates do cover long-term operating costs and losses. Second, it is relevant with respect to Brazil's reliance on the significant losses that the United States admittedly incurred with respect to Poland and Iraq. Presumably, to attempt to recover such losses in any practical time frame would require such a prohibitive fee increase that few, if any, exporters would take advantage of the program. Consequently, the United States would be whipsawed by a prohibition on the export credit guarantee as currently constituted because of the large losses incurred between 10 and 20 years ago, and the inability to create a conforming programme because the fee structure necessary to compensate for such historical losses would foreclose use of the programme. Item (j) cannot be reasonably interpreted to require an examination of all activity since the beginning of a programme, no matter how old it may be. The data provided with respect to fiscal years 1994 and 1995 and for the programmes as a whole indicates that current premium rates are presently adequate to cover long-term operating costs and losses as currently projected. The United States is also in a net positive position with respect to cotton transactions in the ten years commencing with fiscal year 1993.

39. **The Export Credit Guarantee Programmes Are Not Applied in a Manner which Results in or which Threatens to Lead to, Circumvention of Export Subsidy Commitments**: Brazil has challenged the export credit guarantee programmes, GSM 102, GSM 103, and SCGP, as such. Brazil has failed, however, to demonstrate that these programmes as such mandate a violation of US WTO obligations. It is well established under GATT and WTO jurisprudence that legislation of a Member violates that Member's WTO obligations only if the legislation *mandates* action that is inconsistent with those obligations or precludes action that is consistent with those obligations. If the legislation provides discretion to administrative authorities to act in a WTO-consistent manner, the legislation, as such, does not violate a Member's WTO obligations. This distinction has continued under the WTO system.

40. The Commodity Credit Corporation ("CCC") has complete statutory and regulatory discretion at any time not to issue guarantees with respect to any individual application for an export credit guarantee or to suspend the issuance of export credit guarantees under any particular allocation. This is in marked contrast to the situation in *US- FSC*, in which the Appellate Body found a threat of circumvention because the FSC legislation created a legal entitlement to the payment. There is no statutory legal entitlement to an export credit guarantee. Furthermore, even if an application and fee are received, the applicant is not necessarily entitled to receive the guarantee. Issuance is discretionary.

41. Finally, Brazil has alleged that the United States has exceeded its quantitative export subsidy reduction commitments during the period July 2001-June 2002. Even if the export credit guarantee programmes were deemed export subsidies, the United States would be in compliance with the quantitative reduction commitments for that period with respect to wheat, coarse grains, butter and butter oil, skim milk powder, cheese, other milk products, bovine meat, live dairy cattle, and eggs. This may also be true with respect to vegetable oil. In fiscal year 2002, it would also be true for poultry meat. The United States did not use the GSM-102 or GSM-103 programmes during 2001-2002 with respect to butter and butter oil, skim milk powder, cheese, other milk products, or eggs.

42. **Financial Arrangements Analogous to the CCC Export Credit Guarantee Programmes are Available in the Marketplace**: In light of Article 10.2, it is neither appropriate nor necessary to analyze the export credit guarantees with respect to Article 1.1(b) of the SCM Agreement. However, we note that financing is available in the marketplace that is analogous to export credit guarantees. A prominent example in the commercial market would be "forfaiting." It would appear, then, that a competitive marketplace exists for trade financing even in emerging markets where more conventional financing is not available. The United States is not privy to the precise terms at any time available in forfaiting transactions because those terms can vary by country, commodity, bank risk, size of transaction and numerous other factors. In addition, like most private financial activity, that information is ordinarily held confidentially by the parties.

**The Step 2 Programme is not Contingent on Export Performance**

43. Brazil apparently does not contest that all uses of upland cotton are eligible for the Step 2 subsidy. Instead, Brazil suggests, erroneously, that not the entire universe of users of upland cotton is eligible for the subsidy. First, the requirement that a recipient must be "regularly engaged" in the use of cotton is simply an anti-fraud provision to preclude an attempt to receive a payment with respect to cotton on which a payment has already been made. Brazil also correctly notes that "the eligible domestic user criteria exclude all firms that are domestic cotton brokers or simple resellers". These parties are not using the cotton and are therefore ineligible. Brazil suggests a third category of persons who are users but are not eligible to receive the payment: "firms that have not entered into CCC contracts" as either manufacturers or exporters. It is true that CCC cannot pay parties that

choose to remain unknown to it, but this requires an assumption of economic irrationality and does not diminish the point that all who use cotton have it entirely within their power to receive the subsidy.

# ANNEX D-3

## BRAZIL'S COMMENTS ON US REBUTTAL SUBMISSION

27August 2003

1. Pursuant to the Panel's ruling of 23 August 2003, Brazil presents the following comments on the paragraphs listed below relating to the Rebuttal Submission of the United States of America. In addition, Brazil offers comments on Question 67a posed to the United States by the Panel's Communication of 25 August 2003.

**Paragraph 43**

2. In paragraph 43 of its Rebuttal Submission, the United States argues that "Brazil's reading would seemingly require a Member to make payments even if the recipient's production was illegal, for example the production of narcotic crops such as opium poppy or the production of unapproved biotech varieties or environmentally damaging production." The United States claims this would have "potentially far reaching results." This new argument has no merit.

3. The two examples provided by the United States involving the growing of illegal plants/crops are, by definition, situations in which a national (or state/regional) domestic criminal (or civil) law would prohibit or regulate the growing of such plants/crops. The criminal (or civil) law would operate separately from any de-coupled direct payment to prohibit or regulate all forms of such production. There would be no reason in that situation to have a further statute limiting the payment if such illegal plants (or illegal production methods) – the activity would already be illegal. That is exactly the case with the 1996 FAIR Act and the 2002 FSRI Act regarding PFC and direct payments respectively. Neither limits the amount of payments for the growing of plants that would be illegal under US law. There is no need to because US federal and/or State law already prohibits such activity.

4. In addition, the US example in paragraph 43 about a restriction on "environmentally damaging production" is not relevant because such a restriction does not relate to the "type" of production (*i.e.*, the type of crop) but rather the "manner" of production.[4] Therefore, Annex 2, paragraph 6(b), which focuses on the "type" of production related to the "amount" of payment, it does not address the manner in which production is conducted. The context of Annex 2, paragraph 6(b) includes Annex 2, paragraph 12 ("Payments under environmental programmes") which permits Members to impose specific conditions on the growing of crops in order to receive environmentally related direct payments.

5. Thus, the "potentially far-reaching results" [5] from Brazil's text-based approach to the ordinary meaning of "the amount of such payments" related to or based on the "type of production " do not and

[4] *See* First Submission of Brazil, para. 157 in which Brazil makes the distinction between Paragraph 6(b) in which the word "type" relating to the type of crop produced contrasted with Paragraph 6(d) which is concerned with the type of production process. The United States has never contested this distinction.

[5] The United States reference to "potentially far-reaching results" appears also to include its additional new argument in paragraph 43 relating to the EC's possible CAP reform imposing, *inter alia*, fruits and vegetable restrictions. That potential "reform" is obviously not at issue in this case. The EC will have to make a decision how to notify any such measure when it is required to do so under Article 18 of the Agreement on Agriculture. It goes without saying that an improperly categorized green box measure of one Member cannot be justified by relying on a possible future improperly categorized green box measure of another Member.

will not exist. Brazil further notes that in the extraordinary situation in which one Member could theoretically seek to challenge a de-coupled direct payment limiting payments for growing plants such as opium poppy as an actionable subsidy, the Member restricting the "type" of production of such plants could, for instance, assert defences under Article XX(b) or (d) of GATT 1994.[6]

**Paragraphs 96-98**

6. The United States raises the new argument that "no other WTO Member has notified crop insurance programmes as product-specific."[7] At the outset, Brazil notes that it is the US crop insurance programmes and the detailed record of the product-specific nature of the US crop insurance programmes that is at issue in this dispute – not those of other WTO Members.

7. None of the WTO notifications of the EC, Canada, or Japan cited by the United States reflect the existence of the type of special product-specific policies or special treatment for certain crops within a broader insurance programme. In particular, there is no indication that these Members provide any specific crop insurance provisions for a specific crop, such as the insurance programmes provided by the United States for upland cotton.[8] For example, while Canada appears to have a similar programme for "crops" as the United States, there is no indication that Canada provides special polices or groups of policies within its broader programme for individual crops. Thus, in contrast to the evidence of other Member's insurance policies, the *nature, type, value,* and *participation rate* of the crop insurance policies provided by the United States differs widely among commodities. As Brazil has explained, it is simply not a "one size fits all" programme. The EC agrees. It has argued before the Committee on Agriculture that the US crop insurance programme is product-specific support.[9]

8. The United States further argues that it "is not aware of any crop insurance programme maintained by any other Member" that covers as many commodities as the United States.[10] However, the Article 13(b)(ii) test is whether a specific commodity receives support from a domestic measure identified in the *chapeau* and whether there is some sort of a link between the support measure and the specific commodity. Evidence of such a link in the case of crop insurance exists, as with the US crop insurance programme, when particular commodities are provided special policies, coverage, or additional subsidies compared to other commodities covered by the crop insurance programme. There is no such evidence reflected in the notifications of Mexico whose notification states that "insurance premium subsidy [is] available for all producers."[11] Japan's "Agricultural Insurance Scheme" also includes subsidies for policies covering all crops (except vegetables), all livestock (except poultry) and sericulture.[12] By contrast, the US insurance programmes challenged by Brazil do not provide subsidies for any insurance for livestock or many other commodities. Indeed, the commodities *not* covered by the US 2000 ARP Act and relevant regulations represent more than half of the value of US farm cash receipts.[13]

---

[6] These same exceptions would be available in the unlikely event a Member challenged a direct de-coupled payment for any of the three scenarios posed by the United States in paragraph 43.

[7] Rebuttal Submission of the United States, para. 96-98.

[8] *See* Rebuttal Submission of Brazil, paras 54 (special irrigation-related policies for upland cotton), para. 55 (upland cotton producers have much larger pool of insurance subsidies than other types of crops), para. 56 (specific upland cotton income protection policies and catastrophic risk protection), para 57 (much greater use of insurance subsidies than other crops), para. 58 (reinsurance payments for upland cotton).

[9] Exhibit Bra-144 (G/AG/R/31, para. 31).

[10] Rebuttal Submission of the United States, para. 98.

[11] G/AG/N/MEX/7, p. 4.

[12] Rebuttal Submission of the United States, para. 98.

[13] Rebuttal Submission of Brazil, para. 59 (Excluded agricultural commodities from US insurance programme represent 52 per cent of the value of all US farm cash receipts).

9. Finally, as the United States recognizes, more than half of the notifications (which include part of Japan's) cited by the United States refer to insurance programmes as green box support.[14] Members so notifying are not obliged to make a determination under Article 6 of the Agreement on Agriculture whether such support is product-specific or not because it is exempt from any reduction commitments. The United States has not provided evidence suggesting these green box categorizations are incorrect. For these reasons, these notifications are also irrelevant.

**Paragraphs 114-117**

10. The United States argues for the first time in paragraphs 114-117 of its Rebuttal Submission that using the "price-gap" methodology is the appropriate way to calculate the portion of upland cotton AMS that stems from marketing loan gains, certificate exchange gains, and loan deficiency payments (collectively known as "marketing loan payments"). The effect of applying the price gap methodology would be to transform the $2.5 billion in budgetary expenditures for marketing loan payments in MY 2001 into a "negative" amount for purposes of total current AMS.[15] The United States bases its new argument on an alleged statement by Brazil and "agrees" that "Brazil is correct when it states that a non-exempt direct payment dependent on a price gap may be calculated using a price gap methodology, rather than budgetary outlays. . .."[16]

11. The United States refers to Brazil's 11 August Answer to Question 67, paragraph 130, as the basis for its assertion. Brazil's statement cited by the United States reads as follows:

> Brazil notes that the United States has notified the deficiency payments using the price gap methodology provided for in Annex 3. [footnote citing Exhibit Bra-150 (G/AG//N/USA/10)] Brazil considers it appropriate to follow the US decision and will therefore, calculate the amount of support to upland cotton provided by the deficiency payment programme by using the "price gap" approach detailed in Annex 3 paragraph 10 and 11.

Contrary to the US interpretation of this statement, Brazil's point was that any calculation of AMS for deficiency payments (and for the other programmes that require such calculation) must be consistent with the actual choice of methodology originally made by the United States for calculating its domestic support reduction commitments as well as its yearly current AMS notifications. Indeed, the United States' entire argument in paragraphs 114-117 of its Rebuttal Submission is based on the alleged obligation for Brazil "to be consistent."[17] As demonstrated below, it is Brazil's AMS calculation, not that of the United States, that is "consistent."

12. Members are required to notify annually their current total AMS to provide other Members the opportunity to review the consistency with their domestic support reduction commitments pursuant to Article 6.3 of the Agreement on Agriculture.[18] The total AMS reduction commitments were negotiated during the Uruguay Round based on a calculation of "total AMS" provided in marketing years 1986-1988. The initial AMS calculation used for the purposes of the reduction commitments was performed pursuant to Annex 3 of the Agreement on Agriculture with Members choosing either budgetary expenditures or a "price-gap" methodology expressed in total monetary terms. Like Article 13(b)(ii), the comparison between *current* total AMS and the AMS ceiling, *i.e.*,

[14] Rebuttal Submission of the United States, para. 97.

[15] The United States even claims credit for being conservative by not netting the negative support by the marketing loan benefits against the positive support provided by the other domestic support programmes, Rebuttal Submission of the United States, para. 116 and note 148.

[16] Rebuttal Submission of the United States, para. 114.

[17] Rebuttal Submission of the United States, para 114 (last sentence).

[18] *See* Article 18.2 of the Agreement on Agriculture and various US notifications cited herein.

the reduction commitment, must allow for an "apples to apples" annual comparison in accounting for the same measures. It follows that once a Member uses a budgetary approach for one measure to establish the AMS ceiling, it cannot use a price gap approach for that same measure in calculating total *current* AMS. Instead, a Member is required to report *current* total AMS consistently with the choice it made for that particular type of support in its *original* total AMS calculation.

13. This interpretation of Annex 3 and Article 6.3 of the Agreement on Agriculture is consistent with its context and object and purpose. Opting for a methodology that would permit Members to change their original methodology (*i.e.*, from budgetary to price-gap) could sanction what the United States proposes – the covering up of billions of dollars of marketing loan payments (originally calculated on a budgetary basis) and turns them into "negative support" by using a "price-gap" formula. This would be inconsistent with the entire reason for the reduction commitments of Article 6 of the Agreement on Agriculture.

14. Brazil's calculation of AMS for, *inter alia*, marketing loan payments followed the actual decision of the United States during the Uruguay Round[19] as reflected in its notifications.[20] During the Uruguay Round, the United States calculated the upland cotton portion of what would eventually become its domestic support reduction commitment by using the following methodologies: it used the price gap formula for upland cotton deficiency payments[21] and used budgetary outlays for all other domestic support measures.[22] In its MY 1995 notification to the Committee on Agriculture the United States similarly notified deficiency payments using the price-gap formula and using budgetary outlays for all other domestic support measures subject to reduction commitments[23] consistent with its AMS calculation during the Uruguay Round. After the termination of the deficiency payment programme in 1996, all later domestic support (current total AMS) notifications of the United States for upland cotton only use budgetary outlays. Thus, Brazil's approach to calculating upland cotton AMS for MY 1992 and 1999-2002 is entirely consistent with the US approach as evidenced in its domestic support notifications[24] and with the US obligations under the Agreement on Agriculture.

15. The United States accounted for the marketing loan payments in the same manner as in its notifications when it answered Question 67 in its 11 August submission.[25] This is, furthermore, the methodology the Panel indicated the United States should use – referring to the US notification of MY 1999 domestic support in G/AG/N/USA/43, in which the United States – in line with its obligation – used budgetary outlays.[26]

16. In sum, like many other US arguments in this phase of the dispute, this US argument is designed to cover-up expenditures and support to upland cotton that increased significantly since the US Uruguay Round commitments came into effect. Therefore, the Panel should reject it.

[19] Exhibit Bra-191 (G/AG/AGST/USA, p. 20)
[20] Exhibit Bra-150 (G/AG/N/USA/10, p. 18)
[21] Exhibit Bra-191 (G/AG/AGST/USA, p. 20 and supporting tables on p. 21-22).
[22] Exhibit Bra-191 (G/AG/AGST/USA, p. 20).
[23] Exhibit Bra-150 (G/AG/N/USA/10, p. 18).
[24] The United States entire argument in paragraphs 114-117 is premised on the alleged need for Brazil "to be consistent" as stated in the last sentence in paragraph 114. As noted, it is Brazil who has been consistent in using actual US notifications and the US calculation method during the Uruguay Round, not the United States who now seeks to ignore them.
[25] US 11 August Answer to Question 67, para. 128-134.
[26] Exhibit Bra-47 (G/AG/N/USA/43, p. 20).

**Paragraphs 124-127 and Exhibit US-24**

17. The United States presents an additional critique of Professor Sumner's analysis in Exhibit US-24 prepared by Dr. Joseph W. Glauber, the Deputy Chief Economists of USDA, as well as in paragraphs 124-127 of its Rebuttal Submission.

Marketing Loan Benefits

18. Dr. Glauber notes that the analysis of Professor Sumner did not include in the upland cotton acres eligible for marketing loans 447,164 acres of upland cotton planted on Flex acres from other programme crops.[27] Dr. Glauber is correct that any such acreage would be eligible for receiving marketing loan payments and therefore should be included in the calculation.[28] Dr. Glauber refers to "Acreage Reduction compliance reports" as his source of this number. Dr. Glauber does not provide a citation for these compliance reports and the United States has not made them available to Brazil. Therefore, Brazil cannot confirm the actual number of acres. Brazil also notes that the number listed is planted acres not harvested acres.[29]

19. Dr. Glauber further rests his finding that 100 per cent of US upland cotton production in MY 1992 benefited from marketing loan payments on his statement that upland cotton farmers "often" report land that had been planted and abandoned as land left idle and therefore never planted. No citation, authority or reference is provided for this assertion. The assumption in this assertion is that farmers report one thing to the US Federal Government, yet actually do something else. Thus, Dr. Glauber's presumption appears to be that farmers engage in what would appear to be widespread misrepresentation. Brazil does not know if such assumed large-scale misrepresentations were legal under the 1992 US programme, but it certainly contradicts "programme" expectations.

20. Professor Sumner concluded that 1.99 million acres used to produce upland cotton in MY 1992 were not eligible for the marketing loan payments because they did not participate in the deficiency programme. Dr. Glauber confirms Professor Sumner's general approach on non-participating acreage in footnote 1 on page 2 where he acknowledges that "some base building occurred during the early 1990's." What this means is that a substantial amount of upland cotton must have been planted outside the programme to accommodate expansion of upland cotton base by 200,000 acres in 1993, as identified by Dr. Glauber. This acknowledgement supports Professor Sumner's analysis that a significant amount of upland cotton must have been grown *outside* the deficiency programme. The basis for this analysis is as follows:

21. Under the rules existing in MY 1992, in order to "build" base a farm was required to plant all of its upland cotton outside the programme.[30] The expansion of upland cotton base is equal to one-

[27] Exhibit US-24, p. 1.

[28] Neither Brazil nor Professor Sumner were aware of any flex acres from other programme crops planted to upland cotton or of data concerning any such plantings.

[29] Dr. Glauber raises in the first sentence of paragraph 2 what he called "statistical problems in comparing planted acres to programme acres." He points out that "planted acres" information was collected and reported by NASS, while "programme acres" are reported by the Farm Service Agency. (In 1992 this part of USDA was known as the Agricultural Stabilization and Conservation Service.) Dr. Glauber goes on to explain that a significant amount of cotton acreage is planted and abandoned each year. But the relevance of this information in critiquing Professor Sumner's analysis remains unclear. Brazil notes that contrary to Dr. Glauber's assumption, Professor Sumner's calculations do *not* rely on data published by NASS, but instead on published information in the Farm Service Agency's "Fact Sheet: Upland Cotton" (Exhibit Bra-4). This Farm Service Agency source provides data on planted acres, the abandonment rate as well as harvested acres of upland cotton for MY 1992.

[30] Exhibit US-3 (7 CFR 1413.7(c)). ("[T]he crop acreage base shall be equal to the average of the acreage planted and considered planted to such crop for harvest on the farm in each of the 3 crop years

third of the amount of additional cotton acres planted in each of the previous three years. An acre of base is added if an additional acre of cotton is planted for three consecutive years.[31] In order to plant more than the current base, a farm was required to leave the programme *altogether* so that current base acres would also be planted outside the programme. For example, assume a farm had 1000 acres of upland cotton base and wanted to add – over the two-year period 1991-1992 – 200 acres of base by 1993. That farm would withdraw from the programme for those two years and plant 1300 acres of cotton (300 acres more than the previous base) in 1991 and 1992. The 1993 upland cotton base would than be calculated as follows: (1000 acres + 1300 acres + 1300 acres) / 3 equalling 1200 acres, thus 200 acres more than previously. Therefore, to add the 200,000 acres of base in 1993 (which Dr. Glauber stated were actually added) a much larger amount of upland cotton would have been required to be planted *outside* the programme in 1992. In addition to building of additional base, farmers planted upland cotton outside the programme because they did not comply with payment limit rules and for some more idiosyncratic reasons.

22. In summary, the evidence of an expanding base is consistent with the assessment of Professor Sumner that a substantial amount of acreage was planted to upland cotton outside the programme. This evidence is not consistent with Dr. Glauber's undocumented or unsubstantiated claim that *all* upland cotton harvested was eligible for marketing loans.

23. To summarize, if the Panel were to accept the undocumented assertion by Dr. Glauber that 447,164 acres of cotton were planted on flex acres from other programme crop base acreage, then there would be 1.54 million acres (1.99 million acres – 0.45 million acres) that were planted to upland cotton but were not eligible for marketing loan payments. This 1.54 million represents 12 per cent of planted acreage.[32] Thus, adjusting 52.35 cents per pound by 0.88 results in a support from the marketing loan programme of 46.1 cents per pound. This is an increase of 1.76 cents over the marketing loan level of support set forth in Appendix Table 1 to Professor Sumner's 22 July 2003 Statement.

Deficiency Payments

24. Brazil has already rebutted the US argument that it is inappropriate to adjust the support provided by the deficiency payment programme by non-participation and the resulting non-eligibility to receive payments.[33]

25. The various "decisions" in MY 1992 with respect to the deficiency payment programme were calculated to establish rules that encouraged some producers to forego eligibility of the programme. Furthermore, the record establishes that US policy makers had relatively precise prior knowledge of how many acres would remain out of the programme based on their policy choices on required land idling and loan rates.[34]

26. Dr. Glauber criticizes Professor Sumner for relying on a programme yield of 531 pounds per acre to calculate the ratio of payment yield to expected yield and states that the true programme yield

---

preceding such crop year"). For a farmer within the programme the acreage could never change, as all the acreage was planted (or if idled or – in case of flex acreage – if planted to other crop, it was "considered" planted to upland cotton). Thus, an increase of acreage could only take place, if a farmer withdrew from the programme and exceeded the planting limits imposed by the programme. Thus, MY 1992 base acreage is constitutes the 3-year average of acreage planted and considered planted in MY 1989-1991.

[31] Or of 3 additional acres are planted in the previous year, among other possible constellations.

[32] *Compare* Annex 2 to Exhibit Bra-105, p. 3.

[33] Brazil's 22 August Comment on Question 66, para. 81.

[34] Brazil's 22 August Comment on Question 66, para. 81.

in MY 1992 was 602 pounds per acre.[35] Dr. Glauber references a USDA press release that is not available to those outside the US government as his source of the payment yield information.[36] Assuming that the figure of 602 pounds per acre used by Dr. Glauber is correct, he incorrectly continues to rely on Professor Sumner's calculation of the expected yield by stating that the "expected yield based on an average of the upland cotton yields over the five preceding crop years is 601 pounds per acre." Professor Sumner estimated the payment yield based on actual yields per *planted* acre, whereas the payment yields that Dr. Glauber cites appears to be the approximate average yields per *harvested* acre. To achieve an apples-to-apples comparison, Brazil has re-calculated the expected yield for MY 1992 as the average yield per *harvested* acre during the 1990 to 1994 based on USDA's "Fact Sheet: Upland Cotton" (656.4 pounds per acre).[37] Thus, the relevant adjustment factor is not 1.002 as suggested by Dr. Glauber, but 0.917 (603 / 656.4).

27. Dr. Glauber offers no critique of Professor Sumner's analysis of the mandatory land idling cost component in the calculation of deficiency payment support. However, Dr. Glauber neglected to include these costs associated with the participation in the programme. As Professor Sumner explained, such costs are properly subtracted from the gross benefits of the cotton deficiency payment programme.

28. Brazil provides a revised calculation below, taking account of the revised yield adjustment factor of 0.917 – reflecting the deficiency payment yield as provided by Dr. Glauber's and the expected comparable yield for MY 1992 that Dr. Glauber erroneously did not correct. In addition, Brazil continues to deduct the cost figure calculated by Professor Sumner from the deficiency payment programme. The revised formula is as follows:

> Deficiency payment support = 20.55 cents per pound * 0.75 * 0.917 – 0.84 cents per pound = 13.29 cents per pound

Using the new payment yield and the new expected yield that is comparable to it, results in a 0.04 cents per pound upward adjustment to the 13.25 cents per pound presented by Professor Sumner in his 22 July Statement.

Other Payments

29. Brazil has already responded at length to Dr. Glauber's claims endorsing the arguments of the United States that PFC, market loss assistance, direct and CCP payments, as well as crop insurance payments are not "support to" upland cotton. Dr. Glauber's statement simply restates assertions in the legal briefs of the United States and offers no economic analysis to support his assertions.

30. Dr. Glauber asserts that it is relevant that Step 2 payments are not paid directly to producers.[38] As Brazil explains in its 11 August Answer to Question 18, a basic principle is that the effect of a subsidy is independent of who initially receives the subsidy.[39] That is the economic common sense behind the United States notifying Step 2 payments as product-specific support to upland cotton. And it is the basis for including such payments as "support to a specific commodity" "decided" by a

[35] Exhibit US-24, p. 3.

[36] The United States has not made this document available and thus we are unable to evaluate its applicability to the current situation. Professor Sumner had relied on the best information available to him and Brazil, which was the average upland cotton yield per planted acre during the reference period of MY 1981-1985.

[37] Exhibit Bra-4 ("Fact Sheet: Upland Cotton," USDA, January 2003, p. 4).

[38] Exhibit US-24, p. 3.

[39] Exhibit Bra-140 (Pindyck, Robert S. and Rubinfeld, Daniel L. , *Microeconomics*, 5th edition (2002), Prentice Hall, New Jersey, p. 313-317).

Member with respect to MY 1992. The text of Article 13(b)(ii) requires, under any methodology, the calculation of a level of support *to upland cotton*, not *to producers* of upland cotton.

31. Dr. Glauber's assertions about "double counting" are also incorrect. All the support programmes Dr. Glauber discusses (marketing loan payments, CCP payments and deficiency payments) have production and trade effects largely independent of Step 2 payments. But the purpose of calculating a rate of support under Article 13(b)(ii) is not to assess the *amount* of production, export, and price effects of the simultaneous application of all measures of support. Brazil will present an equilibrium analysis of the full economic effects of these support programmes simultaneously for Brazil's "Further Submission." Such an analysis is, however, not required for the purposes of calculating the rate of support under Article 13(b)(ii). The fact that the United States notified Step 2 as "product-specific" support indicates its position that the Step 2 programme provides additional support to upland cotton. This has certainly been the strongly held view of the US National Cotton Council.[40] Thus, it was appropriate for Professor Sumner to include this production and trade-distorting subsidy in the total rate of support.

32. Brazil notes that Dr. Glauber does not criticize any other calculation made by Professor Sumner. For the convenience of the Panel, Brazil reproduces the chart containing Professor Sumner's calculation as amended following the detailed US critique of Professor Sumner's methodology. As the Panel will note, the results do not materially change. The support granted by the United States in MY 1999-2002 exceeds the support decided in MY 1992. Thus, even under this methodology, the United States does not enjoy peace clause exemption from actions based on Articles 5 and 6 of the SCM Agreement or Article XVI:1 of GATT 1994.

**Paragraphs 135-146, and Exhibits US-25 through US-29**

33. Brazil has demonstrated that under the ordinary meaning of Article 10.2 of the Agreement on Agriculture, in its context and according to the object and purpose of Article 10 and the Agreement on Agriculture overall, export credit guarantees are subject to the general export subsidy disciplines contained in that Agreement.[41] Article 10.2 announces Members' intent to work toward negotiations

[40] Brazil Rebuttal Submission, para. 127.

[41] *See* Brazil Statement at the First Panel Meeting, paras. 100-115; Brazil 11 August Responses to Panel Questions 70 (para. 138); Brazil 22 August Rebuttal Submission, paras. 99-100; Brazil 22 August Comments on Answers to Panel Questions 74 (paras. 89-90), 80 (para. 98), 88(b) (paras. 117-119).

on specific disciplines for export credits. In the meantime, the general disciplines on export subsidies included in the Agreement on Agriculture apply to export credits, if those export credits constitute export subsidies.[42]

34. The United States asserts that Article 10.2 carves out export credit guarantees from the general export subsidy disciplines of the Agreement on Agriculture, including the anti-circumvention provisions of Article 10.1. The Appellate Body has, however, concluded that to exempt or carve-out particular categories of measures from general obligations such as the export subsidy obligations in the Agreement on Agriculture, the exemption or carve-out must be *explicit* in the text of an agreement.[43] Article 10.2 includes no such explicit carve-out or exemption. The negotiators knew how to make such an exemption or carve-out explicit, as evidenced by, for example, Article 13 of the Agreement on Agriculture, footnote 15 to Article 6.1(a) of the SCM Agreement, and the second paragraph of item (k) of the Illustrative List of Export Subsidies.[44]

35. In support of its interpretation, the United States appeals to "subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation," within the meaning of Article 31(3)(b) of the *Vienna Convention*.[45] According to the United States, negotiations on agricultural export credit issues that have taken place in the OECD subsequent to the effective date of the WTO Agreement, and a statement by the OECD Secretariat, constitute "subsequent practice" establishing the agreement of WTO Members that Article 10.2 of the Agreement on Agriculture exempts export credits from any and all disciplines.

36. The United States is wrong. The United States has not established "a 'concordant, common and consistent' sequence of acts or pronouncements which is sufficient to establish a discernible pattern implying the agreement of the parties [to a treaty] regarding its interpretation," which is the standard adopted by the Appellate Body to establish "subsequent practice" under Article 31(3)(b) of the *Vienna Convention*.[46] It is evident from the positions taken by Canada, the European Communities and New Zealand in this dispute that *not even those WTO Members that participated in the OECD negotiations* agree with the United States' interpretation of Article 10.2.[47] Nor is there any evidence of "subsequent practice" signifying agreement on the United States' interpretation amongst the 136 WTO Members that did not participate in the OECD negotiations.

37. Brazil notes, moreover, that the WTO Secretariat, which is in a better position to address interpretations of the covered agreements than is the OECD Secretariat, does not appear to agree that

[42] Export credit guarantees are not *per se* subject to these disciplines, as they would be if they were included in Article 9.1 of the Agreement on Agriculture (*See e.g.*: Brazil's 22 August Comment, para. 97, New Zealand's Answer to Third Party Question 35, EC's Answers to Third Party Questions 35, para. 70). Brazil has demonstrated that the GSM 102, GSM 103 and SCGP programmes constitute export subsidies under Articles 1(e) and 10.1 of the Agreement on Agriculture, under Articles 1.1 and 3.1(a) of the SCM Agreement, and under item (j) of the Illustrative List of Export Subsidies annexed to the SCM Agreement.

agricultural export credits are exempt from the general export subsidy disciplines of the Agreement on Agriculture by virtue of Article 10.2.[48]

38. The United States also argues that the negotiating history of Articles 9.1 and 10.2 of the Agreement on Agriculture supports its argument that export credit guarantees are exempt from the general export subsidy disciplines of the Agreement on Agriculture. The United States raises three arguments in this regard.

39. *First*, the United States addresses the negotiating history of Article 9.1.[49]

40. In the DeZeeuw framework agreement, the United States points to paragraph 20(e), which contemplated Members providing "data on financial outlays or revenue foregone . . . in respect of export credits provided by governments or their agencies on less than fully commercial terms."[50] The United States apparently considers that since paragraph 20(e) was not carried over into the Agreement on Agriculture, export credits are not subject to the export subsidy disciplines in the Agreement.

41. Brazil notes, however, that paragraph 20(g) addressed "export performance-related taxation concessions or incentives." This provision was also not carried over into the Agreement on Agriculture. Nonetheless, panels and the Appellate Body have ruled that export performance-related taxation concessions or incentives like the United States' FSC and ETI measures are subject to the general export subsidy disciplines of the Agreement on Agriculture, including Article 10.1.

42. Similarly, the United States points to Addendum 10 of Chairman Dunkel's Note on Options, which includes an illustrative list of export subsidy practices.[51] A number of the items on that illustrative list were eventually included, with modifications, in Article 9.1 of the Agreement on Agriculture.[52] Others were not, including item (h), which refers to "[e]xport credits provided by governments or their agencies on less than fully commercial terms," and item (i), which refers to "[s]ubsidized export credit guarantees or insurance programmes." The United States apparently considers that since items (h) and (i) were not carried over into the Agreement on Agriculture, export credits, including export credit guarantees and insurance programmes, are not subject to the export subsidy disciplines in the Agreement.

43. Brazil notes, however, that item (g) of Chairman Dunkel's illustrative list refers to "[e]xport performance-related taxation concessions or incentives other than the remission of indirect taxes." This provision was also not carried over in Article 9.1 of the Agreement on Agriculture. Nonetheless, as Brazil has already noted, panels and the Appellate Body have ruled that export performance-related taxation concessions or incentives like the United States' FSC and ETI measures are subject to the general export subsidy disciplines of the Agreement on Agriculture, including Article 10.1.

44. Brazil assumes that the United States simply overlooked paragraph 20(g) of the DeZeeuw framework agreement and item (g) from Chairman Dunkel's illustrative list when it states, in paragraph 143 of its Rebuttal Submission, that

[48] G/AG/NG/S/13 (26 June 2000), para. 44 ("[A]s matters currently stand the only rules and disciplines on agricultural export credits are those of the Agreement on Agriculture but only to the extent that such measures constitute export subsidies for the purposes of the Agreement on Agriculture.").

[49] Rebuttal Submission of the United States, paras. 136-138.

[50] *See* Exhibit US-25.

[51] Exhibit US-27.

[52] Paragraph 48(a) corresponds to Article 9.1(a), paragraph 48(e) to Article 9.1(e), paragraph 48(f) to Article 9.1(d), paragraph 48(j) to Article 9.1(f), paragraph 48(k) to Article 9.1(c).

> the negotiating history reveals that the Members very early specifically included export credits and export credit guarantees as a subject for negotiation and specifically elected *not* to include such practices among export subsidies. In contrast, the negotiating history reveals no comparable discussion involving FSC.

45. In light of these facts, it is evident that the negotiating history of Article 9.1 does not offer support for the United States' argument that export credit guarantees are exempt from the general export subsidy disciplines of the Agreement on Agriculture.

46. *Second*, the United States argues that changes introduced to the text of Article 10.2 between the Draft Final Act and the final version of the Agreement on Agriculture mean that export credits are not subject to the export subsidy disciplines included in the Agreement.[53]

47. The version of Article 10.2 included by negotiators in the Draft Final Act read as follows:

> Participants undertake not to provide export credits, export credit guarantees or insurance programmes otherwise than in conformity with internationally agreed disciplines.

The United States argues that this version of Article 10.2 "would clearly prohibit the use of export credit guarantees except in conformity with [internationally] agreed disciplines," which it asserts "would include those contemplated by the SCM Agreement."[54]

48. The version of Article 10.2 included in the Agreement on Agriculture reads as follows:

> Members undertake to work toward the development of internationally agreed disciplines to govern the provision of export credits, export credit guarantees or insurance programmes and, after agreement on such disciplines, to provide export credits, export credit guarantees or insurance programmes only in conformity therewith.

The United States argues that having changed the draft, "[t]he Members clearly subsequently decided *not* to condition the use of export credit guarantees on conformity with the export subsidy disciplines of the Agreement on Agriculture or the SCM Agreement."[55]

49. The United States' interpretation of the negotiating history requires the Panel to accept that the version of Article 10.2 included in the Draft Final Act would have imposed a *greater burden* on Members than does the version of Article 10.2 ultimately included in the Agreement on Agriculture. In fact, however, Article 10.2 of the Draft Final Act was amended to make it clear that negotiators expected Members actually *to pursue* negotiations on specific disciplines. Whereas the version of Article 10.2 included in the Draft Final Act did not include an undertaking to pursue those negotiations, the final version of Article 10.2 does include such an undertaking. The amendment did not *relieve* the Members of any burden, but instead *increased* the burden.

50. At least some Members understood this to be the case, since soon after the conclusion of the Uruguay Round, they launched negotiations in the OECD on specific export credit disciplines.[56] The

[53] Rebuttal Submission of the United States, paras. 140-142.
[54] Rebuttal Submission of the United States, para. 140.
[55] Rebuttal Submission of the United States, para. 141.
[56] The United States' assertion that the phrase "internationally agreed disciplines" in Article 10.2 of the Draft Final Act referred to those disciplines "contemplated by the SCM Agreement of the Draft Final Act" is not credible. Where negotiators meant to refer to pending WTO agreements outside of the draft Agreement on

United States implies that Brazil's "admission" that those negotiations have not yet resulted in agreement on specific disciplines for export credits is fatal to its claims. Brazil has demonstrated elsewhere, however, that while those negotiations are pending, nothing in Article 10.2 (or Article 1(e)) exempts export credits from the general disciplines on export subsidies included in, for example, Article 10.1 of the Agreement on Agriculture. If export credits constitute export subsidies, they are subject to those disciplines. As noted above, the Appellate Body has concluded that to exempt particular categories of measures from general obligations such as Article 10.1, the exemption must be explicit.[57] The negotiators knew how to make exemptions explicit, but did not do so in the case of export credits.[58]

51. *Third*, the United States argues that "Brazil's interpretation would require export credit guarantees in agriculture to be subject to more disciplines than any other practice addressed in the Agreement on Agriculture," since "not only would export credit guarantees constitute export subsidies and be subject to all of the export subsidy disciplines, but Member's [sic] would also be specifically obligated to work toward and then apply *additional* disciplines."[59] This statement is incorrect for several reasons:

- As clarified by Brazil, New Zealand and the European Communities, since export credits are not included in Article 9.1, they do not necessarily "constitute export subsidies."[60] They only constitute export subsidies if they are financial contributions that confer benefits and are contingent on export, or if they satisfy the elements of one of the items on the Illustrative List of Export Subsidies annexed to the SCM Agreement.

- Export credits are only "subject to all of the export subsidy disciplines" of the Agreement on Agriculture if they lead to circumvention of a Member's export subsidy reduction commitments.

- It is not clear that any specific disciplines resulting from negotiations undertaken pursuant to Article 10.2 will be "additional" to those already included in the Agreement on Agriculture or the SCM Agreement. Those negotiations are not yet completed. Depending on the agreement negotiated, it is presumably possible that the resulting text could replace the disciplines included in the Agreement on Agriculture.

52. Therefore, the United States' argument is inaccurate, and does not support its assertion that export credit guarantees are exempt from the general export subsidy disciplines in the Agreement on Agriculture, even if they meet the definition of "export subsidy."

---

Agriculture, they cited those WTO agreements by name. For example, Article 5.8 of the Draft Final Act (regarding special agricultural safeguards) refers specifically to the GATT and the Safeguards Agreement. Similarly, the final version of Article 13 of the Agreement on Agriculture includes numerous specific citations to the SCM Agreement.

[58] *See, e.g.*, Article 13 of the Agreement on Agriculture, footnote 15 to Article 6.1(a) of the SCM Agreement, and the second paragraph of item (k) of the Illustrative List of Export Subsidies.

[59] Rebuttal Submission of the United States, para. 142.

[60] *See e.g.*: Brazil's 22 August Comment, para. 97, New Zealand's Answer to Third Party Question 35, EC's Answers to Third Party Questions 35, para. 70.

**Paragraphs 147-152**

53. The United States argues that it did not include the quantities exported under the CCC programmes in its calculation of average export subsidies during 1986-1990 (the base period from which export subsidy reduction commitments were calculated during the Uruguay Round)[61] because it did not consider that CCC export credit guarantees are export subsidies subject to reduction commitments.[62] According to the United States, subjecting export credit guarantee programmes to export subsidy reduction commitments in the Agreement on Agriculture would therefore lead to "gross injustice."[63]

54. This is not the logical conclusion to be drawn, however. It appears that during the Uruguay Round negotiations the United States took the same position as it has taken in this dispute – that CCC export credit guarantee programmes do not constitute export subsidies within the meaning of item (j) and Articles 1.1 and 3.1(a) of the SCM Agreement and that CCC export credit guarantees are, therefore, not subject to the general export subsidy disciplines included in the Agreement on Agriculture.[64] The United States did not feel compelled to include the CCC export credit guarantees in its calculation of export subsidy reduction commitments because it did not consider that they constituted export subsidies under those provisions. Brazil agrees that not all export credit guarantees are export subsidies and that, therefore, not all export credit guarantees are subject to export subsidy reduction commitments. However, if those guarantees meet the criteria of item (j) or constitute subsidies contingent upon export performance under Articles 1.1 and 3.1(a) of the SCM Agreement, they are export subsidies.[65] (Brazil has demonstrated that the GSM 102, GSM 103 and SCGP programmes are export subsidies. It follows that GSM 102, GSM 103 and SCGP are subject to reduction commitments and, in fact, circumvent or threaten to circumvent the US export subsidy commitments.)

**Paragraphs 156-157, 160-162 and Exhibits US-31 and US-32**

55. The United States argues that it would not give an accurate picture to compare the reestimates made in any given year (and recorded in the US budget) with the cohort-specific subsidy estimates for guarantees disbursed in that year. Specifically, the United States argues that "upward reestimates and downward reestimates reflected in a single budget cannot necessarily be applied against each other for a notional 'net reestimate.'"[66] Brazil has never argued otherwise. In the chart included in paragraph 115 of its 22 August Rebuttal Submission, Brazil compares *cohort-specific* original subsidy estimates to *cohort-specific* reestimates, cumulated over the period 1992-2002, to give a picture of the long-term operating costs and losses of the "programmes," as required by item (j) (rather than costs and losses for a particular cohort). The United States itself uses this same method (albeit with different data) in paragraph 161 of its 22 August Rebuttal Submission.

56. With respect to FCRA-related data, it would in fact only be inappropriate to attempt to tie a cohort-specific subsidy estimate for one year to fiscal year, non-cohort-specific reestimates recorded in the budget for any one year. Brazil has never made this comparison. As the United States notes,

[61] Rebuttal Submission of the Untied States, para. 148.
[62] Rebuttal Submission of the United States, para. 149.
[63] Rebuttal Submission of the United States, paras. 147-153, *see* the heading to that section.
[64] Rebuttal Submission of the United States, para. 151. The arguments of the United States in this case demonstrate that it continues to be of the view that its programmes do not constitute export subsidies within the meaning of Articles 1.1 and 3.1(a), including item (j) of the SCM Agreement, nor within the meaning of Articles 1(e), 10.1 and 8 of the Agreement on Agriculture.
[65] Brazil's 22 August Comment on Question 80, para. 98. *See* also EC's 11 August Answer to Third Party Question 30, para. 65. New Zealand's 11 August Answer to Third Party Question 35.
[66] Rebuttal Submission of the United States, para. 160.

this would be inappropriate because reestimates recorded in the budget as made in a year do not necessarily relate to subsidy estimates for guarantees disbursed in that year. If the data is presented cumulatively over a period constituting the long term, however, and does not purport to *tie* cohort-specific subsidy estimates to fiscal year, non-cohort-specific reestimates recorded in the budget for any one year, a comparison is perfectly acceptable. Specifically, comparing the cumulative subsidy estimates to the cumulative reestimates shows whether the "programme" is loss-making or profit-generating over the long term. Making a comparison of the cumulative figures does not require that the estimates and reestimates recorded in the budget for any year correspond.

57. For example, this approach can be applied to the data included in Exhibit US-31 to the United States' 22 August Rebuttal Submission. The "subsidy" column included in Exhibit US-31 lists the subsidy estimate from the "prior year" column of the US budget for each cohort during the period 1992-2003. Subtracting cumulative annual downward reestimates from and adding cumulative annual upward reestimates to the cumulative original subsidy amount *yields a positive subsidy of $500 million*.[67] Adding administrative expenses over the period 1992-2003 increases this amount by a further $43 million.[68] Taking the data provided by the United States in Exhibit US-31 at face value demonstrates that the CCC guarantee programmes are losing money. This result is not tainted by the "apples-to-oranges" criticism levied in paragraph 160 of the United States' 22 August Rebuttal Submission.

58. Nor does Brazil's treatment of the data included in the chart at paragraph 165 of its 11 August Answers to Questions suffer from an "apples-to-oranges comparison" between fiscal year and cohort-specific data, as the United States alleges at paragraph 160 of its 22 August Rebuttal Submission. The chart at paragraph 165 is wholly unrelated to the FCRA cost formula. It tracks the results of a formula Brazil has constructed to verify, by alternative means, that long-term operating costs and losses for the CCC export guarantee programmes outpace premiums collected. The data in that chart are not FCRA-related subsidy estimates that are recorded on a cohort basis or that are subject to reestimates mandated by the FCRA. Instead, the left-hand column of that chart records revenue collected on a fiscal year (not a cohort-specific) basis, and the right-hand column of that chart records costs incurred on a fiscal year (not a cohort-specific) basis. Over the period 1993-2002, total revenue in the left-hand column is significantly less than total costs in the right-hand column. This entails no "apples-to-oranges comparison," and demonstrates that the CCC export guarantee programmes constitute export subsidies under item (j) of the Illustrative List of Export Subsidies.

59. In the chart included at paragraph 161 of its 22 August Rebuttal Submission, the United States nets cumulative reestimates on a cohort basis against the original, cohort-specific subsidy estimate from the US budget. There are some factual problems with the US data.[69]

---

[67] (2,737 – 297) – (2,629 + 870) + (1,262 + 297) = 500. Since no reestimates have yet been made for 2004, Brazil has reduced the original subsidy amount included in Exhibit US-31 by the $297 million estimate included in the 2004 budget. Had the United States subtracted downward reestimates from and added upward reestimates to the *original* subsidy estimate included in the "budget year" column of the "guaranteed loan subsidy" line of the annual US budget, it would have yielded a positive subsidy, and thus a loss, of $2.038 billion. *See* Exhibit Bra-192.

[68] *See* paragraph 132 of Brazil's 22 July Statement at the First Panel Meeting, and accompanying citations.

[69] First, the United States has offered no documentation verifying the accuracy of the reestimate figures provided in the chart for the period 1993-2000. In contrast, the chart included in paragraph 115 of Brazil's 22 August Rebuttal Submission provides cumulative reestimates on a cohort basis that are taken directly from Table 8 of the Federal Credit Supplement included with the 2004 US budget. *See* Exhibit Bra-182. Second, although the United States asserts that it has netted cumulative reestimates against the "*original* subsidy estimate," it has in fact netted cumulative reestimates against the "guaranteed loan subsidy" figure included in the "*prior year*" column of the US budget, which yields a lower number. Using, subsidy data from the US budget for "prior year," the chart included at paragraph 115 of Brazil's 22 August Rebuttal Submission would

Resolving these problems is not particularly important, however, since the chart included at paragraph 161 of the United States' 22 August Rebuttal Submission itself shows a cumulative positive subsidy for the programmes of over $381 million for the period 1992-2002.[70] This positive subsidy is consistent with CCC's 2002 financial statements, which provide a cumulative, running tally of the subsidy figure for all post-1991 CCC export credit guarantees in the amount of $411 million.[71] The CCC export guarantee programmes have lost money over the period 1992-2002.

60. The United States' point seems to be that because subsidy reestimates are generally downward, the CCC programmes generate profits over the long term. However, all this means is that CCC's original estimates were too high.[72] The real test is the result when cohort-specific reestimates are netted against the original subsidy estimates for each cohort and cumulated over a period constituting the long term, so that the long-term costs and losses of the programmes can be determined, as required by item (j). Netting reestimates against original subsidy estimates on a cohort-specific basis yields a positive subsidy, revealing that over the long term, the CCC is losing money with its export guarantee programmes. This result is obtained whether the Panel accepts the chart at paragraph 161 of the United States' 22 August Rebuttal Submission, the chart at paragraph 115 of Brazil's 22 August Rebuttal Submission,[73] or the cumulative subsidy figure included in CCC's 2002 financial statements.[74]

61. The United States may be suggesting that reestimates will always, eventually, result in negative subsidies and profits. The data shows that this is not the case, however. Netting reestimates against original subsidy estimates does not consistently yield a negative subsidy, or profits, on a cohort basis. The charts included at paragraph 161 of the United States' 22 August Rebuttal Submission and at paragraph 115 of Brazil's 22 August Rebuttal Submission demonstrate this. Nor is it even relevant to focus on the results of individual cohorts, since item (j) require an analysis of the "long-term" costs and losses of export guarantee "programmes," rather than cohorts. That is why Brazil, and presumably the United States, has calculated cumulative results for the charts included at

---

still yield a positive subsidy of $211 million, to which the $43 million in administrative expenses should be added, for a total loss of $254 million over the period 1992-2002. *See* Exhibit Bra-193. Third, the United States has not included administrative expenses for the CCC export guarantee programmes, which amount to $43 million for the period 1992-2003.

[70] Even accepting the validity of the data entered in the US chart, Brazil notes that summing up those figures yields a result different from the $381.35 million total provided by the United States. Using the US data, Brazil reaches a subsidy figure net of reestimates of $230,127,023.

[71] Exhibit Bra-158 (US Department of Agriculture, Office of Inspector General, Financial and IT Operations, Audit Report, *Commodity Credit Corporation's Financial Statements for Fiscal Year 2002*, Audit Report No. 06401-15-FM (December 2002), Notes to the Financial Statements, p. 19).

[72] Brazil notes that according to USDA's Inspector General, CCC estimates are in fact *understated*. In audit reports for fiscal years 1999, 2000 and 2001, CCC's estimates and reestimates were found to have "understated" costs and losses by amounts ranging from to $11 million to $430 million. Exhibit Bra-194 (US Department of Agriculture Office of Inspector General Great Plains Region Audit Report, Commodity Credit Corporation's Financial Statements for Fiscal Year 2001, Audit Report No. 06401-4-KC, February 2002, p. 11); Exhibit Bra-195 (US Department of Agriculture Office of Inspector General Financial and IT Operations Audit Report, Audit Report No. 06401-14-FM, Commodity Credit Corporation's Financial Statements for Fiscal Year 2000, June 2001, p. 9); Exhibit Bra-196 (US Department of Agriculture Office of Inspector General Financial and IT Operations Audit Report, US Department of Agriculture Consolidated Financial Statements for Fiscal Year 1999, Report No. 50401-35-FM, February 2000, p. 9).

[73] Again, using "prior year" subsidy figures for this chart results in a positive subsidy of $211 million over the period 1992-2002. *See* Exhibit Bra-193 (Net Lifetime Reestimates of Guaranteed Loan Subsidy by Cohort)

[74] Exhibit Bra-158 (US Department of Agriculture, Office of Inspector General, Financial and IT Operations, Audit Report, *Commodity Credit Corporation's Financial Statements for Fiscal Year 2002*, Audit Report No. 06401-15-FM (December 2002), Notes to the Financial Statements, p. 19).

paragraph 161 of the United States' 22 August Rebuttal Submission and at paragraph 115 of Brazil's 22 August Rebuttal Submission.

62. In any event, if CCC considered that it would eventually make money on its guarantees on a cohort basis, why does it continue to offer original estimates that are so high? While some factors included in the estimation process are dictated by the FCRA and the US Office of Management and Budget, the original subsidy estimate is primarily driven by CCC's historical experience with its guarantees. Brazil has elsewhere noted that according to the US Federal Accounting Standards Advisory Board, the Government-Wide Audited Financial Statements Task Force on Credit Reform, the Office of Management and Budget and the Department of Agriculture itself, "[m]ethods of estimating future cash flows for existing credit programmes need to take account of past experience,"[75] "[a]ctual historical experience of the performance of a risk category is a *primary factor* upon which an estimation of default cost is based,"[76] and technical assumptions underlying subsidy calculations reflect "historical cash reports and loan performance."[77] If historical experience dictated that CCC would consistently make profits, CCC would reflect that historical experience in its subsidy estimates. Actual historical experience is, after all, a "primary factor" on which those estimates are based. That CCC continues to provide significant positive original subsidy estimates demonstrates that its actual historical experience does *not* suggest that it will make money on its loan guarantees. Since those estimates are calculated and recorded on a *net present value basis*, CCC apparently continues to consider that it will incur significant net costs at the time the cohorts are closed.

63. CCC's apparent views regarding its historical experience with the export guarantee programmes are justified. Evidence regarding CCC's actual historical experience confirms that the long-term operating costs and losses for the CCC guarantee programmes outpace premiums collected. At paragraph 109 of its 22 August Rebuttal Submission, Brazil summarizes this evidence.[78] Although, the United States implies at paragraph 172 of its 22 August Rebuttal Submission that Brazil's evidence is all "between 10 and 20 years" old, a cursory review of the evidence, which includes data from the 2004 US budget and CCC's 2002 financial statements proves otherwise. Therefore, even if the Panel agrees with the United States' conclusion, at paragraph 162 of its 22 August Rebuttal Submission, that the FCRA cost formula is not an ideal way to determine the costs of the CCC export guarantee programmes, Brazil has established by alternative means that CCC premiums fail to meet the long-term operating costs and losses of the programmes.

---

[75] Exhibit Bra-162 (Government-Wide Audited Financial Statements Task Force on Credit Reform, ISSUE PAPER, *Model Credit Programme methods and Documentation for Estimating Subsidy Rates and the Model Information Store*, 96-CR-7 (1 May 1996), p. 2).

[77] Exhibit Bra-163 (Office of Management and Budget Annual Training, Introduction to Federal Credit Budgeting, 24 June 2002, p. 9).

[78] Contrary to the United States' assertion at paragraph 170 of its Rebuttal Submission, Brazil has not misread Note 5 to CCC's 2002 financial statements. The amounts in the "subsidy allowance" column are in fact the amounts of receivables associated with post-1991 CCC guarantees that CCC considers uncollectible. The Panel will recall that under the FCRA, the subsidy allowance is recorded on a net present value basis, which means that it represents the cost CCC considers it will incur on a guarantee cohort at the time that cohorts is closed. The $770 million listed in the "subsidy allowance" column in the receivables table for post-1991 guarantees is therefore as uncollectible as the $ 2,567 billion listed in the "uncollectible" column of the pre-1992 CCC guarantee receivables table (*See* Notes to Financial Statements contained in Exhibit Bra-158 (US Department of Agriculture, Office of Inspector General, Financial and IT Operations, Audit Report, Commodity Credit Corporation's Financial Statements for Fiscal Year 2002, Audit Report N° 06401-15-FM (December 2002) p. 14).

**Paragraph 169 and Exhibit US-33**

64. The United States has asserted that there are no "arrearages" with respect to debt reschedulings.[79] Brazil has two comments. First, the United States does not state the source of the data it included at Exhibit US-33. Second, Brazil maintains that it is not appropriate to treat rescheduled debt as recoveries.[80] The US assumption that there will be no arrearages not only ignores the cost of rescheduling but also the fact that there may be further defaults on rescheduled debt.[81] Although rescheduled debt is treated as a receivable, CCC acknowledges in its financial statements that not all receivables are deemed collectible.[82] Moreover, Brazil presumes that rescheduled debt is subject to the FCRA estimation or reestimation process, which involves calculations of net present value of what the CCC expects to lose (or gain) on the rescheduled debt. The CCC does not assume that all rescheduled debt will be collected.

**Paragraphs 172, 174-175**

65. The United States has argued that Brazil improperly relies on CCC losses incurred *via* Iraqi and Polish defaults. The United States implies that these defaults occurred between 10 and 20 years ago.[83] This is incorrect. The US General Accounting Office ("GAO") reports that the losses in Iraq occurred over the period 1990-1997.[84] (The United States makes no specific challenge to the $2 billion in Polish defaults.) Thus, defaults and losses did not occur as long ago as the United States suggests.

66. Moreover, the United States argues that the Panel should only look into the question whether "*current*" premium rates are adequate to cover the long-term operating costs and losses of the programmes.[85] The United States relies on a "present tense" argument to exclude major defaults in Iraq and Poland that occurred in the recent past. Even if the Panel only looks to "current" premiums, item (j) calls for an analysis of "long-term" operating costs and losses.[86] The United States apparently agrees, since it looks to the performance of the CCC programmes in such years as 1994 and 1995 (a time period even longer ago than part of the defaults in Iraq[87]) to claim that premium rates charged were adequate to meet costs,[88]

67. If the United States believes that it is only appropriate to look at *current* premiums, given the present tense of the term "are" in item (j), then the FCRA cost formula is useful. The FCRA cost formula measures the *net present value* "of the following cash flows: (i) payments by the Government

[79] Rebuttal Submission of the United States, para 169.

. . . and (ii) payments to the Government" of guarantees at the time they are disbursed.[89] In other words, it measures the amount CCC expects today to lose (or gain) on a guarantee cohort at the time the cohort is closed tomorrow. Even if this involves some estimates, the United States has noted that those estimates are acceptable.[90] In fact, the US budget for fiscal year 2004 demonstrates that current premiums paid for guarantees disbursed in fiscal years 2002-2004 will generate losses worth hundreds of million of dollars.[91] Thus, current premiums are inadequate to cover the long-term operating costs and losses of the CCC export credit guarantee programmes. These programmes constitute export subsidies.

**Paragraphs 186-191 and Exhibits US-34 through US-37**

68. Brazil has argued that since CCC export credit guarantees from the GSM 102, GSM 103 and SCGP programmes are unique financial instruments for agricultural commodity transactions that are not available on the commercial market – certainly not for terms longer than the marketing cycles of the eligible commodities – they confer "benefits" within the meaning of Article 1.1(b) of the SCM Agreement.[92] The United States asserts that "financing is available in the marketplace that is analogous to the export credit guarantee programmes" – namely, forfaiting.[93]

69. The United States' assertion should be rejected. As discussed below, the two instruments are not "analogous," and are, in fact, different.

70. Brazil begins with a very rough sketch of the role a forfait can play in a typical transaction involving agricultural commodities. In a typical transaction, an importer will issue a promissory note to an exporter for the agreed price. The exporter will generally demand that the note be backed by a guarantee (or an aval) from the importer's bank and/or, as the United States points out in paragraph 187 of its 22 August Rebuttal Submission, by a guarantee from the importer's government export credit agency.

71. A forfait comes into play because, while both the exporter and the importer want the transaction to occur, they have different interests. The exporter wants to get paid immediately on a cash basis, and the importer wants credit that it can repay on a deferred basis. Even with a guarantee from the importer's bank or a government export credit agency, the exporter bears responsibility for collecting the receivables (in the absence of default). A forfaiter (which could be the exporter's own bank) will step in and purchase the promissory note at a discount to face value, without recourse to the exporter.[94] The exporter will receive payment immediately from the forfaiter. The forfait essentially enables the exporter to convert a credit sale into a cash sale.

72. A forfaiter will generally demand that the importer's obligation is backed by a guarantee from a bank or the importer's government export credit agency.[95] Rather than *substituting* for a guarantee,

[95] United Rebuttal Submission of the United States, para. 187. *See also* Exhibit Bra-198 (Vincent Whittaker, "The Quick Buck, International Finance, and Forfaiting," 23 *Thomas Jefferson Law Review* 249, 258 (Spring 2001) ("In most cases, the forfaiter requires the obligation of the importer to be guaranteed by a bank in the importer's country because of the impossibility of evaluating the credit risk of every importer in

therefore, guarantees and forfaiting are *complementary* instruments. For this reason alone, the US assertion that the two instruments are analogous is incorrect.

73. There are other differences between the two instruments. The importer realizes a tangible and extremely valuable benefit from a CCC guarantee; namely, the bank prices financing to the importer based on the credit rating of the United States, rather than the credit rating of the importer itself. Importantly, the CCC guarantee allows the importer to secure financing in the first place. As the regulations for the GSM and SCGP programmes state, the programmes operate in cases where banks "would be unwilling to provide financing without CCC's guarantee."[96] Forfaiting helps an exporter accept deferred payment terms for the importer, but does not otherwise beneficially affect the price for the financing secured by the importer. Nor would a bank require that forfaiting be involved in a transaction as a prerequisite for it to provide financing to the importer.

74. As a further distinction between the two instruments, while there is a secondary forfaiting market,[97] there is no secondary market for CCC guarantees.[98] Purchasers in the secondary market for forfaiting instruments assume that forfaited promissory notes will yield more at maturity than the purchaser paid for them in the secondary market.[99] Since no secondary market exists for CCC guarantees, apparently no such assumption can be made with respect to CCC guarantees (which itself reveals much about the quality of those guarantees).

75. Most importantly, the pricing for forfaiting instruments is substantially different than pricing for CCC guarantees. As noted above, a forfaiter purchases an exporter's trade receivables at a discount to face value. The discount rate and associated commitment fees are driven by the risks involved – country risk, political risk, currency risk, entity risk (essentially, the risk of the guarantor), etc., and by the length of the underlying credit.[100]

76. Brazil has attached as Exhibit Bra-199 a list of indicative forfaiting rates that vary greatly from market to market.[101] In contrast, the United States has confirmed that country risk "has no impact on the premiums payable" under the GSM 102, GSM 103 and SCGP programmes.[102] Brazil provided the Panel with evidence documenting that GSM and SCGP fees were the same whether guarantees were for transactions with the Dominican Republic, Ghana, Japan, South Korea or Vietnam (among others).[103]

77. Moreover, the *very lowest rate* in the forfaiting rate list included in Exhibit Bra-199 is 1.6638 per cent (6-month tenor). The rates for GSM 102 and GSM 103 guarantees are prohibited by law from being greater than 1 per cent,[104] and are currently (as they have been at least since 1994)[105]

no greater than 0.663 per cent for GSM 102 (36-month tenor)[106] and 0.05 per cent for GSM 103 (120-month tenor).[107]

78. Furthermore, although the United States' assertion that the tenor of forfaiting instruments can range from six months to 10 years is accurate, forfaiting instruments *for agricultural commodities* will not exceed tenors of 360 days, or in other words will not exceed a tenor "matching the typical period of consumption of most commodities."[108] This is consistent with Brazil's statement that commercial financing for exports of agricultural goods that exceeds the marketing cycles of the agricultural good is not available on the marketplace.[109]

79. Under Article 10.3 of the Agreement on Agriculture, the United States bears the burden of demonstrating that no export subsidies have been granted in respect of quantities of agricultural commodities exported in excess of its reduction commitments.[110] Although it is not its burden to do so, Brazil has demonstrated that CCC export credit guarantees are financial contributions that confer benefits and are contingent on export, within the meaning of Articles 1.1 and 3.1(a) of the SCM Agreement. With respect to "benefit," CCC regulations concerning the GSM and SCGP programmes demonstrate that the programmes grant better-than-market terms *per se*.[111] Brazil has also demonstrated that CCC export credit guarantees confer benefits *per se* since they are unique financial instruments for agricultural commodity transactions that are not available on the commercial market – and certainly not for terms longer than the marketing cycles of the eligible commodities.

80. The United States has not established that forfaiting is analogous to CCC export credit guarantees. Even if it had done so, and the market terms for forfaiting instruments could theoretically serve as a benchmark against which to judge whether CCC export credit guarantees confer "benefits," the United States has not: (i) established the terms on which forfaiting is provided on the market; or, (ii) demonstrated that CCC export credit guarantees do not provide terms better than those provided for forfaiting instruments. The United States acknowledges, at paragraph 191 of its 22 August Rebuttal Submission, that it has not provided market terms for forfaiting instruments that could serve as a benchmark. Thus, the United States has not met its burden under Article 10.3 of the Agreement on Agriculture.

**Brazil's Comment on Question 67a posed by Panel to the United States**

81. While Brazil obviously does not know how the United States will ultimately respond, Brazil offers the following information supporting Brazil's calculations of the amounts provided to these four crops as "support to upland cotton."

82. First, to the extent that the United States criticizes Brazil's calculations made to determine the different per acre payments for direct payment and CCP crops in paragraph 42 of its Rebuttal Submission, Brazil notes that these calculations are confirmed by the Food Agricultural Policy Research Institute at the University of Missouri (FAPRI).[112] As Brazil further notes that the FAPRI

The information on CCP and direct payment per acre payments in US dollars for each of the programme crops is found in the last two lines of pages 55 (wheat), 57 (rice), 59 (corn), 61 (sorghum), 63 (barley), 65 (oats), 69

baseline itself and FAPRI analysis has often been influential in US policy formation process, including in analysis of the FSRI Act of 2002, for which FAPRI won the USDA's highest honour.[113]

83. Second, FAPRI's 2003 US Baseline is a long-run scenario projecting what would happen to various elements of US agriculture under the 2002 FSRI Act. In this analysis, FAPRI includes all of the different types of support provided by the 2002 FSRI Act into its projections of, *inter alia*, upland cotton planted acreage, production, exports, prices, revenue, costs, etc. In doing so, the FAPRI economists assume that, *inter alia*, upland cotton producers were holding upland cotton base acreage and receiving upland cotton CCP and direct payments.[114] These CCP payments and direct payments are reflected in their analysis of "Gross Market Revenue" to upland cotton producers on page 79 of their report, which constitutes the sum of LDP (marketing loan), CCP revenue, and direct payments.[115]

84. In addition, FAPRI states that "US cotton producers do not benefit from the projected price increases. Higher prices are offset by lower payments from the loan programme and the CCP programme."[116] This reflects the FAPRI economists' assumption that upland cotton producers receive upland cotton direct and CCP payments.

---

(soybeans), 75 (peanuts) and 79 (upland cotton). Brazil notes that its figures for soybeans and peanuts differ slightly. The underlying reason for this difference is that Brazil had to base its figures on its estimates about the payments yields and it appears that FAPRI's figures for payment yields are slightly different from Brazil's.

# ANNEX D-4

## COMMENTS OF THE UNITED STATES ON NEW MATERIAL IN BRAZIL'S REBUTTAL FILINGS AND ANSWER OF THE UNITED STATES TO THE ADDITIONAL QUESTION FROM THE PANEL

27 August 2003

TABLE OF CONTENTS

## I. Introduction

1. The United States thanks the Panel for its prompt reply to the US request of 25 August 2003, granting an opportunity to comment on new material in Brazil's rebuttal submission and Brazil's comments on the US responses to questions. We also thank the Panel for its additional question. We present both the US comments on new material in Brazil's submissions and our answer to that additional question below.

2. As the United States notes in these comments and answer, Brazil's Peace Clause argument depends on three issues:

- First, Brazil relies on budgetary outlays that reflect prevailing market prices that could not have been "decided" by the United States. Brazil ignores the fact that "support" does not mean "budgetary outlays"; in fact, Annex 3 recognizes that an "Aggregate Measurement of

Support" for price-based support either shall[117] or can[118] be calculated using a price gap methodology, which does not rely on budgetary outlays.

- Second, Brazil conflates "non-product-specific support" with "support to a specific commodity" by attempting to allocate certain payments to upland cotton. To do so, however, Brazil relies on a reading of the definition of "non-product-specific support" in Article 1(a) that ignores the most relevant context for this term – that is, the (immediately preceding) definition of product-specific support in that same article. Indeed, Brazil's approach would appear to render the concept of "non-product specific support" so narrow that it becomes almost, if not completely, meaningless.

- Third, Brazil mischaracterizes US direct payments and production flexibility contract payments as non-green box support. Brazil has not established that these measures fail to conform to the policy-specific criteria in Annex 2. In fact, Brazil has not even established – pursuant to Brazil's own reading of the first sentence of Annex 2, paragraph 1, as a stand-alone obligation – that these payments have more than "minimal[] trade-distorting effects or effects on production."[119]

3. The weakness of Brazil's interpretation that "support" in the Peace Clause means "budgetary outlays" can be seen in this example. Even if US measures were *exactly* the same in *every year* of the implementation period as they were in the 1992 marketing year (that is, the same deficiency target price, same marketing loan rate, same acreage reduction percentage, same normal flex acres with planting flexibility[120], etc.), under Brazil's interpretation, US measures would have breached the Peace Clause in each and every year in which outlays increased due to external factors, for example, whenever market prices dipped below the 1992 level.

- Would 1999-2002 US measures *identical in every respect* to those in 1992 "grant support in excess of that decided during the 1992 marketing year"?

- In other words, if a Member had decided its support during 1992 for the period through 2004 and never changed its decision, could the Member be deemed to grant support in excess of the

[117] In the case of market price support. In fact, Annex 3, paragraph 8, states: "Budgetary outlays made to maintain this gap, such as buying-in or storage costs, shall not be included in the AMS."

[118] In the case of non-exempt direct payments dependent on a price gap. *See* Agreement on Agriculture, Annex 3, paragraph 10.

[119] Of course, the US view is that the "fundamental requirement" of the first sentence is met by a measure that conforms to the basic criteria and any applicable policy-specific criteria. In this regard, Brazil errs in claiming that the United States has "acknowledged that such effects can be presumed if the specific criteria in paragraph 6 of Annex 2 are not complied with." Brazil's Rebuttal Submission, para. 8 fn. 13. In fact, we believe the opposite. Meeting the basic and policy-specific criteria of Annex 2 establishes that a measure meets the "fundamental requirement" of paragraph 1. However, the converse is not necessarily true. So, according to Brazil's approach, Brazil would bear the burden of establishing that a measure that did not comply with the basic and policy-specific criteria in Annex 2 failed to meet the "fundamental requirement" of paragraph 1 of Annex 2.

[120] Recall that "under 1992 programme provisions, producers of non-cotton programme crops (i.e., wheat, corn, barley, grain sorghum, oats, and rice) could plant up to 25 per cent of their [non-cotton] crop programme base to cotton as Normal Flex Acres or Optional Flex Acres. Acreage Reduction Programme compliance reports indicate that, in 1992, 447,164 acres of cotton were planted on a much larger quantity of available Normal Flex Acres and Option Flex Acres of non-cotton programme base.") Exhibit US-24 (Report by Dr. Joseph Glauber, Deputy Chief Economist, US Department of Agriculture). In 1992, there were 153.9 million acres of non-cotton "complying base" and 197.2 million acres of non-cotton "effective base." *See* Exhibit US-39. Thus, the marketing loan was effectively available with respect to all upland cotton production.

> level decided during 1992 just because outlays increased, for example, because market prices changed?[121]

We believe the answer must be "No" because market prices are not "decided" by a Member (as paragraphs 8 and 10 of Annex 3 recognize). And yet, the situation in this dispute is analogous: the United States has changed its measures to *reduce* the product-specific level of support (by eliminating deficiency payments) since 1992, and yet Brazil claims that the Peace Clause has been breached simply because lower market prices resulted in increased price-based outlays.

4. Market prices are beyond the control of the United States, and therefore the United States cannot "decide" them. Removing the effect of market prices beyond the control of the United States from the measure of support demonstrates that US measures do not and did not grant support in excess of that decided during the 1992 marketing year. In fact, whether gauged (as the United States believes is compelled by the Peace Clause) via the rate of support expressed by US measures[122], *or* via the AMS for upland cotton (calculated through a price gap methodology), *or* via the erroneous calculations of Brazil's expert (but limited to product-specific support), the result is exactly the same: in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

## II. Brazil's AMS Calculation Is Flawed and, Had It Consistently Reflected a Price Gap Calculation, Would Demonstrate No Peace Clause Breach

5. We recall that Brazil has argued that budgetary outlays are the only measurement of "support" for purposes of the Peace Clause proviso comparison, without any foundation in the Peace Clause text and despite the context provided by Annex 3, which explicitly indicates that Members have agreed "support" *can* be measured without using budgetary outlays. Brazil itself concedes that US measures do not decide support on the basis of budgetary outlays:

> Brazil acknowledges that *the United States could not possibl[y] determine its expenditures* as they would depend to a certain extent on *market prices* that were also influenced by factors *outside the control of the US Government*.[123]

The United States agrees with this statement by Brazil and believes that this statement demonstrates that Brazil's approach to the Peace Clause comparison is not based on the text nor is it realistic. Instead, in order to hope to succeed, Brazil's claims *require* Brazil to use budgetary outlays and so to take into account low prevailing market prices. An Aggregate Measurement of Support calculation using a price gap methodology – that is, that eliminates the effect of market prices and reflects instead the eligible production and applied administered price decided by a Member – reveals that in no year from 1999-2002 have US measures breached the Peace Clause.

6. Brazil has argued that "there are only two types of methodologies that would allow an expression in monetary terms of a decision (or decisions) taken by the United States in MY 1992 regarding its level of support to upland cotton. The first is budgetary expenditures. The second is the calculation of AMS for a particular commodity."[124] In both its table of expenditures[125] and its AMS

[121] Other factors beyond a Member's control could also influence outlays, such as whether some additional producers chose to begin participating in the support programmes.

[122] Even taking into account the maximum theoretical effect on the deficiency payment effective price of the 1992 acreage reduction percentage (10 per cent) and normal flex acres (15 per cent) for the 1992 marketing year. Since the acreage reduction percentage was lower for 1993 marketing year (7.5 per cent versus 10 per cent) support, which was also decided during the 1992 marketing year, the adjusted level of support (68.27625 cents per pound) was even higher for the 1993 marketing year.

[123] Brazil's Comments on US Answers, para. 66 fn. 49.

[124] Brazil's Rebuttal Submission, para. 71.

table[126], Brazil has attempted to allocate non-product-specific support to a specific commodity. There is no basis in Annex 3 to do so. Annex 3, paragraph 1, explicitly requires an AMS to be calculated "on a product-specific basis for each basic agricultural product" and separately requires that non-product-specific support be calculated and "totalled into one non-product-specific AMS in total monetary terms." The point bears emphasis: "for each basic agricultural product," Annex 3 states that an AMS "shall be calculated on a product-specific basis." Similarly, were "support to a specific commodity" (upland cotton) to be calculated using an Aggregate Measurement of Support, it *must* be calculated "on a product-specific basis."

7. As a result, both Brazil's expenditure table and its AMS table run counter to the terms of Annex 3. Were the Panel to calculate an AMS for upland cotton for marketing years 1992 and 1999-2002, the United States has set forth a calculation consistent with Annex 3 in its rebuttal submission.[127] By using a price-gap methodology for both deficiency payments and marketing loan payments[128], the upland cotton AMS in 1992 is far higher than in any marketing year from 1999 to 2002, reflecting the US decision to move away from the high support levels of product-specific deficiency payments.

8. In fact, we note that the AMS data presented in paragraph 115 of the US rebuttal submission understates the AMS for marketing year 1992. For example, the United States reduced the price gap calculation for 1992 basic deficiency payments by an adjustment factor (approximately .875) to replicate the calculation used in G/AG/AGST/USA, p. 18. Without the adjustment, which is not called for by paragraphs 10 and 11 of Annex 3, the 1992 deficiency payment calculation would have been $858 million, rather than $755 million as reported in paragraph 115.[129] (In case of interest, we also present below the deficiency payment calculation in more detail, reflecting more accurate data, which would increase the deficiency payment calculation slightly, to $867 million.)[130] This

---

[125] Brazil's Rebuttal Submission, para. 73.

[126] Brazil's Rebuttal Submission, para. 76.

[127] US Rebuttal Submission, paras. 114-118.

[128] Brazil has stated (with respect to deficiency payments) that "the formula approach under Annex 3, paragraphs 10-11 of the Agreement on Agriculture [is] warranted for upland cotton AMS calculations." Brazil's Rebuttal Submission, para. 73 fn. 172. Because the Peace Clause proviso comparison must compare the support that challenged measures grant to "that decided during the 1992 marketing year," the price gap methodology is the only AMS approach that reflects only the United States' decisions and not market prices beyond the United States' control. For the same reason, it is equally appropriate to use the price gap methodology for marketing loan payments.

[129] Total deficiency payments calculated via the price gap methodology equal unadjusted basic deficiency payments ($724 million / 0.875) + 50/92 deficiency payments ($30 million) – that is, $858 million. *See* US Rebuttal Submission, para. 115 fn. 144.

[130] To calculate the deficiency payment support using the price gap methodology and consistent with the 1995 US WTO notification and G/AG/AGST/USA, we made the following calculations.

Total deficiency payments are equal to basic deficiency payments plus 50/92 payments. Basic deficiency payments are equal to eligible production times a price gap measured as the difference between the target price and a fixed reference price. Eligible production is measured as eligible base acreage times average programme yield. Eligible base acreage is equal to participating base acreage minus Acreage Conservation Reserve acres minus Normal Flex Acres minus acres enrolled in the 50/92 programme. The fixed reference price is the1986-88 average of the higher of the market price or loan rate for each year.

Payments for the 50/92 programme were calculated in a similar fashion by multiplying base acres in the 50/92 programme times the average programme yield times 92 per cent of the price gap.

In 1992, the target price was 72.9 cents per pound and the fixed reference price for 1986-88 was 57.9 cents per pound. This gives a price gap of 15.0 cents per pound. Eligible production for basic deficiency payments in 1992 was equal to 5,544 million pounds (9.226 million acres times the average programme yield of 601 pounds per acre). Multiplying the price gap times eligible production gives basic deficiency payments equal to $832 million.

The same formula is used to calculate deficiency payments under the 50/92 programme. For 1992, the price gap is the same as that calculated for the basic deficiency payments (15 cents per pound). Eligible

calculation, moreover, uses the actual payment acreage (that is, acres planted for harvest or participating in the 50/92 programme on which payment was received) to calculate the "eligible production." Using instead the base acreage minus the 10 per cent acreage reduction figure and the 15 per cent normal flex acres (14.9 million effective base acres[131] *x* .75 = 11.175 million acres) and multiplying by the programme yield (602 pounds per acre), the "quantity of production eligible to receive the administered price"[132] is 6,727 million pounds, yielding a price gap deficiency payment calculation of $1,009 million. Thus, the figure in paragraph 115 of the US rebuttal reflected a conservative approach that understated the support resulting from a price gap calculation.

9. In this regard, the United States notes Brazil's argument with respect to the 1995 Statement of Administrative Action, which explained that Peace Clause protection would apply "unless the AMS for the particular commodity exceeds the level decided in the 1992 marketing year."[133] We agree with Brazil that this reference to "AMS" is "non-textual[]" because the Peace Clause uses the term "support decided" and not "AMS."[134] However, to the extent that the Panel were to examine "the AMS for the particular commodity" – that is, the upland cotton AMS – the United States has demonstrated that in no year from 1999-2002 does that AMS exceed the 1992 level.

## III. The US Level of Support Argument Does Take Into Account All Product-Specific Support That Challenged US Measures Grant

10. Brazil has argued that "the United States '72.9 methodology' does not – and cannot account for cottonseed payments, Step 2 payments, storage payments and interest rate subsidies," which the United States has identified as product-specific support.[135] Brazil then alleges that the US methodology "would sanction the cover-up of hundreds of millions – if not billions – of dollars of expenditures."[136] Over-heated rhetoric aside, Brazil's argument is simply erroneous.

---

production under the 50/92 programme was 254 million pounds (404 thousand acres times the average programme yield of 50/92 participants of 628 pounds per acre). Deficiency payments under the 50/92 programme were thus equal to $35 million (0.92 times 254 million times $0.15).

Total deficiency payments under the price gap methodology were thus equal to $867 million ($832 million plus $35 million). *Sources:* US Department of Agriculture, Compliance Report for 1992 Acreage Reduction Programme (1993) (Exhibit US-39); Commodity Credit Corporation Commodity Estimates Book for the FY 1995 President's Budget (February 1994); G/AG/AGST/USA, p. 18.

[131] *See* Exhibit Bra-105, Annex 2 (1st source document: US Department of Agriculture, *Provisions of the Federal Agricultural Improvement and Reform Act of 1996*, at 142) (giving 1992 effective base acreage of 14.9 million acres); *id.*, Annex 2 (2nd source document: Daniel A. Sumner, *Farm Programmes and Related Policy in the United States*, at 4) (same).

[132] Agreement on Agriculture, Annex 3, para. 10.

[133] We also note that Brazil never quotes that passage in full since the first half reflects the US view throughout this dispute that "exempt from actions" means not liable to a legal process or suit. *See* 1995 Statement, at 68 ( "Under Article 13(b)(ii) and (iii), governments *may not initiate* adverse effects, serious prejudice or non-violation nullification and impairment *challenges* in the WTO . . . .") (emphasis added). There are numerous other statements in the 1995 Statement that Brazil similarly does not draw to the Panel's attention. *See id.* at 67 ("Article 13, commonly referred to as the peace clause, reflects *an agreement among WTO countries to refrain from challenging* certain of each other's agricultural subsidy programmes . . . *through WTO dispute settlement procedures* . . . .") (emphasis added); *id.* ("*Article 13(b) addresses possible challenges* to domestic support measures falling outside the green box in circumstances in which the WTO member providing the subsidy is meeting its total AMS commitments.") (emphasis added).

[134] Brazil's Opening Statement, para. 35; Brazil's Rebuttal Submission, para. 75; *see also* 1995 Statement of Administrative Action, at 68 (subsequently in same paragraph quoted by Brazil stating "a WTO Member will not be protected by the Peace Clause if its support for the product is above that decided during the 1992 marketing year.") (emphasis added).

[135] Brazil's General Comment on US Answers to Questions 47-69 from the Panel (para. 55).

[136] Brazil's General Comment on US Answers to Questions 47-69 from the Panel (para. 56).

11. Brazil argues that the United States has not accounted for Step 2 payments. The United States directs the Panel's attention to the US rebuttal submission, paragraphs 111 and 113, and the US first written submission, paragraph 111. The United States has noted that, because the availability of Step 2 payments is contingent on certain price conditions existing during the marketing year, the level of support decided must relate to the payment parameters. While these have changed slightly with the 2002 Act, these minor adjustments do not alter the revenue ensured for producers by the marketing loan rate of 52 cents per pound because Step 2 merely provides an alternative avenue of providing support (through processors rather than directly to producers). In addition, these minor adjustments cannot overcome the greater than 20 cents per pound difference in product-specific support between marketing years 1992 and 1999-2002.

12. Brazil argues that the United States has not accounted for cottonseed payments. The United States directs the Panel's attention to the US rebuttal submission, paragraph 111 fn. 136, 137 and paragraph 113. While the United States maintains that these measures are not within the Panel's terms of reference[137], we note that cottonseed payments for the 1999, 2000, and 2002 crops ranged in value between 0.6 to 2.3 cents per pound (factoring expenditures – the way these measures were decided – over production). Thus, given the greater than 20 cents per pound difference in product-specific support between marketing years 1992 and 1999-2002, cottonseed payments too do not materially affect the comparison between marketing year 1992 and any other year.

13. With respect to storage payments and interest rate subsidies, we note that these are US Government estimates of support provided through activities relating to operating the upland cotton marketing loan programme.[138] This support is already captured, however, in the level of support expressed by the marketing loan rate. Were these costs not borne by the United States, the costs to the producer would reduce the guaranteed revenue below the loan rate. In fact, Annex 3 of the Agreement on Agriculture explains that, for purposes of market price support calculated using a price gap, "[b]udgetary payments made to maintain this gap, such as buying-in or storage costs, shall not be included in the AMS." Similarly, where the support provided by marketing loans is measured using a price gap methodology (the only appropriate AMS calculation for purposes of the Peace Clause)[139], "payments made to maintain this gap," such as storage payments and interest rate subsidies, should not be counted separately.

## IV. Brazil's New Green Box Arguments Are in Error

14. In its rebuttal submission and comments on US answers to questions from the Panel, Brazil advances two novel arguments. First, Brazil for the first time responds to the US argument that Brazil's interpretation of paragraph 6(b) would create an inconsistency between that provision and the fundamental requirement of the first sentence of Annex 2, paragraph 1.[140] Second, Brazil argues that the US interpretation of Annex 2, paragraph 6(b), would render paragraph 6(e) of that Annex a nullity. Neither of these arguments withstands scrutiny.

15. First, Brazil misunderstands the US argument that Brazil's reading of paragraph 6(b) creates an inconsistency between that paragraph and the fundamental requirement of the first sentence of Annex 2, paragraph 1, and therefore its arguments go astray. The United States has noted that if payments under a decoupled income support measure were reduced or eliminated if a recipient were to produce any commodity, then the amount of payments would be (on Brazil's reading) linked to the type of production and therefore inconsistent with paragraph 6(b), even though such a measure would

[137] *See* US Rebuttal Submission, paras. 106-09.
[138] For example, for storage payments we estimate expenses incurred with respect to upland cotton put under loan and pledged as collateral.
[139] *See* US Rebuttal Submission, paras. 114-17.
[140] Brazil's Rebuttal Submission, paras. 4-9.

meet the fundamental requirement of Annex 2. Brazil does not contest that such a measure would meet that fundamental requirement but instead argues that "requiring no production, *i.e.*, on all base acres is not a 'type of production'" because "[t]he notion of 'type of production' in paragraph 6(b) is necessarily linked to the amount of payment to some 'type' of commodity that is 'produced' and not to a production requirement itself."[141]

16. With respect, if one were to credit this argument, then Brazil would appear to have misunderstood its own objection to US direct payments and production flexibility contract payments. That is, in the US example, payments are reduced or eliminated if a recipient produces *any type* of commodity. Similarly, Brazil's objection to US green box payments is that payments are reduced or eliminated if a recipient produces *certain types* of commodities. Thus, in the former example, the amount of payment is "based on" (in the sense of being reduced by) "the type" of production undertaken by the producer – for example, production of upland cotton, fruits, vegetables, or wild rice – just as in Brazil's argument on US green box payments, the amount of payment is "based on" (in the sense of being reduced by) "the type" of production undertaken by the producer – that is, fruit, vegetable, or wild rice production. Brazil's objection to US green box payments under paragraph 6(b) would therefore apply with equal force to the US example,[142] again, posing an inconsistency between Brazil's interpretation of paragraph 6(b) and the fundamental requirement of Annex 2.[143]

17. Brazil also argues that the US interpretation of paragraph 6(b) "would render Annex 2, paragraph 6(e)[,] a nullity" because the "US interpretation of paragraph 6(b) as not requiring the production of 'certain crops' is the same as 6(e)'s prohibition on not requiring production of 'any crops.'"[144] Brazil's own re-phrasing of the US argument, however, points to the distinction between the obligations contained in these two provisions. Paragraph 6(e) establishes that under a green box measure: "No production shall be required in order to receive such payments." Thus, there can be no production requirement "in order to receive such payments," but the provision is silent with respect to the *amount* of such payments at any particular time and any links to the "type or volume of production." That is, were paragraph 6(e) alone part of Annex 2, a Member could arguably link the amount of payments to requirements on the "type or volume of production" so long as payment eligibility were not contingent on production.

18. Paragraph 6(b) forecloses that option by prohibiting a green box measure from linking the "amount of such payments in any given year" to "the type or volume of production." That is, not only may a green box measure not require production, but the measure may not require a particular "type or volume of production" in order to obtain a payment amount. As the United States has noted, both direct payments and production flexibility contract payments meet that test because no "type or volume of production" is required to receive payments. For example, with respect to the fruits, vegetables, and wild rice planting flexibility issue, a payment recipient need not undertake any "type or volume of production" in order to receive the full "amount of payments" to which the farm's base acres are entitled. Rather, the recipient need only *desist* from planting certain commodities. Thus, Brazil's objection is nothing more than a statement that, under US green box measures, the amount of payments is linked to production *not* undertaken by the producer.

---

[141] Brazil's Rebuttal Submission, para. 6. Brazil concludes the thought: "Otherwise, it logically could not be a 'type' of production. It would be nothing at all."

[142] *See* Brazil's Rebuttal Submission, para. 4 ("The relevant text of paragraph 6(b) prohibits any linkage of the 'amount of payments' to *any* 'type of production' of an agricultural product.") (emphasis added).

[143] Brazil's reference to paragraph 6(e) does not answer this objection. Brazil argues that "negotiators addressed any possible misunderstanding in this regard by including the very concept of prohibiting the requirement to produce in paragraph 6(e)." Brazil's Rebuttal Submission, para. 6. However, as Brazil immediately points out, conformity with paragraph 6(e) "does not exempt . . . payments from conforming to the requirement of paragraph 6(b)."

[144] Brazil's Comment on US Answer to Question 32 from the Panel (para. 44).

19. Finally, we note that Brazil's reading of paragraph 6(b) could prevent Members from imposing on decoupled income support payment recipients any conditions relating to the type of production – for example, the planting of illegal crops or production of unapproved biotech varieties or environmentally damaging production. As a practical matter, no Member could accept not being able to impose any such conditions on payment recipients. The result of Brazil's reading, then, would be to read decoupled income support out of Annex 2. This may be a favourable result from the Brazilian perspective, but the Panel should not adopt an interpretation of paragraph 6(b) not required by the text, not consistent with its context (in particular, the fundamental requirement of Annex 2), and with such potentially far-reaching results.

## V. Answer to Additional Question 67*bis* from the Panel

**67*bis*. Please state the annual amount granted by the US government in each of the 1999, 2000, 2001 and 2002 marketing years (as applicable) to US upland cotton producers, per pound and in total expenditures, under each of the following programmes: production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments.**

20. The Panel's question would require ascertaining for each programme the amount of upland cotton produced by recipients of payments under the programme. However, the United States does not maintain and cannot calculate this information – that is, it does not maintain information on the amount of expenditures made under the cited programmes to US upland cotton producers. This is because the payments do not relate to, and do not depend on, what crop, if any, is actually produced. Instead, each of these programmes makes payments with respect to *past* production on base *acreage* in a fixed and defined base period, not with respect to whether one is currently a producer.

21. Thus, the United States did track total expenditures with respect to base acres of wheat, corn, barley, grain sorghum, oats, upland cotton, and rice under the expired production flexibility contract payments and market loss assistance payments and does track total expenditure with respect to base acres of wheat, corn, barley, grain sorghum, oats, upland cotton, rice, peanuts, soybeans, sunflower seed, canola, rapeseed, safflower, flaxseed, mustard seed, crambe, and sesame seed under the direct payments and counter-cyclical payments.[145] However, the fact that a recipient at one time produced one of these crops says nothing about what crops the recipient is currently producing, if any. In other words, payments made on the basis of past production of upland cotton do not tell anything about whether the recipient is currently producing cotton, corn, livestock, hay, or any other crop or is not producing at all. As a result, it is not possible to derive from these payments whether the payment is being received by an upland cotton producer.

22. The Panel's question points to a fundamental difficulty with Brazil's approach. Brazil would have the Panel allocate "support to a specific commodity" – upland cotton – on the basis that certain of these measures determine payment amounts (for base acres) based on current or recent market prices for that commodity. However, how could the payment be "support to a specific commodity" (support "provided for an agricultural product in favour of the producer of the basic agricultural product") if there need be no production of upland cotton in order to receive payment?

23. Brazil attempts to avoid this result by arguing that various US payments (direct, counter-cyclical, production flexibility contract, and market loss assistance payments) are *not* non-product-specific support because they are not payments to "producers in general." The United States has addressed this erroneous interpretation in detail in its rebuttal submission. In short, Brazil's reading requires ignoring the definition of product-specific support in Article 1(a) (that is "support . . .

[145] *See* US First Written Submission, para. 57 fn. 46.

provided for an agricultural product in favour of the producers of the basic agricultural product"), which Brazil has not interpreted, in over 450 pages of submissions and statements, even once.[146] In fact, Brazil's reading of the definition of non-product-specific support ("support provided in favour of agricultural producers in general") reads the phrase "in general" as meaning "in a body; universally; without exception." However, this dictionary definition is considered "obsolete"[147] and so would hardly be the "ordinary meaning" of the term.

24. As Brazil has conceded, moreover, payments made with respect to upland cotton base acres are not necessarily in favor of upland cotton producers since those acres may not be planted to upland cotton – indeed, may not be planted at all. We note that Brazil has adjusted its entire AMS calculation to reflect its belated realization that, under its own theory, "only the portion of . . . payments [on "upland cotton" base acres] that actually benefits acres planted to upland cotton can be considered support to upland cotton."[148] But Brazil's adjustment is not enough. Brazil simply takes the ratio of actual upland cotton acreage to "upland cotton" base acreage under a given programme. However, there is no reason why upland cotton acreage need be planted on "upland cotton" base acreage. Consider this example:

- One farm could have 100 base acres of upland cotton and currently plant those 100 acres to corn; direct and counter-cyclical payments would be made on those 100 "upland cotton" base acres that actually are planted to corn.

- Another farm could have 100 base acres of corn and currently plant those 100 acres to upland cotton; direct and counter-cyclical payments would be made on those 100 "corn" base acres that actually are planted to upland cotton.

- Brazil's approach (dividing upland cotton planted by upland cotton base acres) would simply say that *all* of the direct and counter-cyclical payments on "upland cotton" base acres are "support to upland cotton" because there are 100 "upland cotton" base acres on which payments were made and 100 acres currently planted to upland cotton, even though these are found on completely separate farms.

Thus, Brazil's ratio does not identify, *even on Brazil's own terms*, the alleged support to upland cotton (that is, "payments that actually benefit[] acres planted to upland cotton") under these programmes.[149]

25. Brazil's own approach would require Brazil to match up payments for upland cotton base acres with the amount of upland cotton production on those base acres, but Brazil has not done so.[150]

---

[146] *See, e.g.*, Brazil's Rebuttal Submission, para. 19 (again misquoting the definition of product-specific support in Article 1(a) by eliminating the phrase support provided "for an agricultural product" and failing to interpret that definition according to the customary rules of interpretation of public international law); Brazil's Comments on US Answer to Question 43 from the Panel (paras. 58-60) (criticizing US interpretation of product-specific support but failing to interpret that definition according to the customary rules of interpretation of public international law); Brazil's Comments on US Answer to Question 38 from the Panel (paras. 48-49) (same).

[147] *See The New Shorter Oxford English Dictionary*, vol. 1, at 1073 (first definition of "in general": "† (*a*) in a body; universally; without exception"); *id.*, vol. 1, at xv (sec. 4.5.2: Status symbols) ("The dagger [†] indicates that a word, sense, form, or construction is obsolete. It is placed before the relevant word(s) or relevant sense number.").

[148] *See, e.g.*, Brazil's Answer to Question 67 from the Panel (table, fn. 2, 3, 4, 5).

[149] We also would reiterate that such payments would not be "support to a specific commodity" as explained in Article 1(a) and reflected in Annex 3.

[150] For example, Brazil admits that "this acknowledged legal flexibility to grow other crops does not answer the question of whether the producers planting 14.2 million aces of upland cotton in MY 2002 received direct and counter-cyclical payments. Nor does it answer the question of whether the 14.2 million acres planted

At best, Brazil speculates as to the *likelihood* of a person with cotton base acres actually producing upland cotton on those base acres, and even that speculation is flawed.[151] However, such an approach amounts to little more than speculation and, even if Brazil's erroneous interpretation were used, does not meet Brazil's burden of establishing a *prima facie* case.

26. In addition, under Brazil's own approach, the payments made in relation to corn base acres would be support for *corn* even if planted to upland cotton. However, Brazil's approach would appear to result in double counting the support – the same payment would be support to corn (because it was related to corn base acres) and support to upland cotton (because cotton was produced on base acres eligible for payments). In other words, Brazil is trying to have it both ways:

- First, Brazil argues that payments made based on production on base acres during a base period is support to the crop that was produced during that base period, regardless of what is actually produced currently (that is, payments made for upland cotton base acreage is support to upland cotton even if the producer is now growing corn on that acreage).

- Second, Brazil argues that payments made under these programmes are support to the crop that is currently being produced, even if the crop being produced is different from the base crop (that is, payments made for corn base acreage is support to upland cotton if upland cotton is being produced on the corn base).

27. Furthermore, because payments under the cited programmes are made with respect to historic acres and yields during a base period, it is not possible to calculate the "annual amount granted by the US government . . . to US upland cotton producers, per pound." Counter-cyclical payments, for example, determine the payment rate for base period production as the difference between a target price and the sum of the direct payment rate plus the higher of the market price or the loan rate. However, the per pound payment rate for upland cotton base acres applies only for base period production (base acres *x* payment yields), not current production. Thus, to express these payments per pound begs the question: "Per pound of what?" Any production figure used – whether base period production or production in any year from 1999 through 2002 – results in a highly artificial per pound

---

to upland cotton in MY 2002 were planted on *upland cotton* base acreage." Brazil's Rebuttal Submission, para. 38 (emphasis in original). The United States agrees completely, and while Brazil's approach would require that these questions be answered, Brazil has not answered them, even though under Brazil's approach, Brazil would have the burden of proof in this regard. Rather, Brazil tries to construct a series of assumption based on what Brazil considers "likely" or "maybe" or "probably."

[151] *See* Brazil's Rebuttal Submission, paras. 24-50. Brazil makes a lengthy presentation of new data and calculations, including some with respect to crops other than upland cotton, to assert that these four payments are support for upland cotton because without them upland cotton farmers could not cover their costs. However, Brazil's approach is flawed in terms of its facts and the premises on which it relies. In the time available we have not been able to identify and describe all the flaws and inaccuracies in Brazil's presentation of the data. Simply by way of example, however, we note that (1) Brazil includes a figure for cottonseed payments in its graph purporting to show MY 2001 market revenue and government support (Rebuttal Submission, paragraph 30), but Brazil's own table at paragraph 84 of its rebuttal submission reflects that there were no cottonseed payments for the 2001 marketing year; (2) Brazil's theory would appear to be that cotton production on cotton base acres are "necessary" because without government payments costs of production would not be covered, but Brazil presents information only with respect to one year, marketing year 2001, with record low prices - Brazil does not explain its theory or present any data with respect to other years with more typical prices; (3) Brazil asserts that upland cotton production "is produced only in particular regions . . . and producers tend to specialize and not readily switch to other crops" – whereas cotton is produced in 17 of the 50 United States and, for all US cotton farms, average cotton area is approximately 38 per cent of a farm's acres (469 of 1,222 acres) (US Department of Agriculture, Characteristics and Production Costs of US Cotton Farms (October 2001).)

rate since (as noted above) these payments will be or were (as the case may be) received by a recipient regardless of whether he or she produced any upland cotton production.

28. We are able to provide to the Panel the total outlays under the cited programmes with respect to upland cotton base acreage:

| **Total Outlays Under Certain Programmes with respect to Upland Cotton Base Acres (millions US$)** | | | | |
|---|---|---|---|---|
| Payments[152] | MY1999 | MY2000 | MY2001 | MY2002 |
| Production flexibility contract | 614 | 575 | 474 | 452 |
| Market loss assistance | 613 | 612 | 524 | NA |
| Direct | NA | NA | NA | not yet available[153] |
| Counter-cyclical | NA | NA | NA | not yet available[154] |

## VI. Payments With Respect to Base Period Production of Certain Commodities But Not Others Are Not Inherently Product-Specific Support

29. Brazil has argued that production flexibility contract payments, market loss assistance payments, direct payments, and counter-cyclical payments are product-specific support. The United States had addressed some infirmities in Brazil's approach in response to Additional Question 67*bis* from the Panel and in previous submissions.[155] The United States now briefly addresses two arguments presented by Brazil.

30. First, Brazil argues that each of these payments is product-specific because base acreage is defined as acreage on which only some commodities were historically produced during a defined and fixed base period. This argument, again, rests on an "obsolete" definition of "in general" (in the definition of non-product-specific support) as "universal" or "without exception" and a determined refusal to quote accurately and interpret the definition of product-specific support in Article 1(a).[156]

[152] *See* Exhibit US-38 (http://www.fsa.usda.gov/dam/BUD/bud1.htm) (for crop years 1999, 2000, and 2001).

[153] The US Department of Agriculture estimates that direct payments for the 2002 marketing year with respect to upland cotton base acres will total $173 million. Exhibit US-18 (www.fsa.usda.gov/dam/BUD/estimatesbook.htm).

[154] The US Department of Agriculture estimates that counter-cyclical payments for the 2002 marketing year with respect to upland cotton base acres will total $873 million. Exhibit US-18 (www.fsa.usda.gov/dam/BUD/estimatesbook.htm).

[155] *See, e.g.*, US Rebuttal Submission, paras. 79-92, 99-105.

[156] We note that, once again, Brazil has misquoted the definition of product-specific support in Article 1(a). Brazil quotes that definition as follows: "For support not provided to agricultural producers *in general*, the test is whether the support is 'provided in favour of the producers of the basic agricultural product.'" Brazil's Rebuttal Submission, para. 19. The actual text of Article 1(a), in pertinent part, reads:

That these payments are made with respect to base acreage for only some commodities is not relevant to the question whether they are support "provided for an agricultural product in favour of the producers of the basic agricultural product."[157] None of these payments satisfies either part of this definition: they are neither provided "for an agricultural product" (rather, they are made with respect to historic production of several products) nor "in favour of the producers of the basic agricultural product" (no production is necessary for payments to be made).

31. Brazil also appears to now argue that the requirement under paragraph 6(a) of Annex 2 that eligibility for payments under a decoupled income support measure "shall be determined by clearly-defined criteria such as income, status as a producer or landowner, factor use or production level in a defined and fixed base period" requires that these payments be made to *all* producers for *all* commodities. This approach would seriously limit the ability of Members to move to decoupled income support. It is not clear that any Member would be willing to switch to decoupled income support if it required expanding support to whole new classes of producers or commodities. We can find no basis for this approach in the text of paragraph 6(a). This definition does not require comprehensive coverage of all or nearly all production in "a defined and fixed base period"; it merely requires "clearly-defined criteria." Thus, under Brazil's reading, a measure could satisfy the requirement of Annex 2, paragraph 6(a), and yet qualify as product-specific support under Article 1(a).

32. Second, Brazil again selectively quotes the statutory definition of "producers" to suggest that recipients of these payments had to be growers who "shared in the risk of producing a crop."[158] As the United States has previously noted, the statute defines "producers" (those eligible in the first instance to receive payment) as persons who "would have shared had the crop been produced."[159] Thus, both the 2002 and 1996 Acts make clear that a payment recipient need not produce any crop (including upland cotton) to receive payment. It is thus a serious error to imply that a payment recipient is necessarily a "producer" in the Agreement on Agriculture rather than a "producer" (meaning "recipient") in the statutory sense.

33. Nowhere in Brazil's submission is there any suggestion of how its approach can be found in the Agreement on Agriculture. It does not make sense of the definitions of product-specific support and non-product-specific support in Article 1(a), which Brazil has recognized guide the interpretation of the phrase "support to a specific commodity" in the Peace Clause. In sum, Brazil's argument

---

"support . . . provided *for an agricultural product* in favour of the producers of the basic agricultural product" (emphasis added). What Brazil describes as "the narrow US Article 13(b)(ii) specificity standard" in fact flows from an interpretation of Article 13 that makes sense of the *entire* text of Article 1(a) and not just selected parts of it.

[157] Indeed, Brazil's argument in paragraph 36 of its rebuttal submission rests on a *non sequitur*. Brazil's statement is that: "Thus, direct payments are *not* available to the great majority of US producers of agricultural commodities, *i.e.*, they are not provided to US agricultural producers *in general*." (Emphasis in original.) The illogic in Brazil's statement is that, by removing the requirement to produce any particular crop or any crop at all in order to receive these payments, the United States does in fact make the payments available to producers in general. Recipients are free to produce a broad range of commodities, and so are producers of agricultural commodities "in general." Brazil appears to acknowledge that the payments are not in fact tied to current production when, in paragraph 50, Brazil concedes that the payments are made to "upland cotton base acreage holders" rather than to upland cotton *producers*.

[158] *See* Brazil's Rebuttal Submission, paras. 24 (quoting first half of definition), 29 ("Thus, as with PFC payments, market loss assistance payments were not paid to agricultural producers *in general* but rather to only a select group of US producers), 36 ("Direct payments are targeted support to "producers" farming, *inter alia*, on upland cotton base acreage."), 48 ("But the evidence demonstrates that CCP funds in MY 2002 paid to "historic" (i.e., 1998-2001 or 1993-1995) upland cotton producers are paid to a tiny fraction of total US producers of agricultural commodities.").

[159] US Rebuttal Submission, paras. 36-38.

provides ample evidence that the phrase "support to a specific commodity" in the Peace Clause must be interpreted in the context provided by the Agreement on Agriculture. To divorce it from that context may result in an unworkable and illogical interpretation along the lines suggested by Brazil.

## VII. Brazil's New Arguments Relating to Crop Insurance Do Not Demonstrate that Crop Insurance Payments Are Product-Specific Support

34. Brazil presents a number of arguments claiming that crop insurance payments are "support to a specific commodity." In part, this argument relies on the notion that such payments are not support provided to agricultural producers "in general" and, hence, not non-product-specific support. We note, however, that in making these arguments Brazil avoids any reference to the definition of product-specific support in Article 1(a). This is a fundamental interpretive error: Brazil cannot claim that payments are not support to "agricultural producers in general" under Article 1(a) without providing an interpretation of the other component of support in Article 1(a), namely, product-specific support (support "provided for an agricultural product in favour of the producers of the basic agricultural product"). In fact, given that crop insurance support is available to approximately 100 agricultural commodities, representing approximately 80 per cent of US area planted and greater than 85 per cent of the value of all US crops, crop insurance payments are not support "provided for *an* agricultural product."[160] The support to these approximately 100 commodities is the same: that is, the crop insurance premium subsidies do not vary by commodity or plan of insurance.

35. Brazil's specific arguments fail to address the definition of product-specific support in Article 1(a); thus, each fails to demonstrate that crop insurance payments are "support to a specific commodity" rather than "support to several commodities."

36. First, Brazil argues that certain policies (and accompanying premiums) on irrigation failures are available only to upland cotton and a few other commodities. The United States has previously addressed this argument and directs the Panel's attention to that argument.[161]

37. Second, Brazil argues that a larger pool of types of insurance policies are offered to upland cotton than most other crops. Brazil has not explained how the types of crop insurance policies offered by private companies[162] can affect whether US crop insurance payments (premium subsidies that do not vary by commodity or insurance plan) are product-specific or not. Brazil's "facts" are also misleading in some instances and erroneous in others. For example, Brazil suggests that "in many instances, the policies available for cotton enterprises are not available for other crops."[163] However, we note that commodities other than upland cotton can be insured under the same types of policies as upland cotton.[164]

---

[160] US Rebuttal Submission, paras. 93-98.

[161] *See* US Rebuttal Submission, para. 54.

[162] Under the Agricultural Risk Protection Act, new insurance products must be developed by the private sector and approved by the Board of Directors of the Federal Crop Insurance Corporation. The US Department of Agriculture is expressly prohibited from conducting research and development on new products. Thus, the variety and availability of insurance products reflects the fact that private companies, not the US Government, have developed and offered these products.

[163] Brazil's Rebuttal Submission, para. 55.

[164] Upland cotton producers can insure their crops under the following types of policies: Actual Production History, Group Risk Plan, Income Protection, Crop Revenue Coverage, and Revenue Assurance. Other crops that are eligible for the policies include:

for Actual Production History – Alfalfa seed, all other grapefruit, almonds, apples, avocados, barley, blueberries, cabbage, canola, cigar binder tobacco, cigar filler tobacco, cigar wrapper tobacco, corn, cotton, ELS cotton, crambe, cranberries, cultivated wild rice, dry beans, dry peas, early and midseason oranges, figs, flax, forage production, fresh apricots, fresh freestone peaches, fresh market tomatoes, fresh nectarines, grain sorghum, grapefruit, grapes, green peas, late oranges, lemons, macadamia nuts, mandarins, Maryland tobacco,

38. Third, Brazil argues that are there specific upland cotton provisions in certain policies.[165] This is true – an insurance product offered by a private company must be tailored for the situation and desires of the insurance purchasers – but also irrelevant as the policies are generally similar in underwriting rules and share the same subsidy schedule.

39. Fourth, Brazil argues that upland cotton producer participation rates in the crop insurance programme "is much higher that for other crops."[166] We first note that Brazil neglects to mention that participation rates for the major field crops are generally quite high (over 75 per cent of insurable acres). Any producer who received disaster assistance was required to purchase federal crop insurance in the following year; cotton participation may be slightly higher because of droughts that have hit cotton regions in recent years. More importantly, that cotton producers may choose to take up crop insurance more than producers of other commodities might is irrelevant to whether the payments are provided "for an agricultural product." Again, the crop insurance premium subsidy is identical for all commodities and for each plan of insurance.

40. Fifth, Brazil argues that tracking the cost of reinsurance provided to private companies is "further evidence that USDA treats crop insurance for upland cotton separately from crop insurance provided to other crops."[167] Of course, the way the US Department of Agriculture "tracks cost[s]" is irrelevant to the analysis of whether crop insurance payments provide support "for an agricultural product." Brazil also misinterprets the Standard Reinsurance Agreement between the US Government and private insurers. Under that Agreement, net underwriting gains and losses for each insurer are calculated *at the state level* over *all crops*, not separately for individual crops (such as upland cotton).[168] Thus, Brazil errs when it claims that reinsurance provides evidence that crop insurance for upland cotton is treated separately from crop insurance provided to other crops.

41. Sixth, Brazil claims that "the 2000 ARP Act denies subsidies to producers of other agricultural products."[169] It is true that there are certain products for which policies have not been developed. However, development of new policies is ongoing; for example, provisions of the Agricultural Risk Protection Act of 2000 allow for the development of livestock insurance products. A number of livestock products are currently available on a pilot basis, including price insurance for hogs and feeder cattle and gross margin insurance. We also note that producers may currently insure livestock and dairy revenue as part of whole farm insurance offered through the Adjusted Gross Revenue Insurance.[170] Finally, Brazil's argument here again reads domestic producers "in general' to mean "universally" or "without exception"; as noted above, that definition is now considered obsolete.

---

millet, Minneola tangelos, mint, mustard, navel oranges, oats, onions, Orlando tangelos, peaches, peanuts, pears, plums, popcorn, potatoes, processing apricots, processing beans, processing cling peaches, processing freestone, prunes, rice, Rio Red and Star Ruby grapefruit, Ruby Red grapefruit, rye, safflower, soybeans, sugar beets, sugarcane, sunflowers, sweet corn, sweet oranges, sweet potatoes, table grapes, tomatoes, Valencia oranges, walnuts, wheat;

for Group Risk – corn, cotton, forage production, grain sorghum, rangeland, soybeans, wheat;

for Income Protection – barley, corn, cotton, grain sorghum, soybeans, wheat; and

` for Revenue Assurance – barley, canola, cotton, grain sorghum, rice, soybeans, sunflowers, wheat.

*See* http://www3.rma.usda.gov/apps/sob/current_week/crop2003.pdf.

[165] Brazil's Rebuttal Submission, para. 55.

[166] Brazil's Rebuttal Submission, para. 57.

[167] Brazil's Rebuttal Submission, para. 58.

[168] The provisions of the Standard Reinsurance Agreement are available on the Risk Management Agency website at: http://www.rma.usda.gov/pubs/ra/98SRA.pdf.

[169] Brazil's Rebuttal Submission, para. 59.

[170] More information on Adjusted Gross Revenue Insurance can be found on the Risk Management Agency website at: http://www.rma.usda.gov/pubs/2003/PAN-1667-06rev.pdf.

42. Finally, with respect to Brazil's references to the literature on the effects of crop insurance on production,[171] the findings are (contrary to what Brazil has claimed) mixed. While several studies (such as those cited by Brazil) have suggested crop insurance payments may have a slight effect on acreage, the effects on *production* are less clear.[172] If crop insurance encourages moral hazard problems (as claimed by Brazil), crop yields will be adversely affected as producers attempt to increase crop insurance indemnities. If moral hazard and adverse selection problems are severe, crop insurance support could potentially have a *negative* effect on production.[173] The potential production effects of crop insurance payments, moreover, goes to whether such payments are "amber box" support but does not figure in the question whether such payments (which are offered at the same rate across commodities and policies) can be support "for an agricultural product."

## VIII. Brazil May Not Act Unilaterally on Procedural Matters

43. The United States takes note of Brazil's statement in its 25 August 2003 letter to the Panel[174] that, concerning paragraph 20 of the Panel's determination of 20 June 2003, "Brazil interpreted this ruling as permitting it to provide no later than 22 August all of its evidence and argument that had not already been provided in its earlier submissions. This is the manner in which it treated the new evidence and arguments presented by the United States in its Rebuttal Submissions." The United States is unable to reconcile Brazil's position concerning its own ability to provide evidence and arguments at any time up through August 22 with Brazil's repeated assertions that the United States "should have" provided particular material in its replies to the Panel's questions.[175] There is of course no basis for Brazil's assertions that particular material "should have been" provided in replies to questions rather than in a rebuttal submission. There is no basis for Brazil to dictate to another Member what it may or may not include in its rebuttal submission. Brazil is fabricating an obligation and attempting to impose it on the United States at the same time that it exempts itself from this obligation. In this, Brazil's approach is similar to its repeated attempts in this dispute to add to the obligations in the Agreement on Agriculture and the Subsidies Agreement.

[171] Brazil's Rebuttal Submission, paras. 60-67.

[172] The US Department of Agriculture, Economic Research Service, studies cited by Brazil only examine the effects of crop insurance subsidies on acreage. They do not consider effects on crop yields.

[173] Recent studies by Smith and Goodwin (1996), Babcock and Hennessy (1996) and Goodwin and Smith (2003) suggest that farms with more insurance tend to use less inputs like fertilizer and pesticides and vice versa. This demonstrates a potential moral hazard problem with crop insurance that suggests that crop insurance participation may have a negative effect on yields. *See* Babcock, B. and D. Hennessy. "Input Demand Under Yield and Revenue Insurance" *American Journal of Agricultural Economics* 78(1996):416-27; Goodwin, B. and V. Smith. "An Ex Post Evaluation of the Conservation Reserve, Federal Crop Insurance, and other Government Programmes: Programme Participation and Soil Erosion." *Journal of Agriculture and Resource Economics* 28(2003):201-216; Smith, V. and B. Goodwin. "Crop Insurance, Moral Hazard and Agricultural Chemical Use." *American Journal of Agricultural Economics* 78(1996):428-38.

[174] The United States also notes that the Panel's communication of 19 August 2003 had not indicated that the parties would have an opportunity to comment on each other's requests to comment. Had there been such an opportunity, the United States would have been happy to comment on Brazil's request of 23 August 2003. Perhaps Brazil could reconsider whether it has a basis to assert a right to decide that it may unilaterally provide comments to the Panel while denying the United States the same procedural rights. Under Brazil's approach, it would not have needed to request permission from the Panel to file comments on Wednesday, August 27, but could have simply provided those comments, unsolicited, while denying equal access for the United States. The United States is grateful that the Panel's extremely prompt reply to the US request obviated any need to respond to Brazil's unauthorized and out of order comments on that request.

[175] *See* Brazil's 23 August 2003 letter to the Panel.

## IX. Conclusion

44. The United States has demonstrated that using any measurement that reflects the support "decided" by the United States rather than factors (such as market prices) beyond the United States' control, US support to upland cotton in marketing years 1999-2002 has not exceeded the 1992 marketing year level. The question then is whether the Panel will find that the United States has breached the Peace Clause simply because market prices were lower in some recent years than they were in 1992.

45. The United States submits that the Peace Clause must be interpreted in a way that permits Members to comply in good faith – that is, Members must be able to tell if they will breach the Peace Clause or not. Brazil's budgetary outlays approach does not do that. Brazil's approach would mean that Members could not know if they had complied with the Peace Clause until it was too late to do anything about it. The best way to interpret the Peace Clause in a way that allows Members to comply is to use the "support" as "decided" by a Member during the 1992 marketing year as the basis for comparison. Recognizing, as the United States believes is required by the Peace Clause text, that "decided" and "grant" cover only those parameters over which Members exercise control would also be consistent with this approach of allowing "good faith" compliance since it would permit Members to control whether their measures conformed to their obligations.

46. The United States has disciplined itself to grant support not in excess of that decided during the 1992 marketing year. Therefore, we are entitled to the protection of the Peace Clause, and we respectfully request the Panel to find that Brazil may not maintain this action challenging these conforming US measures.

# ANNEX C

## ORAL STATEMENTS OF PARTIES AND THIRD PARTIES AT THE FIRST SESSION OF THE FIRST SUBSTANTIVE MEETING

# ANNEX C-1

## EXECUTIVE SUMMARY OF THE ORAL STATEMENT OF BRAZIL AT THE FIRST SUBSTANTIVE MEETING OF THE PANEL WITH THE PARTIES

### I. INTRODUCTION

1. Brazil addresses first various peace clause issues, followed by Step 2 export and domestic payments, export credit guarantees and the ETI Act subsidies. Finally, Brazil addresses the "preliminary issues" raised by the United States.

### II. PEACE CLAUSE ISSUES

**The Peace Clause is an Affirmative Defence**

2. The peace clause is in the nature of an affirmative defence and it is, thus, the US burden to prove that Brazil's claims under the SCM Agreement are "exempt from actions". An affirmative defence is a provision that does not set out any positive obligations but enables Members to maintain measures that are otherwise inconsistent with its WTO obligations. The peace clause does not in itself set out any positive obligations for Members, but simply provides a conditional shelter against certain actionable and prohibited export subsidy claims under the SCM Agreement. The peace clause meets the criteria set forth by the Appellate Body for an affirmative defence in *US – FSC* and in the *Aircraft* disputes, by being an exception to a legal regime otherwise applicable. Given the extraordinary protection it provides, it is not "bizarre", as the United States argues, that the peace clause requires the defending Member to prove that its domestic and export subsidies meet the conditions for peace clause protection.

**"such measures do not grant support to a specific commodity"**

3. This phrase in AoA Article 13(b)(ii) means that in calculating the amount of support for any marketing year between 1995-2003, all non-"green box" support provided to a specific commodity must be tabulated, regardless of whether the *type* or *form* of the support is "product-specific", "non-product specific", *de minimis*, or "blue box". This is certainly evidenced by the decision of negotiators *not* to use the phrases "product-specific" and "AMS" in Article 13(b)(ii) to qualify the type of support to a specific commodity. The US attempt to read "product-specific" into Article 13(b)(ii) is inconsistent not only with the text but also the context of the phrase "such measures" in Article 13(b)(ii). The US interpretation of "product-specific support" is further incompatible with the object and purpose of the Agreement on Agriculture. It would create a new category of non-actionable trade-distorting non-"green box" subsidies and sanction huge increases in spending for "amber box" and, therefore trade-distorting, domestic support as long as it took the form of support for *multiple* commodities. This is contrary to the presumption of trade and production-distorting effects for individual products from non-"green box" domestic support, which flows from a domestic measure being inconsistent with the "green box" requirements of AoA Annex 2.

**"that decided during the 1992 marketing year"**

4. This word "decided" does not require any particular *type* of "decision". As a neutral term, the meaning of "decided" must be interpreted in a way that does justice to the ordinary meaning of other terms in Article 13(b)(ii) that are *not* neutral. Most importantly, the term "decided" must be interpreted in a manner that permits a comparison between a "*grant*" of non-"green box" "*support*" to a specific commodity for individual marketing years between 1995-2003, and a "decision" regarding such support in MY 1992. A textual interpretation reveals that the term "that" refers back to "support" and that support is accompanied by the term "granted".

5. The Appellate Body agreed with the panel in *Brazil – Aircraft* that the phrase "the *level* of export subsidies *granted*" meant "something actually provided", which means actual budgetary expenditures. Thus, the neutral term "decision" (for MY 1992) can only be read harmoniously with the term "grant support" (for MY 1995-2003) where the "decision" is to fund non-"green box" support to a specific commodity for marketing year 1992.

6. In addition, even if Article 13 would refer to a *level* of (income) support, as the United States alleges, the Appellate Body has held in *Brazil – Aircraft* that the "level" of export subsidies refers to actual expenditures.

7. The US interpretation of a "level of support" is furthermore inconsistent with its own interpretation of Article 13(b)(ii) in its Statement of Administrative Action (SAA). In the SAA, it stated that governments would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year". Brazil strongly disagrees with the notion of "AMS" as the relevant standard for the peace clause, *but* this official US interpretation of the peace clause in 1995 is nevertheless compelling evidence of the United States view of the "decision" it had taken during MY 1992. The calculation of the AMS for a particular commodity requires the calculation of the support provided in monetary terms. AoA Annex 3 offers two options for the calculation of AMS: budgetary outlays or the price gap formula detailed on paragraphs 10 and 11. Under either option, the AMS represents a measurement of support in monetary terms.

8. In sum, Brazil is of the firm view that the text of Article 13(b)(ii) requires comparing MY 1992 support with MY 1995-2003 support by comparing actual expenditures. This methodology produces an "amount" of support – not a "rate". Thus, any decision under Article 13(b)(ii), by definition, must relate in some way to an "amount" of expenditures. Only this methodology allows a clear comparison between the two time periods, regardless of the *type* of support.

9. However, even if the Panel were to decide that the relevant standard is a "rate of support" standard, Brazil has provided the testimony of Professor Daniel Sumner indicating that – following the US approach to measuring "support to upland cotton" – the "rate of support" to upland cotton in MY 1999-2002 was much higher than the "rate of support" to upland cotton in MY 1992. Based on the evidence and analysis presented by Professor Sumner, Brazil also asserts that even under the US "rate of support" methodology, the United States has failed to demonstrate that its MY 1999-2002 support does not exceed its support to upland cotton decided in MY 1992.

**US "statute of limitations" interpretation of the peace clause**

10. There is no express or implied "statute of limitations" in the peace clause. Subsidizing Members such as the United States are offered conditional protection under the peace clause during a 9-year period. But the rights of Members injured by subsidies provided in excess of 1992 marketing year levels are preserved throughout the implementation period as well. This is the balance struck by the peace clause.

11. The US "statute of limitations" argument in this case is very similar to one rejected by the Appellate Body in *US – Lead Bars*. This argument is further inconsistent with the views of the *Indonesia – Automobiles* panel, which held that measures applied in the past must be examined to assess present serious prejudice. The US interpretation would cut off a Member's right to challenge such measures because it missed an imaginary deadline. This US interpretation is inconsistent with the object and purpose of the AoA because it would permit Members to provide huge "non-green" box support one year without peace clause protection, and then claim absolution as soon as the next marketing year began.

**"Support to Upland Cotton"**

12. Brazil has produced extensive evidence providing the factual basis for the Panel to find that CCP, DP, market loss, and PFC payments are "support to" upland cotton within the meaning of the peace clause. USDA categorizes the PFC and market loss payments as part of "total payments" to upland cotton. US National Cotton Council officials repeatedly testified and produced documents revealing that their producer members requested, received, and depended on all four of these subsidies. Crop insurance is also support to cotton as evidenced by specific upland cotton crop insurance policies and groups of policies for upland cotton. Moreover, USDA specifically identifies and tabulates crop insurance subsidies for upland cotton. In addition, all five domestic support measures fail to meet the requirements of AoA Annex 2. Therefore, they constitute non-"green box" support that is presumed to be production and trade distorting. Such distortions can, however, only occur with respect to the production of or the trade in a particular commodity. Because, PFC, market loss assistance, direct and counter-cyclical payments as well as crop insurance subsidies are available to producers of upland cotton, these production and trade-distorting subsidies affect the production of and trade in upland cotton. The Panel should, therefore, find that all five of these programmes granted support to upland cotton in MY 1999-2002.

**Restrictions on Plantings of Fruits and Vegetables under the PFC and DP Programmes**

13. Brazil presents evidence that PFC and direct payments are not "decoupled" domestic support. These payments are dependent on the requirement that a farmer does not produce fruits, vegetables, nuts or wild rice on the contract acreage. This restrictions has the effect of channelling production on contract acreage into production of programme crops, including upland cotton, and is of particular importance for upland cotton base acreage located in regions of the United States where production of fruits and vegetables is a viable alternative to the production of upland cotton.

## III. STEP 2 EXPORT AND DOMESTIC PAYMENTS

14. The US Step 2 export payments clearly constitute subsidies contingent upon proof of export of US upland cotton. Step 2 export payments are export subsidies that violate AoA Articles 3.3 and 8 and that are prohibited by ASCM Articles 3.1(a) and 3.2.

15. Similarly, US Step 2 domestic payments are prohibited local content subsidies in violation of ASCM Article 3.1(b). There is no explicit derogation of ASCM Article 3.1(b) built into the Agriculture Agreement. In fact, the opposite is true, since AoA Article 13(b)(ii) provides a conditional exemption only for claims under ASCM Articles 5 and 6, but not for claims under ASCM Article 3. There is also no conflict between ASCM Article 3.1(b) and AoA Article 6 or Annex 3, paragraph 7, because there are two types of domestic support, including domestic support to processors of agricultural commodities – those that comply with Article 3.1(b) of the SCM Agreement and those that do not.

## IV. EXPORT CREDIT GUARANTEES

16. With respect to the consultations regarding the US export credit guarantee programmes, there is no doubt that the United States and Brazil consulted on three occasions about the GSM 102, GSM 103, and SCGP programmes as they relate to all eligible products. Thus, these measures are properly within the Panel's terms of reference and the Panel should reject the US request for a preliminary ruling.

17. With respect to Brazil's claims regarding the GSM 102, GSM 103 and SCGP export credit guarantee programmes, the United States interpretation of AoA Article 10.2 should be rejected. AoA Article 10.2 does not carve out export credit guarantees from the disciplines on export subsidies under the AoA. Nowhere does the provision exempt export credit guarantees from the disciplines on export subsidies, while exemption need to be made explicit in the text of an agreement following the Appellate Body reports in *EC – Hormones* and *EC – Sardines*. Similarly the context of AoA Article 10 as well as its object and purpose do not support the US view of AoA Article 10.2 as enabling Members to grant export credit support at zero percent interest and for unlimited terms – all for *free* – until Members complete negotiations on specific disciplines for export credits.

18. Concerning the substance of Brazil's claims against export credit guarantees, the United States has not even addressed Brazil's claim that since there is no commercial market for export credit guarantees on terms such as those provided by the CCC programmes, those programmes confer benefits *per se*. Brazil furthermore demonstrates that under the US formula accounting for the budgetary costs of contingent liabilities of CCC export credit guarantees, operating costs and losses for GSM 102, GSM 103 and SCGP have outpaced premiums collected in every single year since the United States started applying the formula in 1992. These figures represent *actual* costs and losses of the US export credit guarantee programmes.

19. Thus, the programmes constitute export subsidies within the meaning of ASCM Articles 1.1 and 3.1(a), item (j) of the Illustrative List, and AoA Articles 10.1, 1(e) and 8. They "at the very least" threaten to circumvent US export subsidy commitments, in violation of Articles 10.1 and 8 and are prohibited under ASCM Articles 3.1(a) and 3.2.

## V. ETI ACT

20. Lastly, the United States argues that Brazil has failed to meet is burden of proof that ETI Act subsidies constitute export subsidies violating the AoA and prohibited by the SCM Agreement. Brazil has adopted and reiterated all of the successful arguments of the EC in the *US – FSC (21.5)* dispute. Brazil asks the Panel to follow the panel in *India – Patents (EC)* and to give "significant weight" to the rulings in the *US – FSC (21.5)* dispute and to avoid "inconsistent rulings", while recognizing that the Panel is not formally bound by that decision.

## VI. PRELIMINARY ISSUES

21. Brazil has addressed the US request for a preliminary ruling on export credit guarantees above.

22. Concerning the US request for a preliminary ruling on the MY 2002 cottonseed payments, the record indicates that Brazil's consultation request covered "future" measures related to existing measures; it indicates further that Brazil and the United States consulted about the "Cottonseed Payment Programme", and that the Agricultural Assistance Act of 2003 provided funding for the existing administrative structure of the Cottonseed Payment Programme. Therefore, following the Appellate Body decision in *Chile – Agricultural Products (Price Band)*, the Agricultural Assistance Act of 2003 is properly within the Panel's terms of reference. In any event, the $50 million in

cottonseed payments are properly treated as "support to cotton" for the purposes of the peace clause calculation of the amount of support granted in MY 2002.

23. Regarding the US arguments that PFC and market loss assistance payments are outside the Panels terms of reference, as they constitute expired measures, Brazil asks the Panel to reject this third US request for a preliminary ruling. Brazil has properly included PFC and market loss assistance payments as part of its claims relating to *present* serious prejudice. Consultations under DSU Article 4.2 may be held concerning measures affecting the operation of a covered agreement. ASCM Article 5 requires a Member to avoid causing adverse effects, which may be the effects of current or previous, expired subsidies. As in the *Indonesia – Automobiles* dispute, expired measures are eminently within the Panel's terms of reference. Denying Members the possibility to challenge expired measures would yield the result that a Member could enact "one-time" subsidy measures that could never be challenged and the provisions of ASCM Articles 5 and 6 would thereby be rendered a nullity.

## VI. CONCLUSION

24. Brazil requests the Panel to reject all three US requests for preliminary rulings and to rule that AoA Article 13 does not exempt US domestic support and export subsidies from actions under the SCM Agreement.

# ANNEX C-2

## EXECUTIVE SUMMARY OF THE CLOSING STATEMENT OF BRAZIL AT THE FIRST SUBSTANTIVE MEETING OF THE PANEL WITH THE PARTIES

### I. INTRODUCTION

1. Brazil addresses first the "preliminary issues" raised by the United States, and then the various peace clause issues. Finally, Brazil addresses the Step 2, ETI Act and export credit guarantee measures.

### II. PRELIMINARY ISSUES

2. With respect to the consultations regarding the US export credit guarantee programmes, there is no doubt that the United States and Brazil consulted on three occasions about the GSM 102, GSM 103, and SCGP programmes as they relate to all eligible products. Thus, these measures are properly within the Panel's terms of reference.

3. Regarding the MY 2002 cottonseed payments, the record indicates that Brazil's consultation request covered "future" measures related to existing measures; it indicates further that Brazil and the United States consulted about the "Cottonseed Payment Programme", and that the Agricultural Assistance Act of 2003 provided funding for the existing administrative structure of the Cottonseed Payment Programme. Therefore, the Agricultural Assistance Act of 2003 is properly within the Panel's terms of reference. In any event, the $50 million in cottonseed payments are properly treated as "support to cotton" for the purposes of the peace clause calculation of the amount of support granted in MY 2002.

4. Regarding the US arguments that PFC and market loss assistance payments are outside the Panels terms of reference, as they constitute expired measures, Brazil asks the Panel to reject this third US request for a preliminary ruling. Brazil has properly included PFC and market loss assistance payments as part of its claims relating to *present* serious prejudice. ASCM Article 5 requires a Member to avoid causing adverse effects, which may be the effects of current or previous, expired subsidies. Adverse present effects caused by both types of measures are eminently within the Panel's terms of reference. As a factual matter, the Panel must decide on the question whether a particular expired subsidy has an actual causal connection with currently existing adverse effects. Yet, by granting the US request for a preliminary ruling the Panel would effectively dismiss Brazil's claim. Therefore, the fact that a subsidy measure has expired cannot be the basis for *a priori* excluding it from the Panel's terms of reference.

5. Furthermore, DSU Article 4.2 and 6.2 – invoked by the United States – must be applied in the context of the remedies provided for actionable subsidies under ASCM Articles 7.2-7.10. Under DSU Article 19 a panel can only recommend that the Member bring a wrongful measure into conformity with the covered agreement(s) at issue. However, for disputes concerning ASCM Articles 5 and 6, ASCM Article 7.8 contemplates two different remedies: removal of the adverse effects or withdrawal of the subsidy. While a Member cannot bring an expired measure into conformity with the covered agreements, both of the ASCM Article 7.8 remedies are valid options even for remedying the effects of a subsidy measure no longer in effect (as in the *Australia – Leather* dispute). As ASCM Articles 7.2-7.10 are "special and additional rules and procedures" under DSU Article 1.2 and DSU Appendix 2, they must prevail to the extent there is a difference between them and DSU Articles 4

and 6. This means that contrary to disputes involving other covered agreements, the Panel is required to address the adverse effects of expired subsidy measures.

6. Further, ASCM Articles 5 and 6.3 make no distinction between subsidies that are now being paid and subsidies that are no longer being paid but have a causal relationship to continuing adverse effects, as evidenced by the Panel report in *Indonesia – Automobiles*, which found serious prejudice arising, *inter alia*, from expired subsidy measures that had been provided for one year and – like the market loss assistance payments – been terminated.

## III. PEACE CLAUSE ISSUES

**"such measures do not grant support to a specific commodity"**

7. This phrase in Article 13(b)(ii) means that in calculating the amount of support for any marketing year between 1995-2003, all non-"green box" support provided to a specific commodity must be tabulated, regardless of whether the *type* or *form* of the support is "product-specific," "non-product specific", *de minimis*, or "blue box". This is certainly evidenced by the decision of negotiators *not* to use the phrases "product-specific" and "AMS" in Article 13(b)(ii) to qualify the type of support to a specific commodity. The US attempt to read "product-specific" into Article 13(b)(ii) is inconsistent not only with the text but also the context of the phrase "such measures" in Article 13(b)(ii). The US interpretation is further incompatible with the object and purpose of the Agreement on Agriculture. It would create a new category of non-actionable trade-distorting non-"green box" subsidies and sanction huge increases in spending for "amber box" and, therefore trade-distorting, domestic support as long as it took the form of support for *multiple* commodities. This is contrary to the presumption of trade and production-distorting effects for individual products from non-"green box" domestic support, which flows from a domestic measure being inconsistent with the "green box" requirements of Annex 2 of the Agriculture Agreement.

**"that decided during the 1992 marketing year"**

8. This word "decided" does not require any particular *type* of "decision". As a neutral term, the meaning of "decided" must be interpreted in a way that does justice to the ordinary meaning of other terms in Article 13(b)(ii) that are *not* neutral. Most importantly, the term "decided" must be interpreted in a manner that permits a comparison between a "*grant*" of non-"green box" "*support*" to a specific commodity for individual marketing years between 1995-2003, and a "decision" regarding such support in MY 1992. The Appellate Body agreed with the panel in *Brazil – Aircraft* that the phrase "the *level* of export subsidies *granted*" meant "something actually provided", which means actual budgetary expenditures. Thus, the neutral term "decision" (for MY 1992) can only be read harmoniously with the term "grant support" (for MY 1995-2003) where the "decision" is to fund non-"green box" support to a specific commodity for marketing year 1992.

9. The US argument that the only decision it took during MY 1992 was a "fixed rate of support" for MY 1992 is totally inconsistent with the US Statement of Administrative Action (SAA), in which the United States provided its official interpretation of the peace clause. In the SAA, the United States stated that governments would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year." Brazil strongly disagrees with the notion of "AMS" as the relevant standard for the peace clause, and draws the attention of the Panel to the fact that the United States now admits that "AMS" is nowhere found in the text of Article 13(b)(ii). *But* this official US interpretation of the peace clause in 1995 is nevertheless compelling evidence of the United States view of the "decision" it had taken during MY 1992. And this interpretation did not reflect a decision regarding only a rate of support. Instead, the only two "decision" options were set out in the AoA Annex 3, where "AMS" is calculated. This calculation is based on either budgetary

outlays, or a calculated *amount* based on the difference between a fixed reference price and the applied administered price multiplied by the amount of production eligible to receive the administered price. Under either option, the United States' interpretation indicates that an "amount" (not a "rate of support") is the measure of support under the peace clause.

10. The SAA statement is also strong evidence that the alleged US "decision" to continue the 1990 FACT Act level of support at 72.9 cents per pound is simply *post hoc* rationalization. Brazil presents evidence that prior to this dispute, the United States had not made up its mind on what would constitute the relevant decision for peace clause purposes. A series of questions asked by Brazil in the Committee on Agriculture and answers provided by the United States reveals that as of 28 June 2002, the United States had not yet made a "decision" regarding which year the United States was using with respect to Article 13(b)(ii). These questions provided the United States with every opportunity to announce the decision that it had allegedly taken 10 years before. Yet, it said nothing about a "rate of support".

11. In sum, Brazil is of the firm view that the text of Article 13(b)(ii) requires comparing MY 1992 support with MY 1995-2003 support by comparing actual expenditures. This methodology produces an "amount" of support – not a "rate". Thus, any decision under Article 13(b)(ii), by definition, must relate in some way to an "amount" of expenditures. Only such methodology allows a clear comparison between the two time periods, regardless of the *type* of support.

12. However, even if the Panel were to decide that the relevant standard is a "rate of support" standard, Brazil has provided the testimony of Professor Daniel Sumner indicating that the "rate of support" to upland cotton in MY 1999-2002 was much higher than the "rate of support" to upland cotton in MY 1992. Based on the evidence and analysis presented by Professor Sumner, Brazil also asserts that even under the US "rate of support" methodology, the United States has failed to demonstrate that its MY 1999-2002 support does not exceed its support to upland cotton decided in MY 1992.

**US "statute of limitations" interpretation of the peace clause**

13. There is no express or implied "statute of limitations" in the peace clause. Subsidizing Members such as the United States are offered conditional protection under the peace clause during a 9-year period. But the rights of Members injured by subsidies provided in excess of 1992 marketing year levels are preserved throughout the implementation period as well. This is the balance struck by the peace clause.

14. The US "statute of limitations" argument in this case is very similar to one rejected by the Appellate Body in *US – Lead Bars*. This argument is further inconsistent with the views of the *Indonesia – Automobiles* panel, which held that measures applied in the past must be examined to assess present serious prejudice. The US interpretation would cut off a Member's right to challenge such measures because it missed an imaginary deadline. This US interpretation is inconsistent with the object and purpose of the AoA because it would permit Members to provide huge "non-green" box support one year without peace clause protection, and then claim absolution as soon as the next marketing year began.

**"Support to Upland Cotton"**

15. Brazil has produced extensive evidence providing the factual basis for the Panel to find that CCP, DP, market loss, and PFC payments are "support to" upland cotton within the meaning of the peace clause. USDA categorizes the PFC and market loss payments as part of "total payments" to upland cotton. US National Cotton Council officials repeatedly testified and produced documents revealing that their producer members requested, received, and depended on all four of these subsidies. Crop insurance is also support to cotton as evidenced by specific upland cotton crop insurance policies and groups of policies for upland cotton. Moreover, USDA specifically identifies and tabulates crop insurance subsidies for upland cotton. Thus, the Panel should find that all five of these programmes granted support to upland cotton in MY 1999-2002.

## IV. STEP 2 PAYMENTS

16. The US Step 2 export subsidies clearly constitute export subsidies that violate Articles 3.3 and 8 of the Agriculture Agreement and that are prohibited by Articles 3.1(a) and 3.2 of the SCM Agreement because they are contingent upon proof of export of US upland cotton.

17. Similarly, US domestic Step 2 subsidies are prohibited local content subsidies in violation of Article 3.1(b) of the SCM Agreement. There is no explicit derogation of Article 3.1(b) built into the Agriculture Agreement. In fact, the opposite is true, since Article 13(b)(ii) provides a conditional exemption only for claims under Articles 5 and 6 of the SCM Agreement, but not for claims under Article 3 of the SCM Agreement. There is also no conflict between Article 3.1(b) of the SCM Agreement and Agriculture Agreement Article 6 or Annex 3, paragraph 7, because there are two types of domestic subsidies – those that comply with Article 3.1(b) of the SCM Agreement and those that do not.

## V. EXPORT CREDIT GUARANTEES

18. With respect to Brazil's claims regarding the GSM 102, GSM 103 and SCGP export guarantee programmes, the United States interpretation of AoA Article 10.2 should be rejected. Under the US view of Article 10.2, it can grant export credit support at zero percent interest and for unlimited terms – all for *free* – at least until Members complete negotiations on specific disciplines for export credits. This interpretation is not supported by a Vienna Convention analysis.

19. The United States has not even addressed Brazil's claim that since there is no commercial market for export credit guarantees on terms such as those provided by the CCC programmes, those programmes confer benefits *per se*. And Brazil has demonstrated that under the cost formula used by the White House, the US Congress, US government accountants and the CCC itself, operating costs and losses for GSM 102, GSM 103 and SCGP have outpaced premiums collected in every single year since the United States started applying the formula in 1992. These figures represent *actual* costs and losses of the US export credit guarantee programmes. The programmes therefore constitute export subsidies within the meaning of ASCM Articles 1.1 and 3.1(a), item (j) of the Illustrative List, and AoA Articles 10.1, 1(e) and 8. They "at the very least" threaten to circumvent US export subsidy commitments, in violation of Articles 10.1 and 8 and are prohibited under ASCM Articles 3.1(a) and 3.2.

## VI. CONCLUSION

20. Brazil requests the Panel to reject the numerous attempts by the United States to delay the initiation of Brazil's serious prejudice claims. Brazilian upland cotton producers are experiencing present serious prejudice from continued huge amounts of US subsidies to upland cotton. Applying

either methodology of calculating the support for peace clause purposes, the United States has no basis to claim peace clause protection.

# ANNEX C-3

## EXECUTIVE SUMMARY OF THE OPENING STATEMENT OF THE UNITED STATES AT THE FIRST MEETING OF THE PANEL WITH THE PARTIES

1. The United States has stayed within the disciplines and acted consistently with its WTO obligations negotiated and agreed in the Uruguay Round. We share many of Brazil's objectives with respect to reform of measures that affect agricultural trade, but we obviously do not endorse the means by which Brazil is attempting to obtain changes to WTO-consistent US support measures for upland cotton. Brazil seeks to impose disciplines and achieve results through this litigation that were not agreed in the Uruguay Round through negotiation.

2. Brazil suggests that whether a Member's measures are in breach of the Peace Clause should be judged by comparing the *aggregate outlays* that may be *attributed* to a commodity to the aggregate outlays that were made during the 1992 marketing year that, again, may be attributed to that commodity. Brazil's erroneous analysis stems from three interpretive missteps.

3. First, with respect to measures currently in effect, Brazil mistakenly suggests that support under previous measures in past years is relevant to the Peace Clause comparison. The proviso, however, is written in the present tense and thus, with respect to measures *currently* in effect, calls for a determination of the support that challenged measures *currently* grant. Brazil *nowhere* explains how the support in any previous years is relevant to the present-tense criterion that Peace Clause-exempted measures "do not grant support" in excess of a certain level. In fact, Brazil's analysis of the ordinary meaning and context of the phrase "grant support" assigns no meaning to Members' choice of verb tense.

4. Second, Brazil misunderstands the support that is relevant to the Peace Clause comparison because it misreads the phrase "support to a specific commodity". Brazil and New Zealand have asserted that, had Members intended for the phrase "support to a specific commodity" to mean "product-specific support", they would have used the latter phrase. With respect, this pushes the general interpretive aid of reading different word choices to carry different meanings too far. It ignores the relevant task for an interpreter, which is to read the text according to its ordinary meaning, in context, and in light of the object and purpose of the agreement. The ordinary meaning of the phrase "support to a specific commodity," in the context of the Agriculture Agreement, is "product-specific support".

5. We note that the Agriculture Agreement suggests that domestic support consists, in part, of product-specific and non-product-specific support. Brazil's interpretation of "support to a specific commodity," however, would apparently also capture "non-product-specific support". Absent a clear indication that such a contrary-to-logic result was intended, the interpreter should read "support to a specific commodity" to exclude "non-product-specific support". We note that the Agriculture Agreement suggests that domestic support consists, in part, of product-specific support and non-product-specific support. Brazil's interpretation of "support to a specific commodity", however, would apparently also capture "non-product-specific support". Absent a clear indication that such a contrary-to-logic result was intended, the interpreter should read "support to a specific commodity" to exclude "non-product-specific support".

6. Third, Brazil ignores the way in which the United States "decided" (that is, "determined" or "pronounced") the product-specific support for upland cotton during the 1992 marketing year. As

Brazil explained in its first submission, the Peace Clause text resulted from the EC's desire to protect from challenge measures "decided" in 1992 for purposes of CAP reform, rather than support "provided" during marketing year 1992. That is precisely the approach the United States suggests: examine the product-specific support "decided" during marketing year 1992 and compare it to the product-specific support that measures currently in effect grant. Brazil fails to explain to the Panel how US measures *actually* decided support during the 1992 marketing year in favour of Brazil's pre-baked conclusion that the "term 'decided during the 1992 marketing year' requires an examination of the *amount or quantity of support* . . . for a specific commodity that a WTO Member 'decided' to provide during the 1992 marketing year". In fact, US measures "decided" support in the 1992 marketing year by ensuring upland cotton producer income at a rate of 72.9 cents per pound. Brazil nowhere explains how US domestic support measures could have "decided" the amount of outlays since those outlays resulted from the difference between the income support level and world prices during Marketing Year 1992 beyond the US Government's control.

7. Brazil has argued that the US approach would create an annual "statute of limitations" for the applicability of the Peace Clause and that the problem with this approach is budgetary outlays are not known until after a given marketing year is completed. This comment, rather, points out the difficulties of *Brazil's* approach that *only* budgetary outlays may be examined under the Peace Clause. That is, Brazil effectively concedes that under *its* approach there would be no certainty for Members whether measures are exempt from actions. For example, it would be difficult to know whether budgetary outlays under the 2002 Act exceeded 1992 outlays as of Brazil's panel request in February 2003.

8. With respect to US direct payments, which the United States believes are "green box" measures, Brazil argues that these payments do not satisfy the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production" under the first sentence of paragraph 1 of Annex 2. However, the text of Annex 2 indicates that "domestic support measures" shall be deemed to have met this "fundamental requirement" if the measures "conform to the . . . basic criteria" of the second sentence, plus any applicable policy-specific criteria, by beginning the second sentence with "accordingly". This interpretation is supported by relevant context in the Agreement; as the European Communities notes in its third party submission, Articles 6.1, 7.1, and 7.2 refer to the measures "which are not subject to reduction commitments because they qualify under the *criteria* set out in Annex 2".

9. In addition to the basic criteria in paragraph 1, US direct payments must also conform to the five "policy-specific criteria and conditions" set out in paragraph 6 of Annex 2. Brazil brings forward two arguments that direct payments do not satisfy the criterion under paragraph 6(b) of Annex 2 that the amount of payments not be related to, or based on, production undertaken in any year after the base period. First, Brazil argues that by eliminating or reducing payments if recipients harvest certain fruits or vegetables, payments are related to production in a year after the base period. However, no particular type of production is required in order to receive such payments – indeed, no production is necessary at all. Brazil's argument, moreover, proves too much. Under Brazil's analysis, *any* limitation on a producer's choices in a year after the base period that would alter the amount of payment would be inconsistent with paragraph 6(b). However, a requirement that a recipient of direct payments produce *nothing at all* (or see the payment reduced or eliminated) *would* link the amount of payment to the type or volume of production in the current year. Such a requirement would also *ensure* that such payments meet the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production" because there would be no production at all. Thus, under Brazil's analysis, paragraph 6(b) would *prevent* a payment that would demonstrably achieve the "fundamental requirement" of Annex 2. This result is not required by the text of paragraph 6(b) and should be avoided.

10. Second, Brazil argues that direct payments are based on production in a year after the base period because once one type of direct payment to producers under Annex 2 has been made, *all*

subsequent measures providing direct payments must be made with respect to the same base period. The Annex 2 text does not support such a reading, however. Annex 2 says that "[d]omestic support measures for which exemption from the reduction commitments is claimed" shall meet the fundamental requirement of the first sentence through the relevant basic and policy-specific criteria of the second sentence. For example, in the case of decoupled income support, the particular "domestic support measure" must meet "policy-specific criteria and conditions as set out" in paragraph 6. Paragraph 6(a), (b), (c), and (d) relate "such payments" to "a defined and fixed base period". Thus, payments with respect to a given "domestic support measure for which exemption from the reduction commitments is claimed" must satisfy conditions relating to "*a* defined and fixed base period". There is no textual requirement that *all* domestic support measures for which exemption from the reduction commitments is claimed utilize the *same* "defined and fixed base period". Brazil also reads paragraph 6 as though the text were "*the* defined and fixed base period". However, this is not what the text says nor what the negotiators agreed.

11. Brazil and the rest of the Cairns Group seek to address this very issue by proposing in the ongoing agriculture negotiations that Annex 2, paragraph 6, be amended to change the reference from "a defined and fixed base period" to "a defined, fixed *and unchanging historical* base period". The revised Harbinson text, in Attachment 8, incorporates this Cairns Group proposal by proposing adding to paragraphs 5, 6, 11, and 13 of Annex 2 the text: "Payments shall be based on activities in a fixed and *unchanging historical* base period." Again, Brazil is seeking to gain through litigation what it has not yet gained through negotiation.

12. The Step 2 programme has been constructed and implemented in a manner to support the price paid to US upland cotton producers by purchasers of their product. Step 2 is a single programme that provides for payments on all sales of all upland cotton produced in the United States in a given marketing year – whether those sales are for export or for domestic consumption. Step 2 payments are provided to merchandisers or manufacturers who use upland cotton as they represent the first step in the marketing chain where these payments could be made and have the greatest impact on producer prices.

13. The authorizing statute plainly does not state that the Step 2 payment is contingent upon export. The statute provides for Step 2 payments to a class of eligible users who constitute the entire universe of potential purchasers of upland cotton from producers. Payment occurs upon demonstration of the requisite use of the cotton. Unlike the facts of *United States - FSC (Recourse to Article 21.5)* , the Step 2 subsidy involves a universally available subsidy on sales of one agricultural product produced entirely in the United States, not tied to exportation or foreign commerce. Stated most simply, US upland cotton does *not* have to be exported to receive the payment. Assuming the conditions in the payment formula are met, all US upland cotton is sold with an entitlement to the Step 2 subsidy, whether it leaves the United States or is consumed there.

14. For nearly 15 years before the inception of obligations under the Agreement on Agriculture, as well as since that time, the core features of the two main agricultural export credit guarantee programmes of the United States (GSM-102 and GSM-103) have remained substantially the same. They are well-known and well-established export credit guarantee programmes, specifically discussed by negotiators during the Uruguay Round, as well as in the OECD and in the current Doha Round.

15. Article 9.1 of the Agriculture Agreement identifies and lists specific export subsidy programmes, also well-known to the negotiators, who wanted to assure that such specific practices were embraced within the definition of an export subsidy for purposes of the Agreement on Agriculture. Other export subsidies are captured within the anti-circumvention provision of Article 10.1. In contrast, export credit guarantees were not included in either Article 9.1 or 10.1. Instead, as part of the balance struck in the Uruguay Round, negotiators opted to extend the negotiations on this subject but determined to hold Members to a commitment that if and when internationally agreed disciplines emerged, the United States, like all other WTO Members, could

only grant export credit guarantees in conformity with such disciplines. To do otherwise would at that time constitute a violation of the Member's obligations under the Agreement on Agriculture.

16. Article 10.2 expresses the two commitments of the Members in this regard: (1) to engage in such negotiations notwithstanding the conclusion of the Uruguay Round and (2) upon development of internationally agreed disciplines to render them WTO commitments through the portal of Article 10.2. Article 10.2 does not state that export credit guarantees shall be subject to such future negotiated disciplines *in addition to* the anti-circumvention provisions of Article 10.1. To the contrary, Article 10.2 and the reference to export credit guarantees is juxtaposed to Article 10.1 to reflect the intention of the drafters to distinguish export credit guarantee programmes from other programmes that otherwise would be export subsidies subject to Article 10.1.

17. For the foregoing reasons and those set out in our first written submission, the United States believes that US non-green box measures are exempt from actions pursuant to Agriculture Agreement Article 13(b)(ii); US direct payments are exempt from actions pursuant to Agriculture Agreement Article 13(a)(ii); and US export credit guarantee programmes for upland cotton and Step 2 payments are consistent with our WTO obligations.

# ANNEX C-4

## EXECUTIVE SUMMARY OF THE CLOSING STATEMENT OF THE UNITED STATES AT THE FIRST MEETING OF THE PANEL WITH THE PARTIES

1. On the US requests for preliminary rulings, the Panel expressed some interest in the question of what prejudice would result to the United States if we were forced to defend export credit guarantees with respect to commodities other than upland cotton. First and foremost, the United States would have lost the benefit of consultations on these measures. Consultations serve a number of important functions, including helping the parties to understand each others' concerns and aiding in efforts to resolve the dispute. The DSU affirms the importance of consultations and requires that a Member cannot proceed to a panel unless the Member has consulted on that measure.

2. Moreover, to require the United States to address Brazil's allegations on these measures would impose additional burdens on the United States and detract from the time and resources available to respond for those measures that *are* within the terms of reference. The United States has export subsidy reduction commitments with respect to 12 commodities. Each such commodity is therefore subject to individual Peace Clause analysis under Article 13(c). In addition, under Brazil's approach, the type of analysis the United States has offered for upland cotton concerning item (j) of the Subsidies Agreement would be appropriate for all commodities subject to the coverage of the Agriculture Agreement. This would necessitate a commodity-by-commodity analysis of the export credit guarantee programmes, as applied, concerning premiums and long-term operating costs and losses (if any).

3. But in the end, the issue of prejudice to the United States does not figure in the question of whether a measure is within the Panel's terms of reference. It is *that* question that underlies the United States' preliminary ruling requests.

4. First, the United States has requested that the Panel find that export credit guarantee measures relating to other eligible agricultural commodities are not within the Panel's terms of reference. While Brazil's *panel* request *did* refer to "export credit guarantees . . . to facilitate the export of US upland cotton and other eligible agricultural commodities," its *consultation* request did not. That consultation request nowhere included the "other eligible agricultural commodities" language, nor did Brazil include these measures in its statement of available evidence. Thus, those measures on other eligible agricultural commodities were not part of the "measures at issue" that Brazil identified in its consultation request as it is required to do under DSU Article 4.4. Contrary to Brazil's statement a few moments ago, the United States and Brazil never consulted on export credit guarantees on commodities other than cotton – not once and certainly not three times. Brazil said as much on the first day of the first panel meeting when it acknowledged that the United States told Brazil at the first consultation that its questions were beyond the scope of the consultations.

5. On the question whether the export credit guarantee programmes were one measure or multiple measures: There is no reason why export guarantees for multiple products cannot be multiple measures. Under DSU Article 4.4, it is incumbent upon Brazil to identify in its consultation request "the measures at issue." Here, Brazil identified the measure as the "export credit guarantees . . . to facilitate the export of US upland cotton," and the United States may, and did, rely on that consultation request (including the attached statement of evidence) for notice.

6. For example, if a Member banned imports of all animal products for a stated health reason, and another Member filed a consultation request on the ban solely with respect to imports of beef, that complaining Member could not then expand the scope of the dispute through its written consultation questions or its panel request to challenge that ban with respect to other affected agricultural commodities. This is, however, what Brazil is attempting to do here.

7. Brazil also relies on footnote 1 of its consultation request, which refers to an explanation "below". Such an explanation expanding the scope of the request to include "other eligible agricultural commodities" is *not* found in the consultation request. DSU Article 4.4 requires Brazil to provide "an identification of the measures at issue," not a cryptic reference that is not explained further. Despite notice from the United States and despite ample opportunity to submit a new consultation request, Brazil never did so. Therefore, export credit guarantee measures relating to eligible US agricultural commodities other than US upland cotton were not the subject of consultations and pursuant to DSU Articles 4.4, 4.7, and 6.2 do not form part of the Panel's terms of reference.

8. With respect to production flexibility contract payments and market loss assistance payments, we have explained that these payments were completed, the programmes terminated, and the statutory instruments providing them were superseded before Brazil's consultation request was filed. The measures that Brazil challenges are subsidies or payments provided by these programmes. The laws authorizing these payments designated that each such payment was *allocated* to a particular crop or fiscal year. Thus, pursuant to the 1996 Act, the last production flexibility contract payment for fiscal year 2002 was made no later than the end of fiscal year 2002. As Brazil states in its first submission, "[w]ith the passage of the new FSRI Act in May 2002, PFC payments were discontinued". The last market loss assistance payment was made with respect to the 2001 marketing year (1 August 2001-31 July 2002) pursuant to legislation enacted on 13 August 2001. Because the relevant fiscal year and the relevant marketing year, respectively, had been completed by the time of Brazil's consultation and/or panel requests, these measures cannot have been consulted upon within the meaning of DSU Article 4.2 *nor* have been "measures at issue" within the meaning of DSU Article 6.2. They therefore do not fall within the Panel's terms of reference. Brazil's suggestion that Articles 7.2 to 7.10 of the Subsidies Agreement should supersede the DSU provisions concerning this Panel's terms of reference is novel. Preliminarily, we note that Article 7.4 does mention the Panel's terms of reference, but only in the context of setting a 15-day deadline for establishing them, as opposed to the time line under DSU Article 7.1.

9. Finally, with respect to subsidies provided under the Agricultural Assistance Act of 2003 – the cottonseed payment – these are measures that were not even in existence at the time of Brazil's panel request. As the cottonseed payment had not been made (implementing regulations were not even issued until 25 April 2003) and the legislation authorizing the payments had not been enacted at the time of Brazil's panel request, this subsidy or measure was not consulted upon and could not have been a measure at issue between the parties. Therefore, the United States requests that the Panel make preliminary rulings that these three sets of measures are not within its terms of reference.

10. To summarize briefly where our discussions on the Peace Clause have brought us: Brazil suggests in *this* dispute that the word " actions" in the phrase "exempt from actions" only refers to "collective action" by the DSB. However, we note that Brazil's interpretation runs directly contrary to the view it expressed in its consultation request in the dispute *European Communities – Export Subsidies on Sugar* (WT/DS266/1). With respect to Article 13(c)(ii), which uses the same phrase "exempt from actions" at issue in this dispute, Brazil wrote: "In respect of the claims based on Article 3 of the SCM Agreement, because the export subsidies provided by the EC on sugar do not conform fully to the provisions of Part V of the Agreement on Agriculture, those export subsidies are not *exempt from challenge* by virtue of Article 13(c)(ii) of the Agreement on Agriculture." That is, in that WTO document Brazil does *not* read the phrase "exempt from actions" to mean "exempt from remedies" or "exempt from collective action by the DSB" but rather "exempt from *challenge*".

Brazil's interpretation in that WTO consultation request could only result if "exempt from action" in the Peace Clause means "not subject to" the "taking of legal steps to establish a claim" – as the United States has been contending in this dispute. We submit that *this* interpretation by Brazil is correct.

11. The Peace Clause – in Brazil's words – "exempt[s] from challenge" certain measures. It follows that the Peace Clause is not an affirmative defence but rather a threshold issue for Brazil in this dispute. As Brazil implicitly recognized in both its panel and consultation requests, to even reach the point where it will, as the complaining party, be allowed to pursue its substantive claims, Brazil must first demonstrate that the Peace Clause does not exempt US measures from action – that is "from challenge".

12. On US direct payments, which the United States believes are "green box" measures because they satisfy the criteria set out in Annex 2: As a question from the Chair to Brazil suggested, assessing the conformity of a claimed green box measure against the "fundamental requirement" of the first sentence of paragraph 1 would be a difficult, if not impossible task, for a Panel. Members foresaw the problem and therefore provided guidance on how a measure would fulfill that fundamental requirement – that is, if the measures "conform to the . . . basic criteria" of the second sentence plus any applicable policy-specific criteria, they shall be deemed to have met the fundamental requirement.

13. With respect to the criterion in paragraph 6(b) that the amount of decoupled income support payments not be based on, or linked to, production undertaken in any year after the base period, this provision need not and should not be read as Brazil suggests. The text supports a reading that a Member may not base or link payments to production requirements. The EC endorsed this view this morning. US direct payments require no particular type of production – indeed, no production is necessary at all. As we have suggested, Brazil's reading of paragraph 6(b) would prevent a Member from prohibiting a recipient from producing crops – that is, would prevent a measure that bases or links payments to a type or volume of production: none at all. If there is no production at all as a result of the measure, such a measure necessarily can have no "trade-distorting effects or effects on production". Thus, Brazil's reading of paragraph 6(b) would *preclude* a Member from establishing a measure that meets the "fundamental requirement" of Annex 2. Paragraph 6(b) need not and should not be read in opposition to that fundamental requirement. In the context provided by the first sentence of Annex 2, then, paragraph 6(b) should be read as establishing that a Member may not base or link payments to requirements to produce any crop in particular – again, US direct payments require no upland cotton production and do not require any production at all.

14. Brazil has repeatedly raised the spectre of unchecked US domestic subsidies should the Panel agree with the US interpretation of the Peace Clause. Brazil's fears are groundless. Of course the United States may not provide subsidies without any limit. US subsidies are disciplined in several ways, and the US has deliberately kept itself within those limits. There are two main disciplines that apply. The first is the US final bound commitment level under the Current Total Aggregate Measurement of Support. The second, as we have discussed at length, is the Peace Clause itself and its effective limitation to a level of producer support of 72.9 cents per pound. The United States has stayed within the boundaries of those limits despite, as outlined in Brazil's filings, pressure to do otherwise. We are entitled to the benefit of that compliance.

15. We can understand that Brazil might feel that these limits are not enough. New limits may be negotiated in the ongoing agriculture negotiations, in which the United States shares many of the same goals as Brazil. Until that happens, however, Brazil may not seek to overturn the balance of rights and obligations negotiated and agreed by Members in the Uruguay Round. Brazil's Peace Clause interpretation would do violence to the text of the Agriculture Agreement and would penalize the United States for deciding support to upland cotton producers within the limits set by the Agreement. We therefore ask the Panel to find that Brazil has not established that US domestic

support measures breach the Peace Clause and that such measures are therefore exempt from Brazil's action at this time.

# ANNEX C-5

## ORAL THIRD PARTY COMMUNICATION BY THE ARGENTINE REPUBLIC

24 July 2003

## I. INTRODUCTION

1. The Argentine Republic thanks the Panel for the opportunity to present its views as a third party to these proceedings and, in pursuant to its Submission dated 15 July[1], will comment on the claims contained in the First Written Submission of the United States, dated 11 July.

2. In this connection, Argentina will comment more particularly on:

(a) The US interpretation of the provisions of the Peace Clause, particularly in Article 13(b)(ii);

(b) the US interpretations regarding Annex 2 of the Agreement on Agriculture and, lastly;

(c) the US interpretation whereby Article 10.2 of the Agreement on Agriculture excludes export credit guarantees from the general export subsidy disciplines in the Agreement on Agriculture and the Agreement on Subsidies and Countervailing Measures.

## II. UNITED STATES CLAIMS

(a) Interpretation of the Peace Clause

3. Argentina will discuss what it regards as a mistaken US interpretation of the terms of the Peace Clause, particularly in Article 13(b) of the Agreement on Agriculture[2], whereby it draws the conclusion – equally mistaken – that its domestic support measures are exempt from the measures based on Article XVI.I of the GATT 1994 or Articles 5 and 6 of the Agreement on Subsidies (ASCM).

*(i) Grant support to a specific commodity*

4. First, the United States mistakenly interprets the phrase "grant support to a specific commodity".

5. In paragraph 71 of its Submission, the United States says that counter-cyclical payments and crop insurance payments do not constitute "support to a specific commodity" because they are not linked to specific commodity but are based on *historical* acreage and payment yields.[3]

6. The United States contends that "support to a specific commodity", in Article 13(b)(ii), means "product-specific support". Its argument is thus based on trying to incorporate the phrase "product-

[1] "Third party Submission by Argentina", paragraph 2.
[2] First Written Submission of the United States of America, 11 July 2003, Section III.D.
[3] *Ibid.*, paragraph 115.

specific support" into Article 13(b)(ii) when the phrase is not to be found in the wording of the article.[4]

7. If the negotiators had meant to say that "product-specific support" was exempt, they would have introduced that phrase into the wording of the article, but they did not do so.[5] Hence, AA Article 13(b)(ii) refers to a Member's non-Green Box domestic support measures, including domestic support measures granted only to individual specific products and also those relating to several specific products.

8. In other words, "support to a specific commodity", in Article 13(b)(ii), includes any non-Green Box domestic support measure providing identifiable support to an individual commodity, regardless of whether the measure can provide support to a larger number of commodities.[6]

9. In its argument, the US ignores the most relevant context of Article 13(b)(ii), namely the chapeau, which refers not to "product-specific support" but to "domestic support measures" in general. This means that the measures which, under Article 13(b)(ii) are relevant in determining whether a Member has granted support to a specific commodity in excess of that decided during the 1992 marketing year necessarily includes non-product-specific domestic support.

10. The US interpretation would mean no claim could be made against any Amber Box domestic support measure granted to more than one commodity. The US argument would thus allow Members to make enormous increases in domestic support to a relatively small number of commodities (such as the ten crops covered by the counter-cyclical payments programme), something which is inconsistent with the object and purpose of the AA, namely, cutting down the level of domestic support, as is apparent from the Preamble.[7]

11. Argentina considers that "support to a specific commodity", in Article 13(b)(ii), indicates that, in calculating the domestic support granted by a Member, the support must relate to a particular or precise commodity, regardless of whether the support is product-specific or specific to more than one product.[8]

12. Contrary to the US suggestion, the phrase "support to a specific commodity" does not mean "support exclusively or only" to a specific commodity. The fact that, through the same domestic

---

[4] According to the Appellate Body in the *India-Patents Case* (WT/DS50/AB/R, adopted 16 January 1998, paragraph 45):

"*The duty of a treaty interpreter is to examine the words of the treaty to determine the intentions of the parties. This should be done in accordance with the principles of treaty interpretation set out in Article 31 of the Vienna Convention. But these principles of interpretation neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended".* (Emphasis added)

[5] "*… had Members intended to exclude non-product specific support they would surely have said so", "Third Party Submission of New Zealand*", 14 July 2003, paragraph 2.21.

[6] In this respect, Argentina agrees with New Zealand: "*… New Zealand sees no basis on which to suggest that support to a specific commodity should be excluded simply because other commodities may receive similar support*". Third-party submission of New Zealand, 15 July 2003, paragraph 2.23.

[7] *"... the above-mentioned long-term objective is to provide substantial progressive reductions in agricultural support and protection sustained over an agreed period of time, resulting in correcting and preventing restrictions and distortions in world agricultural markets"* (Agreement on Agriculture, third preambular paragraph).

[8] Australia's Third Party Submission to the Panel, 15 July 2003, paragraph 23: "*... the ordinary meaning of this phrase* ("To a specific commodity"), *read in its context and in light of the object and purpose of the Agreement on Agriculture, is support granted to an individual agricultural commodity covered by AA Annex 1, such as upland cotton, whether through product specific, or non-product specific, support*".

support measures, the United States grants support to different products does not cancel out the fact that part of the support is granted to one specific product.

*(ii) Support "decided during the 1992 marketing year"*

13. After analysing the phrase "*that decided during the 1992 marketing year*", the United States reaches the conclusion that the phrase does not relate to support actually provided to a specific product during that year[9], but to support *determined* during the 1992 marketing year and that it consisted in "deciding" or "determining" a level of income support for cotton producers of US$0.72 per pound.

14. With this interpretation, the United States can get around the need to respond to Brazil's contention[10] - supported by Argentina[11] - that the US budgetary outlays on domestic support for the cotton sector for the 1999, 2000, 2001 and 2002 marketing years were far in excess of the US$1,994 million granted in 1992.

15. Argentina considers that, under Article 13(b)(ii), the word "decided" means a decision to make payments. The US argument ignores the fact that the text first uses the term "grant support" with reference to the support granted or provided to a specific commodity during the period of implementation (1995-2003). The phrase "grant support", however, is necessarily tied in with the support "decided during the 1992 marketing year"; otherwise, there would be no basis for comparison if one case involved the support granted and the other involved only the support scheduled.

16. In this connection, Argentina contends that the word "decided", in Article 13(b)(ii), should not be interpreted in such a way that the per pound guaranteed price for commodity producers (scheduled support) is the factor to be taken into consideration in determining the amount of support granted. If the criterion advanced by the United States were accepted, it would mean that an unlimited amount of domestic support could be granted to each product provided the total AMS is not exceeded.

17. In other words, the comparison required in Article 13(b)(ii) necessarily entails comparing the same type of support in each of the periods in question (period of implementation versus 1992 marketing year), in other words "comparing the comparable". The "support granted" in each marketing year during the period of implementation must necessarily be tied in with the budgetary outlays in those years.

18. In this respect, the definition of "granted" formulated by the Appellate Body in the "Brazil-Aircraft" case is relevant, namely that it is "*something actually provided*" and, thus, "*to determine the amount of export subsidies "granted" in a particular year, we believe that the actual amounts provided by a government, and not just those authorized or appropriated in its budget for that year, is the proper measure … Therefore, … we believe that the proper reference is to actual expenditures by a government …*".

19. Similarly, Argentina considers that, under AA Article 13(b)(ii), the definition of the term "support granted" must refer to a government's actual expenditures and not to a scheduled level of costs or a rate of support per unit of production.

20. Accordingly, Argentina takes the view that the support "decided during the 1992 marketing year" refers to payments actually made during that marketing year.

---

[9] First Written Submission of the United States of America, paragraph 94: "… *no amount of outlays was 'decided' … during the 1992 marketing year …*".

[10] First Written Submission by Brazil, paragraphs 144-149.

[11] Third Party Submission by Argentina, paragraphs 64-65.

*(iii) The time dimension of Peace Clause protection*

21. In contrast to the US interpretation, Argentina contends that the domestic support measures granted in any of the marketing years in the period from 1995 to 2003 are relevant in determining compliance with Article 13(b)(ii). In this connection, we consider that any injurious effects of the subsidies are extended time-wise.

22. An interpretation like the one postulated by the United States would seriously restrict the possibility of questioning whether such subsidies are consistent with ASCM Articles 5 and 6, while effects causing injury, nullification or impairment or serious prejudice can be linked to domestic support measures granted in previous marketing years.

(b) Annex II of the Agreement on Agriculture

*(i) Interpretation of paragraph 1*

23. The United States claims that its direct payments programme is in conformity with AA Annex II[12] and, therefore, is exempt from measures under the protection afforded by Article 13(a). In reaching this conclusion, however, the United States makes a mistaken interpretation of paragraph 1 of AA Annex II.

24. The United States maintains that the structure of this provision, where the second sentence starts with the word "Accordingly", suggests that measures that conform to the two basic criteria set out in paragraph 1(a) and (b), plus the policy-specific criteria and conditions set out in the subsequent paragraphs of Annex II are designed to meet the "fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production"[13].

25. Argentina considers this interpretation to be erroneous, since the text of the first sentence establishes a clear obligation that the domestic support measures to be exempted from the reduction commitments "… *shall meet the fundamental requirement that they have no … trade-distorting effect or effects on production …*". In Argentina's opinion, the language of this first sentence establishes a general requirement governing the application of all Green Box measures.

26. The structure of paragraph 1 of AA Annex 2 thus creates four types of obligation:

(i) The fundamental requirement of no, or at least minimal, trade-distorting effects or effects on production;

(ii) the support given in a government-financed programme does not entail transfers from consumers;

(iii) the support does not have the effect of providing producers with price support; and

(iv) the policy-specific criteria and conditions set out in paragraphs 2 to 13 of Annex 2 are also taken into account.

27. In this connection, Argentina believes that Green Box measures must respect the guiding principle of avoiding trade-distorting or production effects or at most minimal effects. A measure that meets the two basic criteria set out in paragraph 1(a) and (b), plus the policy-specific criteria and conditions set out in the subsequent paragraphs of Annex 2 could also be at variance with the general

[12] First Written Submission by the United States of America, paragraph 53.
[13] *Ibid.,* paragraph 50.

principle. The opposite interpretation would render meaningless the first sentence of paragraph 1 of Annex 2, which the text describes as a "fundamental requirement".

28. Therefore, it is Argentina's view that, however much the United States claims that its direct payments programme conforms to the requirement established in the second sentence of paragraph 1 of Annex 2[14], since it does not meet the fundamental requirement established in the first sentence it cannot be viewed as a Green Box programme.

29. In this respect, Argentina concurs with Australia and New Zealand that the first sentence of Annex 2 paragraph 1, imposes a stringent standard by requiring that the measures to be exempted from reduction commitments must, as a primary or essential condition, not artificially alter trade or production.[15]

30. Consequently, if a domestic support measure leads to a higher level of production of trade in a particular product or group of products, the measure does not meet the standard established in Annex 2, Article 1.

31. It should be emphasized that the US has in no sense answered the statements by Brazil in paragraphs 183 to 191 of its Submission concerning the trade-distorting and production effects of the direct payments programme, according to studies made by the US Department of Agriculture's own economists.

32. In other words, because the direct payments programme does have trade-distorting and production effects, it cannot be included among the domestic support measures exempted from reduction commitments.

*(ii) Interpretation of paragraph 6(b)*

33. The United States maintains that the Production Flexibility Contract Payments (PFC) and Direct Payments programmes are not tied in with production and, therefore, are not Green Box domestic support.

34. Argentina considers that the alleged "flexibility" of producers to plant different crops is in fact seriously restrictive. The amount of payments made depends on the type of production. Indeed, particular crops (fruits, vegetables, etc.) are excluded from these programmes. The effect of this is to channel production to the remaining crops, which do benefit from the programmes. This shows that the amount of the payments made is linked to the type of product sown, as Argentina pointed out in its Third Party Submission[16] and, therefore, the payments are not in conformity with AA Annex 2 paragraph 6(b).

(c) Article 10.2 of the Agreement on Agriculture does not exclude export credit guarantees from the general export subsidy disciplines of the Agreement on Agriculture and the Agreement on Subsidies.

---

[14] *Ibid.*, paragraphs 64-68.

[15] Australia's Third Party Submission to the Panel, 15 July 2003, paragraph 31: "… *AA Annex 2.1 imposes a stringent standard. Annex 2.1 requires that such measures must, as a primary or essential condition, not "bias" or "unnaturally alter trade or production …*"; Third Party Submission of New Zealand, 15 July 2003, paragraph 1.08: " … *In New Zealand's view it is critical that the integrity of the disciplines on "Green Box" measures are not weakened or their legitimate purpose undermined through the inclusion of measures that fail to meet the strict requirements of Annex 2, including the fundamental criterion that such measures are non-trade or production distorting …*".

[16] Third Party Submission by Argentina, 15 July 2003, paragraphs 54-57.

35. The United States asserts that the text of Article 10.2 of the Agreement on Agriculture permits Members to continue export credit guarantee programmes unaffected by export subsidy disciplines,[17] since the text reflects the fact of that, during the Uruguay Round, Members came to no agreement on the substantive disciplines applicable. In other words, the United States contends that the actual text of Article 10.2 of the Agreement on Agriculture indicates that the export credit guarantee programmes are not subject in any way to the Agreement's export subsidy disciplines.[18]

36. In this regard, Argentina would point out that the fact that WTO Members are negotiating disciplines in order to implement Article 10.2 does not in any way support the US reading to the effect that Article 10.2 excludes export credit guarantees from the general disciplines on export subsidies.[19] A commitment "to work towards the development" of specific international disciplines on the granting export credits, export guarantees or insurance programmes is not the same as excluding them from the general disciplines on export subsidies. If that had been the intention, then the negotiators would have expressly said so.

37. Contrary to the US contention, Argentina does not find any indication of this type in the wording of Article 10.2. The fact that the negotiators did not include an express reference to the effect that export credit guarantees are not included in the definition of export subsidies or are not subject to the disciplines established in AA Articles 3.3, 8 or 10.1 means that such disciplines apply to export credit support measures.

38. In other words, in conformity with the wording of AA Article 10.2, export credit guarantees are not exempt from the general disciplines of the Agreement on Agriculture, and where the measures are not in conformity with that Agreement, from the disciplines of the Agreement on Subsidies.

39. This interpretation is reinforced by the immediate context and the object and purpose of AA Article 10.2. Paragraph 2 forms part of Article 10, which is entitled *"Prevention of Circumvention of Export Subsidy Commitments"*. Paragraph 1 of Article 10 establishes that export subsidies not listed in paragraph 1 of Article 9 *"… shall not be applied in a manner which results in … circumvention of export subsidy commitments …"*. This provision imposes disciplines on export credit guarantees, just as it imposes disciplines on the whole universe of export subsidies not covered by Article 9.1.

40. In turn, the object and purpose of AA Article 10 is to prevent any form of circumvention of export subsidy commitments.[20] Consequently, the US interpretation of Article 10.2 is completely at variance on the context of the provision and the object and purpose of AA Article 10, since it contributes to circumvention of the export subsidy commitment by excluding an entire category of export subsidies from the general disciplines.

41. Lastly, contrary to what the US maintains,[21] the fact that an export subsidy is not included in AA Article 9.1 does not mean that it is not an export subsidy, for Article 9.1 is not an exhaustive list,

[17] First Written Submission of the United States of America, paragraph 160.

[18] *Ibid.*, paragraph 164.

[19] Third Party Submission of Canada, 15 July 2003, paragraph 53: "*This provision (*Article 10.2) *sets out an intention on the part of Members to undertake further work regarding these measures – the simple fact of agreeing to do so, however, does not amount to a permission to use those measures to confer export subsidies without consequence and without limit. The US interpretation of Article 10.2 ignores the important context provided by Article 10.1. It also directly contradicts the stated object and purpose of Article 10 as a whole …"*. Similarly, in its Third Party Submission, New Zealand states: "*Nor does Article 10.2 in any way suggest that it provides an exception from the disciplines of Article 10.1…*", paragraph 3.15.

[20] Article 10.3 reverses the burden of proof in cases of export subsidies under the Agreement on Agriculture where exports are in excess of the reduction commitment level. Article 10.4 establishes disciplines on international food aid.

[21] First Written Submission of the United States of America, paragraphs 161-162.

as is evidenced by the wording of Article 10.1.[22] Nor does it mean that such an export subsidy is not subject to the export subsidy disciplines of the Agreement on Agriculture.

42. Argentina agrees with the European Committees[23] that Article 10.2 makes it clear export credit guarantees are not one of the types of export subsidy listed in Article 9.1 and, in that connection, Article 10.1 establishes that non-listed export subsidy must not be applied in a manner which results in circumvention of export subsidy commitments.

43. Hence, as the European Communities contend, wherever export credit guarantees are export subsidies not listed in Article 9.1, those guarantees could be applied in a manner which would result in circumvention of commitments and, therefore, would be prohibited under Article 10.1.

## III. CONCLUSION

44. In accordance with the foregoing, Argentina considers that the United States has mistakenly interpreted the provisions of the Peace Clause, in particular in Article 13(b)(ii), has failed to bear the burden of proving that the domestic support measures it granted to cotton during the 1999, 2000, 2001 and 2002 marketing years were not in excess of the support "decided during the 1992 marketing year".

45. Second, Argentina considers that the US interpretations regarding Annex 2 of the Agreement on Agriculture are mistaken and that, therefore, the Direct Payments and PFC programmes do not fall under the protection of Article 13(a) of the Agreement on Agriculture for Green Box measures.

46. Third, Argentina considers that the United States export credit guarantee schemes (GSM 102, 103 and SGCP) constitute export subsidies subject to the general export subsidy disciplines of the Agreement on Agriculture (Articles 3.3, 8 and 10.1) and the Agreement on Subsidies and Countervailing Measures (Article 3.1(a) and 3.2).

[22] Third Party Submission of Canada, 15 July 2003, paragraph 32; *"Article 9 of the Agriculture Agreement lists and describes certain export subsidies that are subject to reduction commitments. All other export subsidies fall within the scope of Article 10-1…*".

[23] First Third Party Submission by the European Communities, 15 July 2003, Section V.

# ANNEX C-6

## ORAL STATEMENT BY AUSTRALIA

24 July 2003

Mr Chairman, Members of the Panel,

1. I appreciate this further opportunity to present Australia's views on matters at issue in this dispute.

2. In this statement, I will provide some elaboration of Australia's views on the meaning of Article 13(b)(ii) of the *Agreement on Agriculture*. I will also address some of the matters raised in the First Written Submission of the United States and in the First Third Party Submission of the European Communities.

Mr Chairman, Members of the Panel,

3. I will begin with matters relating to the meaning of Article 13(b)(ii) of the *Agreement on Agriculture*.

4. As Australia noted in its Written Submission[1], the word "decided" appears twice in the operative provisions of the *Agreement on Agriculture* – in subparagraphs (ii) and (iii) of Article 13(b). Further, the immediate context for the word "decided" is exactly the same in each case: "provided that such measures do not grant support to a specific commodity in excess of that *decided* during the 1992 marketing year". Yet Article 13(b)(iii) deals with a completely different type of action: one based on non-violation or impairment under GATT Article XXIII:1(b).

5. Thus, Australia believes that it will be necessary for the Panel to consider two key threshold questions.

6. Firstly, is the meaning of the phrase "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year" the same in each of Article 13(b)(ii) and (iii)?

7. Australia recalls that the phrase, as well as draft text for what became Article 13, first appeared in the "Blair House Accord". Also included in the Accord were provisions concerning the *EEC – Oilseeds* dispute.[2]

8. In Australia's view, that dispute is crucially relevant to the interpretation of Article 13(b)(ii) and (iii).

9. Australia recalls that it clearly understood in the resumed Uruguay Round agriculture negotiations in 1993 that the words "decided during the 1992 marketing year" had been chosen to

[1] Third Party Submission of Australia, paragraph 26.

[2] *European Economic Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins ("EEC – Oilseeds")*, Report of the Panel, adopted 25 January 1990, BISD 37S/86, and *Follow-Up on the Panel Report "European Community – Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins*, DS28/R, BISD 39S/91.

incorporate into the text of Article 13(b)(ii) and (iii) the sense of expectations of "conditions of price competition" as this had been interpreted and applied in the *EEC – Oilseeds* dispute.

10. The panel in *EEC – Oilseeds* described the purpose of GATT Article XXIII:1(b) in the following terms:

> … The panel noted that these provisions, as conceived by the drafters and applied by the contracting parties, serve mainly to protect the value of tariff concessions.[…] The idea underlying them is that the improved competitive opportunities that can legitimately be expected from a tariff concession can be frustrated not only by measures proscribed by the General Agreement but also by measures consistent with that Agreement. …[3]

11. That Panel went on to say:

> … The Panel considered that the main value of a tariff concession is that it provides an assurance of better market access through improved price competition. Contracting parties negotiate tariff concessions primarily to obtain that advantage. They must therefore be assumed to base their tariff negotiations on the expectation that the price effect of the tariff concessions will not be systematically offset. …[4]

12. In any case, having regard to the customary principles of interpretation, Australia considers that the phrase "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year" must have the same meaning in both Article 13(b)(ii) and (iii).

13. Thus, there is a second threshold question that the Panel needs to consider. That question is: could conditions of price competition for the purposes of a non-violation nullification or impairment claim be assessed solely on the basis of budgetary outlay figures, as argued by Brazil, or on the basis of a rate of payment, as argued by the United States? In Australia's view, both factors put forward by Brazil and the United States would properly form a part of that assessment, but not the whole.

Mr Chairman, Members of the Panel,

14. I would now like to comment on some matters raised in the First Written Submission of the United States.

15. Firstly, Australia disagrees with the United States' approach to interpreting the "peace clause" and the meaning of "exempt from action based on".[5]

16. If the United States' interpretation is correct and the WTO Agreement negotiators intended the interpretation offered by the United States, surely the negotiators would have included provisions clarifying how such situations should be resolved? At the very least, surely Article 13 of the *Agreement on Agriculture* would have been listed in the Special or Additional Rules and Procedures Contained in the Covered Agreements at Appendix 2 to the *Dispute Settlement Understanding*? Yet the negotiators did neither of these things.

17. The United States argues as well that its interpretation is supported by the fact that the peace clause applies "[n]otwithstanding the provisions of GATT 1994 and the Agreement on Subsidies and

[3] *EEC – Oilseeds*, paragraph 144.
[4] *EEC – Oilseeds*, paragraph 148.
[5] First Written Submission of the United States, paragraph 33.

Countervailing Measures".[6] However, the United States ignores that, for its argument to be valid, the peace clause would also have to apply "notwithstanding the provisions of the *Dispute Settlement Understanding*".

18. The United States argues too that Brazil is in error by asserting that the peace clause itself "provides no positive obligations".[7] In Australia's view, however, this argument confuses obligations and conditions: the United States is equating a binding requirement to act in a certain way with a prerequisite for the availability of a right or privilege. Article 13 of the *Agreement on Agriculture* does not of itself establish any binding requirements with which WTO Members are required to comply.

19. That confusion between rights and obligations continues when the United States argues that "Brazil's approach would produce bizarre results".[8] Indeed, the United States' arguments could be considered to confirm the nature of Article 13 as an affirmative defence. Had Brazil alleged a breach of the United States' obligations under Article 6, Brazil would have had the initial burden of making a *prima facie* case of inconsistency. Article 13, however, is a right or privilege available to the United States, provided that its measures fully conform to the relevant conditions. Thus, it is for the United States to demonstrate that it is entitled to invoke that right or privilege.

20. Secondly, the United States argues that "support to a specific commodity" is equivalent to "product-specific support".[9]

21. The United States asserts that the definition of Aggregate Measurement of Support – or AMS – at Article 1(a), and Article 6 concerning Domestic Support Commitments, provide relevant context. The United States asserts that because the calculation of AMS, and exemptions from Current Total AMS, differentiate between product specific and non-product specific domestic support, "support" in the context of Article 13(b)(ii) and (iii) means product-specific AMS.

22. Australia does not agree. AMS is defined by Article 1(a) to mean "the annual level of support … provided for an agricultural product in favour of the producers of the basic agricultural product". However, Article 13(b)(ii) and (iii) refer to "support to a specific commodity".

23. Had the negotiators intended that "support to a specific commodity" in the context of Article 13(b)(ii) and (iii) mean product-specific AMS only, they would have said so in the text. They did not. Further, the United States' argument ignores that a Member's reduction commitments include both product specific and non-product specific domestic support measures unless they are exempt from inclusion.

24. Thus, in Australia's view, "support to a specific commodity" means: all non-"green box" support that benefits a specific commodity, whether that support be through product specific, or non-product specific, programmes. Indeed, Australia believes that "support to a specific commodity" in the context of Article 13(b)(ii) and (iii) can include forms of support additional to those captured in an AMS calculation.

25. It follows, of course, that Australia considers – in the context of this dispute – that the portions of the direct payment and counter-cyclical payment programmes that benefit upland cotton should be included in the calculation of "support to a specific commodity" within the meaning of Article 13(b)(ii). Moreover, Australia notes that the counter-cyclical payment programme provides a

[6] First Written Submission of the United States, paragraph 39.
[7] First Written Submission of the United States, Paragraph 43.
[8] First Written Submission of the United States, paragraph 44.
[9] First Written Submission of the United States, paragraph 78.

target price of 72.4 cents per pound for upland cotton,[10] and that entitlements to "Step 2" payments and some other domestic support programmes are additional to the target price, as they were to the 1992 target price of 72.9 cents per pound.

26. Thirdly, the United States argues that direct payments under the 2002 Farm Act meet the criteria of Annex 2 Decoupled Income Support payments. Australia has already addressed the issue of planting restrictions on fruit and vegetables and wild rice in its Written Submission.

27. The United States argues that "eligibility for direct payments is defined by clearly defined criteria … in a defined and fixed base period" and that "payment yields and base acres are defined in the 2002 Act and fixed for the duration of the legislation".[11] The United States' interpretation means that a WTO Member could re-define and re-fix a base period every time it introduced new domestic support legislation. This cannot be a correct interpretation of the provisions of paragraph 6 of Annex 2 to the *Agreement on Agriculture*.

28. Fourthly, the United States argues that "a Member may choose to provide 'amber box' support in any … manner so long as that Member's Current Total AMS does not exceed … *[its]* commitment level".[12]

29. Australia disagrees. The United States' argument ignores that Article 13(b)(ii) does not exempt non-"green box" domestic support measures from actions based on Article 3 of the *SCM Agreement*. It also ignores the provisions of Article 21.1 of the *Agreement on Agriculture*. In an analogous situation in the *EC – Bananas* dispute, the Appellate Body said: "… the provisions of the GATT 1994 … apply … except to the extent that the *Agreement on Agriculture* contains specific provisions dealing specifically with the same matter".[13] The Appellate Body went on to say in that dispute:

> … [T]he negotiators of the *Agreement on Agriculture* did not hesitate to specify … limitations elsewhere in that agreement; had they intended to do so with respect to Article XIII of the GATT 1994, they could, and presumably would, have done so. …[14]

30. The Appellate Body's statement is equally applicable in the context of this dispute. Had the negotiators of the *Agreement on Agriculture* intended that non-"green box" domestic support measures be "exempt from actions based on" Article 3 of the *SCM Agreement*, they would have said so. The negotiators did expressly exempt export subsidies from actions based on SCM Article 3 to the extent that such export subsidies conformed fully to the provisions of Part V of the *Agreement on Agriculture*. In Australia's view, therefore, the omission from Article 13(b)(ii) of the *Agreement on Agriculture* of an express exemption from actions based on SCM Article 3 for local content subsidies has meaning.

31. Fifthly, the United States has requested that the Panel issue a preliminary ruling that Production Flexibility Contract and Market Loss Assistance payments are not within the Panel's terms of reference because these programmes have expired. The fact that a measure has expired cannot be sufficient to remove it from the Panel's purview. If the Panel were to grant the United States' request solely on that basis, it would mean that any Member could authorise WTO-inconsistent domestic support programmes through short-lived measures and avoid the consequences of such actions.

[11] First Written Submission of the United States, paragraph 67.

[12] First Written Submission of the United States, paragraph 144.

[13] *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, Report of the Appellate Body, WT/DS27/AB/R, paragraph 155.

[14] *EC – Bananas*, paragraph 157.

Mr Chairman, Members of the Panel,

32. The final matter on which I will comment today concerns the Third Party Submission of the European Communities and its arguments in relation to the interpretation of the first sentence of paragraph 1 of Annex 2 to the *Agreement on Agriculture*. The European Communities argues that the first sentence "simply signals the objective of Annex 2" and does not set out an independent obligation.[15]

33. That argument ignores the plain meaning of the text and renders the first sentence of paragraph 1 inutile, which of course a treaty interpreter may not do. If an exemption from reduction commitments is being claimed for any domestic support measures, the first sentence says they "shall meet the fundamental requirement that they have no, or at most minimal, trade-distorting effects or effects on production". As explained in Australia's written submission,[16] a fundamental requirement is a primary or essential condition. To interpret a "fundamental requirement" other than as a separate and independent obligation would be contrary to the plain meaning of the words and thus to the normal rules of treaty interpretation. The use of the words "shall meet" establishes an express obligation to comply with the specified condition that such measures not, or only minimally, bias or unnaturally alter trade or production.[17]

34. The European Communities argues that the word "accordingly" at the beginning of the second sentence of paragraph 1 links the 'fundamental requirement' in the first sentence with the 'basic criteria' in the second sentence" and thus makes clear that the fundamental requirement is complied with if the basic criteria in the second sentence and the policy-specific criteria set out in paragraphs 2 to 13 are met.[18]

35. However, the meanings for "accordingly" cited by the European Communities – "in accordance with the logical premises" and "correspondingly" – do not compel the interpretation it has offered. Moreover, there are other, equally valid meanings of the word "accordingly", provided by the same dictionary, such as "harmoniously" and "agreeably".[19]

36. It is possible to interpret the whole of paragraph 1 to Annex 2 so as to give effect to all of its provisions:

- domestic support measures for which exemption from the reduction commitments is claimed shall not, or shall only minimally, distort trade or production; and

- to the extent that measures of the type described in paragraphs 2 to 13 of the Annex are consistent and harmonious with that fundamental requirement and conform to the basic and policy-specific criteria as set out in the second sentence, they are exempt from reduction commitments.

37. Thus, notwithstanding that they may meet the basic and policy-specific criteria set out in paragraphs 1 and 6 of the Annex, a Member may not claim Decoupled Income Support payments as "green box" where those payments do not meet the fundamental requirement that they shall not, or shall only minimally, distort trade or production. Such could be the case, for example, where the level of Decoupled Income Support payments are sufficient to affect directly producer decisions concerning the allocation of economic resources to production of a particular commodity.

Mr Chairman, Members of the Panel,

38. Should you have questions on any matters concerning Australia's Written Submission and Oral Statement, I would be pleased to take these on notice and arrange for written answers to be provided.

Thank you, Mr Chairman, Members of the Panel.

# ANNEX C-7

## THIRD PARTY ORAL STATEMENT OF BENIN

24 July 2003

Mr. Chairman, members of the Panel,

It is my honour to represent Benin at this Third Party session today. The other two members of our delegation are Mr. Eloi Laourou of the Permanent Mission of Benin, and Mr. Brendan McGivern of White & Case, our legal adviser.

Although Benin acceded to the WTO back in 1996, this marks our first entry into WTO dispute settlement. We have been led to take this unprecedented step by the magnitude of the threat posed by US cotton subsidies, and the highly damaging effect that such subsidies have on the exports and economy of our country.

In our third party submission, we sought to provide to the Panel, at the earliest possible stage, information on the impact of the WTO-inconsistent US subsidies on Benin. In our view, this provides essential additional context to the issues facing the panel.

I do not intend to repeat what was in our submission, but it is worth highlighting some key facts.

The importance of the cotton sector to Benin can hardly be overstated. As noted in our submission, it accounts for 90 per cent of our agricultural exports, and three-quarters of our export earnings over the past four years. It generates 25 per cent of national revenues. In total, about a million people in Benin – out of a total population of six million – depend on cotton or cotton-related activities. Cotton plays a particularly important role in rural areas, where national poverty reaches its highest levels.

Mr. Chairman, Members of the Panel: the results of US cotton subsidies are readily apparent in West Africa. The United States provides huge, and WTO-inconsistent, subsidies for cotton. This leads to an oversupply of cotton on the world market, and a consequent decline in prices. Moreover, when cotton from Benin enters world markets, it must compete against massively-subsidized US cotton.

The dollar value of these subsidies dwarfs all other economy activity in Benin. As indicated in our submission, the subsidies paid by the United States to its 25,000 cotton farmers exceed the entire gross national income of Benin – and indeed the other countries in the region as well.

This demonstrates, rather dramatically, the impossibility of Benin ever competing with such subsidies. It is inconceivable that any developing country – let alone a least-developed country in West Africa – could ever match the virtually limitless resources of the United States.

Therefore, for us, the solution to this problem lies in the WTO. We ask simply that the United States respect its WTO obligations regarding subsidies.

Mr. Chairman, we agree with Brazil that the United States cannot invoke the peace clause to bar the claims that have been advanced in this dispute. We agree that the peace clause constitutes an

affirmative defence, and that the burden lies on the United States to demonstrate that has met all the conditions for the successful invocation of this affirmative defence. This it has failed to do.

In any event, whether the peace clause constitutes an affirmative defence, as we believe, or is part of the "balance of rights and obligations of Members", as the United States argues, the result is the same. Brazil's First Submission has established, clearly and unambiguously, that the United States is in breach of its WTO obligations. The US First Submission has provided no convincing rebuttal of Brazil's claims.

Mr. Chairman, Members of the Panel:

In its submission of July 11, the United States argued that the phrase "support to a specific commodity" should be understood to mean "product-specific support". However, the term "product-specific" does not appear in Article 13(b)(ii). If the drafters of the Agreement on Agriculture had wanted to use this term in Article 13(b)(ii), they obviously could have done so, as they did elsewhere in Agreement, such as in Article 6(4), or in Annex 3. Moreover, if the US interpretation were accepted, measures providing support to more than one commodity could not be challenged under Article 13(b)(ii). This elevates form over substance, and is contrary to both the language and the object and purpose of this provision.

Finally, the United States asks this Panel to exclude from its terms of reference certain measures that it argues were not the subject of consultations. We were not part of the consultations, and will not delve into the facts of this disagreement. However, Benin would recall the statement of the Appellate Body in *Brazil Aircraft* (DS46):

> "We do not believe….that Articles 4 and 6 of the DSU, or paragraphs 1 to 4 of the SCM Agreement, require a <u>precise and exact identity</u> between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel. As stated by the Panel, '[o]ne purpose of consultations, as set forth in Article 4.3 of the SCM Agreement, is to 'clarify the facts of the situation', and it can be expected that information obtained during the course of consultations may enable the complainant to focus the scope of the matter with respect to which it seeks establishment of a panel." [emphasis added]

Indeed, Benin notes that the United States itself took a similar approach in the recent *Japan – Apples* case. In the US replies to the Panel on October 16, 2002, USTR stated that:

> "[T]here is no requirement in the DSU to consult on a particular claim in order to include that claim in a panel request and to have such a claim form part of the panel's terms of reference. The purpose of consultations is to provide a better understanding of the facts and circumstances of a dispute; logically, then, a party may identify new claims in the course of consultations."

Although this US reply dealt with claims rather than measures, it is consistent with the ruling of the Appellate Body in *Brazil Aircraft* that panels should not require a "precise and exact identity" between the measures that were the subject of consultations and the measures identified in the panel request.

Mr. Chairman, Members of the Panel:

For Benin, this dispute is of critical national importance. As we stated in our Third Party submission, we are not seeking any special and differential treatment in the present case. We are simply asking that the United States abide by the disciplines that it agreed to at the end of the Uruguay Round.

Thank you for allowing Benin to present its views to the Panel. We would be pleased to reply to any questions you may have.

# ANNEX C-8

## THIRD PARTY ORAL STATEMENT OF CANADA

24 July 2003

### I. INTRODUCTION

1. Mr. Chairman, members of the Panel, on behalf of my Government, I thank you for your consideration of Canada's views in this dispute.

2. Canada's statement today conveys our systemic interest in the interpretation of certain provisions of the Agriculture Agreement and the SCM Agreement regarding certain aspects of Brazil's claims. The first two points we address relate to US domestic support measures and the applicability of the Peace Clause. In this respect, we set out why:

- first, the updating of the base period for US direct payments renders these payments inconsistent with paragraphs 6(a) and (b) of Annex 2 of the Agriculture Agreement; and

- second, US counter-cyclical payments to producers of upland cotton must be counted as "support to a specific commodity" under Article 13(b)(ii) of the Agriculture Agreement.

3. The last point we address is whether there is any exemption for US export credit guarantee programmes from US export subsidy commitments under the Agriculture Agreement. Here, we set out why:

- first, item (j) of the SCM Agreement may not be interpreted a contrario to deem export credit guarantee practices as not providing export subsidies under Article 10.1 of the Agriculture Agreement; and

- second, Article 10.2 of the Agriculture Agreement does not exempt export subsidies granted under export credit guarantee programmes from US export subsidy commitments in the Agriculture Agreement.

### II. US DOMESTIC AGRICULTURAL SUPPORT MEASURES

#### A. TO BE EXEMPT UNDER ANNEX 2, DIRECT PAYMENTS MUST HAVE THE SAME BASE PERIOD AS PFC PAYMENTS

4. We turn first to US direct payments. The United States defends these measures by asserting, among other things, that the 2002 FSRI Act redefines and fixes the base period for the duration of the legislation.[1] According to the United States, direct payments therefore fully conform to Annex 2 of the Agriculture Agreement.

5. This, in Canada's view, raises form over substance. In addition to the views we provided in our written third party submission, Canada observes that US direct payments also do not conform to the base period requirement in paragraphs 6(a) and (b) of Annex 2. The structure of the PFC payment

[1] US First Written Submission, para. 67.

and direct payment programmes are essentially the same[2], so are the payment parameters.[3] The applicable base period therefore is that for PFC payments. However, the United States allows base acreage determining the receipt and the amount of direct payments to be updated.[4] The base period is therefore not "fixed", contrary to subparagraph (a). The amount of the payments may also be increased based on the volume of production undertaken by a producer in a year after the applicable base period, contrary to subparagraph (b).

6. The United States itself demonstrates the linkage between PFC payments and direct payments; they are closely related and successor programmes.[5] Yet, the United States takes the position that because the payments are continued under a separate piece of legislation and new regulations, an updating of the base period does not affect their exempt status.[6] In Canada's view, such formalistic arguments cannot prevail.

B. COUNTER-CYCLICAL PAYMENTS ARE "SUPPORT TO A SPECIFIC COMMODITY"

7. Mr. Chairman and members of the Panel, the formalism of US arguments does not stop there. In an effort to avoid the logical conclusion that counter-cyclical payments "grant support to a specific commodity" within the meaning of Article 13 of the Agriculture Agreement, the United States cites varied meanings of the term "specific" and inappropriately incorporates into Article 13 concepts relating to the calculation of the AMS. These arguments are an attempt to detract from the plain text of Article 13 and its straight-forward application to the facts of this case.

8. In Canada's view, counter-cyclical payments "grant support to a specific commodity" under Article 13(b)(ii) of the Agriculture Agreement.[7] It is hard to see how a measure that grants support that is specific to a "specific commodity" would not be included in the assessment under Article 13(b). It is uncontested that the US measure provides payments in an amount determined by target prices that are specific to certain covered products.[8] The setting of commodity-specific target prices necessarily leads to different levels of support for different products. The cotton-specific support granted in this respect must be taken into account for the purposes of Article 13(b).

## III. US EXPORT CREDIT GUARANTEE PROGRAMMES

9. I now turn to US export credit guarantee programmes.

10. In Canada's written third party submission we set out the applicable standard for determining whether transactions under these programmes are subsidized within the meaning of Articles 1(e) and 10.1 of the Agriculture Agreement. Canada takes no position on the facts in this respect, but notes that USDA's own description of its guarantee programmes implies that a benefit is conferred. I quote: "The programmes encourage exports to buyers in countries where credit is necessary to maintain or increase US sales, but where financing may not be available without CCC guarantees."[9] The Panel should assess CCC premiums in the light of this admitted reality.

[3] US First Written Submission, paras. 58-63.

[4] US First Written Submission, para. 59.

[5] US First Written Submission, fn. 47.

[6] US First Written Submission, para. 67.

[7] See also Exhibit Br-27 ("Title I - *Commodity Programmes*"; "Counter-cyclical payments *for* wheat, feed grains, upland cotton, rice, and oilseeds" (emphasis added)).

[8] See US First Written Submission, para. 117.

[9] USDA, "Export Credit Guarantee Programmes", FAS Online at http://www.fas.usda.gov/excredits/exp-cred-guar.html, (second sentence) [Exhibit CDA-3].

11. Today, Canada addresses the two exemptions alleged by the United States in support of its assertion that the US programmes do not grant export subsidies in violation of US export subsidy commitments under Articles 8 and 10.1 the Agriculture Agreement. The claimed exemptions are the following:

- First, item (j) of the SCM Agreement sanctions any US export subsidy provided through CCC-guaranteed credit transactions because the programmes come within the scope of item (j) yet do not meet the standard it establishes. According to the United States, item (j) may be interpreted a contrario to allow subsidized export credit transactions. It follows for the United States that its programmes do not confer export subsidies within the meaning of Article 3.1(a) of the SCM Agreement and Article 1(e) of the Agriculture Agreement;

- Second, Article 10.2 of the Agriculture Agreement exempts outright any subsidized export credit transactions from US export subsidy commitments.

12. The panel in Brazil – Aircraft considered the first type of alleged exemption at length in its first implementation report. The United States was a third party in that case, and argued for an a contrario interpretation of the first paragraph of item (k) of the Illustrative List.[10] The panel rejected all arguments in this respect and concluded that the provision could not be used to establish that a prohibited export subsidy under the SCM Agreement is otherwise permitted.

13. The panel's reasoning in that case applies with equal force here. Briefly, the panel found that:

- First, Annex I is purely "illustrative" and does not purport to exhaustively list all export subsidy practices[11],

- Second, a measure that falls within the scope of Annex I is deemed to be a prohibited export subsidy such that where a Member demonstrates that the measure meets the standard in any of the listed items, it does not also have to demonstrate that the measure comes within the scope of Articles 1 and 3.1(a) of the SCM Agreement[12], and

- Third, footnote 5 of the SCM Agreement provides that practices described in Annex I may be properly considered not to constitute an export subsidy only in two situations. The first situation is where an affirmative statement in the Agreement provides that the measure in question is not an export subsidy; the second is where an affirmative statement in the Agreement provides that measures satisfying the conditions of an item in Annex I are not prohibited.[13] Footnote 5 reads "Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement".

14. In its second implementation report in Brazil – Aircraft, the panel applied the same reasoning.[14] Applying this reasoning to the case at hand, footnote 5 to the SCM Agreement precludes reliance on an a contrario interpretation of item (j) as an implied exclusion to any finding of subsidized transactions under the US programmes.

---

[10] *Brazil – Export Financing Programme for Aircraft: Recourse by Canada to Article 21.5 of the DSU*, Report of the Panel, WT/DS46/RW, adopted 4 August 2000, paras. 6.24-6.67 [*Brazil – Aircraft, First Recourse*].

[11] *Ibid.*, para. 6.30.

[12] *Ibid.*, para. 6.31.

[13] *Ibid.*, paras. 6.37.

[14] *Brazil – Export Financing Programme for Aircraft: Second Recourse by Canada to Article 21.5 of the DSU*, Report of the Panel, WT/DS46/RW2, adopted 23 August 2001 at paras. 5.274 and 5.275.

15. Regarding Article 10.2 of the Agriculture Agreement, Canada's view is that the words of that provision speak for themselves. Members have undertaken to work towards internationally agreed disciplines to govern the provision of export credit guarantees. Nothing in that provision states that the export subsidy obligations in Article 10.1 of the Agreement do not apply to US export credit guarantee practices. Where Members have wanted to exempt measures from export subsidy obligations, they have been clear– such as in the second paragraph of item (k) of the SCM Agreement.[15]

16. In addition, the US interpretation of this provision does not accord with its object and purpose. Canada shares the views of other third party participants in this dispute that the ongoing work under Article 10.2 is expected to further elaborate on current disciplines regarding export credit practices and to perhaps more clearly identify when such practices shall or shall not be deemed to confer export subsidies within the meaning of Article 1(e) of the Agriculture Agreement.[16] The obvious precedent in this respect is the second paragraph of item (k) of the SCM Agreement.

## IV. CONCLUSION

17. In conclusion, Mr. Chairman and members of the Panel, the Panel should find that the United States rendered direct payments inconsistent with Annex 2 of the Agriculture Agreement by allowing the base period to be updated. This finding would be in addition to a finding that PFC payments and direct payments do not conform to Annex 2 because the amount of the payment is linked to the type of production after the base period. Regarding counter-cyclical payments, the Panel should find that this support to US producers of upland cotton must be counted as "support to a specific commodity" under Article 13(b)(ii) of the Agreement. Finally, regarding US export credit guarantee programmes, the Panel should confirm that neither the Agriculture Agreement nor the SCM Agreement contain an exemption for any US export credit guarantee subsidy found in this case. Were the Panel to find that such subsidies exist – which in Canada's view is the most likely outcome to the Panel's assessment of the facts – then the Panel must conclude that the United States grants export subsidies in violation of its export subsidy commitments under Articles 8 and 10.1 the Agriculture Agreement and that Article 13(c)(ii) therefore does not apply.

# ANNEX C-9

## ORAL STATEMENT OF CHINA AT THE THIRD PARTY SESSION

24 July 2003

1. Thank you, Mr. Chairman, and members of the Panel. China is appreciative of this opportunity to present its views on the issues raised in this Panel proceeding. In its third party written submission of 15 July, China explained its views in relation to three issues. In this statement, I will summarize China's major points.

2. The first issue that China would like to have this Panel's attention is about the burden of proof issue under the Peace Clause.

3. China agrees with Brazil's argument that the Peace Clause is an affirmative defence in nature. If the United States claims that defence, the burden of proof is on the United States.

4. Contrary to what the United States see, China believes that the Peace Clause does not impose positive obligations. Stand-alone, Annex 2 and Article 6 of the *Agreement on Agriculture* may have positive obligations; but when they are cross-referred to by the Peace Clause, they become part and parcel of conditions that must be met before a Member can move under its safety.

5. China believes the US errs on seeing no distinction between "obligation" and "condition". The Peace Clause requirement for full conformity with Article 6 and Annex 2 does not create new obligations because Members have to comply with Article 6 and Annex 2 whether Article 13 exists or not. Within the Peace Clause, these requirements do not stand to impose obligations on Members, but to set conditions precedent for a Members intending to invoke Peace Clause protection. Positive obligations to comply with these requirements, if there is any, lie under where they are, i.e. under Article 6 and Annex 2, but not under the Peace Clause.

6. China does not see any "absurdity" as described by the United States in its written submission. No such "absurdity" would be instilled into the process if at the first stage, the party alleging protection of Peace Clause for its measures is required to discharge its burden to prove that such measures do conform to the relevant Peace Clause conditions; if it cannot so prove, the measures would lose Peace Clause protection. A second stage will follow for the party claiming against the measures to establish its substantive case, without the Peace Clause shield.

7. With respect, China submits that the burden of proof issue must be resolved first. China also hopes that the above two-step approach will help this Panel and the parties to move the procedures on towards resolution of the case.

8. The second point that China made in its written submission relates to proper categorization of US Direct Payments (shortened as "DP") under the US Fair Security and Rural Investment Act of 2002 (shortened as "FSRI"). Allow me to shorten that act to FSRI. Without repeating the issue of burden of proof, preponderance of evidence suggests that such Direct Payments are not "Green Box" in nature.

9. One of the requirements for "Green Box" Direct Payment support measures lies under Para. 6(a) of Annex 2 to the *Agreement on Agriculture*. The paragraph provides to the effect that eligibility shall be determined by "clearly-defined criteria" "in a defined and fixed base period".

10. The word "in" requires a link between the "criteria" and the "defined and fixed base period". In other words, to qualify for "Green Box" direct payment measure under Para. 6(a), a criterion adopted by a Member must be tied, in a chronological sense, to a starting time frame that cannot be moved up on the calendar.

11. As the United States has explained, 2002 FSRI DP allowed landowners to retain PFC base acreage under the 1996 Federal Agriculture Improvement and Reform Act (shortened as "FAIR") and "add 1998-2001 acres of eligible oilseeds or simply declare base acreage for all covered commodities" (including upland cotton). In addition, while a landowner may elect to simply utilize acres devoted to covered commodities during the 1998-2001 period for purpose of DP, a landowner need not do so; base acres may remain those under FAIR of 1996, implying no cotton production need have occurred since the 1993-1995 period for a landowner to have "cotton base acres" Consideration the progression from PFC to DP, one can see that contrary to the US argument that "base acres are defined in the 2002 [FSRI] Act and fixed for the duration of the legislation", the requisite link between the programme acreage as a criterion and the starting time frame under the DP is broken. The change of legislation from FAIR to FSRI and the replacement of PFC with DP were utilized to for producers to leap from their previous coverage acreage, which should have been tied to the base period, to a new updated acreage in 2002.

12. Therefore, in China's opinion, preponderance of evidence proves that the US direct payments under the FSRI shall be properly categorized as non-"Green Box" measures.

13. The last issue that China considers important is about export subsidy support granted by US "Foreign Sales Corporations" for upland cotton export sales under the "FSC Repeal and Extraterritorial Income Act of 2000". Its short name is ETI Act.

14. The ETI Act has previously been found to violate the *Agreement on Agriculture* and the *Subsidies Agreement* by both the panel and the Appellate Body in *US – FSC (21.5)* case. On 29 January 2002, the DSB adopted the panel and Appellate Body reports. Following US failure to withdraw such export subsidy support, on 7 May 2003, the DSB authorized the EC to impose countermeasures against the US.

15. China believes that the panel and the Appellate Body's reasoning and their conclusion in *US – FSC (21.5)* should be considered and taken by this Panel.

16. The measures challenged by Brazil in the current proceeding are exactly the same challenged by the EC in *US – FSC (21.5)*. Reasoning and conclusion by the earlier panel and the Appellate Body are more than relevant to the current case. Their reports, once adopted by DSB not only create legitimate expectations, but also reflect the collective will of the WTO membership.

17. In that respect, allow me to quote the panel in *India – Patent Protection for Pharmaceutical and* Agricultural *Chemical Products*, for this Panel:

> [I]n the course of "normal dispute settlement procedures" required under Article 10.4 of the DSU, we *will take into account the conclusions and reasoning* in the Panel and Appellate Body reports in WT/DS50. Moreover, in our examination, we believe that we *should give significant weight to both Article 3.2 of the DSU*, which stresses the role of the WTO dispute settlement system in providing security and predictability to the multilateral trading system, *and to the need to avoid inconsistent rulings* (which

concern has been referred to by both parties). In our view, these considerations form the basis of the requirement of the referral to the "original panel" wherever possible under Article 10.4 of the DSU.

18. This concludes my oral presentation. China welcomes questions from the Panel regarding these issues.

# ANNEX C-10

## ORAL STATEMENT BY THE EUROPEAN COMMUNITIES

24 July 2003

TABLE OF CONTENTS

## I. INTRODUCTION

1. Mr. Chairman, Distinguished Members of the Panel, the European Communities is grateful for the opportunity to express its views in this third party session.

2. We would first like to welcome the involvement of Benin in this procedure. The European Communities is of the view that the involvement of least developed countries in dispute settlement is highly desirable. We hope that other least developed countries follow Benin's lead.[1]

3. This is a complex case which raises many difficult and important interpretative issues. Those responsible for drafting Article 13 of the *Agreement on Agriculture* have left you with some difficult questions. Despite those difficulties, Article 13 in particular, and the *Agreement on Agriculture* more generally, represent a finely balanced and much fought over package of rights and obligations assumed by WTO Members. The European Communities is confident that this Panel will undertake a careful examination of these very precise terms and preserve the delicate balance of rights and obligations which has been negotiated.

4. This dispute raises a large number of issues. In our interventions, we have concentrated on those issues of principle which we consider are of systemic concern. Today, we will largely address issues which were not addressed in our written submission. At the same time, we also consider it necessary to revisit some issues which we have already addressed in order to rebut some of the arguments raised by other parties.

5. The European Communities starts by setting out its conception of the role of the peace clause (section II). We will then address several questions of interpretation relating to the peace clause (section III). We then turn to consider the interpretation of Annex 2 of the *Agreement on Agriculture* (the Green Box) (Section IV) before considering the status of domestic content subsidies and export credits under the *Agreement on Agriculture* (Section V). We conclude with some comments on one of the requests for preliminary rulings raised by the United States (Section VI).

## II. THE ROLE OF THE PEACE CLAUSE

6. We turn first to consider the role of the Peace Clause (Article 13).

7. The European Communities views Article 13 as one element regulating the interface between the *Agreement on Agriculture* and the *SCM Agreement*. It defines, in some cases, how subsidies granted pursuant to the *Agreement on Agriculture* should be treated for the purposes of countervailing duty investigations, and in other cases exempts such subsidies from actions under the *SCM Agreement*. The European Communities disagrees with both Brazil and the United States as to how the term "exempt from action" should be understood. However, while we disagree with the United States' logic, we do not disagree with the practical result of the application of its logic.

8. The term "exempt from action" cannot mean, as Brazil claims, that, even if the peace clause is applicable, the Panel must examine Brazil's claims under the *SCM Agreement*, and that if the Panel finds that the United States has acted inconsistently with the *SCM Agreement*, the DSB should somehow "refrain" from recommending the United States to bring itself into conformity with the *SCM Agreement*. The European Communities finds it difficult to imagine how the DSB, operating under the negative consensus rule, could refrain from recommending the United States bring itself into conformity should the Panel find that the United States had acted inconsistently with the *SCM Agreement*. Moreover, the United States can reasonably argue that it is not required to bring itself

[1] This text was not in the written statement circulated at the third party session, but reflects unscripted comments made during that session.

into conformity with the *SCM Agreement* by withdrawing measures which it is perfectly entitled to maintain under the *Agreement on Agriculture*, pursuant to both Article 13 and Article 21. The only answer to this question is that if the United States is entitled to peace clause protection, the Panel cannot find in favour of Brazil's *SCM Agreement* claims.

9. The European Communities does not agree with the United States that Article 13 prevents a Member from requesting consultations or the establishment of a panel with respect to a measure which might be entitled to Article 13 protection. It is not, as the US argues, the mere fact that the defendant Member is unable to block a request for consultations, or for establishment of a panel, that the applicability of the peace clause has come before this Panel. The need for the Panel to adjudicate this issue flows from the fundamental principle underlying the WTO Agreement that every question of interpretation of the WTO Agreements which "affects the operation of any covered agreement" must be subject to the DSU.[2] However, as we have noted, if the Panel determines that the US measures in question are protected by Article 13, it cannot find in favour of Brazil's claims under the *SCM Agreement*.

## III. INTERPRETATION OF THE PEACE CLAUSE

10. The Panel has a number of challenging questions before it on the interpretation of various aspects of Article 13(b). The European Communities turns now to set out its position on some of the issues before the Panel.

### A ARTICLE 13 IS NOT AN AFFIRMATIVE DEFENCE

11. The European Communities will only briefly touch upon the issue of the burden of proof for Article 13. The European Communities has yet to hear a credible response to the argument that putting the burden of proof on the defendant has perverse effects. As the European Communities and the United States have pointed out, when a complainant brings a case only under the *Agreement on Agriculture* (for instance alleging breach of Article 6) it will bear the burden of proof. However, if Article 13 is considered an affirmative defence, when a complainant brings a dispute under Articles 5 and 6 of the *SCM Agreement* and, for instance, Article 6 of the *Agreement on Agriculture*, the complainant would be required to prove a breach of Article 6 while at the same time the defendant would also be required to prove that it had not infringed Article 6 of the Agreement. The burden of proof cannot switch between parties simply on the basis of whether the complainant cites the *SCM Agreement* or not, but this would be the result of interpreting Article 13 as an affirmative defence.

12. Further confirmation that Article 13 is not an affirmative defence can be drawn from the fact that Article 13 also regulates the application of countervailing duties on agricultural subsidies. In this context, a determination that the subsidy in question is not protected by Article 13 must be taken by an investigating authority before it may impose countervailing duties. Article 13 is consequently a pre-condition for an individual Member in taking action against subsidised exports. It cannot, in that context, be considered as a defence for exporters co-operating in an investigation and may, as the United States have pointed out, be used as the foundation for a claim in a WTO dispute by the exporting Member that countervailing duties have been illegally imposed. There is no reason why that conception of Article 13 should change simply because the issue arises in WTO dispute settlement.

[2] Article 4.2 DSU.

B. RELEVANT COMPARISON FOR THE PURPOSES OF ARTICLE 13

13. Brazil has argued that any breach of the 1992 level during the 9 year implementation period removes the protection of Article 13.[3] The European Communities agrees with the United States that this is incorrect.[4] The present tense of the phrase "do not grant support" makes this clear. The comparison for the purpose of Article 13(b) must be between the level of support decided in the 1992 marketing year and that granted by virtue of the measures being challenged. This would typically mean the most recent marketing year.

C. THE MEANING OF "DECIDED DURING THE 1992 MARKETING YEAR"

14. We now turn to consider the meaning of the phrase "decided during the 1992 marketing year". Brazil argues that the term "decided" refers to a decision to budget a specific amount of domestic support over a number of years.[5] Brazil then goes on to suggest that because the United States did not make a "decision" during marketing year 1992 with respect to upland cotton, the only decision which the United States can be said to have made during marketing year 1992 was the continued funding of its programmes for upland cotton. Brazil then calculates the US' budgetary outlays in respect of upland cotton in 1992; in other words, Brazil looks at the support actually granted.[6]

15. The European Communities is concerned that Brazil appears to consider that the support "decided" in the sense of Article 13 can be equated with the support granted as Brazil has done in its use of US budgetary outlays. Such an interpretation ignores the meaning of the word "decided". That the use of the word "decided" cannot be equated with the term "granted" is illustrated by the following.

16. First, the use of the word "decided" itself is notable. It is, however, notable primarily for what it is not. WTO Members did not use the word "granted" which is the word which one would expect to be used had this phrase been intended to refer only to the domestic support actually used during the 1992 marketing year. The use of the word "decided" stands out particularly when it is compared to the use of the word "grant" in the very same sentence. The United States has made the same point with respect to the decision not to use the word "provided".[7] If WTO Members had intended that the support granted in the most recent period was to be compared to that granted in marketing year 1992 the word "decided" would not have been used. For this reason, Brazil's use of US budgetary outlays for marketing year 1992 is clearly flawed.

17. Second, the word "decided", meaning "settled, certain",[8] also implies a one-off decision. It would be odd to talk of an administration "deciding" countless applications for support under a particular programme. However, this is what Brazil's use of US budgetary outlays implies.

18. Finally, the use of the word "during" confirms that WTO Members intended that the decision need not be of application only in marketing year 1992 but may also cover future periods. The use of the word "during" (meaning "in the course of"[9]) implies a one-off decision, and does not suggest that the period of application of the decision must be limited to marketing year 1992. Had WTO Members intended a limitation to the support provided or granted in 1992 the word "for" would have been used

[3] Brazil's First Written Submission, paras.142 and 146-150.
[4] US First Written Submission, para. 79 and 90.
[5] Brazil's First Written Submission, paras. 139 and 140.
[6] Brazil's First Written Submission, paras. 141-145.
[7] US First Written Submission, paras.83-84.
[8] The New Shorter Oxford English Dictionary, 1993.
[9] The New Shorter Oxford English Dictionary, 1993.

in place of "during". This further confirms that Brazil's use of US budgetary outlays cannot be considered correct.

19. Consequently, Article 13(b)(ii) and (iii) are intended to set up as a benchmark an amount of support adopted by some form of decision (be it political, legislative or administrative) in which support for a specific product is decided and allocated for future years. It is clearly not intended to set up a comparison between domestic support granted in 1992 and domestic support granted in a more recent period. The European Communities respectfully requests the Panel not to follow Brazil's equation of the term decided with the term granted.

20. For the European Communities, the question of what decision was adopted during 1992 by the United States is a question of fact which we do not take a position on, especially as we are not fully aware of all the elements which might be relevant.

### D. THE MEANING OF THE TERM "SUPPORT TO A SPECIFIC COMMODITY"

21. The United States has argued that the term "support to a specific commodity" is synonymous with the term "product-specific support".[10] Brazil had, in its First Written Submission, taken all support which was specific to cotton, and added to it a proportion of generally available support intended to represent the amount of such support which could be attributed to cotton.[11]

22. The European Communities shares the approach of the United States. Quite simply, support which is provided to a number of crops cannot at the same time be considered "support to a specific commodity". Such support is "support to several commodities" or "support to more than one commodity".

23. With respect, Brazil and New Zealand are wrong to suggest that the word "specific" was added to make clear that the applicable benchmark under Article 13 was not the overall level of subsidies decided but rather was to be undertaken on a product-by-product basis.[12] A brief glance at the *SCM Agreement* finds it replete with references to "a product" or "a subsidised product".[13] Consequently, it could make no sense to interpret Article 13 as being based on overall support. The word "specific" was not, therefore, inserted to differentiate the use of Article 13 in respect of specific products to the application of Article 6 to overall agricultural support, but rather as a qualifier to the word "support".

24. Consequently, the Panel should conclude that the correct comparison is between product specific support decided in 1992 and product specific support currently provided.

## IV. THE INTERPRETATION OF ANNEX 2 OF THE *AGREEMENT ON AGRICULTURE* (THE "GREEN BOX")

### A. FIRST SENTENCE OF THE FIRST PARAGRAPH OF ANNEX 2[14]

25. Australia has argued in its comments today that the European Communities is incorrect to consider that the first sentence of the first paragraph of Annex 2 does not impose a separate obligation. The European Communities notes, however, that Australia does not comment and does not

[10] US First Written Submission, paras. 77-78.
[11] Brazil's First Written Submission, para. 143.
[12] Brazil's First Written Submission, para. 136; New Zealand Third Party Submission Para. 2.22.
[13] See, in particular, Article 6.3.
[14] This section was not in the written statement circulated at the third party session, but reflects unscripted comments made during that session.

attempt to rebut the compelling contextual arguments that the European Communities has made in its written submission.[15] The European Communities pointed out that in several instances that the *Agreement on Agriculture* refers to the "criteria" for inclusion in the green box, specifically in Articles 6 and 7, and most importantly, in paragraph 5 of Annex 2. There is no such reference to the "fundamental requirements". The European Communities recalls that a panel is obliged to follow the accepted canons of interpretation of international law, and therefore, to view the ordinary meaning of the words concerned in light of their context and objective. Consequently, it is clear that the first sentence of paragraph 1 of Annex 2 is not, in and of itself, an independent obligation. This does not render it inutile, as Australia charges. The first sentence sets out an objective and indicates the type of effects which respect for the criteria in the green box is deemed to create. The European Communities urges the Panel to reject Australia's unsubstantiated arguments.

B. TYPE OF PRODUCTION

26. Brazil has argued that the fact payments are reduced where fruits and vegetables, and certain other crops are grown on contract acreage for the purposes of PFC and direct payments means that the "amount of such payments [is] related to or based on, the type or volume of production [ ..] in any year after the base period" (Paragraph 6(b) of Annex 2). However, Brazil also appears to recognise that farmers claiming the benefit of direct payments may plant crops other than the programme crops, and may even not produce any crops.[16] The United States asserts that no current agricultural production is required in order to benefit from direct payments.[17]

27. Assuming the US' assertion to be correct (as seems to be acknowledged by Brazil) the Panel is faced with a dilemma. Is the amount of funding provided by a programme, from which a farmer can benefit without producing anything, to be considered to be "based on or linked to a certain type of production", when payments under that programme can be reduced by growing certain crops? Brazil and some third parties simply assume that where payments can be reduced by growing certain crops, the programme is based on or linked to a certain type of production. Such a view does not, however, take account of the complexity of the situation.

28. In the view of the European Communities, reducing payments under a programme, where a farmer grows fruit or vegetables does not mean that the amount of the payment is linked to type of production. This is because the farmer is free to produce a whole range of other crops, or even not to produce at all and receive the full payment.

29. What Brazil and other third parties fail to realise is that the reduction in payment for fruits and vegetables, if the European Communities understands correctly, is in fact designed to avoid unfair competition within the subsidising Member. Brazil and the other third parties have not challenged the right of a subsidising Member to decide decoupled payments based on past production of, or acreage utilised for, certain crops. Indeed, this is permitted in paragraph 6(a) of Annex 2. However, in the case where, for instance, upland cotton production enjoyed support, while fruit and vegetable production did not, decoupled payments based on past cotton production would allow subsidised former cotton farmers to grow fruit and vegetables, and thus unfairly compete with pre-existing fruit and vegetable producers who could not benefit from the decoupled payments because they had not produced cotton or other supported products in the base period. Thus, the reduction in payments is a necessary element in ensuring that the equilibrium established by the market for the production of fruit and vegetables is not artificially disturbed by the introduction of decoupled support.

[15] EC's First Third Party Submission, paras. 15-25 and in particular paras. 22 and 23.
[16] Brazil's First Written Submission, para. 49.
[17] US First Written Submission, para. 68.

30. Furthermore, finding that Brazil and the other third parties are correct would have perverse effects. The whole *Agreement on Agriculture* is geared at gradually reducing certain types of domestic support. However, if a Member could not reduce decoupled payments when certain types of products which had previously not enjoyed any support are grown, the net effect would be that WTO Members wishing to provide decoupled support would have to increase overall support, and provide producers previously excluded with support which they had not previously enjoyed. This is clearly not an effect which the negotiators of the *Agreement on Agriculture* intended.

31. In this light, this potential reduction of payment is very different from the prohibition set down in paragraph 6(b) of Annex 2. Paragraph 6(b) is intended to prevent an artificial pressure to produce certain crops in order to obtain decoupled payments. Reducing payments where fruit and vegetables are produced does not act to pressure farmers into growing a particular type of crop. Rather, it prevents internal unfair competition. At the same time, as we understand the US measure, it does not oblige a farmer to produce any particular type of crop, in fact requires no production, and therefore should not be considered inconsistent with paragraph 6(b).

### C. A DEFINED AND FIXED BASE PERIOD

32. The European Communities would also like to comment briefly on the arguments raised by Brazil and some of the third parties with respect to the updating of the base periods in the 2002 FRSI Act. We take note of the US statement that the updating of the base period was necessary in order to bring support for oilseeds production under the direct payments scheme.[18] In order to ensure the progressive movement of production distorting subsidies to decoupled subsidies we consider that it must be possible to have different reference periods where eligibility is based on previous eligibility for production distorting subsidies. We see nothing in paragraph 6 of Annex 2 which might prevent this. At the same time, however, the European Communities is concerned that continued updating of reference periods in respect of the same already decoupled support, creating an expectation that production of certain crops will be rewarded with a greater entitlement to supposedly decoupled payments, tends to undermine the decoupled nature of such payments.

## V. INTERPRETATION OF THE *AGREEMENT ON AGRICULTURE* /RELATIONSHIP WITH THE *SCM AGREEMENT* AND GATT 1994

### A. ARE DOMESTIC CONTENT SUBSIDIES EXPRESSLY PERMITTED BY THE AGREEMENT ON AGRICULTURE ?

33. Brazil has argued that US Step 2 payments, which it alleges are conditional upon use of domestic goods, are inconsistent with Article 3 of the *SCM Agreement* and Article III.4 GATT 1994. New Zealand supports this claim. However, as with other claims, their analysis does not take fully into account the complexities of the situation. The European Communities agrees with the United States that subsidies contingent upon the use of domestic goods, which are maintained consistently with the *Agreement on Agriculture* are not inconsistent with either the *SCM Agreement* or GATT 1994.

34. The first question is whether subsidies contingent upon the use of domestic goods are consistent with the *Agreement on Agriculture*. The answer is a clear yes. Article 3.2 of the *Agreement on Agriculture* requires Members not to:

> "…provide support <u>in favour of</u> domestic producers in excess of the commitment levels specified in Section I of Part IV of its Schedule." (emphasis added).

[18] US First Written Submission, para. 60.

35. We have emphasised the phrase "in favour of". This is significant because it does not require that support be "to" domestic producers. The same term is used in Article 1(a) (the definition of AMS) and in Article 1(h) (definition of Total AMS). Moreover, it is established with respect to Article 1 of the *SCM Agreement* that a financial contribution and benefit need not be bestowed on the same person.[19] Consequently, it is simply logical that support may be provided in favour of domestic producers through the provision of funds to processors of the product concerned, and consequently that access to such subsidies be limited to domestic produce, in order to ensure that it is domestic producers who benefit from this subsidy. Indeed, WTO Members, in their wisdom, recognised precisely this possibility in Annex 3 to the *Agreement on Agriculture* where they explained how the AMS was to be calculated. Paragraph 7 thereof explicitly contemplates that:

> "measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products."

36. Consequently, it is clear that a Member has a right to provide subsidies contingent upon use of domestic products under the *Agreement on Agriculture*. On this, the US and the European Communities agree.

37. The second question for the Panel is how does that right relate to the prohibition in Article 3 of the *SCM Agreement* and the national treatment obligation in Article III.4 of GATT. Here, again, we agree with the United States.

38. Article 21.1 of the *Agreement on Agriculture* provides that the other goods agreements will apply "subject to" the provisions of the *Agreement on Agriculture*. That is, the other Annex 1A Agreements will be subordinated to the *Agreement on Agriculture*.[20] A finding that a measure was a domestic content subsidy would mean that such a subsidy would be prohibited under Article 3.1(b) of the *SCM Agreement* and would (in all likelihood) be inconsistent with Article III.4 GATT. In such an event, the consequences of such a finding would have to be subordinated to the right to adopt such measures under the *Agreement on Agriculture* (provided reduction commitments are respected). Moreover, the chapeau of Article 3.1 of the *SCM Agreement* clearly exempts from the scope of that Article domestic content subsidies which are maintained consistently with the *Agreement on Agriculture* and Article III.8 may be relevant to any claim under Article III.4. GATT.

39. Consequently, Brazil's claims that domestic content subsidies maintained consistently with the *Agreement on Agriculture* can be found to be inconsistent with the *SCM Agreement* and Article III.4 GATT should be dismissed.

## B. EXPORT CREDIT GUARANTEES WHICH OPERATE AS EXPORT SUBSIDIES ARE SUBJECT TO AGREEMENT ON AGRICULTURE OBLIGATIONS ON EXPORT SUBSIDIES

40. The United States maintains, in its first written submission, that Article 10.2 of the *Agreement on Agriculture* operates so as to exclude export subsidies in the form of export credits or export credit guarantees. This is not borne out by the text of Article 10.2. Article 10.2 provides for disciplines to be negotiated on the provision of export credits and export credit guarantees; it does not provide an exemption to the export subsidy obligations of the *Agreement on Agriculture*.

41. The United States provides numerous examples of instances in which the WTO has foreseen further negotiations. However, none of these examples support the United States argument that there are no disciplines for export credit guarantees which operate as export subsidies.

---

[19] See, Appellate Body Report, *United States – Countervailing Measures Concerning Certain Products from the European Communities*, WT/DS212/AB/R, adopted 8 January 2003, para. 110.

[20] The New Shorter Oxford English Dictionary, 1993.

42. The best example to illustrate this point is the agreement to negotiate disciplines on harmonised rules of origin. The fact that it was agreed to have negotiations on rules of origin simply means that there is no requirement for a WTO Member to apply an as yet un-finalised set of harmonised rules of origin. However, this does not imply that a WTO Member is exempted from other WTO obligations when it comes to apply rules of origin. A WTO Member must, for instance, in applying its rules of origin, respect the most-favoured nation principle set out in Article 1 GATT. Similarly, while there may not be disciplines on the provision of export credits and export credit guarantees, clearly export credits or export credit guarantees which operate as export subsidies are subject to the export subsidy disciplines of the *Agreement on Agriculture* and the *SCM Agreement*.

43. Other examples are equally illustrative. The US cites provisions in the GATS providing for negotiations on government procurement, emergency safeguards and subsidies on trade in services. However, it does not point out the fact that these subjects are clearly not subject to GATS disciplines, and thus negotiations are required to develop even minimal disciplines. Government procurement in services is the best example – GATS disciplines are explicitly excluded by Article XIII GATS. In contrast, there is no clear exclusion of export credits or export credit guarantees which operate as export subsidies from the *Agreement on Agriculture*.

44. Finally, contrary to the US suggestions, such an interpretation does not render Article 10.2 meaningless. Article 10.2 is not intended to regulate export credits and export credit guarantees as export subsidies but rather to provide for a general set of disciplines comparable to the OECD guidelines for export credits for industrial goods. That the Harbinson text (which of course has yet to be agreed) contains provisions on export credit and export credit guarantees is a recognition that disciplines must be negotiated and that clarification must be provided as to which export credits or export credits guarantees are, in the case of agricultural products, to be considered export subsidies, but is not a recognition that such support which operates as an export subsidy are not currently subject to the obligations of the *Agreement on Agriculture*.

## VI. MEASURES BEFORE THE PANEL (FSC REPLACEMENT SCHEME)

45. The United States has argued that Brazil has failed to make a prima facie case of the inconsistency of the FSC Replacement scheme (the ETI) with the covered agreements. The European Communities must admit to being surprised that the United States considers that Brazil has to present a prima facie case of inconsistency. According to Article 17.14 of the DSU parties to a dispute must "unconditionally accept" adopted Appellate Body Reports as "a final resolution to that dispute."[21] Given that the United States must be assumed to have unconditionally accepted the findings of the Appellate Body in the FSC 21.5 dispute, which, by definition also included a finding that the United States was illegally providing export subsidies to unscheduled agricultural products such as upland cotton, the European Communities fails to see how the United States can argue that Brazil needs to establish a prima facie case. On the contrary, Brazil simply needs to assert a claim.

## VII. CONCLUSION

46. This brings us to the end of our statement today. Thank you for bearing with us through a statement which was inevitably long, given the complexity of the issues, and the very short time we had to prepare our written submission.

47. There are a few central points which we would like to leave you with:

- The peace clause is not an affirmative defence;

[21] Appellate Body Report US- Shrimp (21.5 – Malaysia) para. 97.

- The term "decided" cannot be equated with "granted";

- Reducing payments where certain crops are grown for reasons of internal competition does not amount to basing payments on a certain type of production;

- Domestic content subsidies in favour of domestic producers are permitted under the *Agreement on Agriculture*, and can be maintained irrespective of other provisions; and,

- Export credit guarantees which operate as export subsidies are subject to the *Agreement on Agriculture*.

48. Thank you for your attention. We are, of course, happy to answer your questions, here or in writing.

# ANNEX C-11

## INDIA'S ORAL STATEMENT

Mr. Chairman and Members of the Panel,

I thank you for the opportunity to present India's views in this third party session. India has a few short comments to make on the issues in the dispute.

1. Brazil has challenged the US Subsidy programme relating to cotton. The main schemes challenged are

(i) Step 2 export payments
(ii) US export credit guarantee programmes, and
(iii) Extra Territorial Income (ETI) Act export subsidies.

2. These schemes do not conform to the provisions of Part V of the Agreement on Agriculture and thus have no "peace clause" protection from claims under the Subsidies Agreement. These schemes also violate Article 3.1(a) & 3.2 of the Subsidies Agreement.

3. The scheme relating to Step 2 export payments constitutes an export subsidy within the meaning of the Agreement on Agriculture. It also violates the Subsidies Agreement as

(i) It involves grants within the meaning of the Subsidies Agreement as the US Government pays money to its exporters
(ii) These grants involve direct transfer of economic resources for which the US Government receives no consideration
(iii) The scheme confers a benefit within the meaning of Article 1.1(b) of the Subsidies Agreement as they constitute "free money" for which exporters incur no corresponding obligations and they are made for " less than full consideration" and
(iv) The Scheme is also export contingent within the meaning of Article 3.1(a) of the Subsidies Agreement because exporters are only eligible for payments if they produce evidence that they have exported an amount of US upland cotton.

4. The three Export Credit Guarantee Programmes (GSM 102, GSM 103 & SCGP) are export subsidies within the meaning of the Agreement on Agriculture (AOA) as

(i) They are operated " at premium rates which are inadequate to cover the long term operating costs and losses of the program" as per item (j) of the illustrative list of export subsidies in ASCM.
(ii) They involve financial contributions that confer "benefits" and are contingent upon export performance within the meaning of Article 1.1 & 3.1(a) of the Subsidies Agreement. The US itself treats them as subsidies in its budget.

5. The ETI Act constitutes export subsidies within the meaning of Article 10.1 of the Agreement on Agriculture. This Act operates to circumvent the US export subsidy commitments by providing an export subsidy to upland cotton while the US does not have any export subsidy reduction commitments for cotton in violation of Articles 10.1 & 8 of the AOA.

6. The Step 2 Domestic Payment Scheme grants are direct transfers of funds and constitute a financial contribution by a Government within the meaning of Article 1.1(a)(1)(i) of the Subsidies Agreement. They also confer a "benefit" within the meaning of Article 1.1(h) of the Subsidies Agreement because the domestic user of US upland cotton receives the financial contribution on terms more favourable than those available in the market. Moreover these payment are contingent upon the use of domestic over imported goods.

Mr. Chairman, Members of the Panel,

7. Brazil has provided the legal arguments as to why the US has no basis to assert a "peace clause" defence against Brazil's claims on actionable/prohibited subsidies being given by the US.

8. According to Brazil, the "peace clause" of AOA Article 13 is in the nature of an affirmative defence. The US has indicated that it will invoke a "peace clause" defence in the matter. This means that the burden of proof will be on US to show that the US domestic support and export subsidies to upland cotton are provided in conformity with the requirements of the "peace clause".

9. Brazil has argued that US has no "peace clause" protection under AOA Article 13(c) as the US while invoking an affirmative defence must demonstrate that its export subsidies confirm fully to the provisions of Part V of the AOA. Part V of the AOA consists of Articles 8 to 11. A member violates Part V of the AOA if it provides export subsidies for products for which it has not undertaken any export subsidy reduction commitments.

10. Issues relating to affirmative defence and peace clause defence are mainly legal in nature and should be subject to interpretation under the Vienna Convention on the Law of Treaties and the WTO jurisprudence as seen through Appellate Body findings.

11. As regards subsidies contingent upon export performance, export credit guarantees and premiums, and use of domestic over imported inputs, Mr. Chairman, India believes that they all fall in the category of prohibited subsidies and are actionable under the ASCM.

Thank you for your kind attention.

# ANNEX C-12

## NEW ZEALAND'S ORAL STATEMENT

24 July 2003

1. Mr Chairman, Members of the Panel, New Zealand's views on the issues of concern in this dispute are set out in our Third Party Submission of 15 July and in the time available today it is clearly not possible to canvass all of those views. Accordingly, and as suggested by you in your opening remarks Mr Chairman, I will focus only on some key points.

**(i) New Zealand's systemic interest in the dispute**

2. First, as outlined in our Third Party Submission, New Zealand has joined this dispute because of our systemic interest in ensuring the continued integrity of WTO disciplines applicable to agricultural trade. In particular we are concerned to ensure that trade-distorting or "amber box" measures cannot be used contrary to the "peace clause" in a manner that negatively affects other Members.

3. It is equally important that where the requirements of the "peace clause" have not been respected Members are able to utilise their rights under the *SCM Agreement* and *GATT 1994* to take action in respect of domestic support measures and export subsidies.

**(ii) Brazil's demonstration that the United States cannot claim "peace clause" protection for domestic support provided in marketing years 1999, 2000, 2001 and 2002**

4. Second, Brazil has demonstrated that the level of domestic support for upland cotton granted by the United States in each of the marketing years in question did in fact exceed the level decided during the 1992 marketing year and that there is therefore no "peace clause" protection for those support measures.

5. The United States argues that this is not the case, on the basis that the comparison required by the "peace clause" should be between the 'per pound' rates of support set by the relevant domestic support measures and that certain domestic support measures should be excluded from the comparison.

6. Turning first to the United States claim that the relevant comparison should be between 'per pound' rates of support, in New Zealand's view such an interpretation would be inconsistent with the object and purpose of Article 13(b)(ii). Instead, Article 13(b)(ii) requires a comparison that takes into account the totality of payments to upland cotton producers in order to reflect the true nature of the support that is being granted, including for example, total budgetary outlays. This is especially so when those budgetary outlays have been increasing because of falling world market prices. And those prices are falling due, at least in part, to the fact that United States producers are shielded from true price signals by the guaranteed 'per pound' rates.

7. Furthermore, New Zealand sees no basis for excluding certain domestic support measures from the calculation required by the "peace clause" as requested by the United States.

8. The "counter-cyclical" payments are plainly not "green box" support measures in accordance with Annex 2 of the *Agreement on Agriculture*, as the amount of the payment is linked to current prices for upland cotton, in direct contravention of Annex 2 paragraph 6(c).

9. Nor is the scope of support to be measured under Article 13(b)(ii) limited to "product-specific" support in the sense proposed by the United States. There is no basis for such an interpretation in either the wording or the intent of Article 13(b)(ii). [Just to depart from the prepared statement for a moment, the EC has reminded us this morning of the importance of taking context into account when interpreting WTO Agreements. We would note that it is also important to consider the ordinary and natural meaning of the actual words appearing in the Agreements. Here the words used are "support to a specific commodity" – the text does not say "product-specific support". If the drafters had intended to mean "product-specific support", they surely would have said so. After all, the phrase "product-specific support" is used at least five times elsewhere in the *Agreement on Agriculture*. Returning now to the prepared text,] even if such an interpretation as suggested by the US, could be supported, "counter-cyclical" payments are in any event product-specific support because, as Brazil has demonstrated, there is a strong linkage between those payments and production of upland cotton.

10. New Zealand also considers that there is no basis for excluding the Production Flexibility Contract payments or Direct Payments from the required calculation. The ability of farmers to update the base acreage used for calculation of Direct Payments rules out inclusion of those payments in the "green box", which contemplates only one base period that is fixed and unchanging. To permit a Member to avoid this limitation by simply changing the names of its domestic support programmes would seriously undermine the requirement that there be no link between production and the amount of support.

**(iii) Brazil's demonstration that the United States cannot claim "peace clause" protection in respect of export subsidies;**

11. Looking now at export subsidies, New Zealand agrees with Brazil that the three types of export subsidies applied to upland cotton and other commodities by the United States (the Step 2 Export Programme, the Export Credit Guarantee Programme, and the FSC Replacement Programme) violate Articles 3.3, 8 and 10.1 of the *Agreement on Agriculture*.

12. New Zealand rejects the argument made by the United States that Step 2 export payments are not export subsidies because payments are available to domestic users as well as exporters of upland cotton. The Appellate Body (in *US-FSC Recourse to Article 21.5*) has made it clear that the fact that payments are also able to be made to domestic users of upland cotton does not 'dissolve' the export contingency of the payments that are made to exporters.

13. New Zealand also finds no basis for the assertion by the United States that export credit guarantee programmes are not subject in any way to the export subsidy disciplines of the *Agreement on Agriculture*. In fact the inclusion of reference to such programmes in the context of Article 10 supports the opposite conclusion and demonstrates that Members were in fact concerned at the potential for such programmes to circumvent Members' export subsidy reduction commitments.

14. In summary Brazil has demonstrated that the export subsidies to upland cotton do not have "peace clause" protection, and also that they are prohibited subsidies under Article 3.1(a) and 3.2 of the *SCM Agreement*.

**(iv) The request by the United States for a Preliminary Ruling**

15. Finally Mr Chairman, New Zealand does not consider that the Panel should grant the preliminary ruling requested by the United States.

16. First, New Zealand believes that measures no longer in effect are not outside the scope of the Panel's consideration, particularly where the programmes in question, while renamed, in fact continue in a slightly different form. Furthermore, the nature of serious prejudice claims means that Panels may need to consider data beyond a single year and consider trends over a number of years.

17. Second, New Zealand considers that export credit guarantee measures relating to eligible United States agricultural commodities (other than upland cotton) are within the Panel's terms of reference. To determine otherwise would be to allow a lack of transparency in the operation of particular measures to shield them from scrutiny by Members taking disputes.

**Conclusion**

18. In conclusion, Mr Chairman, New Zealand believes that Brazil has demonstrated that the "peace clause" has not been respected in relation to domestic support and export subsidies provided by the United States to upland cotton in the marketing years 1999, 2000, 2001 and 2002, and that accordingly Brazil is entitled to bring actionable and prohibited subsidy claims against the United States under the *GATT 1994* and the *SCM Agreement*. New Zealand looks forward to the next phase of the case which will examine those claims.

# ANNEX C-13

## ORAL SUBMISSION BY PARAGUAY

24 July 2003

Mr Chairman, members of the Panel:

1. Paraguay is grateful for the opportunity to participate in these proceedings and to present its views on the matter at issue in this dispute.

2. Because Paraguay is a firm believer in a fair system of multilateral trade, it feels that it should explain its position on this issue as a third party because it is an issue of particular interest to its economy.

3. Paraguay considers that the subsidies and support granted by the United States to its cotton production are inconsistent with the Agreement on Subsidies and Countervailing Measures, the Agreement on Agriculture and the rules and principles of the GATT 1994, and that for the purposes of this dispute it is therefore essential to take account of WTO legislation, which was carefully drafted to avoid causing distortions in international trade and prejudice to developing countries such as Paraguay.

4. WTO jurisprudence and the principles of interpretation of international law applied to the various cases suggests that the applicable rules should be read cumulatively, taking account of all elements applied to the case in order to support the system as an integrated whole.

5. With respect to the applicability of Article 13(b)(ii) concerning domestic support measures that conform fully to the provisions of Article 6 of the Agreement including direct payments that conform to the requirements to paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, Paraguay considers they shall be exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year.

6. This implies that it is not limited or confined to specific products. Thus, it can be concluded that the United States does not enjoy protection from actions relating to subsidies using 1999, 2001 and 2002 as a basis, as Brazil duly proved.

7. In interpreting the Peace Clause, account must be taken of the serious prejudice that Member economies could suffer, and an assessment made of the overall significance of all of the agreements relating to the case.

8. Regarding inconsistency with the Agreement on Agriculture, the Step 2 programme introduced by the United States to stimulate exports and the competitiveness of its products on the international market is inconsistent with Articles 3.3 and 8 of the Agreement on Agriculture.

9. Article 3 of the Agreement on Agriculture refers to the incorporation of concessions and commitments. Paragraph 3 thereof stipulates that:

> *3.3 "Subject to the provisions of paragraphs 2(b) and 4 of Article 9 of this Agreement, a Member shall not provide export subsidies listed in paragraph 1 of Article 9 in respect of the agricultural products or groups of products specified in Section II of Part IV of its Schedule in excess of the budgetary outlay and quantity commitment levels specified therein and shall not provide such subsidies in respect of any agricultural product not specified in that Section of its Schedule."*

10. The above paragraph enables Members to provide the subsidies listed in Article 9.1 of the Agreement on Agriculture subject to fulfilment of the commitments assumed.

11. Similarly, Article 8 of the said Agreement regulates export competition commitments, stipulating that:

> *"Each Member undertakes not to provide export subsidies otherwise than in conformity with this Agreement and the commitments as specified in that Member's Schedule."*

12. For the above reasons, and because it does not consider the provisions of the Agreement on Agriculture to have been complied with, Paraguay believes that the export subsidies granted by the United States to its cotton industry are inconsistent with Articles 3.3, 8 and 9.1 of the Agreement on Agriculture.

13. The agricultural subsidies cause "serious prejudice" to the domestic industry of other Members under Articles 5 and 6 of the Agreement on Subsidies and Countervailing Measures.

14. The introductory paragraph of part III, Article 5 of the said Agreement provides that no Member should cause, through the use of any subsidy – specific and not exempted under the Agreement – adverse effects to the interests of other Members, more specifically, as categorically stated in the indents that follow, (a) injury to the domestic industry of another Member and (c) serious prejudice to the interests of another Member.

15. Article 6 specifically refers to cases in which "serious prejudice" is deemed to exist in the sense of paragraph (c) of Article 5.

16. Agricultural subsidies have effects on world trade, and measures such as those applied by the United States have a significant impact on developing countries like Paraguay.

17. Paraguay has a total population of approximately 5,300,000, of which more than 500,000 are linked to cotton production. If we add the related industries and activities, the figure reaches an estimated 1,500,000, or approximately 30 per cent of the country's total population.

18. Any slump in the cotton trade causes an exodus of rural population towards the urban areas which do not offer any relief or solution, and this further undermines the economic situation of a country that depends on its agriculture.

19. As regards exports, in 1991, the foreign exchange revenue generated by sales of cotton and byproducts thereof reached US$318,912,000, approximately 43 per cent of the total for the country's exports that year. At the time, of a total of 299,259 farms, 190,000 were cultivating cotton.

20. By 2001, the figures had changed considerably. Export revenue had fallen to US$90,505,000, a 72 per cent drop in the value of exports. The number of farms producing cotton decreased to about 90,000, representing a 52 per cent decrease in farms, employment and small farmer income. In other words, the impoverishment was real.

21. Regarding international cotton fibre prices, in 1991, the price per ton of Paraguayan type fibre was quoted on the New York Exchange at US$1,624, while in 2001, it was quoted at US$934.

22. In Paraguay, some 60 per cent of cotton is produced on farms of less than 10 hectares, making it the main or only source of income for small farmers and the main source of employment for the rural workforce in the most disadvantaged segment of society where access to capital and technology is more restricted and the leading socio-economic welfare indicators are lower than anywhere else.

23. In spite of its marked decline, cotton continues to be an important cash crop for the "capitalized" farms, and the main – if not only – cash crop of the farms that are on the decline.

24. The agricultural sector is fundamental to the Paraguayan economy, accounting for 90 per cent of exports, 35 per cent of employment and 25 per cent of GDP, in addition to which it supports an agro-industry that accounts for 11 per cent of GDP and 10 per cent of total employment.

Mr Chairman, members of the Panel:

25. The importance of cotton for Paraguay, both in social and economic terms, is such that an increase in international cotton fibre prices as a result of the elimination of significant market distortions such as subsidization of production would not only bring about a general improvement in the standard of living of the country's inhabitants, in a very fragile sector in particular, but it would also lead to an improvement in macroeconomic conditions, balance-of-payments, monetary reserves, etc. that would enable Paraguay to be more reliable in meeting its international financial commitments.

26. For the above reasons, and because it does not consider that the provisions of the Agreement on Agriculture have been complied with, Paraguay believes that the export subsidies granted by the United States to its cotton industry are inconsistent with Articles 3.3, 8 and 9.1 of the Agreement on Agriculture.

27. Paraguay therefore considers that the measures adopted by the United States cause serious prejudice to world trade, affecting Paraguay in particular, and that the necessary steps should be taken to eliminate the adverse effects and seek to achieve a balance in world trade.

28. Finally, Paraguay respectfully requests the Panel to conclude that the measure applied by the United States is inconsistent with its WTO obligations under various provisions of the Agreement on Agriculture, the GATT 1994 and the Agreement on Subsidies and Countervailing Measures.

# ANNEX C-14

## ORAL STATEMENT BY THE SEPARATE CUSTOMS TERRITORY OF TAIWAN, PENGHU, KINMEN AND MATSU AS A THIRD PARTY ON THE CASE OF THE UNITED STATES SUBSIDIES ON UPLAND COTTON

The Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu is pleased to be here as a third party in this case. We have a systemic interest in the particular question of the burden of proof required by Article 13 of the AOA, and would like to focus on this issue in our remarks. We have previously submitted our views in writing accordingly.

**The Burden of Proof (the "Peace Clause")**

In the case in point, Brazil asserts in its first written submission that Article 13 is by nature an "affirmative defence" or "exception" and "not itself a positive obligation", therefore the United States carries the burden of proof on whether its subsidies are in conformity with Article 13.

Our view, in summary, is that it is inappropriate to label Article 13 as an "affirmative defence" or "exception". Indeed this would mean the Article having much less than its originally intended effect. Article 13 in itself confers rights and imposes positive obligations on Members. It is not there simply for the convenience of resolving the question of the burden of proof. The right that it confers of entitlement to being "exempt from actions", for example, would be rendered pointless if the burden of proof were on the respondent. It is surely for Brazil, therefore, as a complainant, to prove a breach of a positive obligation by demonstrating non-conformity, rather than for the United States to bear the burden of proof.

In our written submission, we suggest that in arriving at a proper interpretation of the burden of proof in Article 13, it might also be helpful to make some comparisons with the different types of exceptions, exemptions and defences that exist in other Articles of WTO Agreements.

We mention, for example, disputes arising in connection with agreements not covered by the DSU, where the complaining party would bear the burden to prove that the issue in dispute falls within the purview of the DSB.

Also, where a matter is specifically excluded from the dispute settlement procedures by certain relevant agreements – such as Article 6 of the TRIPS agreement - the provision concerned allows the Member applying it to prevent dispute settlement procedures and the burden of proof falls on the complaining party.

And by way of further comparison, we refer to other cases where exceptions or exemptions are granted under relevant agreements providing specific obligations.

While Article 13 of the AOA is clearly in this case not dealing with a matter under a non-covered agreement or a matter that is specifically excluded from the dispute settlement procedures as in Article 6 of TRIPS, it is also not typical of the type of exception contained in a number of the GATT Articles. By its singular nature, Article 13, in our view, falls between these examples, therefore the procedures for applying its provision should be interpreted separately and differently.

And finally, as far as the burden of proof is concerned, we submit that requiring the respondent to prove that the subsidy measure in question is in conformity with the Agreement on Agriculture will, to a certain extent, offset the respondent's right to claim for the exceptions provided by the Article 13 provisions, which is surely contrary to the drafters' intent.

# ANNEX D

## REBUTTAL SUBMISSIONS OF PARTIES

# ANNEX D-1

## BRAZIL'S REBUTTAL SUBMISSION TO THE PANEL REGARDING THE "PEACE CLAUSE" AND NON-PEACE CLAUSE RELATED CLAIMS EXECUTIVE SUMMARY

TABLE OF CONTENTS

## 1. The United States Has No Peace Clause Protection for Non-Green Box Domestic Support Measures to Upland Cotton for MY 1999-2002

### 1.1. Production Flexibility Contracts and Direct Payments Are Non-Green Box Domestic Support

#### 1.1.1. The Amounts of PFC and Direct Payments Depend on the "Type" of Production

1. PFC payments and direct payments are non-green box support because both limit the "amount" of payment based on the "type" of production inconsistent with the requirements of Annex 2, paragraph 6(b) of the Agreement on Agriculture. The relevant text of paragraph 6(b) prohibits any linkage of the "amount of payments" to any "type of production" of an agricultural product. The "amount" of payments under the PFC and direct payment programmes *falls* when base acres are used to produce fruits, vegetables and wild rice. Thus, the undisputed evidence demonstrates that PFC and direct payments do not meet the policy-specific criteria for "de-coupled income support" in Annex 2, paragraph 6(b).

2. Prohibiting payments if *certain* types of crops are produced while at the same time permitting payments if *other* types of crops are produced violates Annex 2, paragraph 6(b). Contrary to the US argument, requiring no production, *i.e.*, prohibiting production, does not relate the amount of payments to the "type" of production, as no individual "type" of production would be eligible to payments. The notion of "type of production" in paragraph 6(b) is necessarily linked to the amount of payment to some "type" of commodity that is "produced" and not to a production requirement itself.

3. In addition, Brazil also presented evidence that the US restrictions on fruits, vegetables and wild rice prevent producers with PFC and direct payment base acreage from growing these alternative crops. This restriction, therefore, channels production into particular "types of production" by prohibiting *other* "types of production" and, therefore, violates Annex 2, paragraph 6(b).

#### 1.1.2. Direct Payments Are Not Green-Box Because the Base Periods for Determining Eligibility Have Been Updated in the 2002 FSRI Act

4. Direct payments are also not properly in the green box because the amount of payments are based on an updated "base period" and not on a "fixed" base period as required by Annex 2, paragraphs 6(a) and (b). Paragraphs 6(a) and (b) require a fixed and, therefore, unchanging base period for de-coupled domestic support measures with the same structure, design, and eligibility criteria. The evidence demonstrates that there are no significant changes in the payment eligibility criteria between the PFC programme and its direct successor, the direct payment program. Indeed, PFC payments made during 2002 were deducted from the amount of direct payments due in 2002.

5. Further, the updating permitted under the 2002 FSRI Act for direct payments was significant – one-third of eligible farms updated their PFC base acreage as of June 2003 in order to *increase* the base acreage – and payments – under the direct payment programme. This updating creates production-distorting effects because it creates expectations of future updates and will incite farmers to produce more of the programme crops that qualify for support.

6. The United States interprets the word "fixed" in Annex 2, paragraph 6(a) and (b) as being "fixed" only for the life of a particular legal measure. A Member could change a measure every year, update the "base period" to reflect the prior year's acreage, increase current payments to reflect the updated (and increased) "historical" acreage, and label it differently under a new law. Thus, the US interpretation would permit payments to be completely "coupled" to production, just with a one-year time lag. It would render any disciplines reflected in the use of the term "a" and "fixed" "base

period" in Annex 2, paragraph 6(a) a nullity. This is contrary not only to the ordinary meaning of the term "fixed" but also to the object and purpose of Annex 2, paragraph 6(a) to not permit Members to increase payments over time in a manner linked to increases in production over time. The re-linkage of payments to production is also inconsistent with the "fundamental requirement" in Annex 2, paragraph 1.

### 1.2. PFC, Market Loss Assistance, Direct and Counter-Cyclical Payments (CCP) and Crop Insurance Subsidies Are "Support To" Upland Cotton

7. The narrow US specificity test of "tied to production" seeks to impose a "form" of specificity on the text of Article 13(b)(ii) that is not there. It further contradicts the only analogous criteria to Article 13(b)(ii) for calculating annual levels of support – the AMS calculation criteria of Annex 3. In addition, it contradicts the broad definition of "in favour of" in defining AMS in Article 1(a) of the Agreement on Agriculture, and the "in general" language of the same provision. The "substance" the United States seeks to avoid with this unjustified interpretation is the $12.9 billion dollars in payments for the production of upland cotton from MY 1999-present.

8. Applying its narrow specificity criteria, the United States argues that PFC, market loss assistance, direct and counter-cyclical payments as well as crop insurance subsidies are not "support to" upland cotton. Brazil presents evidence that all five domestic support measures provide "support to" the production of upland cotton between MY 1999-2002.

#### 1.2.1. Production Flexibility Contract Payments

9. Brazil has presented considerable evidence demonstrating that PFC payments to holders of upland cotton base acreage in MY 1999-2001 are support to upland cotton. The 1996 FAIR Act established a specific payment formula permitting those upland cotton farmers who had traditionally farmed upland cotton to continue to receive payments following the elimination of the deficiency payment program. The 1996 FAIR Act singled out upland cotton and only six other crops for such PFC payments. Recipients were "producers" who "shared in the risk of producing a crop", and who farmed one of the seven crops in the three immediate years prior to the 1996 FAIR Act (MY 1993-95). Only a small minority of the producers of crops in the United States received PFC (and market loss assistance) payments. Brazil has demonstrated that between MY 1999-2001, the seven types of programme crops receiving PFC represented on average between MY 1999-2001 only 14.19 per cent of total US farm revenue. In addition, the total acreage of the seven PFC and market loss assistance crops in MY 2001 represented only 22 per cent of total US farmland. Thus, PFC payments were not provided to US producers *in general*.

10. The best available evidence demonstrates that upland cotton producers during MY 1999-2001 received PFC (and market loss assistance) payments. USDA reported that 97 per cent of farms producing upland cotton representing 99 per cent of upland cotton acreage from MY 1993-95 signed up to receive upland cotton PFC payments for MY 1996-2001. Upland cotton base acreage under the PFC (and market loss assistance) programme was 16.2 million acres. Between MY 1999-2001, the average acreage planted to upland cotton was 15.24 million acres. In addition, USDA reported that 95.7 per cent of the 16.2 million US upland cotton base acreage was planted to PFC programme crops in MY 2001 – a higher percentage than for any of the other 6 types of PFC programme crops. Thus, the evidence suggests that upland cotton producers in MY 1999-2001 were receiving PFC (and market loss assistance) payments.

11. Brazil has presented evidence demonstrating that PFC payments have production and trade distorting effects that arise from the prohibition on planting fruits, vegetables, and wild rice, as well as from the various "wealth effects" that result from the size of the subsidy averaging more than 15 per cent of the market value of upland cotton between MY 1999-2001. These effects provide further

confirming evidence that the selected, targeted PFC (and market loss assistance) payments are support to upland cotton.

### 1.2.2. Market Loss Assistance Payments

12. The evidence provided by Brazil with respect to PFC payments is also relevant to market loss assistance payments because these payments were made only to farmers with PFC contracts for the seven PFC crops, and additionally to soybeans. Thus, historic upland cotton producers (producing upland cotton in MY 1993-1995) received "upland cotton-specific" market loss assistance payments in MY 1998-2001. Even with the addition of soybeans, these 8 crops only represented on average 20.75 per cent of total US farm revenue in MY 1999-2001. PFC crop base acreage and soybean acreage in MY 2001 represented only 29 per cent of total US farmland. Thus, as with PFC payments, market loss assistance payments were not paid to US agricultural producers *in general* but rather to only a select group of US producers.

13. The evidence presented by Brazil indicates that while producers holding PFC/market loss assistance base acreage had the legal "freedom to farm" different crops, if they produced upland cotton, they would suffer adverse financial consequences *unless* they produced upland cotton on *upland cotton*, *corn* or *rice* base acres. The evidence highlights the practical impossibility of growing upland cotton without any type of PFC and market loss assistance payment in MY 2001. This evidence confirms NCC statements and supports a conclusion that any upland cotton produced in MY 1999-2001 – as a matter of economic reality and viability – needed and received PFC and market loss assistance payments to meet the high cost of production.

14. Further evidence that market loss assistance payments are support to upland cotton stems from the fact that the United States notified these subsidies as trade and production distorting amber box support. The evidence demonstrates that the targeted market loss assistance payments triggered by market price declines have even more trade and production-distorting effects than PFC payments. Further, as with PFC payments, production and trade distortions occurred because of the prohibition or restriction on receiving such payments based on growing fruits, vegetables, or wild rice. The production and trade-distorting effects on upland cotton are further confirmed by the fact that market loss assistance payments represented on average 17.87 per cent of the market value of upland cotton between MY 1999-2001. Thus, even though upland cotton producers were not *required* to produce upland cotton to receive market loss assistance payments, the record demonstrates that they continued to produce upland cotton between MY 1999-2001, and they continued to benefit from the 17.87 per cent subsidies represented by these payments.

### 1.2.3. Direct Payments

15. Direct payments are targeted support to "producers" farming, *inter alia*, on upland cotton base acreage. The eligible upland cotton producers who grew upland cotton in MY 1998-2001 (or in MY 1993-95) – together with eligible producers of only nine other crops – are a select group, who grew crops representing only 23.49 per cent of total farm cash receipts and 30 per cent of total US farm acreage. Thus, direct payments are *not* available to the great majority of US producers of agricultural commodities, *i.e.*, they are not provided to US agricultural producers *in general.*

16. The United States argues that direct payments and CCP payments are not "support to upland cotton" because there is no *legal requirement* under the 2002 FSRI Act for holders of upland cotton base acreage to grow upland cotton. However, Brazil has demonstrated that the theoretical legal *planting flexibility* in the 2002 FSRI Act is not reflected in the *economic* reality of growing high-cost crops like upland cotton. Farmers who did plant the 14.2 million acres of upland cotton for MY 2002 could only have covered their costs by receiving *upland cotton*, *rice* or *peanut* direct payments and counter-cyclical payments. This evidence strongly confirms what the NCC officials have stated

repeatedly, that their members need, rely on, and *receive* direct payment and counter-cyclical payment support. And this evidence refutes the United States argument that the *legal* flexibility to grow other crops – or not produce at all – is the single relevant fact justifying a finding that direct payments and CCP payments did not support upland cotton in MY 2002.

17. Further evidence that direct payments are support to upland cotton is derived from the effects on upland cotton production caused by the updating of the base acreage between the PFC and the direct payment programmes. Brazil has presented evidence indicating that this updating creates a re-linkage between production and the direct (and counter-cyclical) payments. Production effects are also caused by channeling the payments into crops other than fruits, vegetables, and wild rice. Further, the size of the subsidy (over 15 per cent of the current upland cotton market value) also contributes to wealth creation that has production effects. These production effects demonstrate that the direct payments (and CCP payments) are not de-linked from production – as argued by the United States – and support a conclusion that they are support to upland cotton.

### 1.2.5. Counter-Cyclical Payments

18. The United States argues that because producers receiving CCP payments are not required to produce upland cotton to receive payments, these payments cannot, as a matter of law, be considered support to upland cotton within the meaning of Article 13(b)(ii). Nevertheless, the evidence provided by Brazil demonstrates that CCP funds in MY 2002 paid to "historic" (i.e., 1998-2001 or 1993-1995) upland cotton producers are paid to a tiny fraction of total US producers of agricultural commodities and not to US producers of agricultural products "in general". Further, the evidence supports the conclusion that the recipients of these payments in MY 2002 needed these payments to continue producing upland cotton. They constitute "support to upland cotton".

19. Moreover, CCP payments create additional production effects due to the "base-update" permitted under the 2002 FSRI Act for both base yields and base acreage compared to market loss assistance payments. Further, the fruits, vegetables, and wild rice prohibitions or restrictions channel production into upland cotton. This evidence collectively supports a conclusion that CCP payments are "support to upland cotton".

### 1.2.6. Crop Insurance Payments

20. Brazil has demonstrated that upland cotton farmer benefit from specialized and specific crop insurance policies provided under the 2000 Agricultural Risk protection Act. Premium subsidies are directly tied to the amount of acreage planted by an upland cotton farmer. Also the participation rate, the share of policies at higher buy-up levels and the crop insurance loss ratio are higher for upland cotton than for other crops. This is confirmed by USDA's own economists, who have found that crop insurance subsidies cause much higher production and export effects for upland cotton than for other crops. In sum, crop insurance subsidies tied directly to the production of upland cotton are "support to a specific commodity" for the purposes of Article 13(b)(ii).

## 1.3. The US Support to Upland Cotton in MY 1999-2002 Exceeded the Support Decided in MY 1992

21. The United States has raised a number of *post hoc* arguments related to a supposed "rate of support" decision it alleges to have made during MY 1992. In the SAA, the United States stated that Members would have peace clause protection from adverse effects and serious prejudice challenges in the WTO "*unless the AMS for the particular* commodity exceeds the level decided in the 1992 marketing year". The phrase "AMS for the particular commodity" is an explicit recognition by the United States of the test in Annex 3, paragraph 6 which states: "For each basic agricultural product, a specific AMS shall be established *expressed in total monetary terms.*" The US "rate of support"

methodology is not an expression in "total monetary terms," nor does it permit such a calculation. There are only two types of methodologies that would allow an expression in monetary terms of a decision (or decisions) taken by the United States in MY 1992 regarding its level of support to upland cotton: "using budgetary outlays" or the "gap between the fixed reference price and the applied administered price multiplied by the quantity of production eligible to receive the administered price".

22. Brazil disagrees with the United States' assertion that it did not "decide" on budgetary outlays. The alleged US decision to provide a rate of support must necessarily be accompanied by a decision to authorize whatever budgetary outlays would be necessary to meet the rate of support. The United States took specific administrative decisions which meant that the United States decided on the payment rates that resulted from the "rate of support" and, therefore, on the amount of budgetary outlays it would use from its unlimited spending authority. For the United States to argue, *post hoc,* that these decisions did not also include expenditures is inconsistent with its SAA interpretation of the peace clause that the 1992 decision must be expressed in "total monetary terms."

23. Brazil has demonstrated that expenditures for MY 1992 are lower than they are for any of the marketing years from 1999-2002. Therefore, under this methodology, the United States has no peace clause exemption for MY 1999-2002. While Brazil does not believe that calculating the upland cotton AMS based on the AMS methodology in Annex 3 is the appropriate methodology – based on the absence of the terms "AMS", "product-specific" and "non-product-specific" in Article 13(b)(ii) – Brazil has provided evidence that by using this methodology the United States support to the basic agricultural commodity "upland cotton" exceeded the support decided during the 1992 marketing year in all marketing years from 1999-2002.

24. In the event the Panel decides not to use a "total monetary value" methodology, then there are two "rate of support" methodologies: (1) budgetary outlays per pound of support, and (2) the expected guaranteed income rate of support set out in Professor Sumner's analysis. Brazil has provided extensive analysis of each of these two methodologies. However, Brazil does not endorse either methodology.

25. Brazil has demonstrated that the preferable methodology would be to rely on budgetary outlays per pound of upland cotton production. Professor Sumner's approach should be used only as an alternative to the simplistic US "72.9 methodology" because it is much more accurate than the United States approach accounting for eligibility criteria, effective programme limitations and costs that the US ignores. In any event, Brazil has demonstrated that also under both rate of support methodologies the US support in MY 1999-2002 exceeds the support decided during MY 1992

26. Any methodology that does not account for eligibility and effective participation criteria is inconsistent with Article 13(b)(ii). It is also inconsistent with the context of Article 13(b)(ii) which includes Annex 3, paragraphs 8 and 10 requiring calculation of the monetary value of support by factoring in "*production eligible to receive the administered price*." And it is also inconsistent with object and purpose of the Agreement on Agriculture, which is – after all – "correcting and preventing restrictions and distortions in world agricultural markets."

### 1.4. Challenges to Actionable Subsidies under Article 5 and 6 of the SCM Agreement and Article XVI of GATT 1994 Are Not Limited to the Marketing Year in which a WTO Panel Is Established

27. The United States argues that the Panel may only count *current* US non-green box support in determining whether the United States enjoys peace clause exemption under Article 13(b). Applying a strict "statute of limitations" approach, the United States argues that Brazil (1) cannot challenge any US trade and production-distorting agricultural support for MY 2001 (or MY 2000, or MY 1999) because it did not ensure that the Panel was established during MY 2001 (or MY 2000, or MY 1999), and (2) it cannot challenge *all* of the trade and production-distorting support for all of MY 2002 because it did not ensure that the Panel was established by 31 July 2003 – the last day of the 2002 marketing year. The United States goes so far as to argue that the Panel may only compare MY 1992 support decided with *partial* MY 2002 data through 18 March 2003 – the date the Panel was established. According to the US theory, the only date the Panel could have been established to ensure comparison with full MY 2002 data would have been 31 July 2003 – the last day of MY 2002.

28. Brazil has demonstrated that the United States has constructed an irrational interpretation of Article 13(b)(ii). It is bizarre to interpret Article 13(b)(ii) in a way that requires Members to carefully "time" a request for establishment of a panel to maximize the amount of support to be counted for the "current" marketing year. Nothing in the "present tense" of Article 13(b)(ii) compels this result. The Panel must interpret Article 13(b)(ii) according to its ordinary meaning and with regard to its context. The relevant context is Articles 1(h)(ii) and 6.3 of the Agreement on Agriculture. The *Korea – Beef* dispute exemplifies that a Member can challenge violations of "Current Total AMS" at any time after a marketing year ends. The ability of challenging Current Total AMS violations in later years by analogy suggests that non-conformity with the peace clause requirements in much the same way leads to lifting the peace clause exemption also for marketing years other than the current marketing year. Thus, the proper interpretation of Article 13(b)(ii) permits actionable subsidy challenges under the SCM Agreement and GATT Article XVI:1 for any marketing year for which peace clause exemption does not exist – under either its chapeau (Current Total AMS) or the proviso of Article 13(b)(ii).

### 2. The GSM 102, GSM 103 and SCGP Export Credit Guarantee Programmes Constitute Export Subsidies in Violation of Articles 10.1 and 8 of the Agreement on Agriculture, and Item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement

29. Brazil has demonstrated that the GSM 102, GSM 103 and SCGP export credit guarantee programmes administered by the CCC constitute export subsidies within the meaning of Articles 10.1, 1(e) and 8 of the Agreement on Agriculture, Article 3.1(a) of the SCM Agreement, and item (j) of the Illustrative List of Export Subsidies attached as Annex I to the SCM Agreement. Brazil also demonstrated that those export subsidies circumvent, or threaten to circumvent, the United States' export subsidy reduction commitments, in violation of Articles 10.1 and 8 of the Agreement on Agriculture. Additionally, because they violate the Agreement on Agriculture, these programmes are not exempt from actions by Article 13(c)(ii) of the Agreement on Agriculture, and constitute prohibited export subsidies within the meaning of item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement.

30. Article 10.2 does not, as the United States asserts, carve out export credit guarantees from the general export subsidy disciplines of the Agreement on Agriculture, including the anti-circumvention provisions of Article 10.1. The Appellate Body concluded that exemptions and carve-outs from general obligations must be provided for explicitly in the text of an agreement. Article 10.2 includes no such explicit carve-out or exemption. Rather, Article 10.2 announces Members' intent to work toward negotiations on specific disciplines for export credits. In the meantime, the general disciplines on export subsidies included in the Agreement on Agriculture apply to export credits.

### 2.1. CCC Export Credit Guarantees Constitute Export Subsidies under Articles 1 and 3.1(a) of the SCM Agreement

31. Brazil notes that CCC export credit guarantees are "financial contributions" within the meaning of Article 1.1(a)(1)(i) of the SCM Agreement. Since CCC export credit guarantees are unique financing vehicles for agricultural commodity transactions that are not available on the commercial market, let alone on terms consistent with the market, they confer "benefits" within the meaning of Article 1.1(b) of the SCM Agreement. Brazil presents the affidavit of Marcelo Pinheiro Franco from the Brazilian Export Credit Insurance Agency who confirms that no

> comparable market-based export credit guarantees or financing instruments for international transactions involving agricultural commodities [exist] that provide these same terms [as the GSM and SCGP programmes].

32. Further, the United States compares agricultural export credit guarantees to export credit insurance for agricultural commodities, which it asserts is available on the private commercial market. However, it acknowledges that insurance coverage is structured altogether differently from guarantee coverage. Thus, even if the United States had proven its assertion with evidence, it acknowledges that the market for private insurance cannot serve as a benchmark against which to determine whether CCC guarantees confer "benefits".

33. Finally, CCC guarantees are contingent in law on export performance and therefore constitute prohibited export subsidies under Article 3.1(a) of the SCM Agreement.

34. Lastly, Brazil recalls that since the United States surpassed its quantity commitment levels, Article 10.3 of the Agreement on Agriculture allocates the burden to the United States to prove that its excess exports did not benefit from export subsidies, including export credit guarantees.

### 2.2. The CCC Export Credit Guarantee Programmes Constitute Export Subsidies under Item (j) of the Illustrative List of Export Subsidies

35. Brazil has demonstrated that the GSM 102, GSM 103 and SCGP programmes also constitute export subsidies because they charge premium rates that are inadequate to cover the long-term operating costs and losses of the programmes, within the meaning of item (j) of the Illustrative List. Item (j) does not require the Panel to endorse any particular methodology or formula for determining whether the CCC programmes cover their long-term operating costs and losses, or to decide by precisely how much those costs and losses exceed premiums collected. Rather, Brazil has provided the Panel with numerous alternatives, each of which demonstrates that long-term operating costs and losses for the GSM 102, GSM 103 and SCGP programmes outpace premiums collected, including data under the FCRA, Brazil' constructed formula, data from CCC's 2002 financial statements reporting large uncollectible amounts on post-1991 and pre-1992 guarantees, among others.

36. The United States criticizes the FCRA cost formula as inappropriate because it allegedly relies on "estimated" rather than "actual" data about the costs of the programmes. It is not true that the FCRA cost formula reflects only "an *estimate* of the long-term costs to the Government". A significant portion of the inputs into the FCRA cost formula reflect actual historical experience with borrowers, and actual contract terms such as interest rates, maturity, fees and grace periods.

37. Moreover, the results of the FCRA cost formula are modified throughout the lifetime of a cohort, pursuant to the "reestimation" process. The results of the reestimate process demonstrate that CCC has "los[t] money" during the period 1992-2002. When these total lifetime reestimates for all

cohorts of guarantees disbursed since 1992 are netted against the total *original* subsidy estimates adopted each budget year during the period 1992-2002, *the resulting loss is nearly $1.75 billion*.

38. The implication of the United States' position concerning "estimated data" is that it is impossible to judge whether premiums for the GSM 102, GSM 103 and SCGP programmes have covered operating costs and losses until all guarantee cohorts for a period constituting the "long term" are closed, so that purely "actual" rather than partial "estimate" data are available. Because all cohorts disbursed since the inception of federal credit reform remain open, the United States effectively argues that it is impossible for this Panel to judge whether the CCC guarantee programmes satisfy the elements of item (j). Brazil notes however that the US Congress and the President have endorsed the use of the FCRA cost formula as the principal way to "measure more accurately the costs of Federal credit programmes", *even in the budget year column of the US budget*, let alone several years out, when cohorts have been subject to successive rounds of reestimates.

39. In closing, Brazil reminds the Panel that the US criticism regarding the use of "estimated" data does not address the many other bases apart from the FCRA formula on which Brazil has demonstrated that the long-term operating costs and losses of the GSM 102, GSM 103 and SCGP programmes exceed premiums paid.

### 2.3. The CCC Export Credit Guarantee Programmes Threaten to Circumvent US Export Subsidy Reduction Commitments

40. At paragraphs 295-305 of its First Submission, Brazil demonstrated that with respect to both unscheduled and scheduled commodities, the GSM 102, GSM 103 and SCGP export subsidy programmes result in, or threaten to lead to, circumvention of the United States' export subsidy commitments, in violation of Article 10.1 of the Agreement on Agriculture. For the same reason, the United States violates Article 8, which requires a Member not to provide export subsidies otherwise than in conformity with the Agreement on Agriculture and with its scheduled commitments. The threat of circumvention for scheduled commodities is further enhanced by the fact that CCC is exempt from the requirement in the FCRA that a programme receive new Congressional budget authority before it undertakes new loan guarantee commitments. Mandatory programmes like the CCC export credit guarantee programmes must be available to all eligible borrowers, without regard to appropriations limits. In an important sense, this resembles the United States' FSC regime, which the Appellate Body found is available without limit. The Appellate Body considered that the unlimited nature of the regime posed a significant threat, under Article 10.1, that the United States would surpass its agricultural export subsidy reduction commitments.

### 2.4. The GSM 102, GSM 103 and SCGP Export Credit Guarantee Programmes Constitute Export Subsidies in Violation of Item (j) and Articles 3.1(a) and 3.2 of the SCM Agreement

41. Since the CCC export credit guarantee programmes violate Articles 10.1 and 8 of the Agreement on Agriculture, the United States is not entitled to the "peace clause" exemption. Therefore, GSM 102, GSM 103 and SCGP programmes constitute prohibited export subsidies, in violation of item (j) of the Illustrative List of Export Subsidies, and of Articles 3.1(a) of the SCM Agreement.

## 3. The Step 2 Export and Domestic Subsidies Are Prohibited Subsidies in Violation of Articles 3.1(a) and 3.1(b) of the SCM Agreement

42. The United States asserts that all US upland cotton is eligible to receive Step 2 payments and that this removes the export and local content contingency. Brazil refutes the US assertion both as a

matter of law as well as fact. The Step 2 export provisions are not, as the United States now argues, simply domestic support payments made to US producers of upland cotton. Brazil again emphasizes that the *US – FSC* and *Canada – Aircraft* Appellate Body decisions are relevant jurisprudence and apply to the facts of the two situations set out in the regulations to Section 1207(a) of the 2002 FSRI Act. Thus, even if all US production since 1990 or even during MY 1999-2002 received Step 2 payments – which the United States has failed to document with any data – it would not remove the export and local content contingencies mandated by those regulations that violate SCM Agreement Articles 3.1(a) and (b).

43. US domestic Step 2 subsidies are prohibited local content subsidies in violation of Article 3.1(b) of the SCM Agreement. There is no explicit derogation of Article 3.1(b) built into the Agreement on Agriculture. The United States argues that there is an inherent conflict between Annex 3, paragraph 7 and Article 6.3 of the Agreement on Agriculture with Article 3.1(b) of the SCM Agreement because in the view of the United States, there can be no payments to processors of agricultural products included within AMS that do *not* violate Article 3.1(b) of the SCM Agreement. Brazil demonstrates that this is not true and that there are subsidies to agricultural processors that do not violate Article 3.1(b) and presents various examples to that respect.

44. Finally, Brazil notes the EC argument that applying Article 3.1(b) of the SCM Agreement "would lead to stricter disciplines being applied to domestic subsidies than are applicable for industrial goods". Local content subsidies – whether for agricultural and industrial products – are prohibited by Article 3.1(b). As "prohibited" subsidies, they are subject to the ultimate discipline – they cannot legally exist. The two packages of disciplines for agricultural and industrial products have both been negotiated during the Uruguay Round. The resulting rules have to be interpreted according to the customary rules of treaty interpretation as contained in the *Vienna Convention*. This interpretation results in agricultural local content subsidies being prohibited. Whether that results in there being more or less strict disciplines than would be applicable to industrial subsidies is not a relevant consideration for the interpretation of the disciplines.

### 4. The ETI Act Subsidies Violate Articles 10.1 and 8 of the Agreement on Agriculture and Are Prohibited by Articles 3.1(a) and 3.2 of the SCM Agreement

45. Brazil has made a *prima facie case* with respect to its claims against the ETI Act. Brazil challenges exactly the same measure based on the same claims asserted by the EC that the panel and the Appellate Body in *US – FSC (21.5)* held to violate the Agreement on Agriculture and the SCM Agreement. The sole difference is that Brazil limits its claims to ETI Act subsidies benefiting the export of upland cotton only.

# ANNEX D-2

## EXECUTIVE SUMMARY OF THE REBUTTAL SUBMISSION OF THE UNITED STATES

### Introduction and Overview

1. The comparison under the Peace Clause proviso in Article 13(b)(ii) must be made with respect to the support as "decided" by those measures. In the case of the challenged US measures, the support was decided in terms of a rate, not an amount of budgetary outlay. The rate of support decided during marketing year 1992 was ***72.9 cents*** per pound of upland cotton; the rate of support granted for the 1999-2001 crops was only ***51.92 cents*** per pound; and the rate of support that measures grant for the 2002 crop is only ***52 cents*** per pound. Thus, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.[1]

2. Brazil has claimed that additional "decisions" by the United States during the 1992 marketing year to impose a 10 per cent acreage reduction programme and 15 per cent "normal flex acres" reduced the level of support below 72.9 cents per pound. However, the 72.9 cents per pound rate of support most accurately expresses the revenue ensured by the United States to upland cotton producers. Even on the unrealistic assumption that these programme elements reduced the level of support by 10 and 15 per cent, respectively (that is, the maximum theoretical effect these programme elements could have had), the 1992 rate of support would still be ***67.625*** cents per pound, well above the levels for marketing years 1999-2001 and 2002.

3. Although such a comparison would not conform to the text, the result of the Peace Clause comparison is no different if one compares the support via an Aggregate Measurement of Support calculation. Using the price gap methodology (as provided under Annex 3 of the Agriculture Agreement) for US price-based deficiency payments and marketing loan payments, the upland cotton Aggregate Measurement of Support (in US $, millions) for these years is MY1992: 1,079; MY1999: 717; MY2000: 484; MY2001: 264; MY2002: 205. Again, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

4. Finally, the analysis presented by Brazil's expert at the first panel meeting actually supports the United States, not Brazil. Removing the non-product-specific support that Brazil erroneously tries to pass off as support to upland cotton, Brazil's own expert calculates the total support per unit

[1] Brazil has asserted that the United States' approach does not provide any way of taking Step 2 payments into account. Because the availability of Step 2 payments is contingent on certain price conditions existing during the marketing year, the level of support decided must relate to the payment parameters. These have remained the same for Step 2, with the exception of the suspension, through 2006, of the 1.25 cent price difference threshold and payment availability at slightly higher market prices. However, because Step 2 merely provides an alternative avenue of providing support (through processors rather than directly to producers), these minor adjustments do not alter the revenue ensured for producers by the marketing loan rate of 52 cents per pound. In addition, these minor adjustments cannot overcome the greater than 20 cents per pound difference in product-specific support between marketing years 1992 and 1999-2002. Similarly, and without prejudice to whether these measures are within the Panel's terms of reference, we note that cottonseed payments in 1999, 2000, and 2002 ranged in value between 0.6 to 2.3 cents per pound (factoring expenditures over production); thus, they too do not materially affect the comparison between marketing year 1992 and any other year.

(cents/lb.) as MY1992: 60.05; MY1999: 53.79; MY2000: 55.09; MY2001: 52.82; MY2002: 56.32. Again, in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

5. Thus, whether gauged via the rate of support decided by US measures (whether or not adjusted for the acreage reduction programme and normal flex acres), *or* via the AMS for upland cotton (calculated through a price gap methodology), *or* via the calculations of Brazil's expert (limited to product-specific support), the result is exactly the same: in no marketing year from 1999 through 2002 have US measures breached the Peace Clause.

**US Green Box Measures are "Exempt from Actions" Pursuant to Article 13(a)(ii)**

6. A measure shall be deemed to meet the "fundamental requirement" of the first sentence of Annex 2 if it meets the basic criteria of the second sentence plus any applicable policy-specific criteria. As suggested by the use of the word "fundamental" ("from which others are derived") and the structure of Annex 2 (that is, beginning the second sentence with the word "accordingly"), compliance with the requirement ("something called for or demanded") of the first sentence will be demonstrated by conforming to the basic criteria of the second sentence plus the applicable policy-specific criteria of paragraphs 6 through 13.

7. ***Direct Payments:*** Eligibility for direct payments under the 2002 Act is based on criteria in a "defined and fixed base period " (paragraph 6(a)) in the ordinary meaning of those terms: a base period that is "definite" (set out in the 2002 Act) and "stationary or unchanging in a relative position" (does not change in relative position for the six-year duration of the 2002 Act).

8. Paragraph 6(a) establishes that eligibility for payments under a decoupled income support measure shall be determined by clearly-defined criteria in "*a* defined and fixed base period," not "*the* base period" (as in paragraph 9 of Annex 3, which is defined in that same paragraph as "the years 1986 to 1988"). Brazil's reading of "a defined and fixed base period" would read into that text the term "unchanging", language Brazil has proposed in the ongoing WTO negotiations but is not currently found in the Agreement.

9. Annex 2, by its terms, sets out the fundamental requirement and basic and (if applicable) policy-specific criteria to which green box "*domestic support measures*" must conform. Other provisions in the Agreement similarly establish that the criteria set out in Annex 2 apply to "domestic support measures". Thus, with respect to a given decoupled income support measure, eligibility for payments must be determined by criteria in a "defined and fixed base period".

10. Brazil argues that a *new* decoupled income support measure must be based on the same base period as a previous measure if the new measure "is essentially the same" or "[i]f the structure, design, and eligibility criteria have not significantly changed." There is no provision in Annex 2 or the Agreement on Agriculture that supports Brazil's approach. It is thus irrelevant whether two decoupled income support measures are "essentially the same".

11. Brazil would read paragraph 6(b) as requiring a Member to make support available for *any* type of production; a Member could not preclude a recipient from producing certain crops.[2] While direct payments are reduced if certain crops are produced, a recipient need not produce any "type of"

[2] Brazil's reading would also seemingly require a Member to make payments even if the recipient's production was illegal – for example, the production of narcotic crops such as opium poppy or the production of unapproved biotech varieties or environmentally damaging production (for example, planting on converted rain forest or wetlands) – because, under Brazil's approach, by reducing or eliminating payments for any of these production activities, a decoupled income support measure could be understood to base or relate the amount of payment to the "type" of production undertaken.

crop in particular in order to receive the full payment for which a farm is eligible; the recipient need merely refrain from producing the forbidden fruit or vegetable. Thus, it is not any "type . . . of production . . . undertaken by the producer" that results in the full direct payment but rather production *not* undertaken by the producer – that is, *ceasing* certain production.

12. ***Production Flexibility Contract Payments:*** Production flexibility contract payments (now expired) were made with respect to farm acreage that was devoted to agricultural production in the past, including acreage previously devoted to upland cotton production. The payments, however, were made regardless of whether upland cotton was produced on those acres or whether anything was produced at all. As with direct payments, because production flexibility contract payments were decoupled from production, they met the five policy-specific criteria set out in paragraph 6 for decoupled income support measures.

13. Brazil has failed to make a *prima facie* case that US green box measures do not satisfy the fundamental requirement of Annex 2.[3] In fact, Brazil's "evidence" consists simply of selectively quoting and emphasizing conceptual and theoretical statements from the economic literature. *None of the papers Brazil cites concludes that these payments in particular, or decoupled income support measures in general, have more than "minimal[] trade-distorting effects or effects on production."*

14. The Agreement on Agriculture does not define a numerical threshold on what degree of effects will be considered "minimal[] trade-distorting effects or effects on production". However, given that *no study has found that these payments have effects on production of more than one per cent*, it would appear that direct payments have and production flexibility contract payments had no more than "minimal[] trade-distorting effects or effects on production". Thus, not only has Brazil failed to present a *prima facie* case, but the United States has affirmatively shown that these payments satisfy the fundamental requirement of the first sentence of Annex 2.

**US Non-Green Box Domestic Support Measures are not in Breach of Article 13(b)(ii)**

15. **: Peace Clause Proviso – Support was "Decided" During Marketing Year 1992 Using a Rate, Not a Budgetary Outlay**: The Peace Clause proviso requires a comparison to the product-specific support "decided" during the 1992 marketing year. A Member cannot "decide" world market prices or actual production or any other element outside a government's control. Yet Brazil would read the Peace Clause as though Members were omnipotent and could "decide" every factor influencing support.

16. Brazil lists nine different "decisions taken by the United States in relation to MY 1992 upland cotton support programmes". At least three of these "decisions" relate to the rate of support and *not a single decision relating to budgetary outlays or market prices.* Thus, Brazil's own answer confirms that the proper analysis of the support "decided" by US measures is to look to the terms of the US measures, which set a rate of support.

17. The use of the term "grant" in the Peace Clause proviso with respect to challenged measures does not compel an examination of budgetary outlays. The ordinary meaning of "grant" is to "bestow as a favour" or "give or confer (a possession, a right, etc.) formally". Thus, the use of the term "grant" would permit an evaluation of the rate of support that challenged measures "give or confer . . . formally". Members did not choose to use the word "granted" in place of "decided," and a valid

[3] If, as Brazil has argued, the first sentence is "fundamental" and has independent force, then presumably if a measure meets that "fundamental requirement", it will be deemed to be green box, irrespective of whether it meets the subordinate basic and policy-specific criteria. Thus, on Brazil's reading, if a measure does not conform to the criteria in Annex 2, it still could meet the "fundamental requirement", and the complaining party would bear the burden of proof to demonstrate a measure's inconsistency with that provision.

interpretation must make sense of that choice rather than reading it out of the Agreement. In addition, had Members intended the Peace Clause comparison to be made *solely* on the basis of budgetary outlays, they could have used that term, which is a defined term in Article 1(c) and used frequently in the Agreement.

18. **Peace Clause Proviso – "Support to a Specific Commodity" Means Product-Specific Support**: The phrase "support to a specific commodity" means "product-specific support". That the Peace Clause does not use the phrase "product-specific support" is neither surprising nor telling. The basic definition of product-specific support is given in Article 1(a), as "support . . . provided for an agricultural product in favour of the producers of the basic agricultural product." Article 1(h) also refers to the concept but does not use the exact phrase "product-specific support"; in fact, the language this provision uses ("support for basic agricultural products") is strikingly similar to the Peace Clause proviso ("support to a specific commodity"). Neither Article 1(a) nor 1(h) *even uses the term "specific"* whereas the Peace Clause *contains all three elements of that phrase* (product, specific, and support).

**19. Brazil Simply Ignores the Definition of Product-Specific Support in the Agreement on Agriculture**: Brazil argues that certain challenged US measures are *not* "non-product-specific" and therefore must be "support to a specific commodity." Brazil focuses on the definition of "non-product-specific" support in Article 1(a) but simply fails to interpret that definition in light of the definition of product-specific support that immediately precedes it. The universe of domestic support measures under Article 1(a) consists of product-specific support and non-product-specific support; these two parts must be read together and in harmony.

20. The definition of product-specific support consists of two elements: First, the support must be provided "*for an agricultural product*," that is, the subsidy is given "in favour of" a product and not in respect of criteria not related to the product or in respect of multiple products. Second, such support is "in favour of the *producers of the basic agricultural product*", which suggests that subsidy benefits those who produce the product – that is, production is necessary for the support to be received. *Both* of these elements must be present for support to be product-specific since, should either be missing, the definition would not be satisfied.

21. The second category of support in Article 1(a) is defined as "non-product-specific support provided in favour of agricultural producers in general." The ordinary meaning of "in general" is "in general terms, generally". Non-product-specific support *cannot* be interpreted as support provided "for *an* agricultural product in favour of the *producers* of the basic agricultural product" because to do so would reduce the first half of the Article 1(a) definition to redundancy or inutility. Thus, non-product-specific support is support in favour of agricultural producers "generally" – that is, a residual category of support covering those measures that do not fall within the more detailed criteria set out in the definition of product-specific support.

22. **Counter-Cyclical Payments are Non-Product-Specific Support:** Counter-cyclical payments are non-product-specific support. The payment formula for counter-cyclical payments demonstrates that these payments are not "provided for an agricultural product" because a recipient need not currently produce upland cotton (or any other crop) to receive payment. In addition, it is not "the producers of the basic agricultural product" – that is, current upland cotton growers – that are entitled to receive the counter-cyclical payments but rather persons (farmers and landowners) on farm acres with *past histories* of producing covered commodities, including upland cotton, during the base period. Thus, counter-cyclical payments satisfy neither element of the definition of product-specific support and do not form part of the Peace Clause comparison.

23. Despite Brazil's attempts to mischaracterize the two as similar, counter-cyclical payments and deficiency payments differ in crucial respects. To receive a deficiency payment, a producer was

*required* to plant upland cotton for harvest and would be paid on the *acres planted to upland cotton for harvest* up to the maximum payment acreage. Thus, deficiency payments were support for an agricultural product (upland cotton) in favour of the *producers* of the product. By contrast, to receive the counter-cyclical payment a person with "upland cotton base acres" *need not plant for harvest or produce upland cotton* (nor any other crop nor any crop at all). Thus, counter-cyclical payments do not provide support for "an agricultural product" in favour of " the producers" of the basic agricultural product and do not form part of the Peace Clause comparison under the proviso in Article 13(b)(ii).

24. **Crop Insurance Payments Provide Non-Product-Specific Support**: Crop insurance is not support "provided for *an* agricultural product". For marketing year 2002, crop insurance payments are available to approximately 100 agricultural commodities, representing approximately 80 per cent of US area planted and greater than 85 per cent of the value of all US crops. Support which is provided to a number of crops is not "support to a specific commodity"; it is ' support to several commodities' or 'support to more than one commodity' and does not form part of the Peace Clause comparison. The United States notifies crop insurance as non-product-specific "amber box" domestic support subject to US reduction commitments. *No WTO Member has notified crop insurance programmes as product-specific*; in fact, Hungary, Canada, the EC, and Japan have notified crop insurance programmes as non-product-specific support. The United States is not aware of any other Member's crop insurance programme that has as broad product coverage as the US programme.

25. **Market Loss Assistance Payments are Non-Product-Specific Support**: As indicated in the US 1999 WTO domestic support notification (G/AG/N/USA/43), the expired market loss assistance payments were non-product-specific support. As with production flexibility contract payments, market loss assistance payments were made to persons with farm acres that previously had been devoted to production of certain crops, including upland cotton, during an historical base period. A recipient was not required to produce upland cotton or any other crop in order to receive payment, and no production was required at all. Thus, these payments are not product-specific support and would not form part of the Peace Clause proviso comparison.

26. **Direct Payments**: Were the Panel to conclude that direct payments do not conform fully to the provisions of Annex 2, direct payments would be non-product-specific support. As with counter-cyclical payments, direct payments are based on quantities of acreage that historically produced cotton, and there is no requirement to produce upland cotton (or any other crop) to receive these payments. Thus, direct payments would not be product-specific support.

27. **Production Flexibility Contract Payments**: Were the Panel to consider that these payments are within its terms of reference, the United States has explained that they would be green box support. Were the Panel to conclude further that production flexibility contract payments do not conform fully to the provisions of Annex 2, these payments would also be non-product-specific support for the reasons given with respect to direct payments. As such, they would not form part of the Peace Clause proviso comparison.

28. **Cottonseed Payments**: The Agricultural Assistance Act of 2003 and the cottonseed payment made pursuant to it is not within the Panel's terms of reference because the legislation authorizing the payments had not even been enacted at the time of Brazil's panel request, much less its consultation request. The "legal instruments" pursuant to which prior cottonseed payments were made, moreover, do not appear in Brazil's consultation or panel requests. Thus, it would appear that cottonseed payments for the 1999 and 2000 crops of cottonseed also do not form part of the Panel's terms of reference.

29. **Peace Clause Comparison – The Product-Specific AMS for Upland Cotton Also Demonstrates That Challenged US Measures Do Not Breach the Peace Clause**: The United States believes the Peace Clause compels comparing the rate of support decided by US

measures, whether or not adjusted for the acreage reduction programme and normal flex acres, with the current rate of support. Were the Panel to determine to use an Aggregate Measurement of Support calculation, however, the price gap methodology is the only appropriate one for Peace Clause purposes.

30. The price gap methodology eliminates the effect of prevailing market prices on the calculation of support. Instead, paragraphs 10 and 11 of Annex 3 designate that the support be calculated by multiplying the quantity of eligible production by the gap between the applied administered price (for example, the marketing loan rate) and the *fixed reference price* (that is, the actual price for determining payment rates for the years 1986 to 1988). Thus, by holding the reference price "fixed", support measured using a price gap calculation shows the effect of changes in the level of support (applied administered price) decided by a Member, rather than changes in outlays that result from movements in market prices that a Member does *not* control. In fact, the United States has calculated an AMS for upland cotton using the price gap methodology for both deficiency payments and marketing loan payments (marketing loan gains, certificate exchange gains, and loan deficiency payments) and using budgetary outlays for all other payments. The result is exactly the same as a rate of support comparison: in no marketing year from 1999 through 2002 is the support US measures grant in excess of the 1992 marketing year level.

**US Export Credit Guarantee Programme**
