

**AUSTRALIA – CERTAIN MEASURES CONCERNING TRADEMARKS,
GEOGRAPHICAL INDICATIONS AND OTHER PLAIN PACKAGING
REQUIREMENTS APPLICABLE TO TOBACCO PRODUCTS AND PACKAGING**

REPORTS OF THE PANELS

*SCI redacted, as indicated [[***]]*

Note:

These Panel Reports are in the form of a single document constituting four separate Panel Reports: WT/DS435/R, WT/DS441/R, WT/DS458/R, and WT/DS467/R. The cover page, preliminary pages, sections 1 through 7, appendices, and annexes are common to all four Panel Reports. The page header throughout the document bears the four document symbols WT/DS435/R, WT/DS441/R, WT/DS458/R, and WT/DS467/R, with the following exceptions: section 8 on page HND-872, which bears the document symbol for and contains the Panel's conclusions and recommendations in the Panel Report WT/DS435/R; section 8 on page DOM-872, which bears the document symbol for and contains the Panel's conclusions and recommendations in the Panel Report WT/DS441/R; section 8 on pages CUB-872 – CUB-873, which bears the document symbol for and contains the Panel's conclusions and recommendations in the Panel Report WT/DS458/R; and section 8 on page IDN-872, which bears the document symbol for and contains the Panel's conclusions and recommendations in the Panel Report WT/DS467/R. The appendices and the annexes, which are part of the Panel Reports, are circulated in separate documents: WT/DS435/R/Suppl.1, WT/DS441/R/Suppl.1, WT/DS458/R/Suppl.1, WT/DS467/R/Suppl.1 (appendices); and WT/DS435/R/Add.1, WT/DS441/R/Add.1, WT/DS458/R/Add.1, WT/DS467/R/Add.1 (annexes).

TABLE OF CONTENTS

LIST OF APPENDICES	13
LIST OF ANNEXES	14
LIST OF TABLES	15
LIST OF FIGURES	15
MAIN ABBREVIATIONS USED IN THESE REPORTS.....	16
MAIN EXHIBITS CITED IN THESE REPORTS.....	20
MAIN CASES CITED IN THESE REPORTS.....	54
1 INTRODUCTION	63
1.1 Complaint by Honduras	63
1.2 Complaint by the Dominican Republic	63
1.3 Complaint by Cuba	63
1.4 Complaint by Indonesia.....	63
1.5 Panel establishment and composition.....	63
1.5.1 Honduras.....	63
1.5.2 Dominican Republic.....	64
1.5.3 Cuba	64
1.5.4 Indonesia	65
1.5.5 Procedural agreement between Australia, Ukraine, Honduras, the Dominican Republic, Cuba, and Indonesia.....	65
1.6 Panel proceedings.....	66
1.6.1 General	66
1.6.2 Preliminary rulings on the Panel's terms of reference	67
1.6.3 Working procedures on strictly confidential information (SCI)	68
1.6.4 Requests for enhanced third-party rights	68
1.6.5 <i>Amicus curiae</i> submissions.....	68
1.6.6 Suspension of the proceedings and lapse of authority in DS434	70
1.6.7 Requests for information under Article 13 of the DSU	71
1.6.7.1 Request for information from the WHO and the FCTC Secretariat	71
1.6.7.2 Request for information from the International Bureau of WIPO	72
1.6.7.3 Data requests by the parties	73
1.6.7.3.1 Requests by Australia in relation to evidence submitted by the Dominican Republic and Ukraine in the context of their first written submissions	73
1.6.7.3.2 Requests by Ukraine and the Dominican Republic in relation to evidence submitted by Australia in the context of its first written submission.....	74
1.6.7.3.3 Additional data requests.....	81
1.6.8 Evidence and arguments presented subsequent to the comments on responses to questions following the second substantive meeting.....	83
1.6.8.1 Additional comments relating Dr Chipty's Third Rebuttal Report	83

1.6.8.2 Additional comments relating to Australia's Post-Implementation Review	84
2 FACTUAL ASPECTS.....	84
2.1 The measures at issue	84
2.1.1 Preparation, adoption, and entry into force of the TPP measures.....	85
2.1.2 The TPP measures	87
2.1.2.1 Introduction	87
2.1.2.2 "Objects" of the TPP Act.....	88
2.1.2.3 Requirements for retail packaging of tobacco products	89
2.1.2.3.1 Physical features of retail packaging	90
2.1.2.3.2 Colour and finish of retail packaging	90
2.1.2.3.3 Trademarks and other marks on retail packaging	91
2.1.2.3.4 Wrappers	92
2.1.2.3.5 Inserts and onserts	93
2.1.2.3.6 Other requirements concerning retail packaging.....	93
2.1.2.3.7 Summary of requirements on retail packaging	93
2.1.2.4 Requirements for the appearance of tobacco products	98
2.1.2.4.1 Requirements with respect to cigarettes.....	98
2.1.2.4.2 Requirements with respect to cigars	99
2.1.2.4.3 Summary of requirements on the appearance of tobacco products	99
2.1.2.5 Section 28 of the TPP Act.....	100
2.1.2.6 Offences and civil penalties	100
2.1.2.7 Relationship with other legislation.....	101
2.1.2.8 The TMA Act.....	102
2.1.2.9 Regulatory impact analysis.....	103
2.2 Other tobacco control-related measures in Australia	104
2.2.1 Mandatory text and GHWs	104
2.2.2 Restrictions on advertisement and promotion of tobacco products.....	105
2.2.3 Taxation measures.....	106
2.2.4 Restrictions on the sale of tobacco products.....	107
2.2.5 Other measures.....	109
2.3 Protection of trademarks and GIs in Australia.....	110
2.4 The FCTC.....	114
2.4.1 Background.....	114
2.4.2 Structure and governance.....	114
2.4.3 Selected provisions of the FCTC	115
2.4.4 FCTC Guidelines	118
2.4.5 FCTC provisions concerning the relationship between the FCTC and other international agreements and bodies	119
3 PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS	119
3.1 Honduras (DS435).....	119
3.2 Dominican Republic (DS441).....	120

3.3	Cuba (DS458)	120
3.4	Indonesia (DS467)	121
3.5	Australia	121
4	ARGUMENTS OF THE PARTIES	122
5	ARGUMENTS OF THE THIRD PARTIES	122
6	INTERIM REVIEW	122
6.1	Introduction	122
6.2	Requests for review of section 7.1 (Order of Analysis)	123
6.3	Requests for review of section 7.2.5.1 (Whether the TPP measures pursue a "legitimate objective")	123
6.4	Requests for review of section 7.2.5.2 (Whether the TPP measures are "in accordance with relevant international standards" under Article 2.5 (second sentence))	123
6.5	Requests for review of section 7.2.5.3 (The degree of contribution of the TPP measures to their objective)	124
6.6	Requests for review of section 7.2.5.3.5.2 (First mechanism: impact of plain packaging on the appeal of tobacco products to consumers)	127
6.7	Requests for review of section 7.2.5.3.5.3 (Second mechanism: impact of the TPP measures on the effectiveness of graphic health warning)	128
6.8	Requests for review of section 7.2.5.3.5.4 (Third mechanism: reducing the ability of the pack to mislead consumers about the harmful effects of smoking)	128
6.9	Requests for review of section 7.2.5.3.7 (Impact of the TPP measures on illicit trade)	129
6.10	Requests for review of section 7.2.5.4 (The trade-restrictiveness of the TPP measures)	129
6.11	Requests for review of section 7.2.5.5.2.2 (The gravity of the consequences of non-fulfilment)	130
6.12	Requests for review of section 7.2.5.6.1 (Whether less trade-restrictive alternative measures are reasonably available to Australia: Approach of the Panel)	130
6.13	Requests for review of section 7.2.5.6.2 (First proposed alternative measure: Increase in the MLPA)	130
6.14	Requests for review of section 7.2.5.6.3 (Second proposed alternative measure: Increased taxation of tobacco products)	131
6.15	Requests for review of section 7.3.2 (Article 15.4 of the TRIPS Agreement)	132
6.16	Requests for review of section 7.3.3 (Article 16.1 of the TRIPS Agreement)	132
6.17	Requests for review of section 7.3.5 (Article 20 of the TRIPS Agreement)	134
6.18	Requests for review of section 7.3.6 (Article 10 ^{bis} of the Paris Convention (1967), as incorporated by Article 2.1 of the TRIPS Agreement)	136
6.19	Requests for review of the Appendices	136
7	FINDINGS	138
7.1	Order of analysis	138
7.2	Article 2.2 of the TBT Agreement	140
7.2.1	Overview of the claims	141
7.2.2	Overall approach of the Panel	142
7.2.3	Applicability of the TBT Agreement to measures relating to trademarks	147
7.2.3.1	Main arguments of the parties	147

7.2.3.2 Arguments of the third parties.....	149
7.2.3.3 Analysis by the Panel.....	153
7.2.4 Whether the TPP measures constitute a technical regulation within the meaning of Annex 1.1 of the TBT Agreement	163
7.2.4.1 Whether the TPP measures apply to an identifiable group of products.....	164
7.2.4.1.1 Main arguments of the parties	164
7.2.4.1.2 Analysis by the Panel.....	165
7.2.4.2 Whether the TPP measures lay down one or more product characteristics	168
7.2.4.2.1 Main arguments of the parties	168
7.2.4.2.2 Analysis by the Panel.....	171
7.2.4.3 Whether compliance with the TPP measures is mandatory.....	177
7.2.4.3.1 Main arguments of the parties	177
7.2.4.3.2 Analysis by the Panel.....	178
7.2.4.4 Overall conclusion.....	180
7.2.5 Whether the TPP measures are "more trade-restrictive than necessary to fulfil a legitimate objective" within the meaning of Article 2.2.....	182
7.2.5.1 Whether the TPP measures pursue a "legitimate objective"	184
7.2.5.1.1 The objective of the TPP measures	185
7.2.5.1.1.1 Main arguments of the parties.....	186
7.2.5.1.1.2 Analysis by the Panel.....	188
7.2.5.1.2 Whether the objective pursued by Australia through the TPP measures is a "legitimate objective" within the meaning of Article 2.2	195
7.2.5.2 Whether the TPP measures are "in accordance with relevant international standards" under Article 2.5 (second sentence)	197
7.2.5.2.1 Overview of the arguments of the parties.....	197
7.2.5.2.2 Approach of the Panel.....	199
7.2.5.2.3 Whether the Article 11 and Article 13 FCTC Guidelines constitute "relevant international standards".....	200
7.2.5.2.3.1 The notion of "relevant international standards" in Article 2.5 (second sentence).....	200
7.2.5.2.3.2 Whether the Article 11 and Article 13 FCTC Guidelines constitute a "standard" for tobacco plain packaging within the meaning of Annex 1.2 of the TBT Agreement.....	210
7.2.5.2.4 Overall conclusion on whether the Article 11 and Article 13 FCTC Guidelines are "relevant international standards" and whether the TPP measures are "in accordance with" these Guidelines under Article 2.5 (second sentence)	245
7.2.5.3 The degree of contribution of the TPP measures to their objective.....	253
7.2.5.3.1 Overview of the parties' arguments	253
7.2.5.3.2 Main arguments of the third parties.....	261
7.2.5.3.3 Approach of the Panel and structure of the analysis.....	267
7.2.5.3.4 Access to data and probative value of certain evidence	274
7.2.5.3.5 Design, structure and operation of the measures	276
7.2.5.3.5.1 Critique of the "plain packaging literature" (TPP literature)	276

7.2.5.3.5.2 First mechanism: impact of plain packaging on the appeal of tobacco products to consumers	312
7.2.5.3.5.3 Second mechanism: impact of the TPP measures on the effectiveness of GHWs.....	352
7.2.5.3.5.4 Third mechanism: reducing the ability of the pack to mislead consumers about the harmful effects of smoking.....	377
7.2.5.3.5.5 Overall conclusion on evidence relating to the design, structure and operation of the TPP measures	391
7.2.5.3.6 Evidence relating to the application of the TPP measures.....	392
7.2.5.3.6.1 Impact of the TPP measures on "proximal" outcomes (appeal of tobacco products, effectiveness of GHWs and ability of the pack to mislead)	394
7.2.5.3.6.2 Impact of the TPP measures on quitting-related outcomes and other distal outcomes.....	398
7.2.5.3.6.3 Impact of the TPP measures on smoking behaviours.....	400
7.2.5.3.6.4 Overall conclusion on evidence relating to the application of the TPP measures since their entry into force.....	404
7.2.5.3.7 Impact of the TPP measures on illicit trade	405
7.2.5.3.7.1 Main arguments of the parties.....	405
7.2.5.3.7.2 Analysis by the Panel	406
7.2.5.3.8 Overall conclusion on the degree of contribution of the TPP measures to Australia's objective	415
7.2.5.4 The trade-restrictiveness of the TPP measures.....	419
7.2.5.4.1 Meaning of the term "trade-restrictive" in Article 2.2	419
7.2.5.4.1.1 Main arguments of the parties.....	419
7.2.5.4.1.2 Main arguments of the third parties	423
7.2.5.4.1.3 Analysis by the Panel	427
7.2.5.4.2 Application to the TPP measures	431
7.2.5.4.2.1 Main arguments of the parties.....	431
7.2.5.4.2.2 Main arguments by the third parties	448
7.2.5.4.2.3 Analysis by the Panel	450
7.2.5.5 The nature and gravity of the "risks of non-fulfilment"	473
7.2.5.5.1 Main arguments of the parties	474
7.2.5.5.2 Analysis by the Panel.....	480
7.2.5.5.2.1 Nature of the risks.....	481
7.2.5.5.2.2 The gravity of the consequences of non-fulfilment	483
7.2.5.5.2.3 Conclusion on the nature of the risks that non-fulfilment would create and gravity of their consequences	488
7.2.5.6 Whether less trade-restrictive alternative measures are reasonably available to Australia	489
7.2.5.6.1 Approach of the Panel.....	489
7.2.5.6.1.1 Main arguments of the parties.....	489
7.2.5.6.1.2 Analysis by the Panel	497
7.2.5.6.2 First proposed alternative measure: Increase in the MLPA	503
7.2.5.6.2.1 Description of the proposed measure	504

7.2.5.6.2.2	Whether an increase in the MLPA to 21 years is an alternative measure	504
7.2.5.6.2.3	Whether an increase in the MLPA to 21 years would be less trade-restrictive than the TPP measures	505
7.2.5.6.2.4	Whether an increase in the MLPA would make an equivalent contribution to Australia's objective	508
7.2.5.6.2.5	Whether an increase in the MLPA is a measure reasonably available to Australia	520
7.2.5.6.2.6	Overall conclusion on an increased MLPA as an alternative to the TPP measures	520
7.2.5.6.3	Second proposed alternative measure: Increased taxation of tobacco products	521
7.2.5.6.3.1	Description of the proposed measure	521
7.2.5.6.3.2	Whether increased taxation is an alternative measure	521
7.2.5.6.3.3	Whether increased taxation would be less trade-restrictive than the TPP measures	523
7.2.5.6.3.4	Whether increased taxation of tobacco products would make an equivalent contribution to Australia's objective	527
7.2.5.6.3.5	Whether an increase in taxation of tobacco products is reasonably available to Australia	537
7.2.5.6.3.6	Overall conclusion on increased taxation as an alternative to the TPP measures	539
7.2.5.6.4	Third proposed alternative measure: social marketing campaigns	540
7.2.5.6.4.1	Description of the proposed measure	540
7.2.5.6.4.2	Whether "improved" social marketing campaigns are an alternative measure	542
7.2.5.6.4.3	Whether "improved" social marketing campaigns would be less trade-restrictive than the TPP measures	551
7.2.5.6.4.4	Whether "improved" social marketing campaigns would make an equivalent contribution to Australia's objective	552
7.2.5.6.4.5	Whether "improved" social marketing campaigns are reasonably available to Australia	561
7.2.5.6.4.6	Overall conclusion on improved social marketing campaigns as an alternative to the TPP measures	561
7.2.5.6.5	Fourth proposed alternative measure: pre-vetting	562
7.2.5.6.5.1	Description of the proposed measure	562
7.2.5.6.5.2	Whether a pre-vetting mechanism would be less trade-restrictive than the TPP measures	566
7.2.5.6.5.3	Whether a pre-vetting mechanism would make an equivalent contribution to Australia's objective	569
7.2.5.6.5.4	Whether a pre-vetting mechanism is reasonably available to Australia	577
7.2.5.6.5.5	Overall conclusion on a pre-vetting mechanism as an alternative to the TPP measures	584
7.2.5.6.6	"Cumulative" application of alternatives	584
7.2.5.7	Overall conclusion on Article 2.2	586
7.3	The TRIPS Agreement	588
7.3.1	Article 6 <i>quinquies</i> of the Paris Convention (1967), as incorporated by Article 2.1 of the TRIPS Agreement	588
7.3.1.1	Introduction	588

7.3.1.2	Main arguments of the parties	590
7.3.1.3	Main arguments of the third parties.....	593
7.3.1.4	Analysis by the Panel.....	593
7.3.2	Article 15.4 of the TRIPS Agreement	598
7.3.2.1	Main arguments by the parties	598
7.3.2.2	Main arguments by the third parties.....	602
7.3.2.3	Analysis by the Panel.....	605
7.3.2.3.1	Interpretation of Article 15.4	606
7.3.2.3.1.1	The meaning of "trademark" in Article 15.4	607
7.3.2.3.1.2	The meaning of "registration of the trademark" in Article 15.4	608
7.3.2.3.1.3	The meaning of "obstacle" to the registration of a trademark in Article 15.4	612
7.3.2.3.1.4	Conclusion.....	612
7.3.2.3.2	Application to the TPP measures	612
7.3.2.3.2.1	Whether the TPP measures are inconsistent with Article 15.4 in that they operate to prevent the registration of signs that are capable of acquiring distinctiveness through use	613
7.3.2.3.2.2	Whether the TPP measures are inconsistent with Article 15.4 in that they prevent certain signs from acquiring distinctiveness through use	615
7.3.2.3.2.3	Whether the TPP measures are inconsistent with Article 15.4 in that they reduce the protection flowing from registration for tobacco-related trademarks because of the nature of the product	620
7.3.2.3.3	Overall conclusion	623
7.3.3	Article 16.1 of the TRIPS Agreement	623
7.3.3.1	Introduction	623
7.3.3.2	Main arguments of the parties	624
7.3.3.3	Main arguments of the third parties.....	634
7.3.3.4	Analysis by the Panel.....	635
7.3.3.4.1	The scope of the obligation in Article 16.1	636
7.3.3.4.2	Whether the TPP measures violate Article 16.1, because the prohibition on use of certain trademarks reduces their distinctiveness and thus the trademark owner's ability to demonstrate a likelihood of confusion.....	639
7.3.3.4.3	Whether the TPP measures violate Article 16 because they make non-inherently distinctive signs subject to cancellation procedures.....	651
7.3.3.4.4	Whether the TPP measures erode a trademark owner's right to prevent use that is likely to result in confusion by requiring the use of "deceptively similar" marks on identical products.....	653
7.3.3.4.5	Overall conclusion	655
7.3.4	Article 16.3 of the TRIPS Agreement	655
7.3.4.1	Introduction	655
7.3.4.2	Main arguments of the parties	656
7.3.4.3	Main arguments by the third parties.....	661
7.3.4.4	Analysis by the Panel.....	662
7.3.4.4.1	Interpretation of Article 16.3	663

7.3.4.4.2 Whether the TPP measures are inconsistent with Article 16.3 because they prevent the maintenance of well-known status for certain tobacco-related trademarks	665
7.3.4.4.3 Whether the TPP measures are inconsistent with Article 16.3 in that they prevent certain tobacco-related trademarks from acquiring well-known trademark status through use	670
7.3.4.4.4 Overall Conclusion.....	671
7.3.5 Article 20 of the TRIPS Agreement	671
7.3.5.1 Overview of the claims	671
7.3.5.2 Overall approach of the Panel	673
7.3.5.2.1 Main arguments of the parties	673
7.3.5.2.2 Main arguments of the third parties	675
7.3.5.2.3 Analysis by the Panel.....	676
7.3.5.3 Whether the TPP measures involve "special requirements" that "encumber" the use of a trademark.....	680
7.3.5.3.1 Meaning of the terms "special requirements" and "encumbered" in Article 20	681
7.3.5.3.1.1 Main arguments of the parties.....	681
7.3.5.3.1.2 Main arguments of the third parties	686
7.3.5.3.1.3 Analysis by the Panel	689
7.3.5.3.2 Application to the TPP measures	692
7.3.5.4 Whether the special requirements in the TPP measures encumber the "use of a trademark" "in the course of trade"	693
7.3.5.4.1 Meaning of the phrase "in the course of trade"	694
7.3.5.4.1.1 Main arguments of the parties.....	694
7.3.5.4.1.2 Main arguments of the third parties	695
7.3.5.4.1.3 Analysis by the Panel	696
7.3.5.4.2 The relevant "use of a trademark"	697
7.3.5.4.2.1 Main arguments of the parties.....	697
7.3.5.4.2.2 Analysis by the Panel	700
7.3.5.4.3 Application to the TPP measures	701
7.3.5.5 Whether the TPP measures "unjustifiably" encumber the use of trademarks in the course of trade.....	702
7.3.5.5.1 Meaning of the term "unjustifiably"	703
7.3.5.5.1.1 Main arguments of the parties.....	703
7.3.5.5.1.2 Main arguments of the third parties	714
7.3.5.5.1.3 Analysis by the Panel	724
7.3.5.5.2 Whether the TPP measures are <i>per se</i> unjustifiable	731
7.3.5.5.2.1 The extreme nature of the encumbrance	731
7.3.5.5.2.2 Whether the unjustifiability of requirements should be assessed in respect of individual trademarks and features	733
7.3.5.5.2.3 Compliance with domestic regulatory procedures	745
7.3.5.5.2.4 Whether encumbrances falling within the scope of the listed examples in the first sentence of Article 20 are presumed to be "unjustifiabl[e]"	746
7.3.5.5.3 Application to the TPP measures	749

7.3.5.5.3.1	Introduction.....	749
7.3.5.5.3.2	Nature and extent of the encumbrance resulting from the TPP measures.....	749
7.3.5.5.3.3	The reasons for the adoption of the TPP measures.....	759
7.3.5.5.3.4	Whether the reasons for the application of the trademark requirements of the TPP measures provide sufficient support for the resulting encumbrance	762
7.3.5.6	Overall conclusion.....	766
7.3.6	Article 10 bis of the Paris Convention (1967), as incorporated by Article 2.1 of the TRIPS Agreement.....	766
7.3.6.1	Introduction	766
7.3.6.2	Scope of incorporation of Article 10 bis of the Paris Convention (1967) through Article 2.1 of the TRIPS Agreement	767
7.3.6.2.1	Main arguments of the parties	767
7.3.6.2.2	Analysis by the Panel.....	768
7.3.6.3	Interpretation of Article 10 bis of the Paris Convention (1967), as incorporated through Article 2.1 of the TRIPS Agreement	771
7.3.6.3.1	Main arguments of the parties	771
7.3.6.3.2	Main arguments of the third parties.....	777
7.3.6.3.3	Analysis by the Panel.....	778
7.3.6.4	Whether the TPP measures are inconsistent with Article 10 bis of the Paris Convention (1967), as incorporated in the TRIPS Agreement	784
7.3.6.4.1	Introduction	784
7.3.6.4.2	Whether the TPP measures themselves constitute an act of unfair competition	785
7.3.6.4.3	Whether the TPP measures require market actors to engage in acts of unfair competition against which Australia is obliged to assure protection	786
7.3.6.4.3.1	Article 10 bis (3)(1)	787
7.3.6.4.3.2	Article 10 bis (3)(3)	791
7.3.6.4.3.3	Article 10 bis (1)	799
7.3.6.4.4	Overall conclusion	806
7.3.7	Article 22.2(b) of the TRIPS Agreement	806
7.3.7.1	Introduction	806
7.3.7.2	Main arguments of the parties	807
7.3.7.3	Main arguments of the third parties.....	814
7.3.7.4	Analysis by the Panel.....	815
7.3.7.4.1	Whether the TPP measures amount to unfair competition by creating unfair conditions of competition in respect of GIs	820
7.3.7.4.2	Whether the TPP measures compel acts by market participants in respect of GIs that constitute acts of unfair competition that Australia is obliged to prohibit	821
7.3.7.5	Conclusion	823
7.3.8	Article 24.3 of the TRIPS Agreement	823
7.3.8.1	Main arguments of the parties	824
7.3.8.2	Main arguments by the third parties.....	832
7.3.8.3	Analysis by the Panel.....	833
7.3.8.3.1	Whether the TPP measures are covered by Article 24.3.....	833

7.3.8.3.2 Whether the obligation concerns individual GIs or the system of protection	834
7.3.8.3.3 Whether Australia has diminished the protection of GIs through the TPP measures	837
7.3.8.4 Conclusion	843
7.4 Article IX: 4 of the GATT 1994	843
7.4.1 Main arguments of the parties	843
7.4.2 Main arguments of the third parties	845
7.4.3 Analysis of the Panel	845
7.4.3.1 The Habanos sign and the Cuban Government Warranty Seal	846
7.4.3.2 The impact of the TPP measures on the use of the Habanos sign and the Cuban Government Warranty Seal	848
7.4.3.3 Whether the TPP measures constitute "laws and regulations ... relating to the marking of imported products"	850
7.4.3.3.1 The phrase "[t]he laws and regulations of Members relating to the marking of imported products" in Article IX: 4	850
7.4.3.3.1.1 General rule of interpretation	850
7.4.3.3.1.2 The 1958 Decision on Marks of Origin	853
7.4.3.3.1.3 Negotiating history	856
7.4.3.3.2 Whether the TPP measures, insofar as they restrict the use of the Habanos sign and Cuban Government Warranty Seal, constitute "laws and regulations ... relating to the marking of imported products"	858
7.4.3.4 Whether the TPP measures are "such as to permit compliance without materially reducing the value" of Cuban LHM cigars	860
7.4.3.4.1 The meaning of the term "materially reducing the[] value [of imported products]"	861
7.4.3.4.2 Whether Cuban LHM cigars are stripped from added value, thus leading to a material reduction of their value in the sense of Article IX: 4	863
7.4.3.4.3 Whether the TPP measures create consumer uncertainty about the authenticity of Cuban LHM cigars, thus leading to a material reduction of their value	867
7.4.4 Conclusion	870
8 COMPLAINT BY HONDURAS (DS435): CONCLUSIONS AND RECOMMENDATIONS	HND-872
8 COMPLAINT BY THE DOMINICAN REPUBLIC (DS441): CONCLUSIONS AND RECOMMENDATIONS	DOM-872
8 COMPLAINT BY CUBA (DS458): CONCLUSIONS AND RECOMMENDATIONS	CUB-872
8 COMPLAINT BY INDONESIA (DS467): CONCLUSIONS AND RECOMMENDATIONS	IDN-872

MAIN ABBREVIATIONS USED IN THESE REPORTS

Abbreviation	Description
ABAC	Alcohol Beverages Advertising (and Packaging) Code
ABS	Australian Bureau of Statistics
ACBPS	Australian Customs and Border Protection Services
ACCC	Australian Competition and Consumer Commission
ACL	Australian Consumer Law (Competition and Consumer Act 2010 (Cth), Schedule 2)
ACT	Australian Capital Territory
Amended GPA	Agreement on Government Procurement, as amended by the 2012 Protocol
Anti-Dumping Agreement	Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994
ANPHA	Australian National Preventive Health Agency
ARIMA	autoregressive integrated moving average
ARIMAX	autoregressive integrated moving average with explanatory variable
Article 11 FCTC Guidelines	FCTC Guidelines for Implementation of Article 11 of the FCTC
Article 13 FCTC Guidelines	FCTC Guidelines for Implementation of Article 13 of the FCTC
Article 11 and Article 13 FCTC Guidelines	FCTC Guidelines for Implementation of Article 11 of the FCTC and FCTC Guidelines for Implementation of Article 13 of the FCTC
ASEAN	Association of South-East Asian Nations
ASSAD	Australian Secondary Students Alcohol Smoking and Drug
ATMOSS	Australian Trade Marks Online Search System
AUD	Australian dollar
BATA	British American Tobacco Australia
BMJ	British Medical Journal
CCA	Competition and Consumer Act 2010 (Cth)
CCQ	Cancer Council Queensland
CCV	Cancer Council Victoria
CI Regulations	Commerce (Imports) Regulations 1940 (Cth)
CINSW	Cancer Institute New South Wales
CISNET	Cancer Intervention and Surveillance Modeling Network
CITTS	Cancer Institute New South Wales Tobacco Tracking Survey
Codex	Codex Alimentarius Commission
COP	Conference of the Parties
CSE	cigarette stick equivalents

Abbreviation	Description
Doha Declaration	Declaration on the TRIPS Agreement and Public Health, WT/MIN(01)/DEC/2 (14 November 2001)
DHA	Department of Health and Ageing
DSB	Dispute Settlement Body
DSU	Understanding on Rules and Procedures Governing the Settlement of Disputes
EOS	Exchange of Sales
EPS	empty pack survey
FAO	Food and Agriculture Organization of the United Nations
FCTC	WHO Framework Convention on Tobacco Control, done at Geneva, 21 May 2003, UN Treaty Series, Vol. 2302, p. 166
FCTC Guidelines	FCTC Guidelines for Implementation of the FCTC
FMC	factory-made cigarettes
GATS	General Agreement on Trade in Services
GATT 1947	General Agreement on Tariffs and Trade 1947
GATT 1994	General Agreement on Tariffs and Trade 1994
GEE	generalised estimating equation
GI(s)	geographical indication(s)
GHW(s)	graphic health warning(s)
GPA	Agreement on Government Procurement
GRP(s)	gross rating point(s)
Havana Charter	Havana Charter for an International Trade Organization
IARC	International Agency for Research on Cancer
ILO	International Labour Organization
IMS	In-Market-Sales
IMS/EOS	In-Market-Sales/Exchange of Sales
Information Standard	Competition and Consumer (Tobacco) Information Standard 2011 (Cth)
IP	intellectual property
IPE	Institute for Policy Evaluation
IPPC	International Plant Protection Convention
IPPCC	International Plant Protection Convention Commission
ISO	International Organization for Standardization
ISO/IEC Guide 2: 1991	International Organization for Standardization / International Electrotechnical Commission Guide 2, General Terms and Their Definitions Concerning Standardization and Related Activities, 6th edn (1991)
ITA	Imperial Tobacco Australia Limited

Abbreviation	Description
ITC	International Tobacco Control
ITC Project	International Tobacco Control Policy Evaluation Project
IV	instrument variable
LHM	large handmade
Lisbon Agreement	"Lisbon Agreement for the International Registration of Appellations of Origin"
MFN	most-favoured-nation
MLA	minimum age of legal access
MLPA	minimum legal purchasing age
Declaration on Dispute Settlement Pursuant to Article VI of the GATT 1994 or Part V of the SCM Agreement	Declaration on Dispute Settlement Pursuant to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 or Part V of the Agreement on Subsidies and Countervailing Measures
NDSHS	National Drug Strategy Household Survey
NHS	National Health Survey
NPHT	National Preventative Health Taskforce
NTPPTS	National Tobacco Plain Packaging Tracking Survey
NSW	New South Wales
NSWPHS	New South Wales Population Health Survey
NTC	National Tobacco Campaign
OBPR	Office of Best Practice Regulation
OIE	World Organization for Animal Health
OECD	Organisation for Economic Co-operation and Development
OLS	ordinary least square
Paris Convention	Paris Convention for the Protection of Industrial Property
Paris Convention (1967)	Stockholm Act of the Paris Convention for the Protection of Industrial Property of 14 July 1967
PCC	Pacific Cigar Company
PIR	post-implementation review
PML	Philip Morris Limited
RIS	regulation impact statement
RMSS	Roy Morgan Single Source
RYO	roll-your-own
SAHOS	South Australian Health Omnibus Survey
SCI	strictly confidential information
SCM Agreement	Agreement on Subsidies and Countervailing Measures
SDR	socially desirable responding

Abbreviation	Description
SPS Agreement	Agreement on the Application of Sanitary and Phytosanitary Measures
SSHBS	New South Wales School Students Health Behaviours Survey
TBT Agreement	Agreement on Technical Barriers to Trade
TBT Committee Recommendation	Committee on Technical Barriers to Trade, Secretariat Note, "Decisions and Recommendations Adopted by the WTO Committee on Technical Barriers to Trade Since 1 January 1995", WTO Document G/TBT/1/Rev.12 (21 January 2015), Section 4.3.1.1, p. 20 (entitled "Significant effect on trade of other Members")
TCT	Tobacco Control Taskforce
TM Act	Trade Marks Act 1995 (Cth)
TMA Act	Trade Marks Amendment (Tobacco Plain Packaging) Act 2011 (Cth)
TMA Bill	Trade Marks Amendment (Tobacco Plain Packaging) Bill 2011 (Cth)
Tokyo Round Standards Code	1979 Tokyo Round Agreement on Technical Barriers to Trade
TPB	Theory of Planned Behaviour
TPP Act	Tobacco Plain Packaging Act 2011 (Cth)
TPP Bill	Tobacco Plain Packaging Bill 2011 (Cth)
TPP literature	tobacco plain packaging literature
TPP measures	Tobacco Plain Packaging Act 2011 (Cth); Tobacco Plain Packaging Regulations 2011 (Cth), as amended by the Tobacco Plain Packaging Amendment Regulation 2012 (No. 1) (Cth); Trade Marks Amendment (Tobacco Plain Packaging) Act 2011 (Cth)
TPP Regulations	Tobacco Plain Packaging Regulations 2011 (Cth), as amended by the Tobacco Plain Packaging Amendment Regulation 2012 (No. 1) (Cth)
TRA	Theory of Reasoned Action
TRIPS Agreement	Agreement on Trade-Related Aspects of Intellectual Property Rights
TWG	Tobacco Working Group
USCDC	United States Centers for Disease Control and Prevention
USFDA	United States Food and Drug Administration
USIOM	United States Institute of Medicine
Vienna Convention	Vienna Convention on the Law of Treaties, done at Vienna, 23 May 1969, UN Treaty Series, Vol. 1155, p. 331
VSHS	Victorian Smoking and Health Survey
WHA	World Health Assembly
WHO	World Health Organization
WIPO	World Intellectual Property Organization
WTO	World Trade Organization
WTO Agreement	Marrakesh Agreement Establishing the World Trade Organization

1 INTRODUCTION

1.1 Complaint by Honduras

1.1. On 4 April 2012, Honduras requested consultations with Australia with respect to the measures and claims set out below. This request was made pursuant to Article 4 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU), Article 64 of the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement), Article 14 of the Agreement on Technical Barriers to Trade (TBT Agreement) and Article XXII of the General Agreement on Tariffs and Trade 1994 (GATT 1994).¹

1.2. Consultations were held on 1 May 2012 between Honduras and Australia. These consultations failed to resolve the dispute.²

1.2 Complaint by the Dominican Republic

1.3. On 18 July 2012, the Dominican Republic requested consultations with Australia with respect to the measures and claims set out below. This request was made pursuant to Article 4 of the DSU, Article XXII of the GATT 1994, Article 64.1 of the TRIPS Agreement, and Article 14.1 of the TBT Agreement.³

1.4. Consultations were held on 27 September 2012 between the Dominican Republic and Australia. These consultations failed to resolve the dispute.⁴

1.3 Complaint by Cuba

1.5. On 3 May 2013, Cuba requested consultations with Australia. This request was made pursuant to Article 4 of the DSU, Article XXII of the GATT 1994, Article 64.1 of the TRIPS Agreement, and Article 14.1 of the TBT Agreement with respect to the measures and claims set out below.⁵

1.6. Consultations were held on 13 June 2013 between Cuba and Australia. These consultations failed to resolve the dispute.⁶

1.4 Complaint by Indonesia

1.7. On 20 September 2013, Indonesia requested consultations with Australia with respect to the measures and claims set out below. This request was made pursuant to Article 4 of the DSU, Article 14.1 of the TBT Agreement, Article 64.1 of the TRIPS Agreement and Article XXII of the GATT 1994.⁷

1.8. Consultations were held on 29 October 2013 between Indonesia and Australia. These consultations failed to resolve the dispute.⁸

1.5 Panel establishment and composition

1.5.1 Honduras

1.9. On 15 October 2012, Honduras requested the establishment of a panel pursuant to Article 4.7 and Article 6 of the DSU, Article XXIII:2 of the GATT 1994, Article 64 of the TRIPS Agreement and Article 14 of the TBT Agreement, with standard terms of reference.⁹ At its

⁵ WT/DS458/1.

⁶ WT/DS458/14.

⁷ WT/DS467/1.

⁸ WT/DS467/15.

⁹ WT/DS435/16.

meeting on 25 September 2013, the Dispute Settlement Body (DSB) established a panel pursuant to the request by Honduras, in accordance with Article 6 of the DSU.¹⁰

1.10. The Panel's terms of reference are the following:

To examine, in the light of the relevant provisions of the covered agreements cited by the parties to the dispute, the matter referred to the DSB by Honduras in document WT/DS435/16, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.¹¹

1.11. Argentina, Brazil, Canada, Chile, China, Cuba, the Dominican Republic, Ecuador, the European Union, Guatemala, India, Indonesia, Japan, the Republic of Korea, Malawi, Malaysia, Mexico, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Peru, the Philippines, Singapore, South Africa, Chinese Taipei, Thailand, Turkey, Ukraine, the United States, Uruguay, Zambia, and Zimbabwe notified their interest in participating in the panel proceedings as third parties.

1.12. On 26 March 2014, Australia requested the Director-General to determine the composition of the panel, pursuant to Article 8.7 of the DSU.¹²

1.5.2 Dominican Republic

1.13. On 9 November 2012, the Dominican Republic requested the establishment of a panel pursuant to Article 4.7 and Article 6 of the DSU, Article XXIII of the GATT 1994, Article 64.1 of the TRIPS Agreement and Article 14.1 of the TBT Agreement, with standard terms of reference.¹³ At its meeting on 25 April 2014, the DSB established a panel pursuant to the request by the Dominican Republic, in accordance with Article 6 of the DSU.¹⁴

1.14. The Panel's terms of reference are the following:

To examine, in the light of the relevant provisions of the covered agreements cited by the parties to the dispute, the matter referred to the DSB by the Dominican Republic in document WT/DS441/15 and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.¹⁵

1.15. Argentina, Brazil, Canada, Chile, China, Cuba, Ecuador, the European Union, Guatemala, Honduras, India, Indonesia, Japan, the Republic of Korea, Malaysia, Mexico, New Zealand, Nicaragua, Nigeria, Norway, Peru, the Philippines, the Russian Federation, the Kingdom of Saudi Arabia, Singapore, South Africa, Chinese Taipei, Thailand, Trinidad and Tobago, Turkey, Ukraine, the United States, Uruguay, and Zimbabwe notified their interest in participating in the panel proceedings as third parties.

1.16. On 25 April 2014, Australia requested the Director-General to determine the composition of the panel, pursuant to Article 8.7 of the DSU.¹⁶

1.5.3 Cuba

1.17. On 4 April 2014, Cuba requested the establishment of a panel pursuant to Article 4.7 and Article 6 of the DSU, Article XXIII of the GATT 1994, Article 64.1 of the TRIPS Agreement and

Article 14.1 of the TBT Agreement.¹⁷ At its meeting on 25 April 2014, the DSB established a panel pursuant to the request by Cuba, in accordance with Article 6 of the DSU.¹⁸

1.18. The Panel's terms of reference are the following:

To examine, in the light of the relevant provisions of the covered agreements cited by the parties to the dispute, the matter referred to the DSB by Cuba in document WT/DS458/14 and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.¹⁹

1.19. Argentina, Brazil, Canada, Chile, China, the Dominican Republic, Ecuador, the European Union, Guatemala, Honduras, India, Indonesia, Japan, the Republic of Korea, Malaysia, Mexico, New Zealand, Nicaragua, Nigeria, Norway, Peru, the Philippines, the Russian Federation, the Kingdom of Saudi Arabia, Singapore, South Africa, Chinese Taipei, Thailand, Turkey, Ukraine, the United States, Uruguay, and Zimbabwe notified their interest in participating in the panel proceedings as third parties.

1.20. On 25 April 2014, Australia requested the Director-General to determine the composition of the panel, pursuant to Article 8.7 of the DSU.²⁰

1.5.4 Indonesia

1.21. On 3 March 2014, Indonesia requested the establishment of a panel pursuant to Articles 4.7 and 6 of the DSU, Article XXIII of the GATT 1994, Article 64.1 of the TRIPS Agreement and Article 14.1 of the TBT Agreement with standard terms of reference.²¹ At its meeting on 26 March 2014, the DSB established a panel pursuant to the request by Indonesia in document WT/DS467/15, in accordance with Article 6 of the DSU.²²

1.22. The Panel's terms of reference are the following:

To examine, in the light of the relevant provisions of the covered agreements cited by the parties to the dispute, the matter referred to the DSB by Indonesia in document WT/DS467/15 and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.²³

1.23. Argentina, Brazil, Canada, Chile, China, Cuba, the Dominican Republic, Ecuador, the European Union, Guatemala, Honduras, India, Japan, the Republic of Korea, Malawi, Malaysia, Mexico, New Zealand, Nicaragua, Nigeria, Norway, Oman, Peru, the Philippines, the Russian Federation, Singapore, Chinese Taipei, Thailand, Turkey, Ukraine, the United States, Uruguay, and Zimbabwe notified their interest in participating in the panel proceedings as third parties.

1.24. On 23 April 2014, Australia requested the Director-General to determine the composition of the panel, pursuant to Article 8.7 of the DSU.²⁴

1.5.5 Procedural agreement between Australia, Ukraine²⁵, Honduras, the Dominican Republic, Cuba, and Indonesia

1.25. On 24 April 2014, before the establishment of the panels in the disputes brought by the Dominican Republic and Cuba, Australia sent a communication to the Chairman of the DSB on behalf of all the parties to the disputes in DS435, DS441, DS458, and DS467, as well as in relation

¹⁷ WT/DS458/14.

¹⁸ See WT/DSB/M/344.

²⁰ WT/DS458/16/Rev.1.

²¹ WT/DS467/15.

²² See WT/DSB/M/343.

²³ WT/DS467/17/Rev.1.

²⁴ WT/DS467/17/Rev.1.

²⁵ See section 1.6.6 below.

to the proceedings in DS434.²⁶ This communication concerned certain arrangements for the composition of the panels and the panels' timetable in these disputes. The communication stated that the Dominican Republic and Cuba would proceed with their panel requests at the DSB meeting of 25 April 2014 and that Australia would agree to the establishment at that meeting.²⁷

1.26. Australia also informed that it would request the Director-General to compose the panels in DS441 and DS458. The communication also stated that the parties had agreed to the harmonization of the timetable for the panel proceedings in DS434, DS435, DS441, DS458, and DS467, pursuant to Article 9.3 of the DSU. Furthermore, the parties indicated they would "undertake best endeavours to agree on a timetable to propose to the Panels".²⁸

1.27. On 5 May 2014, the Director-General accordingly composed the panels as follows²⁹:

Chairperson:	Mr Alexander Erwin
Members:	Mr François Dessemondet Ms Billie Miller

1.6 Panel proceedings

1.6.1 General

1.28. On 19 May 2014, in accordance with their procedural agreement of 24 April 2014³⁰, the parties submitted to the Panel³¹ a proposed timetable for its consideration.

1.29. On 26 May 2014, the Panel transmitted draft Working Procedures and a draft timetable to the parties. The Panel explained that its draft timetable took "due account of the timeframes envisaged by the parties for various stages of the proceedings".³² The Panel also noted its understanding that the timetable jointly proposed by the parties assumed that substantive meetings as well as third-party sessions would not be held separately for each dispute but would rather be held jointly for all disputes. Accordingly, and in the interest of facilitating the efficient management of the proceedings, the Panel's draft Working Procedures sought to integrate the conduct of the proceedings to the greatest extent possible, in accordance with Article 9.3 of the DSU.³³

1.30. The Panel adopted its Working Procedures³⁴ and timetable on 17 June 2014. These Working Procedures were amended on 1 October 2014, to reflect the Panel's decision concerning the adoption of SCI procedures³⁵, and 15 December 2014, to reflect the Panel's decision concerning enhanced third-party rights.³⁶

1.31. The Panel held a first substantive meeting with the parties on 1 and 3-5 June 2015. A session with the third parties took place on 3 June 2015. The Panel held a second substantive meeting with the parties on 28-30 October 2015.

²⁶ The panel proceedings in relation to DS434 (Ukraine) were subsequently suspended. See section 1.6.6 below.

²⁷ WT/DS435/17, WT/DS441/16, WT/DS458/15, and WT/DS467/16.

²⁸ WT/DS435/17, WT/DS441/16, WT/DS458/15, and WT/DS467/16.

²⁹ WT/DS434/13, WT/DS435/18/Rev.1, WT/DS458/16/Rev.1, and WT/DS467/17/Rev.1.

³⁰ See Section 1.5.5.

³¹ For the reader's convenience, the Panels in DS435, DS441, DS458 and DS467 are herein collectively referred to as the Panel.

³² Panel's communication to the parties of 26 May 2014.

³³ Panel's communication to the parties of 26 May 2014.

³⁴ See Panel's Working Procedures in Annex A-1. In these Reports, exhibits submitted by Honduras are referred to as HND-#, by the Dominican Republic as DOM-#, by Cuba are referred to as CUB-#, by Indonesia as IDN-#, and by Australia as AUS-#. Exhibits that have been submitted jointly by the Dominican Republic, Honduras, and Indonesia are referred to as DOM/HND/IDN-#, by the Dominican and Honduras as DOM/HND-#, by the Dominican Republic and Indonesia as DOM/IDN-#, and by all of the complainants jointly as JE-#.

³⁵ See section 1.6.3 below.

³⁶ See section 1.6.4 below.

1.32. On 8 April 2016, the Panel issued the draft descriptive part of its Reports to the parties. The Panel issued its Interim Reports to the parties on 2 May 2017. The Panel issued its Final Reports to the parties on 25 September 2017.

1.6.2 Preliminary rulings on the Panel's terms of reference

1.33. On 7 May 2014, Australia submitted to the Panel requests for preliminary rulings with respect to the consistency of the Dominican Republic's, Cuba's, and Indonesia's panel requests with Article 6.2 of the DSU.

1.34. Australia requested the Panel to make preliminary procedural rulings excluding from its terms of reference the "*non-exhaustive* list of related measures and measures that 'complement or add to' the measures explicitly identified" in Cuba's, the Dominican Republic's, and Indonesia's panel requests on the basis that the requests did not "identify the specific measures at issue".³⁷ In respect of Cuba's panel request, Australia also challenged the inclusion of claims made by Cuba pursuant to Article 6*bis* of the Paris Convention (read with Article 2.1 of the TRIPS Agreement); Article 16.3 of the TRIPS Agreement; Article 15.1 of the TRIPS Agreement; and Article 17 of the TRIPS Agreement.³⁸ Australia requested that the Panel issue preliminary rulings in respect of these issues before the filing of the first written submissions.

1.35. On 11 June 2014, the Dominican Republic, Cuba, and Indonesia each responded to Australia's request in relation to their respective proceedings. On the same date, the Panel provided the third parties with an opportunity to comment on Australia's requests. On 17 June 2014, the Panel received comments from the European Union and on 18 June 2014, from Argentina, Brazil, Canada, Guatemala, and Mexico. The Panel also received comments from the Dominican Republic, Honduras, and Indonesia in their capacity as third parties in each other's disputes.³⁹

1.36. On 1 July 2014, the Panel received comments from Australia on the Dominican Republic's, Cuba's, and Indonesia's responses to Australia's requests for preliminary rulings. On 8 July 2014, the Dominican Republic and Cuba provided comments on Australia's comments. Indonesia did not submit comments.

1.37. On 19 August 2014, the Panel issued its preliminary rulings to the parties and the third parties, with an indication that these would become an integral part of the Panel's report, subject to any modifications or elaboration of the reasoning, either in a subsequent ruling or in the Panel's report.

1.38. With regard to the Dominican Republic's, Cuba's, and Indonesia's panel requests, the Panel found that "the terms 'including', 'complement' and 'add to', as used in [these] panel request[s], are not, on their face, inconsistent with the requirement under Article 6.2 of the DSU to identify the specific measures at issue".⁴⁰

1.39. In respect of Cuba's panel request, the Panel also held that "the additional claims introduced by Cuba in its panel request are closely related to those that formed the legal basis of its request for consultations and can, in our view, reasonably be said to have evolved from the legal basis that formed the subject of consultations". The Panel therefore was "not persuaded that Cuba's claims under Article 16.3 of the TRIPS Agreement and Article 6*bis* of the Paris Convention (through Article 2.1 of the TRIPS Agreement) ha[d] the effect of ... 'changing the essence of the complaint'. We consider that their addition in Cuba's panel request remains within the bounds of the 'measure of flexibility' accorded to Members in formulating their complaints in their panel request."⁴¹

³⁷ Australia's request for a preliminary procedural ruling in relation to the Dominican Republic's panel request, para. 1; Australia's request for a preliminary procedural ruling in relation to Indonesia's panel request, para. 1; and Australia's request for a preliminary procedural ruling in relation to Cuba's panel request para. 1(iii). (emphasis original)

³⁸ Australia's request for a preliminary ruling in relation to Cuba's panel request, para. 1(i).

³⁹ See WT/DS441/19, WT/DS458/18, and WT/DS467/19.

⁴⁰ WT/DS441/19, para. 5.36; WT/DS458/18, para. 5.71; and WT/DS467/19, para. 5.35.

⁴¹ WT/DS458/18, para. 3.53.

1.40. These rulings were circulated to the DSB on 27 October 2014.⁴²

1.6.3 Working procedures on strictly confidential information (SCI)

1.41. On 15 September 2014, the parties jointly requested that the Panel adopt addenda to its Working Procedures and Additional Working Procedures Concerning Strictly Confidential Information pursuant to Article 12.1 of the DSU. The complainants explained that such procedures were necessary to enable them to provide to the Panel proprietary company and industry data provided to them on the basis of an assurance of confidentiality. In addition, Australia asserted that protection was necessary to provide assurances to different government agencies that provided certain information for use in these disputes. In light of the explanations offered by the parties, the Panel agreed to adopt additional procedures for the protection of SCI and to amend its Working Procedures accordingly.⁴³

1.6.4 Requests for enhanced third-party rights

1.42. In May and June 2014, the Panel received requests for enhanced third-party rights from Brazil, Canada, the European Union, Guatemala, Mexico, New Zealand, Nicaragua, Norway, and Uruguay.⁴⁴

1.43. On 15 December 2014, after consulting with the parties and third parties, the Panel decided to grant the third parties the following additional rights: (a) access to the parties' rebuttal submissions; and (b) access to the final written versions of the parties' opening and closing statements at the first and second substantive meetings. The Panel also noted that, under its Working Procedures, it has the discretion to pose questions to the third parties, orally or in writing, at any point during the proceedings. The Panel further noted that the third parties' access to these documents would be subject to the Additional Working Procedures Concerning Strictly Confidential Information adopted by the Panel.

1.44. The Panel informed the parties and third parties that in reaching its decision, it had taken particular account of the economic interest in the production of, and trade in, tobacco products identified by several of the third parties, and the potential trade policy impact of the disputes in light of several third parties' ongoing policy debate concerning possible tobacco control measures, including plain packaging requirements.

1.45. The Panel considered that the combination of these factors in the present disputes warranted the granting of certain additional rights in the form of access to the above-mentioned documents. As a matter of due process, and following the approach of panels in previous cases⁴⁵, the Panel also considered it appropriate to extend the same enhanced rights to all third parties. The additional rights granted would enable third parties to engage more meaningfully in the panel process and allow their interests to be fully taken into account, without placing an undue burden on the Panel, the parties, or the Secretariat, delaying the proceedings, or upsetting the balance between the respective interests of the parties and third parties to the disputes.

1.6.5 *Amicus curiae* submissions

1.46. In a communication dated 17 June 2014, the Panel informed the parties that it did not include in its timetable a deadline for the submission of *amicus curiae* briefs. However, the Panel added that it did not anticipate being in a position to consider *amicus curiae* submissions submitted to it after the end of March 2015, as accepting *amicus curiae* briefs after this date would risk causing unnecessary delays and disrupt the orderly conduct of the panel process. The Panel

⁴² WT/DS441/19, DS458/18, and WT/DS467/19.

⁴³ The Additional Procedures Concerning SCI were adopted on 1 October 2014 and are reproduced in Annex A-2.

⁴⁴ Brazil's communication of 12 May 2014; Canada's communication of 16 May 2014; the European Union's communication of 13 May 2014; Guatemala's communication of 6 May 2014; Mexico's communication of 16 May 2014; New Zealand's communication of 22 May 2014; Nicaragua's communication of 12 June 2014; Norway's communication of 27 May 2014; and Uruguay's communication of 11 June 2014.

⁴⁵ See Panel Reports, *EC – Tariff Preferences*, Annex A; and *EC – Export Subsidies on Sugar*, paras. 2.5-2.7.

indicated that this determination was without prejudice to the Panel's authority to rule on the admissibility and relevance of any unsolicited submission. The parties were invited to provide their views on the admissibility and relevance of any *amicus curiae* submission either as part of their first written submissions or at the first substantive meeting.

1.47. On 20 August 2014, the Panel received an unsolicited *amicus curiae* submission from a group of business organizations.⁴⁶ On 1 September 2014, the Panel forwarded this submission to the parties and third parties and at the same time informed the third parties of the approach it would take towards *amicus curiae* submissions received in the proceedings.

1.48. On 15 December 2014, following certain revisions to the timetable, the Panel informed the parties and third parties that it "would not be in a position to consider unsolicited information submitted to it after 27 April 2015".

1.49. The Panel received 35 additional unsolicited *amicus curiae* submissions on or before 27 April 2015 and five unsolicited *amicus curiae* submissions after this date.⁴⁷

1.50. Australia submitted as exhibits three *amicus curiae* submissions, provided by the World Health Organization (WHO) and the WHO Framework Convention on Tobacco Control (FCTC) Secretariat⁴⁸; the Healthy Caribbean Coalition; and the Union of International Cancer Control and Cancer Council Australia.⁴⁹ The Dominican Republic, Honduras, and Indonesia submitted as an exhibit 36 *amicus curiae* submissions.⁵⁰

⁴⁶ This submission was made jointly by the following organizations: Emergency Committee for American Trade; National Association of Manufacturers of the United States; National Foreign Trade Council; Paperboard Packaging Council; Printing Industries of America; Independent Packaging Association; United States Chamber of Commerce; and United States Council for International Business.

⁴⁷ The Panel received *amicus curiae* submissions dated on or before 27 April 2015 from: Emergency Committee for American Trade, National Association of Manufacturers of the United States, National Foreign Trade Council, Paperboard Packaging Council, Printing Industries of America, Independent Packaging Association, United States Chamber of Commerce, and United States Council for International Business; Associação Brasileira da Propriedade Intelectual; American Chamber of Commerce in the Netherlands; Federation of Philippine Industries; Confederação Nacional da Indústria (Brazil); Federation of Attica and Piraeus Industries; Cámara Nacional de Comercio y Servicios del Uruguay; Federação das Indústrias do Estado da Bahia; Japan Business Federation; Association of South-East Asian Nations (ASEAN) Intellectual Property Association; Institute of Public Affairs; Cámara de Industria de Guatemala; Trade-related IPR Protection Association; Indonesian Chamber of Commerce and Industry; Montenegrin Employers Federation; Taxpayers Association of Europe; International Trademark Association; Australian Retailers Association; Japan Intellectual Property Association; Association of European Businesses in Russia, American Chamber of Commerce in Russia, and RusBrand; International Tobacco Growers' Association; Patent and Trademark Attorneys Association – Turkey; Aegean Exporters Association; European Association of Trade Mark Owners (MARQUES); United States Chamber of Commerce; EU-ASEAN Business Council, EU-Malaysia Chamber of Commerce and Industry, European Chamber of Commerce in Singapore, European Chamber of Commerce of the Philippines, European Chamber of Commerce and Industry in Lao PDR, and European Association of Business and Commerce in Thailand; American Chamber of Commerce in Thailand; Romanian Small and Medium Retailers Association; Association of Trademarks and Design Rights Practitioners; Canadian Manufacturers and Exporters; Federation of Korean Industries; Polish Chamber of Trade; Union des Fabricants; Healthy Caribbean Coalition; Union for International Cancer Control; Cancer Council Australia; and World Health Organization and WHO Framework Convention on Tobacco Control Secretariat. The Panel received *amicus curiae* submissions dated after 27 April 2015 from: Russian Union of Industrialists and Entrepreneurs; Graphic Association Denmark; American Chamber Mexico; Malaysian International Chamber of Commerce and Industry; and Confederation of Danish Industry.

⁴⁸ World Health Organization and the WHO Framework Convention on Tobacco Control Secretariat, "Information for Submission to the Panel by a Non-Party", 16 February 2015, (WHO/FCTC *amici curiae* brief), (Exhibit AUS-42, revised).

⁴⁹ Healthy Caribbean Coalition communication to the Panel of 22 April 2015, (Exhibit AUS-515); and UICC and CCA *amici curiae* brief, (Exhibit AUS-38).

⁵⁰ Briefs from the following *amicus curiae* were submitted as Exhibit DOM/HND/IDN-1: Emergency Committee for American Trade, National Association of Manufacturers of the United States, National Foreign Trade Council, Paperboard Packaging Council, Printing Industries of America, Independent Packaging Association, United States Chamber of Commerce, and United States Council for International Business; Associação Brasileira da Propriedade Intelectual; American Chamber of Commerce in the Netherlands; Federation of Philippine Industries; Confederação Nacional da Indústria (Brazil); Federation of Attica and Piraeus Industries; Cámara Nacional de Comercio y Servicios del Uruguay; Federação das Indústrias do Estado

1.6.6 Suspension of the proceedings and lapse of authority in DS434

1.51. At the time of adoption of the Panel's Working Procedures and timetable, these panel proceedings also related to DS434, initiated by Ukraine. Ukraine participated in these proceedings as a party until 30 May 2015.⁵¹ On 28 May 2015, the Panel received a request from Ukraine to suspend the proceedings in DS434 pursuant to Article 12.12 of the DSU. In a letter dated 29 May 2015, Australia indicated that it "support[ed] the request by Ukraine to suspend proceedings, on the basis that ... the suspension will be 'with a view to finding a mutually agreed solution'".

1.52. Article 12.12 of the DSU provides that a panel may suspend its work at any time at the request of the complaining party for a period not exceeding 12 months. On 30 May 2015, after consulting also with the parties in DS435, DS441, DS458, and DS467, the Panel sent a communication to the parties informing them that it had acceded to Ukraine's request and suspended its work in DS434. In its communication, the Panel also noted that Ukraine remained entitled to participate in the Panel's proceedings as a third party in disputes DS435, DS441, DS458, and DS467. The Panel also noted that it was the shared understanding of Ukraine and the parties that Ukraine's first written submission in DS434 and related evidence would remain on the record as a validly filed third-party submission in DS435, DS441, DS458, and DS467.⁵² Pursuant to paragraph 9 of the Panel's Working Procedures⁵³, the Panel also invited the parties, to the extent they had not already done so, to provide clear indications as to which of the arguments and evidence presented by Ukraine they wished to endorse.⁵⁴

1.53. On 1 June 2015, following consultation with the parties, the Panel contacted Ecuador, Egypt, and Moldova, which were third parties in the dispute initiated by Ukraine but not in the disputes initiated by Honduras, the Dominican Republic, Cuba, or Indonesia. The Panel informed Ecuador, Egypt and Moldova that they would need to notify their interest to the DSB pursuant to Article 10.2 of the DSU in respect of DS435, DS441, DS458, and DS467 should they wish to participate in one or more of these proceedings, including the third-party session of the first substantive meeting. On 1 June 2015, Ecuador notified its third-party interest in respect of DS435, DS441, DS458, and DS467 to the Chairman of the DSB. On 2 June 2015, Moldova informed the Panel that it did not wish to participate in the other disputes as a third party.⁵⁵

da Bahia; Japan Business Federation; ASEAN Intellectual Property Association; Institute of Public Affairs; Cámara de Industria de Guatemala; Trade-related IPR Protection Association; Indonesian Chamber of Commerce and Industry; Montenegrin Employers Federation; Taxpayers Association of Europe; International Trademark Association; Australian Retailers Association; Japan Intellectual Property Association; Association of European Businesses in Russia, American Chamber of Commerce in Russia, and RusBrand; International Tobacco Growers' Association; Patent and Trademark Attorneys Association – Turkey; Aegean Exporters Association; European Association of Trade Mark Owners ("MARQUES"); United States Chamber of Commerce; EU-ASEAN Business Council, EU-Malaysia Chamber of Commerce and Industry, European Chamber of Commerce in Singapore, European Chamber of Commerce of the Philippines, European Chamber of Commerce and Industry in Lao PDR, and European Association of Business and Commerce in Thailand; American Chamber of Commerce in Thailand; Romanian Small and Medium Retailers Association; Association of Trademarks and Design Rights Practitioners; Canadian Manufacturers and Exporters; Federation of Korean Industries; Polish Chamber of Trade; Union des Fabricants; Russian Union of Industrialists and Entrepreneurs; American Chamber Mexico; and Malaysian International Chamber of Commerce and Industry.

⁵¹ On 19 August 2014, the Panel issued a preliminary ruling on its terms of reference in DS434, further to a request by Australia (See WT/DS434/15).

⁵² Paragraph 20 of the Panel's Working Procedures provides that "a complaining party's first written submission in one dispute shall be deemed to be an exercise of its third-party rights in the other four disputes. Arguments presented as a third party only shall be clearly identified as such." Ukraine's arguments as presented in its first written submission are cited in the Findings section of these Reports as "Ukraine's first written submission", as originally filed, but with the understanding that its status in these disputes is of a third-party submission.

⁵³ Paragraph 9 of the Panel's Working Procedures states that "[a] party wishing to incorporate by reference or rely upon arguments and/or evidence submitted by another party or third party may do so provided that it clearly identifies the specific arguments and/or evidence it refers to and their source."

⁵⁴ Honduras, the Dominican Republic, Cuba, and Indonesia communicated this information in separate correspondence dated 8 July 2015. Cuba sent an additional communication on this matter on 13 July 2015.

⁵⁵ The text of Moldova's third-party submission was also submitted by Honduras, the Dominican Republic, and Indonesia as an exhibit in these proceedings on 1 June 2015. See Exhibit DOM/HND/IDN-2.

1.54. On 2 June 2015, the Panel notified the Chairman of the DSB of its decision to grant Ukraine's request and suspend its work in DS434, and requested that its communication be circulated to Members. The Panel's decision was circulated to Members on 3 June 2015.⁵⁶ The Panel was not requested to resume its work in DS434 during the 12 months following suspension. Pursuant to Article 12.12 of the DSU, the authority for the establishment of the Panel in DS434 lapsed as of 30 May 2016. The Secretariat issued a note informing the Membership on 30 June 2016.⁵⁷

1.6.7 Requests for information under Article 13 of the DSU

1.55. Article 13 of the DSU states:

1. Each panel shall have the right to seek information and technical advice from any individual or body which it deems appropriate. However, before a panel seeks such information or advice from any individual or body within the jurisdiction of a Member it shall inform the authorities of that Member. A Member should respond promptly and fully to any request by a panel for such information as the panel considers necessary and appropriate. Confidential information which is provided shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information.

2. Panels may seek information from any relevant source and may consult experts to obtain their opinion on certain aspects of the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to a dispute, a panel may request an advisory report in writing from an expert review group. Rules for the establishment of such a group and its procedures are set forth in Appendix 4.

1.56. As detailed below, in the course of the proceedings, the parties requested the Panel to exercise its authority to seek information under Article 13 on various occasions, regarding information relating to evidence submitted by another party.

1.57. The Panel also exercised its authority to seek information from the WHO and the FCTC Secretariat, the International Bureau of the World Intellectual Property Organization (WIPO), Cancer Council Queensland (CCQ), and Cancer Council Victoria (CCV).

1.6.7.1 Request for information from the WHO and the FCTC Secretariat

1.58. During the proceedings, the parties made reference to the FCTC and to the FCTC Guidelines for Implementation of the FCTC (FCTC Guidelines), particularly with respect to Articles 11 and 13 of the Convention.⁵⁸

1.59. On 16 February 2015, the WHO and the FCTC Secretariat addressed a joint communication to the Panel, requesting permission to submit information to the Panel and providing certain

⁵⁶ WT/DS434/16.

⁵⁷ WT/DS434/17.

⁵⁸ See WHO Framework Convention on Tobacco Control: Guidelines for Implementation (2013 edition), (FCTC Guidelines for Implementation (2013 edition)), (Exhibits AUS-109, DOM-44), pp. 55-69 and 95-114; "Guidelines for implementation of Article 11 (Packaging and labelling of tobacco products)", document FCTC/COP3(10), excerpted from Conference of the Parties to the WHO Framework Convention on Tobacco Control, "Decisions", Third Session, Durban, South Africa (17-22 November 2008), document FCTC/COP3/DIV/3 of 16 February 2009, (Article 11 FCTC Guidelines, FCTC/COP3(10)), (Exhibit JE-20); and "Guidelines for implementation of Article 13 (Tobacco advertising, promotion and sponsorship)", document FCTC/COP3(12), excerpted from Conference of the Parties to the WHO Framework Convention on Tobacco Control, "Decisions", Third Session, Durban, South Africa (17-22 November 2008), document FCTC/COP3/DIV/3 of 16 February 2009, (Article 13 FCTC Guidelines, FCTC/COP3(12)), (Exhibit JE-21). See details of the FCTC and related instruments in section 2.4 below.

information concerning the FCTC.⁵⁹ This communication also indicated that the WHO and FCTC Secretariat were prepared to provide additional information at the request of the Panel.⁶⁰

1.60. Pursuant to Article 13 of the DSU, and after consulting with the parties, the Panel considered that, in light of the competencies of the WHO and the FCTC Secretariat with respect to the FCTC, it would benefit from further factual information from them concerning the FCTC and, in particular, the FCTC Guidelines for Implementation of Article 11 of the FCTC and the FCTC Guidelines for the Implementation of Article 13 of the FCTC (Article 11 and Article 13 FCTC Guidelines).⁶¹ The Panel also took into account a request by Indonesia for the Panel to seek certain additional information from the WHO and the FCTC Secretariat.⁶²

1.61. Thus, on 14 September 2015, the Panel invited the WHO and the FCTC Secretariat to provide factual information relating to (i) the process through which the Article 11 and Article 13 FCTC Guidelines were adopted; (ii) the nature and intended function of the Article 11 and Article 13 FCTC Guidelines with respect to plain packaging of tobacco products; (iii) the specific aspects of the text of the Article 11 and Article 13 FCTC Guidelines with respect to the implementation of plain packaging of tobacco products; and (iv) any available preparatory materials (including scientific or technical evidence) considered by the FCTC Conference of the Parties (COP) in its deliberations preceding the adoption of the Article 11 and Article 13 FCTC Guidelines.

1.62. On 5 October 2015, the WHO and the FCTC Secretariat provided additional information in response to the Panel's request, which they indicated should be read in the context of the information submitted on 16 February 2015. The WHO and the FCTC Secretariat explained that, because the working groups were closed to the public, "the Convention Secretariat does not have a standing mandate to disclose preparatory materials from the working groups" preceding the adoption of the Article 11 and Article 13 FCTC Guidelines.⁶³ The WHO and the FCTC Secretariat further explained that, with regard to the Article 11 FCTC Guidelines, the restriction to share information was partially lifted by FCTC COP Decision FCTC/COP3(10), and the Convention Secretariat subsequently made a list of resources publicly available.⁶⁴ The WHO and the FCTC Secretariat also explained that, with regard to the Article 13 FCTC Guidelines, "there has not been a COP decision mandating that the Convention Secretariat make preparatory materials public".⁶⁵

1.6.7.2 Request for information from the International Bureau of WIPO

1.63. During the proceedings, the complainants raised certain provisions of the Stockholm Act of the Paris Convention for the Protection of Industrial Property (Paris Convention (1967))⁶⁶ as relevant to the interpretation of Australia's obligations under the TRIPS Agreement.

1.64. On 14 September 2015, pursuant to Article 13 of the DSU, and after consulting with the parties, the Panel requested the assistance of the International Bureau of WIPO with regard to

⁵⁹ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42, revised).

⁶⁰ World Health Organization and the WHO Framework Convention on Tobacco Control Secretariat, "Request for Permission to Submit Information to the Panel by a Non-Party", 16 February 2015, (WHO/FCTC Request for Permission to Submit Information), (Exhibit AUS-42, revised), para. 15.

⁶¹ For simplicity and convenience, when mentioned *individually*, we will refer to the FCTC Guidelines for Implementation of Article 11 of the FCTC and the FCTC Guidelines for Implementation of Article 13 of the FCTC, as, respectively, the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines. See also paras. 2.107-2.109 below.

⁶² Indonesia's communication to the Panel of 22 April 2015. The Dominican Republic had previously requested information from the WHO FCTC Secretariat on the material relied on by the WHO FCTC Working Parties in adopting the two Guidelines. Dominican Republic's communication of 25 April 2014 to the Head of the WHO FCTC Secretariat, (Exhibit DOM-46). The WHO FCTC Secretariat declined to provide this information, citing the "consultative and intergovernmental nature of the process of developing guidelines". Head of the WHO FCTC Secretariat's communication of 26 May 2014 to the Dominican Republic, (Exhibit DOM-47).

⁶³ Additional Information for Submission to the Panel by a Non-Party on behalf of the World Health Organization and the WHO Framework Convention on Tobacco Control Secretariat, 5 October 2015, (WHO/FCTC Additional Information to Panel), para. 68.

⁶⁴ WHO/FCTC Additional Information to Panel, para. 69, at fn 63 above.

⁶⁵ WHO/FCTC Additional Information to Panel, para. 68, at fn 63 above.

⁶⁶ Paris Convention for the Protection of Industrial Property, done at Paris, 20 March 1883, revised at Stockholm, 14 July 1967, amended 28 September 1979, 828 UNTS 305.

factual information relevant to the interpretation of Article 6**bis**, Article 6**quinqüies** (and in particular paragraph (A)(1) thereof), Article 7, and Article 10**bis**, in particular as reflected in the materials of diplomatic conferences and subsequent developments in the framework of the Paris Union.

1.65. On 8 October 2015, WIPO provided material related to these provisions in response to the Panel's request.

1.6.7.3 Data requests by the parties

1.66. In the course of the proceedings, the parties made a number of requests to each other to provide data relied upon in certain expert reports and other material submitted to the Panel. In addition, the parties requested the Panel to exercise its authority pursuant to Article 13 of the DSU to seek data underlying different exhibits submitted by other parties during the proceedings.

1.6.7.3.1 Requests by Australia in relation to evidence submitted by the Dominican Republic and Ukraine⁶⁷ in the context of their first written submissions

1.67. On 17 October 2014, Australia requested the Panel to exercise its authority pursuant to Article 13 of the DSU to seek information from the Dominican Republic and Ukraine with regard to datasets relied upon in certain expert reports submitted with their first written submissions. Specifically, Australia requested the datasets underlying an expert report submitted by the Dominican Republic⁶⁸ (IPE Report), and two expert reports submitted by Ukraine⁶⁹ (Neven Report and Klick Report).

1.68. On 24 October 2014, the Dominican Republic undertook to provide the data requested by Australia relating to the IPE Report. On 31 October 2014, it provided this information⁷⁰ and offered to provide certain other data and computer programming language relied upon in the IPE Report not requested by Australia, if so requested by the Panel. On 24 October 2014, Ukraine indicated that it was not in principle opposed to providing the requested datasets but stated that Article 13 of the DSU was intended to provide the Panel, not Australia, with the right to request the additional information and that the Panel should therefore be "led only by its own needs".

1.69. On 31 October 2014, the Panel took note of the fact that the Dominican Republic had undertaken to provide the requested datasets and that Ukraine was not opposed to providing the datasets requested by Australia. The Panel further noted that Article 13.1 of the DSU grants to panels "'significant investigative authority'⁷¹ and that this authority is 'comprehensive' in nature".⁷² Moreover, the DSU "accords to a panel 'ample and extensive authority to undertake and to control the process by which it informs itself both of the relevant facts of the dispute and of the legal norms and principles applicable to such facts'".⁷³ The Panel also noted that in *US – Large Civil Aircraft (2nd Complaint)*, the Appellate Body had discussed the use of this authority for the purpose

⁶⁷ On Ukraine's participation in these proceedings, see section 1.6.6 above.

⁶⁸ This request concerned retail scanner data as relied upon in D. Afshartous, M. Hagedorn, A. Kaul, and M. Wolf, "Empirical Assessment of Australia's Plain Packaging Regime", Institute for Policy Evaluation, (7 October 2014), (IPE Report), (Exhibit DOM-100).

⁶⁹ This request concerned retail sales data for cigarette sales as well as retail revenue and volume data in Australia and New Zealand provided by Nielsen, as relied upon in D. Neven, "The Effects of Plain Packaging Regulation on Competition and Tobacco Consumption: An Economic Assessment" (2 October 2014), (Neven Report), (Exhibit UKR-3) (SCI) (relied upon by Indonesia: see Indonesia's communication to the Panel of 8 July 2015); and J. Klick, "The Effect of Australia's Plain Packaging Law on Smoking: Evidence from Survey and Market Data" (26 July 2014), (Klick Report), (Exhibit UKR-5) (relied upon by Honduras, the Dominican Republic, Cuba, and Indonesia: see Honduras's communication to the Panel of 8 July 2015; Dominican Republic's responses to Panel questions following the first substantive meeting, para. 1; Cuba's communication to the Panel of 8 July 2015; and Indonesia's communication to the Panel of 8 July 2015).

⁷⁰ See Exhibit DOM-100.A (SCI).

⁷¹ Panel's communication of 31 October 2014, para. 8 (quoting Appellate Body Reports, *US – Continued Suspension*, para. 439; *Canada – Continued Suspension*, para. 439; and *Japan – Agricultural Products II*, para. 129).

⁷² Panel's communication of 31 October 2014, para. 8 (quoting Appellate Body Report, *US – Shrimp*, para. 104).

⁷³ Panel's communication of 31 October 2014, para. 8 (quoting Appellate Body Report, *Canada – Aircraft*, para. 185).

of obtaining information requested by another party to a dispute. In this regard the Appellate Body had observed that one aspect of ensuring that proceedings are fairly conducted is that each party is entitled to know the case it has to make or answer and is given a reasonable opportunity to do so. Accordingly, it advised that panels take into account the following considerations:

[W]hat information is needed to complete the record, whose possession it lies within, what other reasonable means might be used to procure it, why it has not been produced, whether it is fair to request the party in possession of the information to submit it, and whether the information or evidence in question is likely to be necessary to ensure due process and a proper adjudication of the relevant claim(s).⁷⁴

1.70. The Panel noted that the datasets requested by Australia underlay reports that Ukraine had submitted and relied upon in the presentation of its case, and that this reliance formed the basis for Australia's argument that access to the data was necessary to allow it "to test the veracity of the assertions based on the data and consequently to ensure due process and a proper adjudication of [the] disputes."⁷⁵ The Panel also noted that Australia had attempted unsuccessfully to obtain the data in question from the private entities responsible for its collection. The Panel was mindful of the Appellate Body's observation that due process is connected, *inter alia*, to the right of parties to be afforded an adequate opportunity to pursue their claims, make out their defences and establish the facts, and that there may be circumstances in which a party cannot meet its burden by adducing all relevant evidence, most notably when the information is in the exclusive possession of an opposing party.⁷⁶

1.71. The Panel further noted that Ukraine had not suggested that it would be unable or unwilling to provide the requested information, if requested to do so, and that the Panel had adopted additional working procedures for the protection of SCI. The Panel concluded that the provision of the data was appropriate and requested Ukraine to provide the datasets at issue, without prejudice to any later finding by the Panel concerning their relevance to the Panel's assessment of the matter before it.⁷⁷ The datasets, along with select related computer codes, were provided to the Panel and the parties on 13 November 2014. Additional related computer codes were provided on 28 November 2014 and 5 December 2014.⁷⁸

1.72. On 10 November 2014, Australia requested the Panel to exercise its discretion under Article 13 of the DSU to request additional information relating to the IPE Report from the Dominican Republic. On 12 November 2014, the Dominican Republic communicated that it would provide certain information, which it subsequently submitted on 24 November 2014⁷⁹, but required a ruling from the Panel under Article 13.1 of the DSU to obtain the remainder of the requested information from private entities. On 20 November 2014, the Panel exercised its discretion under Article 13 of the DSU and requested that the outstanding data in question be provided to the Dominican Republic in order to facilitate its production by the Dominican Republic to the Panel and the other parties. The Dominican Republic provided this information on 12 December 2014.⁸⁰

1.6.7.3.2 Requests by Ukraine⁸¹ and the Dominican Republic in relation to evidence submitted by Australia in the context of its first written submission

1.73. On 24 October 2014, Ukraine requested that the Panel exercise its authority pursuant to Article 13 to request Australia to provide, no later than the time of Australia's filing of its first written submission, certain datasets that were not in the public domain and that "could be relevant" to the dispute. Specifically, Ukraine identified certain studies "on the alleged effectiveness of plain packaging to impact smoking behaviour of consumers in Australia" conducted

⁷⁴ Panel's communication of 31 October 2014, para. 9 (quoting Appellate Body Report, *US – Large Civil Aircraft (2nd Complaint)*, para. 1140).

⁷⁵ Panel's communication of 31 October 2014, para. 11.

⁷⁶ Panel's communication of 31 October 2014, para. 12 (referring to Appellate Body Reports, *Thailand – Cigarettes (Philippines)*, para. 147; and *US – Large Civil Aircraft (2nd Complaint)*, para. 1139).

⁷⁷ Panel's communication of 31 October 2014, paras. 13-14.

⁷⁸ See Exhibits UKR-199(1) to UKR-199(12), UKR-200(1) to UKR-200(10), and UKR-201(1) to UKR-201(2), respectively. Ukraine designated the entirety of each of these exhibits as SCI.

⁷⁹ See Exhibit DOM-100.B (SCI).

⁸⁰ See Exhibit DOM-100.C (SCI).

⁸¹ On Ukraine's participation in these proceedings, see section 1.6.6 above.

by Cancer Institute New South Wales (CINSW) and CCV. Ukraine requested the Panel to request the underlying data from these studies in order for the Panel to "elucidate its understanding of the facts and assist it in making an objective assessment of the facts ... whether or not Australia relies on these studies in its submission". Ukraine argued that these datasets were known to Australia via these two governmental agencies and were not in the public domain or otherwise available to the Panel or other parties in these disputes. Ukraine also requested that the Panel request Australia to provide any data underlying its own expert reports and other argumentation in its first written submission, at the time it would file such submission.⁸²

1.74. In response, referring to its own requests for datasets relating to arguments submitted with the Dominican Republic's and Ukraine's first written submissions⁸³, Australia noted that it was aware of the specific challenges in properly considering materials based on datasets, when the underlying datasets are not provided in a prompt and timely manner. To avoid this situation going forward, Australia was "willing to provide data sets upon which its expert reports are based" at the time of filing its first written submission". However, it considered that "any claim for data in advance of that date is purely speculative".⁸⁴

1.75. On 20 November 2014, the Panel declined the request, noting that Ukraine had stated that the data "could" be relevant to its dispute and that it should be available "whether or not Australia relies on these studies in its submission".⁸⁵ The Panel was not persuaded that the circumstances required it to request Australia to submit this information at this stage of the proceedings. The Panel considered that it would be better placed to assess the need to seek additional information from the parties, including, if relevant, the information identified by Ukraine, after Australia had presented its first written submission. The Panel therefore declined to request Australia to submit the requested information, without prejudice to any later decision concerning the relevance or otherwise of the datasets at issue.⁸⁶

1.76. On 30 March 2015, Ukraine requested the Panel to request, pursuant to Article 13 of the DSU, that Australia submit "certain tracking survey data and information".⁸⁷ According to Ukraine, "not all relevant data and information presented as evidence and relied upon by Australia have been provided", contrary to Australia's undertaking to provide the datasets upon which its expert reports are based at the time of filing its first written submission.⁸⁸ On 7 April 2015, Honduras, the Dominican Republic, and Indonesia expressed their support for Ukraine's request. On 10 April 2015, the Dominican Republic also requested the Panel to request Australia to submit, pursuant to Article 13 of the DSU, certain "information referenced and relied upon in its first written submission ... and in expert reports submitted as exhibits to that submission"⁸⁹, including data and computer codes "associated with a series of studies referenced and relied upon by Australia and its experts to assert the effectiveness of the challenged plain packaging measure".⁹⁰

⁸² Ukraine's communication to the Panel of 24 October 2014, section III.

⁸³ See section 1.6.7.3.1 above.

⁸⁴ Australia's communication to the Panel of 30 October 2014, p. 2.

⁸⁵ Panel's communication of 20 November 2014, paras. 4-5.

⁸⁶ Panel's communication of 20 November 2014, paras. 7 and 9.

⁸⁷ Ukraine's communication to the Panel of 27 March 2015, para. 1.

⁸⁸ Ukraine's communication to the Panel of 27 March 2015, paras. 10-11.

⁸⁹ Dominican Republic's communication to the Panel of 10 April 2015, para. 1.

⁹⁰ Dominican Republic's communication to the Panel of 10 April 2015, para. 6. The Dominican Republic's request pertained to the datasets underlying the following fourteen published studies: *NTPPTS*: M. Wakefield, K. Coomber, M. Zacher, S. Durkin, M. Brennan, and M. Scollo, "Australian Adult Smokers' Responses to Plain Packaging with Larger Graphic Health Warnings One Year After Implementation: Results from a National Cross-Sectional Tracking Survey", *Tobacco Control* (2015), Vol. 24, ([Wakefield et al. 2015](#)), (Exhibits AUS-206, DOM-306), pp. ii17-ii25; S. Durkin, E. Brennan, M. Coomber, M. Zacher, M. Wakefield, and M. Scollo, "Short-Term Changes in Quitting-Related Cognitions and Behaviours After the Implementation of Plain Packaging with Larger Health Warnings: Findings from a National Cohort Study with Australian Adult Smokers", *Tobacco Control* (2015), Vol. 24, ([Durkin et al. 2015](#)), (Exhibits AUS-215 (revised), DOM-305), pp. ii26-ii32; E. Brennan, S. Durkin, K. Coomber, M. Zacher, M. Scollo, and M. Wakefield, "Are Quitting-Related Cognitions and Behaviours Predicted by Proximal Responses to Plain Packaging with Larger Health Warnings? Findings from a National Cohort Study with Australian Adult Smokers", *Tobacco Control* (2015), Vol. 24, ([Brennan et al. 2015](#)), (Exhibits AUS-224, DOM-304), pp. ii33-ii41. *School-based surveys*: V. White, T. Williams, and M. Wakefield, "Has the Introduction of Plain Packaging with Larger Graphic Health Warnings Changed Adolescents' Perceptions of Cigarette Packs and Brands?" *Tobacco Control* (2015), Vol. 24, ([White et al. 2015a](#)) (Exhibits

1.77. Australia considered "misleading" Ukraine's claim that the requested data is of a category that Australia undertook to provide, and added that the data were not analysed by Australia's experts but instead were analysed in academic journals or independent papers, the conclusions of which were relied on by Australia and one its experts.⁹¹ Australia also argued, in its response to the Dominican Republic of 16 April 2015, that the datasets requested by the Dominican Republic were not relied upon by Australia or its experts, but rather were analysed in independent peer-reviewed journal articles, which were relied on by Australia and its experts.⁹² Such publications were not, in Australia's view, properly the object of requests under Article 13 of the DSU.

1.78. Notwithstanding this position, Australia provided certain data requested by Ukraine and the Dominican Republic in the context of further exchanges on this issue on 7, 16 and 24 April 2015, and 12 May 2015. On 22 April 2015, the Dominican Republic submitted additional comments to the Panel, including an identification of data that it considered had still not been supplied. On 24 April 2015, Australia submitted further additional comments.

1.79. On 13 May 2015, the Panel responded to Ukraine's and the Dominican Republic's requests, while taking note of the aspects of these requests that had already been addressed in the context of Australia's communications of 7, 16 and 24 April and 12 May 2015. The Panel first recalled that, as observed in its communication of 31 October 2014, it was:

[W]ithin the scope of its discretion under Article 13 of the DSU to seek information from a party pursuant to a request from another party and that, in determining whether to exercise such authority, it should have regard to considerations such as what information is needed to complete the record, whose possession it lies within, what other reasonable means might be used to procure it, why it has not been produced, whether it is fair to request the party in possession of the information to

⁹¹ Australia's communication to the Panel of 7 April 2015, p. 1.

⁹² Australia's communication to the Panel of 16 April 2015, p. 1.

submit it, and whether the information or evidence in question is likely to be necessary to ensure due process and a proper adjudication of the relevant claim(s).⁹³

1.80. The Panel observed that, as expressed in its earlier communication in respect of Australia's own request for data⁹⁴, it was mindful of the fact that due process is connected to, *inter alia*, the rights of parties to be afforded an adequate opportunity to pursue their claims, make out their defences, and establish the facts, and that there may be circumstances in which a party cannot meet its burden by adducing all relevant evidence, most notably when that information is in the exclusive possession of an opposing party.⁹⁵

1.81. The Panel also noted Australia's recognition, prior to the filing of its first written submission, of "'the challenges in properly considering materials based on data sets, when the underlying data sets are not provided in a prompt and timely manner' and its commitment ... to provide datasets upon which its expert reports are based at the time of filing its first written submission".⁹⁶ The Panel further noted that the requests at issue were "based on Australia's reliance, in its first written submission, on certain published research results relating to the impact of the challenged measures, including in relation to smoking behaviours since the entry into force of the Plain Packaging measures", and that the complainants also sought access to additional related datasets not expressly relied upon in the cited publications.⁹⁷

1.82. An important consideration guiding the Panel, in deciding whether an exercise of its authority under Article 13 of the DSU was warranted, was a consideration of in whose possession the information is, whether the information was in the exclusive possession of the other party, whether other reasonable means could be used to procure it, and whether the requesting party had availed itself of or tried to avail itself of such means. The Panel noted that Ukraine and the Dominican Republic had provided no indication of having taken steps to obtain the requested information directly from the institutions they identified as the source of the data, or from the persons identified as contact points in each of the cited publications, following Australia's filing of its first written submission. Based on the information before it and without prejudice to the potential relevance of the requested information, the Panel was also not persuaded that this information could, as the complainants' arguments suggested, "be assumed to be in the sole possession of, or directly accessible to, the Government of Australia, solely on the basis that the underlying research was publicly funded or conducted in publicly-funded institutions".⁹⁸

1.83. Without prejudice to the potential relevance of such information, the Panel was therefore not persuaded that the circumstances at that point of the proceedings warranted an exercise of its authority under Article 13 of the DSU to request Australia to produce it, and invited Ukraine and the Dominican Republic to seek to obtain data directly from the relevant sources through appropriate channels.⁹⁹

1.84. On 16 June 2015, the Dominican Republic informed the Panel that, pursuant to the Panel's ruling, it had sent letters to the authors of the fourteen studies to which its request pertained, as well as to the institutions that it understood to be in possession of the data, and that its efforts had "met with very limited success".¹⁰⁰ It requested that the Panel seek, first, from Australia, any requested information that was in its possession and control, and second, concurrently exercise its authority under Article 13 of the DSU by seeking information from the individuals and institutions designated as contacts in the studies in question.

⁹³ Panel's communication of 13 May 2015, para. 6. See also Panel's communication of 31 October 2014, para. 9 (quoting Appellate Body Report, *US – Large Civil Aircraft (2nd Complaint)*, para. 1140).

⁹⁴ See Panel's communication of 31 October 2015, and section 1.6.7.3.1 above.

⁹⁵ Panel's communication of 13 May 2015, para. 8.

⁹⁶ Panel's communication of 13 May 2015, para. 9 (quoting Australia's communication to the Panel of 30 October 2014, p. 2).

⁹⁷ Panel's communication of 13 May 2015, para. 11.

⁹⁸ Panel's communication of 13 May 2015, para. 14.

⁹⁹ Panel's communication of 13 May 2015, para. 15. The Panel addressed in the same communication a similar request by Ukraine, dated 30 March 2015. Australia provided certain information in response to this communication. See Australia's communication to the Panel of 7 April 2015. This request became moot following the suspension of proceedings in DS434 on 30 May 2015. See section 1.6.6 above.

¹⁰⁰ Dominican Republic's communication to the Panel of 16 June 2015, p. 3.

1.85. Between 17 June 2015 and 10 August 2015, CINSW provided, through Australia, certain requested data concerning the Cancer Institute New South Wales Tobacco Tracking Survey (CITTS), and data regarding calls to Australia's national smoking cessation helpline, Quitline.¹⁰¹ During this period, CCV also provided certain information, directly to the Dominican Republic or through Australia, concerning the National Tobacco Plain Packaging Tracking Survey (NTPPTS), cross-sectional school-based surveys, and data from the Victorian Smoking and Health Survey (VSHS).¹⁰²

1.86. On 21 August 2015, the Dominican Republic provided a further clarification of the status of its request, in light of recent communications. On 26 August 2015, Australia addressed an additional communication to the Panel, observing that despite the "firm position" it maintains concerning the "inappropriateness of the Dominican Republic's Article 13 requests", it had nonetheless provided all of the requested information in its possession.¹⁰³ On 29 August 2015, the Dominican Republic addressed a further communication to CINSW concerning the data and information it had provided.

1.87. On 7 September 2015, the Panel communicated to the parties its understanding that, as a result of the parties' exchanges, certain information had been provided by CINSW and CCV, through Australia, to the Panel and the other parties and that, as a result, a number of aspects of the Dominican Republic's request were moot.¹⁰⁴

1.88. With respect to outstanding aspects of the request, the Panel first addressed Australia's argument that the Dominican Republic was not requesting information prepared specifically for use in these proceedings, but information underlying "'certain peer-reviewed journal articles prepared by independent academics that Australia has referred to in its submissions'" which, in Australia's view, "'are not the proper subject of an Article 13 request'".¹⁰⁵

1.89. The Panel first observed that the information requested was comparable in nature to that previously requested by Australia. It recalled that on 17 October and 10 November 2014, Australia had requested that the Panel exercise its discretion under Article 13 of the DSU to seek information from the Dominican Republic¹⁰⁶, with respect to various exhibits submitted by the complainants¹⁰⁷, including unprocessed source data and programming language/computer codes.¹⁰⁸ The Panel also noted Australia's recent requests for similar data in relation to the Dominican Republic's statement at the first substantive meeting and responses to questions.¹⁰⁹ Similarly, in its requests, the Dominican Republic sought access to "data and computer codes underlying the conclusions presented"¹¹⁰ in various studies relied upon by Australia to "'test the veracity of the assertions made' by Australia"¹¹¹ in reliance on these studies.¹¹²

¹⁰¹ Australia's communications to the Panel of 17 June 2015, 28 July 2015, and 10 August 2015. On 18 June 2015, the Dominican Republic informed the Panel that it had received this information and clarified a "clerical error" in its communication of 16 June 2015 and, in light of this correction, clarified the precise content of its request.

¹⁰² On 22 June 2015, the Dominican Republic indicated that it had received a communication from CCV "offering to provide certain information to the Panel but refusing to provide other information". On 28 July 2015 and 7 August 2015 Australia provided certain information on behalf of CCV.

¹⁰³ Australia's communication to the Panel of 26 August 2015, p. 2.

¹⁰⁴ Panel's communication of 7 September 2015, para. 2.11.

¹⁰⁵ Panel's communication of 7 September 2015, para. 2.20 (quoting Australia's communication to the Panel of 19 June 2015, p. 2).

¹⁰⁶ Australia also addressed this request in respect of Ukraine, see fn 99 above.

¹⁰⁷ Klick Report, (Exhibit UKR-5); Neven Report, (Exhibit UKR-3) (SCI); IPE Report, (Exhibit DOM-100); and Exhibit DOM-100.B (SCI). See section 1.6.7.3.1 above.

¹⁰⁸ Panel's communication of 7 September 2015, para. 2.21 (quoting Australia's communication to the Panel of 10 November 2014, p. 2).

¹⁰⁹ Panel's communication of 7 September 2015, para. 2.21 (referring to Australia's communication to the Panel of 2 June 2015, p. 1; and Australia's communication to the Panel of 20 July 2015, p. 2). See also section 1.6.7.3.3 below.

¹¹⁰ Dominican Republic's communication to the Panel of 16 June 2015, p.1.

¹¹¹ Dominican Republic's communication to the Panel of 26 June 2015, paras. 22, 27, 32, 39, and 42-43 (quoting Australia's communication to the Panel of 10 November 2014, p. 2).

¹¹² Panel's communication of 7 September 2015, para. 2.21.

1.90. The Panel noted that Australia's and the Dominican Republic's respective requests, as well as their first written submissions, indicated that, notwithstanding the fact that the information requested by Australia formed the basis of commissioned expert reports rather than of published studies, both parties consider that the scrutiny of information at this level of detail is necessary, in these proceedings, for them "to know the case that [they have] to make or to answer".¹¹³ In light of this, and without prejudice to the Panel's own assessment of the level of scrutiny that will be required for it to make an objective assessment of the matter before it, the Panel considers that its obligation to ensure the right of the parties to be afforded an adequate opportunity to "pursue their claims, make out their defences, and establish the facts in the context of proceedings conducted in a balanced ... manner", mandates that the Panel allow the parties the opportunity to engage in comparable levels of review of the information on the record.¹¹⁴

1.91. With respect to Australia's argument that data underlying independent, peer-reviewed journal articles (as opposed to data underlying commissioned expert reports) is not properly the subject of a request for information under Article 13 of the DSU, the Panel noted that Articles 13.1 and 13.2 of the DSU permit panels to request and obtain information from "any individual or body which it deems appropriate" and from "any relevant source" and the Panel did not see any *a priori* restriction on the individual to whom, or body to which, we might direct a request.¹¹⁵ The Panel therefore considered that the fact that the requested information underlay published articles did not, in itself, shield it from scrutiny under Article 13 of the DSU.¹¹⁶

1.92. The Panel further noted that in the particular circumstances of these proceedings, the studies at issue were relied on by Australia in direct support of its arguments that the challenged tobacco plain packaging measures are fulfilling their objective and specifically address, in various ways, the effects of the measures, which is a strongly disputed issue. The Panel observed that these publications were specifically intended to evaluate the effects of the challenged tobacco plain packaging measures, and were based on data collected in the context of surveys and research programmes dedicated to the study of tobacco control, including programmes receiving public funding.¹¹⁷

1.93. The Panel further noted that CCV, which responded to the Dominican Republic's request on behalf of the authors of most of the studies at issue, and which holds most of the requested information, was established by statute in the State of Victoria as a non-profit organization and reports to Parliament, though it is not classified as a public entity or part of the public service.¹¹⁸ The Panel explained that the Dominican Republic also observes, and Australia does not dispute, that many of the authors of the cited studies, including those affiliated with CCV, have been part of various bodies advising the Australian Government on tobacco control, including on plain packaging legislation.¹¹⁹ Finally, the Panel noted that Professor Fong, one of Australia's

¹¹³ Panel's communication of 7 September 2015, para. 2.22 (quoting Appellate Body Report, *US – Large Civil Aircraft (2nd complaint)*, para. 1140).

¹¹⁴ Panel's communication of 7 September 2015, para. 2.22 (quoting Appellate Body Report, *Thailand – Cigarettes (Philippines)*, para. 147).

¹¹⁶ Panel's communication of 7 September 2015, para. 2.23.

¹¹⁷ Panel's communication of 7 September 2015, paras. 2.24-2.25. See Department of Health's online evaluation of Plain Packaging, (Exhibit DOM-297), p. 1:

The 15 peer-reviewed articles in the British Medical Journal (BMJ) Tobacco Control special supplement outline the results of the first comprehensive evaluation of tobacco plain packaging legislation. The special supplement contains a number of studies undertaken by various authors, including articles relating to work commissioned by the Department: the National Monthly Tracking Survey, the adolescent plain packaging evaluation and cigar research.

See also Dominican Republic's communication to the Panel of 10 April 2015, paras. 11 and 14. For example, as explained in several of the studies, the NPPTS was funded under a contract with the Australian Department of Health and Ageing (DHA). See Brennan et al. 2015, (Exhibits AUS-224, DOM-304), p. ii41; Wakefield et al. 2015, (Exhibits AUS-206, DOM-306), p. ii24; and White et al. 2015a, (Exhibits AUS-186, DOM-235), p. ii48.

¹¹⁸ Panel's communication of 7 September 2015, para. 2.26 (referring to Cancer Council Victoria, "About us: Governance", available at: <<http://www.cancervic.org.au/about/governance>>, accessed 2 October 2014, (Exhibit HND-62)).

¹¹⁹ Panel's communication of 7 September 2015, para. 2.26 (referring to Dominican Republic's communication to the Panel of 10 April 2015, para. 14 fn 26).

commissioned experts in these proceedings, is the founder and principal chief investigator of the International Tobacco Control Policy Evaluation Project¹²⁰ (ITC Project) and a co-author of the two studies referred to in his expert report that draw on data from the ITC Project, which are the object of some of the Dominican Republic's requests.¹²¹ In light of the above, the Panel concluded that information underlying these studies was not *a priori* beyond the scope of what the Panel may request in these proceedings.¹²² Nevertheless, the Panel also noted that the fact that it considered that it *may* request the information at issue, did not necessarily mean it should do so. The Panel therefore considered further the details of the Dominican Republic's request in light of the other considerations that should inform its decision, including the relevance of the specific information at issue, due process, in whose possession the information lay, and the reasons for which it had not been provided. The Panel was also mindful, in this context, of the fact that an orderly conduct of the proceedings should also take due account of the need to ensure, in accordance with the objectives of the DSU, the prompt settlement of disputes.¹²³

1.94. The Panel concluded that the provision of some of the information sought by the Dominican Republic in respect of the studies that Australia relied on in its first written submission would be appropriate, with a view to affording the Dominican Republic and other complaining parties a meaningful opportunity to comment on the arguments and evidence adduced by Australia, thereby contributing to ensuring due process and the Panel's ability to make an objective assessment of the matter before it in accordance with Article 11 of the DSU.¹²⁴

1.95. The Panel also noted the Dominican Republic's efforts to obtain this information directly from the individuals and institutions holding it and the reasons for which CCV declined to provide it, including: (a) the undue burdens and complexities that CCV considered would arise for itself from the provision of detailed information on the NTPPTS and the VSHS; (b) the appropriateness of disclosing for the purposes of these proceedings any data with respect to cross-sectional school-based surveys, considering its legal, ethical and other obligations vis-à-vis its stakeholders; and (c) the future viability of school-based surveys.¹²⁵

1.96. The Panel did not question CCV's assessment as to the legal, practical or other constraints that it would face in providing some of the additional information at issue for the purposes of these proceedings. Nonetheless, with respect to some of the information at issue, the Panel considered it appropriate to seek to "confirm further the extent to which reasonable means would be available, through which additional information could be provided, in a form that could assist in the conduct of these proceedings without compromising the interests expressed by CCV (and potential similar interests of CCQ, as relevant)".¹²⁶

1.97. The Panel also understood that Australia did not have in its possession any of the data and information not already provided to the Dominican Republic and to the Panel and the other parties.¹²⁷ Against this context, the panel considered it appropriate to seek, pursuant to Article 13.1 of the DSU, the further collaboration of CCV and CCQ, as holders of the relevant information, to the extent practicable and to the extent compatible with their legal and other

¹²⁰ Panel's communication of 7 September 2015, para. 2.26 (referring to "Expert Report of G. Fong", 4 March 2014, (Fong Report), (Exhibit AUS-14), para. 3 and Appendix A).

¹²¹ Panel's communication of 7 September 2015, para. 2.26 (referring to Fong Report, (Exhibit AUS-14), Appendix D; E. Swift, R. Borland, K. Cummings, G. Fong, A. McNeill, D. Hammond, J. Thrasher, T.R. Partos, and H.H. Yong, "Australian Smokers' Support for Plain or Standardised Packs Before and After Implementation: Findings from the ITC Four Country Survey", *Tobacco Control* (10 November 2014), doi:10.1136/tobaccocontrol-2014-051880 (Swift et al.); and H.H. Yong, R. Borland, D. Hammond, J. Thrasher, K. Cummings, and G. Fong, "Smokers' Reactions to the New Larger Health Warning Labels on Plain Cigarette Packs in Australia: Findings from the ITC Australia Project", *Tobacco Control* (19 February 2015), doi:10.1136/tobaccocontrol-2014-05197, (Yong et al.)).

¹²³ Panel's communication of 7 September 2015, para. 2.27 (referring to Appellate Body Report, *US – Large Civil Aircraft (2nd complaint)*, para. 1140).

¹²⁴ Panel's communication of 7 September 2015, para. 2.63.

¹²⁵ Panel's communication of 7 September 2015, para. 2.65.

¹²⁶ Panel's communication of 7 September 2015, para. 2.66.

¹²⁷ Panel's communication of 7 September 2015, para. 2.67 (referring to Australia's communication to the Panel of 16 June 2015).

obligations.¹²⁸ The Panel also expected that, as the party relying on the studies at issue, some of which were commissioned by its own Department of Health, Australia would actively collaborate with CCV and CCQ to facilitate the establishment of the relevant facts¹²⁹ and ensure that relevant information underlying its own arguments could be presented in these proceedings promptly and to the fullest extent practicable.¹³⁰

1.98. Finally, in light of the considerable amount of evidence already exchanged and bearing in mind the already unusually long timeframes in these panel proceedings, the Panel reminded all parties that, pursuant to Article 12.2 of the DSU, panel procedures "should provide sufficient flexibility so as to ensure high-quality panel reports, while not unduly delaying the panel process". The Panel considered it important that, at that stage of the proceedings, any further exchange of evidence take place as expeditiously as possible, in the interest of a prompt settlement of these disputes in accordance with Article 3.3 of the DSU.¹³¹

1.99. On 24 September 2015, CCQ informed the Panel that the requested data from the school-based surveys could not be presented in a de-identifiable form, and that it was therefore prevented by binding legal and ethical agreements from releasing it.

1.100. On 25 September 2015, CCV informed the Panel that it was able to provide certain requested information relating to the NPPTS but was unable to provide the requested information in respect of the VSHS due to funding constraints. CCV stated that it was also unable to provide the requested information in respect of school-based surveys, due to undertakings provided to the participating schools, students and parents, and concerns that providing the information would jeopardize CCV's ability to conduct future surveys.

1.6.7.3.3 Additional data requests

1.101. On 2 June 2015, Australia requested that the Panel exercise its authority under Article 13 of the DSU to request certain information relating to a report prepared by Professor List (List Report), submitted as an exhibit by the Dominican Republic and Indonesia at the first substantive meeting with the parties.¹³² On 5 June 2015, the Dominican Republic indicated that it would voluntarily provide data and codes underlying the report, including calculations Professor List generated in reliance upon the "Klick mimeo".¹³³ The Dominican Republic also stated that the data underlying the Klick mimeo were already in Australia's possession and that it was not in a position to share this document itself as it did not have a "direct relationship" with Professor Klick.¹³⁴ The Panel invited the parties to continue bilateral discussions on this matter and to revert to the Panel in the event that an agreement could not be reached.¹³⁵ The parties met on 8 June 2015.¹³⁶

¹²⁸ Panel's communication of 7 September 2015, para. 2.68. See also Panel's communications of 9 September 2015 to CCV and CCQ, respectively.

¹²⁹ Panel's communication of 7 September 2015, para. 2.69 (noting that the Australian Department of Health website indicates that requests for access to data collected in the NTPPTS may be directed to a Department of Health email address, tobacco.control@health.gov.au, and referring to Department of Health's online evaluation of Plain Packaging, (Exhibit DOM-297)).

¹³⁰ Panel's communication of 7 September 2015, para. 2.69 (quoting in a footnote the Appellate Body's statement at paragraph 197 in *Canada – Aircraft* that "a panel has broad legal authority to request information from a Member that is a party to a dispute, and ... a party so requested has a legal duty to provide such information").

¹³¹ Panel's communication of 7 September 2015, para. 2.70. The Panel also drew the attention of the parties to the fact that, as observed by the Appellate Body, a panel's efforts to protect due process need to factor in a number of considerations, which may include "the need for a panel, in pursuing prompt resolution of the dispute, to exercise control over the proceedings in order to bring an end to the back and forth exchange of competing evidence by the parties". Appellate Body Report, *Thailand – Cigarettes (Philippines)*, para. 155.

¹³² J. List, "A Consideration of the Empirical Evidence on the Effects of Australia's Tobacco Plain Packaging Legislation", 1 June 2015, (List Report), (Exhibit DOM/IDN-1).

¹³³ The Klick mimeo is a draft response to a critique of Professor Klick's original report, which was submitted by Ukraine as Exhibit UKR-5. The Panel suspended proceedings in DS434 at Ukraine's request before Professor Klick completed his response, but after Professor Klick, in his capacity as Ukraine's expert, shared his draft with Professor List. See Honduras's communication to the Panel of 19 June 2015, p. 1; and Dominican Republic's communication to the Panel of 19 June 2015, p. 1.

¹³⁴ First substantive meeting, 5 June 2015.

¹³⁵ First substantive meeting, 5 June 2015.

1.102. On 19 June 2015, Australia noted that it was awaiting data and backup materials underlying the List Report and reiterated its request for the Klick mimeo in a letter to the Dominican Republic. On the same day, the Dominican Republic explained that Professor List did not have control of the Klick mimeo and that it would be inappropriate for him to assert control over it by sharing it with third parties. The Dominican Republic however provided certain other data requested by Australia from the List Report (including details of the calculations for which Professor List relied on the Klick mimeo).¹³⁷ Also on 19 June 2015, Honduras informed the Panel that the Klick mimeo, in draft form when provided to and relied upon by Professor List, was being finalized and would be submitted as Honduras's exhibit in its responses to questions on 8 July 2015.

1.103. Australia responded that it required the "*specific version of Professor Klick's mimeo that was relied upon and referred to by Professor List* in his report" and asked that the Panel exercise its authority under Article 13 of the DSU to request it from the Dominican Republic or in the alternative, Honduras.¹³⁸ On 8 July 2015, Honduras submitted a new report authored by Professor Klick, along with related data and codes used to prepare it.¹³⁹

1.104. On 7 September 2015,¹⁴⁰ the Panel noted that, as a result of the exchanges described above, it understood Australia's request in relation to data underlying the List Report to have been addressed.¹⁴¹ In relation to the Klick mimeo, the Panel's understanding was that the document submitted by Honduras on 8 July 2015 was intended to satisfy this request.¹⁴² On 14 September 2015, the Dominican Republic and Honduras confirmed that the entirety of the requested data and analysis relied upon in the List Report and presentation had been provided to Australia.

1.105. On 20 July 2015, Australia asked the Dominican Republic to provide the data, computer codes, and programming language underlying two figures contained in the Dominican Republic's response to Panel question No. 8.¹⁴³ The parties subsequently had several further exchanges in relation to this information.¹⁴⁴ On 4 September 2015, the Dominican Republic indicated that Australia had all of the data needed to test the conclusion drawn in the response to Panel question No. 8.

1.106. On 30 September 2015, Australia requested Honduras to provide the backup data and coding used by Professor Neven in the preparation of his rebuttal report, which had been submitted by Honduras as part of its second written submission.¹⁴⁵ On 1 October 2015, Honduras provided the requested material.¹⁴⁶

1.107. On 7 October 2015, Australia requested that Honduras provide the complete backup material that accompanied Professor Klick's Supplemental Rebuttal Report¹⁴⁷, submitted by Honduras together with its second written submission. According to Australia, the backup materials provided were incomplete and in particular did not contain the original unprocessed data,

metadata, or program files upon which Professor Klick's analyses relied. On 9 October 2015, Honduras provided the requested materials.¹⁴⁸

1.108. On 13 November 2015, the Dominican Republic requested Australia to provide additional backup production materials in respect of a report authored by Professor Chaloupka and submitted by Australia at the second substantive meeting.¹⁴⁹ Australia provided this information on 18 November 2015.¹⁵⁰

1.109. On 14 January 2016, Australia requested that Honduras provide backup production underlying calculations contained in a report by Professor Klick submitted by Honduras with its responses to questions following the second substantive meeting.¹⁵¹ On 15 January 2016, Honduras provided the relevant backup production.¹⁵²

1.6.8 Evidence and arguments presented subsequent to the comments on responses to questions following the second substantive meeting

1.6.8.1 Additional comments relating Dr Chipty's Third Rebuttal Report

1.110. On 17 February 2016, the Dominican Republic addressed a communication to the Panel with respect to certain issues of due process that it claimed arose regarding new material submitted by Australia in the context of its comments on responses to questions following the second substantive meeting. The Dominican Republic considered that "there are many comments that could now be made in respect of Australia's new arguments and evidence". The Dominican Republic identified "as an example" a specific issue relating to an expert report by Dr Chipty¹⁵³ provided by Australia with its final comments on responses to the Panel's questions. The Dominican Republic invited the Panel to "take appropriate steps, at its discretion, to ensure that the parties' due process interests are respected".¹⁵⁴ Australia considered that it was "entirely inappropriate for the Dominican Republic to submit additional rebuttal arguments" after the conclusion of the final exchange of arguments and evidence and that it would be appropriate for the Panel to deem them inadmissible. If the Panel were to consider the Dominican Republic's additional comments to be admissible, Australia requested an opportunity to submit a response limited to the specific criticisms made of Dr Chipty's report, in recognition of Australia's due process interests.¹⁵⁵

1.111. On 2 March 2016, the Panel addressed a communication to the parties, in which it noted that submission of evidence at this stage of the proceedings fell outside of the scope of the first sentence of paragraph 8 of its Working Procedures, and that it may consider evidence filed by the parties outside of the context of the first sentence of paragraph 8 "upon a showing of good cause". The Panel further observed that both parties had referred to their due process interests in this matter and that the Panel would therefore consider the appropriate course of action in light of these due process concerns, as well as other relevant factors as pertinent.

1.112. The Panel noted that the Panel's timetable already extended far beyond that which is envisaged by the DSU and that, though this timetable was adopted taking into account the requests of all parties to these disputes, the requirement of securing a "'prompt settlement' of these disputes that is not 'unduly delay[ed]'" weighed in favour of bringing the exchange of argumentation and evidence to a close.¹⁵⁶ The Panel further noted that a considerable amount of argumentation and evidence had already been exchanged concerning the robustness of the various experts' reports, and that a panel, in pursuing prompt resolution of a dispute, needed to "'exercise control over the proceedings in order to bring an end to the back and forth exchange of competing

¹⁵⁵ Australia's communication to the Panel of 19 February 2016.

¹⁵⁶ Panel's communication of 2 March 2016, p. 3 (quoting Articles 3.3 and 12.2 of the DSU, and Appellate Body Report, *Thailand – Cigarettes (Philippines)*, para. 150).

evidence by the parties".¹⁵⁷ Finally, the Panel noted that the Dominican Republic had not requested the opportunity to comment on Dr Chipty's report, but had nonetheless identified certain criticisms of it.

1.113. The Panel decided to accept the Dominican Republic's comments with respect to the specific criticisms expressly identified in its communication of 17 February 2016, and requested the Dominican Republic to provide the results mentioned in this communication. Australia (and the other complainants, strictly if necessary), was offered an opportunity to comment, strictly limited to addressing the specific criticisms identified in the Dominican Republic's communication. The Panel stressed the very limited scope of these opportunities to provide further comments, noting that the volume of evidence already submitted by the parties, and the imperative of bringing these proceedings to a close, were such that it would consider further requests of this kind only in the most exceptional of circumstances.¹⁵⁸

1.114. On 4 March 2016, the Dominican Republic provided the requested information. On 16 March 2016, Australia provided comments.

1.6.8.2 Additional comments relating to Australia's Post-Implementation Review

1.115. On 26 February 2016, Australia submitted a document containing a post-implementation review (PIR) of its tobacco plain packaging measures, as anticipated in its response to the Panel's question No. 149.¹⁵⁹ In its comments on Australia's responses to questions, Honduras had asked for an opportunity to comment on this document "if and when it is provided to the Panel and the parties".¹⁶⁰ The Panel agreed that it was appropriate to provide Honduras and the other complainants with an opportunity to comment on this newly submitted document and invited the complainants to submit comments by 21 March 2016.¹⁶¹ The complainants submitted comments on 21 March 2016. On 22 March 2016, Australia indicated that it did not seek to prolong the written proceedings any further by requesting a right to reply to the complainants' comments, but that its silence on this matter should in no way be taken as acceptance by Australia of the complainants' arguments.

2 FACTUAL ASPECTS

2.1. In this section, the Panel will describe the measures at issue (section 2.1), as well as elements of the domestic and international regulatory background against which they were adopted and are maintained, including other tobacco control-related measures in Australia (section 2.2), the general framework for the protection of trademarks¹⁶² and geographical indications (GIs) in Australia (section 2.3), other measures (section 2.2.5), and the FCTC (section 2.4).¹⁶³

2.1 The measures at issue

2.2. The measures at issue in these proceedings are the following:

- a. the *Tobacco Plain Packaging Act 2011* (Cth)¹⁶⁴ (TPP Act);

¹⁵⁷ Panel's communication of 2 March 2016, p. 3 (quoting Appellate Body Report, *Thailand – Cigarettes (Philippines)*, para. 155).

¹⁵⁸ Panel's communication of 2 March 2016, p. 3.

¹⁵⁹ See Tobacco Plain Packaging PIR, (Exhibit AUS-624).

¹⁶⁰ Honduras's comments on Australia's response to Panel question No. 149.

¹⁶¹ Panel's communication of 2 March 2016, p. 3.

¹⁶² In keeping with the language of the TRIPS Agreement, we refer to trademark(s) as a single term throughout these Reports, unless quoting from material which refers to "trade mark(s)".

¹⁶³ The parties disagree on a number of factual issues. To the extent it is necessary for the Panel to address those disputed factual issues, it will do so in its Findings.

¹⁶⁴ *Tobacco Plain Packaging Act 2011* (Cth) (TPP Act), (Exhibits AUS-1, JE-1). The reference to "(Cth)" denotes legislation that was enacted at the Commonwealth level. State or territory legislation contains a commensurate reference, depending on the state or territory in question, which will be identified as applicable. In these Reports, references to the Australian Government or Commonwealth Government are references to government at the federal level. References to legislation enacted at the state and territory level are specified, as applicable.

- b. the *Tobacco Plain Packaging Regulations 2011* (Cth), as amended by the *Tobacco Plain Packaging Amendment Regulation 2012 (No. 1)* (Cth)¹⁶⁵ (TPP Regulations); and
- c. the *Trade Marks Amendment (Tobacco Plain Packaging) Act 2011* (Cth)¹⁶⁶ (TMA Act).

2.3. In addition to the above measures, the complainants indicated in their panel requests that the measures at issue also included additional instruments described, respectively, as:

- a. "any amendments, extensions, related instruments or practices" (Honduras)¹⁶⁷; and
- b. "[a]ny related measures adopted by Australia, including measures that implement, complement or add to these laws and regulations, as well as any measures that amend or replace these laws and regulations" (Dominican Republic, Cuba, and Indonesia).¹⁶⁸

2.4. As explained in section 1.6.2 above, the Panel held in preliminary rulings that these references in the panel requests of the Dominican Republic, Cuba, and Indonesia were "not, on their face, inconsistent with the requirement under Article 6.2 of the DSU to identify the specific measures at issue". However, we reserved the right to assess whether any particular measure (in addition to those expressly listed above in paragraph 2.2) that may be invoked on the basis of this language in the course of the proceedings would or would not be covered by those references and, consequently, fall within our terms of reference.¹⁶⁹

2.5. In the course of the proceedings, none of the complainants sought rulings with respect to additional measures within the descriptions quoted above. We therefore consider that the measures at issue in these proceedings are those listed in paragraph 2.2. The Panel will hereafter use the term "TPP measures" to refer to these instruments taken together.¹⁷⁰

2.1.1 Preparation, adoption, and entry into force of the TPP measures

2.6. The legislative process that led to the adoption of the TPP measures started in 2008 with the establishment of the National Preventative Health Taskforce (NPHT).¹⁷¹ The NPHT was responsible for developing a "National Preventive Health Strategy", to "provide a blueprint for tackling the

¹⁶⁵ *Tobacco Plain Packaging Regulations 2011* (Cth), as amended by the *Tobacco Plain Packaging Amendment Regulation 2012 (No. 1)* (Cth), (TPP Regulations), (Exhibits AUS-3, JE-2).

¹⁶⁶ The *Trade Marks Amendment (Tobacco Plain Packaging) Act 2011* (Cth), (TMA Act), (Exhibits AUS-4, JE-3).

¹⁶⁷ WT/DS435/16, p. 2.

¹⁶⁸ Respectively, WT/DS441/15, p. 2; WT/DS458/14, p. 1; and WT/DS467/15, p. 1.

¹⁶⁹ We consider that the same observation applies to the reference to "any amendments, extensions, related instruments or practices" in the panel request of Honduras, which was not the object of a preliminary ruling request by Australia.

¹⁷⁰ We note that parties have used different terms when referring collectively to the measures at issue. See, e.g. Honduras's first written submission, paras. 81 and 847 (using the terms "plain packaging measures" and "PP measures", respectively); Dominican Republic's first written submission, para. 161 (identifying that the Dominican Republic refers to the measures "individually, and collectively, as the 'plain packaging' or 'PP' measures"); Cuba's first written submission, para. 40 (identifying that Cuba refers to the instruments collectively as the "PP measures"); Indonesia's first written submission, para. 23 (using the term "PP measures", but without identifying whether it refers to individual measures with this title); and Australia's first written submission, para. 3 (using the term "tobacco plain packaging measure").

The use of "the TPP measures", in the plural, is not intended to signal that the Panel considers these three legal instruments to constitute distinct measures that would need to be considered separately for the purposes of its analysis of the claims before it. As described in the Appellate Body's observations quoted at para. 7.180 below, whether distinct legal instruments should be treated as a "single measure" or as separate measures for the purposes of its analysis will depend on the claim at issue and the manner in which the Panel considers it most appropriate to address that claim.

¹⁷¹ Between 1994 and 1995 the Australian Senate's Community Affairs References Committee discussed, held hearings and reviewed submissions with respect to various tobacco-related matters, in particular the level of regulation of tobacco products at that time. Submissions were received concerning the possibility of introducing "neutral or generic packaging". In its final report, the Senate Committee recommended that "additional research be undertaken into the efficacy of generic packaging of tobacco products as a means of addressing the problems of juvenile smoking". Australian Parliament, Senate Community Affairs References Committee, *The Tobacco Industry and the Costs of Tobacco-Related Illness*, (15 December 1995), (Exhibit DOM-49), pp. 68-71.

burden of chronic disease currently caused by obesity, tobacco, and excessive consumption of alcohol".¹⁷² A Tobacco Working Group (TWG) was also created.¹⁷³ The NPHT published in 2009 a discussion paper, accompanied by a Technical Report by the TWG that recommended a range of measures.¹⁷⁴

2.7. In September 2009, the NPHT released its final report, entitled *Australia: The Healthiest Country by 2020 – National Preventative Health Strategy – The Roadmap for Action*.¹⁷⁵ With respect to tobacco control, this report identified 11 "key action areas": "Make tobacco products significantly more expensive"; "Increase the frequency, reach and intensity of social marketing campaigns"; "End all remaining forms of advertising and promotion of tobacco products" (which included a specific "action" to "Eliminate promotion of tobacco products through design of packaging")¹⁷⁶; "Eliminate exposure to second-hand smoke in public places"; "Regulate manufacturing and further regulate packaging and supply of tobacco products"; "Ensure all smokers in contact with health services are encouraged and supported to quit ..."; "boost efforts to reduce smoking and exposure to passive smoking among Indigenous Australians"; "Boost efforts to discourage smoking among people in other highly disadvantaged groups"; "Assist parents and educators to discourage tobacco use and protect young people from second-hand smoke"; "Ensure that the public, media, politicians and other opinion leaders remain aware of the need for sustained and vigorous action to discourage tobacco use"; and "Ensure Implementation and measure progress against and towards targets".¹⁷⁷

2.8. On 29 April 2010, the Australian Government announced four measures to "deliver on [the] recommendations of the [NPHT]"¹⁷⁸, which it identified as a tobacco excise increase of 25%¹⁷⁹; **legislation requiring that "all cigarettes ... be sold in plain packaging by 1 July 2012"**; restrictions on Australian internet advertising of tobacco products; and extra expenditure on anti-smoking campaigns.¹⁸⁰ In May 2010, the Australian Government released a response to the NPHT final report, in which it elaborated on these four measures.¹⁸¹

2.9. On 7 April 2011, the Australian Government released an Exposure Draft of the Tobacco Plain Packaging Bill 2011 (Cth) (TPP Bill) for public consultations, which lasted until 6 June 2011.¹⁸² The TPP Bill and Trade Marks Amendment (Tobacco Plain Packaging) Bill 2011 (Cth) (TMA Bill)¹⁸³ were passed by the Parliament in November 2011 and received Royal Assent on 1 December 2011, thus becoming, respectively, the TPP Act and the TMA Act.¹⁸⁴ The TPP Regulations were adopted on 7 December 2011 and amended on 8 March 2012.¹⁸⁵ As indicated above¹⁸⁶, taken together, the TPP Act, the TMA Act and the TPP Regulations form the TPP measures at issue in these disputes.

¹⁸³ TMA Bill, (Exhibits AUS-6, JE-4).

¹⁸⁴ TPP Act, (Exhibits JE-1, AUS-1); TMA Act (Exhibits AUS-4, JE-3). The TPP Bills were also notified to TBT Committee. See World Trade Organization, Australia's Notification to the Committee on Technical Barriers to Trade, G/TBT/N/AUS/67 (8 April 2011), (Exhibit AUS-130).

¹⁸⁵ TPP Regulations, (Exhibits AUS-3, JE-2). The amendment to the TPP Regulations was adopted on 8 March 2012. See the *Tobacco Plain Packaging Amendment Regulations 2012 (No. 1)* (Cth) (Exhibit AUS-125). The "purpose of the regulation is to amend the Principal Regulations to expand their application to non-cigarette tobacco products and to prescribe specific requirements for the retail packaging and appearance

2.10. Tobacco products manufactured or packaged in Australia for domestic consumption were required to comply with the TPP measures from 1 October 2012. As of 1 December 2012, all tobacco products sold, offered for sale, or otherwise supplied in Australia were required to comply with the TPP measures.¹⁸⁷

2.1.2 The TPP measures

2.1.2.1 Introduction

2.11. The TPP Act is, by its own terms, "[a]n Act to discourage the use of tobacco products, and for related purposes". A simplified outline contained in the TPP Act itself describes it as follows:

- This Act regulates the retail packaging and appearance of tobacco products in order to:
 - (a) improve public health; and
 - (b) give effect to certain obligations in the Convention on Tobacco Control.
- Part 2 of Chapter 2 specifies requirements for the retail packaging and appearance of tobacco products. (If there is an acquisition of property otherwise than on just terms, regulations made under section 15 might also specify requirements.)
- The retail packaging and appearance of tobacco products must comply with the requirements of this Act.
- Offences and civil penalties apply if tobacco products are supplied, purchased or manufactured and either the retail packaging, or the products themselves, do not comply with the requirements.¹⁸⁸

2.12. The term "tobacco product" is defined in the TPP Act to mean "processed tobacco, or any product that contains tobacco" that is "manufactured to be used for smoking, sucking, chewing or snuffing" and "not included in the Australian Register of Therapeutic Goods maintained under the *Therapeutic Goods Act 1989*".¹⁸⁹ This definition encompasses not only cigarettes, but also "non-cigarette" products, such as cigars, little cigars (also known as cigarillos) and bidis.¹⁹⁰ To the extent that some of the products covered by this definition may be prohibited in Australia, either by the Commonwealth or states and territories, the TPP Act does not affect their legality.¹⁹¹

of non-cigarette tobacco products". Explanatory Statement to the *Tobacco Plain Packaging Amendment Regulation 2012 (No. 1)* (Cth), (TPPA Regulation Explanatory Statement), (Exhibit JE-22).

¹⁸⁶ See section 2.1 above.

¹⁸⁷ Australia's first written submission, para. 123. Section 2 of the TPP Act specifies the date on which each provision would enter into force, beginning 1 December 2011, with the last provisions taking effect on 1 December 2012. The TPP Regulations took effect on 1 October 2012. See TPP Regulations, (Exhibit AUS-3, JE-2), Regulation 1.1.2; and TPP Act, (Exhibit AUS-1, JE-1), Section 9.

¹⁸⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 12.

¹⁸⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1) (containing various definitions for the purpose of the Act). These definitions are also applicable to the TPP Regulations, in addition to its own list of definitions. TPP Regulations, (Exhibits AUS-3, JE-2), Note to Regulation 1.1.3. The definition of "tobacco products" is based on the definition for the term found in Article 1(f) of the FCTC. Explanatory Memorandum, Tobacco Plain Packaging Bill 2011 (Cth), (TPP Bill Explanatory Memorandum), (Exhibits AUS-2, JE-7), p. 9. See WHO Framework Convention on Tobacco Control, done at Geneva, 21 May 2003, UN Treaty Series, Vol. 2302, p. 166, (FCTC), (Exhibits AUS-44, JE-19), Article 1(f).

¹⁹⁰ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 9. See also Australia's response to Panel question No. 13, para. 60. Other covered "non-cigarette" products also include roll-your-own (RYO) tobacco, kreteks, and dissolvable tobacco products, such as tablets containing tobacco for sucking. Ibid. Some of these types of tobacco products (such as cigarettes, cigars and bidis), and their specific packaging, are also defined in the TPP Act and TPP Regulations. See TPP Act, (Exhibits AUS-1, JE-1), Section 4(1); and TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3.

¹⁹¹ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), pp. 4 and 9. For instance, chewing tobacco and snuffs intended for oral use have been permanently banned in Australia since 1991. See para. 2.64 below.

2.13. The TPP Bill and TMA Bill were accompanied by Explanatory Memoranda.¹⁹² Such documents are "documents that assist members of Parliament, officials and the public to understand the objectives and detailed operation of the clauses of a Bill".¹⁹³ In Australia, an Explanatory Memorandum may also serve as "extrinsic material" that can be used as an aid to judicial interpretation of Acts.¹⁹⁴ The TPP Regulations were accompanied by a similar document, an Explanatory Statement, which may also serve as an extrinsic aid to judicial interpretation.¹⁹⁵

2.14. Section 109 of the TPP Act provides that "[t]he Governor-General may make regulations prescribing matters: (a) required or permitted by this Act to be prescribed; or (b) necessary or convenient to be prescribed for carrying out or giving effect to this Act".¹⁹⁶ The TPP Regulations were made pursuant to this provision.¹⁹⁷

2.1.2.2 "Objects" of the TPP Act

2.15. Section 3 of the TPP Act, entitled "Objects of this Act", provides:

- (1) The objects of this Act are:
 - (a) to improve public health by:
 - (i) discouraging people from taking up smoking, or using tobacco products; and
 - (ii) encouraging people to give up smoking, and to stop using tobacco products; and
 - (iii) discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing; and
 - (iv) reducing people's exposure to smoke from tobacco products; and
 - (b) to give effect to certain obligations that Australia has as a party to the Convention on Tobacco Control.
- (2) It is the intention of the Parliament to contribute to achieving the objects in subsection (1) by regulating the retail packaging and appearance of tobacco products in order to:
 - (a) reduce the appeal of tobacco products to consumers; and
 - (b) increase the effectiveness of health warnings on the retail packaging of tobacco products; and
 - (c) reduce the ability of the retail packaging of tobacco products to mislead consumers about the harmful effects of smoking or using tobacco products.¹⁹⁸

¹⁹² TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7); and Explanatory Memorandum, Trade Marks Amendment (Tobacco Plain Packaging) Act 2011 (Cth), (TMA Bill Explanatory Memorandum), (Exhibits AUS-5, JE-5).

¹⁹³ P. O'Neill, "Was There an EM?: Explanatory Memoranda and Explanatory Statements in the Commonwealth Parliament" (12 September 2006), (Exhibit AUS-260), Executive Summary (cited in Australia's first written submission, para. 601 fn 775).

¹⁹⁴ *Acts Interpretation Act 1901* (Cth), (Exhibit AUS-259), Section 15AB(2)(e). See also Australia's first written submission, para. 601 fn 775.

¹⁹⁵ TPPA Regulation Explanatory Statement, (Exhibit JE-22); and P. O'Neill, "Was There an EM?: Explanatory Memoranda and Explanatory Statements in the Commonwealth Parliament" (12 September 2006), (Exhibit AUS-260), Explanatory Statements to Commonwealth Regulations. See also fn 185 above.

¹⁹⁶ TPP Act, (Exhibits AUS-1, JE-1), Section 109(1).

¹⁹⁷ See TPPA Regulation Explanatory Statement, (Exhibit JE-22), p. 2.

¹⁹⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 3. See also TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), pp. 1-2 and 6-7; TPPA Regulation Explanatory Statement, (Exhibit JE-22), pp. 1 and 10.

2.16. The term "Convention on Tobacco Control" is defined as meaning the WHO Framework Convention on Tobacco Control (FCTC).¹⁹⁹ The TPP Bill Explanatory Memorandum states that the "introduction of plain packaging for tobacco products is one of the means by which the Australia Government will give effect to Australia's obligations under the [FCTC]" and, in this context, refers to Articles 5, 11 and 13 of the FCTC.²⁰⁰ The TPP Bill Explanatory Memorandum adds that Section 3(2) "is not intended to be an exhaustive list of ways in which ... Australia's obligations under the WHO FCTC may be met".²⁰¹

2.1.2.3 Requirements for retail packaging of tobacco products

2.17. The TPP Act specifies requirements for the retail packaging of tobacco products. The Act defines "retail packaging" as:

- (a) any container for retail sale in which the tobacco product is directly placed; or
- (b) any container for retail sale that contains a smaller container in which the tobacco product is directly placed; or
- (c) any plastic or other wrapper that covers any retail packaging of the tobacco product (within the meaning of paragraph (a) or (b) of this definition); or
- (d) any plastic or other wrapper that covers the tobacco product, being a tobacco product that is for retail sale; or
- (e) any insert that is placed inside the retail packaging of the tobacco product (within the meaning of any of paragraphs (a) to (d) of this definition); or
- (f) any onsert that is affixed or otherwise attached to the retail packaging of the tobacco product (within the meaning of any of paragraphs (a) to (d) of this definition).²⁰²

2.18. As elaborated in the TPP Bill Explanatory Memorandum, the TPP Act regulates "any container that a tobacco product is packed in for retail sale, including the package immediately around the tobacco product, any carton that contains one or more packages of tobacco products for retail sale, any wrapper that covers the packaging of a tobacco product or a tobacco product itself, and anything placed in the packaging apart from the tobacco product and anything attached to or forming part of the packaging".²⁰³

2.19. Sections 18 to 25 of the TPP Act set out requirements for retail packaging of tobacco products²⁰⁴ and Section 26 sets out the requirements for appearance of tobacco products.²⁰⁵ Section 27 of the TPP Act provides that regulations may prescribe additional requirements in

¹⁹⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1).

²⁰⁰ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 2.

²⁰¹ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 7.

²⁰² TPP Act, (Exhibits AUS-1, JE-1), Section 4(1). The TPP measures also contain specific definitions for certain types of tobacco packaging, such as "cigarette pack", "cigarette carton", "cigar tube", and "pouch". A cigarette pack is "any container for retail sale in which cigarettes are directly placed". Ibid. Additionally, a reference to an outer surface of a cigarette pack (such as its "front outer surface"), "is a reference to all of that outer surface, including the part of that outer surface that forms part of the flip-top lid". Ibid. Section 6(1). Further, the "inside lip" of a cigarette pack "means the part of the outer surfaces of the pack that is obscured when the flip-top lid is closed". Ibid. Section 4(1). A cigarette carton is "any container for retail sale that contains smaller containers in which cigarettes are directly placed". Ibid. Additionally, "[i]f a cigarette carton has one or more flaps with surfaces that become visible only when the carton is opened, those surfaces are taken to be inner surfaces of the carton". Ibid. Section 6(2). A cigar tube means "a tube for packaging one cigar". TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3. A pouch means "primary packaging" that "is made from flexible material" and "takes the form of a rectangular pocket with a flap that covers the opening". TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3.

²⁰³ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 8.

²⁰⁴ TPP Act, (Exhibits AUS-1, JE-1), Sections 18-25.

²⁰⁵ TPP Act, (Exhibits AUS-1, JE-1), Section 26.

relation to the retail packaging of tobacco products, and the appearance of tobacco products.²⁰⁶ These requirements are in the TPP Regulations.²⁰⁷ The cumulative effect of the TPP Act and TPP Regulations as applied to the packaging of tobacco products are summarized below.²⁰⁸

2.1.2.3.1 Physical features of retail packaging

2.20. Section 18(1) of the TPP Act provides that the outer and inner surfaces of the retail packaging of all tobacco products must not have any "decorative ridges, embossing, bulges or other irregularities of shape or texture, or any other embellishments" (other than as permitted by the TPP Regulations).²⁰⁹ Additionally, "any glues or other adhesives used in manufacturing the packaging must be transparent and not coloured".²¹⁰ The TPP Regulations set out other specifications for the physical features of tobacco packaging for retail sale²¹¹, including requirements for cigarette packs²¹², cigarette cartons²¹³, cigar tubes²¹⁴, and any other type of packaging.²¹⁵

2.21. Cigarette packs and cigarette cartons must be rigid and made only of cardboard.²¹⁶ When closed, each outer surface of the pack or carton must be rectangular, and the surfaces of the pack or carton must meet at a 90-degree angle.²¹⁷ All edges of the pack or carton must be rigid, straight, and not rounded, bevelled, or otherwise shaped or embellished (unless permitted by the TPP Regulations).²¹⁸ The dimensions of cigarette packs are determined by the TPP Regulations.²¹⁹

2.22. The opening of a cigarette pack must be a flip-top lid.²²⁰ The inside lip of the cigarette pack must have straight edges, other than the corners which may be rounded, and neither the lip nor the edges of the lip may be rounded, bevelled or otherwise shaped or embellished.²²¹ Any lining in the pack must be made only of foil backed with paper (unless prescribed by the TPP Regulations).²²²

2.1.2.3.2 Colour and finish of retail packaging

2.23. Section 19 of the TPP Act sets out additional requirements for all outer and inner surfaces of certain retail packaging of tobacco products, including both sides of any lining of a cigarette

²¹¹ See TPP Regulations, (Exhibits AUS-3, JE-2), Division 2.1.

²¹² See TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.1.1.

²¹³ See TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.1.2.

²¹⁴ See TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.1.4. Cigar tubes must be cylindrical and rigid, and may have one or both ends tapered or rounded. The opening to a cigar tube must be at least 15 millimetres in diameter.

²¹⁵ See TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.1.5. With the exception of cigarette packs and cigar tubes, the largest dimension of a container for retail sale in which the tobacco product is directly placed must be at least 85 millimetres, and the second largest dimension at least 55 millimetres. *Ibid.* See also TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3 (defining "primary packaging"); and TPP Act, (Exhibits AUS-1, JE-1), Section 4(1)(a) (defining "retail packaging").

²¹⁶ TPP Act, (Exhibits AUS-1, JE-1), Section 18(2)(a).

²¹⁷ TPP Act, (Exhibits AUS-1, JE-1), Section 18(2)(b).

²¹⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 18(2)(c).

²¹⁹ The dimensions of closed cigarette packs must be between 85-125 millimetres (height), 55-82 millimetres (width), and 20-42 millimetres (depth). TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.1.1(1).

²²⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 18(3)(b). The lid must be hinged only at the back of the pack; have straight edges; and neither the lid, nor the edges of the lid, may be rounded, bevelled or otherwise shaped or embellished in any way, other than corners which may be rounded. Regulations 2.1.1(2)-2.1.1(3) also set out requirements concerning the opening of the packet. TPP Regulations, (Exhibits AUS-3, JE-2).

²²¹ TPP Act, (Exhibits AUS-1, JE-1), Section 18(3)(c).

²²² TPP Act, (Exhibits AUS-1, JE-1), Section 18(3)(d). Regulation 2.1.3 sets out requirements concerning the lining of containers of tobacco products for retail sale. Such lining may be embossed with dots or squares, provided they meet certain conditions, including that they do not form an image or other symbol, or constitute tobacco advertising and promotion. TPP Regulations, (Exhibits AUS-3, JE-2).

pack.²²³ These surfaces must have a matt finish and must be drab dark brown²²⁴, though the colour requirement does not apply to health warnings, the text of the brand, business or company name, or variant name, or the text of relevant legislative requirements.²²⁵ The TPP Regulations further stipulate that the outer surfaces of these packages must be the colour Pantone 448C (drab dark brown), and that the inner surfaces of a cigarette pack or cigarette carton must be white. The inner surface of these packages (other than a cigarette pack or cigarette carton) must be either white or the colour of the packaging material in its natural state. The lining of a cigarette pack must be silver coloured foil with a white paper backing.²²⁶

2.1.2.3.3 Trademarks and other marks on retail packaging

2.24. Section 20 of the TPP Act prohibits the appearance of trademarks and marks anywhere on the retail packaging of tobacco products, with the exception of the brand name, business or company name, variant name, the relevant legislative requirements, and other trademarks and marks permitted by the TPP Regulations.²²⁷ The TPP Regulations make provision for the appearance of origin marks, calibration marks, a measurement mark and trade description, a barcode, a fire risk statement, a locally made product statement, the name and address of the person who packed the product or on whose behalf it was packed, and a consumer contact number.²²⁸ These markings must not obscure any relevant legislative requirement, or constitute or provide access to tobacco advertising and promotion.²²⁹

2.25. Section 21 of the TPP Act, operating together with the TPP Regulations, prescribes the requirements for the manner in which the brand, business, company or variant names for tobacco products may appear on the retail packaging of a tobacco product.²³⁰ With respect to cigarette packaging, any of these names must be printed in the Lucida Sans typeface in fonts no larger than 14-point size (for a brand, business or company name) or 10-point size (for a variant name). The font must be normal weighted and in the colour Pantone Cool Gray 2C.²³¹ With respect to retail packaging other than retail packaging of cigarettes, names must meet the same specifications, but can be printed on the packaging or on an adhesive label fixed to the packaging.²³² Such adhesive label must be in the colour Pantone 448C (drab dark brown), no larger than reasonably necessary to print the permitted names, be fastened firmly to the retail packaging so as not to be easily removable²³³, and must not obscure any relevant legislative requirement.²³⁴

2.26. Section 21(3) of the TPP Act specifies the location and orientation of these names with respect to cigarette packaging:

²²³ Section 19 applies only to the elements of the definition of "retail packaging" set out in subparagraphs (a) to (b) of the definition in para. 2.17 above. See TPP Act, (Exhibits AUS-1, JE-1), Sections 19(1)(a) and 4(1) (defining "retail packaging").

²²⁴ TPP Act, (Exhibits AUS-1, JE-1), Section 19(2).

²²⁵ TPP Act, (Exhibits AUS-1, JE-1), Section 19(3).

²²⁶ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.2.1.

²²⁷ TPP Act, (Exhibits AUS-1, JE-1), Sections 20(1)-20(3). Section 20(3) also permits the appearance of relevant legislative requirements. Section 20(4) stipulates that Section 20 does not apply to wrappers, which are regulated by Section 22.

²²⁸ TPP Regulations, (Exhibits AUS-3, JE-2), Regulations 2.3.1(1)-2.3.1(2) and 2.3.8(1). The specific conditions governing each of these marks are elaborated in Regulations 2.3.2 to 2.3.9.

²²⁹ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.3.1(5).

²³⁰ TPP Act, (Exhibits AUS-1, JE-1). Section 21(5) stipulates that Section 21 does not apply to wrappers, which are governed by Section 22.

²³¹ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.1. In addition, the first letter in each word must be capitalised. No other upper case letters may be used.

²³² TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.2(2).

²³³ Regulation 2.4.2(4) explains that an adhesive label is easily removable if it is not likely to stay fastened during the expected life of the retail packaging, or if it can be removed without damaging the label or the retail packaging. TPP Regulations, (Exhibits AUS-3, JE-2).

²³⁴ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.2(3).

Table 1: Requirements for brand, business, company or variant names

Requirements for brand, business, company or variant names			
Item	If this name ...	appears on this surface ...	the name ...
1	a brand, business or company name	the front outer surface of a cigarette pack	must appear: (a) horizontally below, and in the same orientation as, the health warning; and (b) in the centre of the space remaining on the front outer surface beneath the health warning.
2	a brand, business or company name	the front outer surface of a cigarette carton	must appear: (a) in the same orientation as the health warning; and (b) in the centre of the space on the front outer surface that is not occupied by the health warning.
3	a brand, business or company name	any outer surface of a cigarette pack or cigarette carton (other than a front outer surface)	must appear: (a) horizontally; and (b) in the centre of the outer surface of the pack or carton.
4	variant name	any outer surface of a cigarette pack or cigarette carton	must appear: (a) horizontally and immediately below the brand, business or company name; and (b) in the same orientation as the brand, business or company name.

Source: TPP Act, (Exhibits AUS-1, JE-1), Section 21(3).

2.27. With respect to cigar tubes, a brand, business or company name, or variant name, may only appear once, across a single line only, and must not obscure any relevant legislative requirement.²³⁵ Where a cigar tube contains a brand, business or company name only, or a variant name only, the name must appear in the same orientation as, and immediately below, the health warnings. Where a cigar tube contains a brand, business or company name, together with a variant name, the brand, business or company name must appear in the same orientation as, and immediately below, the health warnings on the surface, and the variant name must appear parallel to, in the same orientation as, and immediately below the brand, business or company name.²³⁶

2.28. Brand, business or company names or variant names may appear on other retail packaging²³⁷ across one line only on each of the front and back outer surfaces (and no others), in the same orientation as, and not above, the health warnings on the surface, and must not obscure any relevant legislative requirement. Variant names on such packages must appear parallel to, in the same orientation as, and immediately below the brand, business or company name.²³⁸

2.1.2.3.4 Wrappers

2.29. Section 22 of the TPP Act concerns requirements for wrappers.²³⁹ Wrappers must be transparent and not coloured, marked, textured or embellished in any way, other than as permitted by the TPP Regulations. Neither trademarks nor marks may appear anywhere on the

²³⁵ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.3(1).

²³⁶ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.3(2).

²³⁷ That is, other than cigarette packs, cigarette cartons, and cigar tubes. See TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.4(1).

²³⁸ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.4(2).

²³⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 22. This Section applies only to plastic or other wrappers that cover the retail packaging of tobacco products that are within the scope of subparagraphs (a) and (b) of the definition of "retail packaging" presented in paragraph 2.17. See *ibid.* Sections 22(1) and 4(1) (defining "retail packaging").

wrapper, except as permitted by the TPP Regulations.²⁴⁰ These requirements are elaborated in the TPP Regulations.²⁴¹

2.1.2.3.5 Inserts and onserts

2.30. Section 23 of the TPP Act applies to certain types of retail packaging, and provides that these packages must not have any inserts or onserts, other than as permitted by the TPP Regulations.²⁴² The TPP Regulations provide that retail packaging of tobacco products may include an adhesive label bearing a health warning²⁴³, and, except with respect to cigarettes and cigarette cartons, may contain an insert if it is used to avoid damage to the tobacco product during transportation or storage, and is white or the colour of the packaging material in its natural state.²⁴⁴ Packages of tobacco products other than cigarettes may include a tab for resealing the package, provided that it is either black, transparent and not coloured, or the colour Pantone 448C (drab dark brown).²⁴⁵

2.1.2.3.6 Other requirements concerning retail packaging

2.31. The retail packaging of tobacco products must not make a noise, or contain or produce a scent, that could be taken to constitute tobacco advertising and promotion²⁴⁶, and must not include features designed to change the packaging after retail sale.²⁴⁷

2.1.2.3.7 Summary of requirements on retail packaging

2.32. As described below, the requirements set out in the TPP Act and the TPP Regulations operate in conjunction with other legislative requirements that are not challenged in these disputes, including graphic health warnings (GHWs). The cumulative effects of the requirements set out in the TPP Act and the TPP Regulations, and other legislative requirements with respect to the packaging of cigarettes and cigars, are shown below:

²⁴⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 22(2).

²⁴¹ See TPP Regulations, (Exhibits AUS-3, JE-2), Regulations 2.5.1-2.5.2.

²⁴² TPP Act, (Exhibits AUS-1, JE-1), Section 23. This Section applies only to the retail packaging of tobacco products that are within the scope of any of the subparagraphs (a) through (d) of the definition of "retail packaging" produced in paragraph 2.17. See *ibid.* Sections 23 and 4(1) (defining "retail packaging").

²⁴³ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.6.1. These warnings must comply with *Trade Practices (Consumer Product Information Standards) (Tobacco) Regulations 2004* (Cth), (Exhibits AUS-297, DOM-43); and *Competition and Consumer (Tobacco) Information Standard 2011* (Cth), (Information Standard), (Exhibits AUS-128, JE-8).

²⁴⁴ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.6.2.

²⁴⁵ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.6.3.

²⁴⁶ TPP Act, (Exhibits AUS-1, JE-1), Section 24.

²⁴⁷ TPP Act, (Exhibits AUS-1, JE-1), Section 25. Section 25 provides the following examples of such features: (a) heat activated inks; (b) inks or embellishments designed to appear gradually over time; (c) inks that appear fluorescent in certain light; (d) panels designed to be scratched or rubbed to reveal an image or text; (e) removable tabs; and (f) fold-out panels.

2.1.2.4 Requirements for the appearance of tobacco products

2.33. The TPP measures regulate various elements affecting the appearance of tobacco products themselves. Section 26 of the TPP Act provides that no trademark or mark may appear anywhere on a tobacco product, other than as permitted by the TPP Regulations.²⁴⁸ Section 27 of the TPP Act provides that the TPP Regulations may prescribe additional requirements in relation to the appearance of tobacco products to further the objects of the TPP Act.²⁴⁹

2.1.2.4.1 Requirements with respect to cigarettes

2.34. Division 3.1 of the TPP Regulations specifies requirements with respect to cigarettes. The paper casing and lowered permeability band (if any) must be white, or white with an imitation cork tip.²⁵⁰ A cigarette may be marked with an alphanumeric code, which may appear only once on the cigarette. The code must be printed parallel to, and not more than 38 millimetres from the end of the cigarette that is not designed to be lit in black, normal-weighted Lucida Sans typeface with a maximum 8-point font size.²⁵¹ The alphanumeric code must not constitute, or provide access to, tobacco advertising and promotion; be "false, misleading, deceptive or likely to create an erroneous impression about the cigarette's characteristics, health effects, hazards or emissions"; "directly or indirectly create a false impression that a particular tobacco product is less harmful than other tobacco products"; "represent, or be linked or related in any way to, the emission yields of the cigarette"; or "represent, or be related in any way to, the brand or variant name of the cigarette".²⁵² If a cigarette includes a filter tip, the filter tip must be white.²⁵³

²⁴⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 26.

²⁴⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 27(1)(b).

²⁵⁰ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.1.1.

²⁵¹ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.1.2(2).

²⁵² TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.1.2(3).

²⁵³ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.1.3.

2.1.2.4.2 Requirements with respect to cigars

2.35. With respect to cigars, the TPP Regulations prescribe that a single band may appear around the circumference of a cigar in the colour Pantone 448C (drab dark brown). The band may be an adhesive band that completely covers another band or bands, provided it is fastened firmly to, and not easily removable from, that band.²⁵⁴

2.36. The band may feature the brand, company or business name, and variant name of the cigar, the name of the country in which the cigar was made or produced, and an alphanumeric code.²⁵⁵ These marks must appear only once on the band; and be printed in normal weighted Lucida Sans typeface, in maximum 10-point font size, in the colour Pantone Cool Gray 2C.²⁵⁶ The brand, business or company name and variant name must be placed horizontally along the length of the band so that they run around the circumference of the cigar.²⁵⁷ The alphanumeric code must not constitute, or provide access to, tobacco advertising and promotion; be "false, misleading, deceptive or likely to create an erroneous impression about the cigar's characteristics, health effects, hazards or emissions"; "directly or indirectly create a false impression that a particular tobacco product is less harmful than other tobacco products"; or "represent, or be linked or related in any way to, the emission yields of the cigar".²⁵⁸

2.37. The band may also contain a covert mark that is not visible to the naked eye and does not provide access to tobacco advertising and promotion.²⁵⁹

2.1.2.4.3 Summary of requirements on the appearance of tobacco products

2.38. The cumulative effects of the requirements set out in the TPP Act and the TPP Regulations, and the other legislative requirements set out in Sections 2.1.2.4.1 and 2.1.2.4.2 with respect to the appearance of cigarettes and cigars, are depicted as follows:

Figure 8: TPP Act and TPP Regulations as applied to the appearance of cigarettes

²⁵⁷ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.2.1(6).

²⁵⁸ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.2.1(7).

²⁵⁹ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 3.2.1(4).

Figure 9: TPP Act and TPP Regulations as applied to the appearance of cigars

Source: Australia's first written submission, Annexure A, Figure 4; Dominican Republic's first written submission, Annex I, Figure 34; and DHA Guide to Tobacco Plain Packaging, (Exhibits HND-50, DOM-161).

2.1.2.5 Section 28 of the TPP Act

2.39. Section 28(1) of the TPP Act provides that, for the purposes of the *Trade Marks Act 1995* (Cth) (TM Act), and the regulations made under that Act, "an applicant for the registration of a trademark in respect of tobacco products is taken to intend to: (a) use the trademark in Australia in relation to those products; or (b) authorise another person to use the trade mark in Australia in relation to those products; or (c) assign the trade mark to a body corporate that is about to be constituted with a view to [it] using the trade mark in Australia in relation to those products".²⁶⁰

2.40. The TPP Bill Explanatory Memorandum states that Section 28 "preserves a trade mark owner's ability to protect a trade mark, and to register and maintain registration of a trade mark". It elaborates that, for example, "a tobacco manufacturer that applies for the registration of a trade mark in respect of tobacco products is taken to intend to use the trade mark in Australia, if it would use it on the products or retail packaging, but for the operation" of the TPP Act. It further states that, in the event of an application to remove a trademark from the register on the basis that it has not been used, the allegation of non-use "will be rebutted by evidence that the registered owner would have used the trade mark, but for the operation" of the TPP Act.²⁶¹ The complainants contest the effects of Section 28(1) of the TPP Act.

2.1.2.6 Offences and civil penalties

2.41. Chapter 3 of the TPP Act is entitled "Offences and civil penalty provisions". This Chapter identifies a variety of acts that attract either civil or criminal penalties. Section 30, which is contained in Part I of Chapter 3, provides a simplified outline of the provisions of the Chapter. It provides, *inter alia*, that:

- A person must not:
 - (a) supply or purchase tobacco products in retail packaging that does not comply with the requirements of this Act; nor
 - (b) be involved in the packaging of tobacco products for retail sale if the packaging does not comply with those requirements; nor

²⁶⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 28(1).

²⁶¹ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 15.

(c) supply, purchase or manufacture tobacco products that do not comply with those requirements; nor

(d) supply tobacco products that are not packaged for retail sale without certain contractual prohibitions.

- A person who does so:

(a) may commit a fault-based offence (that is, an offence where fault elements apply to the physical elements of the offence); and

(b) may also commit a strict liability offence (that is, an offence where no fault elements apply to the physical elements of the offence); and

(c) may also contravene a civil penalty provision.²⁶²

2.42. Each of the prohibitions identified in Chapter 3 stipulates the applicable criminal penalties (for fault-based and strict liability offences) and civil penalties.²⁶³ Part 4 of Chapter 3 creates an exception to certain offences and civil penalty provisions in that Chapter for non-compliant tobacco products that are for export.²⁶⁴

2.1.2.7 Relationship with other legislation

2.43. Section 10 the TPP Act makes provision for inconsistencies between the Act and other Commonwealth legislation, and identifies certain safety or information standards which prevail to the extent of any inconsistency between them and the TPP Act.²⁶⁵ Section 11 of the TPP Act provides, *inter alia*, that the Act "does not exclude or limit the operation of a relevant tobacco law of a State or Territory that is capable of operating concurrently with this Act".²⁶⁶ The TPP Bill Explanatory Memorandum explains that the TPP Bill does not:

[L]imit the operation of State or Territory laws relating to packaging and appearance of tobacco products, where those laws are capable of operating concurrently with the provisions of the Bill. It is expected that Commonwealth and State and Territory tobacco control laws will continue to operate alongside each other. However, if there is any conflict between State and Territory laws and the plain packaging requirements, the Bill will prevail.²⁶⁷

2.44. Furthermore, the Explanatory Memorandum explains that:

It is intended that this Bill will operate alongside other regulatory mechanisms for tobacco products, and packaging generally. Although the Bill regulates information that may appear, and the ways in which certain required information may appear, [it] is not intended to interfere with other regulation of tobacco products, including any regulation creating a requirement for packaging generally that is applicable to retail **packaging for tobacco products**. [...] **The Bill is not intended to detract from any form of regulation of advertising of tobacco products**, but is intended to support existing advertising restrictions in so far as it creates requirements to restrict advertising on tobacco products themselves or on their packaging.²⁶⁸

²⁶² TPP Act, (Exhibits AUS-1, JE-1), Section 30. The details of these prohibitions are elaborated in Sections 31-50, which are contained in Parts 2-4 of Chapter 3.

²⁶⁸ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 4. See also *ibid.* p. 10.

2.1.2.8 The TMA Act

2.45. The TMA Act inserts into the TM Act a new provision, namely Section 231A. This provision provides as follows:

- (1) The regulations may make provision in relation to the effect of the operation of the *Tobacco Plain Packaging Act 2011*, and any regulations made under that Act, on:
 - (a) a provision of this Act; or
 - (b) a regulation made under this Act, including:
 - (i) a regulation that applies a provision of this Act; or
 - (ii) a regulation that applies a provision of this Act in modified form.
- (2) Without limiting subsection (1), regulations made for the purposes of that subsection may clarify or state the effect of the operation of the *Tobacco Plain Packaging Act 2011*, and any regulations made under that Act, on a provision of this Act or a regulation made under this Act, including by taking or deeming:
 - (a) something to have (or not to have) happened; or
 - (b) something to be (or not to be) the case; or
 - (c) something to have (or not to have) a particular effect.
- (3) Regulations made for the purposes of subsection (1):
 - (a) may be inconsistent with this Act; and
 - (b) prevail over this Act (including any other regulations or other instruments made under this Act), to the extent of any inconsistency.²⁶⁹

2.46. The TMA Bill Explanatory Memorandum explains that:

The [TMA Bill] is being introduced so, if necessary, the government can quickly remedy any unintended interaction between the [TPP Act] and the *Trade Marks Act 1995* **The objective of any such exercise of power under the Bill will be to ensure that applicants for trade mark registration and registered owners of trade marks are not disadvantaged by the practical operation of the Plain Packaging Act.**²⁷⁰

2.47. The Explanatory Memorandum continues that:

[T]he proposed Bill will insert a new section 231A to allow regulations to be made under the Trade Marks Act in relation to the effect of the operation of the [TPP Act] and regulations made under that Act on (a) a provision of the Trade Marks Act or (b) of a regulation made under that Act.

Regulations made under new section 231A are not intended to have any effect on the operation of the Trade Marks Act in relation to goods or services not governed by the Plain Packaging Act.²⁷¹

2.48. The TMA Act entered into force on 1 December 2011.²⁷²

²⁷¹ TMA Bill Explanatory Memorandum, (Exhibits AUS-5, JE-5), p. 1.

²⁷² See TMA Act, (Exhibits AUS-4, JE-3), Section 2.

2.1.2.9 Regulatory impact analysis

2.49. The Australian regulatory impact analysis process involves a three-tier system for assessing regulations, including "in-depth analysis, documented in a Regulation Impact Statement (RIS), for all proposals that will have a significant impact on business and individuals or the economy".²⁷³ The process also allows for a PIR in circumstances where a RIS is not completed in relation to a regulatory proposal.

2.50. In April 2009, the Department of Health and Ageing (DHA) submitted to the Office of Best Practice Regulation (OBPR) a draft RIS for a Tobacco Control Act that would have contained, *inter alia*, provisions on plain packaging of tobacco products.²⁷⁴ The OBPR advised the DHA that the draft RIS required more work to satisfy the Australian Government's Best Practice Regulation requirements and offered comments to assist in finalizing it.²⁷⁵ In April 2010, the DHA transmitted to the OBPR a second draft RIS on plain packaging of tobacco products.²⁷⁶ In May 2010, after it was announced that the Government would adopt a comprehensive package of tobacco control measures targeting smoking, including plain packaging²⁷⁷, the OBPR informed the DHA that the second draft RIS did not satisfy the Best Practice Regulation requirements and that the DHA was required to commence a PIR within one to two years of implementation.²⁷⁸

2.51. According to the Best Practice Regulation Handbook, a PIR "should be similar in scale and scope to what would have been prepared for the decision-making stage" and "should focus on the way the policy was implemented, whether the implementation is proving effective in meeting the policy objectives, and whether implementation or ongoing delivery methods might be adjusted to manage the policy's ongoing delivery more efficiently and/or effectively".²⁷⁹ The DHA was granted an extension, from December 2014 to June 2015, to complete its PIR of the TPP measures.²⁸⁰ In November 2015, the "Department of Health received advice that it would be reported as 'non-compliant' on the Office of Best Practice Regulation's website in relation to the post-implementation review of the tobacco plain packaging measure".²⁸¹ The Department of Health

²⁷³ See Australian Government, "Best Practice Regulation Handbook", August 2007, (Best Practice Regulation Handbook), (Exhibit AUS-126), p. 16.

²⁷⁴ Email correspondence dated 7 April 2009 from D. Sloane, Assistant Director, Department of Health and Ageing, to R. Ristic, S. Rowley, and C. Toyne, Office of Best Practice Regulation, attaching Department of Health and Ageing, "DRAFT Regulation Impact Statement – Tobacco Control Act" (April 2009), (Exhibit UKR-51).

²⁷⁵ Letter of 23 April 2009 from OBPR to DHA, (Exhibits HND-12, IDN-6). The OBPR provided "general comments" on the definition of the problem, the structure of the RIS, the range of sources relied on, and the need to target the information to the measures proposed to be introduced, including an analysis of the degree to which the proposed measures will contribute to the health benefits of quitting smoking. Ibid. p. 2. With respect to plain packaging, it commented that "[t]he idea that cigarettes are held in the same social cues to style and display one's status like designer clothing seems overstated." Ibid. p. 6.

²⁷⁶ Letter of 4 May 2010 from OBPR to DHA, (Exhibit HND-16).

²⁷⁷ See PM Rudd, Anti-Smoking Action Media Release, (Exhibits AUS-115, HND-4, DOM-52).

²⁷⁸ Letter of 4 May 2010 from OBPR to DHA, (Exhibit HND-16). Under the Government's Best Practice Regulation Handbook:

Where the OBPR detects a regulation may have been introduced or amended without the appropriate level of analysis being undertaken, it will, in the first instance, contact the department or agency to obtain additional information. Following consultation with the department or agency, the OBPR will determine that:

- the best practice regulation requirements have been met and no further action is required; or
- the requirements to prepare a RIS or quantitative assessment of compliance costs have not been met and the department or agency must undertake a post-implementation review. In addition, the department or agency will be reported as non-compliant in the **Best Practice Regulation Report** for that year.

Australian Government, "Best Practice Regulation Handbook", August 2007, (Best Practice Regulation Handbook), (Exhibit AUS-126), p. 37. See also *ibid.* pp. 32 and 36-38. The tobacco plain packaging proposal was reported as non-compliant in 2012. Best Practice Regulation Report 2011-12, (Exhibits HND-18, CUB-9), p. 33.

²⁷⁹ Best Practice Regulation Handbook, (Exhibit AUS-126), p. 37.

²⁸⁰ Evidence to Senate Finance and Public Administration Legislation Committee, (Exhibit DOM-371).

²⁸¹ Australia's response to Panel question No. 149, para. 31.

completed the PIR for the TPP measures in February 2016.²⁸² This PIR seeks to assess "the effectiveness and efficiency of the tobacco plain packaging measure to meet its objective in order to determine if it is an appropriate regulatory intervention".²⁸³

2.2 Other tobacco control-related measures in Australia

2.52. Australia maintains a number of measures at the Commonwealth, state and territory levels regulating the use, sale, advertisement and promotion of tobacco products that are not challenged in these proceedings. A number of these measures have however been referred to and discussed by the parties. A general description of this regulatory context is therefore provided below.

2.2.1 Mandatory text and GHWs

2.53. Tobacco health warning requirements, enacted by all Australian states and territories in 1973, initially applied only to the retail packaging of cigarettes and involved textual health warnings.²⁸⁴ Subsequent measures at the federal level were enacted, expanding the scope of the warnings with respect to their form (i.e. to include textual and graphic/pictorial warnings), size (i.e. as a percentage of the surface of the pack), position (i.e. on the front and/or back of packs), modalities (i.e. the variation and rotation of text and images) and scope (i.e. application of the requirements to other categories of tobacco products).²⁸⁵ As of 1 March 2006, GHWs were required for almost all tobacco products.²⁸⁶

2.54. On 1 January 2012, the *Competition and Consumer (Tobacco) Information Standard 2011 (Cth)* (Information Standard) entered into force; it applied to all tobacco products as of 1 December 2012.²⁸⁷ This measure requires all tobacco products sold²⁸⁸, offered for sale or otherwise supplied in Australia to feature new and expanded health warnings, including warning statements and corresponding graphics, an explanatory message and information messages.²⁸⁹ Pursuant to the Information Standard, the package area covered by health warnings was expanded, such that textual and graphic warnings must cover 75% of the front surface and 90%

²⁸² See Australia's communication to the Panel of 26 February 2016 (referring to <http://ris.dpmc.gov.au/2016/02/26/tobacco-plain-packaging/>).

²⁸³ See Tobacco Plain Packaging PIR, (Exhibit AUS-624), p. 2.

²⁸⁴ Australia's first written submission, Annexure B, Section A(1); *Cigarette Containers (Labelling) Ordinance 1972* (Cth) (as made), (Exhibit AUS-299), Section 5(1); *Cigarette Containers (Labelling) Ordinance 1972* (NT), (Exhibit AUS-300), Section 4; *Cigarette Package Labelling Regulations 1972* (Vic), (Exhibit AUS-301), Regulations 3-4 and 6; *Cigarettes (Labelling) Regulations 1972* (WA), (Exhibit AUS-302), Regulations 3-6; *Cigarettes (Labelling) Act 1972* (NSW), (Exhibit AUS-303), Section 4; *Cigarettes (Labelling) Regulations 1973* (NSW), (Exhibit AUS-304), Regulation 4; *Cigarettes (Labelling) Act 1972* (Tas), (Exhibit AUS-305), Sections 3-4; *Cigarettes (Labelling) Regulations 1973* (Tas), (Exhibit AUS-306), Regulation 3; *Cigarettes (Labelling) Regulations 1971-1972* (SA), (Exhibit AUS-307), Regulations 2 and 3; *Food and Drug Amendment Regulations 1973* (Qld), (Exhibit AUS-308).

²⁸⁵ Australia's first written submission, Annexure B, Section A(1). See, e.g. *Trade Practices (Consumer Product Information Standards) (Tobacco) Regulations 1994* (Cth), (Exhibit AUS-322), Regulations 7, 9, 10(1), 11(1)(b), 11(2)(b), and 15(1); *Trade Practices (Consumer Product Information Standards) (Tobacco) Regulations 2004* (Cth), (Exhibit AUS-323), Regulations 35, 42, 47, 51, and Schedule 2.

²⁸⁶ An exception was made for cigars sold singly and tobacco for export. *Trade Practices (Consumer Product Information Standards) (Tobacco) Regulations 1994* (Cth), (Exhibit AUS-322), Regulation 4(2)(b).

²⁸⁷ Information Standard, (Exhibits AUS-128, JE-8), Section 1.5.

²⁸⁸ Prior to the Information Standard, an exception to the warning requirements was made for cigars sold individually, as well as tobacco for export. See Australia's first written submission, para. 133 and Annexure B, Section A(1); Information Standard, (Exhibits AUS-128, JE-8), Section 9.16. It is noted that Information Standard requires warning statements, but not GHWs, for single cigar tubes, bidis and smokeless tobacco. See Information Standard, (Exhibits AUS-128, JE-8), Parts 6, 7 and 8.

²⁸⁹ For example, Section 3.2(4) offers the following "explanatory message":

Smoking during pregnancy reduces blood flow in the placenta and limits the oxygen and nutrients that reach the growing baby. Smoking increases the risk of miscarriage, stillbirth, premature birth, problems during the birth or the baby having a smaller brain and body.

You CAN quit smoking. Call **Quitline 13 7848**, talk to your doctor or pharmacist, or visit **www.quitnow.gov.au**

Information Standard, (Exhibits AUS-128, JE-8), Section 3.2(4). (emphasis original)

of the back surface of cigarette packs and cartons. Cigar tubes require only textual warnings; such statements must occupy 95% of the total length of the outer surface, and extend to at least 60% of the circumference of the outer surface.²⁹⁰ The warning on other tobacco products (except cigars tubes and bidis) was increased to 75% on the front and back of the package.²⁹¹ Warning statements on the front surface of a cigarette package must feature upper case, bold type, in the largest font size available to fit the set area, and must be set in white against black background. Furthermore, the side warning statements must have "WARNING" in uppercase and several lines of a specified message below in regular capitalization, in black lettering on a bright yellow background.²⁹²

2.55. In 2013, amendments were made to the Information Standard, with the effect that rotation of the health warnings on the retail packaging of tobacco products became the responsibility of manufacturers and importers of tobacco products rather than retailers.²⁹³

Figure 10: Current GHWs used on the front of cigarette packaging

Source: Australia's first written submission, para. 133.

2.2.2 Restrictions on advertisement and promotion of tobacco products

2.56. Since 1992, Australia has maintained restrictions and prohibitions concerning advertising and promotion of tobacco products across various media.²⁹⁴ It has also maintained prohibitions on tobacco advertising at the point of sale. As described in paragraph 2.7 above, the NPHT, in its final

²⁹⁰ Information Standard, (Exhibits AUS-128, JE-8), Part 6.

²⁹¹ Information Standard, (Exhibits AUS-128, JE-8), Sections 9.13, 9.14, and 9.24.

²⁹² Information Standard, (Exhibits AUS-128, JE-8), Sections 9.10-9.12.

²⁹³ *Competition and Consumer (Tobacco) Amendment (Rotation of Health Warnings) Information Standard 2013* (Cth), (Exhibit AUS-325).

²⁹⁴ This includes restrictions on advertising in various print media; advertisements in film, videos, television or radio; advertising on tickets; the sale or supply or offer or hire of any item containing a tobacco advertisement to the public; displays that could be seen or heard from a public place, or from public transport or workplaces; and advertising of sponsorship. See *Tobacco Advertising Prohibition Act 1992* (Cth), (Exhibits AUS-64, IDN-14), Sections 9, 10(1), and 15; and *Smoking and Tobacco Products Advertisements (Prohibition) Act 1989* (Exhibit AUS-62).

report of June 2009²⁹⁵, identified "[e]nd(ing) all forms of advertising and promotion of tobacco products" as one of 11 "key action areas".²⁹⁶

2.57. In response to the NPHT's recommendations, the Prime Minister and the Minister for Health and Ageing announced reforms to further restrict tobacco advertising and promotion. The reforms announced included the introduction of legislation to restrict internet advertising of tobacco products; working with Australian states and territories to develop an action plan for ending other forms of tobacco promotion, and possible mandatory reporting of promotion expenditure, in the next iteration of the National Tobacco Strategy; and a proposal for legislation concerning the plain packaging of tobacco products.²⁹⁷

2.58. In addition, Australia indicated in these proceedings that legislation prohibiting tobacco advertising may include retailer advertising or over-the-counter word-of-mouth promotion and that some states and territories provide guidelines about what a retailer can say to a customer.²⁹⁸

2.59. In 2012, the *Tobacco Advertising Prohibition Act 1992* (Cth) was amended so as to extend existing tobacco advertisement restrictions to internet and other electronic media (e.g. mobile phones), with the exception of advertising on websites that sell tobacco products.²⁹⁹ Advertisements on these websites must comply with regulations accompanying these amendments in respect of their content, format, and location.³⁰⁰ These amendments took effect on 6 September 2012.³⁰¹

2.60. All Australian states and territories prohibit retailers from selling food, toys or other products designed to resemble tobacco products or that might encourage young people to smoke.³⁰²

2.2.3 Taxation measures

2.61. On 1 November 1999, Australia amended the *Excise Tariff Act 1921* (Cth) such that excise tax was applied to cigarettes, cigars and other tobacco products on a per stick basis (for products in stick form not exceeding 0.8 grams of tobacco per stick), or on a per kilogram basis (for products exceeding 0.8 grams per stick).³⁰³

2.62. In addition to indexation adjustments³⁰⁴, the excise rate has been increased on several occasions. On 29 April 2010, Australia announced an increase in the tobacco excise rate of 25% to

²⁹⁵ NPHT, The Roadmap for Action, (Exhibits AUS-67, JE-14).

²⁹⁶ Australia's first written submission, Annexure C, para. 15. See NPHT, The Roadmap for Action, (Exhibits AUS-67, JE-14), pp. 179-182. See para. 2.67 below.

²⁹⁷ Response to NPHT, The Roadmap for Action, (Exhibits AUS-116, JE-15), pp. 65-66.

²⁹⁸ Australia's first written submission, para. 56 and Annexure C, paras. 25-26. Australia cites the "Guide to the Sale of Tobacco Products in the ACT [Australian Capital Territory]" restricting the ability of retailers to say anything that would constitute the promotion of particular products or of smoking generally and the "Victorian Tobacco Retailer Guide", which provides that if a customer does not request a specific brand the retailer may ask general questions such as "What brand do you want?" or "What flavour are they?" but may not mention a specific brand themselves. See Australia's first written submission, Annexure C, para. 26.

²⁹⁹ *Tobacco Advertising Prohibition Amendment Act 2012* (Cth), (Exhibit AUS-473). See also footnote 311, below.

³⁰⁰ More specifically, online tobacco advertisement should be "presented in a plain, text-only format, without product images, and accompanied by health warnings and age warnings". Australia's first written submission, para. 56; *Tobacco Advertising Prohibition Amendment Regulation 2012* (Cth), (Exhibit AUS-68), Section 8A.

³⁰³ Australia's first written submission, Annexure B, Section D(1); *Excise Tariff Amendment Act (No 1) 2000* (Cth), Schedule 1 (Exhibit AUS-417).

³⁰⁴ *Excise Tariff Amendment (Tobacco) Act 2014* (Cth), (Exhibit HND-86), Section 6AA; Excise Tariff Working Pages, (Exhibit IDN-23), p. 4. From 1 March 2014, the indexation of tobacco excise changed from

be applied from 30 April 2010.³⁰⁵ On 1 August 2013, Australia announced four additional 12.5% increases in excise tax, effective on 1 December 2013, 1 September 2014, 1 September 2015, and 1 September 2016.³⁰⁶

2.2.4 Restrictions on the sale of tobacco products

2.63. Australia regulates, mostly through state and territory legislation, what kind of tobacco products may be sold, who can buy and sell and purchase tobacco products, and how they can be sold.³⁰⁷

2.64. The supply of chewing tobacco and snuff has been banned in Australia since 1991. A number of states and territories have also introduced prohibitions on the sale of flavoured cigarettes or fruit or confectionery-flavoured cigarettes, or enacted legislation allowing their prohibition.³⁰⁸

2.65. By 1998, all Australian States and Territories had increased the minimum age limit restricting the sale of cigarettes to persons under 18 years of age.³⁰⁹

2.66. All Australian states also regulate the modalities of sale through vending machines, online and other forms of "indirect sales", or via "mobile sales" in places such as nightclubs or dance events³¹⁰, though these restrictions are not applied uniformly across all states and territories.³¹¹ Some Australian states and territories require tobacco retailers and wholesalers to be licensed.³¹²

Western Australia prohibits the display of any package that contains tobacco with fruit or confectionery flavours. **Tobacco Products Control Regulations 2006** (WA), (Exhibit AUS-365), Regulation 33.

³⁰⁹ Australia's first written submission, para. 710 and Annexure B, Section B(2)(a). **Tobacco (Amendment) Act 1990** (ACT), (Exhibit AUS-351), Section 5; **Public Health Act 1991** (NSW), (Exhibit AUS-352), Section 59; **Tobacco Products (Prevention of Supply to Children) Act 1998** (Qld), (Exhibit AUS-353), Schedule (defining "child" as someone under 18 years of age); **Tobacco Products Control (Miscellaneous) Amendment Act 1993** (SA), (Exhibit AUS-354), Section 3(a); **Tobacco Act 1992** (NT), (Exhibit AUS-355), Sections 3, 9; **Public Health Amendment Act 1996** (Tas), (Exhibit AUS-356), Section 4; and **Tobacco (Amendment) Act 1993** (Vic), (Exhibit AUS-357), Section 4. According to Australia, the legal purchase age in Western Australia has been 18 years since 1916. Australia's second written submission, para. 557 fn 623.

³¹⁰ **Tobacco Products Control Act 1986** (SA), (Exhibit AUS-366), Section 11(2); **Tobacco Act 1987** (Vic), (Exhibit AUS-462), Section 13; **Tobacco Advertising Prohibition Act 1991** (NSW), (Exhibit AUS-372), Section 9; **Tobacco (Amendment) Act 1990** (ACT), (Exhibit AUS-351), Section 5; **Tobacco Products (Prevention Of Supply To Children) Act 1998** (Qld), (Exhibit AUS-353), Section 15; **Tobacco Products Control (Miscellaneous) Amendment Act 1993** (SA), (Exhibit AUS-354), Section 8; **Public Health Amendment Act 1996** (Tas), (Exhibit AUS-356), Section 4. The Northern Territory prohibits vending machines except within areas of licensed premises where children are not permitted. **Tobacco Control Act 2002** (NT), (Exhibit AUS-374), Section 26. Western Australia restricts tobacco vending machines to licensed premises or mines amenities. **Tobacco Products Control Act 2006** (WA), (Exhibit AUS-350), Section 27. On 1 September 2006, the ACT banned tobacco vending machines completely. **Tobacco (Vending Machine Ban) Amendment Act 2004** (ACT), (Exhibit AUS-375), Sections 2(2) and 9.

³¹¹ For example, only Western Australia and South Australia prohibit sale by internet, telephone, and facsimile. See **Tobacco Products Control Act 2006** (WA), (Exhibit AUS-376), Section 18; **Tobacco Products Regulation (Miscellaneous) Amendment Act 2007** (SA), (Exhibit AUS-377), Section 4.

³¹² This is the case for the ACT, South Australia, Tasmania, Western Australia and the Northern Territory. See Australia's first written submission, Annexure B, Section B(1); **Tobacco Act 1927** (ACT), (Exhibit AUS-347), Part 7, Sections 61 and 63; **Tobacco Products Regulation Act 1997** (SA), (Exhibit AUS-348), Section

Others have what Australia describes as "'negative' licensing schemes that similarly assist in the enforcement of tobacco laws".³¹³

2.67. All Australian states and territories have implemented requirements concerning the point of sale of tobacco products, including bans on the display of tobacco products and tobacco advertising at retail premises.³¹⁴ Certain exemptions to display bans are maintained in Victoria for specialist tobacconist outlets and duty-free shops³¹⁵, and in Western Australia for specialist tobacconist outlets.³¹⁶ A typical point-of-sale display ban in Australia requires that tobacco products be kept in an opaque, closed cabinet that is inaccessible to consumers and is behind the counter of a retail outlet.³¹⁷

2.68. Australian states and territories also regulate other means through which information about the tobacco products available in a given retail outlet can be communicated to consumers. In all states and territories except Queensland and the Australian Capital Territory (ACT), price boards are visible and display certain information. The information displayed varies from jurisdiction to jurisdiction, as does the size, font, and other features of the board.³¹⁸ Retailers may also, or alternatively, use price tickets.³¹⁹ The information displayed varies from jurisdiction to jurisdiction, and limitations apply to the font and other features of each ticket.

³¹⁹ Australia's first written submission, Annexure C, para. 24. See also Tasmanian Department of Health and Human Services, "Tobacco Retailers Guide and Guidelines for the Sale of Tobacco products", February

2.69. A number of states and territories have different requirements for the storage or display of cigars. For example, in Queensland, customers may view cigars in a humidified room, accompanied by the tobacco retailer. In Victoria, cigars may be displayed in a humidor. In Western Australia, certain tobacco retailers may keep cigars in cigar cabinets. New South Wales (NSW) and Western Australia allow tobacco retailers to open cigar packages to sell single cigars. Western Australia permits additional signage to provide information about the availability and price of cigars in a cigar cabinet.³²⁰

2.2.5 Other measures

2.70. Full or partial bans on the consumption of tobacco products in various locations have also been implemented in Australia at the Commonwealth and state and territory levels. These bans apply in various places, including enclosed public places, certain outdoor public areas (outdoor eating areas, beaches, outdoor swimming areas and around playground equipment, areas used for outdoor spectacles and events), airplanes, train stations, vehicles carrying minors, restaurants, bars, workplaces, cafes, shopping and community centres, public transport, bus stops, taxi ranks, and wharves.³²¹

2.71. The Australian Government has undertaken to invest AUD 135 million in anti-smoking social marketing campaigns between 2009 and 2016.³²² It has also invested in campaigns that use different media (such as direct mail and online resources) and campaigns targeting certain groups

³²⁰ Australia's first written submission, Annexure C, Section B(4), paras. 27-28. See, with respect to NSW, *Public Health (Tobacco) Act 2008* (NSW), (Exhibit AUS-267), Section 6(3).

³²¹ These restrictions are not uniformly applicable across all states and territories. See Australia's first written submission, Annexure B, Section C. See also *Air Navigation Regulations (Amendment) 1987* (Cth), (Exhibit AUS-378); *Air Navigation Regulations (Amendment) 1990* (Cth), (Exhibit AUS-379); *Smoke-free Areas (Enclosed Public Places) Act 1994* (ACT), (Exhibit AUS-383), Section 5; *Tobacco Control Act 2002* (NT), (Exhibit AUS-374), Sections 5, 7, 9, 11; *Tobacco Control Regulations 2002* (NT), (Exhibit AUS-385), Regulation 11; *Smoke-Free Environment Act 2000* (NSW), (Exhibit AUS-386), Sections 6, 7(1), Schedule 1; *Tobacco and Other Smoking Products (Prevention of Supply to Children) Amendment Act 2001* (Qld), (Exhibit AUS-387), Section 26, Part 2B; *Tobacco Products Regulation Act 1997* (SA), (Exhibit AUS-388), Section 47; *Public Health Amendment (Smoke-free areas) Act 2001* (Tas), (Exhibit AUS-389), Section 5; *Tobacco (Amendment) Act 2000* (Vic), (Exhibit AUS-390), Section 7; *Occupational Safety and Health Amendment Regulations (No 2) 1997* (WA), (Exhibit AUS-391), Regulation 6; *Health (Smoking in Enclosed Public Places) Regulations 1999* (WA), (Exhibit AUS-392), Regulations 4-10; *Smoking (Prohibition in Enclosed Public Places) Amendment Act 2009* (ACT), (Exhibit AUS-393), Section 11; *Tobacco Legislation Amendment Act 2012* (NSW), (Exhibit AUS-394), Schedule 1 item 8; *Tobacco Control Legislation Amendment Act 2010* (NT), (Exhibit AUS-395), Section 16-18; *Tobacco and Other Smoking Products Amendment Act 2004* (Qld), (Exhibit AUS-396), Section 40; *Tobacco Products Regulation (Further Restrictions) Amendment Act 2012* (SA), (Exhibit AUS-397), Section 4; *Public Health Amendment Act 2004* (Tas), (Exhibit AUS-398), Section 6; *Tobacco (Amendment) Act 2005* (Vic), (Exhibit AUS-399), Sections 5 and 24; *Tobacco Products Control Amendment Act 2009* (WA), (Exhibit AUS-400), Section 9; *Smoking (Prohibition in Enclosed Public Places) Act 2003* (ACT) (as made), (Exhibit AUS-401), Section 6; *Tobacco Products Regulation (Further Restrictions) Amendment Act 2004* (SA), (Exhibit AUS-402), Section 17; *Tobacco Products Regulation (Smoking in Cars) Amendment Act 2007* (SA), (Exhibit AUS-403); *Public Health (Tobacco) Act 2008* (NSW), (Exhibit AUS-404), Section 30; *Public Health Amendment Act 2007* (Tas), (Exhibit AUS-405), Section 4; *Tobacco Amendment (Protection of Children) Act 2009* (Vic), (Exhibit AUS-406), Section 19; *Health and Other Legislation Amendment Act 2009* (Qld), (Exhibit AUS-407), Sections 180 and 181; *Smoking in Cars with Children (Prohibition) Act 2011* (ACT), (Exhibit AUS-408), Section 7; *Tobacco and Other Smoking Products Regulation 2010* (Qld), (Exhibit AUS-409), Regulations 14-15, Schedules 1-2; *Public Health Amendment Act 2011* (Tas), (Exhibit AUS-410), Section 12; *Tobacco Products (Smoking Bans in Public Areas – Longer Term) Regulations 2012* (SA) (AUS-411), Regulation 4; and *Tobacco Amendment (Smoking at Patrolled Beaches) Act 2012* (Vic), (Exhibit AUS-412), Section 3.

³²² In 1997, the Australian Government initiated a mass media anti-smoking campaign, the "National Tobacco Campaign" (NTC). Background Paper, National Tobacco Strategy 1999 to 2002-03, (Exhibit AUS-435), para. 4.7; Australia's National Tobacco Campaign: Evaluation Report, (Exhibit AUS-436).

and sectors of the population (for example, pregnant women, culturally and linguistically diverse groups, prisoners, people with mental illness, socially disadvantaged groups, and Aboriginal and Torres Strait Islander communities).³²³

2.72. The Australian Government has implemented measures to provide access to nicotine replacement therapies and other smoking cessation medicines (such as nicotine patches and gums).³²⁴ It has enacted several initiatives that target Aboriginal and Torres Strait Islander communities.³²⁵ All Australian states and territories have put in place "Quitlines" and other smoking cessation support services.³²⁶

2.73. In 2000, the Australian Government introduced measures with respect to illicit tobacco trade, which created offences and penalties for unlicensed manufacture, production, possession, dealing with or moving tobacco seed, tobacco plant or tobacco leaf.³²⁷ In 2012, the Australian Government introduced legislation that created criminal offences under the *Customs Act 1901* specifically in relation to the smuggling of tobacco products.³²⁸

2.3 Protection of trademarks and GIs in Australia

2.74. In the course of the proceedings, the parties have referred to various aspects of the framework for the protection of trademarks and GIs in Australia. General aspects of this framework are described below.

2.75. Trademarks and GIs are protected in Australia through a range of mechanisms, including statutory protections under the TM Act³²⁹, other statutory protections against unfair competition, and common law actions such as passing off that protect the reputation associated with a trademark.

2.76. The TM Act establishes the legal requirements for the registration of trademarks for goods and services (which may, as discussed below, also include signs that constitute GIs). It also provides for the corresponding rights accorded to owners and authorised users of registered trademarks.

2.77. Section 17 of the TM Act defines a trademark as:

[A] sign used, or intended to be used, to distinguish goods or services dealt with or provided in the course of trade by a person from goods or services so dealt with or provided by another person.³³⁰

2.78. The TM Act defines a "sign" as including "any letter, word, name, signature, numeral, device, brand, heading, label, ticket, aspect of packaging, shape, colour, sound or scent", or any combination thereof.³³¹

2.79. A trademark must be registered unless the application is rejected. An application must be rejected if the trademark consists of or includes a sign prohibited under the Regulations³³²; cannot be represented graphically³³³; is not capable of distinguishing between goods and services of the

³²³ Response to NPHT, The Roadmap for Action, (Exhibits AUS-116, JE-15), p. 10-11.

³²⁴ Australian Department of Health and Ageing, Pharmaceutical Benefits Scheme, "New Listings and Changes 1 January 2012", (Exhibit AUS-443).

³²⁵ Australia's first written submission, Annexure B, Section F(6).

³²⁶ "Quitlines" are smoking cessation helplines. See Young et al. 2014, (Exhibits AUS-214, JE-24(67), DOM-285), p. 29.

³²⁷ *Excise Amendment (Compliance Improvement) Act 2000* (Cth) (Exhibit AUS-426); and *Excise Act 1901* (Cth), (Exhibit AUS-428), Sections 25, 28, 33, 117C-117H.

³²⁸ *Customs Act 1901* (Cth), (Exhibit AUS-429), Section 233BABAD.

³²⁹ *Trade Marks Act 1995* (Cth), (TM Act), (Exhibits JE-6). Exhibit JE-6 includes all amendments to the TM Act through Act No. 13 of 2013. Australia provided a version of the TM Act current through Act No. 174 of 2011 as Exhibit AUS-244.

³³⁰ TM Act, (Exhibit JE-6), Section 17.

³³¹ TM Act, (Exhibit JE-6), Section 6.

³³² TM Act, (Exhibit JE-6), Section 39.

³³³ TM Act, (Exhibit JE-6), Section 40.

applicant and those of other persons³³⁴; contains or consists of scandalous matter or its use would be contrary to law³³⁵; is likely to deceive or cause confusion³³⁶; or is substantially identical or deceptively similar to a prior registered trademark.³³⁷ The TM Act makes the registrability of non-inherently distinctive marks such as colours dependent on distinctiveness acquired through use.³³⁸

2.80. The registration of a trademark can also be opposed on these grounds³³⁹ as well as certain additional grounds.³⁴⁰

2.81. The registration of a trademark expires ten years after the filing date³⁴¹, unless renewed.³⁴² The registration of a trademark may be cancelled, revoked, amended and the Register may be rectified under specific circumstances.³⁴³ A trademark owner can oppose an application for removal for non-use in "circumstances (whether affecting traders generally or only the registered owner of the trade mark) that were an obstacle to use of the trade mark during that period".³⁴⁴

2.82. Section 20 of the TM Act states that the owner of a registered trademark has the "exclusive rights" "to use", and "to authorise other persons to use", that trademark in relation to the goods and/or services in respect of which the trademark was registered.³⁴⁵ They also include "the right to obtain relief under this Act if the trade mark has been infringed"³⁴⁶ as well as the right to assign or transfer the trademark.³⁴⁷ Under the TM Act, a person infringes a registered trademark if the person uses as a trademark a sign that is substantially identical with, or deceptively similar to, the trademark in relation to (a) goods or services in respect of which the trademark is registered; (b) goods or services of the same description as those in respect of which the trademark is registered; (c) services that are closely related to the registered goods; or (d) goods that are closely related to the registered services.³⁴⁸

2.83. In addition to the rights accorded to registered trademarks under the TM Act, owners of trademarks that are "well known in Australia" may pursue infringement action against unauthorized use of that sign, or of substantially identical or deceptively similar signs, by third parties if certain conditions are met.³⁴⁹ Owners of well-known trademarks may pursue

³³⁴ TM Act, (Exhibit JE-6), Section 41.

³³⁵ TM Act, (Exhibit JE-6), Section 42.

³³⁶ TM Act, (Exhibit JE-6), Section 43.

³³⁷ TM Act, (Exhibit JE-6), Section 44. The application must also be rejected if it was not made in accordance with the TM Act or if it is successfully opposed. See TM Act, (Exhibit JE-6), Sections 27(1), 33.

³³⁸ TM Act, (Exhibit JE-6), Section 41(3).

³³⁹ TM Act, (Exhibit JE-6), Section 57.

³⁴⁰ Additional grounds include: if the applicant is not the owner of the trademark; the applicant does not intend to use the trademark; another trademark had acquired a reputation in Australia and the use of the trademark being registered would be likely to deceive or cause confusion, or the trademark contains or consists of a false geographical indication. TM Act, (Exhibit JE-6), Sections 58-61.

³⁴¹ TM Act, (Exhibit JE-6), Section 72(3).

³⁴² TM Act, (Exhibit JE-6), Part 7, Division 2.

³⁴³ TM Act, (Exhibit JE-6), Part 8. For instance, a registered trademark (other than a certification trademark) may be removed from the Register for non-use where, at the time of registration, the trademark was never intended to be used in Australia. It may also be removed where it has not been used in Australia for a continuous period of three years or more. TM Act, (Exhibit JE-6), Sections 92(4)(a) and 92(4)(b).

³⁴⁴ TM Act, (Exhibit JE-6), Section 100(3)(c).

³⁴⁵ TM Act, (Exhibit JE-6), Section 20(1).

³⁴⁶ TM Act, (Exhibit JE-6), Section 20(2).

³⁴⁷ TM Act, (Exhibit JE-6), Section 106.

³⁴⁸ TM Act, (Exhibit JE-6), Sections 120(1)-120(2).

³⁴⁹ TM Act, (Exhibit JE-6), Section 120(3). The Act provides that a person infringes a registered trademark if:

- (a) the trade mark is well known in Australia; and
- (b) the person uses as a trade mark a sign that is substantially identical with, or deceptively similar to, the trade mark in relation to:
 - (i) goods (**unrelated goods**) that are not of the same description as that of the goods in respect of which the trade mark is registered (**registered goods**) or are not closely related to services in respect of which the trade mark is registered (**registered services**); or
 - (ii) services (**unrelated services**) that are not of the same description as that of the registered services or are not closely related to registered goods;

infringement actions beyond those available to owners of trademarks that are not well known.³⁵⁰ In deciding whether a trademark is "well known in Australia", "one must take account of the extent to which the trade mark is known within the relevant sector of the public, whether as a result of the promotion of the trade mark or for any other reason".³⁵¹

2.84. Under the TM Act, a sign that constitutes a GI may be eligible for registration as a trademark in Australia. Pursuant to the TM Act, a GI is defined as follows:

[I]n relation to goods, means a sign that identifies the goods as originating in a country, or in a region or locality in that country, where a given quality, reputation or other characteristic of the goods is essentially attributable to their geographical origin.³⁵²

2.85. To the extent that GIs are registered as trademarks in Australia, they are generally registered as certification trademarks³⁵³, which are defined as:

[A] sign used, or intended to be used, to distinguish goods or services: (a) dealt with **or provided in the course of trade; and (b) certified by a person ... or by another** person approved by that person, in relation to quality, accuracy or some other characteristic, including (in the case of goods) origin, material or mode of manufacture; from other goods or services dealt with or provided in the course of trade but not so certified.³⁵⁴

2.86. A person who has filed an application for the registration of a certification trademark must, in accordance with the regulations, file a copy of the rules governing the use of the certification trademark.³⁵⁵ The Registrar may only reject an application for registration of a certification trademark on certain grounds, which are, with some exceptions, the same as those applied to for other trademark registration applications.³⁵⁶ Certification trademarks are subject to the same provisions concerning duration and renewal as trademarks.³⁵⁷ However, a certification trademark is not liable to be removed from the register for non-use, because the owner of the certification trademark is not required to use the trademark.³⁵⁸

2.87. Collective trademarks may also provide protection for signs that are GIs in Australia. Most of the provisions of the TM Act concerning trademarks, including registration and grounds of opposition, apply to collective trademarks.³⁵⁹ A collective trademark is defined under the TM Act as:

-
- (c) because the trade mark is well known, the sign would be likely to be taken as indicating a connection between the unrelated goods or services and the registered owner of the trade mark; and
 - (d) for that reason, the interests of the registered owner are likely to be adversely affected.

Ibid. (emphasis original)

³⁵⁰ Compare TM Act, (Exhibit JE-6), Section 120(3), with *ibid.* Sections 120(1) and 120(2).

³⁵¹ TM Act, (Exhibit JE-6), Section 120(4).

³⁵² TM Act, (Exhibit JE-6), Section 6.

³⁵³ Australia's first written submission, Annexure D, para. 8.

³⁵⁴ TM Act, (Exhibit JE-6), Section 169.

³⁵⁵ TM Act, (Exhibit JE-6), Section 173.

³⁵⁶ These exceptions are the following: (a) the application cannot be rejected on the ground that the trademark is not capable of distinguishing the designated goods or services from the goods or services of other persons (rather, the relevant ground is that the trademark "is not capable of distinguishing goods or services certified by the applicant ... from goods or services not so certified"); (b) an applicant for registration of a certification trademark need not itself intend to use the trademark; and (c) a certificate from the Australian Competition and Consumer Commission (ACCC), as per Section 175(2), is required. TM Act, (Exhibit JE-6), Sections 170, 176(1)(c), and 177.

³⁵⁷ TM Act, (Exhibit JE-6), Section 170. See also Part 7, Division 2.

³⁵⁸ TM Act, (Exhibit JE-6), Section 170. See also fn 343 above.

³⁵⁹ TM Act, (Exhibit JE-6), Section 163. There are some exceptions and variations, for example, the use of a registered collective trademark by a member of the association that is the registered owner of the collective trademark is taken to be a use of the collective trademark by the registered owner. See *ibid.* Section 163(2)(b).

[A] sign used, or intended to be used, in relation to goods or services dealt with or provided in the course of trade by members of an association to distinguish those goods or services from goods or services so dealt with or provided by persons who are not members of the association.³⁶⁰

2.88. Finally, in the same way as with other registered trademarks, an owner of a registered certification trademark or registered collective trademark is able to pursue infringement action against unauthorized use of a sign by third parties.³⁶¹

2.89. Australia also maintains protection with respect to trademarks and GIs under other areas of Australian law, including through consumer protection measures addressing misleading representations in Australia.³⁶²

2.90. The *Competition and Consumer Act 2010* (Cth) (CCA) establishes a general ban on misleading or deceptive conduct in trade or commerce. The Australian Consumer Law (ACL) constitutes Schedule 2 of the CCA. Section 18 of the ACL provides that "[a] person must not, in trade or commerce, engage in conduct that is misleading or deceptive or is likely to mislead or deceive".³⁶³ Similarly, Section 29(1) prohibits the making of a range of false or misleading representations in connection with the supply, possible supply or promotion of goods or services, including statements concerning the place of origin of goods.³⁶⁴ Sections 33 and 34 address goods and services, respectively, and provide that a person must not, in trade or commerce, engage in conduct "that is liable to mislead the public as to the nature, ... **the characteristics ... of any goods**".³⁶⁵

2.91. A special division of the Australian Competition and Consumer Commission (ACCC) undertakes investigations of possible breaches of the ACL. The ACCC has a number of enforcement powers, including the power to initiate proceedings in the Federal Court of Australia.³⁶⁶ Practices in contravention of the ACL may give rise to both criminal and civil liabilities, including damages, injunction and rescission of contract.³⁶⁷

2.92. Under the *Commerce Trade Descriptions Act 1905* (Cth), Australia also prohibits the importation of any good bearing a false trade description.³⁶⁸ A false trade description is defined as "a trade description which, by reason of anything contained therein or omitted therefrom, is false or likely to mislead in a material respect as regards the goods to which it is applied, and includes every alteration of a trade description, whether by way of addition, effacement, or otherwise,

³⁶⁰ TM Act, (Exhibit JE-6), Section 162.

³⁶¹ TM Act, (Exhibit JE-6), Sections 163 and 170. However, with respect to certification trademarks, the registered owner must exercise his or her exclusive rights "only in accordance with the rules governing the use of the certification trade mark". See Section 171. With respect to collective trademarks, a member of an association in whose name a collective trademark is registered does not have the right to prevent another member of the association from using the collective trademark in accordance with the rules of the association. See *ibid.* Section 165.

³⁶² We note, but do not address, certain protections included in the *Australian Grape and Wine Authority Act 2013* (Cth), (Exhibit AUS-490), and the *Australia New Zealand Food Standards Code, Standard 1.2.11 Country of Origin Labelling (Australia Only)* (Cth), (Exhibit AUS-568). These measures address, respectively, wine and certain food items, which are not at issue in these proceedings.

³⁶³ *Competition and Consumer Act 2010* (Cth), Schedule 2 (Australian Consumer Law), (ACL), (Exhibit DOM-110), Section 18. The Dominican Republic's exhibit includes amendments through Act No. 83 of 2014. We note that Australia and Honduras also submitted as exhibits excerpts from the *Competition and Consumer Act 2010* (Cth), which included amendments up to Act No. 148 of 2010. See Exhibits AUS-127 and HND-66.

³⁶⁴ ACL, (Exhibit DOM-110), Section 29(1).

³⁶⁵ ACL, (Exhibit DOM-110), Sections 33-34.

³⁶⁶ D. Shavin, "Prohibitions against misleading and deceptive conduct pursuant to the Australian Consumer Law, and the Australian Competition & Consumer Commission's history of effective enforcement thereof", 26 September 2014, (Shavin Report), (Exhibit DOM/HND-1), paras. 73-74.

³⁶⁷ Australia's first written submission, Annexure D, para. 20. The ACCC has used its power in the context of tobacco products, specifically with respect to cigarettes marketed as "light", "mild", "medium", "ultra-light", and "micro". The ACCC concluded that the use of these representations were misleading and likely to breach Section 52 of the *Trade Practices Act 1974* (Cth) (now Section 18 of the ACL, (Exhibit DOM-110)). See R. Sims, "Report Concerning the Australia Consumer Law and the Packaging of Tobacco Products", 24 February 2015, (Sims Report), (Exhibit AUS-22) (SCI), para. 4.9.

³⁶⁸ *Commerce (Trade Descriptions) Act 1905* (Cth), (CTD Act), (Exhibit AUS-248), Section 9.

which makes the description false or likely to mislead in a material respect".³⁶⁹ A "trade description" means any description, statement, indication, or suggestion, direct or indirect, as to, *inter alia*, the country or place in or at which the goods were made or produced.³⁷⁰

2.93. Australia also maintains "common law" protection for the reputation of a business through the tort of "passing off", which can provide additional protection against misrepresentations. Australia has described the elements of the tort of passing off as "(a) a misrepresentation (b) by a trader in the course of trade to prospective customers of the trader (c) calculated to injure the business reputation of another trader, and (d) resulting in damage or the probability of damage to that other trader's business reputation".³⁷¹ Neither trademarks nor GIs are protected *per se* under this tort, though they may be probative with respect to the existence of, and damage to, a trader's reputation in the relevant market.³⁷²

2.4 The FCTC

2.94. The FCTC, negotiated under the auspices of the WHO, has been referred to by the parties in the course of the proceedings. As described above, the TPP Act states that one of its objectives is "to give effect to certain obligations that Australia has as a party to the Convention on Tobacco Control".³⁷³

2.95. This section provides a general description of the FCTC and relevant guidelines adopted in the framework of the FCTC, taking into account information provided to the Panel by the WHO and FCTC Secretariat.³⁷⁴

2.4.1 Background

2.96. In 1995, the 49th World Health Assembly (WHA) of the WHO launched the negotiation of an international tobacco control instrument.³⁷⁵ These negotiations concluded with the adoption of the FCTC by the WHA in May 2003.³⁷⁶ The Convention entered into force in February 2005.³⁷⁷

2.97. The FCTC has 180 parties (FCTC Parties).³⁷⁸ 149 of the FCTC Parties are also Members of the World Trade Organization (WTO). Among the five parties to these disputes, Australia and Honduras have signed and ratified the FCTC. Cuba has signed, but not ratified, the FCTC, and the Dominican Republic and Indonesia are not signatories.³⁷⁹ Thus Cuba, the Dominican Republic and Indonesia are not FCTC Parties.

2.4.2 Structure and governance

2.98. The FCTC is served by a Secretariat, which is hosted in the WHO, with an independent workplan and budget adopted by the COP.³⁸⁰ The main functions of the FCTC Secretariat are governed by the FCTC itself as well as COP decisions.³⁸¹

³⁶⁹ CTD Act, (Exhibit AUS-248), Section 3.

³⁷⁰ CTD Act, (Exhibit AUS-248), Section 3.

³⁷⁹ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 12.

³⁸⁰ FCTC, (Exhibits AUS-44, JE-19), Article 24; and WHO/FCTC Request for Permission to Submit Information, (Exhibit AUS-42 (revised)), paras. 8 and 12.

³⁸¹ The FCTC Secretariat's functions are (a) to make arrangements for sessions of the COP and any subsidiary bodies and to provide them with services as required; (b) to transmit reports received by it pursuant

2.99. The FCTC COP is the governing body of, and comprises all parties to, the FCTC.³⁸² The FCTC COP, *inter alia*, "keep[s] under regular review the implementation of the Convention and take[s] the decisions necessary to promote its effective implementation".³⁸³ It may also adopt protocols³⁸⁴, annexes³⁸⁵ and amendments³⁸⁶ to the FCTC as well as other documents and instruments, such as guidelines with respect to particular topics.³⁸⁷ International intergovernmental organizations and nongovernmental organizations "whose aims and activities are in conformity with the spirit, purpose and principles" of the FCTC may be granted "observer status" by the COP. The Rules of Procedure of the COP limit participation by tobacco companies other than through the relevant bodies of States.³⁸⁸

2.4.3 Selected provisions of the FCTC

2.100. The FCTC's objective, as set out in Article 3, is to:

[P]rotect present and future generations from the devastating health, social, environmental and economic consequences of tobacco consumption and exposure to tobacco smoke by providing a framework for tobacco control measures to be implemented by the Parties at the national, regional and international levels in order to reduce continually and substantially the prevalence of tobacco use and exposure to tobacco smoke.³⁸⁹

2.101. Article 5, entitled "General Obligations", provides the following in its first paragraph:

Each Party shall develop, implement, periodically update and review comprehensive multisectoral national tobacco control strategies, plans and programmes in accordance with this Convention and the Protocols to which it is a party.³⁹⁰

2.102. The Convention defines "tobacco control" as "a range of supply, demand and harm reduction strategies that aim to improve the health of a population by eliminating or reducing their consumption of tobacco products and exposure to tobacco smoke".³⁹¹

2.103. Part III of the Convention, entitled "Measures relating to the reduction of demand for tobacco", contains provisions entitled "Packaging and labelling of tobacco products" (Article 11) and "Tobacco advertising, promotion and sponsorship" (Article 13).

2.104. Article 11 addresses "packaging and labelling of tobacco products" and provides as follows:

to the Convention; (c) to provide support to the Parties, particularly developing country Parties and Parties with economies in transition, on request, in the compilation and communication of information required in accordance with the provisions of the Convention; (d) to prepare reports on its activities under the Convention under the guidance of the COP and submit them to the COP; (e) to ensure, under the guidance of the COP, the necessary coordination with the competent international and regional intergovernmental organizations and other bodies; (f) to enter, under the guidance of the COP, into such administrative or contractual arrangements as may be required for the effective discharge of its functions; and (g) to perform other secretariat functions specified by the Convention and by any of its protocols and such other functions as may be determined by the COP. FCTC, (Exhibits AUS-44, JE-19), Article 24.

³⁹¹ FCTC, (Exhibits AUS-44, JE-19), Article 1(d).

Article 11***Packaging and labelling of tobacco products***

1. Each Party shall, within a period of three years after entry into force of this Convention for that Party, adopt and implement, in accordance with its national law, effective measures to ensure that:

(a) tobacco product packaging and labelling do not promote a tobacco product by any means that are false, misleading, deceptive or likely to create an erroneous impression about its characteristics, health effects, hazards or emissions, including any term, descriptor, trademark, figurative or any other sign that directly or indirectly creates the false impression that a particular tobacco product is less harmful than other tobacco products. These may include terms such as "low tar", "light", "ultra-light", or "mild"; and

(b) each unit packet and package of tobacco products and any outside packaging and labelling of such products also carry health warnings describing the harmful effects of tobacco use, and may include other appropriate messages. These warnings and messages:

(i) shall be approved by the competent national authority,

(ii) shall be rotating,

(iii) shall be large, clear, visible and legible,

(iv) should be 50% or more of the principal display areas but shall be no less than 30% of the principal display areas,

(v) may be in the form of or include pictures or pictograms.

2. Each unit packet and package of tobacco products and any outside packaging and labelling of such products shall, in addition to the warnings specified in paragraph 1(b) of this Article, contain information on relevant constituents and emissions of tobacco products as defined by national authorities.

3. Each Party shall require that the warnings and other textual information specified in paragraphs 1(b) and paragraph 2 of this Article will appear on each unit packet and package of tobacco products and any outside packaging and labelling of such products in its principal language or languages.

4. For the purposes of this Article, the term "outside packaging and labelling" in relation to tobacco products applies to any packaging and labelling used in the retail sale of the product.³⁹²

2.105. Article 13 addresses "tobacco advertising, promotion and sponsorship" and reads as follows:

Article 13***Tobacco advertising, promotion and sponsorship***

1. Parties recognize that a comprehensive ban on advertising, promotion and sponsorship would reduce the consumption of tobacco products.

2. Each Party shall, in accordance with its constitution or constitutional principles, undertake a comprehensive ban of all tobacco advertising, promotion and

³⁹² FCTC, (Exhibits AUS-44, JE-19), Article 11.

sponsorship. This shall include, subject to the legal environment and technical means available to that Party, a comprehensive ban on cross-border advertising, promotion and sponsorship originating from its territory. In this respect, within the period of five years after entry into force of this Convention for that Party, each Party shall undertake appropriate legislative, executive, administrative and/or other measures and report accordingly in conformity with Article 21.

3. A Party that is not in a position to undertake a comprehensive ban due to its constitution or constitutional principles shall apply restrictions on all tobacco advertising, promotion and sponsorship. This shall include, subject to the legal environment and technical means available to that Party, restrictions or a comprehensive ban on advertising, promotion and sponsorship originating from its territory with cross-border effects. In this respect, each Party shall undertake appropriate legislative, executive, administrative and/or other measures and report accordingly in conformity with Article 21.

4. As a minimum, and in accordance with its constitution or constitutional principles, each Party shall:

(a) prohibit all forms of tobacco advertising, promotion and sponsorship that promote a tobacco product by any means that are false, misleading or deceptive or likely to create an erroneous impression about its characteristics, health effects, hazards or emissions;

(b) require that health or other appropriate warnings or messages accompany all tobacco advertising and, as appropriate, promotion and sponsorship;

(c) restrict the use of direct or indirect incentives that encourage the purchase of tobacco products by the public;

(d) require, if it does not have a comprehensive ban, the disclosure to relevant governmental authorities of expenditures by the tobacco industry on advertising, promotion and sponsorship not yet prohibited. Those authorities may decide to make those figures available, subject to national law, to the public and to the Conference of the Parties, pursuant to Article 21;

(e) undertake a comprehensive ban or, in the case of a Party that is not in a position to undertake a comprehensive ban due to its constitution or constitutional principles, restrict tobacco advertising, promotion and sponsorship on radio, television, print media and, as appropriate, other media, such as the internet, within a period of five years; and

(f) prohibit, or in the case of a Party that is not in a position to prohibit due to its constitution or constitutional principles restrict, tobacco sponsorship of international events, activities and/or participants therein.

5. Parties are encouraged to implement measures beyond the obligations set out in paragraph 4.

6. Parties shall cooperate in the development of technologies and other means necessary to facilitate the elimination of cross-border advertising.

7. Parties which have a ban on certain forms of tobacco advertising, promotion and sponsorship have the sovereign right to ban those forms of cross-border tobacco advertising, promotion and sponsorship entering their territory and to impose equal penalties as those applicable to domestic advertising, promotion and sponsorship originating from their territory in accordance with their national law. This paragraph does not endorse or approve of any particular penalty.

8. Parties shall consider the elaboration of a protocol setting out appropriate measures that require international collaboration for a comprehensive ban on cross-border advertising, promotion and sponsorship.³⁹³

2.4.4 FCTC Guidelines

2.106. The FCTC provides that the COP shall propose guidelines for the implementation of the provisions of Articles 8 to 13 of the FCTC. FCTC Guidelines are "intended to assist the Parties in meeting their obligations and in increasing the effectiveness of measures adopted".³⁹⁴

2.107. The FCTC COP adopted FCTC Guidelines for the Implementation of Article 11 (Article 11 FCTC Guidelines) and FCTC Guidelines for the Implementation of Article 13 (Article 13 FCTC Guidelines) in November 2008.³⁹⁵ Although "plain packaging" is not referred to in Articles 11 and 13 of the FCTC, it is referred to in both of these Guidelines.³⁹⁶

2.108. The Article 11 FCTC Guidelines, entitled "*Packaging and labelling of tobacco products*", provide:

46. Parties should consider adopting measures to restrict or prohibit the use of logos, colours, brand images or promotional information on packaging other than brand names and product names displayed in a standard colour and font style (plain packaging). This may increase the noticeability and effectiveness of health warnings and messages, prevent the package from detracting attention from them, and address industry package design techniques that may suggest that some products are less harmful than others.³⁹⁷

2.109. The Article 13 FCTC Guidelines, entitled "*Tobacco advertising, promotion and sponsorship*", provide:

15. Packaging is an important element of advertising and promotion. Tobacco pack or product features are used in various ways to attract consumers, to promote products and to cultivate and promote brand identity, for example by using logos, colours, fonts, pictures, shapes and materials on or in packs or on individual cigarettes or other tobacco products.

16. The effect of advertising or promotion on packaging can be eliminated by requiring plain packaging: black and white or two other contrasting colours, as prescribed by national authorities; nothing other than a brand name, a product name and/or manufacturer's name, contact details and the quantity of product in the packaging, without any logos or other features apart from health warnings, tax stamps and other government-mandated information or markings; prescribed font style and size; and standardized shape, size and materials. There should be no advertising or promotion inside or attached to the package or on individual cigarettes or other tobacco products.

17. If plain packaging is not yet mandated, the restriction should cover as many as possible of the design features that make tobacco products more attractive to

³⁹³ FCTC, (Exhibits AUS-44, JE-19), Article 13. Also relevant to the above FCTC provisions are the definitions of "tobacco advertising and promotion" ("any form of commercial communication, recommendation or action with the aim, effect or likely effect of promoting a tobacco product or tobacco use either directly or indirectly"), "tobacco products" ("products entirely or partly made of the leaf tobacco as raw material which are manufactured to be used for smoking, sucking, chewing or snuffing"), and "tobacco sponsorship" ("any form of contribution to any event, activity or individual with the aim, effect or likely effect of promoting a tobacco product or tobacco use either directly or indirectly"). See *ibid.* Articles 1(c), 1(f) and 1(g), respectively.

³⁹⁴ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 22.

³⁹⁵ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 19; WHO/FCTC Additional Information to Panel, pp. 7-8, at fn 63 above; Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20); and Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21).

³⁹⁶ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46; and Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, paras. 16-17 and "Recommendation" following para. 17.

³⁹⁷ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46.

consumers such as animal or other figures, "fun" phrases, coloured cigarette papers, attractive smells, novelty or seasonal packs.

Recommendation

Packaging and product design are important elements of advertising and promotion. Parties should consider adopting plain packaging requirements to eliminate the effects of advertising or promotion on packaging. Packaging, individual cigarettes or other tobacco products should carry no advertising or promotion, including design features that make products attractive.³⁹⁸

2.4.5 FCTC provisions concerning the relationship between the FCTC and other international agreements and bodies

2.110. Article 2.1 of the FCTC states that this Convention does not prevent Parties "from imposing stricter requirements that are consistent with [the provisions of the FCTC and its protocols] and are in accordance with international law".³⁹⁹ Article 2.2 further provides that the FCTC does not "affect the right of Parties to enter into bilateral or multilateral agreements, including regional or subregional agreements, on issues relevant or additional to the Convention and its protocols, provided that such agreements are compatible with their obligations under the FCTC and its protocols".⁴⁰⁰

2.111. Additionally, Article 15.2 of the FCTC (on illicit tobacco trade) requires that Parties "adopt ... measures to ensure that all [tobacco product packaging is] marked to assist Parties in determining the origin of tobacco products, and in accordance with national law and relevant bilateral or multilateral agreements, assist Parties in determining the point of diversion and monitor, document and control the movement of tobacco products and their legal status".⁴⁰¹

2.112. Finally, the FCTC contains various provisions on the cooperation between the FCTC Parties and other international organizations and bodies. For instance, Article 5.5 states that the FCTC Parties "shall cooperate, as appropriate, with competent international and regional intergovernmental organizations and other bodies to achieve the objectives of the Convention and the protocols to which they are Parties".⁴⁰² Article 7 provides that, in implementing, *inter alia*, Articles 11 and 13, FCTC Parties "shall cooperate, as appropriate, with each other directly or through competent international bodies".⁴⁰³

3 PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS

3.1 Honduras (DS435)

3.1. Honduras requests that the Panel find that:

- a. Australia's plain packaging trademark restrictions in the TPP measures are inconsistent with Article 15.4 of the TRIPS Agreement;
- b. Australia's plain packaging trademark restrictions in the TPP measures are inconsistent with Article 16.1 of the TRIPS Agreement;
- c. Australia's plain packaging trademark restrictions in the TPP measures are not justified under Article 17 of the TRIPS Agreement;

³⁹⁸ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, paras. 15-17 and "Recommendation" following para. 17.

³⁹⁹ FCTC, (Exhibits AUS-44, JE-19), Article 2.1. See also FCTC, (Exhibits AUS-44, JE-19), Article 13(5) ("Parties are encouraged to implement measures beyond the obligations set out in paragraph 4.").

⁴⁰⁰ FCTC, (Exhibits AUS-44, JE-19), Article 2.2.

⁴⁰¹ FCTC, (Exhibits AUS-44, JE-19), Article 15.2.

⁴⁰² FCTC, (Exhibits AUS-44, JE-19), Article 5.5.

⁴⁰³ FCTC, (Exhibits AUS-44, JE-19), Article 7.

- d. Australia's plain packaging trademark restrictions in the TPP measures are inconsistent with Article 2.1 of the TRIPS Agreement, which incorporates provisions of the Paris Convention, in particular, Article 6*quinquies* of the Paris Convention;
- e. Australia's plain packaging trademark restrictions in the TPP measures are inconsistent with Article 20 of the TRIPS Agreement;
- f. Australia has acted inconsistently with Article 10*bis* of the Paris Convention, as incorporated by Article 2.1 of the TRIPS Agreement;
- g. Australia infringes Article 24.3 of the TRIPS Agreement;
- h. Australia contravenes Article 22.2(b) of the TRIPS Agreement; and
- i. Australia's plain packaging measures are inconsistent with Article 2.2 of the TBT Agreement.

3.2. Honduras further requests the Panel to recommend, in accordance with Article 19.1 of the DSU, that the DSB request Australia to bring the measures at issue into conformity with the TRIPS Agreement and the TBT Agreement.⁴⁰⁴

3.2 Dominican Republic (DS441)

3.3. The Dominican Republic requests that the Panel find that by virtue of its adoption and imposition of the TPP measures, Australia violates:

- a. Article 15.4 of the TRIPS Agreement;
- b. Article 16.1 of the TRIPS Agreement;
- c. Article 16.3 of the TRIPS Agreement;
- d. Article 20 of the TRIPS Agreement;
- e. Article 22.2(b) of the TRIPS Agreement;
- f. Article 24.3 of the TRIPS Agreement;
- g. Article 10*bis* of the Paris Convention (as incorporated into the TRIPS Agreement through Article 2.1); and
- h. Article 2.2 of the TBT Agreement.

3.4. The Dominican Republic requests that the Panel recommend to the DSB that Australia be required to bring its TPP measures into conformity with the above-mentioned provisions of the TRIPS Agreement and the TBT Agreement.⁴⁰⁵

3.3 Cuba (DS458)

3.5. Cuba requests the Panel to find that the TPP measures violate:

- a. Article 20 of the TRIPS Agreement;
- b. Article 24.3 of the TRIPS Agreement;
- c. Article 10*bis* of the Paris Convention (read with Article 2.1 of the TRIPS Agreement);

⁴⁰⁴ Honduras's first written submission, paras. 936 and 938-939.

⁴⁰⁵ Dominican Republic's first written submission, paras. 1032-1033.

- d. Article 2.2 of the TBT Agreement;
- e. Article IX: 4 of the GATT 1994;
- f. Article 15.4 of the TRIPS Agreement;
- g. Article 16.1 of the TRIPS Agreement;
- h. Article 16.3 of the TRIPS Agreement;
- i. Article 22.2(b) of the TRIPS Agreement; and
- j. Article *6quinques* of the Paris Convention (read with Article 2 of the TRIPS Agreement).

3.6. Cuba further requests the Panel to recommend, in accordance with Article 19.1 of the DSU, that the DSB request Australia to bring its measures into conformity with the TRIPS Agreement and the GATT 1994.⁴⁰⁶

3.4 Indonesia (DS467)

3.7. Indonesia requests the Panel to find that the TPP measures, collectively and individually, violate Australia's obligations under the following provisions:

- a. Article 2.2 of the TBT Agreement;
- b. Article 2.1 of the TRIPS Agreement, which incorporates the provisions of the Paris Convention, in particular Article 10*bis*;
- c. Article 15.4 of the TRIPS Agreement;
- d. Article 16.1 of the TRIPS Agreement;
- e. Article 16.3 of the TRIPS Agreement;
- f. Article 20 of the TRIPS Agreement;
- g. Article 22.2(b) of the TRIPS Agreement; and
- h. Article 24.3 of the TRIPS Agreement.

3.8. Indonesia also requests that the Panel find that Australia's TPP measures, collectively and individually, are inconsistent with Australia's obligations under Article XXIII:1(a) of the GATT because it has nullified or impaired benefits accruing directly or indirectly to Indonesia under the TBT Agreement.

3.9. Indonesia further requests that the Panel recommend that Australia bring its measures into conformity with its obligations under the TRIPS and TBT Agreements.⁴⁰⁷

3.5 Australia

3.10. Australia requests that the Panel reject the complainants' claims under Articles 2.1 (incorporating Article *6quinquies* A(1) and Article 10*bis* of the Paris Convention), 15.1, 15.4, 16.1, 16.3, 20, 22.2(b), and 24.3 of the TRIPS Agreement, Article 2.2 of the TBT Agreement, and Article IX: 4 of the GATT 1994 in their entirety.⁴⁰⁸

⁴⁰⁶ Cuba's first written submission, paras. 429-430.

⁴⁰⁷ Indonesia's first written submission, paras. 463-465.

⁴⁰⁸ Australia's first written submission, paras. 762-763.

4 ARGUMENTS OF THE PARTIES

4.1. The arguments of the parties are reflected in their executive summaries, provided to the Panel in accordance with paragraph 27 of the Working Procedures adopted by the Panel (see Annex B).

5 ARGUMENTS OF THE THIRD PARTIES

5.1. The arguments of Argentina, Brazil, Canada, China, the European Union, Japan, the Republic of Korea, Malawi, New Zealand, Nicaragua, Norway, Oman, Singapore, South Africa, Turkey, Uruguay, Zambia, and Zimbabwe are reflected in their executive summaries, provided in accordance with paragraph 28 of the Working Procedures adopted by the Panel (see Annex C).

5.2. Chile, Ecuador, Egypt, India, Malaysia, Mexico, Panama, the Russian Federation, the Kingdom of Saudi Arabia, Trinidad and Tobago and the United States did not submit written or oral arguments to the Panel. Guatemala, Nigeria, Peru, the Philippines, Chinese Taipei, and Thailand provided arguments in these proceedings. These third parties did not provide an executive summary of their arguments as envisaged in paragraph 28 of the Panel's Procedures and item (n) of the Panel's timetable. However as their written submissions and/or oral statements are within the page limits specified in the Panel's Working Procedures for the third parties' executive summaries, they have been included as a substitute for an executive summary (see Annex C).

5.3. Ukraine⁴⁰⁹ submitted a third-party written submission in these proceedings. However, it did not provide an executive summary of its arguments as envisaged in paragraph 28 of the Panel's Working Procedures and item (n) of the Panel's timetable. Ukraine's written submission exceeded the page limits specified in the Panel's Working Procedures for the third parties' executive summaries. Therefore, it cannot be annexed to these Panel Reports. Nonetheless, Ukraine's written submission is reflected in these Panel Reports pursuant to Article 10 of the DSU.

6 INTERIM REVIEW

6.1 Introduction

6.1. On 2 May 2017, the Panel issued its Interim Reports to the parties. On 6 June 2017, Honduras, the Dominican Republic, Indonesia, and Australia each submitted written requests for the Panel to review aspects of the Interim Reports. On 4 July 2017, Honduras, the Dominican Republic, and Indonesia submitted comments on Australia's requests for review, and Australia submitted comments on the complainants' requests for review. Cuba did not submit any requests for review and did not comment on any other party's requests for review. None of the parties requested an interim review meeting.

6.2. In accordance with Article 15.3 of the DSU, this section of the Reports describes the parties' requests for review at the interim review stage and the Panel's response to them. In addition, the Panel made some typographical and other corrections, including those identified by the parties. In this context, the Panel in particular modified footnote 1 to Table A to clarify the manner in which Table A describes the outcomes of the papers that it refers to and adjusted some of the language in section 7.2.5.3.6 to align the text in this section to that of the related Appendices.

6.3. Australia made several requests to amend or add additional footnotes. These requests have been considered in light of comments made by Honduras, the Dominican Republic, and Indonesia, and have been implemented as deemed appropriate, resulting in modifications to, or additional references at, paragraphs 7.231, 7.1446, and 7.2566, and footnotes 269, 515, 653, 710, 866 to 868, 871, 872, 891, 914, 916, 1339, 1352, 1358, 1359, 1450, 1518, 1661, 1669, 1671, 1761, 1763, 1780, 1795, 1806, 2111, 2256, 2402, 2443, 2570, 2571, 2609, 2617, 2695, 2855, 2857, 2885, 3198, 3201, 3486, 3596, 3613, 3620, 3623, 3625, 3656, 3728, 3804, 3807, 4042, 4043, 4045, 4824, 5004, 5088, and 5200.

⁴⁰⁹ See section 1.6.6 above.

6.4. The numbering of some of the paragraphs and footnotes in the Final Reports is different from the numbering in the Interim Reports. Unless otherwise indicated, references to sections, paragraph numbers, and footnotes in this section relate to those of the Final Reports.

6.2 Requests for review of section 7.1 (Order of Analysis)

6.5. Honduras requested the Panel to modify the second sentence of paragraph 7.11 to more closely reflect the language used in Article 15.4 of the TRIPS Agreement and Article 6^{quinqüies} of the Paris Convention (1967). In response, we adjusted the wording of paragraph 7.11 to describe the relevant provisions with reference to their titles in the TRIPS Agreement. Regarding the additional language suggested by Honduras, we note that the phrase "protectable subject matter", which is contained in the heading of Article 15, is already used in the sentence at issue, while "protection of marks registered in one country of the Union in the other countries of the Union" is not used in the title of either of the provisions in question.⁴¹⁰ We therefore decline to add these phrases as suggested.

6.3 Requests for review of section 7.2.5.1 (Whether the TPP measures pursue a "legitimate objective")

6.6. Honduras requests the Panel to add a specific reference to its arguments at paragraph 7.52, which the Panel has accepted as reflected at paragraph 7.52 and footnote 493.

6.7. Honduras also requests the Panel to reflect more completely its arguments on the objectives of the TPP measures in paragraph 7.200, which the Panel has accepted partially only, as the argument at issue is already reflected elsewhere, including at paragraph 7.208.

6.8. Honduras requests the Panel to add a further reference to its rebuttal arguments relating to the "mechanisms" and "objectives" of the measures in paragraph 7.208. The Panel does not find it necessary to make this addition, given the detailed analysis of this issue in the paragraphs that follow.

6.9. Honduras requests the Panel to modify the language in paragraph 7.213 describing "undisputed" aspects of the objectives of the TPP measures, in relation to the objective of reduced "exposure" as distinct from reducing "consumption". Australia did not object to this request but requested that its arguments on the objective of reducing exposure to tobacco products be also considered, if the Panel agrees to Honduras's proposed edits. We have modified the first sentence in paragraph 7.213 to avoid creating any misunderstanding in respect of its implications with respect specifically to "consumption" or "exposure" to tobacco products.

6.10. Australia requests the Panel to modify parts of paragraphs 7.212, 7.214, 7.215 and 7.227 to reflect that "Australia and the parties were ... *in agreement* that reducing the appeal of tobacco products to consumers; increasing the effectiveness of health warnings; and reducing the ability of the retail packaging of tobacco products to mislead consumers" were the specific mechanisms through which the TPP measure contributes to achieving its public health objectives. Honduras, the Dominican Republic and Indonesia opposed this request, disagreeing with Australia that there has been any agreement between the parties, during the course of the proceedings, on whether the three "mechanisms" of the TPP Act were "objectives" of the measures. The Panel considers that the existing text correctly reflects the exchanges of the parties in the course of the proceedings on this issue. We accordingly decline to make the requested changes at paragraphs 7.212, 7.214, and 7.215 but have edited relevant parts of paragraph 7.227 for further clarity.

6.4 Requests for review of section 7.2.5.2 (Whether the TPP measures are "in accordance with relevant international standards" under Article 2.5 (second sentence))

6.11. Honduras requests the Panel to modify the description of its arguments on the interpretation of the term "relevant international standards", to avoid incorrectly suggesting that

⁴¹⁰ We note that, in some published versions of the Paris Convention (1967), its articles have been given titles by the WIPO Secretariat to facilitate their identification. In such published versions, these titles are indicated in square brackets. There are no titles in the authentic French text of the Paris Convention (1967).

Honduras modified its arguments on this issue in the course of the proceedings. While the Panel does not consider its initial description of Honduras's arguments to have been incorrect, it has simplified the description of the relevant arguments at paragraph 7.265.

6.12. Honduras requests that the description of key arguments of the parties on the meaning of the terms "in accordance with" in the second sentence of Article 2.5 be expanded. In response, the Panel has expanded this discussion at paragraph 7.274 and footnotes 958 and 959.

6.13. Honduras requests that the Panel expand its summary of Honduras's arguments on the elements relevant to a determination on the existence of "international standards" under the second sentence of Article 2.5. The Panel has expanded this description in paragraph 7.277 and footnote 963, to a level of detail comparable with that provided in respect of the related arguments of other parties.

6.14. Honduras requests the Panel to clarify the description of the nature of commitments under the FCTC and its Guidelines at paragraph 7.305, to avoid a suggestion that certain actions "must" be taken under the FCTC Guidelines. Australia commented that it did not understand the Panel's use of terms in this paragraph to suggest that the FCTC Guidelines are binding but suggests that the language be clarified to avoid any confusion. In response to these comments, the Panel has adjusted the language of this paragraph to clarify the distinction between obligations under the FCTC itself and the role of the related FCTC Guidelines.

6.15. Honduras requests the Panel to add a reference to its arguments that it "does not consider that the FCTC or its Guidelines have any legal or factual relevance to the questions raised under Article 2.2 of the TBT Agreement or the relevant provision of the TRIPS Agreement". In response, the Panel has expanded its description and discussion of all parties' arguments on the relevance of the FCTC and relevant FCTC Guidelines if they do not constitute an "international standard" for tobacco plain packaging for the purposes of Article 2.5 of the TBT Agreement. This is reflected at paragraphs 7.404 to 7.417.

6.5 Requests for review of section 7.2.5.3 (The degree of contribution of the TPP measures to their objective)

6.16. Honduras requests the Panel to amend the description of its arguments on the lack of contribution of the measures to their objectives. In particular, Honduras states that its argument is not that smoking prevalence increased, but rather that the measures did not contribute to the reduction of smoking. Honduras considers that the Panel's attribution to Honduras of arguments about an increase in prevalence is based on a misrepresentation of what Honduras has argued, as the reference to an increase in smoking prevalence, Honduras explains, is "nothing but a reference to the possible effect of another phenomenon, namely downtrading and its effect on prices". Honduras therefore requests the Panel to delete "the suggestion that Honduras' argument is essentially that smoking increased as a result of plain packaging, even if for some groups of the population there seems to have been such a correlation". Honduras states that it has pointed out that the downward substitution that plain packaging is causing may lead to lower prices, which in turn may mean higher consumption and that this is the only impact that can be expected of plain packaging. It argues that this, however, is different from a position that plain packaging caused an increase in smoking prevalence when it is clear that the overall smoking trend is negative and has been for many years.

6.17. Australia considers the Panel's summaries to be accurate reflections of Honduras's submissions. It observes that in its first written submission Honduras repeatedly argues that the TPP measures either have, would or are "likely to" result in an increase in smoking prevalence.⁴¹¹ While some of Honduras's arguments relate to downtrading, Honduras also provides distinct arguments relating to social theory, the analysis of post-implementation data, and illicit tobacco trade. To the extent that the Panel agrees to Honduras's request in regard to these paragraphs, Australia requests that the Panel fully reflect Honduras's arguments on these points. In response to these comments, the Panel has amended paragraph 7.430 and expanded its description of the

⁴¹¹ See Honduras's first written submission, paras. 346, 347, 372, 392-400, 888, and p. 89 subheading 5(c), titled "research in social sciences theories indicate that the trademark requirements will not only fail to contribute to Australia's objective but *will also lead to an increase in smoking prevalence*". (emphasis added)

relevant arguments at paragraphs 7.426 to 7.429 to provide additional context for the statements of Honduras in respect of the effects of the TPP measures, including in relation to their possible impact on smoking prevalence.

6.18. Honduras also requests the Panel to amend its description of its arguments on the drivers of cessation and relapse and the impact of plain packaging. Specifically, Honduras explains that its "forbidden fruit" argument was made "as a 'final' point" and "is not the essence" of the argument it developed. Honduras requests the Panel to replace its initial text with a summary of its position taken from its second written submission, highlighting the complexity of drivers of smoking behaviours and the absence of credible evidence that logos, branding and other aspects of tobacco packaging contribute, or may in principle contribute, to smoking behaviours such as cessation or relapse. In response to this request, the Panel has expanded its description of Honduras's arguments at paragraph 7.428, to better distinguish the different aspects referred to by Honduras, including arguments relating to the drivers of cessation and relapse and to a possible "forbidden fruit" effect.

6.19. Honduras requests the Panel to remove a reference to its arguments on the expected impact of the TPP measures on smoking prevalence at paragraph 7.430. Australia considers the existing language to be an accurate reflection of Honduras's submissions. In response to this comment, the Panel has deleted the sentence at issue, as the relevant argument is adequately reflected in paragraph 7.427, as modified in response to Honduras's separate comments described above in relation to the description of its arguments on the effects of the TPP measures on tobacco consumption.

6.20. Honduras requests the Panel to delete a reference, in its summary of arguments at paragraph 7.431, to two studies relating to the assessment of actual behaviours in the presence of plain packaging, or to complement the reference to avoid possible misleading implications in respect of the outcomes of these studies. In response, the Panel has removed the reference to these studies, which was not necessary at this stage of the description of arguments, as specific studies are discussed in later parts of the Panel's analysis.

6.21. Honduras requests the Panel to add a reference to some of its arguments in rebuttal, concerning Australia's reliance on behavioural theories. The Panel added a sentence to paragraph 7.433 and footnote 1299 to address this comment.

6.22. Australia requests the Panel to clarify Australia's arguments and its reference to prior jurisprudence concerning the role of qualitative evidence in demonstrating contribution. Honduras, the Dominican Republic, and Indonesia request that, if the Panel agrees to the requested changes, Australia's arguments be reflected in full, including by citing more completely the relevant findings in *EC – Seal Products* relied on by Australia. In response to this comment, the Panel has expanded the description of Australia's arguments in paragraph 7.455, including the additional detail identified by Honduras and the Dominican Republic.

6.23. Australia requests the Panel to amend the final sentence of paragraph 7.486, to add a reference to its argument that a determination in qualitative terms is the methodology best suited to a correct assessment of contribution in the circumstances of this case. The Dominican Republic and Indonesia object to the requested modification, as the argument at issue is already reflected in other paragraphs. In response to these comments, the Panel has only partially accepted the insertion requested by Australia, in light of the fact that, as pointed out by the Dominican Republic and Indonesia, this argument is already reflected in other surrounding paragraphs.

6.24. Australia also requests the Panel to clarify that it explicitly acknowledged that quantitative analysis of the post-implementation effects of the TPP measures is relevant to the Panel's contribution analysis, by including additional references to its arguments. The Dominican Republic objects to the additional reference suggested by Australia, as the argument is already adequately summarized elsewhere. Honduras also does not consider necessary the changes requested by Australia, as the existing text correctly reflects the Panel's agreement with the position of the complainants that evidence of actual smoking behaviour is to be an integral part of the contribution assessment. The Dominican Republic does not object to some of the modifications requested by Australia, provided that Australia's position is clarified. The Dominican Republic notes that Australia fundamentally changed its position on the relevance of post-implementation

evidence relating to actual smoking behaviour, so that if the Panel accepts Australia's amendments, it should add text at the end of the paragraph to reflect the evolution of Australia's position over the course of the proceedings in this respect. In response to these comments, the Panel has elaborated the description of Australia's arguments at paragraph 7.494 and footnote 1448 and rephrased the formulation of its conclusion at paragraph 7.497.

6.25. Australia requests a modification of the second sentence of paragraph 7.510 to reflect that it has not relied upon the White et al. 2015b paper referred to in this sentence. Honduras considers however that this text refers back to the descriptive section of these Reports, which the parties have already had an opportunity to comment on. The Dominican Republic and Indonesia observe that Australia's experts rely on the paper at issue, and thus request that if the Panel modifies this text, it modify it to indicate this. In response, the Panel has modified the relevant text to clarify that the material at issue relates to studies relied on by Australia or its experts.

6.26. Australia requests the Panel to add, at paragraph 7.535, a reference to Professor Fong's point that an analysis of post-implementation evidence by the complainants' own experts confirms that the measures have had the effects predicted by the pre-implementation studies. The Dominican Republic and Indonesia observe that this section of these Reports does not address post-implementation evidence and request that, if the Panel adds the arguments requested by Australia, the response to these arguments by the Dominican Republic's and Honduras's experts also be reflected. The Panel declines to make the requested edits since, as noted by Honduras and Indonesia, this section of these Reports does not address post-implementation evidence, which is addressed separately in section 7.2.5.3.6.

6.27. Australia requests the Panel to amend the first sentence of paragraph 7.536 to avoid incorrectly suggesting that Australia's arguments regarding the analysis of the TPP literature were confined to the challenges inherent in evaluating national-level policies. The Dominican Republic objects to Australia's request, noting that the existing language summarizes almost verbatim Professor Fong's argument, while the requested addition is not part of this argument and would alter its meaning. In response, the Panel has modified the text at issue to avoid the potential implication identified by Australia but declines to add the additional argument requested by Australia, which is addressed separately later in the same section.

6.28. Honduras requests the Panel to add a reference, at paragraph 7.557, to Professor Klick's observations on the use of randomized field experiments to inform public policy "in other contexts". Australia requests that if the Panel accepts the requested reference, it also reflect Australia's evidence and arguments on the unique public health context for testing tobacco control measures. The Panel does not find it necessary to expand, in this part of its analysis, on the role of randomized experiments in "other contexts", as the focus of discussion is limited to the specific context before the Panel, i.e. the TPP measures.

6.29. Australia requests the Panel to include at paragraph 7.557 a cross-reference to the Panel's later conclusion on the practical and ethical constraints on the conduct of an "ideal" study. The Dominican Republic does not object to this request. Honduras considers it neither necessary nor appropriate to insert the requested reference, as it would confuse the discussion of the focus of the TPP studies with the more general "overall assessment" that follows. The Panel does not consider it necessary to add the cross-reference requested by Australia, given that a detailed discussion of the practical and ethical constraints on the conduct of "ideal" experimental studies in the context of tobacco plain packaging follows immediately after this paragraph, concluding at paragraph 7.561.

6.30. Honduras requests the Panel to modify paragraph 7.562, to avoid a suggestion that the lack of an ideal experiment was the only reason for which the complainants argued that the pre-implementation studies should be rejected as the evidentiary base for the adoption of the TPP measures. Australia sees no basis for removing the passage at issue, as it does not, in its view, suggest the implication that Honduras asserts. In response to this comment, the Panel has clarified the wording of the relevant passage.

6.31. Honduras requests the Panel to consider reformulating its general summary of the conclusions of its expert reviews of the TPP literature to show the focus of the complainants on the fact that the studies "do not provide a sound basis upon which to base claims about the expected

effects of plain packaging on smoking behaviour". Australia considers that the existing text accurately reflects a conclusion of the reviewers of the studies at issue. In response to this comment, the Panel has reformulated its description of the conclusions of the complainants' experts on the TPP literature at paragraphs 7.583 and 7.626.

6.32. Honduras requests the Panel to revise its reference to the medical qualifications of Sir Cyril Chantler, in paragraph 7.598, to reflect the statement of Professor Klick qualifying the relevance of this medical training for the purposes of reviewing the methodological soundness of the pre-implementation TPP studies. In response, the Panel has removed the reference to Sir Cyril Chantler's qualifications, in line with its overall approach, which does not refer to the individual qualifications of specific experts.

6.33. Australia requests that the Panel add, at paragraph 7.608, a reference to its arguments that, when adopting tobacco plain packaging "as a world first public health measure", it relied on the explicit recommendation of FCTC parties and on the nearly unanimous consensus on the causal link between tobacco advertising and smoking behaviour reflected in published analyses conducted by highly respected international bodies. Honduras considers that if the Panel accepts to include the arguments by Australia "in which it seeks to justify" the absence of a systematic or other thorough review of the evidence before adopting the measures, the Panel then also needs to address whether these arguments are relevant and pertinent in this context, and address the many counter-arguments of the complainants on these points. The Dominican Republic does not object to Australia's request, provided that Australia's arguments and the Dominican Republic's responses are both fully reflected. Indonesia observes that the additions requested by Australia are unrelated to the subject-matter of the paragraph at issue, and requests that, if the Panel accepts the additions requested by Australia, it also adds Indonesia's and the other complainants' arguments on these points. In response, the Panel has added a reference, in footnote 1687, to Australia's indications as to the evidentiary base that it relied upon in adopting the TPP measures. The Panel did not find it necessary however to engage in a detailed discussion of the relative merits or limits of each of these sources as evidentiary basis for the measures in this section of its Reports, which reviews surveys of the TPP literature. These questions are discussed in other parts of the Panel's analysis, including, with respect to the FCTC and associated instruments, in paragraphs 7.404 to 7.417, which, as described above, have been expanded in response to a separate request for review by Honduras.

6.34. Honduras requests the Panel to clarify the subject of one of the sentences in paragraph 7.634. The Panel has modified the sentence to clarify its subject.

6.6 Requests for review of section 7.2.5.3.5.2 (First mechanism: impact of plain packaging on the appeal of tobacco products to consumers)

6.35. Honduras requests the Panel to mention in paragraph 7.656 the distinction it has outlined between communication and advertising. Although this distinction was already reflected in earlier paragraphs, the Panel has added a reference to it in this paragraph.

6.36. Honduras requests the Panel to add a further reference, at paragraph 7.692, to its argument that the behavioural theories referred to by Australia are intention-based and not action-based theories. Australia noted that this point was already reflected in a preceding paragraph and asked that, if the Panel accepted Honduras's addition, it also include a reference to the sentence immediately following that referred to by Honduras in its arguments, to the effect that these theories may generate useful hypotheses about the possible presence or absence of a causal link between certain constructs and specific behaviours. In response, the Panel has expanded its reference to Professor Ajzen's relevant points in the paragraph where these were already discussed, at paragraph 7.696.

6.37. Australia requests the Panel to amend the references, in paragraph 7.693, to its reliance on behavioural theories. Australia explains that it has not relied on Professor Ajzen's TRA or TPB and that Professor Fong, rather, made a single reference to the TRA as part of his review of existing evidence on the link between the appeal of tobacco products and smoking behaviours. Honduras objects to Australia's request, noting that Australia and its experts have undoubtedly relied on this theory and related behavioural theories. The Dominican Republic similarly objects to the requested modification, citing to Professor Fong's report stating that "[s]ocial psychological theories, notably

the 'Theory of Reasoned Action' (Fishbein & Ajzen 1975), and research arising from such theories, have demonstrated clearly that attitudes are indeed related to behaviour" and the associated figure relied on by Professor Fong, describing the TPB. In this light, the Dominican Republic considers that the Panel correctly finds that Australia has relied on Professor Ajzen's behavioural theories during the proceedings. Indonesia also objects to Australia's request, similarly pointing to the reference, in Professor Fong's report, to Professor Ajzen's TRA as a basis for an explanation of why attitudes are important to behaviour and the argument that achieving changes to attitudes and behaviour through specific objectives will lead to changes in smoking behaviour over time. In response, the Panel has rephrased its description of Australia's reliance on the relevant theories at paragraphs 7.693 and 7.697, to track more closely the terminology used by Professor Fong, who refers to "social psychological theories", including the TRA and related research.

6.38. Honduras requests the Panel to revise its summary of the level of "disagreement" between the parties in relation to the relationship between attitudes and perceptions, on the one hand, and intentions and subsequent behaviours, on the other hand. Australia considers the Panel's summary to be an accurate assessment of the evidence before the Panel and of the points of difference between the parties. In response to these comments, the Panel has modified the formulation of this passage in paragraph 7.699, to focus more directly on what the Panel understands to be the key relevant point of disagreement.

6.39. Honduras requests the Panel to review the formulation of its description of certain elements of the expert reports submitted by the Dominican Republic and Honduras relating to the role of branding elements such as colours or logos on the salience of a pack. Australia considers that the passage of Honduras's submission referred to by Honduras in support of this request does not contradict the Panel's conclusions. In response to these comments, we have clarified the relevant passages in paragraphs 7.768 and 7.769.

6.7 Requests for review of section 7.2.5.3.5.3 (Second mechanism: impact of the TPP measures on the effectiveness of graphic health warning)

6.40. Honduras requests the Panel to add a reference to Professor Viscusi's discussion of the results of the study based on eye movements in respect of regular smokers (i.e. that "the results of the study failed to indicate any advantage of plain packs for regular smokers even though the nature of the eye tracking test would make the study predisposed to finding such an effect for plain packs"). In response, we have introduced the requested reference in footnote 2228 to paragraph 7.818 and added a summary of the main findings and conclusions of Munafò et al. 2011 (Exhibits AUS-199, JE-24(47)) with respect to the three studied subgroups.

6.41. Australia requests the addition of the term "avoidance" in the description of the conceptual model for the assessment of the effectiveness of GHWs in the second sentence of paragraph 7.851. Honduras observes that the exhibit cited by Australia in support of this request does not contain this term and that in any event the existing text fits well with the title of the section (which concerns quit intentions and smoking behaviours), making the requested addition neither necessary nor appropriate. The Dominican Republic did not object to the request. In response, the Panel has accepted the addition of the term "avoidance" in the sentence at issue. While, as noted by Honduras, the exhibit reference cited by Australia does not shed light on the relevance of this term, its inclusion in the description of the model is consistent with its depiction at Figure 14.

6.42. Honduras requests the Panel to revise the text of paragraph 7.862, which it considers contains two "logical leaps" in the analysis and incorrectly reflects the views of Honduras and its experts. Australia contends that Honduras's arguments in support of this request for review are consistent with the Panel's statements in the preceding paragraph of these Reports and submits that Honduras has misconstrued the Panel's conclusion. In response to these comments, the Panel has revised paragraph 7.862 to clarify its reasoning.

6.8 Requests for review of section 7.2.5.3.5.4 (Third mechanism: reducing the ability of the pack to mislead consumers about the harmful effects of smoking)

6.43. Honduras submits that paragraph 7.892 does not accurately reflect its "primary argument" with respect to the capacity of the TPP measures to reduce the ability of the pack to mislead consumers regarding the harmful effects of smoking. Honduras states that its "primary argument"

with respect to this issue is that there is no likelihood that a trademark appearing on the remaining space of a pack with a 75% GHW will generate misleading effects, and not that the TPP measures are unnecessary because Australia's existing regulatory framework provides a legal mechanism through which any misleading packaging elements can be removed from the market. We note that Honduras provides no specific reference to support its assertion regarding the primacy of this argument over its argument that any misleading packaging design elements can be effectively dealt with under the Australian Consumer Law.⁴¹² The parties' arguments on the ability of the TPP measures to contribute through their mechanisms to their public health objective in the specific Australian context, where a 75% GHW covers the front of the pack, are acknowledged and discussed at paragraphs 7.615 to 7.620 as part of the discussion of the TPP literature and the evidentiary base underlying the design and structure of the measures. Nevertheless, in light of Honduras's request, we have clarified our cross-reference to the discussion of the TPP literature in paragraph 7.872, added cross-references to this discussion to paragraphs 7.896 and 7.918, and expanded our summary of the findings of Parr et al. 2011b at footnote 1718 to paragraph 7.620. We also added clarifying sentences at paragraph 7.660 and footnote 1813 regarding the communicative capacity of a pack with a 75% GHW. We also made additional edits to paragraphs 7.876, 7.892 to 7.894, 7.896 to 7.899, 7.902, 7.905, 7.907, 7.918, and 7.928 to clarify the Panel's conclusions and the parties' arguments in respect of this mechanism.

6.44. Honduras requests the Panel to add a reference to its own argument similar to that of the Dominican Republic reflected in paragraph 7.935. The Panel has accepted this request.

6.45. Honduras requests the Panel to either include in footnote 2546 at paragraph 7.979 a reference to Professor Neven's rebuttal arguments or delete the footnote. Australia notes that it has filed a surrebuttal report from Professor Katz that responds in detail to Professor Neven's rebuttal. While Australia considered that the existing text of the footnote represents an accurate assessment of the evidence before the Panel, it requests that the Panel also include a reference to Professor Katz's surrebuttal report, if it accepts Honduras's request to refer to Professor Neven's rebuttal report. In response to these comments, the Panel has expanded its analysis to include references to both Professor Neven's rebuttal report and Professor Katz's surrebuttal report.

6.9 Requests for review of section 7.2.5.3.7 (Impact of the TPP measures on illicit trade)

6.46. Australia requests the Panel to clarify the source of the data used by Professor Chaloupka to estimate illicit tobacco use at paragraph 7.1005. The Panel has modified the paragraph as requested.

6.10 Requests for review of section 7.2.5.4 (The trade-restrictiveness of the TPP measures)

6.47. Honduras requests the Panel to consider relying on a different text, taken from its second written submission, as the basis for the summary of its arguments on the trade-restrictiveness of the measures at paragraph 7.1090. The Panel has accepted the requested change.

6.48. Australia requests the Panel to revise the final sentence of paragraph 7.1131. to clarify that its argument regarding evidence of actual trade effects was made specifically in light of the Appellate Body's statements in *US – COOL (Article 21.5 – Canada and Mexico)*. Honduras considers the requested revision to be unnecessary, as the Panel reflects this jurisprudence elsewhere. The Dominican Republic and Indonesia do not object to Australia's request, provided that Australia's original argument is accurately reflected. The Panel has modified this paragraph partly as requested, considering the comments of the complainants.

⁴¹² We note that in its first written submission, Honduras states, "the plain packaging measures seem to be based on the assumption that the *residual portions of the package* that they regulate could mislead consumers about the harmful effects of smoking or using tobacco products." Honduras's first written submission, para. 518 (emphasis original). This statement appears in an introductory paragraph to a section entitled, "[t]he plain packaging measures are superfluous because Australia already has a robust legislative framework to address misleading or deceptive conduct".

6.49. Honduras requests the Panel to "more accurately summarize" its arguments regarding the impact of the measures on barriers to entry and participation in the market at paragraph 7.1172, at the beginning of section on "Whether the TPP measures raise barriers to entry onto the Australian market". The Panel declines to make this change, as this section is concerned with barriers to entry rather than barriers to "participation" in the market more generally, which is addressed in other parts of section 7.2.5.4.2.3.

6.50. Honduras requests the Panel to modify paragraph 7.1189 to start with an overview of its arguments on downtrading with reference to its second written submission. The Panel has added references to the passage identified by Honduras, though not at the level of detail that it requested.

6.11 Requests for review of section 7.2.5.5.2.2 (The gravity of the consequences of non-fulfilment)

6.51. Australia requests that the Panel modify its description of the operation of Section 15 of the TPP Act in paragraph 7.1320 to reflect that it is a "savings provision" that is intended to preserve the requirements of the TPP Act to the greatest extent possible in the event that it was found to be inconsistent with the Australian Constitution. Indonesia asserts that Australia's request is unnecessary and maintains that the paragraph at issue correctly describes the practical effect of Section 15. The Panel has rephrased this paragraph to more clearly distinguish the purpose of Section 15 from its practical consequences.

6.12 Requests for review of section 7.2.5.6.1 (Whether less trade-restrictive alternative measures are reasonably available to Australia: Approach of the Panel)

6.52. Australia requests that the Panel clarify that the arguments Australia has advanced in relation to trade-restrictiveness and "competitive opportunities" or "freedoms", as set forth in the fourth sentence of paragraph 7.1361, have been made in response to arguments articulated by the complainants. Honduras and Indonesia object to Australia's proposed characterization of the complainants' arguments. The Dominican Republic and Indonesia also submit that the proposed clarification is unnecessary as it is clear from the context of the sentence at issue that Australia's arguments are in response to those of the complainants. The Panel partly accepts Australia's request and has modified the sentence at issue to indicate that Australia's arguments are in response to those of the complainants on the limitation of "competitive opportunities" and "freedoms".

6.53. Honduras requests the Panel to add, at paragraph 7.1379, a reference to its arguments similar to that of the Dominican Republic with reference to the panel rulings in *China – Rare Earths*. The Panel has added this reference at footnote 3349.

6.13 Requests for review of section 7.2.5.6.2 (First proposed alternative measure: Increase in the MLPA)

6.54. Honduras requests additional detail of the proposed increase in the MLPA and the reasons for which Honduras proposes it at paragraph 7.1395. The Panel has accepted to include some of the requested additional detail, to a level comparable with that provided in relation to other complainants.

6.55. Australia requests the Panel to clarify, at paragraph 7.1412, that its argument in relation to the impact of an increase in the MLPA on competitive opportunities was made in response to the complainants' interpretation of trade-restrictiveness. Honduras had no objection to the request, but the Dominican Republic and Indonesia objected to it as unnecessary. The Panel accepted to insert the requested clarification.

6.56. Australia requested the Panel to add a reference in paragraph 7.1433 to its reliance on the Chaloupka Public Health Report. The Panel has accepted to make the requested addition.

6.57. Australia requested the Panel to clarify that its argument on the absence of certainty of the immediate impact of the proposed alternative was made in response to arguments by the complainants and more closely reflect the formulation of its arguments in this respect. The Panel

clarified the relevant text of paragraph 7.1440 to reflect more closely the terms of Australia's argument.

6.58. Australia requests that the Panel delete the reference to a "meaningful" contribution from the first sentence of paragraph 7.1453 and from the first half of the second sentence of paragraph 7.1470 and instead find that an increase in the MLPA to 21 years would, in principle, be apt to contribute to Australia's objective. The Dominican Republic, Honduras, and Indonesia requested the Panel to reject Australia's request because it, *inter alia*, contradicts the Panel's stated approach of assessing first whether the proposed alternative measure would make any contribution to the TPP measure's objective, and then the degree of such contribution. In paragraphs 7.1366-7.1370, we explain our approach to assessing whether a proposed alternative measure makes a contribution to the objective equivalent to that of the challenged measure and state that this assessment relies on ascertaining "as precisely as possible, in light of the entirety of the relevant evidence before us, the degree of contribution that the proposed alternatives would make to the objective". As some complainants note, the language that Australia seeks to modify reflects the Panel's assessment of the degree of contribution that this alternative is apt to make to Australia's objective, as a component of the Panel's overall assessment of this proposed measure as a potential less trade-restrictive alternative to the TPP measures. We therefore declined to modify the first sentence of paragraph 7.1453 and the first half of the second sentence of paragraph 7.1470.

6.59. Australia requests the Panel to consider adding, in its overall conclusion on an increased MLPA as an alternative to the TPP measures, a reference to its earlier finding that "an increase in the MLPA would not address initiation, cessation or relapse in any age group over 21". The Dominican Republic requests the Panel to reject this request, as Australia does not explain why the Panel should single out this intermediate finding to include in this paragraph where it was merely reflecting its overall conclusions. Indonesia similarly requests the Panel to reject this request, as this sentence would be unnecessary to the Panel's summary of its overall conclusion. The Panel declined to add the requested sentence to paragraph 7.1470, which is intended to reflect its overall conclusion rather than the detail of its earlier findings that are the basis for this conclusion. This in no way diminishes, however, the Panel's determinations made at paragraphs 7.1459 and 7.1460 or their importance to the Panel's assessment of whether an increase in the MLPA to 21 years would make a contribution to Australia's objective equivalent to that of the TPP measures.

6.60. Australia requests the Panel to amend paragraph 7.1505 to clarify its arguments regarding the distinction between the objectives and specific mechanisms of the TPP measures and reflect its further arguments on assessing the equivalent degree of contribution in the context of a comprehensive policy. Australia further requests the Panel to add, in this paragraph, a reference to Professor Chaloupka's rebuttal of the Dominican Republic's assertion that he did not consider taxation to be effective in relation to smoking initiation. Honduras, the Dominican Republic, and Indonesia oppose these requests, observing that the passages that Australia requests to be removed are an accurate reflection of its arguments. The Dominican Republic notes that the arguments that Australia requests be added in relation to the Appellate Body's findings in *Brazil – Retreaded Tyres* are addressed elsewhere in the Panel's analysis. In response, the Panel declines to delete and replace the references in this paragraph to arguments made in Australia's first written submission, but has accepted the addition of a reference to Professor Chaloupka's response to the Dominican Republic's statements concerning his conclusions on the effect of taxation on smoking initiation and has added supplementary references at footnotes 3581 and 3583.

6.14 Requests for review of section 7.2.5.6.3 (Second proposed alternative measure: Increased taxation of tobacco products)

6.61. Honduras requests the Panel to reflect at paragraph 7.1497 its argument that Australia failed to rebut Honduras's submissions that Australia's tobacco taxes are below the level recommended by the WHO. Australia disagrees with Honduras's assertion that it failed to rebut this argument and refers to a number of its submissions and relevant expert reports addressing this point. The Panel declines to make additional references to these arguments in the requested paragraph, as this issue is discussed later in its analysis, at paragraph 7.1521.

6.62. Australia requests the Panel to remove the term "meaningful" from paragraphs 7.1523 and 7.1544 of the Panel's analysis of the contribution that increased taxation would be apt to make to Australia's objective. Honduras, the Dominican Republic, and Indonesia object to these requests,

for reasons similar to those described above in relation to the same term as used in relation to the first proposed alternative measure. For the same reasons provided in response to the same request made in the context of the MLPA, the Panel declines to modify the language of these paragraphs as requested. However, the Panel slightly amended paragraph 7.1523 for consistency of language across the analyses of all four alternatives.

6.63. Australia requests the Panel to amend some of the language of paragraph 7.1682 to align it with the description of the pre-vetting scheme in previous paragraphs. The Panel has accepted to amend this text as proposed by Australia.

6.64. Australia requests the Panel to include in paragraph 7.1694 a reference to its arguments that litigation costs under the pre-vetting scheme would make it prohibitively costly. The Panel has accepted to add this reference.

6.65. Australia requests the Panel to add in paragraph 7.1719 a reference to its argument that since the complainants' proposed alternatives are unable to stand alone and must be implemented cumulatively to make an equivalent contribution to that of the TPP measures, their trade-restrictiveness must be evaluated cumulatively, which will necessarily increase the degree of trade-restrictiveness of the alternatives relative to the TPP measures. Honduras considers that as this paragraph sets forth the Panel's assessment of the main arguments, it would not appear appropriate to add a description of an argument "buried in a comment on a reply" or seek to modify the Panel's findings in respect of this argument. The Dominican Republic did not object to this request. The Panel did not find it necessary to amend paragraph 7.1719 to reflect this argument, in light of its other determinations in this section.

6.15 Requests for review of section 7.3.2 (Article 15.4 of the TRIPS Agreement)

6.66. Honduras requests that the Panel's summary of the complainants' arguments under Article 15.4 of the TRIPS Agreement in paragraph 7.1879 be expanded to include an argument that signs which have already acquired distinctiveness and have been registered could not maintain distinctiveness or remain registered, and will thus lose the protection flowing from registration as a result of the TPP measures. Honduras submits that it referred to this effect in paragraphs 245 and 261 of its second written submission. Honduras refers to two passages of its submissions to support its request. The first expresses Honduras's disagreement with Australia's argument that Section 28 of the TPP Act remedies the TPP measures' negative effects on the *registrability* of inherently non-distinctive marks but does not refer to *already registered* marks.⁴¹³ In the second passage, Honduras argues that the distinctiveness of registered trademarks that include a non-inherently distinctive sign will be diminished by the TPP measures, and the trademark owner will thus lose its ability to restrain infringing use *in violation of Article 16.1*. This paragraph does not relate to Article 15.4, nor does it refer to an inability of a registered trademark to *remain registered*.⁴¹⁴ We therefore decline to modify the description of Honduras's arguments under Article 15.4. Nonetheless, we have made additional references to the passages referred to by Honduras in footnotes 4252 and 4302 to paragraphs 7.1879 and 7.1919, respectively.

6.16 Requests for review of section 7.3.3 (Article 16.1 of the TRIPS Agreement)

6.67. Honduras requests that the Panel amend its summary of Cuba's argument in paragraph 7.1916 to reflect that it also argued that the TPP measures violate Article 16.1 of the TRIPS Agreement by reducing the distinctiveness of non-inherently distinctive trademarks and thus making them liable to cancellation procedures. Honduras also requests that paragraph 7.2033 be similarly amended.

6.68. In paragraph 7.1916, we provide an overview of the arguments made by the complainants regarding Article 16.1. In this overview, we identify only Cuba as having explicitly argued that the fact that certain trademarks may be *liable to cancellation* procedures as a result of the TPP

⁴¹³ The view expressed in paragraph 245 of Honduras's second written submission is reflected in the fourth sentence of paragraph 7.1879 of these Reports and referred to in corresponding footnote 4252.

⁴¹⁴ The view expressed in paragraph 261 of Honduras's second written submission is reflected in paragraph 7.1919 of these Reports in the section summarizing the complainants' main arguments with respect to their claims under Article 16.1.

measures constitutes a violation of Article 16.1. Paragraph 7.2033 summarizes more fully this set of arguments by Cuba. Honduras submits that it also made this argument in paragraph 261 of its second written submission, as supported by paragraph 243 of its first written submission. We note that in paragraph 261 of its second written submission, Honduras argues that, as a result of the TPP measures, the distinctiveness of a registered trademark will be diminished to the extent that it will no longer be considered distinctive, and the owner of that registered trademark will lose its *ability to restrain infringing use*. Paragraph 243 of Honduras's first written submission elaborates that this is because "the universe of similar trademarks that a consumer could confuse with the **original trademark ... shrinks**", and that the trademark owner's right to *prevent third parties from unauthorized use* will be compromised since other trademarks will no longer be considered "similar" to the original trademark. Honduras has also argued that Section 28 of the TPP Act does "not address the ... erosion of distinctiveness, and consequently the *scope of protection*", or the "maintenance of protection of tobacco-related marks *vis-à-vis* their potential *use by third parties*".⁴¹⁵ We have summarized and addressed in section 7.3.3.4.2 the arguments by the complainants, including Honduras, on whether the TPP measures violate Article 16.1 because the prohibition on the use of certain trademarks reduces their distinctiveness and thus the trademark owner's ability to demonstrate a likelihood of confusion.⁴¹⁶

6.69. Given that we have addressed the arguments presented in the paragraphs referred to by Honduras in another section, and that none of those paragraphs mention the TPP measures' potential implications relating to *cancellation of a registered trademark*, we decline to modify paragraphs 7.1916 and 7.2033. In response to Honduras's requests, we have, however, modified footnote 4526 to paragraph 7.2033, including by adding a cross-reference to section 7.3.3.4.2.

6.70. Honduras requests that, in paragraph 7.1919, the Panel refer to Professor Dinwoodie not as "Ukraine's expert", but as an expert "relied upon" by the complainants, as it does in paragraph 7.1752. We note that Honduras itself refers to Professor Dinwoodie as Ukraine's expert in paragraphs 240 and 244 of its first written submission. Nonetheless, we have amended paragraph 7.1919 for further clarity and to align the language with that of paragraph 7.1752.

6.71. Honduras alleges that the Panel's focus on the ability to show confusion in the first sentence of paragraph 7.1966 is not an accurate reflection of its argument which, it submits, focuses on the impact of the strength of the mark on the normative assessment of the likelihood of confusion that is relevant in the context of infringement proceedings. Honduras requests that the phrase "to show confusion in the market, and thus infringement" be replaced by the phrase "to protect the mark and thus defend against infringement". Australia objects to this request as it sees the relevant text as an accurate reflection of Honduras's previous submissions. Australia points out that, in its second written submission, Honduras itself refers to the responsibility of the trademark owner to demonstrate a likelihood of confusion.

6.72. We note that Honduras has argued that "the 'likelihood of confusion' is a normative assessment that is relevant in the context of any infringement proceeding", and that "[t]he strength of the mark is a key aspect of such a 'likelihood of confusion' assessment".⁴¹⁷ Honduras adds that "[t]he 'likelihood of confusion' *must always be demonstrated by the trademark owner* in the context of an infringement proceeding when trying to prevent the use of similar signs on similar products by unauthorized third parties and protect the distinctiveness of the mark."⁴¹⁸ In response to this request, we have amended paragraph 7.1966 to reflect more closely the language used by Honduras on the ability to demonstrate a likelihood of confusion and included additional references in footnotes 4448 and 4471 to paragraphs 7.1982 and 7.1999 to more fully reflect Honduras's arguments.

⁴¹⁵ Honduras's second written submission, para. 262. (emphasis added)

⁴¹⁶ Honduras's main arguments relating to its claim under Article 16.1 are summarized in greater detail in section 7.3.3.2 of these Reports.

⁴¹⁷ Honduras's second written submission, para. 259.

⁴¹⁸ Honduras's second written submission, para. 259 (emphasis added). This corresponds to another formulation by Honduras of its claim under Article 16.1, which asserts that the TPP measures void rights conferred under Article 16.1 because, "[c]ontrary to this provision, the legitimate owner of a tobacco-related trademark will not be able to prevent unauthorised third-party use of the trademark as he or she *will not be able to demonstrate* a likelihood of confusion with its original trademark." Honduras's first written submission, para. 249. (emphasis added)

6.73. With respect to the Panel's quote from Professor Dinwoodie's expert report in paragraph 7.1990, Honduras requests that the Reports also reflect certain other statements by Professor Dinwoodie that provide context for the quoted remark. In paragraphs 7.1989 to 7.1993, we discuss the complainants' allegation that the TPP measures' prohibition of use of certain registered trademarks will cause these marks to lose their distinctiveness and thus reduce the occurrence of situations in which right owners can demonstrate a "likelihood of confusion" between the registered trademarks and similar or identical signs on similar products.⁴¹⁹ In response to Honduras's request to provide further context for a statement made by Professor Dinwoodie, we have expanded footnote 4463 to paragraph 7.1990.

6.74. Honduras also asks the Panel to revise paragraph 7.2003 to reflect that it has made an argument similar to that attributed to the Dominican Republic, Cuba, by reference, and Indonesia. In support of this request, it refers to paragraphs 260 and 263 of its second written submission.

6.75. In its second written submission, Honduras argues that an owner of a tobacco-related trademark will not be able to demonstrate a likelihood of confusion because the trademark has lost much of its strength as a result of the TPP measures. We have referred to the relevant paragraph in footnotes 4457 and 4459 to paragraph 7.1986, which summarizes the complainants' arguments relating to the alleged reduction of the effective scope of the right. In its second written submission, Honduras cites MARQUES's *amicus curiae* submission, according to which "[a] measure that prevents the mark from maintaining its scope of protection or from growing its notoriety and strength through use as intended is thus inconsistent with the rights conferred on registered trademark owners under Article 16.1". In response to Honduras's request, we have added a reference to this text in footnote 4459 to paragraph 7.1986. We address the complainants' arguments, including those made by Honduras, relating to the alleged reduction in the effective scope of the right as a result of a reduction in the instances in which a "likelihood of confusion" can be demonstrated in paragraphs 7.1994 to 7.2002.

6.76. In paragraph 7.2003 and those that follow, we summarize a separate set of arguments, according to which Article 16.1 protects a trademark owner's ability to develop and maintain the distinctiveness of a trademark by means additional to third-party infringement actions and thus contains a general obligation for Members to refrain from adopting measures that undermine or eliminate the distinctiveness of trademarks. As we have addressed the arguments to which Honduras refers in paragraphs 7.1994 to 7.2002, we decline to add a further reference to them in paragraph 7.2003.

6.77. With respect to the Panel's quote from Professor Dinwoodie's expert report in paragraph 7.2012, Honduras requests that, to put the statement in context, the Panel also quote the paragraph immediately preceding it and the sentences that follow it. In response, we have modified footnote 4489 to paragraph 7.2012 to reflect the sentences that follow the quoted statement. In the preceding paragraph of his expert report, Professor Dinwoodie argues that, due to the nature of IP rights as private rights, Australia could not claim to achieve through regulation what Article 16 requires to be achieved by trademark rights. In our view, this point is not relevant to the issue under discussion in this paragraph, i.e. whether trademark distinctiveness may vary in the market.

6.17 Requests for review of section 7.3.5 (Article 20 of the TRIPS Agreement)

6.78. Honduras requests that the Panel more fully reflect Honduras's position on the meaning of the term "unjustifiably" in paragraph 7.2134.⁴²⁰ The overview of the claims in section 7.3.5.1 is intended to capture the elements that the parties identified as needing to be established to find a violation of the core obligation contained in the first sentence of Article 20 of the TRIPS

⁴¹⁹ See para. 7.1988 below.

⁴²⁰ Honduras identifies "the three different points why it considers Australia's TPP measures to be an unjustifiable encumbrance ... i.e. (i) TPP measures are the 'ultimate encumbrance'; (ii) TPP measures are unjustifiable by their nature because they are not based on an individual assessment; and (iii) in the alternative, the Panel should determine whether the TPP measures make a material contribution to the achievement of the public policy objective and whether these measures constitute the least-restrictive means to achieve that objective." Honduras's requests for review of the Interim Report, para. 59 (referring to arguments found at paragraphs 269-272 of Honduras's second written submission).

Agreement. It does not elaborate on arguments on whether and, if so, why the parties consider that these elements in fact are established in this particular case. We have, nonetheless, reflected in footnote 4645 Honduras's arguments in its first written submission on why it considers that the TPP measures are, by nature, unjustifiable and additional arguments from its second written submission.

6.79. Honduras requests that the Panel add a reference in paragraph 7.2140 to Honduras's arguments on the need to conduct an individual assessment and the need for a proportionate and limited exception. In response, we have included in paragraph 7.2140 language from Honduras's first written submission and added references in the related footnotes to paragraphs 7.2436 and 7.2443 to 7.2449, where Honduras's arguments on the need for individual assessment and the extreme nature of the encumbrance are more fully summarized.

6.80. Honduras also requests that the Panel modify the order in which it summarizes Honduras's arguments on the meaning of the term "unjustifiably" in section 7.3.5.5.1.1 and emphasizes that paragraph 7.2296 contains its rebuttal argument. Honduras also requests that the Panel include references to Honduras's arguments why it considers the TPP measures to be unjustifiable by their very nature. We have maintained the order of the summary of Honduras's arguments in this section, consistently with the order in which related arguments of other parties are summarized. However, we amended paragraph 7.2296, to clarify that Honduras makes its argument in response to Australia's arguments and added text to paragraph 7.2305 to reflect additional arguments by Honduras. We have also added a reference in a footnote to the related arguments in Honduras's second written submission. We decline to reflect in this section additional arguments identified by Honduras concerning the unjustifiability of the TPP measures specifically, which are referenced and addressed in subsequent sections.⁴²¹

6.81. Australia considers that the Panel's discussion in paragraphs 7.2414 and 7.2415 incorrectly suggested that Australia had argued that the proper meaning of the term "unjustifiably" should be discerned primarily in opposition to any other term, rather than from the proper meaning of the term actually used. Australia adds that it has applied a Vienna Convention analysis to determine the meaning of "unjustifiably" and that its arguments in relation to the interpretative distinction between "necessity" and "justifiable" are rebuttal points in response to what it sees as the complainants' attempts to conflate the two terms. Accordingly, Australia requests the Panel to make certain amendments to these paragraphs. The Dominican Republic and Indonesia object to the suggested changes. In their view, they are unnecessary given that the Panel presents in detail the parties' positions in paragraphs 7.2294-7.2348 and it is clear from the context that, in paragraphs 7.2414 and 7.2415, the Panel is focusing on a specific area of contention between the parties, namely the difference between the "necessity" and "justifiable" standards.

6.82. In response, we have clarified in paragraph 7.2413 that the parties first described their understanding of the ordinary meaning of the term "unjustifiably" in Article 20 and then sought contextual guidance, *inter alia*, by contrasting it to certain other terms. We also added a sentence in paragraph 7.2414, clarifying that Australia made the argument reflected in that paragraph in response to the complainants' arguments. We also slightly modified paragraph 7.2415. As indicated in footnote 5012 to paragraph 7.2412, the parties' arguments on the meaning of the term "unjustifiably" are summarized more extensively in section 7.3.5.5.1.1.

6.83. Australia considers that the Panel's analysis in paragraph 7.2420 incorrectly states that Australia has argued that the term "unjustifiably" in Article 20 of the TRIPS Agreement should be assumed to have "exactly the same meaning" as the term "unjustifiable" in the *chapeau* of Article XX of the GATT 1994. It requests the Panel to amend the first sentence of that paragraph accordingly. The Dominican Republic and Indonesia do not object to the modification suggested by Australia but request that the Panel also add a sentence indicating that Australia argues that the

⁴²¹ See paragraphs 269-270 of Honduras's second written submission regarding the three primary reasons why Honduras considers the TPP measures to be an unjustifiable encumbrance. These arguments concern the unjustifiability of the TPP measures in particular and appear to cover the same ground as the general interpretative arguments contained in paragraph 315 of Honduras's first written submission and paragraphs 361-372 of its second written submission, to which we have added references in para. 7.2305 below. Honduras's related main arguments concerning the TPP measures are summarized in subsequent parts of these Reports, including in sections 7.3.5.3.1.1 and 7.3.5.5.2.1 below.

meaning of the term "unjustifiably" in Article 20 of the TRIPS Agreement must be at least as permissive as the meaning of the term "unjustifiable" in Article XX of the GATT 1994. In response to these comments, we have modified paragraph 7.2420 and added footnote 5020 to paragraph 7.2420 containing a cross-reference to paragraph 7.2329. In addition, we have complemented the reference in footnote 4903 to paragraph 7.2329 with an additional reference to Australia's response to Panel question No. 107.

6.18 Requests for review of section 7.3.6 (Article 10*bis* of the Paris Convention (1967), as incorporated by Article 2.1 of the TRIPS Agreement)

6.84. Honduras requests that the term "constitutive" be added to the last sentence of paragraph 7.2634. We have made the requested change and have made minor adjustments to the references in related footnote 5285.

6.85. Indonesia requests the Panel to add a reference to its related arguments from its first written submission regarding Article 10*bis* to paragraph 7.2693. We have adjusted the text by moving details regarding the arguments of Honduras, the Dominican Republic, and Indonesia, formerly contained in a footnote, into the main body of the text. The complainants' arguments are now summarized in paragraphs 7.2693 to 7.2696. We further note that Indonesia's arguments are also cited at paragraph 7.2708 in the section that summarizes the parties' main arguments relating to Article 10*bis*(3)(1).

6.86. Honduras requests that the phrase "does not render" in what was footnote 5297 of the Interim Reports be corrected to "renders". We have corrected the text, which now appears in paragraph 7.2694.⁴²² We have also made the same correction to the third sentence of paragraph 7.2790.

6.87. Referring to paragraph 7.2701, Honduras requests that the Panel change its order of analysis by presenting and assessing Honduras's claims under Article 10*bis* of the Paris Convention (1967), as incorporated by Article 2.1 of the TRIPS Agreement, in the order set out in its submissions, namely first the claim under paragraph 1 of Article 10*bis* and then the claim under paragraph 3(3) of that Article. In response, we have expanded our discussion of the order of analysis under Article 10*bis* in paragraph 7.2691. For the reasons set out therein, we decline to change the order of our analysis.

6.88. Honduras suggests that paragraph 7.2764 be modified to reflect that it is unaware of an empirical study assessing whether consumers have been unable to distinguish the commercial source of tobacco products of one undertaking from those of other undertakings following the implementation of the TPP measures but considers that such quantitative data would not assist the Panel in resolving the claims in the present disputes. We expanded footnote 5488 to paragraph 7.2764 to include an additional reference to this argument and to the parts of these Reports where the complainants' responses to Panel question No. 168 on this subject are more fully reflected. We have also made minor corresponding adjustments to footnote 5210 at paragraph 7.2548.

6.19 Requests for review of the Appendices

6.89. In [Appendix A](#), the Panel has added references or made corrections at paragraphs 12, 35, 37, 54, 67, and 68, in response to requests for review by Australia that the complainants have not objected to.

6.90. The Panel has also amended the summary of the parties' arguments at paragraphs 12, 16, 36, 41, and 76 to reflect further arguments in response to requests for review by Australia, taking into account also the comments of the Dominican Republic and Indonesia. The Panel has declined to make some of the requested additions, as they are already reflected at paragraphs 4, 12, 36, and 76.

⁴²² We moved this text from the footnote to the main body of the text in response to a request by Indonesia, as described at para. 6.85 above.

6.91. In paragraphs 38, 41, and 54, the Panel has added additional references to evidence from Australia's expert, Professor Chaloupka, and the Dominican Republic and Indonesia's experts, Ajzen et al., in response to a request by Australia that the Dominican Republic does not object to, provided that its own arguments in response are also incorporated. The Panel declines to incorporate some of the additional references requested by the Dominican Republic as they are already discussed at paragraph 83.

6.92. At footnote 58, the Panel has added references to the third rebuttal report by Professor Chaloupka, in response to a request by Australia. Indonesia objects to this request on the basis that the exhibit referred to by Australia does not address the questions that its request relates to. We understand Australia to have misidentified, in its request, the title of the exhibit at issue, referring to the "second" rather than the "third" rebuttal report by Professor Chaloupka.

6.93. In paragraph 56, the Panel has amended its reference to White at al. 2015b in response to a request by Australia that the Dominican Republic and Indonesia do not object to, provided that the findings of the study are accurately described. The Panel declines to include two additional sentences proposed by the Dominican Republic, to paragraph 56, as the issues covered by these sentences are already discussed at sections 1.1.3 and 2.1.4 of Appendix A. However, the Panel has added a sentence to paragraph 64 of Appendix B in response to the Dominican Republic's comments.

6.94. In Appendix B, the Panel has added a reference at footnote 165, in response to a request for review by Australia that the complainants have not objected to.

6.95. At footnotes 27, 29, 30, 31, and 140 of Appendix B, the Panel has added references to the third rebuttal report by Professor Chaloupka, in response to a request by Australia. The Dominican Republic and Indonesia object to this request on the basis that the exhibit referred to by Australia does not provide support for the referenced statements, as they address different issues. We understand Australia to have misidentified, in its request, the title of the exhibit at issue, referring to the "second" rather than the "third" rebuttal report by Professor Chaloupka but to paragraph numbers corresponding to the relevant aspects addressed in the third rebuttal report.

6.96. In paragraphs 25 and 57, the Panel has amended its description of the conclusions of Ajzen et al. and Australia's response. The Dominican Republic and Indonesia do not object to this request for review by Australia, provided that the Panel likewise reflects the Dominican Republic's response to this argument, which the Panel has done at paragraphs 25 and 56.

6.97. In Appendix C, the Panel has added references or made corrections at paragraphs 11, 12, 23, 36, 38, 65, and 117, footnotes 15, 24, 25, 34, 42, and 64, and Figures C.1, C.13, C.15, and C.17 in response to requests for review by Australia that the complainants have not objected to.

6.98. The Panel has also corrected Figure C.19, in response to requests for review by Australia and the related comments by Honduras and the Dominican Republic. Specifically, the Panel has clarified the source of Figure C.19 and adjusted the time-frame reflected in it, to match the range reflected in Figure 2 in the Chipty Second Rebuttal Report (Exhibit AUS-591).

6.99. The Panel has amended paragraphs 4, 59, and 62 to clarify the manner in which Australia's expert Dr Chipty used the RMSS data, in response to a request for review by Australia that the Dominican Republic does not object to, provided that Australia's arguments are accurately reflected.

6.100. The Panel has also amended paragraph 72 to clarify the nature of the use by Australia's expert Dr Chipty of the RMSS data and her re-estimation of Professor List's micro-economic model, in response to a request for review by Australia and the Dominican Republic's comments on this request.

6.101. The Panel has clarified, in paragraph 95, its description of Professor Chaloupka's discussion of issues relevant to Professor Klick's analysis of the NTPPTS data, in response to a request for review by Australia and Honduras's related comments, which have been endorsed by the Dominican Republic and Indonesia.

6.102. In [Appendix D](#), the Panel has added references or made corrections at paragraphs 62, 66, 73, 82, footnotes 14, 63, and 109, and Figure D.4 in response to requests for review by Australia that the complainants have not objected to.

6.103. The Panel has clarified, in paragraph 96, its description of Professor Chaloupka's discussion of issues relevant to Professor Klick's analysis of the NTPPTS data, in response to a request for review by Australia and Honduras's related comments, which have been endorsed by the Dominican Republic and Indonesia.

7 FINDINGS

7.1 Order of analysis

7.1. The complainants have made claims under the TRIPS Agreement and the TBT Agreement. In addition, Cuba has made a claim under the GATT 1994. We therefore first consider the order in which we should address these claims.

7.2. [Honduras](#), the [Dominican Republic](#) and [Cuba](#) agree that panels are in general free to structure the order of their analysis of multiple claims in the manner they see fit. They add that there is no hierarchy between the agreements raised in these proceedings (and in particular between the TRIPS Agreement and the TBT Agreement), and that they apply cumulatively and concurrently. Though suggesting that the Panel begin its analysis with the claims under the TRIPS Agreement, they do not express a firm preference.⁴²³ [Indonesia](#) argues that it is "a general principle of international law that claims concerning multiple treaties be considered in the order of specificity to the underlying facts, beginning with the highest degree of specificity"⁴²⁴, and that there "is no particular order in which the Panel should address the claims under the TBT Agreement and TRIPS Agreement because these agreements are equally specific to the measures at issue".⁴²⁵ [Australia](#) argues that the Panel is free to structure the order of its analysis as it sees fit but, because Article 20 of the TRIPS Agreement "deals 'more specifically, and in detail' with the subject matter falling within its scope", the Panel would need to begin its analysis of the trademark requirements in the TPP measures with that provision.⁴²⁶

7.3. As observed by some of the complainants, panels are free to structure the order of their analysis as they see fit, and may find it useful to do so taking account of the manner in which a claim is presented to them by a complaining Member.⁴²⁷ However, this is true only to the extent that, based on the "structure and logic" of the provisions at issue, there is no "mandatory sequence of analysis which, if not followed, would amount to an error of law" or would "affect the substance of the analysis itself".⁴²⁸

7.4. We note that there is no explicit hierarchy between the TRIPS Agreement and the TBT Agreement, which appear in distinct parts of Annex 1 of the Marrakesh Agreement Establishing the World Trade Organization (WTO Agreement). We therefore see nothing on the face of those two agreements that would suggest that the adoption of a specific sequence of analysis is mandated. We also note that the complainants have presented arguments, first, under the TRIPS Agreement; second, under the TBT Agreement; and third (in Cuba's complaint) under the GATT 1994. Australia has also presented its responses to these claims in the same order. The complainants generally see the cumulative nature of the obligations invoked as indicating that there is no obligation for us to address their claims in a particular order, and none of them contends that there is any mandatory sequence of analysis which, if not followed, would amount to an error of law.

⁴²³ Honduras's response to Panel question No. 1; Dominican Republic's response to Panel question No. 1; and Cuba's response to Panel question No. 1 (annexed to its response to Panel question No. 138).

⁴²⁴ Indonesia's response to Panel question No. 1 (referring to Panel Report, *US – 1916 Act (EC)*, para. 6.76).

⁴²⁵ Indonesia's response to Panel question No. 1.

⁴²⁶ Australia's response to Panel question No. 1.

⁴²⁷ Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, paras. 126-127.

⁴²⁸ Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 109. See also Appellate Body Reports, *Canada – Renewable Energy / Feed-in Tariff Program*, para. 5.5; and Panel Reports, *EC – Seal Products*, para. 7.63.

7.5. It has also been established that a claim under the more specific and detailed WTO agreement should be addressed before a claim under a similar more general provision in another agreement.⁴²⁹ In line with this principle, the panel in *EC – Sardines* stated that, "if the [measure at issue] is a technical regulation, then the analysis under the TBT Agreement would precede any examination under the GATT 1994".⁴³⁰ Accordingly, to the extent that the challenged measure was found to be covered by the TBT Agreement, several panels have addressed claims under the TBT Agreement before addressing concurrent claims under the GATT 1994.⁴³¹

7.6. In respect of the claims before us under the TBT Agreement and under the GATT 1994, this reasoning would suggest that we consider the former before the latter. Such an approach would also be consistent with the fact that the TBT Agreement and the GATT 1994 both form part of Annex 1A (entitled "Multilateral Agreements on Trade in Goods"), and that the TBT Agreement articulates in its preamble that it sets out "to further the objectives of the GATT 1994".⁴³² The obligation in the TBT Agreement invoked by the complainants in these disputes (Article 2.2) applies to "technical regulations", thereby setting out an obligation in respect of that subset of measures that satisfies the definition in Annex 1.1 of the TBT Agreement.

7.7. In respect of the claims before us under the TBT Agreement and under the TRIPS Agreement, Australia considers that, by virtue of its understanding of the relationship between Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement, the Panel should consider Article 20 first, ultimately to the exclusion of Article 2.2 of the TBT Agreement in respect of those aspects of the TPP measures that relate to the use of trademarks on tobacco products and their retail packaging. Australia argues that the TRIPS Agreement deals more specifically and in detail with those aspects of the TPP measures that relate to the use of trademarks⁴³³, and adds that the TBT Agreement is not concerned with measures that address the exploitation of intellectual property (IP) rights.⁴³⁴ We do not wish to prejudge, at this stage of our analysis, our own analysis of the questions raised by Australia, namely (i) whether those aspects of the TPP measures that affect the use of trademarks are covered by the disciplines of Article 2.2 of the TBT Agreement or fall exclusively within the purview of the TRIPS Agreement, and (ii) the interpretation of the term "unjustifiably" in Article 20 and its relationship with the term "necessary" in Article 2.2 of the TBT Agreement.

7.8. For the purpose of determining our order of analysis, however, we note that certain claims before us relate to the same aspects of the measures at issue, and that the complainants use much of the same evidence in connection with a number of their claims, in particular in respect of their claims under Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement. In particular, we note that the complainants rely on essentially the same body of evidence in respect of a number of aspects of the effects of the challenged measures, under both covered agreements. Without prejudice to our assessment of whether the trademark requirements in the TPP measures are (contrary to Australia's argument) covered by the disciplines of Article 2.2 of the TBT Agreement, a finding that they are covered by those disciplines would render evidence in relation to the effect of both the "trademark-related" and "format" requirements relevant in the context of our assessment under Article 2.2 of the TBT Agreement.

⁴²⁹ The Appellate Body in *EC – Bananas III* stated:

Although Article X:3(a) of the GATT 1994 and Article 1.3 of the *Licensing Agreement* both apply, the Panel, in our view, should have applied the *Licensing Agreement* first, since this agreement deals specifically, and in detail, with the administration of import licensing procedures. If the Panel had done so, then there would have been no need for it to address the alleged inconsistency with Article X:3(a) of the GATT 1994.

Appellate Body Report, *EC – Bananas III*, para. 204. See also Panel Report, *EC – Sardines*, paras. 7.15-7.16; and Panel Report, *EC – Asbestos*, paras. 8.16-8.17.

⁴³⁰ Panel Report, *EC – Sardines*, para. 7.16. See also Panel Report, *EC – Asbestos*, paras. 8.16-8.17; Panel Reports, *US – COOL*, para. 7.73.

⁴³¹ See Panel Reports, *EC – Sardines*; *US – Clove Cigarettes*; *US – Tuna II (Mexico)*; *EC – Seal Products*; *US – COOL*; and *US – COOL (Article 21.5 – Canada/Mexico)*. We also note that, in accordance with the General interpretative note to Annex 1A, in the event of a conflict between a provision of the GATT 1994 and the TBT Agreement, the provisions of the TBT Agreement would prevail to the extent of the conflict.

⁴³² TBT Agreement, preamble, 2nd recital.

⁴³³ Australia's response to Panel question No. 1.

⁴³⁴ Australia's first written submission, para. 509.

7.9. It seems to us, therefore, that a more practical approach to our analysis would be one in which we consider, first, the evidence concerning the combined operation of both the trademark and format requirements in the TPP measures and then, to the extent necessary, relevant aspects of the evidence for the purpose of our analysis under Article 20. On this basis, we consider first the complainants' claim that the TPP measures are inconsistent with Article 2.2 of the TBT Agreement.

7.10. We will then assess the complainants' claims under the various provisions of the TRIPS Agreement that they identify as legal bases for their claims.

7.11. We will start by considering the complainants' claims relating to the provisions of the TRIPS Agreement that concern the protection of trademarks. We will first take up the provisions that concern the protectable subject matter, namely Article 2.1 of the TRIPS Agreement in conjunction with Article 6~~quinquies~~ of the Paris Convention (1967) and then Article 15.4 of the TRIPS Agreement. We will next turn to the provisions concerning the rights conferred to the owner of a trademark, namely Article 16.1 and then Article 16.3. Finally, we will address the claims under Article 20 that concern "other requirements" relating to the use of a trademark. As noted above, the complainants use essentially the same set of evidence in respect of their claims under Article 2.2 of the TBT Agreement and some aspects of their claims under Article 20 claims of the TRIPS Agreement.

7.12. We will then address the complainants' claims under Article 2.1 of the TRIPS Agreement in conjunction with Article 10~~bis~~ of the Paris Convention (1967). We then turn to the complainants' claims relating to the protection of geographical indications (GIs) under Articles 22.2(b) and 24.3 of the TRIPS Agreement. In light of the reference in Article 22.2(b) to "use which constitutes an act of unfair competition within the meaning of Article 10~~bis~~ of the Paris Convention (1967)", we consider it appropriate to take up the claims under Article 22.2(b) after first addressing the claims under Article 10~~bis~~ of the Paris Convention (1967).

7.13. Finally, we will consider Cuba's argument that the TPP measures are inconsistent with Article IX:4 of the GATT, in accordance with the approach of past panels that addressed claims under the TBT Agreement before addressing concurrent claims under the GATT 1994.⁴³⁵

7.14. In the context of our examination of the claims under the TRIPS Agreement and the GATT 1994, we will refer, as appropriate, to our analysis of the evidence and our factual findings in the context of our assessment under Article 2.2 of the TBT Agreement.

7.2 Article 2.2 of the TBT Agreement

7.15. Article 2.2 of the TBT Agreement provides that:

Members shall ensure that technical regulations are not prepared, adopted or applied with a view to or with the effect of creating unnecessary obstacles to international trade. For this purpose, technical regulations shall not be more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create. Such legitimate objectives are, *inter alia*: national security requirements; the prevention of deceptive practices; protection of human health or safety, animal or plant life or health, or the environment. In assessing such risks, relevant elements of consideration are, *inter alia*: available scientific and technical information, related processing technology or intended end-uses of products.

7.16. Honduras, the Dominican Republic, Cuba and Indonesia claim that the TPP measures are inconsistent with Article 2.2 because they are "more trade-restrictive than necessary to fulfil a legitimate objective" within the meaning of Article 2.2. Australia considers that some aspects of the TPP measures should not be reviewed under Article 2.2 of the TBT Agreement and, to the extent that they do fall within the purview of this provision, it considers that the complainants have not made a *prima facie* case that they are inconsistent with Article 2.2.

⁴³⁵ Panel Reports, *EC – Sardines*; *US – Clove Cigarettes*; *US – Tuna II (Mexico)*; *EC – Seal Products*; *US – COOL*; and *US – COOL (Article 21.5 – Canada/Mexico)*.

7.2.1 Overview of the claims

7.17. Honduras submits that the trademark and format restrictions stipulated in Australia's plain packaging legislation are inconsistent with Article 2.2 of the TBT Agreement as these measures constitute a technical regulation that is more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks of non-fulfilment.⁴³⁶

7.18. The Dominican Republic claims that Australia violates Article 2.2 of the TBT Agreement because the TPP measures are severely trade-restrictive and are not necessary in view of their failure to contribute to Australia's objective and the reasonable availability of more effective and less trade-restrictive alternatives.⁴³⁷

7.19. Cuba claims that the TPP measures violate Article 2.2 of the TBT Agreement, as they are technical regulations, are "trade-restrictive" and are "more trade-restrictive than necessary" to achieve Australia's public health objective.⁴³⁸

7.20. Indonesia claims that the TPP measures violate Australia's obligations under Article 2.2 of the TBT Agreement, because the technical regulations at issue create unnecessary obstacles to trade as they are more trade-restrictive than necessary to fulfil a legitimate objective.⁴³⁹

7.21. Australia accepts that the "physical requirements" under the TPP measures are technical regulations within the scope of the TBT Agreement⁴⁴⁰ but expresses "significant concerns" with the "systemic implications" of the complainants' contention that the "trademark requirements" under the TPP measures can also be reviewed under the TBT Agreement. It argues that the TBT Agreement addresses technical regulations and does not, on its face, appear to be concerned with the exploitation of IP.⁴⁴¹ Australia considers that, should the Panel take the view that requirements affecting the use of trademarks can be "technical regulations" within the scope of the TBT Agreement, Article 20 of the TRIPS Agreement would remain "the applicable provision in respect of the trademark requirements imposed by the tobacco plain packaging measure", to the exclusion of Article 2.2 in respect of those requirements.⁴⁴²

7.22. Australia further argues that the TPP measures are "in accordance with relevant international standards" for tobacco plain packaging and therefore must be, by virtue of the second sentence of Article 2.5, rebuttably presumed not to be more trade-restrictive than necessary: a presumption, it claims, the complainants did not rebut.⁴⁴³ As a consequence, Australia claims, the Panel "need not proceed any further with its analysis of the complainants' claims under Article 2.2".⁴⁴⁴

7.23. Australia argues that the complainants have failed to establish that the TPP measures are "trade-restrictive" at all. As a result, even if the Panel concludes that the presumption under Article 2.5 is inapplicable, Australia submits that any further relational analysis with respect to the substance of the claim under Article 2.2 would not be required to examine the inconsistency of the TPP measures, as the complainants have failed to establish a *prima facie* case that they are inconsistent with Article 2.2.⁴⁴⁵

⁴⁴⁴ Australia's second written submission, para. 357. See also Australia's first written submission, paras. 519 and 584; second written submission, para. 320; opening statement at the second meeting of the Panel, para. 143; and response to Panel question No. 76, para. 209.

⁴⁴⁵ See Australia's first written submission, para. 585; second written submission, para. 358; and opening statement at the second meeting of the Panel, para. 144. See also response to Panel question No. 76,

7.24. The complainants reject these arguments by Australia. They consider that the measures cannot enjoy the rebuttable presumption under the second sentence of Article 2.5 because they are not "in accordance with relevant international standards" for tobacco plain packaging; and even if they were, such presumption has been successfully rebutted by them.⁴⁴⁶ They also consider that the TPP measures are not only trade-restrictive, but "highly" so.⁴⁴⁷ The complainants therefore request these two preliminary substantive arguments be rejected and, as a consequence, that the Panel proceed into a full analysis of the consistency of the TPP measures with Article 2.2.

7.25. Australia argues that, even if the Panel considered that the complainants had established some degree of trade-restrictiveness, and assuming that the measures cannot enjoy the presumption under the second sentence of Article 2.5, the complainants have nonetheless failed to establish that the measures are inconsistent with Article 2.2, i.e. that they are more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create. Therefore, the Panel would still need to reject the complainants' claims under Article 2.2 of the TBT Agreement in their entirety.⁴⁴⁸

7.2.2 Overall approach of the Panel

7.26. We recall that Article 2.2 of the TBT Agreement provides that:

Members shall ensure that technical regulations are not prepared, adopted or applied with a view to or with the effect of creating unnecessary obstacles to international trade. For this purpose, technical regulations shall not be more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create. Such legitimate objectives are, *inter alia*: national security requirements; the prevention of deceptive practices; protection of human health or safety, animal or plant life or health, or the environment. In assessing such risks, relevant elements of consideration are, *inter alia*: available scientific and technical information, related processing technology or intended end-uses of products.

7.27. It is undisputed that, in accordance with the applicable rules on burden of proof⁴⁴⁹, the burden of establishing that the TPP measures are inconsistent with Article 2.2 rests on the complainants:

With respect to the burden of proof in showing that a technical regulation is inconsistent with Article 2.2, the complainant must prove its claim that the challenged measure creates an unnecessary obstacle to international trade. In order to make a *prima facie* case, the complainant must present evidence and arguments sufficient to establish that the challenged measure is more trade restrictive than necessary to achieve the contribution it makes to the legitimate objectives, taking account of the risks non-fulfilment would create.⁴⁵⁰

7.28. Article 2.2 applies to measures that are "technical regulations" within the meaning of the TBT Agreement. The first step of an analysis of the consistency of the TPP measures with Article 2.2 must therefore be to determine whether they constitute a "technical regulation". In this respect, Australia argues that the TBT Agreement "addresses technical regulations and does not, on its face, appear to be concerned with the exploitation of intellectual property"⁴⁵¹, so that the

para. 210 (noting that trade-restrictiveness need only be demonstrated with respect to the portion of the TPP measures that constitute "technical regulations").

⁴⁴⁶ See, e.g. Honduras's response to Panel question No. 67, pp. 27 and 29; Dominican Republic's response to Panel question No. 66, paras. 292-294; Cuba's response to Panel question No. 67 (annexed to its response to Panel question No. 138) (agreeing with Honduras's response to Panel question No. 67); and Indonesia's response to Panel question No. 66, para. 84.

⁴⁴⁷ Honduras's second written submission, paras. 328-580; and Dominican Republic's second written submission, paras. 924-961. See also Cuba's second written submission, paras. 225-253; and Indonesia's second written submission, paras. 220-273.

⁴⁴⁸ Australia's first written submission, para. 513.

⁴⁵⁰ Appellate Body Report, *US – Tuna II (Mexico)*, para. 323. (footnote omitted)

⁴⁵¹ Australia's first written submission, para. 509.

"trademark requirements" under the TPP measures do not fall within the scope of the TBT Agreement. We will therefore first consider, to the extent necessary to address Australia's arguments in this respect, whether such impediment to the applicability of the TBT Agreement exists.

7.29. Should we determine that the TBT Agreement may be applicable, we will consider the extent to which the TPP measures constitute a "technical regulation" within the meaning of the TBT Agreement.⁴⁵² To the extent that we find that the measures are a technical regulation, such that the obligation in Article 2.2 applies to them, we will then need to consider whether they are inconsistent with that provision.

7.30. As described by the Appellate Body, an assessment of whether a technical regulation is "more trade-restrictive than necessary" within the meaning of Article 2.2 involves a number of considerations:

In sum, we consider that an assessment of whether a technical regulation is "more trade-restrictive than necessary" within the meaning of Article 2.2 of the *TBT Agreement* involves an evaluation of a number of factors. A panel should begin by considering factors that include: (i) the degree of contribution made by the measure to the legitimate objective at issue; (ii) the trade-restrictiveness of the measure; and (iii) the nature of the risks at issue and the gravity of consequences that would arise from non-fulfilment of the objective(s) pursued by the Member through the measure. In most cases, a comparison of the challenged measure and possible alternative measures should be undertaken. In particular, it may be relevant for the purpose of this comparison to consider whether the proposed alternative is less trade restrictive, whether it would make an equivalent contribution to the relevant legitimate objective, taking account of the risks non-fulfilment would create, and whether it is reasonably available.⁴⁵³

7.31. An assessment of the consistency of a technical regulation with Article 2.2 thus involves in the first instance a "relational analysis"⁴⁵⁴ of three factors:

- i. the degree of contribution made by the measure to the legitimate objective at issue;
- ii. the trade-restrictiveness of the measure; and
- iii. the nature of the risks at issue and the gravity of consequences that would arise from non-fulfilment of the objective(s) pursued by the Member through the measure.

7.32. These factors will, in turn, inform the "comparative analysis" that is, in most cases⁴⁵⁵, required to determine whether the challenged measure is **more** trade-restrictive than necessary:

The use of the comparative "more ... than" in the second sentence of Article 2.2 suggests that the existence of an "unnecessary obstacle[] to international trade" in the first sentence may be established on the basis of a comparative analysis of the above-mentioned factors. In most cases, this would involve a comparison of the trade-restrictiveness and the degree of achievement of the objective by the measure at issue with that of possible alternative measures that may be reasonably available **and** less trade restrictive than the challenged measure, taking account of the risks non-fulfilment would create. The Appellate Body has clarified that a comparison with reasonably available alternative measures is a conceptual tool for the purpose of

⁴⁵² Appellate Body Report, *US – Tuna II (Mexico)*, para. 323.

⁴⁵³ Appellate Body Report, *US – Tuna II (Mexico)*, para. 322. (footnote omitted)

⁴⁵⁴ See Appellate Body Reports, *US – COOL*, para. 374 (referring to Appellate Body Report, *US – Tuna II (Mexico)*, para. 318).

⁴⁵⁵ We note in this regard that it is "not mandatory in respect of Article 2.2 of the TBT Agreement for a panel to draw a preliminary conclusion on 'necessity' based on the factors with respect to the technical regulation itself before engaging further in a comparison with proposed alternative measures". Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.235. See also *ibid.* paras. 5.227-5.229. In respect of Article XX of the GATT 1994, see Appellate Body Reports, *EC – Seal Products*, para. 5.215 fn 1299.

ascertaining whether a challenged measure is more trade restrictive than necessary.⁴⁵⁶

7.33. As described above, in the present proceedings, the complainants argue that the TPP measures are trade-restrictive, and that they are more trade-restrictive than necessary to fulfil the legitimate objective they pursue, taking into account the risks that non-fulfilment of this objective would create. The complainants address all elements of the above test, including the three factors forming part of the "relational analysis", and identify certain alternative measures that are, in their view, reasonably available to Australia, would make an equivalent contribution to its objective, and would be less trade-restrictive than the TPP measures.

7.34. Australia considers, however, that the complainants have not established that the measures are trade-restrictive⁴⁵⁷ in the first place, and that therefore, to the extent that the TPP measures are examined under this provision, the Panel should reject these claims "at the threshold".⁴⁵⁸ Australia also argues, in the context of its analysis of the "trade-restrictiveness" of the measures, that the complainants have failed to address the fact that, since the TPP measures were adopted in accordance with the Article 11 and Article 13 FCTC Guidelines, these measures are "in accordance with relevant international standards" within the meaning of the second sentence of Article 2.5 of the TBT agreement.⁴⁵⁹ Consequently, it claims that, to the extent that the definition of a "technical regulation" also encompasses measures affecting the use of a trademark, the TPP measures are "rebuttably presumed" not to create an unnecessary obstacle to international trade under the second sentence of Article 2.5 and that the complainants have not rebutted this presumption.⁴⁶⁰

7.35. Australia concludes that, given the complainants' failure to establish that the measures are trade-restrictive, the Panel should conclude its analysis under Article 2.2 at that stage and is not required to engage in any further "relational" analysis under Article 2.2.⁴⁶¹ Australia submits in the alternative, i.e. only in the event that the Panel would determine that the complainants have made a *prima facie* case that the TPP measures are trade-restrictive, that the complainants have failed to establish a violation of article 2.2, with reference to the additional factors of the "relational analysis" described above.⁴⁶² In particular, Australia argues that the measure pursues a legitimate public health objective and is not more trade-restrictive than necessary to achieve that objective. Australia further considers that the complainants have not established that alternative measures would be reasonably available to it, that would achieve an equivalent contribution to its objective and be less trade-restrictive than the TPP measures.⁴⁶³

7.36. We consider that the possibility that the challenged measures may benefit from the rebuttable presumption conferred by the second sentence of Article 2.5, as invoked by Australia, may have significant implications for the manner in which we must conduct our analysis of the claims under Article 2.2.

7.37. The second sentence of Article 2.5 of the TBT Agreement provides as follows:

Whenever a technical regulation is prepared, adopted or applied for one of the legitimate objectives explicitly mentioned in paragraph 2, and is in accordance with relevant international standards, it shall be rebuttably presumed not to create an unnecessary obstacle to international trade.

⁴⁵⁶ Appellate Body Report, *US – Tuna II (Mexico)*, para. 320 (emphasis original; footnote omitted). See also *ibid.* para. 318.

⁴⁵⁷ Australia's first written submission, para. 583.

⁴⁵⁸ Australia's first written submission, para. 513.

⁴⁵⁹ Australia's first written submission, paras. 567 and 584.

⁴⁶⁰ Australia's first written submission, paras. 519, 567-568 and 584.

⁴⁶¹ Australia's first written submission, para. 585.

⁴⁶² Australia's first written submission, paras. 586-590.

⁴⁶³ Australia's first written submission, paras. 21, 595, and 700-742.

7.38. By its express terms, therefore, the second sentence of Article 2.5 embodies a "rebuttable" presumption, which applies in respect of measures meeting the following two sets of cumulative conditions⁴⁶⁴:

- a. that they are "technical regulations"⁴⁶⁵ prepared, adopted or applied "for one of the legitimate objectives explicitly mentioned" in Article 2.2; and
- b. that they are "in accordance with relevant international standards".

7.39. The requirement to ensure that technical regulations are not prepared, adopted or applied "with a view to or with the effect of creating unnecessary obstacles to trade" is contained in the first sentence of Article 2.2.⁴⁶⁶ In turn, the second sentence of Article 2.2 provides that "[f]or this purpose, technical regulations shall not be more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create" (emphasis added).

7.40. There is therefore a close nexus between the first and second sentences of Article 2.2, both of which establish certain obligations with which WTO Members must comply when preparing, adopting, and applying technical regulations.⁴⁶⁷ Specifically, the requirement for technical regulations not to be "more trade-restrictive than necessary" (in the second sentence) qualifies and elaborates on the scope of the requirement for technical regulations not to create "unnecessary obstacles to trade" (in the first sentence):

Both the first and second sentence of Article 2.2 refer to the notion of "necessity". These sentences are linked by the terms "[f]or this purpose", which suggests that the second sentence qualifies the terms of the first sentence and elaborates on the scope and meaning of the obligation contained in that sentence.⁴⁶⁸

7.41. Against this context, it appears to us that if a technical regulation benefits from a "rebuttable presumption" that it does not create "unnecessary obstacles to trade" pursuant to the second sentence of Article 2.5, this would have a direct impact⁴⁶⁹ on the content and structure of the analysis to be conducted in relation to a claim that the same measure is "more trade-restrictive than necessary" within the meaning of the second sentence of Article 2.2.

7.42. The presumption established under the second sentence of Article 2.5 only applies with respect to technical regulations that are adopted "for one of the legitimate objectives explicitly mentioned" in Article 2.2. An early consideration of this factor will therefore allow us to determine

⁴⁶⁴ The parties seem to follow this same approach of perceiving the second sentence of Article 2.5 as containing two broad set of cumulative conditions. See, e.g. Honduras's response to Panel question No. 66, p. 26; Dominican Republic's response to Panel question No. 66, para. 288; Cuba's response to Panel question No. 66, p. 16 (annexed to its response to Panel question No. 138) (endorsing Honduras's response to question No. 66); Australia's first written submission, para. 569; and Australia's second written submission, para. 314.

⁴⁶⁵ The second sentence of Article 2.5 does not therefore concern the other two types of TBT measures: "standards" and "conformity assessment procedures". We also note that the second sentence of Article 2.5, on its face, only concerns technical regulations that, like the TPP measures, have been prepared, adopted or applied by **central government bodies**. Technical regulations from **local** or **non-governmental** bodies are disciplined in a separate provision, Article 3. The present proceedings, we note, do not involve such types of measures. Therefore, we need not, and do not, examine the question of whether Article 2.5 can be also invoked with respect technical regulations from **local** or **non-governmental** bodies.

⁴⁶⁶ The text of Article 2.2 is set out at paras. 7.15 and 7.26 above.

⁴⁶⁷ See Appellate Body Reports, **US – COOL**, para. 369:

In accordance with the first sentence, [Members] must ensure that such preparation, adoption, and application is not done "with a view to or with the effect of creating unnecessary obstacles to international trade"; and, in accordance with the second sentence, they must ensure that their **technical regulations are "not ... more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create"**.

⁴⁶⁸ Appellate Body Report, **US – Tuna II (Mexico)**, para. 318.

⁴⁶⁹ What precisely the impact of this presumption will be, and when and how it can be rebutted, is a question we need not decide now. Instead, we may return to it later, as needed, after we have considered all elements of the two sets of conditions under the second sentence of Article 2.5.

whether the TPP measures, to the extent that we will have found them to be a technical regulation, fall within the scope of measures to which the presumption of the second sentence of Article 2.5 applies. As described above, the "legitimate objective" at issue is also one of the aspects to be considered in an assessment of whether a technical regulation is "more trade-restrictive than necessary" within the meaning of the second sentence of Article 2.2, independently of the applicability of the rebuttable presumption embodied in the second sentence of Article 2.5.

7.43. In light of these elements, we consider it appropriate, in the circumstances of this case, to start our analysis with a consideration of whether the TPP measures, in whole or in part, constitute a technical regulation within the meaning of the TBT Agreement.⁴⁷⁰ If this is the case, we will consider further whether they pursue a "legitimate objective" within the meaning of Article 2.2 of the Agreement, and, if so, more specifically whether they have been prepared, adopted or applied "for one of the legitimate objectives explicitly mentioned" in Article 2.2.

7.44. Should we determine that the TPP measures are a technical regulation *and* have been prepared, adopted or applied "for one of the legitimate objectives explicitly mentioned" in Article 2.2, we would need to consider further whether they are, as Australia argues, "in accordance with relevant international standards", such that the "rebuttable presumption" under the second sentence of Article 2.5 is applicable. If this is the case, we will also need to determine what this implies for the remainder of our analysis of the claims before us under Article 2.2, including how the complainants may "rebut" this presumption.⁴⁷¹

7.45. Should we determine that the TPP measures are a technical regulation but that the rebuttable presumption embodied in Article 2.5 does not apply, we would then need to pursue our analysis on the basis of the general approach described above, to determine whether the measures are "more trade-restrictive than necessary" within the meaning of Article 2.2. This would include a consideration of the degree to which the measures contribute to a legitimate objective, their trade-restrictiveness and the nature and gravity of the risks that non-fulfilment of the objective would create ("relational analysis"). This would be followed, as relevant, by a consideration of possible alternative measures that may be reasonably available to Australia and would make an equivalent contribution to the objective while being less trade-restrictive ("comparative analysis").

7.46. As described above, we first consider, as a preliminary matter, Australia's argument that the TBT Agreement "does not, on its face, appear to be concerned with the exploitation of intellectual property"⁴⁷², and whether this constitutes an impediment to the application of the TBT Agreement to the "trademark requirements" of the TPP measures.

⁴⁷⁰ On the approach to be followed in considering Australia's arguments under Article 2.5, see, e.g. Honduras's response to Panel question No. 66, p. 26; Dominican Republic's response to Panel question No. 66, paras. 288-289 and 292; Cuba's response to Panel question No. 66, p. 216 (annexed to its response to Panel question No. 138) (endorsing Honduras's response to question No. 66); Indonesia's response to Panel question No. 66, para. 73; Australia's response to Panel question No. 66, para. 156; and Australia's second written submission, para. 313. With the exception of Indonesia (which considers that we should first make all our determinations under the second sentence of Article 2.5 before even "commencing" assessing Article 2.2), we do not consider that the parties' views on this matter are in contradiction with the approach we take here, that is: first, considering the elements that belong to *both* Articles 2.2 and 2.5 (whether the measures constitute a "technical regulation" and the identification of their "objectives"); and then proceeding, as relevant, to the remaining elements that determine the applicability of the rebuttable presumption under the second sentence of Article 2.5 (whether the measures are "in accordance with relevant international standards" and if they are, what the consequences of the presumption conferred are and how it can be rebutted). Finally, having considered the applicability of the presumption under the second sentence of Article 2.5, we would then return to the completion of our analysis under Article 2.2 in light of our earlier determinations in relation to Article 2.5.

⁴⁷¹ See also para. 7.187 and fn 824 below.

⁴⁷² Australia's first written submission, para. 509. See also para. 7.21 above.

7.2.3 Applicability of the TBT Agreement to measures relating to trademarks

7.2.3.1 Main arguments of the parties

7.47. Australia expresses "significant concerns about the systemic implications" of the complainants' contention that the trademark requirements of the TPP measures are covered by the TBT Agreement.⁴⁷³ It considers that an interpretation according to which a measure affecting the use of IP may fall within the scope of the TBT Agreement "has the potential to expand the scope of the TBT Agreement to encompass matters that ... were meant to be reserved for the domestic law of each Member".⁴⁷⁴ As an example, Australia refers to the exclusion, under Article 27.2 of the TRIPS Agreement, of certain inventions from the scope of patentability in certain circumstances.⁴⁷⁵

7.48. In Australia's view, the TBT Agreement addresses technical regulations and does not, on its face, appear to be concerned with the exploitation of IP.⁴⁷⁶ Contrary to Article 20 of the TRIPS Agreement, "Article 2.2 of the TBT Agreement does not refer to the use of a trademark at all, but instead encompasses all manner of 'technical regulations'".⁴⁷⁷ Should the Panel agree that the trademark requirements are outside of the scope of the TBT Agreement, Australia submits that the Panel must dismiss the complainants' claim under this provision, as the complainants have not advanced or substantiated a claim that the non-trademark requirements alone are inconsistent with Article 2.2.⁴⁷⁸ Australia also notes that its claim that the TPP measures constitute a relevant "international standard" under Article 2.5 is independent of whether the Panel finds that the trademark requirements constitute "technical regulations" under Article 2.2.⁴⁷⁹

7.49. Australia adds that "if the Panel takes the view that requirements affecting the use of trademarks can be 'technical regulations' within the scope of the TBT Agreement, Article 20 of the TRIPS Agreement would remain the applicable provision in respect of the trademark requirements imposed by the tobacco plain packaging measure".⁴⁸⁰ According to Australia, "Article 20 of the TRIPS Agreement would apply to the exclusion of Article 2.2 [of the TBT Agreement] in respect of th[e] requirements [affecting the use of trademarks]"⁴⁸¹, for "Article 20 of the TRIPS Agreement would clearly address this subject matter more 'specifically, and in detail' as compared to Article 2.2 of the TBT Agreement".⁴⁸² Australia recalls "the statement by the Appellate Body in *EC – Bananas III* that, as between two agreements or norms addressing the same subject matter, a panel should apply the agreement or norm that 'deals specifically, and in detail' with the particular subject matter".⁴⁸³ Australia refers to other disputes as examples of the application of the *lex specialis* principle⁴⁸⁴, arguing that "the correct application of the principle of *lex specialis* is to apply the agreement or norm that 'deals specifically, and in detail' with the particular subject matter, which, in respect of the trademark requirements, is Article 20 of the TRIPS Agreement".⁴⁸⁵

7.50. While maintaining that "it is possible to comply with both agreements simultaneously and indeed the [tobacco plain packaging] measure does so"⁴⁸⁶, in Australia's view, "the application of two very different standards of review to the same subject matter would constitute a conflict."⁴⁸⁷ According to Australia, "the concurrent application of Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement to the trademark requirements of the tobacco plain packaging measure would mean 'in effect' that the standard of 'unjustifiability' under the former would be supplanted by the standard of 'necessity' under the latter."⁴⁸⁸ In other words, "[a] measure that a

Member is allowed to maintain under Article 20 of the TRIPS Agreement as long as it is not unjustifiable could be found to be inconsistent with the standard of least trade-restrictiveness under Article 2.2 of the TBT Agreement."⁴⁸⁹

7.51. According to Australia, such an "approach would not do justice to the separate requirements of the different standards embodied in the two provisions".⁴⁹⁰ For Australia, "Article 20 of the TRIPS Agreement requires that the use of a trademark in the course of trade shall not be unjustifiably encumbered by special requirements, whereas Article 2.2 of the TBT Agreement requires that technical regulations not create unnecessary obstacles to trade and not be more trade-restrictive than necessary to fulfil a legitimate objective."⁴⁹¹ According to Australia, "[t]he Panel should resist the temptation to think that every measure taken by a Member must be challengeable in every respect under the covered agreements and to try to interpret the WTO agreements to achieve such an end"; "[t]he covered agreements have simply not been designed in such a manner to ensure a uniform coverage whereby every aspect of every measure taken by a Member can be challenged before the WTO."⁴⁹²

7.52. For Honduras and the Dominican Republic, by raising this preliminary defense, Australia "tries to shield [the TPP measures] from WTO scrutiny".⁴⁹³ According to Honduras and the Dominican Republic, "it is Australia's arguments that give rise to systemic concerns" because "Australia's line of argument effectively removes the trademark requirements from scrutiny under both Article 20 of the TRIPS Agreement, and Article 2.2 of the TBT Agreement"⁴⁹⁴, thus "allow[ing] Members to defeat the basic treaty function of a trademark without any scrutiny under the WTO agreements".⁴⁹⁵ For the Dominican Republic, "Article 27.2 of the **TRIPS Agreement** serves only to highlight that, when the drafters intended to reserve specific matters to domestic law they did so expressly."⁴⁹⁶

7.53. According to Honduras, the Dominican Republic and Cuba, Australia "selectively quotes from, and misstates" the Appellate Body Report in *EC – Bananas III*.⁴⁹⁷ Honduras adds that "the order of analysis bears no relation with the issue of applicability of one provision to the exclusion of another": "[o]n various occasions, the Appellate Body has recalled its findings in *EC – Bananas III* to reiterate the rule concerning the order of analysis, which is that panels should examine first the provision that deals with specifically and in detail with a certain issue".⁴⁹⁸ The Dominican Republic also addresses some of the other disputes referenced by Australia.⁴⁹⁹

7.54. Referencing the concurrent applicability of the covered agreements as a cardinal principle of the interpretation of the covered agreements, the Dominican Republic, supported by Indonesia⁵⁰⁰, argues that it is Australia's contrary position that raises serious systemic concerns.⁵⁰¹ For the Dominican Republic, the same measure is, in principle, subject to all of the different obligations

under the covered agreements, unless the contrary is stated in the text of the agreements, or there is conflict in the application of the agreements.⁵⁰² According to the Dominican Republic, the "principle of effectiveness" dictates that covered agreements be read harmoniously, as a whole.⁵⁰³

7.55. Cuba adds that the application of various WTO Agreements to the same measure does not raise any major problem for the WTO system of trade rules.⁵⁰⁴ Cuba points out that the Appellate Body in *EC – Bananas III* discussed the possibility that the GATT 1994 and the GATS could apply to a single measure⁵⁰⁵, and that in *EC – Trademarks and Geographical Indications (Australia)* the panel assessed the same measure under the TBT and TRIPS Agreements.⁵⁰⁶

7.56. Honduras further argues that, by virtue of the principle of the Single Undertaking, as a general rule, WTO obligations apply cumulatively.⁵⁰⁷ WTO jurisprudence confirms that different obligations contained in different agreements can co-exist since one does not override the other, and that there is no hierarchy between different WTO Agreements.⁵⁰⁸

7.57. Cuba argues that neither the WTO Agreement nor the case law make clear which law is more specific between the TBT and the TRIPS Agreements.⁵⁰⁹ Honduras adds that departures from the rule that WTO agreements apply cumulatively are rare and, where applicable, are clearly stipulated in the text of the covered agreements⁵¹⁰, and that in contrast, there is no provision in WTO law indicating that, as argued by Australia, the TRIPS Agreement applies to the exclusion of the TBT Agreement.⁵¹¹ Honduras maintains that if this had been the drafters' intention, they would have included a specific clause to that effect.⁵¹² The Dominican Republic and Indonesia similarly argue if Members had wanted to exclude the application of the TBT Agreement to measures falling under the TRIPS Agreement, they would have done so expressly, as was done in Article 1.5 of the TBT Agreement with respect to measures covered by the Agreement on the Application of Sanitary and Phytosanitary Measures (SPS Agreement).⁵¹³

7.58. According to the Dominican Republic, a conflict arises when it is impossible to comply concurrently with the obligations in two different provisions, and in this case, it is perfectly possible for a Member to comply concurrently with its obligations under Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement.⁵¹⁴

7.2.3.2 Arguments of the third parties

7.59. Argentina agrees with Australia that the TPP measures' "trademark requirements" should be only examined under the TRIPS Agreement because it is the Agreement that "deals specifically"

with the issue of the relationship between Members' right to regulate health and the protection of trademarks.⁵¹⁵

7.60. Brazil "understands that a measure may fall under more than one of the Covered Agreements. In this sense, a measure dealing with intellectual property issues may also be a technical regulation within the meaning of the TBT Agreement insofar as it deals with product characteristics, labelling or other TBT-related matters concerning trade in products."⁵¹⁶ Brazil also believes that analysis of the TBT Agreement and the TRIPS Agreement should be independent from one another, as there is not a relationship of *lex specialis* between them. While the TBT Agreement deals with technical regulations and their effects on the trade of goods, the TRIPS Agreement establishes IP rights relating to trade. Brazil continues that each agreement integrates different annexes of the Marrakesh Agreement and deals with substantially different obligations. Inconsistency with the obligations in one agreement does not bring about necessarily a violation of the other.⁵¹⁷

7.61. Canada considers that the TBT and TRIPS Agreements "are not mutually exclusive" in the sense that both can apply to the same measure, including a measure that deals with IP. Moreover, says Canada, "intellectual property measures have not been carved out of the TBT Agreement and may constitute, *inter alia*, 'technical regulations', within the meaning of the term under Annex 1.1 of that Agreement."⁵¹⁸ Canada considers that because both the TRIPS and TBT Agreements can apply to IP measures, "it would be incorrect for the Panel to employ the *lex specialis* principle in this case." Canada says that, in fact, "[b]oth the TBT and TRIPS Agreements are *lex specialis* and discipline defined categories of measures." The *lex specialis* principle, notes Canada, "does not apply if the two treaties in issue deal with the same subject matter from different points of view, apply in different circumstances, or one provision is more far-reaching than, but is not inconsistent with, the other." In this respect, Canada does not see the relationship between the TRIPS and TBT Agreements as indicating that "one is not more specialized than the other", as both agreements "have the potential to apply to the same subject matter from different points of view, and the provisions under these covered agreements are cumulative and are not in conflict".⁵¹⁹ Canada thus concludes that the Panel "must make an assessment of whether the measure in issue satisfies the threshold elements under both [the TBT and TRIPS Agreements]", i.e. whether the TPP measures constitute a "technical regulation" and are trade-restrictive for the purposes of the TBT Agreement, and whether, *inter alia*, they are "special requirements" for the purposes of Article 20 of the TRIPS Agreement. Should the TPP measures satisfy these threshold elements under both the TBT and TRIPS Agreements, "the measure must then be assessed for consistency with the relevant provisions under these agreements."⁵²⁰

7.62. China first notes that it is undisputed that the TPP measures' "form requirements" are technical regulations under the TBT Agreement.⁵²¹ With respect to the measures' "trademark requirements", in particular, China considers that they meet the definition in Annex 1.1 of the TBT Agreement because they are mandatory requirements in respect of "product characteristics" and/or "packaging, marking or labelling".⁵²² China also considers the *lex specialis* principle inapposite to the present disputes and says that it is "well established by the Appellate Body that different aspects of a measure(s) at issue can be scrutinized under different provisions of the WTO covered agreements". Therefore, says China, "[w]hile the trademark requirements are subject to Article 20 of the TRIPS Agreement, these requirements, as technical regulations, are concurrently subject to Article 2.2 of the TBT Agreement, although the two provisions apply to different aspects of the trademark requirements."⁵²³

7.63. The European Union considers that if a "document prohibits, restricts or conditions the use of terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method, it falls within the definition of technical regulation, assuming that the other elements of the definition are fulfilled". For the European Union, the fact that any such requirement "is also a trademark or a geographical indication (terms that are not used in the TBT Agreement) does not, without more, take the document outside the scope of Article 2.2 of the TBT Agreement". The same is also true, claims the European Union, when terminology, symbol, packaging, marking or labelling requirements also fall within the scope of Article 20 (or other provisions) of the TRIPS Agreement: this "does not, without more, remove [those requirements] from the scope of Article 2.2 of the TBT Agreement". This indicates, therefore, that the respective obligations under these two agreements "apply concurrently",⁵²⁴ as evidenced by the fact that the TBT Agreement has been applied with respect to both "geographical indications" and "origin labelling", when neither of these terms are "expressly referenced" in the TBT Agreement's definition of technical regulations.⁵²⁵ As to the *lex specialis* principle, while the European Union considers it as "a useful analytical tool", it also believes that it is "not to be mechanistically applied". The European Union, more specifically, believes that the *lex specialis* principle "does not, without more, lead to the disapplication of Article 2.2 of the TBT Agreement, in favour of Article 20 or other provisions of the TRIPS Agreement".⁵²⁶ If anything, the European Union sees this issue "more in terms of order of analysis, a matter with respect to which the Panel has significant discretion, provided that it faithfully addresses all of the issues that need to be resolved for the purposes of this dispute".⁵²⁷

7.64. Guatemala considers that the provisions of the TRIPS Agreement are not "applicable to the exclusion of the provisions of the TBT Agreement".⁵²⁸ Guatemala says that, consistent with Article II of the WTO Agreement as well as Appellate Body jurisprudence, "covered agreements must be interpreted in a coherent and consistent manner", in the sense that "[w]henever a measure imposed by a Member falls within the scope of two or more covered agreements, the analysis of such measure should be made in a way that all the covered agreements concerned are taken into account and the obligations contained in each of them are carefully observed."⁵²⁹ Guatemala considers, as it says Australia does also, that the TBT and TRIPS Agreements deal with different subject-matter.⁵³⁰ In Guatemala's view, even assuming *arguendo* that these Agreements "might deal with the same subject matter, they do that from a different point of view and apply in different circumstances".⁵³¹

7.65. Japan believes that "[t]here is nothing in the TBT Agreement that *a priori* excludes measures regulating the use of a trademark from the scope of Article 2.2 of the Agreement. Thus, whether the measures' 'trademark requirements' fall within the scope of that TBT provision 'depends on whether they constitute a technical regulation'.⁵³² In this sense, Japan considers that the TPP measures meet the definition of "technical regulation" in Annex 1.1 of the TBT Agreement because they not only lay down "product characteristics" for tobacco products themselves, but also for their packaging.⁵³³ As to the relationship between the TRIPS and TBT Agreements, Japan first posits that the Appellate Body decision in *EC – Bananas*, cited by Australia, only relates "to the order of analysis and do[es] not stand for the proposition that a provision of one covered

⁵²⁵ European Union's third-party response to Panel question No. 1, para. 1. For the European Union, "[a] similar approach has been followed with respect to origin labelling, origin also being something not expressly mentioned in the definition of a technical regulation, and origin marking being specifically regulated by Article IX of the GATT and origin by the Agreement on Rules of Origin." European Union's third-party submission, para. 44 (referring to Appellate Body Reports, *US – COOL*, para. 256).

⁵²⁶ European Union's third-party submission, para. 44. See also European Union's third-party response to Panel question No. 1, paras. 2-13.

⁵²⁷ European Union's third-party response to Panel question No. 1, para. 1.

⁵²⁸ Guatemala's third-party submission, para. 15.

⁵²⁹ Guatemala's third-party submission, paras. 8-10 (referring to Appellate Body Reports, *US – Countervailing and Anti-Dumping Measures (China)*, and *Argentina – Footwear (EC)*).

⁵³⁰ Guatemala's third-party submission, para. 11 (referring to Australia's first written submission, paras. 508-510).

⁵³¹ Guatemala's third-party submission, para. 14.

⁵³² Japan's third-party submission, para. 39.

⁵³³ Japan's third-party submission, paras. 40-42. See also Japan's third-party response to Panel question No. 1a, p. 1.

agreement which 'deals specifically, and in detail' with the particular subject matter applies to the exclusion of a provision on another agreement which also deal with the same matter".⁵³⁴ Japan then draws attention to the Appellate Body decision in *China – Publications and Audiovisual Products*, which it considers more appropriate to this case⁵³⁵, and supports the view that both the TRIPS and TBT Agreements are "integral part[s]" of the same treaty – the WTO Agreement – and, consequently, their provisions should be interpreted in a way "that gives meaning to *all* of them, harmoniously".⁵³⁶

7.66. Nicaragua argues that in the present dispute, it is "clear" that the TPP measures constitute a technical regulation. Nicaragua finds that the distinction between the trademark and the format requirements is not entirely clear because format elements and physical features of packaging (e.g. types of opening, edges or embossing) can also be trademarked. Similarly, format elements, like colors of logos or figurative trademarks, are part and parcel of the "terminology, symbols, packaging, marking or labelling requirements" that make up physical product characteristics. Thus, while descriptively convenient, Nicaragua does not find it analytically helpful to distinguish "trademark" requirements from "physical" requirements. For Nicaragua, the trademark and the physical requirements of the TPP measures satisfy the requirements of a "technical regulation" in Annex 1.1 of the TBT Agreement, and constitute a single measure covered by the TBT Agreement, as confirmed by Australia's notification of the measure under Article 2.9.2 of the TBT Agreement.⁵³⁷

7.67. Nicaragua disagrees with Australia's reading of the panel findings in *US – 1916 Act (Japan)* and *US – Customs Bond Directive* as supporting its *lex specialis* argument in this case. In those cases, the question concerned the relationship of the GATT 1994 to a specific Agreement found in Annex 1A of the WTO Agreement, and the relationship between different provisions of the GATT 1994, respectively. The situation is entirely different in the current disputes, which concern two equally applicable WTO covered agreements that apply to the same factual situation with different obligations. Nicaragua submits that applying both sets of agreements to the same factual situation does not raise any systemic concern and the rule of *lex specialis* therefore does not apply.⁵³⁸

7.68. Norway finds that the requirements relating to packaging, marking or labelling must be considered as "technical regulations", and does not find it necessary to distinguish between the restriction on the use of a trademark and the physical requirements in the assessment of Article 2.2 of the TBT Agreement.⁵³⁹

7.69. Singapore is of the view that the Panel should consider both the trademark requirements and format requirements together, in assessing the consistency of the TPP measures with Article 2.2 of the TBT Agreement. Both the trademark requirements and format requirements are "technical regulations" within the meaning of Annex 1.1 of the TBT Agreement and thus are subject as a whole to the TBT Agreement.⁵⁴⁰

7.70. Singapore submits that a measure may engage one or more of the covered agreements at the same time, and agrees with Japan that the Appellate Body's findings in *EC – Bananas III* relate to the *order of analysis*, rather than the exclusion of a provision of another agreement which deals with the same matter. Singapore asserts that Annex 1.1 of the TBT Agreement, which concerns terminology, symbols, packaging, marking or labelling requirements as they apply to a product, is

⁵³⁴ Japan's third-party submission, paras. 43-44. See also Japan's third-party response to Panel question No. 1b, pp. 2-3 (suggesting that Australia's reliance on Appellate Body Report, *EC – Bananas III* and Panel Reports, *US – 1916 Act (Japan)*, and *US – Customs Bond Directive* is misplaced).

⁵³⁵ Japan's third-party submission, paras. 45-46. See also Japan's third-party response to Panel question No. 1b, pp. 2-4.

⁵³⁶ Japan's third-party submission, para. 38 (referring to Appellate Body Report, *Argentina – Footwear (EC)*, para. 81). See also Japan's third-party response to Panel question No. 1b, pp. 2-4.

⁵³⁷ Nicaragua's third-party response to Panel question No. 1, pp. 1-2. See also third-party response to Panel question Nos. 2 and 3, pp. 2-4.

⁵³⁸ Nicaragua's third-party response to Panel question No. 1, pp. 1-2 (referring to Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.87, for the notion that applying two covered agreements to a single regulatory measure is "quite common in WTO jurisprudence").

⁵³⁹ Norway's third-party submission, para. 78.

⁵⁴⁰ Singapore's third-party response to Panel question No. 1, pp. 1-2 (referring to Appellate Body Reports, *EC – Sardines*, para. 176; and *EC – Asbestos*, para. 67).

as specific and detailed in this context as the TRIPS Agreement is with regard to trademark requirements. Singapore concludes that there is nothing that prevents the Panel from examining the trademark requirements in this case under Article 2.2 of the TBT Agreement.⁵⁴¹

7.71. South Africa states that "it would be cogent to argue that the same measure could be examined under two different agreements". It submits that Article 20 of the TRIPS Agreement, unlike Article 2.2 of the TBT Agreement, does not incorporate a necessity test and as a result it would be unwarranted to read such a test into the current provisions. "If the use of a trademark as a 'symbol or mark' is nonetheless also considered in context of Annex 1.1 of the TBT Agreement ... the Panel should be able to assess whether such a 'technical regulation' (to the extent that a trade mark may be said to be a 'technical regulation') complies with the requirement of Article 2.2 of the TBT Agreement."⁵⁴²

7.72. Peru notes Australia's indication that the TPP measures are in conformity with the Article 11 FCTC Guidelines, which is a relevant international standard under Article 2.4 of the TBT Agreement. Peru recalls, in this respect, that paragraph 46 of these Guidelines exhorts FCTC Parties to consider adopting measures to restrict or prohibit the use of logos, colours, brand images or promotional information on packaging other than brand names and product names displayed in a standard colour and font. In this regard, in addition of assessing certain TRIPS provisions, resolving this dispute also requires determining whether the FCTC COP is a body with activities in standardization and, if this is the case, whether their Guidelines constitute a relevant international standard. In the present proceedings, Peru considers that the Panel must decide on these two aspects. The Panel cannot therefore apply the principle of the judicial economy because the TPP measures contain two aspects: one related to IP (trademark use) and another related to technical regulations (tobacco product labelling and other related aspects).⁵⁴³

7.73. Uruguay submits that the TPP measures may be defined as a set in the shape of a policy designed to protect human, animal or plant life and human health. They may also be characterized as technical regulations and thus come within the scope of the TBT Agreement by requiring the presence of certain physical features on the packaging.⁵⁴⁴

7.74. Zimbabwe is of the view that all of the TPP measures' aspects provide for "mandatory" requirements "which lay down product characteristics" with respect to "symbols, packaging, marking or labelling requirements" and apply to an identifiable group of products. Zimbabwe thus considers that the attempt to distinguish the form or physical requirements from the trademark requirements is not meaningful, as all aspects of the challenged measures are covered by the disciplines of the TBT Agreement.⁵⁴⁵

7.2.3.3 Analysis by the Panel

7.75. We now consider whether, as Australia argues, certain aspects of the TPP measures relating to the use of trademarks on tobacco products and their retail packaging, which it describes as the "trademark requirements", should be considered not to be covered by the disciplines of Article 2.2 of the TBT Agreement, because they would fall within the purview of the TRIPS Agreement, which addresses IP rights. This argument requires us to consider the relationship between these agreements, and their relevant provisions, to the extent necessary to determine whether it would be inappropriate to consider under Article 2.2 of the TBT Agreement these aspects of the measures.

7.76. As observed by the Appellate Body, it is now well established that the WTO Agreement is a "Single Undertaking", such that WTO obligations are generally cumulative and Members must comply with all of them simultaneously.⁵⁴⁶ This is expressed in Article II:2 of the WTO Agreement, which provides that:

⁵⁴¹ Singapore's third-party response to Panel question No. 1, pp. 2-3.

⁵⁴² South Africa's third-party response to Panel question No. 1b, p. 2.

⁵⁴³ Peru's third-party statement, paras. 4-6.

⁵⁴⁴ Uruguay's third-party submission, para. 66.

⁵⁴⁵ Zimbabwe's third-party statement, para. 9.

⁵⁴⁶ Appellate Body Report, *Korea – Dairy*, para. 74.

The agreements and associated legal instruments included in Annexes 1, 2 and 3 (hereinafter referred to as "Multilateral Trade Agreements") are integral parts of this Agreement, binding on all Members.

7.77. In the words of the Appellate Body, Article II:2 of the WTO Agreement "expressly manifests the intention of the Uruguay Round negotiators that the provisions of the *WTO Agreement* and the Multilateral Trade Agreements included in its Annexes 1, 2 and 3 must be read as a whole".⁵⁴⁷ Thus, "an appropriate reading of this 'inseparable package of rights and disciplines' must, accordingly, be one that gives meaning to *all* the relevant provisions of these two equally binding agreements".⁵⁴⁸ As the Appellate Body pointed out, "[i]t is important to understand that the *WTO Agreement* is *one treaty*" and the different agreements annexed to it "are integral parts of that treaty and are equally binding on all Members pursuant to Article II:2 of the *WTO Agreement*".⁵⁴⁹

7.78. This cumulative and concurrent application of the WTO covered agreements was confirmed by the Appellate Body in *Canada – Periodicals* in relation to the GATT 1994 (trade in goods) and the GATS (trade in services), which appear under Annexes 1A and 1B of the WTO Agreement, respectively. The Appellate Body stated, in this regard, that "[t]he entry into force of the GATS ... does not diminish the scope of application of the GATT 1994."⁵⁵⁰ The Appellate Body explicitly agreed with the Panel's statement that: "The ordinary meaning of the texts of GATT 1994 and GATS as well as Article II:2 of the WTO Agreement, taken together, indicates that obligations under GATT 1994 and GATS can co-exist and that one does not override the other."⁵⁵¹ As expressed by the Appellate Body, the potential overlap in scope of application between the GATT and GATS depends ultimately on the measure at issue:

Given the respective scope of application of the two agreements, they may or may not overlap, depending on the nature of the measures at issue. Certain measures could be found to fall exclusively within the scope of the GATT 1994, when they affect trade in goods as goods. Certain measures could be found to fall exclusively within the scope of the GATS, when they affect the supply of services as services. There is yet a third category of measures that could be found to fall within the scope of both the GATT 1994 and the GATS. These are measures that involve a service relating to a particular good or a service supplied in conjunction with a particular good. In all such cases in this third category, the measure in question could be scrutinized under both the GATT 1994 and the GATS. However, while the same measure could be scrutinized under both agreements, the specific aspects of that measure examined under each agreement could be different.⁵⁵²

7.79. These elements make clear, in our view, that the fact that the covered agreements may overlap in scope does not imply that the scope of application of each agreement should be diminished or otherwise modified. Rather, the various covered agreements co-exist and apply cumulatively, and it is possible, therefore, for a measure to be simultaneously covered by the disciplines of one or more covered agreements. This is also consistent with the well-established tenet of treaty interpretation that, "[i]n light of the interpretive principle of effectiveness, it is the *duty* of any treaty interpreter to 'read all applicable provisions of a treaty in a way that gives meaning to *all* of them, harmoniously.'"⁵⁵³ Further, as observed by the panel in *Indonesia – Autos*, "in public international law there is a presumption against conflict", and "[t]his presumption is

⁵⁵³ Appellate Body Report, *Korea – Dairy*, para. 81. (emphasis original)

especially relevant in the WTO context since all WTO agreements ... were negotiated at the same time, by the same Members and in the same forum."⁵⁵⁴

7.80. We therefore see no basis to assume that, as a matter of principle, measures affecting the use of IP, and thus potentially covered by the TRIPS Agreement, could not also be covered by relevant provisions of the TBT Agreement, to the extent that they would also fall within the scope of application of these provisions.⁵⁵⁵

7.81. This potential overlap in scope of application has already been noted in respect of the relationship between another agreement relating to trade in goods under Annex 1A, the GATT 1994, and the TRIPS Agreement, which is contained in Annex 1C of the WTO Agreement. In *EC – Trademarks and Geographical Indications (Australia)*, Australia challenged certain EC measures both under specific provisions of the TRIPS Agreement concerning the protection of GIs and trademarks, and under specific provisions of the GATT 1994 concerning non-discrimination in relation to imported products. In that case, the panel "d[id] not consider that the conclusion of the TRIPS Agreement reduced the scope of application of GATT"⁵⁵⁶:

[T]here is no hierarchy between the TRIPS Agreement and GATT 1994, which appear in separate annexes to the WTO Agreement. The ordinary meaning of the texts of the TRIPS Agreement and GATT 1994, as well as Article II:2 of the WTO Agreement, taken together, indicates that obligations under the TRIPS Agreement and GATT 1994 can co-exist and that one does not override the other. This is analogous to the finding of the Panel in *Canada – Periodicals*, with which the Appellate Body agreed, concerning the respective scopes of GATS and GATT 1994. Further, a "harmonious interpretation" does not require an interpretation of one that shadows the contours of the other. It is well established that the covered agreements apply cumulatively and that consistency with one does not necessarily imply consistency with them all.⁵⁵⁷

7.82. On the same basis, that panel also reviewed, under both the TBT and TRIPS Agreements, certain requirements of the measure at issue affecting "geographical indications", which, like "trademarks", constitutes one of the categories of IP rights covered by the TRIPS Agreement.⁵⁵⁸

7.83. Thus, we conclude that, where a measure falls within the scope of more than one covered agreement, including agreements on trade in goods under Annex 1A (such as the GATT 1994 or the TBT Agreement) and the TRIPS Agreement, these covered agreements apply concurrently and cumulatively, to the extent that the measure at issue, or aspects thereof, fall within the scope of each relevant agreement. *A priori*, this concurrent coverage entails the possibility of reviewing the same measure or aspect of a measure under all applicable provisions. Indeed, in the present dispute, Australia has not suggested that the applicability of the provisions of the TRIPS Agreement invoked by the complainants other than Article 20 would constitute an obstacle to the applicability of the TBT Agreement to the TPP measures.

⁵⁵⁴ Panel Report, *Indonesia – Autos*, para. 14.28. (footnotes omitted)

⁵⁵⁵ Indeed, we note that matters relating to the protection of intellectual property were not, as such, excluded from the scope of the GATT 1947, as illustrated by the terms of Article XX(d) and the proceedings in *US – Section 337*. In *US – Section 337*, patent-related matters were reviewed under Articles III:4 and XX(d) of the GATT 1947 to ensure that intellectual property (IP) rules do not unnecessarily discriminate against imported goods or constitute a disguised restriction on trade. IP matters also appear elsewhere in the GATT 1994, e.g. Articles IX:6, XII:3(c)(iii), and XVIII:10. Additionally, IP matters are also explicitly mentioned in various other WTO Agreements, including the Agreement on Subsidies and Countervailing Measures (SCM Agreement) (Article 8.2(a)(iii)); the Customs Valuation Agreement (Article 15.2(b) and para. 1 of Note to Article 8.1(c)); the Preshipment Inspection Agreement (Articles 2.12(a), 2.12(b), and 20(c)); the Agreement on Government Procurement (GPA) (Articles VI:3, XV:1(b), and XXIII:2); and the Agreement on Government Procurement, as amended by the 2012 Protocol (Amended GPA) (Articles. III:2(c), X:4, XIII:1(b)(ii), XVII:3(b), and XVII:3(c)). See also Article 7.1(b) of the Agreement on Textile and Clothes, which is no longer in force.

⁵⁵⁶ Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.267 fn 260. See also Panel Report, *EC – Trademarks and Geographical Indications (United States)*, para. 7.227 fn 234.

⁵⁵⁷ Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.244 (footnotes omitted). See also *ibid.* para. 7.87; and Panel Report, *EC – Trademarks and Geographical Indications (United States)*, paras. 7.36 and 7.208.

⁵⁵⁸ Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, paras. 7.443-7.515.

7.84. Therefore, while not prejudging, at this stage of our analysis, the extent to which requirements affecting the use of trademarks may be considered to constitute "technical regulations" within the meaning of the TBT Agreement⁵⁵⁹, we find that the mere fact that a measure, or a certain aspect of a measure, is covered by a specific provision of the TRIPS Agreement is not, in itself, an obstacle to its potentially also falling within the scope of relevant provisions of the TBT Agreement.

7.85. We also recall that the fact that one of several covered agreements that apply concurrently to the same measure might be considered to be more "specific" to the subject-matter at issue in a given dispute has not been understood to imply, as Australia suggests, that the more specific agreement should apply *to the exclusion* of the more "general" one. Rather, as reflected in the rulings of the Appellate Body in *EC – Bananas III* referred to by Australia⁵⁶⁰:

Although *Article X:3(a) of the GATT 1994 and Article 1.3 of the Licensing Agreement both apply*, the Panel, in our view, should have applied the *Licensing Agreement* first, since this agreement deals specifically, and in detail, with the administration of import licensing procedures. If the Panel had done so, then there would have been no need for it to address the alleged inconsistency with Article X:3(a) of the GATT 1994.⁵⁶¹

7.86. While the Appellate Body refers in this context to the principle of *lex specialis*, it addresses the order of analysis and the subsequent possibility of exercising judicial economy, rather than conflict. Determining the order of analysis is different from the resolution of conflict between provisions, as "[t]he latter entails the use of conflict resolution rules or interpretative techniques."⁵⁶² Order of analysis is an analytical tool to determine the sequence in which an adjudicator addresses different, possibly related, claims, whereas conflict of norms relates to how cumulatively applicable provisions should be interpreted relative to each other.⁵⁶³

7.87. Other disputes invoked by Australia with reference to the *lex specialis* principle⁵⁶⁴ also do not support the view that a "more specific" covered agreement should, as a matter of principle, apply to the exclusion of the more general one. As the European Union observes, *US – 1916 Act (Japan)* "was not a case in which [specific provisions of covered agreements] were

⁵⁵⁹ See section 7.2.4 below on this question.

⁵⁶⁰ Australia's first written submission, para. 511.

⁵⁶¹ Appellate Body Report, *EC – Bananas III*, para. 204 (emphasis added). See also Appellate Body Report, *US – Upland Cotton*, paras. 549-550:

We recall that the *Agreement on Agriculture* and the *SCM Agreement* "are *both* Multilateral Agreements on Trade in Goods contained in Annex 1A of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*")", and, as such, are *both* 'integral parts' of the same treaty, the *WTO Agreement*, that are 'binding on all Members'. Furthermore, as the Appellate Body has explained, "a treaty interpreter must read all applicable provisions of a treaty in a way that gives meaning to *all* of them, harmoniously". We agree with the Panel that "Article 3.1(b) of the *SCM Agreement* can be read together with the *Agreement on Agriculture* provisions relating to domestic support in a coherent and consistent manner which gives full and effective meaning to all of their terms".

In sum, we are not persuaded by the United States' submission that the prohibition in Article 3.1(b) of the *SCM Agreement* is inapplicable to import substitution subsidies provided in connection with products falling under the Agreement on Agriculture. WTO Members may still provide domestic support that is consistent with their reduction commitments under the *Agreement on Agriculture*. In providing such domestic support, however, WTO Members must be mindful of their other WTO obligations, including the prohibition in Article 3.1(b) of the *SCM Agreement* on the provision of subsidies that are contingent on the use of domestic over imported goods. (emphasis original) (footnotes omitted)

⁵⁶² Panel Report, *India – Autos*, para. 7.158 fn 380.

⁵⁶³ Overlap between two provisions *ratione materiae* is the precondition for the application of the principle *lex specialis derogat legi generali*. As the panel in *Thailand – Cigarettes (Philippines)* noted, "[t]he *lex specialis* principle has been defined by the International Law Commission ('ILC') as 'a generally accepted technique of interpretation and conflict resolution in international law. It suggests that whenever two or more norms deal with the same subject matter, priority should be given to the norm that is more specific'". Panel Report, *Thailand – Cigarettes (Philippines)*, para. 7.1047. (footnote omitted)

⁵⁶⁴ Australia's first written submission, para. 511 fn 695.

applied to the exclusion of Article III:4 of the GATT 1994, but merely a case in which judicial economy was exercised⁵⁶⁵ by the panel. Although the passage⁵⁶⁶ referenced by Australia⁵⁶⁷ addresses the principle of *lex specialis*, subsequent paragraphs of the panel's analysis address⁵⁶⁸ and explicitly reference judicial economy.⁵⁶⁹ Likewise, the paragraphs of the panel report in *US – Customs Bond Directive*⁵⁷⁰, also referred to by Australia⁵⁷¹, discuss the principle of *lex specialis* in the context of the question faced by the panel in *US – 1916 Act (Japan)* as to "whether it must also analyse a claim under [another provision of another covered agreement]".⁵⁷² The paragraphs referenced by Australia constitute the final part of an analysis of reasons supporting the panel's earlier conclusion that "on the basis of judicial economy, [it] refrains from ruling on"⁵⁷³ "a number of additional *as applied* claims under the *GATT 1994*".⁵⁷⁴ We consider the notion of judicial economy to be distinct from that of order of analysis, even if "[t]he order selected for examination of the claims may also have an impact on the potential to apply judicial economy."⁵⁷⁵ In our understanding, judicial economy⁵⁷⁶ is also distinct from conflict of norms. Judicial economy entails the adjudicator's choice of not entering into the analysis of a claim, provided this does not jeopardize effective resolution of the dispute⁵⁷⁷, whereas conflict of norms relates to how the rules underlying those claims should be interpreted relative to each other.

7.88. For the above reasons, we find that, in principle, the TBT and TRIPS Agreements may apply concurrently and cumulatively to different aspects of the same measures. We approach our further analysis under the TBT Agreement with this understanding, noting that the TBT and TRIPS Agreements should be interpreted harmoniously.

7.89. Nonetheless, the fact that each of the Multilateral Trade Agreements is an integral part of the Marrakesh Agreement does not, in and of itself, make clear how specific rights and obligations contained in those Multilateral Trade Agreements relate to each other, "particularly when they are contained in different instruments that nevertheless relate to the same subject matter".⁵⁷⁸ It cannot be excluded, therefore, that the concurrent application of different covered agreements may give rise to conflicts, including between specific provisions of these different agreements.

7.90. This possibility is expressly recognized, in respect of Agreements within Annex 1A of the WTO Agreement (i.e. the multilateral agreements on trade in goods), through the "General interpretative note to Annex 1A", which provides that:

In the event of conflict between a provision of the General Agreement on Tariffs and Trade 1994 and a provision of another agreement in Annex 1A to the Agreement Establishing the World Trade Organization (referred to in the agreements in Annex 1A as the "WTO Agreement"), the provision of the other agreement shall prevail to the extent of the conflict.

7.91. The panel in *EC – Bananas III* understood this provision as follows:

In light of the wording, the context, the object and the purpose of th[e General Interpretative] Note, ... it is designed to deal with (i) clashes between obligations

contained in GATT 1994 and obligations contained in agreements listed in Annex 1A, where those obligations are mutually exclusive in the sense that a Member cannot comply with both obligations at the same time, and (ii) the situation where a rule in one agreement prohibits what a rule in another agreement explicitly permits.⁵⁷⁹

7.92. No equivalent provision exists, however, in respect of the relationship between covered agreements contained in Annex 1A (Multilateral Agreements on Trade in Goods, including the TBT Agreement) and Annex 1B (GATS) or Annex 1C (TRIPS), that would provide specific guidance on whether a conflict exists between provisions of these different agreements or clarify how such conflicts should be addressed. Against this context, recourse to other interpretative elements will be necessary to determine the specific relationship among individual terms and provisions of the Multilateral Trade Agreements, and between such provisions and the Marrakesh Agreement.⁵⁸⁰ As expressed by the Appellate Body:

[T]he specific relationship among individual terms and provisions of the Multilateral Trade Agreements, and between such provisions and the Marrakesh Agreement, must be determined on a case-by-case basis through a proper interpretation of the relevant provisions of these agreements. In other words, this specific relationship must be ascertained through scrutiny of the provisions concerned, read in the light of their context and object and purpose, with due account being taken of the overall architecture of the WTO system as a single package of rights and obligations, and any specific provisions that govern or shed light on the relationship between the provisions of different instruments (such as the General Interpretative Note to Annex 1A).⁵⁸¹

7.93. Further, as observed by the panel in *Indonesia – Autos*, "in public international law there is a presumption against conflict", and "[t]his presumption is especially relevant in the WTO context since all WTO agreements ... were negotiated at the same time, by the same Members and in the same forum."⁵⁸² That panel also considered that a conflict between the Agreement on Subsidies and Countervailing Measures (SCM Agreement) and Article III of the GATT 1994 would only arise in "the narrow situation of mutually exclusive obligations for provisions that cover the same type of subject matter"⁵⁸³:

In international law for a conflict to exist between two treaties, three conditions have to be satisfied. First, the treaties concerned must have the same parties. Second, the treaties must cover the same substantive subject matter. Were it otherwise, there would be no possibility for conflict. Third, the provisions must conflict, in the sense **that the provisions must impose mutually exclusive obligations. "... [T]echnically speaking, there is a conflict when two (or more) treaty instruments contain obligations which cannot be complied with simultaneously. ... Not every such divergence constitute a conflict, however. ... Incompatibility of contents is an essential condition of conflict"**.⁵⁸⁴

7.94. In *Guatemala – Cement I*, the Appellate Body, in interpreting the term "difference" in Article 1.2 of the DSU in the context of the relationship between the rules and procedures of the DSU and Article 17 of the Anti-Dumping Agreement, adopted a similarly restrictive definition of "conflict", albeit not explicitly limited to conflicting "obligations":

[I]t is only where the provisions of the DSU and the special or additional rules and procedures of a covered agreement **cannot** be read as **complementing** each other that the special or additional provisions are to **prevail**. A special or additional provision should only be found to **prevail** over a provision of the DSU in a situation where

⁵⁸¹ Appellate Body Reports, *China – Rare Earths*, para. 5.55. See also, in respect of Agreements under Annex 1A, Appellate Body Report, *Brazil – Desiccated Coconut*, p. 14, DSR 1997:I, 167, pp. 178-179.

⁵⁸² Panel Report, *Indonesia – Autos*, para. 14.28. (footnotes omitted)

⁵⁸³ Panel Report, *Indonesia – Autos*, para. 14.49.

⁵⁸⁴ Panel Report, *Indonesia – Autos*, para. 14.28 fn 649.

adherence to the one provision will lead to a violation of the other provision, that is, in the case of a **conflict** between them.⁵⁸⁵

7.95. These rulings address somewhat different situations as regards the legal nature of the provisions among which a conflict may arise (i.e. "obligations", explicit rights, "provisions", and prohibitions). They also appear to reflect partly different definitions of "conflict". The panel in *Indonesia – Autos* considered that "under public international law a conflict exists in the narrow situation of mutually exclusive obligations for provisions that cover the same type of subject matter."⁵⁸⁶ A variant of this narrow concept of conflict involves two positive obligations, as under the first situation of "conflict" identified by the panel in *EC – Bananas III* ("obligations are mutually exclusive in the sense that a Member cannot comply with both obligations at the same time"⁵⁸⁷). Another variant entails the type of logical conflict between two provisions identified by the Appellate Body in *Guatemala – Cement I* in the context of Article 1.2 of the DSU between a positive and a negative obligation, i.e. between two provisions, one of which prescribes what the other forbids.⁵⁸⁸ Finally, and somewhat differently, the second type of situation identified by the panel in *EC – Bananas III* ("where a rule in one agreement prohibits what a rule in another agreement explicitly permits"⁵⁸⁹) would not involve two obligations but rather a prohibition, i.e. a negative obligation, and an explicit authorization.

7.96. In these proceedings, we must consider the specific relationship between the terms of Article 20 of the TRIPS Agreement and those of Article 2.2 of the TBT Agreement. At their core, both Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement disallow certain measures, in that they require Members **not** to adopt or maintain certain types of measures ("shall not"). In essence, Article 20 prohibits the adoption of "special requirements" that "unjustifiably encumber" the use of a trademark in the course of trade, whereas Article 2.2 of the TBT Agreement prohibits the preparation, adoption, or application of "technical regulations" (including those dealing with "terminology, symbols, packaging, marking or labelling requirements") that are more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create. We consider that these two obligations are not in substantive contradiction or "mutually exclusive". Nor do we see any logical conflict between them.⁵⁹⁰ Because these two provisions contain prohibitions that are neither mutually exclusive nor in substantive contradiction, it is possible to comply with both of them at the same time: "adherence to the one provision will [not] lead to a violation of the other provision".⁵⁹¹

7.97. In the present proceedings, Australia has recognized that "it is possible to comply with both agreements simultaneously and indeed the [TPP] measure does so".⁵⁹² As we understand it, therefore, Australia is not alleging the existence of a conflict between Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement in the narrow sense of mutually exclusive obligations, whereby it would be impossible to comply with both provisions at the same time. We understand Australia to argue instead that complying with the requirements under Article 2.2 of the TBT Agreement, in relation to the trademark requirements of the TPP measures, would undermine the flexibility available to it under Article 20 of the TRIPS Agreement in respect of such requirements. This is closer, though not identical – to the second type of situation identified by the panel in *EC – Bananas III* as giving rise to a conflict, namely "the situation where a rule in one agreement prohibits what a rule in another agreement explicitly permits".⁵⁹³ In fact, whereas the panel in *EC – Bananas III* referred to an "explicit[] permi[ssion]", Australia invokes a flexibility that is indirect and implicit: it emanates from what is **not prohibited** by Article 20 of the

TRIPS Agreement, i.e. what, Australia argues, does not amount to an unjustifiable encumbrance on the use of trademarks in the sense of that provision.

7.98. We note that this understanding of conflict is broader in scope than previous descriptions of this concept by panels and the Appellate Body, as reflected above. We also recall that in *US – Upland Cotton* the Appellate Body addressed the relationship of the SCM Agreement and the Agreement on Agriculture. Notwithstanding the existence of a specific provision in the Agreement on Agriculture giving precedence to the latter⁵⁹⁴, the Appellate Body concluded that absent an explicit carve-out or authorization to depart from the prohibition in Article 3.1(b) of the SCM Agreement⁵⁹⁵, this prohibition applies concurrently with relevant provisions of the Agreement on Agriculture:

We recall that the *Agreement on Agriculture* and the *SCM Agreement* "are *both* Multilateral Agreements on Trade in Goods contained in Annex 1A of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*")", and, as such, are *both* 'integral parts' of the same treaty, the *WTO Agreement*, that are 'binding on all Members'". Furthermore, as the Appellate Body has explained, "a treaty interpreter must read all applicable provisions of a treaty in a way that gives meaning to *all* of them, harmoniously". We agree with the Panel that "Article 3.1(b) of the SCM Agreement can be read together with the *Agreement on Agriculture* provisions relating to domestic support in a coherent and consistent manner which gives full and effective meaning to all of their terms".

In sum, we are not persuaded by the United States' submission that the prohibition in Article 3.1(b) of the *SCM Agreement* is inapplicable to import substitution subsidies provided in connection with products falling under the *Agreement on Agriculture*. WTO Members may still provide domestic support that is consistent with their reduction commitments under the *Agreement on Agriculture*. In providing such domestic support, however, WTO Members must be mindful of their other WTO obligations, including the prohibition in Article 3.1(b) of the *SCM Agreement* on the provision of subsidies that are contingent on the use of domestic over imported goods.⁵⁹⁶

7.99. We note that there is no provision similar to Article 21.1 of the Agreement on Agriculture that would give precedence to the provisions of the TRIPS Agreement over the TBT Agreement. Nor does the TRIPS Agreement, and its Article 20 in particular, contain an explicit carve-out or authorization to depart from the prohibition contained in Article 2.2 of the TBT Agreement.

7.100. By its terms, Article 20 of the TRIPS Agreement prohibits "special requirements" that "unjustifiably encumber" the use of a trademark in the course of trade. While Article 20 does not prohibit, and thus, tolerates encumbrances that are not unjustifiable, it does not explicitly identify, authorize or encourage encumbrances that would not be unjustifiable. Likewise, Article 2.2 of the TBT Agreement does not prohibit, and thus, tolerates technical regulations that are not more trade-restrictive than necessary to fulfil a legitimate objective, taking account of the risks non-fulfilment would create; however, Article 2.2 of the TBT Agreement does not explicitly encourage such technical regulations. In short, each provision disallows certain measures and

⁵⁹⁴ According to Article 21.1 of the Agreement on Agriculture, "[t]he provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the provisions of this Agreement." See Appellate Body Report, *US – Upland Cotton*, para. 531.

⁵⁹⁵ According to the Appellate Body, Article 21.1 of the Agreement on Agriculture "could apply in ... three situations: where, for example, the domestic support provisions of the Agreement on Agriculture would prevail in the event that an *explicit carve-out or exemption* from the disciplines in Article 3.1(b) of the SCM Agreement existed in the *text* of the Agreement on Agriculture. Another situation would be where it would be impossible for a Member to comply with its domestic support obligations under the Agreement on Agriculture and the Article 3.1(b) prohibition simultaneously. Another situation might be where there is an *explicit authorization* in the text of the Agreement on Agriculture that would authorize a measure that, in the absence of such an *express authorization*, would be prohibited by Article 3.1(b) of the SCM Agreement." Appellate Body Report, *US – Upland Cotton*, para. 532, referring to Panel Report, *US – Upland Cotton*, para. 7.1038 (underlining original; italics added). The Appellate Body also recalled its earlier finding that "[i]f the negotiators [of the Agreement on Agriculture] had intended to permit Members to act inconsistently with Article XIII of the GATT 1994, they would have said so explicitly". Appellate Body Report, *US – Upland Cotton*, para. 548, referring to Appellate Body Report, *EC – Bananas III*, para. 157.

⁵⁹⁶ Appellate Body Report, *US – Upland Cotton*, paras. 549-550. (emphasis original) (footnotes omitted)

establishes a balance to assess, on a case-by-case basis, whether specific measures are permitted. On their face, the explicit prohibitions contained in Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement respectively must be read and, absent a conflict, applied together. The principle of harmonious reading dictates that the flexibilities implicitly left by those prohibitions also need to be viewed together, without *a priori* giving precedence to one over, and to the exclusion of, the other.

7.101. We do not exclude that certain aspects of the TPP measures may fall within the scope of application of both the TBT Agreement and Article 20 of the TRIPS Agreement, to the extent that they would constitute both a "technical regulation" within the meaning of the TBT Agreement and "special requirements" falling within the scope of Article 20 of the TRIPS Agreement. Assuming *arguendo* that this would be the case, to determine whether one provision prohibits what the other permits, we would need to consider whether their concurrent application to the same measures or aspects of these measures would lead to "conflicting" outcomes. Australia argues that they do because by applying Article 2.2 of the TBT Agreement "the standard of 'unjustifiability' under [Article 20 of the TRIPS Agreement] would be supplanted by the standard of 'necessity' under the [Article 2.2 of the TBT Agreement]".⁵⁹⁷ In other words, "[a] measure that a Member is allowed to maintain under Article 20 of the TRIPS Agreement as long as it is not unjustifiable *could* be found to be inconsistent with the standard of least trade-restrictiveness under Article 2.2 of the TBT Agreement."⁵⁹⁸

7.102. Implicit in Australia's arguments is the assumption that the "necessity test" under Article 2.2 of the TBT Agreement is more stringent than the "justifiability test" under Article 20 of the TRIPS Agreement, or at least that their concurrent application "could" lead to outcomes that Australia describes as conflicting. Specifically, the situation that Australia envisages is that Article 20 of the TRIPS Agreement would allow scope for the maintenance of a measure that would be disallowed if considered under Article 2.2 of the TBT Agreement. We consider, however, that the relative stringency of these two tests is very difficult to establish in the abstract. As described by Australia, the two provisions entail "two very different standards"⁵⁹⁹, informed by the specific context of each Agreement.⁶⁰⁰ Given these differences, the outcome of the analysis under each provision would depend on the circumstances of the case, and it is conceivable that a measure would not be found to be "more trade-restrictive than necessary" under Article 2.2 of the TBT Agreement, while "unjustifiably" "encumbering" the use of trademarks within the meaning of Article 20 of the TRIPS Agreement, or vice-versa.⁶⁰¹ We see no basis, therefore, to assume that the concurrent application of these two provisions to aspects of the same measures that may fall within the scope of both agreements would necessarily lead to the type of outcomes identified by Australia as conflicting.

7.103. We further note that, while the TBT and TRIPS Agreements are contained in distinct parts of Annex 1 of the WTO Agreement, they pursue complementary objectives. The TBT Agreement serves to "further the objectives of GATT 1994"⁶⁰², while the TRIPS Agreement serves to address the "applicability of the basic principles of GATT 1994".⁶⁰³ We note in this regard the preambular language of the General Agreement on Tariffs and Trade 1947 (GATT 1947), incorporated into the GATT 1994⁶⁰⁴, setting forth Members' objective of "expanding the... **exchange of goods**" and Members' desire to "contribut[e] to th[is] objective[] by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce".⁶⁰⁵ We also note that very similar objectives figure in the preamble to the WTO Agreement itself, to which both

⁵⁹⁷ Australia's response to Panel question No. 145, para. 2.

⁵⁹⁸ Australia's response to Panel question No. 75, para. 206. (emphasis added)

⁵⁹⁹ Australia's response to Panel question No. 75, para. 206. See also para. 7.50 above.

⁶⁰⁰ Australia's response to Panel question No. 75, para. 206. See also Australia's response to Panel question No. 89, para. 20.

⁶⁰¹ We also note in this respect that certain technical regulations may, under the second sentence of Article 2.5 of the TBT Agreement, enjoy a rebuttable presumption of consistency with Article 2.2, where they are "in accordance with relevant international standards". This legal presumption has no equivalent in Article 20 of the TRIPS Agreement. See also para. 7.37 above.

⁶⁰² TBT Agreement, preamble, second recital.

⁶⁰³ TRIPS Agreement, preamble, second recital (a).

⁶⁰⁴ GATT 1994, para. 1(a).

⁶⁰⁵ GATT 1947, preamble, second and third recitals.

the TBT and the TRIPS Agreement are annexed.⁶⁰⁶ The first recital of the TRIPS Agreement underscores the Agreement's objective of reducing trade barriers and avoiding the creation of trade restrictions: "Desiring to reduce distortions and impediments to international trade, and taking into account the need to promote effective and adequate protection of intellectual property rights, and to ensure that measures and procedures to enforce intellectual property rights do not themselves become barriers to legitimate trade".⁶⁰⁷

7.104. Further, the TBT Agreement needs to be interpreted in light of its preambular objective that "no country should be prevented from taking measures necessary ... for the protection of human ... life or health". By virtue of the same preambular paragraph, this prerogative of Members is "subject to the requirement that [such measures] are not applied in a manner which would constitute a ... disguised restriction on international trade, and are otherwise in accordance with the provisions of th[e TBT] Agreement".⁶⁰⁸ Likewise, in setting forth that "Members may, in formulating or amending their laws and regulations, adopt measures necessary to protect public health", Article 8.1 of the TRIPS Agreement makes this conditional on "such measures [being] consistent with the provisions of th[e TRIPS] Agreement".

7.105. Taken in context, therefore, Article 2.2 of the TBT Agreement and Article 20 of the TRIPS Agreement may each be assumed to reflect a certain balance between at least three dimensions: (i) the objective of reducing and avoiding trade barriers; (ii) the possibility of adopting measures for legitimate public policy purposes, including public health; and (iii) the imperative of complying with applicable requirements under the relevant provisions of each agreement. The requirements under these two provisions may thus be seen as complementary rather than contradictory.⁶⁰⁹

7.106. In light of the above, we see no basis to assume the existence of a conflict between Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement – either under the various definitions of conflict described above, or in the sense suggested by Australia, that would require us to abstain from examining aspects of the TPP measures that may fall within the scope of application of both the TBT and TRIPS Agreements. Rather, as elaborated above, we must assume that both agreements apply cumulatively and harmoniously.⁶¹⁰

7.107. Having reached these initial determinations, we now consider whether the TPP measures are covered by the TBT Agreement, and more specifically, whether they constitute a technical regulation within the meaning of that agreement. We will address in that context whether the trademark-related requirements of the TPP measures constitute a technical regulation within the

⁶⁰⁶ See WTO Agreement, preamble, first ("expanding the production of and trade in goods") and third recitals ("contribut[e] to these objectives by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international trade relations"). As the Appellate Body held:

At the end of the Uruguay Round, negotiators fashioned an appropriate preamble for the new **WTO Agreement**, which strengthened the multilateral trading system by establishing an international organization, *inter alia*, to facilitate the implementation, administration and operation, and to further the objectives, of that Agreement and the other agreements resulting from that Round. In recognition of the importance of continuity with the previous GATT system, negotiators used the preamble of the GATT 1947 as the template for the preamble of the new **WTO Agreement**.

Appellate Body Report, *US – Shrimp*, para. 152.

⁶⁰⁷ TRIPS Agreement, preamble, first recital. The final recital of the TRIPS preamble further refers to the desire to establish a "mutually supportive relationship" between, on the one hand, the WTO, and on the other, WIPO, as well as "other relevant international organizations".

⁶⁰⁸ TBT Agreement, preamble, sixth recital.

⁶⁰⁹ The two provisions strike such balance from *different perspectives* which, rather than *contradictory*, may be seen instead is *complementary*. A WTO Member needs to strike the health/trade balance when regulating labelling and packaging that may also affect the use of trademarks, from both the perspective of Article 20 of the TRIPS Agreement and Article 2.2 of the TBT Agreement.

⁶¹⁰ The reference in Article 19 of TRIPS to "other government requirements for goods ... protected by the trademark" may also indicate the negotiators' intention to ensure that requirements under the TRIPS Agreement harmoniously co-exist with measures that both fall (*inter alia*) under the TBT Agreement ("government requirements for goods") and the TRIPS Agreement ("which constitute an obstacle to the use of the trademark" for that "good"). Such "other requirements" are considered as "valid reasons for non-use".

meaning of the TBT Agreement. It is only in the event that we would determine that the measures are inconsistent with Article 2.2 of the TBT Agreement while being permitted under Article 20 of the TRIPS Agreement that the situation alleged by Australia to constitute a conflict would arise. Should we find that this is the case, we would subsequently need to consider whether this situation gives rise to a "conflict", as argued by Australia.

7.2.4 Whether the TPP measures constitute a technical regulation within the meaning of Annex 1.1 of the TBT Agreement

7.108. The complainants claim that the TPP measures are covered by the TBT Agreement, as they fall within the definition of "technical regulation" in Annex 1.1 of the Agreement.⁶¹¹ Australia, as described above, "accepts that the physical requirements [under the TPP measures] are technical regulations within the scope of the TBT Agreement".⁶¹² However, it considers that "[t]he TBT Agreement addresses technical regulations and does not, on its face, appear to be concerned with the exploitation of intellectual property".⁶¹³

7.109. Article 2.2 of the TBT Agreement applies to "technical regulations" by central government bodies. A "technical regulation" is defined in Annex 1.1 to the TBT Agreement⁶¹⁴ as a:

Document which lays down product characteristics or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method.

7.110. Whether a measure constitutes a technical regulation depends on three criteria⁶¹⁵:

- a. "[f]irst, the document must apply to an identifiable product or group of products";
- b. "[s]econd, the document must lay down one or more characteristics of the product"; and
- c. "[t]hird, compliance with the product characteristics must be mandatory".⁶¹⁶

7.111. The parties do not contest the relevance of these criteria for determining whether a measure is a technical regulation.⁶¹⁷

7.112. As the Appellate Body has noted:

[A] determination of whether a measure constitutes a technical regulation "must be made in the light of the characteristics of the measure at issue and the circumstances of the case". ... [T]his analysis should give particular weight to the "integral and essential" aspects of the measure. In determining whether a measure is a technical regulation, a panel must therefore carefully examine the design and operation of the measure while seeking to identify its "integral and essential" aspects. It is these features of the measure that are to be accorded the most weight for purposes of

⁶¹¹ Honduras's first written submission, paras. 829-846; Honduras's second written submission, paras. 445-460; Dominican Republic's first written submission, paras. 936-950; Dominican Republic's second written submission, paras. 815-841; Cuba's first written submission, paras. 391-397; Cuba's second written submission, paras. 192-197; Indonesia's first written submission, paras. 369-384; and Indonesia's second written submission, paras. 211-219.

⁶¹² Australia's first written submission, para. 507.

⁶¹³ Australia's first written submission, para. 509.

⁶¹⁴ Under Article 1.2 of the TBT Agreement, "for the purposes of this Agreement the meaning of the terms given in Annex 1 applies". See also the second paragraph of the introduction to Annex 1 to the TBT Agreement.

⁶¹⁵ Appellate Body Report, *EC – Sardines*, para. 176.

⁶¹⁶ Appellate Body Report, *EC – Sardines*, para. 176 (emphasis original) (referring to Appellate Body Report, *EC – Asbestos*, paras. 66-70).

⁶¹⁷ Honduras's first written submission, para. 791; Dominican Republic's first written submission, para. 937; Cuba's first written submission, para. 392; Indonesia's first written submission, para. 370; and Australia's first written submission, paras. 507 and 563.

characterizing the measure, and, thereby, for determining whether it is subject to the disciplines of the TBT Agreement. The ultimate conclusion as to the legal characterization of the measure must be made in respect of, and having considered, the measure as a whole.⁶¹⁸

7.113. With these considerations in mind, we address the three criteria identified above, that must be satisfied in order for the TPP measures to constitute a technical regulation.

7.114. We note at the outset that each of the legal instruments comprising the TPP measures satisfies the requirement in Annex 1.1 that technical regulations be contained in a "document".⁶¹⁹ We therefore consider further below whether the TPP measures (i) apply to an identifiable group of products, and (ii) lay down one or more characteristics of the products, (iii) with which compliance is mandatory.

7.2.4.1 Whether the TPP measures apply to an identifiable group of products

7.2.4.1.1 Main arguments of the parties

7.115. The complainants argue that the TPP measures (including the TMA Act) apply to an identifiable product or group of products in accordance with Annex 1.1 of the TBT Agreement.⁶²⁰ They note that Section 4(1) of the TPP Act contains a definition of "tobacco products"⁶²¹ for the purposes of the same Act.⁶²² Honduras adds⁶²³ that the Explanatory Memorandum to the TPP Bill clarifies the breadth of this definition.⁶²⁴ Cuba references the subtitle of the TPP Act ("An Act to discourage the use of tobacco products, and for related purposes")⁶²⁵, and observes that Australia indicates that "[t]he tobacco plain packaging requirements apply to *all tobacco products*".⁶²⁶

⁶¹⁸ Appellate Body Reports, *EC – Seal Products*, para. 5.19 (referring to Appellate Body Reports, *US – Tuna II (Mexico)*, para. 188 (in turn referring to Appellate Body Reports, *EC – Asbestos*, para. 64; and *EC – Sardines*, paras. 192 and 193)); and *EC – Asbestos*, para. 72.

⁶¹⁹ In *US – Tuna II (Mexico)*, the Appellate Body held that:

Annex 1.1 [of the TBT Agreement] defines the term "technical regulation" by reference to a "document", which is defined quite broadly as "something written, inscribed, etc., which furnishes evidence or information upon any subject".³⁹¹ The use of the term "document" could therefore cover a broad range of instruments or apply to a variety of measures.

[*fn original] ³⁹¹ *Shorter Oxford English Dictionary*, 6th edn, A. Stevenson (ed.) (Oxford University Press, 2007), Vol. 1, p. 731. We note that the ISO/IEC Guide 2: 1991, General Terms and Their Definitions Concerning Standardization and Related Activities (the "ISO/IEC Guide 2: 1991") establishes that "[a] document is to be understood as any medium with information recorded on or in it."

Appellate Body Report, *US – Tuna II (Mexico)*, para. 185. See also Appellate Body Reports, *EC – Seal Products*, paras. 5.9-5.10 (stating that "the scope of Annex 1.1 appears to be limited to those documents that establish or prescribe something and thus have a certain normative content."). See also para. 7.291 and fns 1153, 1001 and 1007 below.

⁶²⁰ Honduras's first written submission, paras. 831-833; Dominican Republic's first written submission, paras. 939-940; Dominican Republic's second written submission, para. 820; Cuba's first written submission, para. 394; Cuba's second written submission, para. 194; and Indonesia's first written submission, paras. 371-374.

⁶²¹ Cuba's first written submission, para. 394; Dominican Republic's first written submission, para. 940; Honduras's first written submission, para. 831; and Indonesia's first written submission, para. 372.

⁶²² According to the TPP Act, "*tobacco product* means processed tobacco, or any product that contains tobacco, that: (a) is manufactured to be used for smoking, sucking, chewing or snuffing; and (b) is not included in the Australian Register of Therapeutic Goods maintained under the *Therapeutic Goods Act 1989*". TPP Act, (Exhibits AUS-1, JE-1), Section 4(1).

⁶²³ Honduras's first written submission, para. 832.

⁶²⁴ Honduras quotes the following portion of the Explanatory Memorandum: "This definition is based on the definition in the WHO FCTC. It is intended to encompass all tobacco products designed for human consumption, and will include, for example, cigarettes, cigars, roll-your-own tobacco, bidis, kreteks, little cigars, and dissolvable tobacco products such as tablets containing tobacco for sucking". TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 9.

⁶²⁵ Cuba's second written submission, para. 194 fn 100.

⁶²⁶ Cuba's second written submission, para. 194 fn 100 (emphasis added by Cuba) (quoting Australia's first written submission, para. 125 and referring to Australia's first written submission, para. 132).

Indonesia invokes the title of Chapter 2 of the TPP Act ("Requirements for plain packaging and appearance of tobacco products") and notes that, according to the "Simplified Outline" of its Chapter 2⁶²⁷, "Part 2 of this Chapter specifies requirements for the retail packaging and appearance of tobacco products".⁶²⁸ Thus, Indonesia argues⁶²⁹, the situation under the TPP measures is similar to *US – Clove Cigarettes*, where the panel had found that the relevant measure "explicitly identifie[d] the products it cover[ed]"; hence, the products were "not merely 'identifiable', as was apparently the case in *EC – Asbestos*" but "[r]ather ... 'expressly identified'".⁶³⁰ For Indonesia, this is confirmed by the TPP Regulations' stated "[p]urpose": to "prescribe requirements for the retail packaging and appearance of tobacco products for Part 2 of Chapter 2 of the [TPP] Act".⁶³¹

7.116. As noted, *Australia* accepts that the "physical requirements" of the TPP measures lay down product characteristics⁶³²; however, it contests the applicability of the TBT Agreement to the "trademark requirements" of the TPP measures.⁶³³ In doing so, Australia does not explicitly address the above arguments of the complainants as regards the applicability of the TPP measures to an identifiable product or group of products.

7.2.4.1.2 Analysis by the Panel

7.117. A "technical regulation" must be applicable to an identifiable product, or group of products", but the term "identifiable" does not require that a technical regulation "expressly identify" its product scope, as long as the products to which it applies are "identifiable".⁶³⁴ In assessing whether this criterion is satisfied, we give the most weight to those provisions of the TPP measures that, in our view, represent their integral and essential aspects.⁶³⁵

7.118. The terms of the *TPP Act* reveal that it applies to an expressly identified group of products. The "simplified outline" in Section 12 of the TPP Act provides that "[t]his Act regulates the retail packaging and appearance of tobacco products".⁶³⁶ The TPP Act contains the following definition of "tobacco product"⁶³⁷:

processed tobacco, or any product that contains tobacco, that:

⁶²⁷ TPP Act, (Exhibits AUS-1, JE-1), p. 18.

⁶²⁸ Indonesia's first written submission, para. 372; response to Panel question Nos. 62 and 115; and second written submission, para. 215.

⁶²⁹ Indonesia's first written submission, paras. 371-372.

⁶³⁰ Panel Report, *US – Clove Cigarettes*, para. 7.27.

⁶³¹ Indonesia's first written submission, para. 374; and response to Panel question No. 62 (referring to TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.4).

⁶³² Australia's first written submission, para. 507.

⁶³³ Australia's first written submission, paras. 509-512.

⁶³⁴ According to the Appellate Body:

A "technical regulation" must, of course, be applicable to an *identifiable* product, or group of products. Otherwise, enforcement of the regulation will, in practical terms, be impossible. This consideration also underlies the formal obligation, in Article 2.9.2 of the *TBT Agreement*, for Members to notify other Members, through the WTO Secretariat, "of the *products to be covered*" by a proposed "technical regulation". (emphasis added) Clearly, compliance with this obligation requires identification of the product coverage of a technical regulation. However, in contrast to what the Panel suggested, this does not mean that a "technical regulation" must apply to "*given*" products which are actually *named*, *identified* or *specified* in the regulation. (emphasis added) Although the *TBT Agreement* clearly applies to "products" generally, nothing in the text of that Agreement suggests that those products need be named or otherwise *expressly* identified in a "technical regulation". Moreover, there may be perfectly sound administrative reasons for formulating a "technical regulation" in a way that does *not* expressly identify products by name, but simply makes them identifiable – for instance, through the "characteristic" that is the subject of regulation.

Appellate Body Report, *EC – Asbestos*, para. 70 (emphasis original; footnote omitted).

⁶³⁵ Appellate Body Reports, *EC – Seal Products*, para. 5.19.

⁶³⁶ TPP Act, (Exhibits AUS-1, JE-1), Section 12.

⁶³⁷ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1). See Cuba's first written submission, para. 394; Dominican Republic's first written submission, para. 940 and fns 116 and 805; Honduras's first written submission, para. 831; and Indonesia's first written submission, para. 372.

- (a) is manufactured to be used for smoking, sucking, chewing or snuffing; and
- (b) is not included in the Australian Register of Therapeutic Goods maintained under the *Therapeutic Goods Act 1989*.

Note: Loose tobacco for roll-your-own cigarettes is an example of processed tobacco.
A cigar or cigarette is an example of a product that contains tobacco.⁶³⁸

7.119. As Honduras notes⁶³⁹, the Explanatory Memorandum to the TPP Bill relevantly clarifies the scope of this definition as follows:

The definition of "tobacco product" in the [TPP Act] means that generally any product containing tobacco, no matter how small the amount, will be within the scope of the [TPP Act] if it was manufactured for smoking, sucking, chewing or snuffing.

This definition is based on the definition in the WHO FCTC. It is intended to encompass all tobacco products designed for human consumption, and will include, for example, cigarettes, cigars, roll-your-own tobacco, bidis, kreteks, little cigars, and dissolvable tobacco products such as tablets containing tobacco for sucking.

It is important to note that therapeutic goods, which are aimed at helping people to quit their use of tobacco products, will not be regulated by the [TPP Act] **Products** that contain nicotine but do not contain any tobacco will not be regulated by the [TPP Act].

The broad definition of "tobacco products" may encompass some tobacco products which are unlawful, under Commonwealth, State or Territory laws that regulate the use and sale of tobacco, and that are not affected by the operation of this Bill.⁶⁴⁰

7.120. Also, as Indonesia points out⁶⁴¹, Section 3 of the TPP Act (entitled "Objects of the Act") relates to "tobacco products"⁶⁴² and, as discussed further below, defines the objects of the Act with reference to the effects of the Act on use of those products.⁶⁴³

7.121. Moreover, the TPP Act explicitly defines "tobacco product requirement" as:

⁶³⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1).

⁶³⁹ Honduras's first written submission, para. 832.

⁶⁴⁰ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 9.

⁶⁴¹ Indonesia's first written submission, para. 374; and response to Panel question No. 62 (referring to TPP Regulations, (Exhibits AUS-3, JE-7), Regulation 1.1.4).

⁶⁴² Section 3 defines the "Objects of this Act" as follows:

- (1) The objects of this Act are:
 - (a) to improve public health by:
 - (i) discouraging people from taking up smoking, or using tobacco products; and
 - (ii) encouraging people to give up smoking, and to stop using tobacco products; and
 - (iii) discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing; and
 - (iv) reducing people's exposure to smoke from tobacco products; and
 - (b) to give effect to certain obligations that Australia has as a party to the Convention on Tobacco Control.
- (2) It is the intention of the Parliament to contribute to achieving the objects in subsection (1) by regulating the retail packaging and appearance of tobacco products in order to:
 - (a) reduce the appeal of *tobacco products* to consumers; and
 - (b) increase the effectiveness of health warnings on the retail packaging of *tobacco products*; and
 - (c) reduce the ability of the retail packaging of *tobacco products* to mislead consumers about the harmful effects of smoking or using *tobacco products*.

TPP Act, (Exhibits AUS-1, JE-1), Section 3. (emphasis added)

⁶⁴³ This observation is without prejudice to our assessment, in Section 7.2.5.1 below, of whether the TPP measures pursue a legitimate objective.

[T]he following requirements in relation to the retail packaging or appearance of tobacco products:

- (a) a requirement specified in Part 2 of Chapter 2;
- (b) a requirement prescribed by regulations made under Part 2 of Chapter 2;
- (c) if subsection 15(2) applies (acquisition of property)—a requirement prescribed by regulations made under section 15.⁶⁴⁴

7.122. As Indonesia notes⁶⁴⁵, Chapter 2 of the TPP Act is entitled "Requirements for plain packaging and appearance of tobacco products" and, according to the Simplified Outline of Chapter 2⁶⁴⁶, Part 2 of Chapter 2 "specifies requirements for the retail packaging and appearance of tobacco products".⁶⁴⁷ Thus, on its express terms, the TPP Act sets out requirements in respect of the packaging and appearance of an expressly identified group of products, namely "tobacco products". Part 2 of Chapter 2 contains the substantive requirements of the TPP Act challenged by the complainants under the TBT Agreement.

7.123. The TPP Regulations elaborate on the "tobacco product requirements" in the TPP Act. Specifically, Section 27 of the TPP Act provides that regulations "may prescribe additional requirements in relation to (a) the retail packaging of tobacco products; and (b) the appearance of tobacco products".⁶⁴⁸ This is reflected in the "Purpose" of the TPP Regulations.⁶⁴⁹ Significantly, the TPP Regulations specify that a number of words and expressions used therein have the same meaning as provided in the TPP Act, including "tobacco product".⁶⁵⁰ Moreover, the TPP Act defines "this Act" as "includ[ing] the regulations".⁶⁵¹ Thus, like the TPP Act, the TPP Regulations apply, on the express terms of the instrument, to "tobacco products" in that they are intended to prescribe requirements for "tobacco products" as defined in, and in addition to those prescribed in, the TPP Act.

7.124. The TMA Act does not expressly identify its product scope. We therefore consider whether it nonetheless applies to a group of products that are "identifiable".⁶⁵² We recall that the TMA Act inserts into the *Trade Marks Act 1995* (Cth) (TM Act) a new provision, Section 231A, which provides as follows:

- (1) The regulations [made by Governor-General pursuant to their authority under Section 231 of the *Trade Marks Act 1995* (Cth)] may make provision in relation to the effect of the operation of the *Tobacco Plain Packaging Act 2011*, and any regulations made under that Act, on:
 - (a) a provision of this Act; or
 - (b) a regulation made under this Act, including:
 - (i) a regulation that applies a provision of this Act; or

⁶⁴⁴ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1).

⁶⁴⁵ Indonesia's first written submission, para. 372; response to Panel question Nos. 62 and 115; and second written submission, para. 215.

⁶⁴⁶ According to the Explanatory Memorandum to the Tobacco Plain Packaging Bill 2011, "Part 1 (clause 17) provides a simplified outline of Chapter 2, to aid in understanding of relevant clauses". TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 12.

⁶⁴⁷ TPP Act, (Exhibits AUS-1, JE-1), Section 17.

⁶⁴⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 27. According to the Explanatory Memorandum to the Tobacco Plain Packaging Bill 2011, "Chapter 2 outlines general requirements for plain packaging of tobacco products, and some specific requirements for cigarette packs and cartons. Chapter 2 also provides for the Governor-General to make regulations specifying requirements for plain packaging and the appearance of tobacco products among other things, to further the objects of the Bill". TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 12.

⁶⁴⁹ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.4.

⁶⁵⁰ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3. The other words and expressions having the same meaning as in the TPP Act include "retail packaging", "tobacco advertising and promotion", and "variant name".

⁶⁵¹ TPP Act, (Exhibits AUS-1, JE-1), Section 4 (definition of "this Act"). See also *ibid.* Section 109.

⁶⁵² Appellate Body Report, *EC – Asbestos*, para. 70.

- (ii) a regulation that applies a provision of this Act in modified form.
- (2) Without limiting subsection (1), regulations made for the purposes of that subsection may clarify or state the effect of the operation of the *Tobacco Plain Packaging Act 2011*, and any regulations made under that Act, on a provision of this Act or a regulation made under this Act, including by taking or deeming:
 - (a) something to have (or not to have) happened; or
 - (b) something to be (or not to be) the case; or
 - (c) something to have (or not to have) a particular effect.
- (3) Regulations made for the purposes of subsection (1):
 - (a) may be inconsistent with this Act; and
 - (b) prevail over this Act (including any other regulations or other instruments made under this Act), to the extent of any inconsistency.⁶⁵³

7.125. The TMA Bill Explanatory Memorandum explains that:

Regulations made under new section 231A are not intended to have any effect on the operation of the Trade Marks Act in relation to goods or services not governed by the Plain Packaging Act.⁶⁵⁴

7.126. This indicates that regulations made pursuant to the TMA Act are intended only to address the potential impact of the operation of the TPP Act and TPP Regulations in relation to trademarks whose use is affected by the TPP Act – i.e. those relating to tobacco products.

7.127. A consideration of the terms of Section 231A confirms this view. Specifically, the TMA Act grants to the Governor-General the power to make regulations, which is circumscribed only by the requirement that such regulations be made "in relation to the effect of the operation" of the TPP Act and the TPP Regulations, which themselves apply in relation to tobacco products, on a provision of the TM Act or regulations made thereunder.

7.128. In light of the above, we find that the TPP Act and the TPP Regulations apply to an expressly identified group of products; namely, "tobacco products" as defined⁶⁵⁵ by Section 4.1 of the TPP Act. While the TMA Act does not identify expressly the products to which it applies in the same manner, we understand it to apply in relation to the same group of products (namely, tobacco products).

7.2.4.2 Whether the TPP measures lay down one or more product characteristics

7.2.4.2.1 Main arguments of the parties

7.129. The complainants contend that the TPP measures, in particular the TPP Act and the TPP Regulations, lay down product characteristics. According to the complainants, both the trademark and form requirements⁶⁵⁶ under the TPP measures prescribe packaging, marking and labelling requirements.⁶⁵⁷ The Dominican Republic also argues that the TPP measures lay down product characteristics for tobacco products, including cigarette packs and cartons, relating to their

⁶⁵³ TMA Act, (Exhibits AUS-4, JE-3), Schedule 1(2). (note omitted)

⁶⁵⁴ TMA Bill Explanatory Memorandum, (Exhibits AUS-5, JE-5), p. 1.

composition, size, shape, colour, that are applied through "applicable administrative requirements" as prescribed by the TPP measures.⁶⁵⁸

7.130. Australia accepts that the requirements concerning the physical characteristics of tobacco products and packages "'lay[] down product characteristics' and/or 'deal ... with terminology, symbols and packaging, marking or labelling requirements as they apply to a product'" within the meaning of Annex 1.1 to the TBT Agreement.⁶⁵⁹ However, Australia has "significant concerns about the systemic implications" of the proposition that the trademark requirements can also be reviewed under the TBT Agreement.⁶⁶⁰ According to Australia, the TBT Agreement "does not, on its face, appear to be concerned with the exploitation of intellectual property"⁶⁶¹, and "Article 2.2 ... does not refer to the use of a trademark at all, but instead encompasses all manner of 'technical regulations'".⁶⁶² Accordingly, Australia contends, only the "physical requirements" of the TPP measures are properly subject to examination under Article 2.2.⁶⁶³

7.131. The complainants contend that both the physical and trademark requirements of the TPP measures are covered by the definition of technical regulations under the TBT Agreement and should be addressed together⁶⁶⁴, a view that is shared by a "large number" of third-parties to these proceedings, including "several who are otherwise very supportive" of Australia's TPP measures.⁶⁶⁵ Honduras argues that the trademark requirements govern the packaging, presentation and appearance of tobacco products⁶⁶⁶, whereas the format requirements affect packaging of tobacco products and products themselves.⁶⁶⁷ Honduras maintains that nothing in the text of Annex 1.1 suggests that trademark requirements would be excluded from the definition of technical regulations⁶⁶⁸, and notes that "[n]owhere in the Appellate Body's criteria is there a suggestion that measures affecting intellectual property rights fall outside the definition provided in Annex 1.1".⁶⁶⁹ In a similar vein, the Dominican Republic argues that Australia advances no arguments for its position based on the text of Annex 1.1.⁶⁷⁰ According to Cuba, Australia does not address the definition of technical regulations.⁶⁷¹ The Dominican Republic notes, in this respect, the "absence of express language, such as 'trademarks' or 'geographical indications' in the definition of 'technical regulation' does not mean that the [T]PP measures are not qualified as 'technical regulations'".⁶⁷² According to Indonesia, "[t]he terms 'packaging or labelling' in the TBT Agreement are not qualified" and "[t]he Agreement does not limit itself to the 'non-intellectual property' aspects of packaging and labeling".⁶⁷³ In fact, argues Indonesia, "there are a multitude of topics that could conceivably be addressed by a technical regulation and the TBT Agreement refers specifically to none of them."⁶⁷⁴ For instance, while "rules of origin" are nowhere mentioned in the TBT Agreement, both the panel and the Appellate Body in *US – COOL* "recognized that origin labelling was covered by the TBT Agreement".⁶⁷⁵

7.132. The complainants also note that the TBT Agreement contains provisions expressly excluding certain subject-matter from its scope. They point out, more specifically, to Articles 1.4 and 1.5 of the Agreement, according to which only purchasing specifications prepared by

governmental bodies for production or consumption requirements of governmental bodies and sanitary and phytosanitary measures fall outside of the scope of the TBT Agreement.⁶⁷⁶ To the complainants, this indicates that "when the drafters wanted to exclude certain subject matter from the TBT Agreement, they did so expressly".⁶⁷⁷

7.133. With reference to the second sentence of Annex 1.1, the Dominican Republic adds that the trademark requirements also amount to "at least"⁶⁷⁸ "packaging", "marking", and "labelling" requirements.⁶⁷⁹ Indonesia concurs.⁶⁸⁰ Likewise, Cuba maintains that the terms "[t]erminology, symbols, packaging, marking or labelling"⁶⁸¹ also cover the trademark requirements of the TPP measures. Honduras and Indonesia add that the terms of the second sentence are "unqualified", and make no reference to a trademark exception.⁶⁸² The Dominican Republic points out that the second sentence of Annex 1.1 has been interpreted as a standalone basis for finding that a document qualifies as a technical regulation.⁶⁸³

7.134. Australia responds that "terminology, symbols, packaging, marking or labelling requirements" under the second sentence of Annex 1.1 of the TBT Agreement must convey information about an intrinsic characteristic of a product. According to Australia, "[a] proper understanding of the scope of a 'technical regulation' encompasses measures that regulate intrinsic characteristics of a product or the physical characteristics of its package, as well as terminology, symbols, packaging, marks or labels *insofar as they convey information about the intrinsic characteristics of the product*".⁶⁸⁴ Whilst Australia recognizes that "[t]he function of a trademark is to distinguish the products of one enterprise from those of another in the course of trade" and that "[s]ome symbols that convey information about a product characteristic may ... be trademarked", it points out that "[n]othing in the trademark requirements imposed by the [TPP] measure[s] regulates what information a trademark may or may not convey about the intrinsic characteristics of tobacco products".⁶⁸⁵ Australia maintains that "[u]nder a proper interpretation of the second sentence of Annex 1.1 ... a measure constitutes a 'technical regulation' only to the extent that it regulates what information a symbol may or may not convey about an intrinsic characteristic of a product".⁶⁸⁶

7.135. According to Cuba, the TPP measures lay down both "intrinsic" and related characteristics, such as packaging, marking and labelling requirements, for tobacco products.⁶⁸⁷ Honduras and Indonesia add that the Appellate Body explained that product characteristics may include not only features and qualities intrinsic to the product itself, but also related characteristics, such as the means of identification, the presentation and appearance of a product.⁶⁸⁸ Honduras, the Dominican Republic, and Cuba recall that in *EC – Trademarks and Geographical Indications (Australia)*, Australia itself argued that a labelling requirement affecting the use of a GI, which is an IP right

covered by the TRIPS Agreement, is a technical regulation under the TBT Agreement, and that the panel agreed with that position.⁶⁸⁹

7.2.4.2.2 Analysis by the Panel

7.136. Annex 1.1 of the TBT Agreement defines the term "technical regulation" as follows:

Document *which lays down product characteristics* or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. *It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method.* (emphasis added)

7.137. As described by the Appellate Body, "[t]he heart of the definition of a 'technical regulation' is that the 'document' at issue must 'lay down' — that is, set forth, stipulate or provide — 'product *characteristics*'".⁶⁹⁰ The Appellate Body interpreted "product characteristics" in the following manner:

The word "characteristic" has a number of synonyms that are helpful in understanding the ordinary meaning of that word, in this context. Thus, the "characteristics" of a product include, in our view, any objectively definable "features", "qualities", "attributes", or other "distinguishing mark" of a product. Such "characteristics" might relate, *inter alia*, to a product's composition, size, shape, colour, texture, hardness, tensile strength, flammability, conductivity, density, or viscosity. In the definition of a "technical regulation" in Annex 1.1, the *TBT Agreement* itself gives certain examples of "product characteristics" — "terminology, symbols, packaging, marking or labelling requirements". These examples indicate that "product characteristics" include, not only features and qualities intrinsic to the product itself, but also related "characteristics", such as the means of identification, the presentation and the **appearance of a product**. ... Further, we note that the definition of a "technical regulation" provides that such a regulation "may also include or deal *exclusively* with terminology, symbols, packaging, marking *or* labelling requirements". (emphasis added) The use here of the word "exclusively" and the disjunctive word "or" indicates that a "technical regulation" may be confined to laying down only one or a few "product characteristics".⁶⁹¹

7.138. We note that such "[p]roduct characteristics' may ... be prescribed or imposed with respect to products in either a positive or a negative form":

[T]he document may provide, positively, that products *must possess* certain "characteristics", or the document may require, negatively, that products *must not possess* certain "characteristics". In both cases, the legal result is the same: the document "lays down" certain binding "characteristics" for products, in one case affirmatively, and in the other by negative implication.⁶⁹²

7.139. Also, as a general matter, "a determination of whether a measure constitutes a technical regulation 'must be made in the light of the characteristics of the measure at issue and the

⁶⁹¹ Appellate Body Report, *EC – Asbestos*, para. 67. (emphasis original)

⁶⁹² Appellate Body Report, *EC – Asbestos*, para. 69. (emphasis original)

circumstances of the case"⁶⁹³, and "this analysis should give particular weight to the 'integral and essential' aspects of the measure".⁶⁹⁴

7.140. Turning to the measures at issue, as set out in section 2.1.2, the requirements in the TPP Act and the TPP Regulations, operating in conjunction with other legislative requirements that are not challenged in these proceedings (such as those relating to GHWs), have the cumulative effect of requiring that tobacco products (including their retail packaging) appear in a standardized manner, as depicted in section 2.1.2.3.7. The elements of the TPP measures that prescribe that tobacco products (including their retail packaging) appear in this uniform manner, taken together, constitute the integral and essential aspects of the TPP Act and TPP Regulations.⁶⁹⁵ We thus give particular weight to these elements in assessing whether the TPP measures lay down one or more product characteristics.

7.141. As we observed in section 2.1.2.4, the TPP Act and the TPP Regulations regulate various elements of the appearance of **tobacco products** themselves. Specifically, Section 26 of the TPP Act provides that no trademark or mark may appear anywhere on a tobacco product, other than as permitted by the TPP Regulations⁶⁹⁶. Moreover, Section 27 of the TPP Act provides that the TPP Regulations may prescribe additional requirements in relation to the appearance of tobacco products.⁶⁹⁷ In so doing, Division 3.1 of the TPP Regulations specifies requirements with respect to cigarettes. As discussed⁶⁹⁸, it regulates the colour of the paper casing⁶⁹⁹, the marking of a cigarette with an alphanumeric code⁷⁰⁰; and the colour of filter tips.⁷⁰¹ Division 3.2 of the TPP Regulations specifies requirements with respect to other tobacco products, including cigars, and stipulate that a colour and content (with respect to the brand, business or variant name) of the single band which may appear around the circumference of a cigar.⁷⁰² The requirements of the TPP Act also include a "prohibit[ion of] trade marks from generally appearing on the tobacco products themselves".⁷⁰³

7.142. Accordingly, we find that in laying down the requirements for the appearance of tobacco products in this way, the TPP Act and the TPP Regulations, operating together, lay down product characteristics for tobacco products.

7.143. As described in section 2.1.2.3, the TPP Act and the TPP Regulations also set out detailed requirements for the retail **packaging** of tobacco products. Specifically, the "tobacco product requirements" set out in Part 2, Chapter 2 of the TPP Act, and elaborated in the TPP Regulations, govern the packaging of tobacco products. According to the Simplified Outline of Chapter 2⁷⁰⁴, Part 2 of Chapter 2 "specifies requirements for the retail packaging and appearance of tobacco products"⁷⁰⁵, including, in respect of packaging, "the physical features of retail packaging", "the colour and finish of retail packaging", "marks on retail packaging (including a prohibition on trade marks generally appearing on retail packaging)", "wrappers", "retail packaging after retail

⁷⁰⁵ TPP Act, (Exhibits AUS-1, JE-1), Section 17.

sale".⁷⁰⁶ Accordingly, we find that the TPP Act and the TPP Regulations, operating together, lay down product characteristics by regulating the packaging of tobacco products.

7.144. Moreover, key requirements under both the TPP Act and the TPP Regulations deal with the **terminology** and **symbols** that may appear on tobacco products or packaging. For instance, the TPP Act⁷⁰⁷ and the TPP Regulations⁷⁰⁸ contain detailed "[r]equirements for brand, business, company or variant names"⁷⁰⁹ and appearance of names on the packaging of tobacco products. As regards symbols and marking, the TPP Act defines marks as "includ[ing] (without limitation) any line, letters, numbers, symbol, graphic or image; but (other than when referring to a trade mark) does not include a trade mark".⁷¹⁰ The TPP Act and TPP Regulations contain detailed requirements concerning *inter alia* "trade marks or marks on retail packaging"⁷¹¹, "origin marks"⁷¹², a "calibration mark"⁷¹³, a "measurement mark"⁷¹⁴, the "marking of name and address on packaging"⁷¹⁵, a "mark on wrapper to conceal bar codes"⁷¹⁶, and the "alphanumeric code for cigarettes".⁷¹⁷ Further, as mentioned, the TPP Act and the TPP Regulations contain a wide array of "[r]equirements for retail packaging of tobacco products"⁷¹⁸ ranging from the "[p]hysical features"⁷¹⁹, "colour and finish of retail packaging"⁷²⁰, "[t]rade marks and marks on retail packaging"⁷²¹, "[b]rand, business, company and variant names" on tobacco packaging⁷²², "[w]rappers"⁷²³, and "[i]nserts and onserts".⁷²⁴ Finally, in some respects, **labelling** is regulated: for instance, in the context of "[i]nserts and onserts", the TPP Regulations contain requirements relating to "adhesive label health warnings".⁷²⁵ In respect of each of these requirements, the TPP Act and/or the TPP Regulations specify requirements that must be met in order for a tobacco product to be legally placed on the market in Australia. These requirements therefore amount to "terminology, symbols, packaging, marking or labelling requirements" within the meaning of the second sentence of Annex 1.1.

7.145. As described above, among its requirements on the appearance of tobacco packaging, the TPP Act contains a "[p]rohibition on trade marks and marks generally appearing on retail packaging"⁷²⁶ of tobacco products, combined with rules addressing "permitted trade marks and marks".⁷²⁷ Further, the TPP Act stipulates that "[n]o mark" and "[n]o trade mark may appear anywhere on a tobacco product, other than as permitted by the regulations".⁷²⁸ The TPP Regulations elaborate on these rules.⁷²⁹ In regulating the appearance and packaging of tobacco products, an essential function of the TPP Act and TPP Regulations is to address comprehensively how both word and figurative signs, whether protected as trademarks or not,

⁷²⁷ See TPP Act, (Exhibits AUS-1, JE-1), Section 20(3).

⁷²⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 26(1)-(2).

⁷²⁹ See TPP Regulations, (Exhibits AUS-3, JE-2), Part 2, Division 2.3 (entitled "Trade marks or marks on retail packaging"), Division 2.4 (entitled "Brand, business, company and variant names"), and Part 3 (entitled "Requirements for appearance of tobacco products").

shall or shall not appear, i.e. what "terminology" and "symbols" may be represented and how, on tobacco products and their packaging. The trademark-related requirements of the TPP Act and TPP Regulations fall within the scope of several examples of product characteristics under the second sentence of Annex 1.1: "**terminology, symbols, packaging, marking ... requirements**".

7.146. Australia contends that "[u]nder a proper interpretation of the second sentence of Annex 1.1, a measure constitutes a 'technical regulation' only to the extent that it regulates what information a symbol may or may not convey about an intrinsic characteristic of the product".⁷³⁰ For Australia, a "trademark need not relate to any feature or quality intrinsic to the trademarked product, or to a related process or production method, in order to fulfil these functions".⁷³¹

7.147. We recall that the second sentence of the definition of "technical regulation" indicates that a technical regulation "may also include or deal **exclusively** with terminology, symbols, packaging, marking **or** labelling requirements".⁷³² The use of the words "also include" and "deal exclusively with" at the beginning of this sentence indicates that it includes elements that are **additional to**, and may be **distinct from**, those covered by the first sentence.⁷³³

7.148. In addition, the Appellate Body has found that "[t]he[] examples [in the second sentence of Annex 1.1] indicate that 'product characteristics' include, not only features and qualities intrinsic to the product itself, but also related 'characteristics', such as the means of identification, the presentation and the appearance of a product".⁷³⁴ In *EC – Sardines*, the Appellate Body confirmed this⁷³⁵, adding that "[i]n any event, ... a 'means of identification' **is** a product characteristic"⁷³⁶ in itself. Specifically, "product characteristics include not only 'features and qualities intrinsic to the product', but also those that are related to **it**, such as 'means of identification'".⁷³⁷

7.149. A "characteristic" within the meaning of Annex 1.1 of the TBT Agreement may refer to, *inter alia*, "any objectively definable 'features', 'qualities', 'attributes', or other 'distinguishing mark' of a product"; "terminology, symbols, packaging, marking or labelling requirements"; as well as characteristics "related" to the product itself, such as "the means of identification, the presentation and the appearance of a product".⁷³⁸ This definition of "characteristics" is sufficiently broad to encompass requirements relating to terminology, marking or labelling that affect the manner in which a sign, including one that is protected as a trademark, may be displayed on the relevant product.

7.150. Furthermore, as described above, the integral and essential aspects of the TPP measures are to ensure that tobacco products (including their packaging) appear in the uniform manner depicted above, i.e. in a specific prescribed manner in terms of their shape, fonts and colours, and other features. These requirements govern all aspects of "the means of identification, the presentation and appearance" of tobacco products, as well as all "terminology, symbols, packaging, marking or labelling requirements" for tobacco products and their retail packaging, with the exception of those governed by measures that are not at issue in these proceedings. That the scope of these measures is so broad as to encompass all these elements, including, *inter alia*, the display of signs protected as trademarks on the product, does not change the fact that their integral and essential aspects relate to "the means of identification, the presentation and appearance" of tobacco products, as well as all "terminology, symbols, packaging, marking or

⁷³⁰ Australia's response to Panel question No. 72, para. 198.

⁷³⁸ Appellate Body Report, *EC – Asbestos*, para. 67.

labelling requirements"; nor, in our view, does it modify or diminish the scope of the definition under Annex 1.1 of the TBT Agreement.

7.151. We note in this respect the analysis of the panel in *EC – Trademarks and Geographical Indications (Australia)*, which considered whether a measure requiring the country of origin to be clearly and visibly indicated on the label laid down "product characteristics" within the meaning of Annex 1.1 of the TBT Agreement:

The parties disagree as to whether the second indent of Article 12(2) of the Regulation lays down a *product characteristic*. The Panel notes that it expressly sets out a requirement that concerns what must be indicated on "the label" of a product. That is a labelling requirement. The second sentence of the definition of "technical regulation" in Annex 1.1 of the TBT Agreement expressly refers to "labelling requirements" as an example of a technical regulation.

The Panel notes that this example in the definition in Annex 1.1 is qualified by the words "as they apply to a product, process or production method". The text does not limit the scope of the example by stating what the labels must indicate in order for them to constitute a technical regulation. Rather, they explain to what the labelling requirements "apply". This simply means that a requirement concerning a product label is a labelling requirement that applies to a product. The context shows that the subject of the second sentence, "[i]t" refers back to the noun "[d]ocument" as qualified by the relative clause beginning "which lays down" and ending with the word "mandatory". Were this not so, the element that "compliance is mandatory", for example, would not apply to the items described in the second sentence, which would be contrary to the object and purpose of the obligations concerning technical regulations. As a result, a document that "deal[s] exclusively with ... labelling requirements as they apply to a product" can be an example of a "[d]ocument that lays down product characteristics". The issue is not whether the content of the label refers to a product characteristic: the label on a product *is* a product characteristic. Therefore, the second indent of Article 12(2) of the Regulation deals exclusively with a labelling requirement "as it applies to a product".⁷³⁹

7.152. The panel concluded that "a document that lays down a requirement that a product label must contain a particular detail, in fact, lays down a product characteristic".⁷⁴⁰ The panel found support for this interpretation in a Decision of the TBT Committee, in which Members agreed as follows:

In conformity with Article 2.9 of the Agreement, Members are obliged to notify all mandatory labelling requirements that are not based substantially on a relevant international standard and that may have a significant effect on the trade of other Members. That obligation is not dependent upon the kind of information which is provided on the label, whether it is in the nature of a technical specification or not.⁷⁴¹

7.153. In the present case, the fact that the content of the labelling and marking requirements at issue relates in part to the use of signs protected as trademarks does not imply that they no longer constitute "labelling requirements", and therefore a "product characteristic", within the meaning of Annex 1.1 of the TBT Agreement.

7.154. In addition, as observed by some of the complainants⁷⁴², the TBT Agreement contains certain explicit carve-outs for those measures that do not fall within the definition of "technical

⁷³⁹ Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, paras. 7.448 and 7.449. (emphasis original)

⁷⁴¹ See Committee on Technical Barriers to Trade, "Decisions and Recommendations adopted by the Committee since 1 January 1995", G/TBT/1/Rev.8 (23 May 2003), cited in Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.451.

⁷⁴² See Honduras's second written submission, para. 457; Dominican Republic's second written submission, paras. 830-832; and Indonesia's second written submission, para. 214.

regulation". Such carve-outs relate to sanitary or phytosanitary measures⁷⁴³ and "[p]urchasing specifications prepared by governmental bodies for production or consumption requirements of governmental bodies".⁷⁴⁴ No similar carve-out exists for terminology, symbols, markings and other elements protected by IP rights. Likewise, in defining the scope of TBT disputes subject to the DSU, Article 14.1 of the TBT Agreement references "disputes with respect to *any matter affecting* the operation of the TBT Agreement" (emphasis added). If anything, this broad definition suggests that all requirements falling within the definition of technical regulations should be subject to dispute settlement, rather than implying that specific types of requirements should be carved out from the scope of the definition of a technical regulation under Annex 1.1 or from the scope of review under the TBT Agreement in the context of dispute settlement proceedings.

7.155. A consideration of the object and purpose of the TBT Agreement does not lead us to a different conclusion. The fifth recital of the preamble⁷⁴⁵ to the TBT Agreement references Members' "[d]esir[e] ... to ensure that technical regulations ... including packaging, marking and labelling requirements ... do not create unnecessary obstacles to international trade". The explicit and unqualified reference to technical regulations, further elaborated by the phrase "including packaging, marking and labelling requirements", in this preambular provision⁷⁴⁶ also does not suggest an intention to carve out requirements relating to signs that are protected as trademarks from the coverage of "technical regulations" or of the TBT Agreement in general. Although the sixth recital of the TBT Agreement⁷⁴⁷ "counterbalanc[es] the trade-liberalization objective expressed in the fifth recital"⁷⁴⁸, the "balance set out in the preamble of the TBT Agreement", in **particular in its fifth and sixth recitals, is "between ... the desire to avoid creating unnecessary obstacles to international trade and ... the recognition of Members' right to regulate"**.⁷⁴⁹ This does not suggest a consideration of whether the requirements at issue relate to signs that may also be protected as trademarks or an exclusion of such signs from the coverage of the Agreement. We therefore do not consider that the fact that some of the specific requirements contained in the TPP measures relate to trademarks should *per se* lead us to conclude that they cannot be covered by the disciplines of the TBT Agreement, or specifically of Article 2.2, provided that they otherwise meet the relevant criteria in Annex 1.1.

7.156. We further note that the above view does not imply that any and all requirements relating to the use of trademarks would be covered by the disciplines of the TBT Agreement on technical regulations. The definition of a "technical regulation" in Annex 1.1 covers terminology, symbols, packaging, marking or labelling requirements "as they apply to a product". This limits the scope of the definition, to the extent that it excludes instances when terminologies, symbols, packaging, marking or labelling requirements do not "apply to a product". For instance, it does not address the availability, scope and use of IP rights⁷⁵⁰ as such, which are addressed separately in the TRIPS Agreement.

⁷⁴³ According to Article 1.5 of the TBT Agreement, "[t]he provisions of this Agreement do not apply to sanitary and phytosanitary measures as defined in Annex A of the Agreement on the Application of Sanitary and Phytosanitary Measures."

⁷⁴⁴ According to Article 1.4 of the TBT Agreement, "[p]urchasing specifications prepared by governmental bodies for production or consumption requirements of governmental bodies are not subject to the provisions of this Agreement but are addressed in the Agreement on Government Procurement".

⁷⁴⁵ According to the Appellate Body, "[t]he preamble of the *TBT Agreement* ... sheds light on the object and purpose of the Agreement". Appellate Body Report, *US – Clove Cigarettes*, para. 89.

⁷⁴⁶ Appellate Body Report, *US – Clove Cigarettes*, para. 92.

⁷⁴⁷ The sixth recital of the preamble to the TBT Agreement states:

Recognizing that no country should be prevented from taking measures necessary to ensure the quality of its exports, or for the protection of human, animal or plant life or health, of the environment, or for the prevention of deceptive practices, at the levels it considers appropriate, subject to the requirement that they are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail or a disguised restriction on international trade, and are otherwise in accordance with the provisions of this Agreement.

⁷⁴⁸ Appellate Body Report, *US – Clove Cigarettes*, para. 95.

⁷⁴⁹ Appellate Body Report, *US – Clove Cigarettes*, para. 96.

⁷⁵⁰ See paragraph (b) of the second recital of the preamble and footnote 3 of the TRIPS Agreement.

7.157. Overall, taking into account the characteristics of the measures at issue and the circumstances of this case, the requirements of the TPP Act and the TPP Regulations relating to the use of trademarks of tobacco products and packaging are one component of a broader set of requirements, the essence of which is to regulate in a comprehensive manner the appearance of tobacco products and tobacco packaging, with a view to making them uniformly "plain". Thus, the "integral and essential aspects" of the TPP measures are to regulate comprehensively the appearance of tobacco products and their retail packaging. As described above, this involves a regulation generally of the use of colours, shapes and other signs and features on such tobacco packaging and tobacco products. It is in this broader context that specific requirements are imposed, that affect the display on these products and their packaging, of signs that may also be protected as trademarks. Taking the TPP measures as a whole, therefore, these requirements are only one aspect of the regulation, through the TPP measures, of the appearance, labelling and packaging of tobacco products, all of which fall within the scope of what constitutes a "technical regulation" within the meaning of Annex 1.1 the TBT Agreement.

7.158. On the basis of the foregoing, we find that the TPP Act and the TPP Regulations, in setting forth requirements relating to the appearance and packaging of tobacco products, including requirements relating to the manner in which trademarks may be displayed on tobacco products and packaging, lay down product characteristics within the meaning of Annex 1.1.

7.159. With respect to the TMA Act, we note that its text does not lay down any product characteristics. Indeed, it appears to us that it is not the purpose of the TMA Act to lay down such requirements. As the Explanatory Memorandum for the TMA Bill explains, "[n]ew subsection 231A(1) of the Trade Marks Act will provide for the making of regulations under the Trade Marks Act, to govern the effect of the operation of the [TPP Act] and [the TPP Regulations] made under that Act, on the Trade Marks Act, and the Trade Mark Regulations".⁷⁵¹

7.2.4.3 Whether compliance with the TPP measures is mandatory

7.2.4.3.1 Main arguments of the parties

7.160. The complainants argue that the TPP measures are "mandatory" within the meaning of Annex 1.1 of the TBT Agreement. According to Honduras, this applies to both "the trademark and format requirements" of the TPP measures as these regulate product characteristics "in a binding and compulsory fashion".⁷⁵² The Dominican Republic⁷⁵³ and Indonesia⁷⁵⁴ both reference the interpretation of the term "mandatory"⁷⁵⁵, and Indonesia refers also to the interpretation of "compliance" by the Appellate Body.⁷⁵⁶ All complainants mention the enforcement mechanisms and penalties under the TPP measures, in particular Chapter 3 of the TPP Act, and how such mechanisms and sanctions were taken into account in previous disputes.⁷⁵⁷ Cuba adds that Section 18(1) of the TPP Act⁷⁵⁸ demonstrates that the TPP measures are mandatory "under [their] own wording".⁷⁵⁹ Likewise, Indonesia⁷⁶⁰ refers to the Simplified Outline of the TPP Act, which

⁷⁵¹ TMA Bill Explanatory Memorandum, (Exhibits AUS-5, JE-5), Note on Schedule 1, Item 2, p. 3.

⁷⁵² Honduras's first written submission, para. 841. See also *ibid.* para. 791 (referring to Appellate Body Report, *EC – Asbestos*, para. 68).

⁷⁵³ Dominican Republic's first written submission, para. 948.

⁷⁵⁴ Indonesia's first written submission, para. 381.

⁷⁵⁵ Appellate Body Report, *US – Tuna II (Mexico)*, para. 185 (definition of "mandatory").

⁷⁵⁶ Indonesia's first written submission, para. 381.

⁷⁵⁷ Honduras's first written submission, para. 791 (referring to enforcement mechanisms and Panel Reports, *US – COOL*, paras. 7.157-159); Honduras's first written submission, paras. 843-844 (discussing enforcement mechanisms); Honduras's first written submission, para. 845 (referring to case law on enforcement mechanisms); Dominican Republic's first written submission, para. 948 (referring to Appellate Body Report, *EC – Asbestos*, para. 72 and noting mandatory and enforceable through criminal sanctions with reference to Panel Report, *EC – Sardines*, para. 7.30); Dominican Republic's first written submission, para. 949 (noting offences and civil penalties for tobacco products or retail packaging that do not comply, with reference to Chapter 3 of the TPP Act and *ibid.* Annex I); Cuba's first written submission, para. 396 and Section II.B.4 (noting "mandatory" compliance as non-compliance with TPP measures can attract civil and criminal penalties); and Indonesia's first written submission, para. 383 (referring to Chapter 3 of the TPP Act).

⁷⁵⁸ Section 18(1) of the TPP Act states: "[t]he retail packaging of tobacco products must comply with the following requirements". TPP Act, (Exhibits AUS-1, JE-1), Section 18(1).

⁷⁵⁹ Cuba's second written submission, para. 194.

⁷⁶⁰ Indonesia's first written submission, para. 382.

states that "[t]he retail packaging and appearance of tobacco products must comply with the requirements of th[e TPP] Act".⁷⁶¹ Indonesia also refers to the use of "must" and "must not" "throughout" the TPP Regulations⁷⁶², whereas Honduras references the same terms in both the TPP Act and the TPP Regulations⁷⁶³ as well as previous disputes relying on the modal verbs used in the challenged measure to find that the latter was mandatory.⁷⁶⁴

7.161. Australia accepts that the "physical requirements" of the TPP measures are technical regulations "within the scope of the TBT Agreement" as "[c]ompliance with these requirements is mandatory".⁷⁶⁵ In advancing systemic arguments concerning the trademark requirements of the TPP measures, Australia is silent on whether it also considers these requirements to be mandatory.

7.2.4.3.2 Analysis by the Panel

7.162. As the Dominican Republic⁷⁶⁶ and Indonesia⁷⁶⁷ point out, in *US – Tuna II (Mexico)* the Appellate Body defined the terms "mandatory" and "compliance" as follows:

The noun "compliance" is defined as "[t]he action of complying".⁷⁶⁸ The verb "comply" refers to an "[a]ct in accordance with or *with* a request, command, etc."⁷⁶⁹ The word "mandatory" means "obligatory in consequence of a command, compulsory"⁷⁷⁰, or "being obligatory".⁷⁷¹

7.163. As noted, "a panel's determination of whether a measure constitutes a technical regulation must be made in the light of the characteristics of the measure at issue and the circumstances of the case"⁷⁷², and "this analysis should give particular weight to the 'integral and essential' aspects of the measure".⁷⁷³ We have found that the integral and essential aspects of the TPP Act and the TPP Regulations are to regulate the packaging and appearance of tobacco products by laying down product characteristics. "Tobacco products", as defined for the purposes of the TPP Act and the TPP Regulations, may be legally marketed in Australia only in accordance with the appearance and packaging requirements, including the trademark requirements, set out in these instruments. The Simplified Outline of the TPP Act is explicit: "[t]he retail packaging and appearance of tobacco

⁷⁶⁹ (footnote original) *Shorter Oxford English Dictionary*, 6th edn, A. Stevenson (ed.) (Oxford University Press, 2007), Vol. 1, p. 473.

⁷⁷⁰ (footnote original) *Shorter Oxford English Dictionary*, 6th edn, A. Stevenson (ed.) (Oxford University Press, 2007), Vol. 1, p. 1694.

⁷⁷¹ Appellate Body Report, *US – Tuna II (Mexico)*, para. 185 (footnote omitted). Likewise, the panel in the same dispute held that:

[D]ictionary definitions of the term "mandatory" include "binding" as well as "obligatory, compulsory, not discretionary", or "required by law or mandate; compulsory". This suggests that the notion of "mandatory" may encompass the legally binding and enforceable character of the instrument, and may also relate to its contents, prescribing/imposing a certain behaviour. We also note that the ISO/IEC Guide 2 establishes that the expression "mandatory requirement", should be used to mean only "a requirement made compulsory by law or regulation".

Panel Report, *US – Tuna II (Mexico)*, para. 7.103 (footnotes omitted). See also Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.453.

⁷⁷² Appellate Body Report, *US – Tuna II (Mexico)*, para. 188 (referring to Appellate Body Reports, *EC – Asbestos*, para. 64; and *EC – Sardines*, paras. 192 and 193).

⁷⁷³ Appellate Body Reports, *EC – Seal Products*, para. 5.19 (quoting Appellate Body Report, *EC – Asbestos*, para. 72).

products must comply with the requirements of this Act".⁷⁷⁴ Also, as Indonesia notes⁷⁷⁵, the TPP Regulations' declared "[p]urpose" is to "prescribe requirements for the retail packaging and appearance of tobacco products for Part 2 of Chapter 2 of the [TPP] Act".⁷⁷⁶

7.164. Accordingly, the language of the TPP Act and the TPP Regulations is prescriptive in relation to the requirements at issue. The tobacco product requirements use terms such as "must"⁷⁷⁷, "must not"⁷⁷⁸, and the word "may" combined with terms in the negative⁷⁷⁹, and they do so pervasively and in regard to all aspects of the appearance and packaging of tobacco products. In this context, we note that the panel in *EC – Trademarks and Geographical Indications (Australia)* considered that the terms of the measure at issue, such as the use of the word "shall", may be indicative of mandatory compliance.⁷⁸⁰

7.165. Further, several of the provisions of the TPP Act and the TPP Regulations in question appear under titles that contain the term "requirements"⁷⁸¹, underscore the universal nature of such requirements ("Retail packaging of all tobacco products"⁷⁸²), or are termed as categorical prohibitions ("Prohibition on..."⁷⁸³, "Retail packaging not to..."⁷⁸⁴, "Retail packaging must not..."⁷⁸⁵, "No marks"⁷⁸⁶, and "No trade marks"⁷⁸⁷). The less numerous permissive provisions of the TPP Act and TPP Regulations that relate to product characteristics and use "may" appear either in a restrictive context ("may ... only"⁷⁸⁸ or "may appear once on no more than 2 of ..." ⁷⁸⁹), or as limited, precisely circumscribed, often conditional exceptions to obligations using the above terms⁷⁹⁰, or as provisions not contradicting the limits of the above obligations.⁷⁹¹

⁷⁸⁷ TPP Act, (Exhibits AUS-1, JE-1), Section 20.1 (title).

⁷⁸⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 21.2(c); and TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 2.4.4(2)(d).

⁷⁸⁹ TPP Regulations, (Exhibits, AUS-3, JE-2), Sections 2.3.4(3)(b) and 2.3.4(4)(b). See also *ibid.* Section 2.5.2(3).

⁷⁹⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 20.3; and TPP Regulations, (Exhibits, AUS-3, JE-2), Regs. 2.3.1(1)-2.3.1(4), 2.3.7(1), 2.3.8(1), 2.5.1-2.5.2, 2.6.1, 2.6.2(1), 2.6.3(1), 3.1.2(1), 3.2.1(1)-3.2.1(4), and 3.2.2.

⁷⁹¹ See, e.g. Section 2.1.2 of the TPP Regulations (Exhibits, AUS-3, JE-2) on the "[p]hysical features of cigarette cartons" relative to Sections 18-25 of the TPP Act, (Exhibits AUS-1, JE-1), in particular Sections 18(2) and 19. See also Regulation 2.1.3(1) of the TPP Regulations, on the "[p]hysical features of lining of primary packaging of tobacco products" relative to Sections 18.3(d) and 19 of the TPP Act. See also Regulation 2.1.4(1)(b) of the TPP Regulations, relative to Regulation 2.1.4(1)(a). See also Regulation 2.3.2(3) of the TPP Regulations, relative to TPP Regulations 2.3.2(1)-2.3.2(2).

7.166. As the complainants note, the TPP Act is supported by an elaborate enforcement mechanism.⁷⁹² The Simplified Outline of the Act indicates that "[o]ffences and civil penalties apply if tobacco products are supplied, purchased or manufactured and either the retail packaging, or the products themselves, do not comply with the requirements".⁷⁹³ Accordingly, Chapter 3 of the TPP Act addresses "[o]ffences and civil penalty provisions"⁷⁹⁴, in particular "[g]eneral offences and civil penalty provisions for non-compliant retail packaging and tobacco products"⁷⁹⁵ and "[o]ffences and civil penalty provisions relating to constitutional corporations".⁷⁹⁶ Chapter 4 establishes "[p]owers to investigate contraventions of th[e TPP] Act".⁷⁹⁷ In turn, Chapter 5 contains provisions addressed at "[e]nforcing compliance with th[e TPP] Act"⁷⁹⁸, such as "[o]btaining a civil penalty order"⁷⁹⁹, "[c]ivil proceedings and criminal proceedings"⁸⁰⁰, and "[i]nfringement notices".⁸⁰¹

7.167. The enforcement mechanism of the TPP Act applies also in the context of the TPP Regulations. As the Notes to Sections 27(1) and 27A of the TPP Act indicate, Chapters 3 and 5 apply for failure to comply with a tobacco product requirement, which includes "a requirement in **relation to the retail packaging or appearance of tobacco products ... specified in Part 2 of Chapter 2 [of the TPP Act or] ... prescribed by regulations made under Part 2 of Chapter 2**", i.e. the TPP Regulations.

7.168. We note that the enforceability of a measure through sanctions, in particular criminal sanctions, has been found to be indicative of mandatory compliance⁸⁰², and that the fact that certain measures are "legally enforceable and binding under [a Member's] law (they are issued by the government and include legal sanctions)" is "an important component of the 'mandatory' character of the measures".⁸⁰³

7.169. For the foregoing reasons, we find that the TPP Act and the TPP Regulations are "mandatory" within the meaning of the definition of a technical regulation under Annex 1.1 of the TBT Agreement.

7.170. The TMA Act makes no mention of compliance or requiring compliance. We also note that, since the TMA Act does not lay down any product characteristics, there is no prescribed product characteristic in that instrument "with which compliance [could be] mandatory" for the purpose of Annex 1.1 of the TBT Agreement. However, this is a law enacted by Australia and a provision to be applied by virtue of a governmental mandate.

7.2.4.4 Overall conclusion

7.171. We have determined above that the TPP Act and the TPP Regulations each satisfy the three criteria of technical regulations within the meaning of Article 1.1 of the TBT Agreement, in that they apply to an identifiable product or group of products (tobacco); lay down one or more characteristics of those products (including with respect to their marking, packaging or labelling); and mandate compliance with those characteristics.

7.172. With respect to the third legal instrument that forms part of the TPP measures, the TMA Act, we have determined above that, taken in isolation, it applies to an identifiable group of products (tobacco). We have also concluded that it does not lay down product characteristics for

⁷⁹² Article 27A of the TPP Act, (Exhibits AUS-1, JE-1), addresses the "[l]egal effect of sections 18 to 27" as follows: "Sections 18 to 27 have no legal effect other than to specify requirements, and provide for regulations specifying requirements, for the purposes of the definition of **tobacco product requirement** in subsection 4(1)." (emphasis original)

⁷⁹³ TPP Act, (Exhibits AUS-1, JE-1), Section 12.

⁷⁹⁴ TPP Act, (Exhibits AUS-1, JE-1), Chapter 3 (title).

⁷⁹⁵ TPP Act, (Exhibits AUS-1, JE-1), Chapter 3, Part 2 (title).

⁸⁰² Appellate Body Report, *EC – Asbestos*, para. 72. See also Panel Reports, *US – COOL*, para. 7.160.

⁸⁰³ Panel Report, *US – Tuna II (Mexico)*, para. 7.142.

tobacco products (including with respect to their marking, packaging or labelling), with which compliance is mandatory and therefore would not, taken in isolation, constitute a technical regulation.

7.173. We recall, however, that the definition of "technical regulation" in Annex 1.1 of the TBT Agreement includes "applicable administrative provisions":

Document which lays down product characteristics or their related processes and production methods, *including the applicable administrative provisions*, with which compliance is mandatory. (emphasis added)

7.174. We therefore consider whether the TMA Act constitutes an "applicable administrative provision" in relation to the TPP Act and TPP Regulation, within the meaning of Annex 1.1.

7.175. The appositive clause "including the applicable administrative provisions" has been interpreted to mean that:

[W]here a mandatory document laying down product characteristics or their related processes and production methods also contains "administrative provisions" that refer to those "product characteristics" or "related processes and production methods", those administrative provisions are to be considered as an integral part of the technical regulation and are thus subject to the substantive provisions of the TBT Agreement.⁸⁰⁴

7.176. Whether a measure constitutes an "applicable administrative provision" depends on whether there exist "provisions to be applied by virtue of a governmental mandate in relation to either product characteristics or their related processes and production methods".⁸⁰⁵ A key consideration for determining whether the TMA Act is an "applicable administrative provision" in the matter before us is therefore whether it is to be applied "in relation to either product characteristics or their related processes and production methods".⁸⁰⁶

7.177. As discussed in paragraph 7.127 above, the TMA Act grants to the Governor-General the power to make regulations "in relation to the effect of the operation" of the TPP Act and the TPP Regulations on a provision of the TM Act or regulations made thereunder. The TMA Act therefore provides a legal basis to address certain potential consequences of the marking, labelling and packaging requirements contained in the TPP Act and TPP Regulations in respect of the application of trademark law. Specifically, it creates a power to make regulations that will limit the effect of the requirements in the TPP Act and the TPP Regulations that set out product characteristics, insofar as that effect might disadvantage applicants for trademark registration and registered owners of trademarks.⁸⁰⁷

7.178. The power to make regulations established by the TMA Act is "in relation to ... product characteristics"⁸⁰⁸, insofar as such regulations would ensure that the effect of the requirements mandated by the TPP Act and TPP Regulations does not extend beyond that which is intended by the drafters of those two instruments. On this basis, insofar as its provisions relate to aspects of the TPP Act and Regulations related to the product characteristics that these instruments lay down, we conclude that the TMA Act is an "applicable administrative provision" within the meaning of Annex 1.1 of the TBT Agreement.⁸⁰⁹

7.179. Overall, therefore, we find that the TPP measures (i.e. the TPP Act, the TPP Regulations and the TMA Act, taken together), prescribe a number of detailed characteristics for tobacco products (including in terms of marking, labelling and packaging requirements) falling within the scope of the definition of "technical regulation" under Annex 1.1 of the TBT Agreement.

⁸⁰⁴ Appellate Body Reports, *EC – Seal Products*, para. 5.13.

⁸⁰⁵ Appellate Body Reports, *EC – Seal Products*, para. 5.13.

⁸⁰⁶ We consider it clear that the TMA Act, as an act of the Australian Parliament, is "applied by virtue of a governmental mandate". See Section 2.1.1 above and para. 7.177 below.

⁸⁰⁷ TMA Bill Explanatory Memorandum, (Exhibits AUS-5, JE-5), p. 1.

⁸⁰⁸ Appellate Body Reports, *EC – Seal Products*, para. 5.13.

⁸⁰⁹ Appellate Body Reports, *EC – Seal Products*, para. 5.13.

7.180. We note the following observation of the Appellate Body in relation to measures comprised of several legal instruments:

[T]he issue of how best to characterize a measure at issue which comprises several **different elements is one that arises in many disputes**. ... A panel may, in some cases, find it appropriate to treat several domestic legal instruments together as a single measure in order to facilitate its analysis of that measure in the light of the claims raised or defences invoked. Conversely, there may be instances where a panel may choose to consider different elements set out in a single legal instrument as different "measures", for purposes of its analysis.⁸¹⁰

7.181. As we have already concluded, the "integral and essential aspects"⁸¹¹ of the TPP Act and the TPP Regulations have the effect of ensuring that tobacco products and their retail packaging comply with the requirements set out in those provisions. This appearance is the combined **effect** of the TPP Act and the TPP Regulations, through the mandatory requirements set out in **both** instruments.⁸¹²

7.182. For these reasons, we consider that the TPP measures⁸¹³ constitute a technical regulation, laying down characteristics for the appearance and packaging of tobacco products (including requirements relating to the manner in which trademarks may be displayed on tobacco products and packaging)⁸¹⁴, and mandating compliance with those characteristics.⁸¹⁵ To the extent that the TMA Act is an "applicable administrative provision" in respect of the requirements contained in the TPP Act and the TPP Regulations, it is an "integral part"⁸¹⁶ of that technical regulation.

7.183. Having established that the TPP measures constitute a technical regulation within the meaning of Annex 1.1 of the TBT Agreement, we now consider the claim that they are inconsistent with Article 2.2 of the TBT Agreement.

7.2.5 Whether the TPP measures are "more trade-restrictive than necessary to fulfil a legitimate objective" within the meaning of Article 2.2

7.184. As described above, an assessment of the consistency of a technical regulation under Article 2.2 involves in the first instance a "relational analysis"⁸¹⁷ of three factors:

- i. the degree of contribution made by the measure to the legitimate objective at issue;
- ii. the trade-restrictiveness of the measure; and
- iii. the nature of the risks at issue and the gravity of consequences that would arise from non-fulfilment of the objective(s) pursued by the Member through the measure.

7.185. These factors will inform the "comparative analysis" that is, in most cases⁸¹⁸, required in order to determine whether the challenged measure is **more** trade-restrictive than necessary.⁸¹⁹

⁸¹⁰ Appellate Body Reports, *EC – Seal Products*, para. 5.20. (footnotes omitted)

⁸¹¹ Appellate Body Reports, *EC – Seal Products*, para. 5.19.

⁸¹² We recall, for example, that Section 27 of the TPP Act provides that regulations "may prescribe additional requirements in relation to (a) the retail packaging of tobacco products; and (b) the appearance of tobacco products", and that these requirements are so prescribed in the TPP Regulations. We also recall that the Notes to Sections 27(1) and 27A of the TPP Act indicate that Chapters 3 and 5 apply for failure to comply with a tobacco product requirement, which includes "a requirement in relation to the retail packaging or **appearance of tobacco products ... specified in Part 2 of Chapter 2 [of the TPP Act or] ... prescribed by regulations made under Part 2 of Chapter 2**", i.e. the TPP Regulations.

⁸¹³ While the TPP Act, the TPP Regulations and the TMA Act, taken together, have been identified throughout these Reports as "the TPP measures", in the plural, this usage is not intended to signal that the Panel considers these three legal instruments to constitute distinct measures that would need to be considered separately for the purposes of its analysis of the claims before it.

⁸¹⁴ See para. 7.158 above.

⁸¹⁵ See para. 7.169 above.

⁸¹⁶ Appellate Body Reports, *EC – Seal Products*, para. 5.13.

⁸¹⁷ See Appellate Body Report, *US – COOL*, para. 374 (referring to Appellate Body Report, *US – Tuna II*, para. 318).

7.186. As described earlier, the complainants argue that the TPP measures are trade-restrictive, and that they are more trade-restrictive than necessary to fulfil the legitimate objective they pursue, taking into account the risks that non-fulfilment of this objective would create. The complainants address all elements of the above test, including the three factors identified above as forming part of the "relational analysis" and alternative measures that are, in their view, reasonably available to Australia, would make an equivalent contribution to its objective, and would be less trade-restrictive than the TPP measures.

7.187. Australia considers, however, that the complainants have not established that the measures are trade-restrictive.⁸²⁰ Australia also argues that the TPP measures were adopted in accordance with the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines, and thus these measures are "in accordance with relevant international standards" within the meaning of the second sentence of Article 2.5 of the TBT Agreement.⁸²¹ Consequently, it claims that, to the extent that the definition of a "technical regulation" also encompasses measures affecting the use of a trademark, the TPP measures are "rebuttably presumed" not to create an unnecessary obstacle to international trade under the second sentence of Article 2.5 and that the complainants have not rebutted this presumption.⁸²² It is undisputed that the burden rests on Australia, as the party invoking the second sentence of Article 2.5, to demonstrate that these conditions are met.⁸²³ Should Australia do so, the burden would shift to the complainants to rebut the presumption that the TPP measures "[do] not create an unnecessary obstacle to international trade".⁸²⁴

7.188. Australia concludes that, given the complainants' failure to establish that the measures are trade-restrictive, the Panel is not required to engage in any further "relational" analysis under Article 2.2.⁸²⁵ Australia submits in the alternative, i.e. only in the event that the Panel would determine that the complainants have made a *prima facie* case that the TPP measures are trade-restrictive, that the complainants have failed to establish a violation of Article 2.2, with reference to the additional factors of the "relational analysis" described above.⁸²⁶ Australia further considers that the complainants have not established that alternative measures would be

⁸¹⁸ We note in this regard that it is "not mandatory in respect of Article 2.2 of the TBT Agreement for a panel to draw a preliminary conclusion on 'necessity' based on the factors with respect to the technical regulation itself before engaging further in a comparison with proposed alternative measures". Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.235. See also *ibid.* paras. 5.227-5.229. In respect of Article XX of the GATT 1994, see Appellate Body Reports, *EC – Seal Products*, para. 5.215 fn 1299.

⁸¹⁹ Appellate Body Report, *US – Tuna II (Mexico)*, para. 320. See also *ibid.* para. 318.

⁸²⁰ Australia's first written submission, para. 583.

⁸²¹ Australia's first written submission, paras. 567 and 584.

⁸²² Australia's first written submission, paras. 519, 567-568 and 584. See also Australia's response to Panel question No. 73, para. 200 (stating that "[t]he FCTC Guidelines address both the *trademark elements* of tobacco plain packaging (such as the use of logos, colours, or brand images) and the *physical elements* of tobacco plain packaging (such as the shape, size, and materials of tobacco packaging). The FCTC is therefore a relevant international standard whether the Panel considers the term 'technical regulation' to encompass only the physical requirements of the tobacco plain packaging measure, or whether it considers that term to encompass both the trademark and physical requirements." (footnote omitted) (emphasis added)).

⁸²³ See Honduras's response to Panel question No. 66, p. 27; Honduras's second written submission, para. 852; Dominican Republic's response to Panel question No. 66, paras. 293 and 323; Cuba's response to Panel question No. 66, p. 16 (annexed to its response to Panel question No. 138) (endorsing Honduras's response to this question); Indonesia's response to Panel question No. 66, para. 85; Indonesia's second written submission, para. 220; and Australia's response to Panel question No. 66, para. 160.

⁸²⁴ We note, in this respect, that in *Russia – Pigs (EU)*, the panel, addressing a similar situation (i.e. the sequential assessment of various elements before concluding whether the measure could enjoy the presumption of consistency established under Article 3.2 of the SPS Agreement), reserved its consideration of *how* to assess "rebuttability" to a later stage of its analysis:

Pursuant to the terms of Article 3.2, a finding that Russia's measures "conform to" relevant international standards would establish a presumption of consistency of Russia's measures with its relevant SPS obligations, and thus would have implications for this Panel's disposition of other claims in this dispute. Should we find "conformity to", as we understand that this presumption is "rebuttable", we would further need to consider how to assess whether or not this presumption has been rebutted in respect of each of the relevant provisions.

Panel Report, *Russia – Pigs (EU)*, para. 7.888. (footnote omitted)

⁸²⁵ Australia's first written submission, para. 585.

⁸²⁶ Australia's first written submission, paras. 586-590.

reasonably available to it, achieve an equivalent contribution to its objective, and be less trade-restrictive than the TPP measures.⁸²⁷

7.189. For the reasons described earlier⁸²⁸, we consider that the possibility that the challenged measures may benefit from the rebuttable presumption conferred by the second sentence of Article 2.5, as invoked by Australia, may have significant implications on the manner in which we must conduct the remainder of our analysis under Article 2.2 in these proceedings.

7.190. The presumption established under the second sentence of Article 2.5 only applies with respect to technical regulations that are adopted "for one of the legitimate objectives explicitly mentioned" in Article 2.2. An early consideration of this factor will therefore allow us to determine whether the TPP measures fall within the scope of measures to which the presumption of the second sentence of Article 2.5 applies. As described above, the "legitimate objective" at issue is also one of the aspects to be considered in an assessment of whether a technical regulation is "more trade-restrictive than necessary" within the meaning of the second sentence of Article 2.2, independently of the applicability of the rebuttable presumption embodied in the second sentence of Article 2.5.

7.191. In light of these elements, we deem it appropriate, in the circumstances of this case, to continue our analysis⁸²⁹ with a consideration of the objective of the TPP measures and whether such objective is "legitimate" within the meaning of Article 2.2. Should we determine that the TPP measures have been prepared, adopted or applied "for one of the legitimate objectives explicitly mentioned" in Article 2.2⁸³⁰, we will need to consider further whether, as invoked by Australia, the other conditions under the second sentence of Article 2.5 are met, such that the rebuttable presumption under Article 2.5 is applicable and, if so, what this implies for the remainder of our analysis of the claims before us under Article 2.2.⁸³¹

7.2.5.1 Whether the TPP measures pursue a "legitimate objective"

7.192. In adjudicating a claim under Article 2.2 of the *TBT Agreement*, a panel must first assess what a Member seeks to achieve by means of a technical regulation. Subsequently, the analysis must turn to the question of whether a particular objective is legitimate.⁸³² This analysis therefore involves both an identification of the objective being pursued by the Member through the measure and an assessment of its "legitimate" character, within the meaning of Article 2.2.

7.193. In addition, as observed above, an identification of the objective of the TPP measures is also necessary, in the circumstances of this case, to determine whether they pursue "one of the

⁸²⁷ Australia's first written submission, paras. 21, 595, and 700-742.

⁸²⁸ See para. 7.36 above.

⁸²⁹ We understand this general approach to be consistent with the manner in which the parties have articulated their understanding of Article 2.5. See, e.g. Honduras's response to Panel question No. 66, p. 26; Dominican Republic's response to Panel question No. 66, paras. 288-289 and 292; Cuba's response to Panel question No. 66, p. 216 (annexed to its response to Panel question No. 138) (endorsing Honduras's response to question No. 66); Indonesia's response to Panel question No. 66, para. 73; Australia's response to Panel question No. 66, para. 156; and Australia's second written submission, para. 313. With the exception of Indonesia (which considers that we should first make all our determinations under the second sentence of Article 2.5 before even "commencing" assessing Article 2.2), we do not consider that the parties' views on this matter are in contradiction with the approach we take here, that is: first, considering the elements that belong to *both* Articles 2.2 and 2.5 (whether the measures constitute a "technical regulation" and the identification of their "objectives"); and then proceeding, as relevant, to the remaining elements that determine the applicability of the rebuttable presumption under the second sentence of Article 2.5 (whether the measures are "in accordance with relevant international standards" and if they are, what the consequences of the presumption conferred are and how it can be rebutted). Finally, having considered the applicability of the presumption under the second sentence of Article 2.5, we would then return to the completion of our analysis under Article 2.2 in light of our earlier determinations in relation to the second sentence of Article 2.5.

⁸³⁰ The other element of the first set of conditions under the second sentence of Article 2.5 is that the measure seeking the rebuttable presumption must be a "technical regulation". We consider that this element has been met when we found, at para. 7.182 above, that the TPP measures are a "technical regulation" for the purposes of Article 2.2.

⁸³¹ See also paras. 7.36, 7.41, 7.187, 7.189 and fns 824 and 829 above.

⁸³² Appellate Body Report, *US – Tuna II (Mexico)*, para. 314.

legitimate objectives **explicitly** mentioned in paragraph 2" (emphasis added) within the meaning of the second sentence of Article 2.5, invoked by Australia.

7.194. We therefore first consider what the objective of the TPP measures is, or, as the Appellate Body expressed it, what Australia "seeks to achieve" through these measures, before considering whether this objective is "legitimate" within the meaning of Article 2.2 of the TBT Agreement, and to what extent it falls within the scope of the specific objectives listed in the second sentence of Article 2.5.

7.2.5.1.1 The objective of the TPP measures

7.195. As described by the Appellate Body:

[T]he proper approach to be followed by a panel in determining the objective a Member seeks to achieve by means of a technical regulation ... calls for an independent and objective assessment, based on an examination of the text of the measure, its design, architecture, structure, legislative history, as well as its operation. While a panel may take as a starting point the responding Member's characterization of the objective it pursues through the measure, a panel is not bound by such characterization. This is so especially where the objective of a measure is contested between the parties, and competing arguments have been raised on the basis of the text of the measure, its design, architecture, structure, legislative history, and evidence relating to its operation.⁸³³

7.196. We are mindful, in approaching this question, of the important distinction to be made, for the purposes of Article 2.2, between the identification of the **objective** that is pursued through the measure, which we now seek to ascertain, and the **level** at which the Member aims to achieve this objective, which we need not establish in the abstract at this stage of our analysis. As the Appellate Body observed:

Neither Article 2.2 in particular, nor the **TBT Agreement** in general, requires that, in its examination of the objective pursued, a panel must discern or identify, in the abstract, the level at which a responding Member wishes or aims to achieve that objective.⁸³⁴

7.197. Similarly, we are mindful of the fact that the identification of the objective pursued by a technical regulation is distinct also from the question of **how** or through what means, that objective is to be pursued. This distinction may have an impact on later parts of our analysis, to the extent that a comparison would be required between the degree to which the objective at issue is achieved by means of the challenged measures and the degree to which an equivalent contribution could be achieved through other less trade-restrictive measures attaining the same objective through different means.⁸³⁵

7.198. As we understand it, the identification of the "objective" pursued by a measure is designed to identify the underlying purpose of the challenged measure. The specific list of "legitimate objectives" identified in Article 2.2 provides an indication that this determination in essence relates to an identification of the underlying policy concern that the Member seeks to address through the measures (and, subsequently, whether this is "legitimate" within the meaning of Article 2.2). **How**

⁸³³ Appellate Body Reports, *US – COOL*, para. 395.

⁸³⁴ Appellate Body Reports, *US – COOL*, para. 390 (referring to Appellate Body Report, *US – Tuna II (Mexico)*, para. 316: "a WTO Member, by preparing, adopting, and applying a measure in order to pursue a legitimate objective, articulates either implicitly or explicitly the level at which it seeks to pursue that particular legitimate objective"). See also para. 7.231 below. The cited passage includes the following original footnote: "We have noted above that the sixth recital of the preamble of the **TBT Agreement** provides that a Member shall not be prevented from taking measures necessary to achieve a legitimate objective 'at the levels it considers appropriate'. ... This does not, however, require a separate assessment of a **desired** level of fulfilment." Appellate Body Reports, *US – COOL*, para. 390 fn 779. (emphasis original)

Appellate Body Reports, *US – COOL*, para. 390 (referring to Appellate Body Report, *US – Tuna II (Mexico)*, para. 316).

⁸³⁵ See Appellate Body Reports, *US – COOL*, para. 387. See also Panel Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, paras. 7.320 and 7.326.

the specific challenged measure seeks to address the concern at issue, and the degree to which it actually contributes to achieving its objective, are distinct questions that we will consider, as relevant, in later parts of our analysis.

7.199. With this general guidance in mind, we outline the main arguments of the parties in respect of the objective of the TPP measures, before turning to our own assessment of this objective.

7.2.5.1.1.1 Main arguments of the parties

7.200. Honduras describes the objective pursued by Australia through the TPP measures as "the improvement of public health by reducing smoking prevalence".⁸³⁶ Honduras considers that this position is supported by the TPP Act itself and the legislative history of the TPP Act.⁸³⁷ It explains that the relevant **objective** that must be identified is the government's policy objective, which must be distinguished from the **mechanism** chosen by the government to achieve that objective, and that in the present case, Australia's **policy objective is the reduction of smoking prevalence among its population**, which is reflected in Section 3.1 of the TPP Act and related evidence.⁸³⁸

7.201. The Dominican Republic also considers that the explicit objective of the TPP measures, as stated in the TPP Act, is the improvement of public health by reducing smoking prevalence.⁸³⁹

7.202. Cuba explains that the text of the TPP Act establishes that its objective is to "improve public health" through a reduction in smoking prevalence as a result of reducing initiation, increasing cessation and reducing relapse. It considers that the legislative history of the measure, as reflected in the Explanatory Memorandum accompanying the TPP Bill when it was first proposed, confirms this objective, as it explains that "the objects of this bill are to improve public health by reducing people's use of and exposure to tobacco products; and to give effect to certain of Australia's obligations under the WHO FCTC". Thus, in Cuba's view, the objective of Australia's plain packaging measure is "the protection of human health through the reduction of smoking prevalence (i.e. reducing initiation, increasing cessation, and reducing relapse) that will result, in combination with other measures, in reducing the national smoking rate to 10% by 2018 and halving the smoking rate of Aboriginal and Torres Strait Islander people".⁸⁴⁰

7.203. Indonesia explains that the Government of Australia stated early in the development of its proposal that the TPP measures' overall objective is to contribute to "reducing the smoking rate {prevalence} among the Australian population to 10 per cent by 2018, and halving the smoking rate among Aboriginal and Torres Strait Islander people" and that "[t]hus, the objective of PP is to protect health by reducing smoking prevalence".⁸⁴¹

7.204. Australia explains that "the objectives of Australia's tobacco plain packaging measure are set out in section 3 of the TPP Act".⁸⁴² It explains that Subsection 3(1) of the TPP Act sets out the general objects of the Act concerning smoking behaviour, which are shared by all comprehensive tobacco control strategies and are the means by which to improve public health overall: discouraging uptake, encouraging quitting, and discouraging relapse will necessarily result in a reduction of exposure to smoke, furthering public health by benefitting even non-smokers.⁸⁴³

7.205. Australia further explains that the implementing legislation and regulations, the Explanatory Memorandum and legislative history of the measure as well as its overall design, structure and operation, and the measure's objectives – which include giving effect to Australia's obligations under the FCTC – each clearly describes how the measure is intended to contribute, as part of Australia's comprehensive strategy of tobacco control measures, to achieving Australia's

⁸⁴² Australia's first written submission, para. 135.

⁸⁴³ Australia's first written submission, para. 136.

overall objective of protecting human health.⁸⁴⁴ Australia explains that Subsection 3(1) of the TPP Act sets out the "general objectives" of the TPP Act, which are "to improve public health by discouraging uptake, encouraging quitting, discouraging relapse, and reducing exposure to smoke" and are shared by all comprehensive tobacco control strategies, which operate to improve public health by reducing smoking prevalence and tobacco-related disease and mortality.⁸⁴⁵ It further explains that the operation of subsection 3(2) of the TPP Act is designed to contribute to improving public health through three specific mechanisms, or "specific objectives": reducing the appeal of tobacco products; increasing the effectiveness of health warnings; and reducing the ability of retail packaging of tobacco products to mislead consumers about the harmful effects of smoking and use of tobacco products.⁸⁴⁶

7.206. Australia considers that focusing exclusively on "smoking prevalence" in formulating the measure's objective, as proposed by the complainants, would have an impact on how the Panel will assess the degree of contribution of the measure:

[T]he complainants in effect [would be asking] the Panel to ignore the causal pathway through which the tobacco plain packaging measure will ultimately contribute to the achievement of its broader objectives of improving public health by discouraging uptake, encouraging quitting, discouraging relapse and reducing exposure to smoke. This is an attempt by the complainants to artificially sever the causal link between the behavioural effects of the tobacco plain packaging measure, and their long-term effects on smoking prevalence.⁸⁴⁷

7.207. Australia thus describes the TPP measures' objective, "properly defined", as "reducing smoking rates in Australia by reducing the appeal of tobacco products, increasing the effectiveness of graphic health warnings, and reducing the ability of packages to mislead consumers about the harms of smoking".⁸⁴⁸

7.208. Honduras considers that Australia tries to conflate its policy objective with the mechanisms it chose to achieve that objective and that, contrary to Australia's suggestions, the mechanisms contained in the TPP Act are not themselves Australia's objective, they are merely means to an end – the end or "objective" being the reduction of smoking prevalence.⁸⁴⁹

7.209. The Dominican Republic also observes that Australia seeks to characterize the three mechanisms as "specific objectives" that are ends in themselves, and that "[u]nsurprisingly, Australia was unable to maintain a consistent argument that the mechanisms are both the means to achieve the ends and the ends themselves".⁸⁵⁰

7.210. Cuba considers Australia's reference to reduction in smoking as the "general objective" to be achieved through three "specific objectives" or "mechanisms" to be confusing.⁸⁵¹ It argues that, taking as reference the text of the TPP Act, its legislative history, and the structure and design of the measure, there can be no doubt that the goal or "objective" of plain packaging is the improvement of public health through a change in smoking behaviour and not simply the reduction of the aesthetic appeal of tobacco products or their packaging.⁸⁵²

7.211. Indonesia also cautions the Panel against allowing Australia to "move the goal posts" by using terminology related to the "general objectives" and "specific measures" set out in the TPP measures. It argues that Australia tries to "have it both ways" by attempting to re-characterize the "specific mechanisms" as "objectives" themselves and that this is misleading,

⁸⁴⁴ Australia's first written submission, para. 141.

⁸⁴⁹ See Honduras's second written submission, paras. 523 and 524.

⁸⁵⁰ Dominican Republic's second written submission, para. 280.

⁸⁵¹ Cuba's second written submission, para. 207.

⁸⁵² Cuba's second written submission, para. 213.

as the specific mechanisms are the "levers" that Australia hopes will drive down prevalence, but the objective of Australia's plain packaging regime is to reduce prevalence.⁸⁵³

7.212. In addition, the Dominican Republic comments on Australia's stated objective of giving effect to certain obligations as a party to the FCTC. In the Dominican Republic's view, the FCTC does not oblige Australia to adopt plain packaging, and a WTO Member may not invoke, in any event, an obligation under a separate international agreement to justify imposing restrictions that would otherwise be contrary to WTO law. It argues that if they were so entitled, Members could reach agreements outside of the WTO as a means of evading their WTO obligations.⁸⁵⁴

7.2.5.1.1.2 Analysis by the Panel

7.213. In these proceedings, it is undisputed that the objective of the TPP measures relates to public health protection and more specifically to the protection of public health in relation to the use of tobacco products in Australia.

7.214. However, the parties articulate the particular objective pursued by Australia through the TPP measures somewhat differently. As described above, the complainants define the objective pursued by Australia with specific reference to the improvement of public health "by reducing smoking prevalence". Australia considers that a focus exclusively on smoking prevalence would "ignore the causal pathway through which the measures will contribute to their objective". As described above, Australia considers that the objective of the measures, properly defined, is to "reduc[e] smoking rates in Australia by reducing the appeal of tobacco products, increasing the effectiveness of graphic health warnings, and reducing the ability of packages to mislead consumers about the harms of smoking".⁸⁵⁵ In the complainants' view, these three aspects constitute "mechanisms" in the operation of the measures, i.e. the means through which the general objectives identified in the TPP Act are intended to be carried out, and cannot properly be characterized as "objectives" of the TPP measures within the meaning of article 2.2 of the TBT Agreement.

7.215. In light of the diverging descriptions by the parties of the objective of the TPP measures, we next consider further how exactly it should be characterized. In doing so, we should take into account Australia's own articulation of what objective it pursues through its measures. However, as noted above, we are not bound by this characterization. In order to make an objective and independent assessment of the objective that a Member seeks to achieve, we must take account of all the evidence put before us in this regard, including "the texts of statutes, legislative history, and other evidence regarding the structure and operation" of the technical regulation at issue.⁸⁵⁶

7.216. We therefore consider the relevant evidence before us, including the text of the measures, their legislative history and other evidence on the operation of the TPP measures, to identify their objective.

7.217. The text of the TPP Act is the principal legal instrument embodying the plain packaging requirements under the TPP measures and defines its object. It is subtitled "An Act to discourage the use of tobacco products, and for related purposes".⁸⁵⁷ Section 3 defines the "Objects of this Act" as follows:

(1) The objects of this Act are:

(a) to improve public health by:

(i) discouraging people from taking up smoking, or using tobacco products; and

⁸⁵³ Indonesia's second written submission, para. 166.

⁸⁵⁴ Dominican Republic's second written submission, para. 287.

⁸⁵⁵ Australia's first written submission, para. 604. See also Australia's second written submission, paras. 210 and 535.

⁸⁵⁶ Appellate Body Reports, *US – COOL*, para. 371.

⁸⁵⁷ TPP Act, (Exhibits AUS-1, JE-1), cover page.

- (ii) encouraging people to give up smoking, and to stop using tobacco products; and
 - (iii) discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing; and
 - (iv) reducing people's exposure to smoke from tobacco products; and
- (b) to give effect to certain obligations that Australia has as a party to the Convention on Tobacco Control.⁸⁵⁸

7.218. On its face, therefore, the TPP Act identifies two main "objects". The first, under subparagraph (a), is "to improve public health" through certain actions listed in subparagraphs (i)–(iv). The second specific object is identified in subparagraph (b), namely "to give effect to certain obligations that Australia has as a party to the [FCTC]". These "objects" are summarized as follows in the Simplified Outline of the Act contained in the TPP Act itself:

This Act regulates the retail packaging and appearance of tobacco products in order to:

- (a) improve public health; and
- (b) give effect to certain obligations in the Convention on Tobacco Control.⁸⁵⁹

7.219. We consider these two "objects" in turn.

Improvement of public health

7.220. With respect to the first "object" identified in the TPP Act, we note that Section 3(1)(a) refers to improving public health by *discouraging* smoking uptake, use of tobacco products or relapse into smoking, *encouraging* cessation and *reducing exposure* to smoke. As the title of the Act itself suggests, this formulation turns around "*discourag(ing)* the use of tobacco products" (emphasis added).

7.221. According to the TPP Bill Explanatory Memorandum⁸⁶⁰, "[t]his clause provides that the objects of this Bill are to improve public health *by reducing people's use of and exposure to tobacco products*"⁸⁶¹ (emphasis added). The Explanatory Memorandum also describes the broader context against which the TPP Act is adopted:

The Australian Government is implementing a comprehensive suite of reforms *to reduce smoking and its harmful effects*. As part of these reforms the Government committed to introduce legislation requiring plain packaging of tobacco products, to remove one of the last frontiers for tobacco advertising.⁸⁶²

7.222. Throughout these proceedings, Australia has used various formulations to describe the general objective of the TPP measures. It has described it both in terms of "improvi[ng] public health by *discouraging* uptake, *encouraging* quitting, discouraging relapse and reducing exposure to smoke"⁸⁶³ and in terms of "*reducing smoking rates in Australia ...*".⁸⁶⁴ These two formulations differ, to the extent the first focuses on encouraging or discouraging certain specific behaviours relating to the use of tobacco products, while the other refers more directly to a reduction of smoking and smoking rates. Australia has also described its objective, "properly defined" for the

⁸⁵⁸ TPP Act, (Exhibits AUS-1, JE-1), Section 3.

⁸⁵⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 12.

⁸⁶⁰ See para. 2.13 above, and related footnotes, for an explanation of the legal value of Explanatory Memoranda under Australian domestic law.

⁸⁶¹ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 6.

⁸⁶² TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 1. (emphasis added)

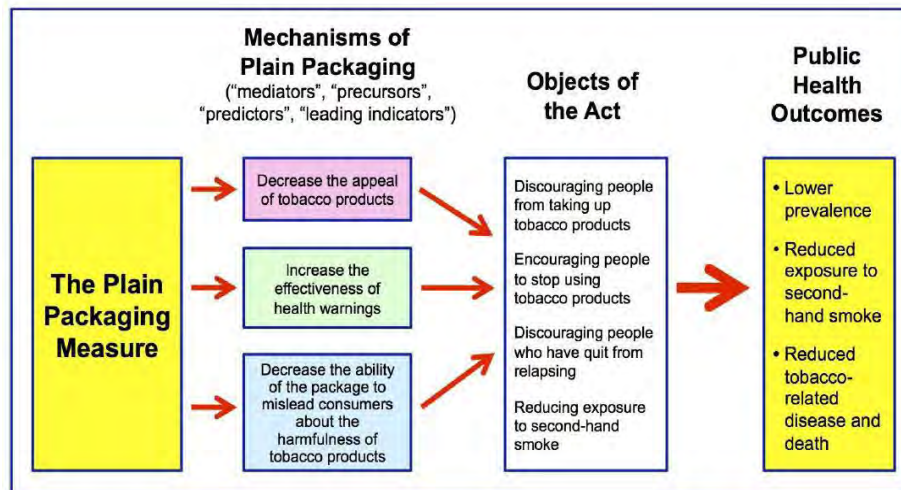

⁸⁶³ Australia's first written submission, para. 602. (emphasis added)

⁸⁶⁴ Australia's first written submission, para. 604. (emphasis added)

purposes of the analysis under Article 2.2, with reference to the improvement of public health by "reducing smoking rates".

7.223. The overall operation of the measures is described as follows by Australia:

Figure 11: Australia's depiction of the operation of the TPP measures

Source: Figure 9 of Australia's first written submission, at para. 144.

7.224. The complainants describe the objective of the TPP measures as the improvement of public health by "reducing smoking *prevalence*" (emphasis added), prevalence being defined as the number of smokers as a percentage of the total population.⁸⁶⁵

7.225. As we understand it, the underlying objective pursued by Australia through the TPP measures, as reflected in the text of the TPP Act and in its Explanatory Memorandum, is the improvement of public health, specifically through an effort to "reduce smoking" and "reduce smoking rates".⁸⁶⁶ The TPP Act does not expressly refer to the reduction of smoking or smoking rates as one of its objects. It is clear however from the Explanatory Memorandum that these measures are one element of what Australia describes as "a comprehensive suite of reforms *to reduce smoking* and its harmful effects".⁸⁶⁷ As expressed in the Explanatory Memorandum, the

⁸⁶⁵ See Honduras's first written submission, para. 351; Dominican Republic's first written submission, para. 50 fn 7; Cuba's first written submission, para. 86; and Indonesia's first written submission, para. 6, fn 3.

⁸⁶⁶ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 1. See also TPPA Regulation Explanatory Statement, (Exhibit JE-22), pp. 11-15; and Consultation Paper Non-Cigarette Tobacco Products, (Exhibit JE-11), pp. 3 and 16.

⁸⁶⁷ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 1. The Explanatory Memorandum further identifies the "rationale for plain packaging" as follows:

This Bill will prevent tobacco advertising and promotion on tobacco products and tobacco product packaging in order to:

- reduce the attractiveness and appeal of tobacco products to consumers, particularly young people;
- increase the noticeability and effectiveness of mandated health warnings;
- reduce the ability of the tobacco product and its packaging to mislead consumers about the harms of smoking; and
- through the achievement of these aims in the long terms, as part of a comprehensive suite of tobacco control measures, contribute to efforts to reduce smoking rates.

Ibid. See also TMA Bill Explanatory Memorandum (Exhibits AUS-5, JE-5), p. 1, outline; Australian Department of Health and Ageing, "Consultation Paper: Tobacco Plain Packaging Bill 2011 Exposure Draft", 7 April 2011, (Consultation Paper TPP Bill Exposure Draft), (Exhibits AUS-120, JE-10), pp. 1-2; 1-2; Australian Department of Health and Ageing, "Consultation Paper: Tobacco Plain Packaging: Proposed Approach to Non-Cigarette Tobacco Products", 30 September 2011, (Consultation Paper Non-Cigarette Tobacco Products), (Exhibit JE-11), pp. 3 and 13-14.

TPP Act is intended "to improve public health by reducing people's use of and exposure to tobacco products".⁸⁶⁸

7.226. We agree with Australia that a characterization of the objective of the TPP measures based exclusively on the reduction of smoking *prevalence*, as proposed by the complainants, would not fully reflect the objective that it pursues through the TPP measures, to the extent that this would reflect only one dimension of the reduction of smoking that Australia seeks to achieve through the measures. While the objects of the TPP Act make reference to encouraging quitting and discouraging uptake, which may be seen to relate in particular to reducing smoking prevalence as defined above, the TPP Act is also intended, by its own terms, to discourage people more generally "from using tobacco products" and reducing "exposure to smoke from tobacco products". The objective of the TPP measures therefore cannot, in our view, be reduced exclusively to the reduction of smoking prevalence, i.e. a reduction in the proportion of the population that smokes. As we understand it, the objective of the measures encompasses more broadly an intention to reduce "use" of, and exposure to, tobacco products.

7.227. We do not consider, however, that the objective of the TPP measures, for the purposes of our analysis under Article 2.2, should be understood as encompassing the additional aspects identified by Australia as the "specific objectives" or "mechanisms" under the TPP Act, i.e. "reducing the appeal of tobacco products, increasing the effectiveness of graphic health warnings, and reducing the ability of packages to mislead consumers about the harms of smoking". In our view, these "specific objectives" are more properly described as the means, or "mechanisms", as Australia itself describes them, by which the measures are intended to achieve Australia's objective of improving public health. We agree with the view expressed by the complainants, and some of the third parties, that the means should not be confused with the ends in this context.⁸⁶⁹

7.228. As Australia itself explains, the TPP Act and its Explanatory Memorandum describe "**how the measure is intended to contribute**, as part of Australia's comprehensive strategy of tobacco control measures to achieving Australia's overall objective of protecting human health" (emphasis added). Specifically, Section 3.2 of the TPP Act introduces the three "mechanisms" that Australia describes as "specific objectives" in the following manner:

(2) It is the intention of the Parliament to **contribute to achieving the objects in subsection (1) by** regulating the retail packaging and appearance of tobacco products in order to:

(a) reduce the appeal of tobacco products to consumers; and

⁸⁶⁸ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 6. See also TMA Bill Explanatory Memorandum (Exhibits AUS-5, JE-5), p. 1, outline; Consultation Paper TPP Bill Exposure Draft, (Exhibits AUS-120, JE-10), pp. 1-2; 1-2; Consultation Paper Non-Cigarette Tobacco Products, (Exhibit JE-11), pp. 3 and 16; and TPPA Regulation Explanatory Statement, (Exhibit JE-22), pp. 11, 12, 14, and 15.

⁸⁶⁹ See, e.g. European Union's third-party submission, para. 68:

The overarching legitimate objective and the subsidiary aims should not be conflated. If the "objective" is cast in an artificial way to include matters that are not *per se* legitimate, but that merely draw their legitimacy from the overarching objective and the context, then the analysis becomes circular and the measure self-justifying. That is because even if, hypothetically, an alternative measure would exist that would in fact eliminate or almost eliminate smoking, and thus make a greater contribution to the objective of protecting public health, but do nothing to reduce the appeal of the packaging, in purely legal terms it would fail as an alternative measure under Article 2.2 simply because it would not address the issue of the appeal of the packaging (leaving aside the question of whether or not it would be more trade-restrictive).

In this respect, we also note the observation by the panel in *US – COOL (Article 21.5 – Canada and Mexico)* that:

[T]he assessment of the degree of contribution would be confounded and would become virtually meaningless if the objective pursued by the amended COOL measure were to be equated with the way in which the same measure pursues that objective. A meaningful review of a Member's challenged measure entails a review against objective standards, not those of the challenged measure itself.

Panel Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 7.326.

- (b) increase the effectiveness of health warnings on the retail packaging of tobacco products; and
- (c) reduce the ability of the retail packaging of tobacco products to mislead consumers about the harmful effects of smoking or using tobacco products.⁸⁷⁰

7.229. As described above, what we are seeking to establish, at this stage of our analysis, is what Australia seeks to achieve through the TPP measures, or, in other words, what policy concern it seeks to address. This question is distinct, in our view, from the question of *how* the specific measures at issue are intended to achieve this objective. What we are concerned with here is the identification of the underlying *purpose* of the measures, rather than the specific operational mechanisms through which they are intended to achieve that purpose.

7.230. This determination does not imply that the specific mechanisms through which the measures are intended to operate will not be relevant to our overall analysis of the measures' consistency with Article 2.2 of the TBT Agreement. On the contrary, these may form the basis of further aspects of our analysis, should we determine in the first instance that the "objective" of the measures is legitimate. They may become highly relevant, *inter alia*, to our analysis of the measures' contribution to its objective. At this stage of our analysis however, the focus of our enquiry is on the general policy goal that the measures seek to address or, as the Appellate Body expressed it, what Australia "seeks to achieve" through the TPP measures.

7.231. In describing Australia's objective under the TPP measures, Cuba and Indonesia have also referred to the "performance benchmarks set under the COAG [Council of Australian Governments] National Healthcare Agreement" of "reducing the national smoking rates to 10 per cent of the population by 2018 and halving the Aboriginal and Torres Strait Islander smoking rate". These "performance benchmarks" are referred to in the TPP Bill Explanatory Memorandum.⁸⁷¹ They constitute general targets set in relation to the reduction of smoking rates in Australia, through the TPP measures and other tobacco control measures.⁸⁷² These "benchmarks" thus identify a certain targeted *level* of achievement of the objective. As described above however, Article 2.2 does not require that we discern or identify *in abstracto* the *level* at which Australia wishes or aims to achieve its objective.⁸⁷³ We thus need not consider, as such, the existence of a specific target or benchmark in the achievement of the objective for which Australia may aim as a component of that objective itself.⁸⁷⁴ Rather, as described above⁸⁷⁵, the focus of our enquiry is the underlying purpose or rationale of the measures. We are not persuaded, therefore, that the objective of the TPP measures needs to be characterized, at this stage of our analysis, with reference to the above performance benchmarks.

7.232. In light of the above, we understand the objective pursued by Australia by means of the TPP measures to be to improve public health by reducing the use of, and exposure to, tobacco products.

Giving effect to the Framework Convention on Tobacco Control (FCTC)

7.233. The TPP Act identifies, in Section 3(1)(b), a second "Object", namely "to give effect to certain obligations that Australia has as a party to the Convention on Tobacco Control".

⁸⁷⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 3. (emphasis added)

⁸⁷¹ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 1. See also Consultation Paper TPP Bill Exposure Draft, (Exhibits AUS-120, JE-10), pp. 1 and 3-5; and Consultation Paper Non-Cigarette Products, (Exhibit JE-11), pp. 13-14.

⁸⁷² See, e.g. Consultation Paper TPP Bill Exposure Draft, (Exhibits AUS-120, JE-10), pp. 1 and 3-5; and Consultation Paper Non-Cigarette Products, (Exhibit JE-11), pp. 13-14 (listing "the introduction of plain packaging for tobacco products" among **ten "reforms initiated ... to meet [the Council of Australian Governments'] target"**).

⁸⁷³ See para. 7.196 above.

⁸⁷⁴ See paras. 7.197-7.198 above.

⁸⁷⁵ See para. 7.229 above.

7.234. As described above, the term "Convention on Tobacco Control" is defined in the TPP Act as meaning the FCTC.⁸⁷⁶ Further, the TPP Bill Explanatory Memorandum states that the "introduction of plain packaging for tobacco products is one of the means by which the Australian Government will give effect to Australia's obligations under the [FCTC]" and, in this context, refers to Articles 5, 11 and 13 of the FCTC.⁸⁷⁷ The TPP Bill Explanatory Memorandum adds that Section 3(2) "is not intended to be an exhaustive list of ways in which ... Australia's obligations under the WHO FCTC may be met".⁸⁷⁸

7.235. As discussed above, Australia has described its "legitimate objectives", "properly defined", for the purposes of Article 2.2 of the TBT Agreement as "reducing smoking rates in Australia by reducing the appeal of tobacco products, increasing the effectiveness of graphic health warnings, and reducing the ability of packages to mislead consumers about the harms of smoking".⁸⁷⁹ In describing its objectives, however, Australia also makes reference to its intention of giving effect to the FCTC, as referred to in Subsection 3(2) of the TPP Act:

The structure and operation of subsections 3(1) and 3(2), operating together, make clear that the TPP Act specifies a causal pathway by which Australia's objectives of improving public health and giving effect to the FCTC may be achieved. That is, the achievement of the specific objectives under subsection 3(2) is a *direct means* by which the objective of improving public health under subsection 3(1) of the TPP Act is achieved.⁸⁸⁰

7.236. In response to a question from the Panel, Australia clarified that it considers the implementation of its obligations under the FCTC to be one of its "objectives" for the purposes of Article 2.2:

Tobacco plain packaging is recommended as a means by which parties to the FCTC may implement their obligations under Articles 11 and 13 of the FCTC. Australia therefore considers the introduction of tobacco plain packaging to give effect to Australia's "General Obligation" to implement and update comprehensive multi-sectoral strategies under Article 5.1 of the FCTC, as well as its specific obligations under Articles 11 and 13. As such, giving effect to certain obligations that Australia has as a party to the FCTC is one of the measure's legitimate objectives for the purposes of Article 2.2 of the TBT Agreement.⁸⁸¹

7.237. Honduras, the Dominican Republic and Cuba argue that the implementation of the FCTC does not oblige Australia to adopt plain packaging, and that a WTO Member may, in any event, not invoke an obligation under a separate international agreement to justify imposing restrictions that would otherwise be contrary to WTO law.⁸⁸² For these reasons, they consider that the consistency of the TPP measures with Article 2.2 of the TBT Agreement must only be assessed against the stated objective of reducing smoking behaviour⁸⁸³, improving "public health by reducing smoking prevalence"⁸⁸⁴ and "reducing tobacco prevalence".⁸⁸⁵

⁸⁷⁶ TPP Act, (Exhibits AUS-1, JE-1), Section 4(1). See also para. 2.16 above.

⁸⁷⁷ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 2.

⁸⁷⁸ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 7.

⁸⁷⁹ Australia's first written submission, para. 604.

⁸⁸⁰ Australia's first written submission, para. 600. (emphasis original; footnote omitted)

⁸⁸¹ Australia's response to Panel question No. 78, para. 220.

⁸⁸² See Honduras's first written submission, paras. 11, 121 and 138-140; Honduras's second written submission, para. 465; Dominican Republic's first written submission, paras. 187 and 422-423; Dominican Republic's second written submission, paras. 286-288 and 962; Cuba's first written submission, paras. 289-291, 320 fn 406, and 406; Cuba's response to Panel question No. 130, p. 17; Indonesia's first written submission, paras. 92-98; Indonesia's comments on Australia's Post-Implementation Report, paras. 12-13. Honduras also argues that, even if the FCTC required its parties to implement plain packaging, this Panel, by virtue of Article 3.2 of the DSU, would not have the mandate to interpret such obligation from a non-WTO treaty. Honduras's first written submission, paras. 138-139. See also Dominican Republic's first written submission, para. 423; Dominican Republic's second written submission, para. 287; and Cuba's first written submission, paras. 290 and 292.

⁸⁸³ Dominican Republic's second written submission, paras. 288 and 962.

⁸⁸⁴ Honduras's first written submission, para. 140.

7.238. We do not understand Australia to be suggesting that its objective of "giving effect to certain obligations" it has under the FCTC should be considered, for the purposes of determining the "legitimate objective" of the TPP measures under Article 2.2, in abstraction of, and independently from, its objective in relation to the improvement of public health. Rather, we understand Australia's intention of giving effect to certain of its obligations under the FCTC through the TPP measures, including the TPP Act, to be directly related to, and in pursuance of, its objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.239. As expressed by Australia, "[t]he public health rationale underlying the TPP Act, and the means by which to achieve this objective, **is supported by** both the Explanatory Memorandum to the TPP Act and **the FCTC Guidelines**".⁸⁸⁶ Australia further explains that "there is no dispute that measures recommended by the FCTC are 'legitimate' **public health** measures".⁸⁸⁷ As Australia further expressed it:

Subsection 3(1)(b) of the TPP Act expressly provides that the tobacco plain packaging measure will **improve public health by** giving effect to certain obligations that Australia has as a party to the FCTC. As outlined in paragraph 140 of Australia's first written submission, the Explanatory Memorandum to the TPP Bill refers explicitly to the FCTC Guidelines, which recommend that Parties consider introducing tobacco plain packaging (emphasis added).⁸⁸⁸

7.240. The objective of the FCTC is set out in Article 3 as follows:

[T]o protect present and future generations from the devastating **health**, social, environmental and economic **consequences of tobacco consumption and exposure to tobacco smoke** by providing a framework for tobacco control measures to be implemented by the Parties at the national, regional and international levels **in order to reduce continually and substantially the prevalence of tobacco use and exposure to tobacco smoke**.⁸⁸⁹ (emphasis added)

7.241. We note the recognition, in the FCTC, of the major public health concerns raised by tobacco consumption and exposure, **and its express objective of addressing the "devastating ... consequences for tobacco consumption and exposure to tobacco smoke"**, including on health.

7.242. As indicated by Australia⁸⁹⁰ and as reflected in the measures' legislative history⁸⁹¹, the TPP measures intend, more specifically, to reflect certain recommendations in the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines to "consider adopting" tobacco

⁸⁸⁵ Cuba's first written submission, para. 320 fn 406 (stating that "the further objective of giving effect to the FCTC cannot be treated as one which is capable of separately justifying the [T]PP Measures if the [T]PP Measures fail to reduce tobacco use"). But see Cuba's second written submission, paras. 203, 214, and 224.

⁸⁸⁶ Australia's first written submission, para. 601. (emphasis added; footnotes omitted)

⁸⁸⁷ Australia's response to Panel question No. 78, para. 219. (emphasis added)

⁸⁸⁸ Australia's response to Panel question No. 78, para. 217. (emphasis added)

⁸⁸⁹ FCTC (Exhibits AUS-44, JE-19), Article 3 (emphasis added). See also para. 2.100 above, and Australia's response to Panel question No. 78, para. 218.

⁸⁹⁰ See, e.g. Australia's first written submission, paras. 2, 4, 9, and 108. Australia links the TPP measures' **"three mechanisms" with the "likely benefits of tobacco plain packaging ... identified in the [FCTC] Guidelines"**:

This may increase the noticeability and effectiveness of health warnings and messages, prevent the package from detracting attention from them, and address industry package design techniques that may suggest that some products are less harmful than others.

Ibid. para. 108 (quoting part of paragraph 46 of the Article 11 FCTC Guidelines).

⁸⁹¹ See, e.g. TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), pp. 2-3, 6-9, 11, 14; Consultation Paper TPP Bill Exposure Draft, (Exhibits AUS-120, JE-10), pp. 6-7, 11, and 13-14; TPPA Regulation Explanatory Statement, (Exhibit JE-22), p. 14 of Attachment B. See also Australia's first written submission, para. 140.

plain packaging as one of the ways to implement those obligations in Articles 11 and 13 of the FCTC.⁸⁹²

7.243. In light of these elements, we consider that the reference made, in the TPP Act and its Explanatory Memorandum and related documents, to Australia's intention to give effect to certain obligations under the FCTC through the adoption of the TPP measures further supports and **confirms** that the objective of these measures, for the purposes of our determination under Article 2.2 (i.e. identifying the underlying policy concern being addressed through the challenged measures) is to improve public health by reducing the use of, and exposure to, tobacco products.⁸⁹³

7.244. We therefore need not consider further whether the implementation of certain obligations under the FCTC might be considered to constitute a separate "legitimate objective" *independently* of Australia's public health objective described above.⁸⁹⁴

7.2.5.1.2 Whether the objective pursued by Australia through the TPP measures is a "legitimate objective" within the meaning of Article 2.2

7.245. The Appellate Body has observed that a "legitimate objective" refers to an "aim or target that is lawful, justifiable, or proper".⁸⁹⁵ While Article 2.2 does not provide an exhaustive list of such objectives, it expressly identifies a number of objectives as "legitimate objectives". As noted by the Appellate Body, a finding that the objective of a measure is among those listed in Article 2.2 will end the inquiry into its legitimacy.⁸⁹⁶

7.246. We have determined above⁸⁹⁷ that the objective pursued by Australia through the TPP measures is the protection of human health, and more precisely the improvement of public health by reducing the use of, and exposure to, tobacco products.

7.247. The "protection of human health or safety" is one of the "legitimate objectives" explicitly identified in Article 2.2.⁸⁹⁸ We note in this respect that, in the context of Article XX(b) of the GATT 1994, the preservation of human life and health through the elimination or reduction of well-known and life-threatening health risks (in that instance, as caused by asbestos fibers) was considered to be a value "both vital and important in the highest degree".⁸⁹⁹

⁸⁹² FCTC parties have undertaken in Article 11 of the Convention to implement "effective measures" with respect to the use of health warnings and other appropriate messages in tobacco product packaging and labelling, as well as to ensure tobacco product packaging and labelling "do not promote" these products by any means that are misleading or deceptive. FCTC, (Exhibits AUS-44, JE-19), Articles 11.1(a) and 11.1(b). Under Article 13 of the Convention, FCTC parties have undertaken to apply a "comprehensive ban on all tobacco advertisement, promotion and sponsorship" which, "[a]s a minimum" shall provide, *inter alia*, for a prohibition of "all forms of tobacco advertisement ... that promote a tobacco product by any means that are false, misleading or deceptive". Ibid. Articles 13.1, 13.2, and 13.4(a). "Tobacco advertisement and promotion" is, in turn, defined by the Convention as "any form of commercial communication, recommendation or action with the aim, effect or likely effect of promoting a tobacco product or tobacco use either directly or indirectly". Ibid. Article 1(c). We also note that the TPP Act expressly adopts this FCTC definition. TPP Act, (Exhibits AUS-1, JE-1), Section 4(1). See also paras. 2.100-2.109 above.

⁸⁹³ We note in this respect the acknowledgement by the Dominican Republic that the FCTC Guidelines could "at most ... confirm the legitimacy of the plain packaging as a measure with the *objective* of promoting public health". Dominican Republic's response to panel question No. 130, para. 315. (emphasis original)

⁸⁹⁴ This determination that, for the purposes of identifying the "objective" of the measures under Article 2.2 of the TBT Agreement, the implementation of the FCTC need not be considered to constitute an *independent* objective separate from Australia's public health objective, in no way implies that the FCTC and its related instruments will be of no relevance, or of lesser relevance, for the remainder of our assessment under Article 2.2 of the TBT Agreement or in relation to other claims before us.

⁸⁹⁵ Appellate Body Reports, *US – Tuna II (Mexico)*, para. 313; and *US – COOL*, para. 370. (footnote omitted)

⁸⁹⁶ Appellate Body Reports, *US – COOL*, para. 372.

⁸⁹⁷ See para. 7.232 above.

⁸⁹⁸ The other legitimate objectives explicitly listed in Article 2.2 are: "national security requirements"; "the prevention of deceptive practices"; "protection of ... animal or plant life or health"; and "protection of ... the environment".

⁸⁹⁹ See Appellate Body Report, *EC – Asbestos*, para. 172.

7.248. It is undisputed, in these proceedings, that tobacco use and exposure to tobacco smoke cause death and disease⁹⁰⁰, and that the protection of human health from such risks is thus a legitimate public health objective within the meaning of Article 2.2 of the TBT Agreement.

7.249. We also note Honduras's observation that it has itself implemented comprehensive tobacco regulation measures and shares Australia's goal of "reducing smoking prevalence and tobacco consumption".⁹⁰¹ The Dominican Republic considers "the improvement of public health by reducing smoking prevalence" to be a legitimate objective within the meaning of Article 2.2.⁹⁰² Cuba also accepts that the objective of reducing smoking prevalence is an entirely legitimate objective and that tobacco consumption and exposure to tobacco smoke cause death and disability.⁹⁰³ Indonesia also does not dispute that measures to reduce smoking prevalence protect public health and does not challenge the legitimacy of the objective pursued by Australia's TPP measures.⁹⁰⁴

7.250. We further note that "curbing and preventing youth smoking" has already been recognized as a "legitimate health objective" in the context of the TBT Agreement⁹⁰⁵ and that the Appellate Body has also, in the context of applying the TBT Agreement, already recognized "the importance of Members' efforts in the World Health Organization on tobacco control".⁹⁰⁶ As described above, the "spread of the tobacco epidemic" as "a global problem with serious consequences for public health", and "the devastating worldwide health ... consequences of tobacco consumption and exposure to tobacco smoke"⁹⁰⁷ have been expressly recognized by the FCTC. As also described above, the very objective of the FCTC, an international convention with 180 parties (the vast majority of which are also WTO Members)⁹⁰⁸, is to provide "a framework for tobacco control measures to be implemented by the Parties at the national, regional and international levels in order to reduce continually and substantially the prevalence of tobacco use and exposure to tobacco smoke".⁹⁰⁹

7.251. It is clear, in light of the above⁹¹⁰, that the improvement of public health by reducing the use of, and exposure to, tobacco products is a "legitimate objective" within the meaning of Article 2.2 of the TBT Agreement.

⁹⁰⁰ See section 7.2.5.5 below, on the nature of the risks and gravity of the consequences of non-fulfilment of the objective. See also FCTC, (Exhibits AUS-44, JE-19), preamble, second and third recitals, and Article 3; and WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 13. See further paras. 7.240-7.241 above.

⁹⁰¹ See Honduras's first written submission, paras. 2 and 850.

⁹⁰² See Dominican Republic's first written submission, para. 972.

⁹⁰³ See Cuba's first written submission, paras. 3 and 406.

⁹⁰⁴ See Indonesia's first written submission, para. 389.

⁹⁰⁵ Appellate Body Report, *US – Clove Cigarettes*, para. 236.

⁹⁰⁶ Appellate Body Report, *US – Clove Cigarettes*, para. 235.

⁹⁰⁷ FCTC, (Exhibits AUS-44, JE-19), preamble, second and third recitals, and Article 3; and WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 13. See also paras. 7.240-7.241 above.

⁹⁰⁸ We note that most FCTC Parties are also WTO Members (149 out of 180, or around 83%). See Australia's response to Panel question No. 128, paras. 188-189; Australia's first written submission, para. 578; and Australia's second written submission, para. 336 (referring however to 148 WTO Members, as these submissions were made before Kazakhstan, also a FCTC Party, became a WTO Member in November 2015).

Similarly, the vast majority of WTO Members are also FCTC Parties (149 out of 160, or around 93%). Two of the parties of these proceedings are FCTC Parties: Australia and Honduras. Cuba signed the FCTC in June 2004, but has never become a FCTC Party via ratification, acceptance or accession. The Dominican Republic and Indonesia are neither FCTC Parties nor Signatories. WHO/FCTC Request for Permission to Submit Information, (Exhibit AUS-42, revised), para. 12; and WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 12 and fn 18. See also Honduras's first written submission, para. 124; Dominican Republic's first written submission, para. 178; Cuba's second written submission, para. 383; Indonesia's first written submission, para. 93; and Australia's first written submission, para. 103. Additionally, "[a]ll parties to [these disputes] are WHO Member States." WHO/FCTC Request for Permission to Submit Information, (Exhibit AUS-42 (revised)), para. 12.

Most third parties to these proceedings are also FCTC Parties. The only third parties to these proceedings that are not FCTC Parties are: Argentina, Malawi, and the United States (although both Argentina and the United States are FCTC Signatory states, having signed it in 2003 and 2004, respectively). A list of all FCTC Parties and signatories is contained in Exhibit IND-29 (indicating 179 Parties given that it was submitted before Zimbabwe became a Party in March 2015). See also para. 2.97 above.

⁹⁰⁹ FCTC, (Exhibits AUS-44, JE-10), Article 3. See also Australia's response to Panel question No. 78, para. 218.

⁹¹⁰ See, e.g. paras. 7.232, 7.246, and 7.247 above.

7.252. We understand the reference in the second sentence of Article 2.5 to the "objectives **explicitly** mentioned in Article 2.2" (emphasis added) to relate to those objectives listed in Article 2.2 and identified in paragraph 7.247 above, which includes "the protection of human health". We therefore also find, and the parties do not dispute⁹¹¹, that the TPP measures are "prepared, adopted or applied for one of the objectives explicitly mentioned in paragraph 2", within the meaning of the second sentence of Article 2.5 of the TBT Agreement.

7.253. Accordingly, we now consider whether the TPP measures are, as Australia argues, "in accordance with relevant international standards".

7.2.5.2 Whether the TPP measures are "in accordance with relevant international standards" under Article 2.5 (second sentence)

7.2.5.2.1 Overview of the arguments of the parties

7.254. Australia argues that the FCTC Guidelines for Implementation of Article 11 of the FCTC and the FCTC Guidelines for Implementation of Article 13 of the FCTC (Article 11 and Article 13 FCTC Guidelines)⁹¹², constitute a "relevant international standard" for tobacco plain packaging, and the TPP measures have been prepared, adopted or applied "in accordance with" these Guidelines.

7.255. With respect to the first element ("relevant international standards"), Australia contends that the Article 11 and Article 13 FCTC Guidelines are "standards" within the meaning of the TBT Agreement because they are "documents" that, through "conditional" as opposed to "obligatory" language, provide "guidelines" for "common and repeated use" by the FCTC Parties to "meet their obligations under the respective provisions of the convention" as they relate to a "product" (tobacco), including with respect to their packaging, as well as "related processes and production methods" (manufacture and sale of tobacco products).⁹¹³ It further considers that the Article 11 and Article 13 FCTC Guidelines are, in addition, "international" in character because they were adopted by an "international standardizing body": the FCTC COP. Australia argues that the FCTC COP is an "international standardizing body" because it is a body with "recognized activities in standardization", whose membership is open to the relevant bodies of at least all Members. Australia also contends that the complainants do not dispute that these two FCTC Guidelines are "relevant" to the TPP measures.

7.256. With respect to the second element, Australia contends that the TPP measures have been adopted "in accordance with" the Article 11 and Article 13 FCTC Guidelines because, as the measures themselves state, they have been adopted to "give effect" to "certain obligations" that Australia has under the FCTC.⁹¹⁴ Australia recalls, in this respect, that the Article 11 and Article 13 FCTC Guidelines specifically recommend tobacco plain packaging measures as a means to implement the obligations in Articles 11 and 13 of the FCTC regarding packaging and labelling of tobacco products and tobacco advertising, promotion and sponsorship, respectively. Australia argues that when the scope of these plain packaging recommendations in these FCTC Guidelines is "properly identified", it is clear that the TPP measures are "in accordance with" them, including insofar as the TPP measures "extend[]" to: regulation of the use of manufacturer or brand names

⁹¹¹ See, e.g. Dominican Republic's response to Panel question No. 66, para. 290; Dominican Republic's second written submission, paras. 850-851; Australia's first written submission, para. 269; and Australia's second written submission, para. 314.

⁹¹² For simplicity and convenience, when mentioned *individually*, we will refer to the FCTC Guidelines for Implementation of Article 11 of the FCTC and the FCTC Guidelines for Implementation of Article 13 of the FCTC, as, respectively, the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines. See also paras. 2.107-2.109 above.

⁹¹³ See also Australia's response to Panel question No. 73, para. 200 (stating that "[t]he FCTC Guidelines address both the *trademark elements* of tobacco plain packaging (such as the use of logos, colours, or brand images) and the *physical elements* of tobacco plain packaging (such as the shape, size, and materials of tobacco packaging). The FCTC is therefore a relevant international standard whether the Panel considers the term 'technical regulation' to encompass only the physical requirements of the tobacco plain packaging measure, or whether it considers that term to encompass both the trademark and physical requirements." (footnote omitted) (emphasis added)).

⁹¹⁴ Although the TPP Act itself does not specify what these "certain obligations" in the FCTC are, Australia indicates that the TPP Bill Explanatory Memorandum refers specifically to the Article 11 and Article 13 FCTC Guidelines (see, e.g. Australia's first written submission, para. 140). See also paras. 7.233-7.234 above.

on individual cigarettes and other tobacco products such as cigars; restrictions on wrappers inside tobacco packs; specification of location and orientation of information permitted to appear on tobacco packaging; and the number of times certain information may appear on the pack."⁹¹⁵

7.257. Based on the foregoing, Australia requests the Panel to find that the TPP measures meet the conditions under the second sentence of Article 2.5, and should therefore be "rebuttably presumed not to create an unnecessary obstacle to international trade" under Article 2.2 of the TBT Agreement.⁹¹⁶ Australia argues, in addition, that the complainants have "failed to adduce any evidence of the type that would be required to rebut" this presumption.⁹¹⁷ As a consequence, Australia requests the Panel "to reject all of the complainants' claims under Article 2.2 on the grounds that they had not rebutted the presumption established under Article 2.5".⁹¹⁸

7.258. The complainants consider that Australia has not demonstrated that the conditions of the second sentence of Article 2.5 are met. They argue that the Article 11 and Article 13 FCTC Guidelines do not constitute a "relevant international standard" for tobacco plain packaging, first, because they do not meet the definition of "standard" under Annex 1.2 of the TBT Agreement. Second, even if they could, the complainants argue that these two FCTC Guidelines could not be considered an "international" standard because they were not adopted by an "international standardizing body".⁹¹⁹ The complainants further contend that, even assuming that the Article 11 and Article 13 FCTC Guidelines were "relevant international standards", the TPP measures could not be considered as being "in accordance with" this international standard, given the insufficient degree of correspondence between them and the FCTC Guidelines. The complainants submit, in this respect, that the TPP measures implement "plain packaging" by regulating certain tobacco product or packaging features that are not even set forth in the Article 11 and Article 13 FCTC Guidelines (thus going "beyond" these instruments)⁹²⁰ and regulate certain other "plain packaging" features in a manner that is different from the way they are addressed under these Guidelines.⁹²¹

7.259. The complainants therefore ask the Panel to find that the conditions under the second sentence of Article 2.5 have not been satisfied and that, as a consequence, the

⁹¹⁵ See, e.g. Australia's first written submission, paras. 519 and 584; Australia's second written submission, paras. 316, 318 and 321-345; Australia's opening statement at the first meeting of the Panel, para. 83; Australia's response to Panel question No. 135, paras. 21-32; and Australia's response to Panel question No. 150, paras. 35-36.

⁹¹⁶ See, e.g. Australia's first written submission, paras. 519, 567-582 and 584; and Australia's second written submission, para. 345. Australia also claims that the complainants "have failed to adduce any evidence of the type that would be required to rebut" this presumption under the second sentence of Article 2.5. Australia's second written submission, paras. 347-353.

⁹¹⁷ Australia's second written submission, paras. 308 and 347-355.

⁹¹⁸ Australia's second written submission, para. 356.

⁹¹⁹ The Dominican Republic also makes the point that, even assuming that the WHO or the FCTC COP engage in recognized standard-setting activities in some specific areas, such activities do not include those that are "relevant" to the technical regulation at issue in these proceedings. Consequently, it says, the Article 11 and Article 13 FCTC Guidelines cannot be considered as "relevant" international standards. See, e.g. Dominican Republic's opening statement at the second meeting of the Panel, para. 28 and fn 37; and Dominican Republic's comments on Australia's response to Panel question No. 147, paras. 9, 11 and 24.

⁹²⁰ See, e.g. Indonesia's response to Panel question No. 136, para. 6 (claiming that, "[by] regulating every imaginable feature of tobacco products and their packaging, well beyond anything that was suggested in the FCTC Guidelines, Australia has forfeited any presumption that its measures are 'in accordance' with the FCTC Guidelines").

⁹²¹ See, e.g. Honduras's second written submission, paras. 7, 462 and 476-517 (including, its *arguendo* arguments, as per paras. 507-508 and 515); Honduras's response to Panel question No. 66, pp. 26 and 34; Honduras's response to Panel question No. 129, pp. 41-42; Honduras's opening statement at the second meeting of the Panel, para. 22; Dominican Republic's second written submission, paras. 842-911 (including, its *arguendo* argument, as per para. 908); Dominican Republic's response to Panel question No. 66, paras. 283 and 294; Dominican Republic's opening statement at the second meeting of the Panel, para. 28; Cuba's second written submission, paras. 165-188; Cuba's opening statement at the second meeting of the Panel, para. 43; Indonesia's second written submission, paras. 220-253 and 254-258; and Indonesia's response to Panel question No. 150, para. 13. See also the parties' respective responses to Panel question No. 150 as well Australia's and the complainants' comments on each other's responses to that question.

TPP measures cannot be rebuttably presumed not to create an unnecessary obstacle to international trade.⁹²²

7.2.5.2.2 Approach of the Panel

7.260. As described above⁹²³, the second sentence of Article 2.5 of the TBT Agreement provides that a technical regulation "shall be rebuttably presumed not to create an unnecessary obstacle to international trade" when it meets the following two sets of cumulative conditions:

- a. it is a "technical regulation"⁹²⁴ prepared, adopted or applied "for one of the legitimate objectives explicitly mentioned" in Article 2.2; and
- b. it is "in accordance with relevant international standards".

7.261. Having determined above that the TPP measures constitute a technical regulation⁹²⁵ prepared for a legitimate objective expressly mentioned in Article 2.2⁹²⁶, and therefore meet the first of these conditions, we now consider whether these measures are "in accordance with relevant international standards", as argued by Australia.⁹²⁷

7.262. On its face, a technical regulation is "in accordance with relevant international standards", if two cumulative elements are met: first, "relevant international standards" exist, and, second, the measure(s) at issue is "in accordance with" these international standards.

7.263. We therefore first need to consider whether the Article 11 and Article 13 FCTC Guidelines, or elements thereof, as identified by Australia, constitute a "relevant international standard" for tobacco plain packaging. Should we find that this is the case, we will proceed to assess whether the TPP measures are "in accordance with" those Guidelines. Should we, however, find otherwise, we will not need to proceed any further.⁹²⁸

⁹²² See, e.g. Honduras's second written submission, para. 462. Additionally, assuming *arguendo* that the TPP measures are rebuttably presumed not to create an unnecessary obstacle to international trade, the complainants consider that they have rebutted such presumption. See, e.g. Dominican Republic's second written submission, para. 912 (stating that because the "strength" of the presumption under the second sentence of Article 2.5 "must be calibrated to the level of specificity of the international standard", this means that "there could be no, or at most a very weak, presumption created by the FCTC Guidelines, given the loose manner in which they are formulated", and then arguing that the "evidence and arguments in support of its *prima facie* case under Article 2.2 are sufficient to overcome any such presumption").

⁹²³ See paras. 7.37 and 7.38 above.

⁹²⁴ We note that, as part of one of the twelve paragraphs of Article 2 of the TBT Agreement, the second sentence of Article 2.5, on its face, only concerns technical regulations that, like the TPP measures at issue here, have been prepared, adopted or applied by *central government bodies*. Technical regulations from *local* or *non-governmental* bodies (as defined in Annexes 1.7 and 1.8 of the TBT Agreement, respectively), are addressed in a separate provision of the Agreement: Article 3. The present dispute, we note, does not involve such types of measures.

⁹²⁵ See para. 7.182 above, where we conclude that the TPP measures constitute a technical regulation, laying down characteristics for the appearance and packaging of tobacco products (including requirements relating to the manner in which trademarks may be displayed on tobacco products and packaging), and mandating compliance with those characteristics.

⁹²⁶ See para. 7.252 above. See also para. 7.246 above, where we recall our conclusion in para. 7.232 that the objective pursued by Australia through the TPP measures is the protection of human health, and more precisely the improvement of public health by reducing the use of, and exposure to, tobacco products.

⁹²⁷ See, e.g. Honduras's second written submission, para. 477; and Australia's second written submission, para. 314 (stating that "the only point of contention between the parties refers to the second requirement in Article 2.5, namely, whether the [TPP measures are] 'in accordance with relevant international standards'").

⁹²⁸ As we have stated in para. 7.187 above, it is undisputed that, in these proceedings, the burden of demonstrating that all the conditions under the second sentence of Article 2.5 are met rests on Australia, as the party invoking this provision.

7.2.5.2.3 Whether the Article 11 and Article 13 FCTC Guidelines constitute "relevant international standards"

7.264. These are the first panel proceedings in which a party invokes the existence of "relevant international standards" within the meaning of the second sentence of Article 2.5 of the TBT Agreement.⁹²⁹ We will therefore first determine what elements must be present for a "relevant international standard" to exist within the meaning of this provision. We will then examine, in light of these determinations, whether the Article 11 and Article 13 FCTC Guidelines, or relevant elements thereof, as identified by Australia, constitute a "relevant international standard" for tobacco plain packaging for the purposes of that provision.

7.2.5.2.3.1 The notion of "relevant international standards" in Article 2.5 (second sentence)

Main arguments of the parties

7.265. Honduras considers that "an instrument constitutes a relevant international standard if it meets the requirements outlined"⁹³⁰ as follows: (i) "[t]he instrument is a 'standard' according to the definition established in Annex 1.2 of the TBT Agreement"⁹³¹; (ii) "[t]he standard must be 'international'"⁹³²; and (iii) "[t]he standard must be 'relevant'".⁹³³

7.266. The Dominican Republic takes the view that assessing whether a document is a "relevant international standard" requires the following "cumulative" and "sequential steps" be addressed: (i) whether "the document was prepared by an 'international standardizing body'"; (ii) whether "the document constitutes an 'international standard'"; and (iii) whether "the document is 'relevant' to the measure at issue".⁹³⁴ The Dominican Republic considers that Australia "does not dispute" that this assessment consists of these "sequential steps".⁹³⁵

7.267. Cuba initially endorsed Honduras's view that the two questions to be assessed are: (i) whether the body that adopted the "document" is an "international standardizing body"; and (ii) whether the "document" at issue sets forth an "international standard".⁹³⁶ It later expressed the second question in terms of whether the "document" is a "standard" as defined in Annex 1.2 to the TBT Agreement.⁹³⁷ Specifically, it argued that the Article 11 and Article 13 FCTC Guidelines are not relevant international standards, "first", because they do not meet the definition of "standard", and "second", because the FCTC COP "is not a recognized international standardization body".⁹³⁸

7.268. Indonesia considers that the first question to be answered under "relevant international standards" is whether "an 'international standard' exists".⁹³⁹ It argues that responding to this

⁹²⁹ In *US – Clove Cigarettes*, noting the parties' agreement that no "relevant international standard" within the meaning of the second sentence of Article 2.5 existed, the panel remarked that it would not therefore begin assessing the claim under Article 2.2 "from any rebuttable presumption that the ban on clove cigarettes is not an unnecessary obstacle to trade." Panel Report, *US – Clove Cigarettes*, para. 7.331 (also cited in Honduras's comments on Australia's response to Panel question No. 147, para. 40; and in Cuba's second written submission, paras. 179-180 and 188).

⁹³⁰ Honduras's second written submission, para. 478. Honduras considered that these three elements constituted the "legal standard" for this particular assessment. Ibid. para. 492.

⁹³¹ Honduras's second written submission, paras. 479-485 (in particular, the heading for subsection VI.B.2(a) of this submission).

⁹³² Honduras's second written submission, paras. 486-489 (in particular, the heading for subsection VI.B.2(b) of this submission).

⁹³³ Honduras's second written submission, paras. 490-492 (in particular, the heading for subsection VI.B.2(c) of this submission).

⁹³⁴ Dominican Republic's response to Panel question No. 66, para. 291 (emphasis omitted). See also Dominican Republic's second written submission, para. 851.

⁹³⁵ Dominican Republic's second written submission, para. 852.

⁹³⁶ Cuba's response to Panel question No. 66, pp. 15-16 (annexed to its response to Panel question No. 138).

⁹³⁷ Cuba's second written submission, paras. 168-181 and 182-188.

⁹³⁸ Cuba's second written submission, para. 47.

⁹³⁹ Indonesia's response to Panel question No. 66, para. 74. See also Indonesia's second written submission, para. 222.

question requires, first, assessing whether a "standard" exists in the sense of the definition in Annex 1.2 to the TBT Agreement⁹⁴⁰, and second, if so, whether such "standard" is more precisely an "international standard". Whether an "international standard" exists, Indonesia claims, depends therefore on the presence of three elements: "(i) standard; (ii) adopted by an international standardizing/standards organization; and (iii) made available to the public".⁹⁴¹

7.269. *Australia* initially considered that, in order to show a "relevant international standard" exists under the second sentence of Article 2.5, "a party must demonstrate that there is: (i) a 'standard'; (ii) adopted by an international standardizing/standards body or organization; and (iii) 'made available to the public'".⁹⁴² This party should, in addition, demonstrate that the international standard is (iv) "relevant".⁹⁴³ Later in the proceedings, *Australia* expressed element (iii) differently, describing it as whether the standardizing body or organization was one "whose Membership is open to the relevant bodies of at least all Members".⁹⁴⁴ Subsequently, *Australia* stated that "the parties are largely in agreement that" demonstrating "relevant international standards" depends on three "cumulative conditions", namely: "(i) the document must meet the definition of 'standard'; (ii) it must be 'international' in character, in that it has been approved by an 'international standardizing body'; (iii) the international standard must be 'relevant' to the technical regulation at issue".⁹⁴⁵

Analysis by the Panel

7.270. The term "relevant international standards" is common to Articles 2.4 and 2.5 of the TBT Agreement. The meaning of this term, as used in Article 2.4, has been addressed in prior rulings. All parties to these proceedings rely on the interpretations developed in that context, to inform their understanding of the meaning of "relevant international standards" under the second sentence of Article 2.5.⁹⁴⁶ We agree that the use of the same terms in consecutive paragraphs of the same Article of the TBT Agreement suggests that they are intended to have the same meaning in both paragraphs. Nonetheless, in considering this term as used in Article 2.4 as context for interpreting the same term in the second sentence of Article 2.5, we should also be guided more generally by the similarities and differences between these provisions.⁹⁴⁷

⁹⁴⁰ Indonesia's response to Panel question No. 66, para. 74.

⁹⁴¹ Indonesia's response to Panel question No. 66, para. 75 (footnote omitted) (referring to Panel Report, *US – Tuna II (Mexico)*, para. 7.663).

⁹⁴² *Australia's* first written submission, para. 570 (including fn 750, omitted, referring to Panel Report, *US – Tuna II (Mexico)*, para. 7.664).

⁹⁴³ *Australia's* first written submission, para. 581.

⁹⁴⁴ *Australia's* response to Panel question No. 66, para. 157 (recalling, in fn 179, omitted, that in *US – Tuna II (Mexico)*, the Appellate Body refrained from addressing whether this consideration should necessarily also include demonstrating that the international standard was "based on consensus" and "made available to the public"). See also *Australia's* second written submission, para. 315.

⁹⁴⁵ *Australia's* second written submission, para. 315 (footnote omitted). We note that *Australia* and the complainants always (correctly, in our view) include in their lists of elements for the second set of conditions under the second sentence of Article 2.5, a final "cumulative condition": that the technical regulation is "in accordance with" the relevant international standard. This condition is, however, a separate one that, as explained further below, a panel only reaches if it concludes that the "document" at issue is a "relevant international standard". The parties' references to this final condition have been omitted from our summary of the arguments here in order to facilitate assessing "relevant international standard" separately from "relevant".

⁹⁴⁶ See, e.g. *Honduras's* second written submission, paras. 476-490 (see, in particular, *ibid.* para. 477); *Honduras's* response to Panel question No. 70, pp. 32-33; *Dominican Republic's* response to Panel question No. 66, paras. 291-308; *Dominican Republic's* second written submission, paras. 851-901; *Cuba's* response to Panel question No. 66, p. 16 (annexed to its response to Panel question No. 138) (endorsing *Honduras's* response to this question); *Cuba's* second written submission, paras. 168-170; *Indonesia's* response to Panel question No. 66, paras. 74-76; *Indonesia's* second written submission, paras. 222-224; *Australia's* first written submission, paras. 567-581; *Australia's* response to Panel question No. 66, para. 157 (first indent); and *Australia's* second written submission, paras. 315-341. See, however, *Honduras's* response to Panel question No. 66, p. 27 (stating that it "does not see any interaction between [Articles 2.4 and 2.5, second sentence] for the purposes of this dispute").

⁹⁴⁷ See, e.g. Appellate Body Report, *US – Tuna II (Mexico) (Article 21.5 – Mexico)*, para. 7.347 (stating that, "so long as *the similarities and differences* between Article 2.1 of the TBT Agreement and Article XX of the GATT 1994 are taken into account, it may be permissible to rely on reasoning developed in the context of one agreement for purposes of conducting an analysis under the other" (emphasis added)). See *ibid.* paras. 7.89-7.90 and 7.345. See also Appellate Body Report, *US – Carbon Steel (India)*, para. 4.423

7.271. In this respect, we note that Article 2.4 and the second sentence of Article 2.5 both serve, together with other provisions of the TBT Agreement, the purpose of "harmonizing technical regulations on as wide a basis as possible".⁹⁴⁸ This is a key purpose of the TBT Agreement.⁹⁴⁹ As the Appellate Body observed:

In several of its provisions, the *TBT Agreement* recognizes the important role that international standards play in promoting harmonization and facilitating trade. For example, Article 2.5 of the *TBT Agreement* establishes a rebuttable presumption that technical regulations that are in accordance with relevant international standards do not create unnecessary obstacles to trade. Article 2.6, for its part, encourages Members to participate in international standardizing bodies with a view to harmonizing technical regulations on as wide a basis as possible.

The significant role of international standards is also underscored in the Preamble to the *TBT Agreement*. The third recital of the Preamble recognizes the important contribution that international standards can make by improving the efficiency of production and facilitating the conduct of international trade. The eighth recital recognizes the role that international standardization can have in the transfer of technology to developing countries. In our view, excluding existing technical regulations from the obligations set out in Article 2.4 would undermine the important role of international standards in furthering these objectives of the *TBT Agreement*. Indeed, it would go precisely in the opposite direction.⁹⁵⁰

7.272. Article 2.4 and the second sentence of Article 2.5 aim to promote harmonization in distinct but complementary ways: the former by creating an "obligation" and the latter by conferring, in the words of the Appellate Body, a "privilege".⁹⁵¹ In this respect, we note that Article 2.4 consists of an *obligation*⁹⁵² that is applicable to *all* technical regulations, irrespective of the specific legitimate objective they pursue. This obligation is triggered when a Member decides to adopt a technical regulation to fulfil a legitimate objective, and where either "relevant international standards" already "exist" or, if they do not yet exist, "their completion is imminent". In such a situation, that Member "shall use them" (or their "relevant parts") "as a basis for" its technical

(identifying various "textual similarities and differences" between Article 12.7 of the SCM Agreement and Article 6.8 of the Anti-Dumping Agreement, and its associated Annex II, to conclude that the latter provides "[a]dditional context for the interpretation of" the former). But see Appellate Body Report, *Japan – DRAMS (Korea)*, para. 272 (stating that "[a]lthough both Articles 6.3 and 15.5 [of the SCM Agreement] refer to effects of the subsidies, the meaning of this phrase must be interpreted in the light of the substantive obligations within which the phrase is located. Articles 6.3 and 15.5 deal with different subject matters and therefore it is not appropriate to accord an *identical meaning* to the *common phrase* in these Articles" (emphasis added)).

⁹⁴⁸ Article 2.6 of the TBT Agreement. See also Japan's third-party submission, para. 66; and Uruguay's third-party submission, para. 72. The TBT Agreement also articulates this "harmonization" purpose with respect to "conformity assessment procedures" and national "standards" (see Articles 5.5 and Annex 3.G, respectively). We also note that in *EC – Sardines* the Appellate Body agreed with the Panel's reliance on Articles 2.5 (including its second sentence) and 2.6 as providing useful context to the interpretation that Article 2.4 "applies" to measures adopted before the entry into force of the TBT Agreement on 1 January 1995, but which have not ceased to exist. Appellate Body Report, *EC – Sardines*, paras. 210-216.

⁹⁴⁹ The relevance of "harmonization" is also reflected in other covered agreements, in particular, the SPS Agreement (see, e.g. preamble (sixth recital), Articles 3.1 and 3.2). Harmonization, as a driver for economic development, is also recognized in Article XXXVIII:2(e) of the GATT 1994 (GATT being an agreement the "objectives" of which the TBT Agreement is intended to "further", as stated in the second recital of the preamble to the TBT Agreement). See also WTO Staff Paper, *International Standards and TBT Agreement*, (Exhibit AUS-530), para. 2.1, p. 3 (stating that "[i]nternational standards are used by the Agreement as a means of promoting international harmonization of technical regulations, conformity assessment procedures, and national standards; in other words international standards can help promote greater regulatory alignment on a global scale.").

⁹⁵⁰ Appellate Body Report, *EC – Sardines*, paras. 214-215.

⁹⁵¹ Appellate Body Report, *US – Tuna II (Mexico)*, paras. 379 and 390. We note, however, that the *first* sentence of Article 2.5, not at issue in the present disputes, does provide for an *obligation*: the obligation for a Member, when so requested, to "explain the justification" for its technical regulation. See, in this respect, Appellate Body Report, *EC – Sardines*, para. 277; and Panel Report, *US – Clove Cigarettes*, paras. 7.447-7.448.

⁹⁵² Appellate Body Report, *EC – Sardines*, para. 275. See also Appellate Body Report, *US – Tuna II (Mexico)*, paras. 379 and 390.

regulation.⁹⁵³ The second sentence of Article 2.5, for its part, provides for a "rebuttable presumption" – or, a "privilege" – of conformity with a particular obligation (i.e. that under Article 2.2). That is, technical regulations that are "in accordance with" relevant international standards are "rebuttably presumed" not to create an unnecessary obstacle to international trade within the meaning of Article 2.2. However, unlike Article 2.4, this privilege is available only in respect of a subset of technical regulations: those pursuing one of the legitimate objectives "explicitly mentioned" in Article 2.2.⁹⁵⁴ A determination that "relevant international standards" exist, under either of these provisions, therefore has important implications for all WTO Members: "the obligations and privileges associated with international standards pursuant to the **TBT Agreement** apply with respect to *all* WTO Members, not merely those who participated in the development of the respective standard".⁹⁵⁵

7.273. We further note that Article 2.4 covers not only "relevant international standards" that already "exist" but also those the completion of which is "imminent". The second sentence of Article 2.5, by contrast, only refers to "relevant international standards". This difference suggests that the scope of the second sentence of Article 2.5 is narrower in the sense that it only covers a subset of the "relevant international standards" that may be covered by Article 2.4, i.e. only those that already "exist".⁹⁵⁶ Additionally, the second sentence of Article 2.5 requires a technical regulation to be "in accordance with" the "relevant international standard" without also permitting, as it is the case in Article 2.4, that the measure simply rely, alternatively, on "the relevant parts" of those international standards.⁹⁵⁷

7.274. Finally, we note that Article 2.4 and the second sentence of Article 2.5 establish distinct criteria in terms of the degree of correspondence required between the relevant international standard and the technical regulation at issue, as reflected by the terms "use ... as a basis for", in the former, and "in accordance with", in the latter. The parties discussed in detail the extent to which the meaning of the terms "in accordance with" in the second sentence of Article 2.5 of the TBT Agreement, seen in light of the terms "as a basis for" in Article 2.4 of the same Agreement, should be informed by the relationship between the terms "conform to" in Article 3.2 of the SPS Agreement and "based on" in Articles 3.1 and 3.3 of the same Agreement, as clarified by the Appellate Body in *EC – Hormones*.⁹⁵⁸ We note in this respect the conceptual similarities between

⁹⁵³ This obligation is not, however, absolute: a Member is not required to use relevant international standards "as a basis for" its technical regulation when such standards (or "relevant parts" thereof) would be an "ineffective" or "inappropriate" means for the fulfilment of the legitimate objectives pursued. See Appellate Body Report, *EC – Sardines*, para. 274 (comparing the requirements under Article 3.1 of the SPS Agreement with those under Article 2.4 of the TBT Agreement with respect to "relevant international standards", and stating that "[n]either of these requirements in these two agreements is **absolute**" (emphasis added)).

⁹⁵⁴ These are: "national security requirements"; the "prevention of deceptive practices"; the "protection of human health or safety, animal or plant life or health, or the environment". See also para. 7.252 above.

⁹⁵⁵ Appellate Body Report, *US – Tuna II (Mexico)*, para. 390. (emphasis original)

⁹⁵⁶ The context provided by other provisions of the TBT Agreement supports this understanding. Had the drafters of the Agreement intended the second sentence of Article 2.5 to include not only already adopted international standards but also those not yet adopted, but the adoption of which is imminent, they could have used terms such as those used in Article 2.4: i.e. the phrase "exist or their completion is imminent". Rather, when TBT drafters intend a given obligation to cover already **adopted** international standards, they either used the term "exist" (see, e.g. Articles 2.9, 5.6, and 12.4) or, as in the second sentence of Article 2.5, refer to "international standards", without qualification (see, e.g. Article 6.1.1 and Annex 3.J (second paragraph), Article 5.4 and Annex 3.F).

⁹⁵⁷ See also, in the same vein, Indonesia's response to Panel question No. 150, para. 11; and Indonesia's comments on Australia's response to Panel question No. 150, para. 22.

⁹⁵⁸ The **complainants** consider the term "in accordance with" to require a high degree of correspondence between the measure and the international standard. In explaining the basis for such interpretation they first note that Article 2.4 of the TBT Agreement and the second sentence of Article 2.5 of the TBT Agreement use different terms – "as a basis for" and "in accordance with", respectively – when referring to international standards and that this difference should be given meaning. They also note that a similar situation occurs under the SPS Agreement, whereby Article 3.1, the SPS parallel of Article 2.4 of the TBT Agreement, uses the term "**base ... on**", while Article 3.2, the SPS parallel of the second sentence of Article 2.5 of the TBT Agreement, uses the term "conform to". The complainants then argue that the interpretation of "in accordance with" in the second sentence of Article 2.5 has to be based on the ordinary meaning of these terms, seen in light of the object and purpose of the TBT Agreement as well as under their proper context, which include, in particular, the term "conform to" in Article 3.2 of the SPS Agreement, as clarified by the Appellate Body in *EC – Hormones*. Based on these considerations the complainants argue that for a technical regulation to be "in accordance with" an international standard for the purpose of the second sentence of Article 2.5 of the TBT Agreement, there should be a "sufficient degree of correspondence" between that

these TBT provisions and the corresponding provisions in the SPS Agreement.⁹⁵⁹ The different wording reflected in Articles 2.4 and 2.5 of the TBT Agreement suggests that, similarly to the comparable provisions in the SPS provisions, the second sentence of Article 2.5 may require a closer or higher degree of correspondence between the measure at issue and the relevant international standard than that required under Article 2.4. As indicated above⁹⁶⁰, we will consider this aspect further if we first find that the Article 11 and Article 13 FCTC Guidelines are "relevant international standards".

7.275. Taken together, these differences suggest to us that the more limited scope of application and the higher degree of correspondence required under the second sentence of Article 2.5 between a technical regulation adopted by a Member and the relevant international standard

measure and that international standard, such that, as in the case of Article 3.2 of the SPS Agreement, the measure "embodies" the standard "completely". This means, they continue, that the measure would be, as in the case of Article 3.2 of the SPS Agreement, "for practical purposes", basically "converting" the international standard "into a municipal standard". The complainants also consider that this interpretation also indicates that the level of specificity of an international standard is an element for assessing "in accordance with". For them, this means that in assessing the degree of correspondence required between the technical regulation and the international standard, a panel must consider whether such a standard "is sufficiently precise" so as to be able to be "converted into a municipal standard". Finally, the complainants also consider that the above interpretation means that a measure that fully incorporated the elements of an international standard, but that also goes *beyond* the standard, cannot be considered as being "in accordance with" that standard. Australia considers that the complainants' analogy with Article 3.1 of the SPS Agreement, and the corresponding jurisprudence on the meaning of its terms, "is inapposite" for the interpretation of the term "in accordance with" in the second sentence of Article 2.5 of the TBT Agreement. While acknowledging that one of the ordinary meanings of "accordance" is "conformity", Australia argues that a panel should instead be guided by the other relevant ordinary meanings for "accordance", namely: "agreement", "harmony". For Australia, these meanings of the term "in accordance with", as used in the second sentence of Article 2.5, indicate not a "high" but, instead, a "lower degree of correspondence between the technical regulation and the international standard." Finally, Australia considers that whether a measure is "in accordance with" a relevant international standard should depend on an "objective assessment of the facts" in accordance with Article 11 of the DSU. See, e.g. Parties' respective responses to Panel question No. 150 as well Australia's and the complainants' comments on each other's responses to that question. See also Honduras's response to Panel question No. 66, p. 27; Dominican Republic's second written submission, paras. 903-907; Indonesia's second written submission, para. 255; and Australia's second written submission, paras. 342-343. On the similarities between the second sentence of Article 2.5 of the TBT Agreement and Article 3.2 of the SPS Agreement, see fn 961 below.

⁹⁵⁹ In *EC – Sardines*, the Appellate Body observed the existence of "strong conceptual similarities" between, on the one hand, Article 2.4 of the TBT Agreement and, on the other hand, Articles 3.1 and 3.3 of the SPS Agreement. The Appellate Body explained that such "strong conceptual similarities" stemmed from the fact that "the heart" of Article 3.1 of the SPS Agreement consisted of a requirement that Members *base* their SPS measures *on* international standards, guidelines, or recommendations, much like "the heart" of Article 2.4 of the TBT Agreement consisted of a requirement that Members use international standards *as a basis for* their technical regulations. The Appellate Body thus concluded that its previous reasoning in *EC – Hormones* on the meaning of Articles 3.1 and 3.3 of the SPS Agreement to be "equally apposite" for their task in *EC – Sardines* to clarify the meaning of Article 2.4 of the TBT Agreement. Appellate Body Report, *EC – Sardines*, paras. 274-275. See also Appellate Body Report, *India – Agricultural Products*, para. 5.77. Similarly, we note the conceptual similarities between the second sentence of Article 2.5 of the TBT Agreement and Article 3.2 of the SPS Agreement, and the conceptual parallelism in the relationships between Articles 3.2 and 3.3 of the SPS Agreement and Articles 2.4 and 2.5 of the TBT Agreement, respectively. See also fn 961 below.

It appears to us that indeed Article 3.2 of the SPS Agreement in general, and the term "conform to", in particular, may constitute useful context for understanding the meaning of the term "in accordance with" in the second sentence of Article 2.5, which is the counterpart of that SPS provision in the TBT Agreement. This is particularly so given that, as the parties agree, "conformity" is one (even if it is not, as Australia notes, the only one) of the ordinary meanings of the term "in accordance with". We note, in this respect, that in *EC – Hormones*, the Appellate Body, after considering that the term "base ... on" in Article 3.1 of the SPS Agreement connotes a different and less stringent meaning than "conform to" in Article 3.2 of that same Agreement, concluded that:

Under Article 3.2 of the *SPS Agreement*, a Member may decide to promulgate an SPS measure that conforms to an international standard. Such a measure would embody the international standard completely and, for practical purposes, converts it into a municipal standard. Such a measure enjoys the benefit of a presumption (albeit a rebuttable one) that it is consistent with the relevant provisions of the *SPS Agreement* and of the GATT 1994.

Appellate Body Report, *EC – Hormones*, para. 170 (underlining added). See, more generally, *ibid.* paras. 160-172. See also, more recently, Panel Report, *US – Animals*, paras. 7.218-7.220.

⁹⁶⁰ See paras. 7.44 and 7.263 above.

reflect the fact that, through this provision, Members confer the "privilege" of a rebuttable presumption of conformity with a key obligation under the TBT Agreement, which is uncommon in the covered agreements.⁹⁶¹ We take due account of this overall context in considering how the existence of "relevant international standards" within the meaning of the second sentence of Article 2.5 may be established.

7.276. The core component of "relevant international standards" is the existence of "international standards".⁹⁶² The parties have identified the elements that, in their view, must be considered in assessing whether "international standards" exist for the purposes of the second sentence of Article 2.5 of the TBT Agreement.

7.277. Honduras considers that the existence of "international standards" requires demonstrating two elements: that the document is a "standard" according to the definition established in Annex 1.2 of the TBT Agreement⁹⁶³, which is, in addition, "international" in character.⁹⁶⁴ The Dominican Republic understands the notion of "international standard" as included in the first two of the "four cumulative, sequential steps" that it considers "must be established" in order to show that a technical regulation is "in accordance with relevant international standards" for the purposes of the second sentence of Article 2.5, namely: "1. the document was prepared by an 'international standardizing body'; 2. **the document constitutes an 'international standard' ...**".⁹⁶⁵ The Dominican Republic further states that whether "international standards" exist includes assessing conformity with the definition of "standard" in Annex 1.2.⁹⁶⁶ Cuba considers the "international standard" assessment as requiring a demonstration that the "measure" must be adopted by an "international standardizing body".⁹⁶⁷ Indonesia considers that an "international standard" exists "where there is: (i) a standard; (ii) adopted by an international standardizing/standards organization; and (iii) that is made available to the public".⁹⁶⁸ Australia, like Indonesia, considers that such assessment

⁹⁶¹ The only other covered agreement that confers a similar presumption of conformity with treaty obligations is the SPS Agreement (in Articles 2.4 and 3.2). We note, in particular, that under Article 3.2 of the SPS Agreement, measures "which conform to international standards, guidelines or recommendations shall be deemed to be necessary to protect human, animal or plant life or health, and presumed to be consistent with the relevant provisions of this Agreement and of GATT 1994". Although the latter SPS provision does not expressly state it, the Appellate Body has clarified that such presumption is not absolute, but instead a "rebuttable" one. Appellate Body Report, *EC – Hormones*, para. 170. Article 3.2 of the SPS Agreement is, in this sense, similar to the second sentence of Article 2.5 of the TBT Agreement. These provisions are, however, only *similar*, not identical, because the resulting rebuttable presumption of consistency conferred by Article 3.2 is with respect to "relevant provisions" of not only the SPS Agreement, but also of the GATT 1994, whereas Article 2.5 of the TBT Agreement provides a presumption only with respect to Article 2.2 of the TBT Agreement. We further note that the covered agreements may also occasionally confer types of presumptions other than those in the form of *consistency* with an obligation. But even those are uncommon. For instance, recently, in *India – Agricultural Products*, the Appellate Body clarified that a finding of a violation of Articles 5.1 and 5.2 of the SPS Agreement "may give rise" to a rebuttable presumption of *in*consistency with Article 2.2 of that Agreement. Appellate Body Report, *India – Agricultural Products*, paras. 5.24 and 5.29. Another example is Article 3.8 of the DSU, which provides that where there is an infringement of an obligation under a WTO agreement, such action is rebuttably presumed to have nullified and impaired benefits accrued under that agreement.

⁹⁶² As to the term "relevant", we note that the Appellate Body in *EC – Sardines* agreed with the panel's interpretation of the ordinary meaning of this term as "bearing upon or relating to the matter at hand; pertinent". Appellate Body Report, *EC – Sardines*, paras. 229-230. Thus, to be "relevant", an international standard must "bear upon, relate to, or be pertinent to" the technical regulation under analysis.

⁹⁶³ Honduras's second written submission, paras. 479-485 (stating *inter alia* that this requires, in particular, assessing whether the "document" at issue is suitable for "common and repeated use" i.e. that "the product specifications must be stipulated with sufficient precision and detail so as to permit a uniform adoption across different jurisdictions").

⁹⁶⁴ Honduras's response to Panel question No. 66, pp. 25-26; and second written submission, paras. 478-489.

⁹⁶⁵ Dominican Republic's second written submission, paras. 850-851 (emphasis original). See also Dominican Republic's response to Panel question No. 66, para. 291.

⁹⁶⁶ Dominican Republic's second written submission, para. 894. See also Dominican Republic's response to Panel question No. 66, para. 305.

⁹⁶⁷ Cuba's second written submission, para. 168.

⁹⁶⁸ Indonesia's second written submission, para. 222; and Indonesia's response to Panel question No. 66, para. 75 (relying on the Panel Report, *US – Tuna II (Mexico)*, para. 7.663).

entails "demonstr[ating] that there is: (i) a 'standard'; (ii) adopted by an international standardizing/standards body or organization; and (iii) 'made available' to the public".⁹⁶⁹

7.278. The Panel notes that, while the composite term "international standards" is not defined in the TBT Agreement⁹⁷⁰, Annex 1 to the Agreement contains definitions of relevant related terms, including definitions of the terms "standard" (Annex 1.2)⁹⁷¹ and "international body or system" (Annex 1.4). In interpreting the term "international standards" as used in Article 2.4 of the TBT Agreement, the Appellate Body relied on these two definitions, concluding that the Agreement "establishes the characteristics of a *standard* and of an *international body*".⁹⁷²

7.279. A "standard" is thus defined in Annex 1.2 to the TBT Agreement⁹⁷³ as a:

Document approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for products or related processes and production methods, with which compliance is not mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method.

7.280. This definition is accompanied by the following *Explanatory note*:

The terms as defined in ISO/IEC Guide 2 cover products, processes and services. This Agreement deals only with technical regulations, standards and conformity assessment procedures related to products or processes and production methods. Standards as defined by ISO/IEC Guide 2 may be mandatory or voluntary. For the purpose of this Agreement standards are defined as voluntary and technical regulations as mandatory documents. Standards prepared by the international standardization community are based on consensus. This Agreement covers also documents that are not based on consensus.

⁹⁶⁹ Australia's first written submission, para. 570 (relying on the Panel Report, *US – Tuna II (Mexico)*, para. 7.664). Australia, however, seems to indicate the elements for "international standards" somewhat differently when listing them as part of the broader term "relevant international standards". Australia considers that proving that the Article 11 and Article 13 FCTC Guidelines are "relevant international standards" requires demonstrating that they constitute: "(i) a 'standard'; (ii) adopted by an international standardizing/standards body or organization; (iii) whose membership is open to the relevant bodies of at least all Members; and that it is (iv) 'relevant'". Australia's response to Panel question No. 66, para. 157. (footnote omitted)

⁹⁷⁰ See Appellate Body Report, *US – Tuna II (Mexico)*, para. 350. We observe, however, that the 1979 Tokyo Round Agreement on Technical Barriers to Trade (Tokyo Round Standards Code), which preceded the WTO's TBT Agreement, contained a definition for "international standard" in its Annex 1.10 ("[a] standard adopted by an international standardizing body"). The provisions of the Tokyo Round Standards Code, were, however, "never the subject of even a single ruling by a panel". Appellate Body Report, *EC – Asbestos*, para. 81. This GATT plurilateral agreement was terminated with the entry into force of the WTO. Panel Report, *EC – Sardines*, para. 7.86 fn 85. We also note that footnote 2 to Article 2.4 of the Agreement on Preshipment Inspection (on the application of international standards with respect to quantity and quality inspections) defines "international standard" as being "a standard adopted by a governmental or non-governmental body whose membership is open to all Members, one of whose recognized activities is in the field of standardization". This definition appears not to be in contradiction with the meaning of this term for the purposes of the TBT Agreement, as understood by the Appellate Body in *US – Tuna II (Mexico)*. Appellate Body Report, *US – Tuna II (Mexico)*, para. 359. See also, in the same vein, the parties' respective responses to Panel question No. 131.

⁹⁷¹ In other contexts in the TBT Agreement, this definition is relevant for instances when "standard" appears as a stand-alone term, rather than as one forming the composite term "international standards". For instance, in *US – Tuna II (Mexico)*, a threshold question before the Panel and the Appellate Body was whether the measure at issue was a "technical regulation" or a "standard"; which, in turn, depended on whether the measure fell within the definitions for these terms in Annexes 1.1 and 1.2 to the TBT Agreement, respectively. See, e.g. Panel Report, *US – Tuna II (Mexico)*, paras. 7.48-7.49; and Appellate Body Report, *US – Tuna II (Mexico)*, paras. 171 and 178.

⁹⁷² Appellate Body Report, *US – Tuna II (Mexico)*, paras. 350-352. (emphasis original)

⁹⁷³ All three Annexes to the TBT Agreement, including Annex 1, "constitute an integral part" of the Agreement. Article 15.5 of the TBT Agreement. For the purpose of the Agreement, the meaning of the terms given in Annex 1 apply (Article 1.2 and introductory clause of Annex 1), including with respect to any term used in the other two Annexes. See, e.g. Annex 3.A of the TBT Agreement.

7.281. Overall, this definition suggests that a "standard" exists for the purpose of the TBT Agreement⁹⁷⁴, including the second sentence of Article 2.5, when a given instrument:

- is a "document"⁹⁷⁵...;
- ... "approved by a recognized body"⁹⁷⁶ ...;
- ... that provides "rules", "guidelines" or "characteristics"⁹⁷⁷ ...;
- ... "for products" or "related processes and production methods"⁹⁷⁸ ...;
- ... "for common and repeated use"⁹⁷⁹; *and*
- "compliance" with these rules, guidelines or characteristics is "not mandatory".⁹⁸⁰

7.282. Each of these elements describes a specific aspect of the conditions that, taken together, would allow an instrument be defined as a "standard" under Annex 1.2 of the TBT Agreement. A "document" will therefore constitute a "standard" when all of these elements are met cumulatively.⁹⁸¹ We note that this understanding is consistent with the manner in which the parties have presented their arguments in these proceedings.⁹⁸²

⁹⁷⁴ See Honduras's second written submission, para. 479; Dominican Republic's second written submission, para. 894; Cuba's second written submission, para. 182; Indonesia's second written submission, paras. 222-223; and Australia's first written submission, paras. 571-572.

⁹⁷⁵ This element also applies to "terminology, symbols, packaging, marking or labelling requirements", as described in the second sentence of the definition. See fn 979 below.

⁹⁷⁶ This element also applies to "terminology, symbols, packaging, marking or labelling requirements", as described in the second sentence of the definition. See fn 979 below.

⁹⁷⁷ In addition, it "may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements".

⁹⁷⁸ When the "document" includes or deals exclusively with terminology, symbols, packaging, marking or labelling requirements, the definition refers to such requirements "as they apply to a product, processes or production method". See also fn 979 below.

⁹⁷⁹ The composite term "for common and repeated use" only appears in the first sentence of the definition of "standard" in Annex 1.2, but not in the second, which refers to a "document" that includes or deals exclusively with "terminology, symbols, packaging, marking or labelling requirements". We consider that when the whole text of this definition is seen in the context of those from the other definitions in Annex 1, and in light of the object and purpose of the TBT Agreement, it becomes clear that, to be a "standard", instrument(s) dealing, exclusively or not, with terminology, symbols, packaging, marking or labelling requirements must equally comply with certain key elements that are expressly mentioned in the first sentence of that definition, but which are not repeated in the second. These elements are: that these requirements should be contained in a "document" that was "approved by a recognized body"; that these requirements are "for common and repeated use"; and that they are requirements "with which compliance is not mandatory". A different interpretation would, in our view, render any meaningful application of the definition of "standard" in Annex 1.2 unworkable in certain situations, including for situations when taking into consideration the definition of "technical regulation" is also necessary. For instance, because neither of these two definitions in Annexes 1.1 and 1.2 expressly refers to the "mandatory/not mandatory" nature of the "document" in their respective second sentences (which are identically worded), it would be impossible to use these elements to assess whether a "document" that "deal[s] exclusively with" product "packaging requirements" is a "technical regulation" or a (national) "standard". In any event, no party or third-party of these proceedings, implicitly or explicitly, expressed a view that any of these key elements from the first sentence of the Annex 1.2 definition (in particular "for common and repeated use") should not equally apply to instruments providing for the "requirements" described in the second sentence of that definition.

⁹⁸⁰ This element also applies to "terminology, symbols, packaging, marking or labelling requirements", as described in the second sentence of the definition. See fn 979 above. The Explanatory Note to Annex 1.2, which is set out in full at para. 7.280 above, referring to the mandatory nature of technical regulations, further clarifies that for the purpose of TBT Agreement "standards are defined as voluntary ... documents".

⁹⁸¹ This understanding is consistent with prior interpretations and application of the definitions in Annexes 1.1 ("technical regulation") and 1.2 ("standard") to the TBT Agreement, which are similarly drafted. See, e.g. Appellate Body Report, *EC – Asbestos*, paras. 66-75 (assessing, sequentially and cumulatively, the measure at issue against the elements forming the definition of "technical regulation" in Annex 1.1 to the TBT Agreement); Appellate Body Report, *EC – Sardines*, para. 176 (recalling its previous report in *EC – Asbestos* and disaggregating the text of Annex 1.1 into "three criteria" a document "must meet" in order to fall within that definition of "technical regulation"); Appellate Body Report, *US – Tuna II (Mexico)*,

7.283. The Appellate Body also considered certain definitions in the ISO/IEC Guide 2: 1991⁹⁸³ as applicable and relevant⁹⁸⁴, to the extent that Annex 1 definitions do not depart from them.⁹⁸⁵ The Appellate Body noted, in particular, that the ISO/IEC Guide 2: 1991 defines the term "international standard" as a "standard that is adopted by an international standardizing/standards organization and made available to the public".⁹⁸⁶

7.284. The Appellate Body further found that this definition suggests that "it is primarily the characteristics of the entity approving a standard that lends the standard its 'international' character". By contrast, it added, "the subject matter" of a standard would not appear to be "material" for determining whether the standard is "international".⁹⁸⁷ The Appellate Body concluded that "in order to constitute an 'international standard', a standard has to be adopted by an 'international standardizing *body*' for the purposes of the *TBT Agreement*".⁹⁸⁸

7.285. Whether an "international standardizing body" exists requires, in turn, assessing whether this body is one that has *recognized activities* in standardization and whose membership is open to the relevant bodies of at least all Members.⁹⁸⁹

7.286. Overall, the foregoing suggests that, for an instrument to be considered an "international standard" under the second sentence of Article 2.5, it must:

- a. constitute a "standard" under Annex 1.2; and
- b. be also "international", a condition primarily⁹⁹⁰ predicated upon whether it was adopted by an "international standardizing body".⁹⁹¹

paras. 183-189 (also with respect to elements in the Annex 1.1 definition of "technical regulation"); and Panel Report, *EC – Sardines*, paras. 7.63-7.65 (with respect to the individual elements in the Annex 1.2 definition of "standard").

⁹⁸² See, in particular, Indonesia's response to Panel question No. 66, para. 74. See also Honduras's second written submission, paras. 493-507; Honduras's response to Panel question No. 129, pp. 41-42; Dominican Republic's second written submission, para. 894; Dominican Republic's response to Panel question No. 66, para. 305; Cuba's second written submission, para. 182; and Australia's first written submission, paras. 571-574. See also, e.g. Canada's third-party response to Panel question No. 1 (disaggregating the definition of "technical regulation" in Annex 1.1 into "three, cumulative, criteria" that a measure must meet).

⁹⁸³ *International Organization for Standardization (ISO) / International Electrotechnical Commission (IEC) Guide 2, General Terms and Their Definitions Concerning Standardization and Related Activities*, 6th edn (1991) (ISO/IEC Guide 2:1991). See also Appellate Body Report, *US – Tuna II (Mexico)*, para. 353 fn 702.

⁹⁸⁴ The introductory clause of Annex 1 to the TBT Agreement states that the "terms presented in the [ISO/IEC Guide 2:1991], shall, when used in this Agreement, have the same meaning as given in the definitions in the said Guide ... For the purpose of this Agreement, however, the following definitions shall apply: ...".

⁹⁸⁵ The Appellate Body cautioned therefore that panels must "carefully scrutinize" the extent of such departure. Appellate Body Report, *US – Tuna II (Mexico)*, para. 354 (referring to Appellate Body Report, *EC – Sardines*, paras. 224-225). See the introductory clause of Annex 1 to the TBT Agreement. See also Article 1.2 of the TBT Agreement.

⁹⁸⁶ ISO/IEC Guide 2:1991, sub-clause 3.2.1 (as quoted in Appellate Body Report, *US – Tuna II (Mexico)*, para. 353).

⁹⁸⁷ Appellate Body Report, *US – Tuna II (Mexico)*, para. 353.

⁹⁸⁸ Appellate Body Report, *US – Tuna II (Mexico)*, para. 356 (emphasis original). The Appellate Body also explained that:

Annex 1.2 to the TBT Agreement refers to a "body", not to an "organization", and Annex 1.4 defines an "international body or system", but not an "international organization". This suggests that, for the purposes of the *TBT Agreement*, "international" standards are adopted by "bodies", which may, but need not necessarily, be "organizations".

Ibid. para. 356.

⁹⁸⁹ Appellate Body Report, *US – Tuna II (Mexico)*, para. 359.

⁹⁹⁰ As noted in para. 7.284 above, "it is *primarily* the characteristics of the entity approving a standard that lends the standard its 'international' character." Appellate Body Report, *US – Tuna II (Mexico)*, para. 353 (emphasis added). However, as observed by the Appellate Body, the texts of the definition of "international standard" in the ISO/IEC Guide 2: 1991 and the "*Explanatory note*" to the definition of "standard" in Annex 1.2 to the TBT Agreement both suggest that, besides the adoption by an "international standardizing body", there

7.287. Taking into account the broader context described above, including the complementary role of Articles 2.4 and 2.5 in promoting harmonization through the use of relevant international standards⁹⁹², we see no basis to assume that the above guidance, given in respect of the term "international standards" as contained in Article 2.4, would not be equally relevant to the determination of the meaning of the same term in the second sentence of Article 2.5.⁹⁹³

7.288. It is undisputed that the burden rests on Australia, as the party invoking the presumption under Article 2.5, to demonstrate that all of the conditions under this provision are met.⁹⁹⁴

7.289. We therefore consider first whether the instruments identified by Australia as constituting a "relevant international standard" for tobacco plain packaging constitute a "standard" for tobacco plain packaging. If we find that this is the case, we would then proceed to consider whether such standard is also "international" in character. However, should we not find that the instruments identified by Australia constitute such a "standard", we would not need to proceed any further.⁹⁹⁵

may be "additional procedural conditions" to be met for a standard to be considered "international" for the purposes of the Agreement, i.e. whether, in addition, the standard was "based on consensus" and "made available to the public". Appellate Body Report, *US – Tuna II (Mexico)*, para. 353. In that dispute, however, the question before the Appellate Body was limited to the *characteristics of the entity* approving an "international" standard. The Appellate Body therefore considered it unnecessary, in that case, to address further whether the document at issue complied with those two "additional procedural conditions". In these proceedings, as described at paras. 7.268, 7.269 and 7.277 above, some parties have, for instance, identified demonstrating that the document was "made available to the public" as elements forming the "international standards" assessment under the second sentence of Article 2.5. This element, together with other "additional procedural conditions", however, belongs to the second ("international") and not the first ("standard") prong of the assessment of whether a document is an "international standard". See, e.g. Appellate Body Report, *US – Tuna II (Mexico)*, paras. 353 and 359 fn 709.

⁹⁹¹ Appellate Body Report, *US – Tuna II (Mexico)*, paras. 353 and 356. See also paras. 7.284 and 7.285 above.

⁹⁹² See para. 7.271 above.

⁹⁹³ Additionally, as we stated in para. 7.270 above, the use of the same terms in consecutive paragraphs of the same Article of the TBT Agreement suggests that they are intended to have the same meaning in both paragraphs. Nonetheless, in considering this term as used in Article 2.4 as context for interpreting the same term in the second sentence of Article 2.5, we should also be guided more generally by the similarities and differences between these provisions. We considered such similarities and differences in paras. 7.271 to 7.275 above.

⁹⁹⁴ See para. 7.187 above. In considering whether the above guidance of the Appellate Body for the "comparative assessment" under Article 3 of the SPS Agreement can be of use for the equivalent provisions in the TBT Agreement, we also note that an important difference between these two Agreements is that, unlike the TBT Agreement, the SPS Agreement lists (see, e.g. Annex A(3)) the three bodies that adopt international standards for its purpose. This difference, in turn, may impact the burden of proof for the party invoking the second sentence of Article 2.5 of the TBT Agreement (as well as the role of the Panel examining that provision), in terms of identifying and discerning the meaning of the instrument claimed to be an "international standard". Under the second sentence of Article 2.5 it is incumbent on the party invoking that provision to properly identify the contents and scope of the instrument(s) it claims is a relevant international standard, starting with the need to clearly identify all the relevant elements or components of said instrument(s) that, together, are alleged to form a "document" in the sense of the definition of "standard" in Annex 1.2 of the TBT Agreement.

⁹⁹⁵ And, for the same reason, we would need not assess whether these instruments are "relevant" nor whether the measures are "in accordance with" them. See para. 7.263 above. See, also, in the same vein, Honduras's second written submission, para. 507. We note that the Appellate Body has clarified that the interpretation of the term "international standardizing body", for the purpose of assessing the "international" character of a standard under Article 2.4, is a "holistic exercise in which the components of the definition are to be considered together". Appellate Body Report, *US – Tuna II (Mexico)*, para. 359. We further note that in that dispute, the Appellate Body based its decision that the AIDPC was not an "international standardizing body" solely on one of the components of that definition (as opposed to its various components, "considered together"), namely that the AIDPC was "not opened to the relevant bodies of at least all Members". As a consequence, the Appellate Body considered it unnecessary to address the other "components" of that assessment, namely, whether the AIDPC was a "body and has 'recognized activities in standardization'". Appellate Body Report, *US – Tuna II (Mexico)*, para. 399 and fn 763. We understand, however, the Appellate Body's reference to a "holistic exercise" to concern the cumulative nature of the various "components" for assessing the "international" character of the "document" at issue. The Appellate Body did not suggest that such an approach is required in all cases, or that all of the three relevant components of "relevant international standards" (i.e. "standard", "international" and "relevant") should be individually and

7.2.5.2.3.2 Whether the Article 11 and Article 13 FCTC Guidelines constitute a "standard" for tobacco plain packaging within the meaning of Annex 1.2 of the TBT Agreement

7.290. As indicated above⁹⁹⁶, the first element of a "standard" is that it is a "document". We therefore first consider the identification, by Australia, of certain FCTC instruments as being the "document" that it argues constitutes a standard with respect to tobacco plain packaging.

Identification of the relevant "document"

The notion of "document" in Annex 1.2

7.291. The term "document" is used in the definitions for both "technical regulation" and "standard" in Annexes 1.1 and 1.2 to the TBT Agreement, respectively. As the Appellate Body observed, this term, as used in Annex 1.1:

[I]s defined quite broadly as "something written, inscribed, etc., which furnishes evidence or information upon any subject". The use of the term "document" could therefore cover a broad range of instruments or apply to a variety of measures. Annex 1.1 to the *TBT Agreement*, however, narrows the scope of measures that can be characterized as a "technical regulation" by referring to a document that "lays down product characteristics or their related processes and production methods, including the applicable administrative provisions".⁹⁹⁷

7.292. Similarly, the surrounding terms in Annex 1.2 to the TBT Agreement "narrow[] the scope" of the measures that can be characterized as a "standard"⁹⁹⁸ under that definition. For instance, it only defines as a standard those "documents" that provide "rules, guidelines or characteristics" for products, or related processes and production methods, (including those that "include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements").⁹⁹⁹ Additionally, as discussed below, the scope of the term "document" under this definition is further narrowed by the fact that it only concerns those that "provide" product characteristics (or deal with or include packaging or other requirements)¹⁰⁰⁰ with a specific purpose, i.e. "for common and repeated use".¹⁰⁰¹ The Appellate Body has also clarified that the term "documents", as used in that "*Explanatory note*", "must refer to standards *in general*, and not only to those adopted by entities *other than* international bodies".¹⁰⁰²

7.293. We also consider the Appellate Body's observation that under Annex 1.1, "a 'document' may comprise multiple legal instruments in a given circumstance" to be equally relevant in the context of Annex 1.2.¹⁰⁰³ Depending on the circumstances, the "document" that constitutes a standard may take a variety of forms. It could thus be contained within an instrument that simultaneously addresses other issues, and one which, together with various other instruments,

cumulatively (or "holistically") considered, where this is not necessary to the determination in light of the circumstances.

⁹⁹⁶ See para. 7.281.

⁹⁹⁷ Appellate Body Report, *US – Tuna II (Mexico)*, para. 185 (footnote omitted). See also Appellate Body Reports, *EC – Seal Products*, paras. 5.9-5.10.

⁹⁹⁸ We also note, as the Appellate Body did in *US – Tuna II (Mexico)*, that the ISO/IEC Guide 2: 1991 establishes, broadly, that "[a] document is to be understood as any medium with information recorded on or in it". Appellate Body Report, *US – Tuna II (Mexico)*, para. 185 fn 391. However, as we have explained at para. 7.283 and fns 985-986 above, the applicability and relevance of any ISO/IEC Guide definition, if any, is subject to the qualifications under the introductory clause of Annex 1 to the TBT Agreement.

⁹⁹⁹ We further discuss the meaning of these terms at paras. 7.335-7.340 below.

¹⁰⁰⁰ See para. 7.337 and fn 1085 below.

¹⁰⁰¹ We further discuss the meaning of the phrase "common and repeated use" later in these findings, in particular at paras. 7.361-7.370 below. We also note that, while the text of the definition of "standard" in Annex 1.2 refers to "*document*", the text of its "*Explanatory note*" refers to "*documents*". Nonetheless, as clarified by the Appellate Body, these two terms "must be interpreted as having the same meaning" for the purposes of this provision. Appellate Body Report, *EC – Sardines*, para. 222.

¹⁰⁰² Appellate Body Report, *EC – Sardines*, para. 222 (emphasis original). See also European Union's third-party submission, para. 45 and fn 44 (also referring to Appellate Body Report, *EC – Sardines*).

¹⁰⁰³ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, fn 708. See also fn 1007 below.

forms part of a broader context or framework. These situations, in themselves, would not be an obstacle to demonstrating the existence of a "document" that can be characterized as a "standard", or as a "relevant international standard" within the meaning of Article 2.5.

7.294. We consider that, properly understood in the above context, the term "document" indicates that an assessment of whether a "standard" exists under Annex 1.2 requires, as a first step, a sufficiently clear and distinctive identification of the components or elements of the instrument(s) claimed by a party to constitute that "standard". This is particularly important where the "document" argued to be a "relevant international standard" is contained in "multiple legal instruments", each one addressing a range of matters, including some that are distinct from, even if related to, the specific matter at issue in the challenged technical regulation.¹⁰⁰⁴

7.295. We note that this initial task of precisely identifying the components of the instrument(s) at issue forming the "document" is a necessary first step for both the second sentence of Article 2.5, and Article 2.4. Under both provisions, such identification is necessary for the subsequent "comparative assessment" needed to assess the degree of correspondence between the international standard and the technical regulation, as specified under each provision.¹⁰⁰⁵ In the context of Article 2.4 of the TBT Agreement, an examination of whether a relevant international standard was "use[d] ... as a basis for" a technical regulation "must be limited to those parts of the relevant international standards that relate to the subject-matter of the challenged prescriptions or requirements" and such examination "must be broad enough to address *all* of those relevant parts [of the international standard]".¹⁰⁰⁶ Similarly, under the second sentence of Article 2.5, a clear and distinctive identification of all components of the instrument that form the "document" at issue is necessary to allow an assessment of whether a "standard" exists and also to allow, subsequently (if the standard is also "international" and "relevant"), an

¹⁰⁰⁴ See also fn 1007 below.

¹⁰⁰⁵ That is: "in accordance with", under the second sentence of Article 2.5, or "use ... as a basis for", under Article 2.4. We also note that, under those provisions of the SPS Agreement which are equivalent to these two TBT provisions (those under Article 3 of the SPS Agreement, for instance), there is a similar need to first properly identify the components of the instrument allegedly containing the SPS standard in order to, then, undertake a "comparative assessment" of the degree of correspondence between the measure and the international standard, as specified under each SPS provision (that is: "based on", "conforms to", or "results in a higher level of protection than", as per Articles 3.1, 3.2 or 3.3 of the SPS Agreement, respectively). See also para. 7.274 and fn 961 above, where we also discuss these TBT and SPS terms.

¹⁰⁰⁶ Appellate Body Report, *EC – Sardines*, para. 250 (emphasis original). The Appellate Body based this understanding on the composite term "or relevant parts of them", used in Article 2.4. As we noted at para. 7.273 and fn 956 above, the second sentence of Article 2.5, however, does not contain this composite term. This, in turn, appears to indicate that, under the second sentence of Article 2.5, it may not be possible for technical regulations to be "in accordance with" international standards by only assessing these measures against the "relevant parts", rather than the entirety, of these standards. We also note the following observations by the Appellate Body in *EC – Sardines* when applying this understanding to the facts of that case:

This dispute concerns the WTO-consistency of the requirement set out in Article 2 of the EC Regulation that only products prepared exclusively from the species *Sardina pilchardus* may be marketed in the European Communities as preserved sardines. Consequently, the "relevant parts" of Codex Stan 94 are those elements of Codex Stan 94 that bear upon or relate to the marketing of preserved fish products under the name "sardines". The term "relevant parts of them", as used in Article 2.4, implies two things for the case before us. First, the determination whether Codex Stan 94 has been used "as a basis for" the EC Regulation must stem from an analysis that is limited to those "parts" of Codex Stan 94 relating to the use of the term "sardines" for the identification and marketing of preserved fish products. Those parts include not only sections 6.1.1(i) and 6.1.1(ii), but also section 2.1.1 of Codex Stan 94, which sets out the various species that may be given the names contemplated in sections 6.1.1(i) and 6.1.1(ii). Second, this analysis must address *all* of those relevant provisions of Codex Stan 94, and must not ignore any one of them.

Appellate Body Report, *EC – Sardines*, para. 251. (emphasis original)

In that dispute, the Appellate Body also rejected the respondent's argument that Article 2.4 required that "the whole of the standard and the whole of the EC Regulation should be compared". The Appellate Body said such a holistic comparative assessment was not possible because "several parts of Codex Stan 94 [were] not relevant to the use of the term 'sardines' for the identification and marketing of preserved fish products" and, therefore, "[t]here [was] simply no purpose served in examining other provisions of the EC Regulation that [were] irrelevant to [that] dispute." Ibid. para. 252.

assessment of whether the challenged technical regulation is "in accordance with" such standard.¹⁰⁰⁷

7.296. We note that the Appellate Body has provided similar guidance, in the context of Article 3 of the SPS Agreement, on the manner in which a panel should conduct the "comparative assessment" between an SPS measure and the relevant international standard, for the purpose of determining whether that measure is "based on", "conforms to", or "results in a higher level of protection than", that international standard. Articles 3.1, 3.2 and 3.3 of the SPS Agreement, respectively, as observed above¹⁰⁰⁸, have a comparable structure and function to Articles 2.4 and 2.5 in the TBT Agreement:

[A] panel must engage in a comparative assessment between the challenged measure and that international standard. In this respect, because the international standard serves as the benchmark against which a Member's compliance under Article 3 is to be assessed, it is incumbent on a panel to discern the meaning of that standard. In conducting such an assessment, panels have various means available to them. A panel may be guided by any relevant interpretative principles, including relevant customary rules of interpretation of public international law. In addition, a panel may find additional sources to be useful in discerning the meaning of the international standard. For example, panels may wish to have recourse to the views of the relevant standard-setting body, as referred to in Annex A(3) to the SPS Agreement, through evidence on the panel record or through direct consultation with that body, or with other experts in the relevant fields, pursuant to Article 11.2 of the SPS Agreement and Article 13 of the DSU.¹⁰⁰⁹

¹⁰⁰⁷ We note, in this respect, the determination of the Appellate Body in *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.239 and fn 708, similarly stressing the need for a precise identification of the "document" that constitutes a technical regulation under Annex 1.1 (even when it "may comprise multiple legal instruments"), as an essential requirement for a proper assessment of the measure's consistency with the obligation in Article 2.2, and in particular for an analysis of the "contribution" of the challenged technical regulations under the relational analysis:

In our view, a technical regulation should, in principle, be reviewed in its entirety in order to assess its degree of contribution to its objective. We note that paragraph 1 of Annex 1 to the TBT Agreement defines a "technical regulation", in relevant part, as a "[d]ocument which lays down product characteristics or their related processes and production methods". It is, thus, the "document" constituting the technical regulation that should be assessed under Article 2.2, **rather than isolated or disconnected portions of that document. ... In assessing the relevant document constituting the technical regulation at issue under Article 2.2, the elements contained within it that contribute to the objective of the technical regulation should first be identified, with all of those elements then being taken into account when assessing the degree of contribution of the technical regulation to its objective.** Otherwise, to exclude certain elements from that assessment could yield an incorrect finding as to the technical regulation's degree of contribution to its objective, and could lead to an imbalance or asymmetry in a comparison with proposed alternatives.

Ibid. (emphasis original; footnotes omitted). See also Dominican Republic's response to Panel question No. 150, para. 21; Dominican Republic's comments on Australia's response to Panel question No. 147, para. 49 fn 74 (also referring, in addition to the above passage of the Appellate Body Report in *US – COOL (Article 21.5 – Canada and Mexico)*, to Appellate Body Report, *US – Tuna II (Mexico) (Article 21.5 – Mexico)*, para. 7.15); Indonesia's response to Panel question No. 150, para. 11; and Indonesia's comments on Australia's response to Panel question No. 140, paras. 21-23.

¹⁰⁰⁸ See fn 1005 above. See also para. 7.274 and fn 961 above.

¹⁰⁰⁹ Appellate Body Report, *India – Agricultural Products*, para. 5.79. Applying the above understanding to the "circumstances of that dispute", the Appellate Body then said:

Annex A(3)(b) [of the SPS Agreement] provides that the relevant international standards ... are those set out in the [World Organization for Animal Health (OIE)] Code, in particular, Chapter 10.4. Chapter 10.4 of the OIE Code therefore serves as the benchmark against which India's AI measures must be compared in order to determine whether they are "based on", or "conform to", that standard. Accordingly, in keeping with the guidance outlined above, it was incumbent on the Panel in this dispute to discern the meaning of relevant portions of the OIE Code in order to determine whether India's AI measures satisfy the elements under Articles 3.1 and 3.2 of the SPS Agreement.

7.297. The above statements provide, *mutatis mutandis*, relevant guidance for properly identifying the document identified by Australia as "relevant international standards" in relation to tobacco plain packaging. Once the relevant instruments have been identified, their meaning will also need to be discerned and understood.¹⁰¹⁰

7.298. With the foregoing in mind, we now examine the instruments that Australia identifies as forming the "document" that, within the meaning of the definition of "standard" in Annex 1.2, constitutes a "relevant international standard" for tobacco plain packaging for the purposes of the second sentence of Article 2.5.

Main arguments of the parties

7.299. Australia considers that the FCTC Guidelines, "as a whole", could be considered "relevant international standards" for the purposes of the second sentence of Article 2.5 of the TBT Agreement.¹⁰¹¹

7.300. Australia further explains that, for the purpose of determining whether "relevant international standards" exist for tobacco plain packaging, the "document(s)" to be assessed are, more specifically, the Article 11 and Article 13 FCTC Guidelines.¹⁰¹² Australia further clarifies that it makes this assertion "rel[ying] primarily" on the following paragraphs of these two FCTC Guidelines:

- a. paragraph 46 of the Article 11 FCTC Guidelines; and
- b. paragraphs 16 and 17 of the Article 13 FCTC Guidelines.¹⁰¹³

7.301. Australia also notes that, besides these three specific paragraphs, the Article 11 and Article 13 FCTC Guidelines also contain "other elements" that "do not specify 'plain packaging'" but are nonetheless "relevant" for characterizing these FCTC instruments as an international standard for tobacco plain packaging. Australia considers the following paragraphs of the Article 11 and

Ibid. para. 5.80 (footnotes omitted). This approach was applied by the panel in *Russia – Pigs (EU)*, which considered that its task of assessing whether the challenged measure conformed with Article 3 of the SPS Agreement consisted of: (i) identifying the relevant international standards; (ii) discerning the meaning of such international standards; and (iii) assessing the measures at issue in light of these international standards in order to determine whether the measures are "based on" the standards. Panel Report, *Russia – Pigs (EU)*, paras. 7.262 and 7.274. See also *ibid.* paras. 7.263-7.272 (on the legal test for "identifying") and 7.273-7.283 (on the legal test for "discerning meaning").

¹⁰¹⁰ We note in this respect the observations of the panel in *Russia – Pigs (EU)*, referring to the Appellate Body's determinations in *India – Quantitative Restrictions*:

In essence, in connection with our own assessment of the meaning of the Terrestrial Code, this Panel has remained vigilant in terms of how it has treated the responses received from the OIE and how it has undertaken its assessment of the meaning of the Terrestrial Code. In this respect, the Panel has remained mindful of the reasoning of the Appellate Body in *India – Quantitative Restrictions* that a panel may not delegate its judicial function to an international organization that it consults, but must instead critically assess the views of that international organization. The Appellate Body's findings in *India – Agricultural Products* reaffirm that the Panel must make its own assessment of the meaning of the Terrestrial Code and not simply rely on the views of the OIE regarding the meaning of the Terrestrial Code. A Panel may, in respect of each of the interpretative issues it addresses, refer to and accord weight to the OIE's responses to its questions; however, a Panel must indicate, in each instance, that its conclusions are also based on its own examination of the wording or text of the relevant recommendations of the Terrestrial Code.

Panel Report, *Russia – Pigs (EU)*, para. 7.282 (footnotes omitted). See also Appellate Body Report *India – Agricultural Products*, paras. 5.93-5.94.

¹⁰¹¹ Australia's response to Panel question No. 129, para. 201.

¹⁰¹² Australia's first written submission, para. 567.

¹⁰¹³ Australia's response to Panel question No. 129, para. 202. See also, e.g. Australia's opening statement at the first meeting of the Panel, para. 83. We assume Australia's reference to "paragraph 17" of the Article 13 FCTC Guidelines is intended to refer to the "*Recommendation*" following paragraph 17, as paragraph 17 itself does not concern "plain packaging" *per se*. See also para. 7.311 and fn 1031 below.

Article 13 FCTC Guidelines to be "examples" of these "other elements", in particular given that they "set out" requirements that the TPP measures "incorporate[]"¹⁰¹⁴:

- a. paragraphs 10 and 54 of the Article 11 FCTC Guidelines (dealing, respectively, with "inserts and onserts" and "adhesive labels"); and
- b. paragraph 15 of the Article 13 FCTC Guidelines (dealing with "packaging and product features").

7.302. Australia further submits that "other aspects" of the Article 11 and Article 13 FCTC Guidelines that are "relevant", include those addressing "misleading or deceptive packaging and labelling" and "misleading or deceptive advertisement and promotion".¹⁰¹⁵

7.303. The complainants do not contest Australia's identification of paragraph 46 of the Article 11 FCTC Guidelines and paragraphs 16-17 of the Article 13 FCTC Guidelines as being the parts of these instruments expressly addressing "plain packaging".¹⁰¹⁶ Honduras questions, however, Australia's broad claim that all the currently adopted FCTC Guidelines, "as a whole", qualify as an international standard for the purpose of these proceedings. Honduras recalls that the FCTC COP has adopted FCTC Guidelines for the implementation of other provisions of that Convention, such as those for Articles 8, 9, 10 and 14. Honduras considers that, "absent further clarification by Australia, [such] general assertions are insufficient to discharge Australia's burden under [the second sentence of] Article 2.5 of the TBT Agreement".¹⁰¹⁷

Analysis by the Panel

7.304. As described above, Australia identifies specific paragraphs of two Guidelines adopted by the FCTC COP (the Article 11 FCTC Guidelines and the Article 13 FCTC Guidelines) as constituting a relevant (international) "standard" in respect of tobacco plain packaging.

7.305. We first note that various Guidelines adopted by the FCTC COP to date contain extensive text dealing with a broad range of regulatory aspects of various types of tobacco-control measures addressed in the specific FCTC provisions that these Guidelines relate to.¹⁰¹⁸ Like other FCTC Guidelines, the Article 11 FCTC Guidelines and the Article 13 FCTC Guidelines are non-binding instruments "intended to assist the Parties in meeting their obligations and in increasing the effectiveness of measures adopted".¹⁰¹⁹ Both set of guidelines contain extensive text addressing a variety of regulatory measures concerning the packaging, labelling or marketing of tobacco products, to assist FCTC Parties in meeting their obligations and increasing the effectiveness of measures adopted pursuant to Articles 11 and 13 of the Convention respectively.¹⁰²⁰ It is notable in this respect that, as indicated by the complainants,

¹⁰¹⁴ Australia's response to Panel question No. 129, para. 202.

¹⁰¹⁵ Australia's response to Panel question No. 129, para. 203.

¹⁰¹⁶ See, e.g. Honduras's second written submission, para. 495; and Indonesia's second written submission, paras. 183 and 186.

¹⁰¹⁷ Honduras's second written submission, para. 504.

¹⁰¹⁸ See FCTC Guidelines for Implementation (2013 edition), (Exhibits AUS-109, DOM-44), containing a compilation of all adopted Guidelines, except the Article 6 FCTC Guidelines (Exhibit AUS-111), adopted in 2014.

¹⁰¹⁹ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 20-22 (referring to the texts of the respective opening paragraphs of these two FCTC Guidelines). We further discuss the non-binding nature of these FCTC Guidelines when discussing this element of the definition of "standard" in Annex 1.2, at paras. 7.390-7.394 below.

¹⁰²⁰ For instance, the Article 11 FCTC Guidelines contain various recommendations on the development and use of health warnings, including with respect to their "rotation" (paras. 19-22) and their "content" (paras. 23-27), and the Article 13 FCTC Guidelines contain recommendations on various components of a comprehensive ban of tobacco advertising, promotion and sponsorship, including with respect to: "retail sale and display" of tobacco products (paras. 12-14, recommending banning them); "internet sales" (paras. 18-21, recommending banning them); "brand stretching and brand sharing", i.e. the use of tobacco brands in non-tobacco products (paras. 22-23, recommending banning them); "depiction of tobacco in entertainment media" (para. 31, *inter alia* recommending "prohibiting the use of identifiable tobacco brands or imagery" in entertainment media products); and "domestic enforcement of laws on tobacco advertising, promotion and sponsorship" (paras. 60-68, *inter alia* recommending to "introduce and apply effective, proportionate and dissuasive penalties"). Further, with further respect to paragraphs 22-24 the Article 13 FCTC Guidelines, which define and recommend banning "brand stretching" and "brand sharing", they state that these types of branding

"plain packaging" is not, as such, a specific type of tobacco control measure expressly identified in either Article 11 or Article 13 of the FCTC themselves (or in any other provision of the Convention).¹⁰²¹

7.306. In light of this and our observations above on the importance of a precise identification of the "document" at issue for the remainder of our analysis¹⁰²², we agree with Honduras that, as an initial step in our assessment, "it is necessary to identify *which parts* of the FCTC Guidelines have been invoked by Australia as the alleged relevant international standards".¹⁰²³

7.307. As described above, Australia states that the FCTC Guidelines "as a whole" could be considered "relevant international standards" for the purposes of the second sentence of Article 2.5. Nonetheless, Australia also identifies the relevant instruments in respect of tobacco plain packaging as being, more specifically, the Article 11 FCTC Guidelines and the Article 13 FCTC Guidelines. It then further identifies three specific paragraphs of these two Guidelines upon which it "relies primarily" for the purposes of determining the existence of a "relevant international standard" in respect of tobacco plain packaging: paragraph 46 of the Article 11 FCTC Guidelines, and paragraphs 16 and 17 of the Article 13 FCTC Guidelines (in fact, the "*recommendation*" text following paragraph 17).¹⁰²⁴ These are the specific texts, within these two sets of Guidelines, in which tobacco "plain packaging" is expressly mentioned and described.

7.308. Paragraph 46 of the Article 11 FCTC Guidelines (entitled "*Packaging and labelling of tobacco products*") is the sole provision under a heading entitled "Plain packaging", which states:

Parties should consider adopting measures to restrict or prohibit the use of logos, colours, brand images or promotional information on packaging other than brand names and product names displayed in a standard colour and font style (plain packaging). This may increase the noticeability and effectiveness of health warnings and messages, prevent the package from detracting attention from them, and address industry package design techniques that may suggest that some products are less harmful than others.¹⁰²⁵

7.309. Paragraph 16 of the Article 13 FCTC Guidelines (entitled "*Tobacco advertising, promotion and sponsorship*"), provide that:

The effect of advertising or promotion on packaging can be eliminated by requiring plain packaging: black and white or two other contrasting colours, as prescribed by national authorities; nothing other than a brand name, a product name and/or manufacturer's name, contact details and the quantity of product in the packaging, without any logos or other features apart from health warnings, tax stamps and other government-mandated information or markings; prescribed font style and size; and standardized shape, size and materials. There should be no advertising or promotion

"should be also regarded as forms of tobacco advertisement and promotion". See also Canada's third party submission, para. 41 and fns. 20-21 (referring to this recommendation and informing that "many WTO Members", including Ukraine and Indonesia", have implemented measures regulating "brand stretching").

¹⁰²¹ See, e.g. Honduras's first written submission, paras. 125-127; Honduras's second written submission, para. 468; Dominican Republic's first written submission, paras. 183 and 194; Cuba's first written submission, paras. 291-294; and Indonesia's first written submission, para. 94. We note, however, that certain other specific types of tobacco-control measures are expressly addressed in both the FCTC itself and in the corresponding FCTC Guidelines. For instance, regulations on the use/design/size/rotation of health warnings or GHWs in tobacco packaging are measures that are expressly addressed both in Article 11 of the FCTC as well as in various parts of the Article 11 FCTC Guidelines. See FCTC, (Exhibits AUS-44, JE-19), Article 11; and Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, paras. 12-22.

¹⁰²² See paras. 7.291-7.297 above.

¹⁰²³ Honduras's second written submission, para. 495. (emphasis added)

¹⁰²⁴ We assume Australia's reference to "paragraph 17" of the Article 13 FCTC Guidelines is intended to refer to the recommendation following paragraph 17, as paragraph 17 itself does not concern "plain packaging" *per se*.

¹⁰²⁵ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46.

inside or attached to the package or on individual cigarettes or other tobacco products.¹⁰²⁶

7.310. Paragraph 16 of the Article 13 FCTC Guidelines is contained (together with paragraphs 15 and 17, both quoted below) under a heading entitled "Packaging and product features". This heading contains the following footnote:

See also the guidelines for implementation of Article 11 of the Convention, which address plain packaging with regard to health warnings and misleading information.¹⁰²⁷

7.311. Paragraph 17 of the Article 13 FCTC Guidelines, which refers to, but does not *per se* prescribe "plain packaging", states:

If plain packaging is not yet mandated, the restriction should cover as many as possible of the design features that make tobacco products more attractive to consumers such as animal or other figures, "fun" phrases, coloured cigarette papers, attractive smells, novelty or seasonal packs.¹⁰²⁸

7.312. Paragraph 17 of the Article 13 FCTC Guidelines is immediately followed by this Recommendation:

Packaging and product design are important elements of advertising and promotion. Parties should consider adopting plain packaging requirements to eliminate the effects of advertising or promotion on packaging. Packaging, individual cigarettes or other tobacco products should carry no advertising or promotion, including design features that make products attractive.¹⁰²⁹

7.313. We observe that there seems to be no disagreement, among the parties, on the identification of these three paragraphs of the Guidelines as relating to plain packaging of tobacco products.¹⁰³⁰ The WHO and FCTC Secretariat similarly identify these three provisions of the FCTC Guidelines, as specifically addressing "plain packaging".¹⁰³¹

7.314. The WHO and FCTC Secretariat identify, in addition, paragraph 15 of the Article 13 FCTC Guidelines as addressing "plain packaging". Australia instead argues that paragraph 15 is one of the "other elements" in these Guidelines that "do not specify 'plain packaging'" but are nonetheless "relevant" for characterizing these FCTC instruments as an international standard for tobacco plain packaging. Paragraph 15 of the Article 13 FCTC Guidelines, like paragraphs 16 and 17, is contained under the heading "Packaging and product features". It states:

¹⁰²⁶ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16.

¹⁰²⁷ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, fn 2 accompanying "**Packaging and product features**" heading above para. 15; and FCTC Guidelines for Implementation (2013 edition), (Exhibits AUS-109, DOM-44), Article 13, fn 4. For simplicity, we will henceforth refer to this footnote as footnote 4 to the Article 13 FCTC Guidelines.

¹⁰²⁸ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 17.

¹⁰²⁹ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, "**Recommendation**" following para. 17.

¹⁰³⁰ As we observe at para. 7.315 below, unlike Australia, the WHO and FCTC Secretariat also identify paragraph 15 of the Article 13 FCTC Guidelines as specifically addressing "plain packaging".

¹⁰³¹ See WHO/FCTC Additional Information to Panel, paras. 60 and 62-63, at fn 63 above. See also WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 59-71. We note that, like Australia, the WHO and FCTC Secretariat refer to the text of the "**Recommendation**" for plain packaging in the Article 13 FCTC Guidelines as being the one contained in "paragraph 17" of these Guidelines. The evidence presented to us suggests, however, that paragraph 17 contains another text. Instead, as we see it, the text of this "**Recommendation**", which is unnumbered, follows, rather than is contained within, paragraph 17 of the Article 13 FCTC Guidelines. This is different from the way "plain packaging" is addressed in the Article 11 FCTC Guidelines. There, "plain packaging" is expressly addressed in a single paragraph, the sole one under a heading called "plain packaging", and nowhere else in the Article 11 FCTC Guidelines is "plain packaging" also presented as a "**Recommendation**", as in the Article 13 FCTC Guidelines.

Packaging is an important element of advertising and promotion. Tobacco pack or product features are used in various ways to attract consumers, to promote products and to cultivate and promote brand identity, for example by using logos, colours, fonts, pictures, shapes and materials on or in packs or on individual cigarettes or other tobacco products.¹⁰³²

7.315. Australia also considers "other aspects" of the Article 11 and Article 13 FCTC Guidelines to be "relevant" for plain packaging, citing, as "examples", certain specific provisions from these instruments. Specifically, it identifies as "relevant" paragraphs 10¹⁰³³ and 54¹⁰³⁴ of the Article 11 FCTC Guidelines and, as we already noted above, paragraph 15 of the Article 13 FCTC Guidelines. Australia further submits that "other aspects" of the Article 11 and Article 13 FCTC Guidelines that are "relevant" include those addressing "misleading or deceptive packaging and labelling" and "misleading or deceptive advertisement and promotion".¹⁰³⁵ The WHO and FCTC Secretariat, but not Australia, also refer to paragraph 43 of the Article 11 FCTC Guidelines as forming part of the "broader context" for plain packaging as expressly addressed in paragraph 46 of these same Guidelines. They explain that paragraph 43 is relevant because it "stress[es] that the terms included in Article 11.1(a) [of the FCTC] are indicative of misleading terms, but that the list is not exhaustive".¹⁰³⁶ Similarly as context, the WHO and FCTC Secretariat, but not Australia, refer to paragraph 3 of the Article 11 FCTC Guidelines, which, in its relevant part, states that "[e]ffective health warnings and messages and other tobacco product packaging and labelling measures are key components of a comprehensive, integrated approach to tobacco control".¹⁰³⁷

7.316. Finally, Australia and the WHO and FCTC Secretariat agree that both the FCTC itself and its Guidelines contain "a number of provisions relevant to plain packaging"¹⁰³⁸ and that, consequently, the parts of the Article 11 and Article 13 FCTC Guidelines expressly addressing plain packaging "must be read in light" of the context provided by these provisions.¹⁰³⁹

7.317. Having identified the parts of the Article 11 and Article 13 FCTC Guidelines on which **Australia "relies primarily ... as international standards for the TPP measures"**¹⁰⁴⁰, as well as the

¹⁰³² Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 15.

¹⁰³³ Paragraph 10 of the Article 11 FCTC Guidelines states, under a heading entitled "Design elements":

Parties should ensure that health warnings and messages are not obstructed by other required packaging and labelling markings or by commercial inserts and onsets. Parties should also ensure, when establishing the size and position of other markings, such as tax stamps and markings as per the requirements of Article 15 of the Convention, that such markings do not obstruct any part of the health warnings and messages.

Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 10.

¹⁰³⁴ Paragraph 54 of the Article 11 FCTC Guidelines, the sole provision under a heading entitled "Adhesive labels and covers", states:

Parties should ensure that adhesive labels, stickers, cases, covers, sleeves, wrapping and tobacco manufacturers' promotional inserts and onsets do not obscure, obliterate or undermine health warnings and messages. For example, adhesive labels might be allowed only if they cannot be removed and are used only on metal or wood containers that hold products other than cigarettes.

Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 54.

¹⁰³⁵ See paras. 7.299-7.302 above.

¹⁰³⁶ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 62. The WHO and FCTC Secretariat also refer, as context to the plain packaging recommendation in paragraph 46 of the Article 11 FCTC Guidelines, to paragraph 12 of these same Guidelines, which "provides specific guidance with respect to the size of health warnings", recognizing that "the effectiveness of health warnings increases with their size" (Ibid. para. 64). They also point out to paragraph 60 of the Article 11 FCTC Guidelines (which recommends health warnings be reviewed and updated periodically), to, more broadly, "impl[y] [that] the effectiveness of packaging and labelling measures is greatest when they are updated periodically [...]". (Ibid. para. 65).

¹⁰³⁷ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 3, as quoted in WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 63.

¹⁰³⁸ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 59.

¹⁰³⁹ WHO/FCTC Additional Information to Panel, paras. 61 and 64, at fn 63 above.

¹⁰⁴⁰ Australia's response to Panel question No. 129, para. 202.

"other elements" or "aspects" (at least those that it lists expressly)¹⁰⁴¹ that Australia identifies as "relevant" in this context, we need to consider whether, taken together, those parts of these instruments constitute a "document" that could be considered to contain a "standard" for tobacco plain packaging, within the meaning of Annex 1.2 of the TBT Agreement.

7.318. We first recall that the Article 11 and Article 13 FCTC Guidelines referred to above, adopted by the FCTC COP are, as stated in their respective opening paragraphs, "intended to assist the Parties in meeting their obligations and in increasing the effectiveness of measures adopted".¹⁰⁴² The WHO and FCTC Secretariat further explain that "the status of each set of Guidelines is governed by its own wording".¹⁰⁴³

7.319. Specific FCTC provisions can thus be, and most are, supplemented by certain instruments aimed at furthering them and their implementation, chief among them being Protocols and Guidelines.¹⁰⁴⁴ Article 7 of the FCTC thus provides that the FCTC COP shall propose Guidelines for the implementation of the provisions of Articles 8 to 13 of the FCTC.¹⁰⁴⁵ Towards this end, the FCTC COP adopted in November 2008, by consensus,¹⁰⁴⁶ two separate Guidelines: one for the implementation of Article 11 and another for the implementation of Article 13, i.e. the Article 11 and Article 13 FCTC Guidelines at issue in these proceedings.¹⁰⁴⁷

7.320. The WHO and FCTC Secretariat also note that the "overarching obligation to implement effective measures" is reflected not only in Article 7 of the FCTC, but also, importantly, in the wording of Articles 11 and 13 of the FCTC.¹⁰⁴⁸ The WHO and FCTC Secretariat thus explain that:

Article 11 obliges Parties to implement *effective measures* to ensure that tobacco packaging and labelling does not promote tobacco products by means that are false, misleading or deceptive (Article 11.1(a)) and to ensure that tobacco packaging carries health warnings describing the harmful effects of tobacco use (Article 11.1(b)). Similarly, Article 13 obliges Parties to undertake a *comprehensive* ban on tobacco advertising, promotion and sponsorship.¹⁰⁴⁹

¹⁰⁴¹ That is: paragraphs 10 and 54 of the Article 11 FCTC Guidelines and paragraph 15 of the Article 13 FCTC Guidelines, set out, respectively, in fns 1033 and 1034, and para. 7.314 above. See also paras. 7.301 and 7.307 above.

¹⁰⁴² WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 20-22 (referring to the texts of the respective opening paragraphs of these two guidelines).

¹⁰⁴³ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 20-22 (referring to the texts of the respective opening paragraphs of these two guidelines).

¹⁰⁴⁴ See section 2.4 above, in particular para. 2.99.

¹⁰⁴⁵ WHO/FCTC Additional Information to Panel, para. 50, at fn 63 above.

¹⁰⁴⁶ On the adoption of the Article 11 and Article 13 FCTC Guidelines by consensus, see WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 19; and WHO/FCTC Additional Information to Panel, para. 19, at fn 63 above. (containing "timetable 2" and "timetable 3", more specifically the seventh bullet in p. 7 and seventh bullet in p. 8). See also *ibid*, para. 46. See also Australia's first written submission, para. 106 and fn 166; and UICC and CCA *amici curiae* brief, (Exhibit AUS-38), para. 7.2. Indonesia, but not the other complainants, argues that "consensus" in the Guidelines with respect to tobacco plain packaging only means consensus on recommendations for FCTC Parties to "consider adopting" tobacco plain packaging, rather than recommendations to "adopt" plain packaging. Indonesia considers that this means that the Article 11 and Article 13 FCTC Guidelines were not in fact "adopted by consensus" and for this reason cannot be "international standards" under Article 2.5 of the TBT Agreement. Indonesia's second written submission, para. 225. We disagree. We consider that the particular way the final texts of these Guidelines were drafted to be, on their face, immaterial for asserting that these instruments were not adopted by consensus; nor have we been presented with any other evidence demonstrating otherwise.

¹⁰⁴⁷ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 19; and WHO/FCTC Additional Information to Panel, pp. 7-8 and Annexes 6 and 9, at fn 63 above. See also section 2.4.4 above. Honduras was one of the FCTC Parties involved in the intercessional Working Group established to develop the Article 11 FCTC Guidelines, which was "primarily devoted to the development of health warning and messages." Honduras's first written submission, para. 130. See also Honduras's response to Panel question No. 164, pp. 18-20; and Australia's comments on Honduras's response to Panel question Nos. 164, paras. 121-124. See, e.g. WHO/FCTC Additional Information to Panel, para. 19 (first bullet under "timetable 2", p. 6) and Annex 3, p. 33, at fn 63 above.

¹⁰⁴⁸ WHO/FCTC Additional Information to Panel, paras. 50-51, at fn 63 above.

¹⁰⁴⁹ WHO/FCTC Additional Information to Panel, paras. 51 and 54, at fn 63 above (emphasis original). See WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 60 and 67-68. We note here that with

7.321. The WHO and FCTC Secretariat note that the "overarching obligation to implement effective measures" is further articulated in the opening paragraphs of the Article 11 and Article 13 FCTC Guidelines¹⁰⁵⁰, which enunciate the "purpose" of each set of Guidelines. These state, respectively:

[Article 11 FCTC Guidelines]:

Consistent with other provisions of the [FCTC] and the intentions of the [FCTC COP], these guidelines are intended to assist Parties in meeting their obligations under Article 11 of the Convention, and to propose measures that Parties can use to increase the effectiveness of their packaging and labelling measures. Article 11 stipulates that each Party shall adopt and implement effective packaging and labelling measures within a period of three years after entry into force of the Convention for that Party.¹⁰⁵¹

[Article 13 FCTC Guidelines]:

The purpose of these guidelines is to assist Parties in meeting their obligations under Article 13 of the [FCTC]. They draw on the best available evidence and the experience of Parties that have successfully implemented effective measures against tobacco advertising, promotion and sponsorship. They give Parties guidance for introducing and enforcing a comprehensive ban on tobacco advertising, promotion and sponsorship or, for those Parties that are not in a position to undertake a comprehensive ban owing to their constitutions or constitutional principles, for applying restrictions on tobacco advertising, promotion and sponsorship that are as comprehensive as possible.¹⁰⁵²

7.322. To us, the above descriptions of the context in which the Article 11 and Article 13 FCTC Guidelines were adopted make clear that the relevant prescriptions relating to tobacco plain packaging in these Guidelines must be understood and implemented as part of "the broader tobacco control context"¹⁰⁵³ established by the FCTC, and also in light of the immediate context provided by, and together with, certain other specific provisions of the FCTC Guidelines as well as the provisions of the FCTC itself.¹⁰⁵⁴

7.323. Thus, as explained by the WHO and FCTC Secretariat, paragraph 46 of the Article 11 FCTC Guidelines must be "read in light" of the obligations in Article 11 of the FCTC itself, as well as

respect to certain terms used in FCTC Article 11(1), *caput*, and Article 11(1)(b), respectively, Indonesia observes that the Convention "does not define or further explain what constitutes 'effective measures' or means of promotion that are 'false, misleading, deceptive' or 'likely to create an erroneous impression'". Indonesia's first written submission, para. 95. Indonesia also cites a legal article in which, we note, the author argues that because those and other terms in Article 11 are not defined, FCTC Parties "have broad discretion in interpreting these terms". D. Layton and J. Lowe, "The Framework Convention on Tobacco Control and the World Trade Organization: A Conflict Analysis under International Law", *Global Trade and Customs Journal*, Vol. 9, Issue 6 (2014), (Layton and Lowe, *The FCTC and the WTO*), (Exhibit IDN-30), p. 248) (cited at Indonesia's first written submission, para. 95 fn 119).

¹⁰⁵⁰ WHO/FCTC Additional Information to Panel, paras. 52-53, at fn 63 above. See also WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 61.

¹⁰⁵¹ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 1.

¹⁰⁵² Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 1. See also *ibid.* para. 2 (stating that these guidelines "provide guidance on the best ways to implement Article 13 of the Convention in order to eliminate tobacco advertising, promotion and sponsorship effectively at both domestic and international levels"). We note, however, that unlike Article 11, Article 13 does not expressly refer to "packaging" or "labelling" measures. We note, on the other hand, that "tobacco advertising, promotion and sponsorship" is broadly defined in Article 1(c) of the FCTC, as including "**any form** of commercial communication" and Article 13 itself, in its paragraph (4)(a) includes a "minimum" obligation that each FCTC Party shall "prohibit **all forms** of tobacco advertising, promotion and sponsorship that promote a tobacco by **any means** that are false, misleading". FCTC, (Exhibits AUS-44, JE-19), Articles 1 and 13 (emphasis added). Finally, in paragraph 15 of the Article 13 FCTC Guidelines, set out at para. 7.314 above, it is stated that "[p]ackaging is an important element of advertising and promotion". Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 15.

¹⁰⁵³ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 73.

¹⁰⁵⁴ See, e.g. para. 7.315 above.

"other provisions" of that Convention that are "also relevant to implementation of plain packaging".¹⁰⁵⁵ They explain that plain packaging, as addressed in paragraph 46 "is set out in a broader context of other packaging and labelling measures", including those with respect to the size of health warnings, which are also the object of "specific guidance" in these same Guidelines.¹⁰⁵⁶ This "broader context", they explain, means that the Article 11 FCTC Guidelines:

[R]ecommend adoption of plain packaging *in addition* to a number of other packaging and labelling measures, including health warnings that cover as much of the principal display areas as possible and other measures prohibiting misleading packaging.¹⁰⁵⁷

7.324. With respect to the three paragraphs of the Article 13 FCTC Guidelines that they describe as specifically addressing tobacco plain packaging (paragraphs 15, 16 and 17), the WHO and FCTC Secretariat similarly explain that "these paragraphs need to be read in their context". For the WHO and FCTC Secretariat, such context includes "other passages" in the Article 13 FCTC Guidelines; the text of Article 13 of the FCTC itself, and "other obligations set out in the Convention".¹⁰⁵⁸

7.325. We note, in this respect, that the FCTC defines "tobacco control" as "a range of supply, demand and harm reduction strategies that aim to improve the health of a population by eliminating or reducing their consumption of tobacco products and exposure to tobacco smoke".¹⁰⁵⁹ Article 11 of the FCTC (entitled "Packaging and labelling of tobacco products") and Article 13 (entitled, "Tobacco advertising, promotion and sponsorship") are part of a wide family of measures covered by the Convention addressing the "demand-side" of tobacco products.¹⁰⁶⁰

7.326. Overall, we consider that the above elements, taken together, including the text of the FCTC and its Guidelines as well as the relevant information provided by the WHO and FCTC Secretariat, suggest that, while certain specific paragraphs and texts of the Article 11 and Article 13 FCTC Guidelines expressly refer or relate to tobacco plain packaging, and invite FCTC parties to "consider adopting" such measures, these recommendations can only be fully understood as part of a broader set of inter-related tobacco control measures and policies. This, in our view, includes not only those measures and policies recommended under the Article 11 and Article 13 FCTC Guidelines and other Guidelines (among which is "plain packaging"), but also those mandated under the FCTC itself. From the texts of the FCTC and its Guidelines, and consistent with the FCTC's legal nature as a "framework convention"¹⁰⁶¹, it is clear that FCTC Parties adopt

¹⁰⁵⁵ WHO/FCTC Additional Information to Panel, para. 61, at fn 63 above.

¹⁰⁵⁶ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 62-65.

¹⁰⁵⁷ WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 66 (emphasis added). See also *ibid.* paras. 72-73 (first, explaining that the "approach set out in the [FCTC]" is that "tobacco control relies upon implementation of comprehensive multi-sectoral measures that work together as cumulative interventions in a complementary regulatory scheme"; and then, as a corollary of this affirmation, stating that the "plain packaging should be viewed in this broader tobacco control context", in particular given its effect of "augment[ing] packaging and labelling measures and measures prohibiting tobacco promotion and advertising").

¹⁰⁵⁸ WHO/FCTC Additional Information to Panel, para. 64, at fn 63 above.

¹⁰⁵⁹ FCTC (Exhibits AUS-44, JE-19), Article 1(d). See also para. 2.102 above, and more broadly, paras. 7.233-7.244 below.

¹⁰⁶⁰ These measures are addressed in Part III of the Convention, entitled "Measures relating to the reduction of demand for tobacco". In contrast with Part IV of the FCTC (which only covers three "supply-side" measures), Part III of the Convention covers a variety (9) of *demand*-side tobacco-control measures. These are: "*price and tax*" measures (Article 6); "*non-price*" measures (Article 7); measures for "*protection from exposure to tobacco smoke*" (Article 8); regulations of "*content of tobacco products*" (Article 9); regulations of "*tobacco product disclosures*" (Article 10); measures on "*packaging and labelling of tobacco products*" (Article 11); measures on "*education, communication, training and public awareness*" (Article 12); measures on "*tobacco advertising, promotion and sponsorship*" (Article 13); and "*demand reduction measures concerning tobacco dependence and cessation*" (Article 14). FCTC, (Exhibits AUS-44, JE-19). See also paras. 2.102-2.105 above and paras. 7.233-7.244 below.

¹⁰⁶¹ See, e.g. Framework Convention/Protocol Approach, FCTC Paper 1, (Exhibits HND-141, IDN-31); and Vadi 2012, (Exhibit IDN-32), pp. 100-104. We do not consider, however, that, just because an instrument is in the form of a "framework convention", or was adopted in the context of such type of convention, this, in and of itself, *ipso facto* renders such instrument incapable of constituting a "standard" under Annex 1.2 of the TBT Agreement, or more broadly, a "relevant international standard" under the second sentence of Article 2.5 of the Agreement.

Guidelines with the *specific* purpose of assisting them to meet their *obligations* under certain provisions of that convention.¹⁰⁶² As described by Australia:

[T]he Guidelines are intended to help Parties to the FCTC to meet their obligations under the respective provisions of the Convention to which the Guidelines are directed, and "aim to reflect and promote best practices and standards that governments would benefit from in the treaty-implementation process".¹⁰⁶³

7.327. Based on all the evidence and information before us in these proceedings, therefore, it appears to us that, under the legal regime established by the FCTC, parties commit to implementing various supply-side and demand-side tobacco control measures in a comprehensive and multi-sectoral manner.¹⁰⁶⁴ By their own terms, when the Article 11 and Article 13 FCTC Guidelines propose certain measures or otherwise make certain policy recommendations to FCTC Parties, they do so within the particular context of being part of a comprehensive international instrument conferring certain rights and obligations towards the attainment of the objectives that those parties jointly agree that instrument should pursue.¹⁰⁶⁵ In other words, the Article 11 and Article 13 FCTC Guidelines, like all other FCTC Guidelines¹⁰⁶⁶, have been drafted with the sole aim of helping FCTC Parties meet certain specific Convention obligations to adopt a particular type of tobacco control measure, and are part of, and interlinked with, the implementation of a constellation of other tobacco control measures under Convention obligations.¹⁰⁶⁷

7.328. The interrelated nature of the relevant FCTC obligations and their respective Guidelines makes it difficult to isolate the specific elements of the Guidelines that are argued by Australia to form a "document" under Annex 1.2 from the broader context under which these instruments were adopted, which informs their specific purpose, namely to assist Parties in the implementation of

¹⁰⁶² As explained by Dr H. Nikogosian, former Head of the FCTC Secretariat, in the foreword to the 2013 edition of the official publication compiling all FCTC Guidelines adopted until that year:

The guidelines are intended to help Parties to meet their obligations under the respective provisions of the Convention. They reflect the consolidated views of Parties on different aspects of implementation, their experiences and achievements, and the challenges faced. The guidelines also aim to reflect and promote best practices and standards that governments would benefit from in the treaty-implementation process. The guidelines were prepared through the work of representatives of the Parties in the intergovernmental working groups established by the Conference of the Parties, intergovernmental and nongovernmental organizations accredited as observers to the COP and invited experts, with further input from Parties during the commentary process and the discussions during sessions of the COP. As a result of this wide consultative process and the consensus reached by the Parties, the guidelines have become widely acknowledged as a valuable tool in the implementation of the Convention.

FCTC Guidelines for Implementation (2013 edition), (Exhibits AUS-109, DOM-44). (emphasis added)

¹⁰⁶³ Australia's first written submission, para. 573 (footnote omitted) (quoting part of this statement by Dr H. Nikogosian, quoted in full at fn 1062 above).

¹⁰⁶⁴ See FCTC, (Exhibits AUS-44, JE-10), Article 5.1, set out at para. 2.101 above. See also para. 7.236 and fn 1057 above. See also, e.g. WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), paras. 66 and 72-73; and Australia's first written submission, paras. 38, 46-50.

¹⁰⁶⁵ Article 3 of the FCTC states that:

The objective of this Convention and its protocols is to protect present and future generations from the devastating health, social, environmental and economic consequences of tobacco consumption and exposure to tobacco smoke by providing a framework for tobacco control measures to be implemented by the Parties at the national, regional and international levels in order to reduce continually and substantially the prevalence of tobacco use and exposure to tobacco smoke.

FCTC, (Exhibits AUS-44, JE-10), Article 3. See also para. 2.100 above.

¹⁰⁶⁶ See the respective paragraph(s) of the Articles 5.3, 8, 9-10, 12, and 14 FCTC Guidelines, where, under the heading "Purpose", this same aim is stated, although sometimes in slightly different ways. FCTC Guidelines for Implementation (2013 edition), (Exhibits AUS-109, DOM-44), pp. 4, 19, 33, 73 and 117, respectively. For the Article 6 FCTC Guidelines, see Exhibit AUS-111, p. 1.

¹⁰⁶⁷ See also, e.g. Australia's opening statement at the second meeting of the Panel, para. 8 (stating that, "[i]n order to combat the global epidemic of tobacco use, the [FCTC] recommends that parties adopt comprehensive tobacco control strategies that optimize synergies from a mix of policies."); and Australia's response to Panel question No. 158, para. 74 fn 101.

the broad range of treaty obligations (FCTC) undertaken by FCTC Parties in relation to tobacco control.¹⁰⁶⁸ In this respect, we note the existence of certain differences in the manner in which Australia and the WHO and FCTC Secretariat identify the "core" plain packaging elements of the Article 11 and Article 13 FCTC Guidelines.¹⁰⁶⁹ Australia and the WHO and FCTC Secretariat also appear to identify differently the other parts of these two FCTC Guidelines, which do not expressly refer to or describe "plain packaging", that are to be considered "relevant" and what implications these have on the scope of the "document" claimed to constitute the "relevant international standard" and its contents. For instance, while Australia considers paragraphs 10 and 54 of the Article 11 FCTC Guidelines as "other provisions" that are "relevant" for plain packaging, the WHO and FCTC Secretariat do not expressly identify these when describing the context provided by other provisions of these Guidelines.¹⁰⁷⁰ Conversely, none of the paragraphs in the Article 11 FCTC Guidelines that the WHO and FCTC Secretariat identify as forming part of the "broader context" for plain packaging as addressed in paragraph 46 of those Guidelines¹⁰⁷¹ has been, at least expressly, identified by Australia among the examples of "other elements" that it considers to be "also relevant".¹⁰⁷²

7.329. We also note that some of the references made by Australia and the WHO and FCTC Secretariat to related or relevant provisions of the Article 11 and Article 13 FCTC Guidelines, or more generally to certain obligations in the FCTC itself, are presented in a non-exhaustive and/or generic manner. For instance, the WHO and FCTC Secretariat refer generically to those paragraphs of the Article 11 FCTC Guidelines "addressing industry design techniques that may suggest some products are less harmful than others and paragraphs addressing the size of health warnings".¹⁰⁷³ They also state that paragraph 46 of the Article 11 FCTC Guidelines "is set out in a broader context of other packaging and labelling measures", including those with respect to the size of health warnings, which are also object of "specific guidance" in these same Article 11 FCTC Guidelines. The WHO and FCTC Secretariat also refer, this time more specifically, to a number of paragraphs of the Article 11 FCTC Guidelines as forming part of the "broader context" of the plain packaging recommendation of paragraph 46: paragraphs 3, 12, 43, and 60.¹⁰⁷⁴ Finally, the WHO and FCTC Secretariat state that Articles 11 and 13 of the FCTC itself, along with "other provisions" of the Convention, are also important context for implementing tobacco plain packaging, as addressed in each set of Guidelines.¹⁰⁷⁵ The fact that these FCTC elements have been referred to in a non-exhaustive, or generic, manner further confirms that the three (or four, in the description of the WHO and FCTC Secretariat) paragraphs of the Article 11 and Article 13 FCTC Guidelines relating specifically to plain packaging are intended to be read as an integral part of a comprehensive set of Guidelines supporting the implementation of a broad range of effective tobacco control measures.

7.330. Overall, therefore, it is not clear to us which elements or components within the Article 11 and Article 13 FCTC Guidelines would form a "document" encapsulating the totality of the "rules, guidelines or characteristics", that a WTO Member would be required to follow if it decides to adopt a measure providing for tobacco plain packaging "in accordance with" an international standard. It follows that we are not persuaded that the elements of these two FCTC Guidelines that have been identified by Australia can be read independently of, or separately from, their broader context as part of the FCTC, for the purpose of establishing the existence of a "relevant international standard" on tobacco plain packaging, within the meaning of the second sentence of Article 2.5. As

¹⁰⁶⁸ In this respect, we consider it telling the fact that, as noted above, Australia itself has submitted that the FCTC Guidelines, "as a whole", could be considered "relevant international standards" for the purposes of the second sentence of Article 2.5 of the TBT Agreement. Australia's response to Panel question No. 129, para. 201. See also paras. 7.299, 7.303 and 7.307 above.

¹⁰⁶⁹ See paras. 7.307 and 7.315 above. Specifically, the WHO and FCTC Secretariat identify paragraph 15 of the Article 13 FCTC Guidelines among the "plain packaging" requirements, while Australia does not.

¹⁰⁷⁰ See, e.g. paras. 7.301, 7.307, and 7.314-7.316 above. See also fn 1183 below.

¹⁰⁷¹ That is, Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, paragraphs 3, 12, 43 and 60. See also para. 7.315 (where, *inter alia*, paragraph 3 is partially quoted) and fn 1036 above. See also para. 7.323 above.

¹⁰⁷² See paras. 7.301, 7.302 and 7.307 above.

¹⁰⁷³ WHO/FCTC Additional Information to Panel, para. 61, at fn 63 above. They also included, in this respect, the Article 13 FCTC Guidelines.

¹⁰⁷⁴ See, *inter alia*, fn 1071 above.

¹⁰⁷⁵ WHO/FCTC Additional Information to Panel, para. 61, at fn 63 above. See also *ibid.* para. 64 (specifically referring to the text of Article 13 of the FCTC, and then, generically, to "other obligations set out in the Convention") See also paras. 7.314-7.316 above.

we observed above, the Appellate Body, addressing a comparable situation under Article 2.4 of the TBT Agreement, determined that "this analysis must address *all* of those relevant provisions of [the document], and must not ignore any one of them".¹⁰⁷⁶ Similarly here, we must be able to ascertain what parts of the relevant instruments at issue (the Article 11 and Article 13 FCTC Guidelines) constitute the "document" at issue. In the absence of clarity in this respect, we will not be able to properly assess the content of the relevant "document" against the other elements of the definition of "standard" in Annex 1.2 or, more broadly, the existence of a "relevant international standard" and whether, for the purpose the second sentence of Article 2.5, the TPP measures are "in accordance with" such standard.

7.331. In making this determination, as described above, we are not suggesting that a "document", for the purposes of meeting the definition of "standard" in Annex 1.2 (and, specifically, constituting a "relevant international standard" under the second sentence of Article 2.5), could not be contained within an instrument that simultaneously addresses other issues or, together with various other instruments, form part of a broader context or framework.¹⁰⁷⁷ Rather, what is relevant is that all relevant product requirements, or other specifications related to the specific subject matter that is claimed to be the object of the "relevant international standard" (in the present case, "tobacco plain packaging") be identifiable with sufficient clarity to allow a "comparative assessment" to be properly conducted, to determine whether the challenged measure is "in accordance with" with that international standard.¹⁰⁷⁸

7.332. The next element of the definition of "standard" under Annex 1.2 of the TBT Agreement, as outlined above¹⁰⁷⁹, is whether the "document" at issue has been "approved by a recognized body". As described above¹⁰⁸⁰, in respect of an "*international* standard" under the second sentence of Article 2.5, this requirement is informed by the definition of "standardizing body" in the ISO/IEC Guide 2: 1991¹⁰⁸¹, "[w]ith respect to other necessary features of a body that can approve an 'international' standard".¹⁰⁸²

7.333. The "international" character of a standard is thus primarily predicated upon whether the instrument was adopted by an "international standardizing body". Whether an "international standardizing body" exists requires, in turn, assessing, *inter alia*, whether this body is one that has *recognized activities* in standardization. A discussion of the characteristics of the body having adopted the document at issue may therefore be considered in the context of determining whether

¹⁰⁷⁶ Appellate Body Report, *EC – Sardines*, para. 251 (emphasis original). See also fn 1006 above.

¹⁰⁷⁷ See, e.g. para. 7.293 and fn 1061 above.

¹⁰⁷⁸ The identification of the parts of the instrument claimed to be an "(international) standard" containing all "relevant" requirements to a given subject-matter is also important because, without it, an "assessment of conformity" with such requirements cannot be properly performed. We note, in this respect, that "conformity assessment procedures", which are also covered by the TBT Agreement, are defined in Annex 1.3 of the Agreement as "[a]ny procedure used, directly or indirectly, to determine that *relevant requirements* in technical regulations or *standards* are fulfilled". (emphasis added)

¹⁰⁷⁹ See para. 7.281 above.

¹⁰⁸⁰ See para. 7.278 above.

¹⁰⁸¹ The ISO/IEC Guide 2: 1991, 4.3 defines "standardizing body" as a "body that has recognized activities in standardization". See Appellate Body Report, *US – Tuna II (Mexico)*, para. 357.

¹⁰⁸² Appellate Body Report, *US – Tuna II (Mexico)*, para. 357. The Appellate Body found, in particular, that:

Annex 1.2 to the *TBT Agreement* provides that a "standard" must be approved by a "recognized body". As we see it, the definition of "standardizing body" in the ISO/IEC Guide 2: 1991 does not conflict with the definition in the *TBT Agreement*. Instead, the definition in the ISO/IEC Guide 2: 1991 adds to and complements the definition in the *TBT Agreement*, specifying that a body must be "recognized" with respect to its "activities in standardization".

Ibid. The Appellate Body, based in particular on the text of the last two sentences of the *Explanatory note* to that Annex, has also clarified that "the definition of a 'standard' ... does not require approval by consensus for standards adopted by a 'recognized body' of the international standardization community." Appellate Body Report, *EC – Sardines*, para. 227. See also Panel Report, *US – Animals*, para. 7.224 fn 679 (stating that, in that panel's view, what the Appellate Body concluded in *EC – Sardines* when it interpreted the term "approved by a recognized body" in Annex 1.2, was "that the relevant issue [with respect to that term] is whether the document is *approved* by the recognized body and not how that approval comes about (i.e. consensus, voting, etc.)" (emphasis original)).

the alleged standard is "international" in character. At this stage of our analysis, we focus primarily on the nature and contents of the "document" alleged to be an international standard.

7.334. We therefore consider, next, following the order of elements of the Annex 1.2 definition¹⁰⁸³, whether the "document" alleged to constitute a "standard" provides "rules", "guidelines" or "characteristics" for products (or their related processes and production methods). Specifically, we consider whether the aspects of the Article 11 and Article 13 FCTC Guidelines argued by Australia to constitute a standard in respect of tobacco plain packaging provide "rules", "guidelines" or "characteristics" (including with respect to terminology, symbols, packaging, marking or labelling requirements for products or their related PPMs) and whether, in addition, they are "for common and repeated use". Finally, we consider whether compliance with such requirements is "not mandatory".

Whether the Article 11 and Article 13 FCTC Guidelines provide "rules, guidelines or characteristics for products"

The notion of "rules, guidelines or characteristics for products" in Annex 1.2

7.335. The definition of "standard" in Annex 1.2 refers to a document "that provides rules, guidelines or characteristics for products or related processes and production methods". Additionally, the second sentence of Annex 1.2 provides that it may also include or deal exclusively with terminology, symbols, packaging, marking or labelling "requirements".

7.336. Australia claims that the Article 11 and Article 13 FCTC Guidelines comply with these conditions because they constitute a document in the form of "guidelines" which provide for the "characteristics" of a "product" (tobacco) as well as its "related processes and production methods", i.e. manufacture and sale of tobacco products.¹⁰⁸⁴

7.337. As the use of the disjunctive "or" in the phrase "rules, guidelines or characteristics" indicates, a document can satisfy this component of the definition of a "standard" if it "provides"¹⁰⁸⁵ either one of these three elements. Dictionary definitions of the noun "rule" suggest that it may be defined, when used in relation to "regulations or principles", as "[a] principle, regulation, or maxim governing individual conduct"¹⁰⁸⁶, while the term "guidelines" can be defined as "a directing or standardizing principle laid down as a guide to procedure, policy, etc."¹⁰⁸⁷. These two terms, or variations thereof, are found in other provisions of the TBT Agreement¹⁰⁸⁸ as well as

¹⁰⁸³ See para. 7.281 above.

¹⁰⁸⁴ Australia's first written submission, para. 573; and second written submission, para. 316.

¹⁰⁸⁵ The verb "provide" can be defined as "to *lay down* as a provision or arrangement". Oxford English Dictionary Online, definition of "provide, v.", available at: <http://www.oed.com/view/Entry/153448?rskey=1jZVfC&result=2&isAdvanced=false#eid>, accessed 2 May 2017 (emphasis added). The definition of "technical regulation" in Annex 1.1 similarly refers to a document "which *lays down*" product characteristics (emphasis added). As noted by the Appellate Body, the verb "lay down", is defined as to "establish, formulate definitely (a principle, a rule); prescribe (a course of action, limits, etc.)". Appellate Body Reports, *US – Tuna II (Mexico)*, para. 185; and *EC – Seal Products*, para. 5.10 (both referring to the *Shorter Oxford English Dictionary*, 6th edn, A. Stevenson (ed.) (Oxford University Press, 2007), Vol. 1, p. 1562). Merriam-Webster defines the transitive verb "provide" as "to have as a condition: stipulate <the contract *provides* that certain deadlines will be met>". Merriam-Webster Dictionary online, definition of "provide", <<https://www.merriam-webster.com/dictionary/provide>>, accessed 2 May 2017. (emphasis added)

¹⁰⁸⁶ Oxford English Dictionary online, definition of "rule", available at:

<<http://www.oed.com/view/Entry/168717?rskey=0cxA2d&result=1#eid>>, accessed 2 May 2017.

¹⁰⁸⁷ *Shorter Oxford English Dictionary*, 6th edn, A. Stevenson (ed.) (Oxford University Press, 2007), Vol. 1, pp. 15, 16, 488, 719, 1174, (Shorter Oxford English Dictionary, Vol. 1 AUS Excerpts, Part 2), (Exhibit AUS-539), p. 1174. See also Australia's second written submission, para. 232 (arguing that, "[i]nherent in the ordinary meaning of the term 'guideline' (a 'standardizing principle') is the notion that a standard may allow for a certain degree of flexibility in the relevant product characteristic or related processes and production methods." (footnote omitted)). See also Australia's comments on complainants' responses to Panel question No. 150, para. 32; and No. 163, para. 119.

¹⁰⁸⁸ In the TBT Agreement, the term "guidelines" is only found in the definition of "standard" in Annex 1.2, while the term "rules" can be found in other provisions of the Agreement (e.g. Articles 1.6 and 5.1.1). The TBT Agreement, however, also refers to "guides", as in "relevant *guides* or recommendations issued by international standardizing bodies", mostly in the context of its disciplines on conformity assessment procedures. See, e.g. Articles 5.4 to 5.6. See also Article 12.4.

in other covered agreements¹⁰⁸⁹, including the SPS Agreement¹⁰⁹⁰, GATT 1994¹⁰⁹¹, the SCM Agreement¹⁰⁹², GATS¹⁰⁹³, and the Customs Valuation Agreement.¹⁰⁹⁴ We note that the term "**rules**" has also been discussed in the context of the application of the Antidumping Agreement (but not, *per se*, as a term of that Agreement). In that context, the Appellate Body considered that it was irrelevant whether a given prescription was binding or not in order to determine the existence of a "rule or norm". The question, concluded the Appellate Body, is rather whether it was an "act[] ... **setting forth rules** or norms that are intended to have general and prospective application".¹⁰⁹⁵ The term "guidelines", as used in Article 14 of the SCM Agreement, has been found to refer to a "framework" or "parameters" for calculation of "benefit", rather than a "detailed method of calculation", such that paragraphs (a) through (d) of that provision should not be interpreted as "rigid rules that purport to contemplate every conceivable factual circumstance".¹⁰⁹⁶ Rather, the term "guidelines" was understood as conveying "a certain degree of flexibility" in the analysis under Article 14(d).¹⁰⁹⁷

7.338. The above suggests, in our view, the need for the document at issue to have a certain degree of normative content. It also suggests that, in terms of the required degree of normative content, a distinction may be drawn between "guidelines" – which would establish broad frameworks or parameters for the adoption of a given measure with a degree of flexibility – and "rules" – which would define more clearly a norm or measure to be followed. The inclusion of both terms in the definition of a "standard" in Annex 1.2 indicates that either type of prescription may form the basis of a "standard" within the meaning of the TBT Agreement. The fact that the FCTC Guidelines, or relevant parts thereof, would constitute "guidelines", rather than strict "rules", and would thereby entail a certain degree of flexibility, would therefore not, in itself, be an obstacle to their being considered to fall within the scope of this definition, at least with respect of this particular element of the Annex 1.2 definition. The fact that the instrument at issue meets this

¹⁰⁸⁹ These terms are also found in the GPA, a WTO plurilateral agreement, which contains a definition of "standard" almost identical to that in Annex 1.2 to the TBT Agreement. Both the GPA (in fn 4 to Article VI:2(b)), and the Amended GPA (in Article I(s)), contain definitions of "standard" that, with the exception of the additional references to "service(s)", are virtually identical to that in Annex 1.2 to the TBT Agreement. However, to date, these definitions have not been discussed in any dispute involving either the GPA or the Amended GPA. With respect to the relationship between the TBT Agreement and the GPA, see Article 1.4 of the TBT Agreement (stating that, while "[p]urchasing specifications prepared by governmental bodies for production or consumption requirements of governmental bodies" are not subject to the provisions of the TBT Agreement, they are, on the other hand, "addressed in the Agreement on Government Procurement, according to its coverage").

¹⁰⁹⁰ The SPS Agreement contains various references to "international standards, **guidelines** and recommendations" (emphasis added). This composite term is defined in Annex A(3) to the SPS Agreement, but only with express reference to the types of SPS risks these documents address and the specific international bodies that "establish", "develop" or "promulgate" them. As recently noted by the panel in *Russia – Pigs (EU)*, however, individually, none of these three terms, including "guidelines", have been interpreted and, in any event, the SPS Agreement "does not require a fine distinction between [them] for its proper application." See Panel Report, *Russia – Pigs (EU)*, para. 7.274 fn 413.

¹⁰⁹¹ See, e.g. the reference to "rules" in Article I:1 of GATT 1994 (as used in the phrase: "all **rules** and formalities in connection with importation and exportation"). (emphasis added)

¹⁰⁹² See, e.g. the reference to "guidelines" in the *chapeau* of Article 14 of the SCM Agreement, requiring that "any method" for calculating the amount of a subsidy in terms of the benefit to the recipient, shall, *inter alia*, "be consistent with the following **guidelines**: ...". (emphasis added)

¹⁰⁹³ See, e.g. the reference to "guidelines" in Article III:3 of the GATS (as used in the phrase: "new, or any changes to existing, laws, regulations or **administrative guidelines** which significantly affect trade in services covered by its specific commitments"). (emphasis added)

¹⁰⁹⁴ See, e.g. the reference to "guidelines" in the Customs Valuation Agreement, under Annex I (*Interpretative Notes, General Note, Use of Generally Accepted Accounting Principles*), which defines what "generally accepted accounting principles" means, adding that "[t]hese standards may be **broad guidelines of general application** as well as detailed practices and procedures." (emphasis added)

¹⁰⁹⁵ Appellate Body Report, *US – Oil Country Tubular Goods Sunset Reviews*, para. 187 (emphasis added). In that case, the Appellate Body answered this question in the affirmative on the basis that the measure at issue had "normative value", as it provided administrative guidance and created expectations among the public and among private actors. Ibid. According to the Appellate Body, a measure will be considered "as such" when it may be seen as a "**rule** or norm of general and prospective application" as opposed to "as applied", in which case it will be considered "as an individual instance of the application of a **rule** or norm". Appellate Body Report, *US – Continued Zeroing*, para. 179. (emphasis added)

¹⁰⁹⁶ Appellate Body Report, *US – Softwood Lumber IV*, para. 92. (footnotes omitted)

¹⁰⁹⁷ Appellate Body Report, *US – Carbon Steel (India)*, para. 4.332. The same interpretation was recalled in Appellate Body Report, *US – Countervailing and Anti-Dumping Measures (China)*, para. 483.

element of the definition is not, however, dispositive for it does not suffice that the "document" be simply one providing "guidelines". As we shall see later, it also must be one that provides guidelines with a certain purpose, i.e. "for common and repeated use". Whatever degree of flexibility the meaning of the term "guidelines" may entail in isolation, it is qualified when seen in the context of the other terms of the Annex 1.2 definition, in particular the phrase "for common and repeated use".

7.339. As described above, the Annex 1.2 definition also identifies the type of subject-matter that needs to be addressed for a document to constitute a "standard".¹⁰⁹⁸ The definition thus encompasses documents that provide "characteristics for products or related processes and production methods". This part of the definition is almost¹⁰⁹⁹ identical to the relevant aspects of the definition of a "technical regulation" in Annex 1.1 to the TBT Agreement.¹¹⁰⁰ In the context of Annex 1.1, the "characteristics" of a product have been understood to include "... any objectively definable 'features', 'qualities', 'attributes', or other 'distinguishing mark' of a product"¹¹⁰¹, including, for instance, a product's "composition, size, shape, colour, texture, hardness, tensile strength, flammability, conductivity, density, or viscosity".¹¹⁰² As discussed earlier, "product characteristics" may "be prescribed or imposed with respect to products in either a positive or a negative form".¹¹⁰³ We see no reason not to understand the term "characteristics for products [or related processes and production methods]" to have the same meaning in the definition of a "standard" in Annex 1.2.

7.340. The second sentence of the definition in Annex 1.2 further clarifies that a standard "may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method". This part of the definition is identical to the second sentence of the definition of "technical regulation" in Annex 1.1.¹¹⁰⁴ In that context, as discussed earlier, these terms have been interpreted with reference to the term "characteristic", as used in the first sentence of the definition.¹¹⁰⁵ As above with respect to the term "characteristics", we see no reason not to apply the same understanding regarding these terms, as used in the definition of "standard" in Annex 1.2.¹¹⁰⁶ As is the case in Annex 1.1, the use of the words "also include" and "deal exclusively with" at the beginning of this sentence further indicates that it includes elements that are additional to, and may be distinct from, those covered by the first sentence.¹¹⁰⁷

¹⁰⁹⁸ As we said above in para. 7.337 above, the disjunctive "or" in the first sentence of Annex 1.2 appears to indicate that a document containing any of these four elements ("rules", "guidelines", "characteristics" or related "PPMs") may be a "standard", provided it also meets the other separate elements of that definition (being "for common and repeated use", "not mandatory", etc.). This means that a document that "provides guidelines" but does not, for instance, do so "for common and repeated use", cannot be a standard.

¹⁰⁹⁹ It is almost identical because, while the Annex 1.1 definition refers to "product characteristics or their related processes and production methods", the Annex 1.2 definition refers to "characteristics for products or related processes and production methods".

¹¹⁰⁰ Annex 1.1 to the TBT Agreement defines "technical regulation" as a "[d]ocument which lays down product characteristics or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method."

¹¹⁰¹ Appellate Body Report, *EC – Asbestos*, para. 67.

¹¹⁰² Appellate Body Report, *EC – Asbestos*, para. 67.

¹¹⁰³ Appellate Body Report, *EC – Asbestos*, para. 69. See also Appellate Body Reports, *EC – Seal Products*, para. 5.11.

¹¹⁰⁴ Appellate Body Report, *US – Tuna II (Mexico)*, para. 187.

¹¹⁰⁵ Appellate Body Report, *EC – Asbestos*, para. 67 ("In the definition of a 'technical regulation' in Annex 1.1, the *TBT Agreement* itself gives certain examples of 'product characteristics' – 'terminology, symbols, packaging, marking or labelling requirements'. These examples indicate that 'product characteristics' include, not only features and qualities intrinsic to the product itself, but also related 'characteristics', such as the means of identification, the presentation and the appearance of a product.").

¹¹⁰⁶ We also recall our observations, at paras. 7.136–7.159 above, with respect to the meaning of this composite term when we assessed whether the TPP measures are technical regulations under the definition in Annex 1.1.

¹¹⁰⁷ See Appellate Body Reports, *EC – Seal Products*, para. 5.14, in relation to the same sentence in Annex 1.1.

Whether the Article 11 and Article 13 FCTC Guidelines contain "rules, guidelines or characteristics" for products

7.341. As we have determined above in relation to the TPP measures, we consider that prescriptions relating to tobacco packaging and labelling requirements relate to product characteristics within the meaning of Annex 1.1 and may also constitute packaging, marking or labelling requirements. Accordingly, to the extent that relevant aspects of the Article 11 and Article 13 FCTC Guidelines would prescribe requirements in relation to tobacco packaging and labelling, they could be considered to similarly prescribe "characteristics for products" within the meaning of the first sentence of the Annex 1.2 definition and relate to "terminology, packaging, marking or labelling requirements" as they apply to such products, within the meaning of the second sentence of the definition in Annex 1.2.

7.342. We also note, however, that different parts of the Article 11 and Article 13 FCTC Guidelines identified by Australia as containing the "relevant international standard" for tobacco plain packaging describe somewhat differently the relevant product characteristics or marking, packaging or labelling requirements that are "recommended" under each set of Guidelines.

7.343. We first note that the scope of "tobacco plain packaging" measures seems narrower, as described in paragraph 46 of the Article 11 FCTC Guidelines, relative to the descriptions in the Article 13 FCTC Guidelines: paragraph 46 of the Article 11 FCTC Guidelines only concerns elements for regulating tobacco "packaging", with no express indication as to whether it also covers features concerning the labelling or appearance of individual tobacco products, such as cigarettes or cigars¹¹⁰⁸, while the Article 13 FCTC Guidelines do contain such references.¹¹⁰⁹

7.344. Secondly, the prohibitive elements relating to "plain packaging" in paragraph 46 of the Article 11 FCTC Guidelines seem to allow a certain degree of flexibility: under this part of the Guidelines, FCTC parties can implement "plain packaging" requirements that either "prohibit" the use of "logos", "colours", "brand images" or "other promotional information" in packaging or, instead, implement packaging requirements that only "restrict" these elements. Additionally, it seems that the permissive plain packaging elements addressed in paragraph 46 of the Article 11 FCTC Guidelines only cover two features: "brand names" and "product names" (these two elements are permitted when "displayed in a standard colour and font style"). No reference is made to other features, such as, for instance, government-mandated information (e.g. health warnings, tax stamps), variant names, package design or package materials. As observed by the complainants, no further guidance is given, for instance, on the choice of colour, font size or font type that should be used, nor on aspects such as the number of times, and where, "brand names" and "product names" may appear in packaging.¹¹¹⁰

7.345. The Article 13 FCTC Guidelines address tobacco "plain packaging" in more detail relative to paragraph 46 of the Article 11 FCTC Guidelines. Tobacco plain packaging measures are expressly addressed and described in two parts of Article 13 FCTC Guidelines: in paragraph 16 and in the "Recommendation" text that follows paragraph 17.¹¹¹¹ When read together, and in light of the information presented to us, including from the WHO and FCTC Secretariat, these texts seem to indicate that "plain packaging" adopted for the purpose of implementing Article 13 of the FCTC

¹¹⁰⁸ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46, set out at para. 7.308 above. We recall that the Article 11 FCTC Guidelines aim to assist FCTC parties with implementing Article 11 of the Convention, which addresses misleading information in tobacco packaging and labelling, and also includes certain requirements for the use of health warnings in these products. See also footnote 4 to the Article 13 FCTC Guidelines, set out at para. 7.310 above, which refer to the Article 11 FCTC Guidelines as being those "which address plain packaging with regard to health warnings and misleading information".

¹¹⁰⁹ See, e.g. Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16 ("There should be no advertising or promotion ... on individual cigarettes or other tobacco products").

¹¹¹⁰ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46. Set out at para. 7.308 above.

¹¹¹¹ Set out, respectively, at paras. 7.309 and 7.312 above. As we indicated at fn 1031 above, the text of the "**Recommendation**" follows, rather than is contained within, the text of paragraph 17 of the Article 13 FCTC Guidelines. We also noted that although the text of paragraph 17 (set out at para. 7.311 above) refers to "plain packaging", it does not *per se* concern plain packaging measures. "Plain packaging" is also referred in footnote 4 to the Article 13 FCTC Guidelines, set out at para. 7.310 above, but only to direct to the Article 11 FCTC Guidelines, "which address plain packaging with regard to health warnings and misleading information".

covers both tobacco "packaging" as well as the appearance of tobacco "products" themselves.¹¹¹² This contrasts with the scope of paragraph 46 of the Article 11 FCTC Guidelines, which, as noted above, seems to only address "packaging" requirements. We note, however, that even here these relatively more detailed plain packaging requirements under the Article 13 FCTC Guidelines mostly concern tobacco "packaging", while relatively fewer specific guidance is given with respect to "features" related to the appearance (or labelling) of tobacco "products" themselves.¹¹¹³ Tobacco plain packaging requirements, as addressed and recommended in the Article 13 FCTC Guidelines, also seem to cover measures providing for certain prohibitive elements that, as compared to those under paragraph 46 of the Article 11 FCTC Guidelines, appear more stringent in that they allow for a lesser degree of flexibility in respect of their implementation. For instance, under the provisions in the Article 13 FCTC Guidelines expressly addressing plain packaging, the use of "logos" must be **prohibited ("... without any logos ...")**. This suggests that "logos" cannot be simply "restricted", as appears to be possible under paragraph 46 of the Article 11 FCTC Guidelines.¹¹¹⁴

7.346. The Article 13 FCTC Guidelines also appear to include and describe various other features in addition to, and sometimes differently from, those under the Article 11 FCTC Guidelines. For instance, under the Article 13 FCTC Guidelines, plain packaging measures should prohibit¹¹¹⁵ "advertisement and promotion" that appear either "inside or attached" to the tobacco package or "on" individual cigarettes or other tobacco products. The Article 11 FCTC Guidelines, in contrast, refer, more generically, to **prohibiting or restricting the "use of ... promotional information on packaging"**.¹¹¹⁶ Under the Article 13 FCTC Guidelines, plain packaging measures are expressly permitted to, besides "brand and product names", allow certain other information to appear in packaging, such as the "manufacturer's name", "contact details", and "quantity of product". These Guidelines also expressly allow the inclusion of "government-mandated information or markings", such as "health warnings" and "tax stamps". Paragraph 46 of the Article 11 FCTC Guidelines, in contrast, only refers to "brand and product names" as those features expressly permitted in packaging.¹¹¹⁷ Further, the Article 13 FCTC Guidelines give some specific guidance on how packaging appearance should be standardized. For instance, as described in these Guidelines, tobacco packaging should be required to be in "black and white or two other contrasting colours, as prescribed by national authorities" and also in "standardized shape, size and materials". Under paragraph 46 of the Article 11 FCTC Guidelines, in contrast, no guidance is given with respect to the appearance of the packages themselves in terms, for instance, of their size, shape or materials; instead, the Article 11 FCTC Guidelines give general guidance with respect to the

¹¹¹² As indicated at para. 7.310 above, these key "plain packaging" texts of the Article 13 FCTC Guidelines are contained under a heading entitled "**Packaging and product features**".

¹¹¹³ As set out at para. 7.309 above, the text of paragraph 16 of the Article 13 FCTC Guidelines starts with the phrase "[t]he effect of advertising or promotion on **packaging** can be eliminated by requiring plain packaging" (emphasis added). This is then followed by a description of certain packaging requirements (e.g. "black and white or two other contrasting colours, as prescribed by national authorities", "standardized shape, size and materials", etc.). This contrasts with the way requirements for "product features" are addressed in the last sentence of paragraph 16, which simply say, in relevant parts, that "[t]here should be no **advertising or promotion ... on individual cigarettes or other tobacco products.**" The text of the "**Recommendation**" following paragraph 17 carries similar guidance that tobacco products "should carry no advertisement or promotion", although it further explains that these prohibited aspects "include[e] design features that make products attractive". We note that paragraphs 15 and 17 of the Article 13 FCTC Guidelines, set out, respectively, at paras. 7.314 and 7.311 above, do contain relatively more detailed references to restrictions to tobacco product features for the purpose of regulating tobacco advertisement and promotion. However, as we observed above, these paragraphs, although related, do not prescribe plain packaging requirements *per se*.

¹¹¹⁴ Compare Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46 with Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16 and "**Recommendation**" following para. 17. Paragraph 46 of the Article 11 FCTC Guidelines also refers to the restriction or prohibition of the use of, *inter alia*, "brand images" on packaging, a term not used in the parts of Article 13 FCTC Guidelines expressly addressing plain packaging (although in paragraph 31 and the "**Recommendation**" text that follows it, which address "depictions of tobacco in entertainment media", FCTC Parties are recommended to, *inter alia*, "prohibit[] the use of identifiable tobacco brands or **imagery**"). (emphasis added)

¹¹¹⁵ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16, last sentence ("... there should be no ...").

¹¹¹⁶ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46.

¹¹¹⁷ We note however that the second sentence of paragraph 46 of the Article 11 FCTC Guidelines explain that regulating the use of logos, colours, brand images and promotional information on tobacco packaging "may", *inter alia*, "increase the noticeability and effectiveness of health warnings and messages".

appearance of "brand names" and "product names" as they appear in packaging, stating that they should be only "displayed in a standard colour and front style".¹¹¹⁸

7.347. Overall, therefore, the specific parts of the Article 11 FCTC Guidelines and of the Article 13 FCTC Guidelines each describe certain recommended features of "plain packaging" for tobacco products, but do so in different terms and in different levels of detail.

Whether the Article 11 and Article 13 FCTC Guidelines provide rules, guidelines or characteristics "for common and repeated use"

7.348. We now consider, based on the sequence of elements of the definition of "standard" under Annex 1.2 of the TBT Agreement outlined above¹¹¹⁹, whether the relevant "rules, guidelines or characteristics" providing for the plain packaging of tobacco products under the Article 11 and Article 13 FCTC Guidelines are "for common and repeated use" within the meaning of Annex 1.2.

The notion of "common and repeated use" in Annex 1.2

7.349. The parties disagree on the meaning of the phrase "for common and repeated use" in the definition of "standard" in Annex 1.2 and for the purpose of applying the second sentence of Article 2.5 of the TBT Agreement.

7.350. The complainants argue that a "document" would be suitable "for common and repeated use" only when the product requirements it provides for "are *sufficiently precise* to achieve harmonization by permitting different countries to implement them uniformly".¹¹²⁰ If "documents" were not required to contain such "sufficient degree of precision", this would result in "each Member [being able] to adopt very different technical regulations"¹¹²¹, rendering such documents ill-suited to perform the functions of all standards – in particular international standards, i.e. promoting harmonization, improving efficiency, creating predictability and facilitating trade.¹¹²² For the complainants, such functions are, *inter alia*, reflected in the third, fourth and eighth recitals of the preamble of the TBT Agreement¹¹²³ as well as in certain TBT Committee instruments¹¹²⁴,

¹¹¹⁸ Compare Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46 with Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16. The two sets of Guidelines seem to differ slightly in this regard: paragraph 46 of the Article 11 FCTC Guidelines refers to brand names and product names displayed in a "standard *colour* and font style", while paragraph 16 of the Article 13 FCTC Guidelines refers to the standardization of these elements (along with others, like government-mandated information) in terms of "prescribed font style and *size*". Ibid. (emphasis added).

¹¹¹⁹ See para. 7.281 above.

¹¹²⁰ Honduras's second written submission, paras. 480-481. (emphasis added)

¹¹²¹ Dominican Republic's response to Panel question No. 66, para. 306. See also, e.g. Indonesia's response to Panel question No. 163, para. 21.

¹¹²³ Honduras's response to Panel question No. 70, p. 33 fn 145 (also referring to the Appellate Body's statement in *EC – Sardines*, para. 214, that "the TBT Agreement recognizes the important role that international standards play in promoting harmonization and facilitating trade"); Honduras's response to Panel question No. 163, p. 18 fn 97; Dominican Republic's second written submission, para. 895 fn 912; Dominican Republic's response to Panel question No. 66, paras. 297 and 305, and No. 163, para. 149; Cuba's response to Panel question No. 70, p. 16 (annexed to its response to Panel question No. 138) (agreeing with Honduras's response to this question), and No. 163, p. 9 fn 34; and Indonesia's response to Panel question No. 150, para. 10 (quoting the texts of the third and fourth recitals of the preamble of the TBT Agreement).

¹¹²⁴ More specifically, the statement in principle 4 ("Effectiveness and Relevance") of the "Decision of the Committee on Principles for the Development of International Standards, Guides and Recommendations with Relation to Articles 2, 5, and Annex 3 to the TBT Agreement", G/TBT/9, 13 November 2000, para. 20 and Annex 4, (TBT Committee Six Principles Decision), Annex 4, para. 10, that "[i]n order to serve the interests of the WTO membership in *facilitating international trade and preventing unnecessary trade barriers*, international standards need to be relevant and to effectively respond to regulatory and market needs, as well as scientific and technological developments in various countries. They *should not distort the global market, have adverse*

Members' statements before that body¹¹²⁵, and "certain [r]ecognized international standardizing bodies under the WTO Agreement [that] expressly mention trade facilitation in their mandate".¹¹²⁶

7.351. The complainants also consider that requiring standards to be "precise" is important for assessing whether a document is an *international* standard under the second sentence of Article 2.5, so as to avoid conferring a rebuttable presumption of consistency with Article 2.2 to technical regulations internalizing "documents" that could be implemented in different ways, including some that may constitute an unnecessary obstacle to trade.¹¹²⁷

7.352. Honduras and Cuba argue that standards must also be *prescriptive*.¹¹²⁸ In Honduras's view, this means that standards must also be documents the product specifications of which Members are "require[d]", as opposed to simply "suggest[ed]", to include in their measures.¹¹²⁹ Honduras says that there are "important systemic reasons" why "relevant international standards", in particular, must be prescriptive. For instance, according to Honduras, a "finding by a WTO panel that a hortatory instrument constitutes a relevant international standard under Article 2.5 would

effects on fair competition, or stifle innovation and technological development". Dominican Republic's second written submission, para. 858 (emphasis added by the Dominican Republic). Reference was also made to a statement the Committee made in paragraph 20 of the aforementioned document, when it adopted the Decision, that, "in order for international standards to make *a maximum contribution to the achievement of the trade facilitating objectives of the* [TBT Agreement], it was important that all Members had the opportunity to participate in the elaboration and adoption of international standards". Dominican Republic's second written submission, para. 857. (emphasis added by the Dominican Republic).

¹¹²⁵ Honduras refers to Australia's statement that "[i]t is important for the TBT Committee and international standardizing bodies to cooperate as far as possible in ensuring that international standards contribute to *improving the efficiency of production and facilitate the conduct of international trade*". Honduras's response to Panel question No. 70, p. 33 (emphasis added by Honduras) (quoting Australia's communication to the Committee on Technical Barriers to Trade, G/TBT/W/139, 28 July 2000, para. 8). Honduras further states that "this position [by Australia] was also supported by other WTO Members such as the United States and reflects the common understanding among WTO Members that international standards should be aimed at facilitating trade". Honduras's response to Panel question No. 70, p. 33 (referring to United States' communication to the Committee on Technical Barriers to Trade, G/TBT/W/305, 12 March 2009). See also Dominican Republic's second written submission, para. 859; and Dominican Republic's response to Panel question No. 66, para. 297.

¹¹²⁶ Honduras's response to Panel question No. 70, p. 33 fn 142 (referring to World Organization for Animal Health, "Procedures Used by the OIE to Set Standards and Recommendations for International Trade, with a Focus on the *Terrestrial and Aquatic Animal Health Codes*", (Exhibit HND-161), Introduction). See also Dominican Republic's second written submission, para. 874 fn 885 (observing that the OIE Terrestrial Code aims to allow "*trade* in animals and animal products *to take place* with an optimal level of sanitary safety *while avoiding unjustified restrictions* on trade", and referring to OIE, How to Use the Terrestrial Code to Set Health Measures for Trade in Terrestrial Animals and Products, (Exhibit DOM-339) (emphasis original)). The Dominican Republic notes, more broadly, that the ISO, Codex, OIE, and International Plant Protection Convention Commission (IPPC) all have "an express mandate to develop international standards, with [] the purpose of promoting international trade through harmonization". Dominican Republic's second written submission, para. 871 (emphasis original). The Dominican Republic provides the passages of the statutes and other similar documents of these bodies where this, or other related purposes, are, in its view, expressly indicated. See Dominican Republic's second written submission, para. 872 (stating the ISO's mandate includes "promot[ing] the development of *standardization* ... in the world ... with a view to *facilitating international exchange of goods and services*" (emphasis original)), para. 873 (noting that Codex is mandated to prepare "a collection of internationally adopted food standards presented in a *uniform form*", the purpose of which is "to promote the standardization of foodstuffs in the various parts of the world, to *facilitate harmonization* of standards, and in so doing to *further the development of the international food trade*" (emphasis original)), para. 874 (noting that the OIE is required to develop standards "to *facilitate safe international trade* in animals and their products" (emphasis original)), and para. 875 (noting the stated objectives of the International Plant Protection Convention (IPPC) include "provid[ing] a framework for the development and application of *harmonized phytosanitary measures* and *the elaboration of international standards to that effect*", while seeking to "*minimize interference with international trade*" (emphasis original)).

¹¹²⁷ Honduras's response to Panel question No. 163, p. 18 (arguing that, "[a]bsent detailed and specific content for the standard, the alleged standard would not be amenable to 'common and repeated' use and could in fact be implemented in ways that would still constitute an unnecessary obstacle to trade. The presumption established by Article 2.5 thus requires a sufficiently detailed standard"). See also Dominican Republic's response to Panel question No. 66, paras. 316-318; and Indonesia's response to Panel question No. 163, para. 20.

¹¹²⁸ Honduras's second written submission, paras. 482-485 and 493. See also Cuba's opening statement at the second meeting of the Panel, para. 49.

¹¹²⁹ Honduras's second written submission, para. 482.

effectively impose a WTO obligation to implement that instrument even though countries approved such instrument on their understanding that no legal obligations were being created."¹¹³⁰ This, adds Honduras, would be the "combined result" of, on the one hand, finding that an instrument is a relevant international standard under the second sentence of Article 2.5, with, on the other hand, the existing obligation Members also have under Article 2.4 of the TBT Agreement to use such instrument as a basis for their technical regulations.¹¹³¹

7.353. The Dominican Republic adds that the phrase "for common and repeated use" derives from the definition of "standardization", which, in turn, is defined in the ISO/IEC Guide 2: 1991 as the "[a]ctivity of establishing, with regard to actual or potential problems, provisions for **common and repeated use, aimed at achievement of the optimum degree of order in a given context**."¹¹³² For the Dominican Republic, this means that a standard must set forth "standardized terms of international trade" that are capable of achieving "the optimum degree of order" through harmonization.¹¹³³ It concludes that, accordingly, to allow for "common and repeated use", an instrument must meet a minimum threshold of precision regarding the standardized terms of the national regulation. Loosely defined guidelines or general policy statements that allow for considerable variation in the content of national implementing measures do not meet this requirement.¹¹³⁴

7.354. Australia considers that, properly interpreted, the phrase "for common and repeated use" "does not set forth any minimum threshold of specificity or prescriptiveness"¹¹³⁵ and that the complainants' interpretation has no basis in the texts of either Annex 1.2 or the second sentence of Article 2.5.¹¹³⁶

7.355. With respect to **specificity**, Australia argues that, while the definition of "standard" in Annex 1.2 requires that the "document" provide requirements for "common and repeated use", it also establishes that such "document" can be one "that provide mere 'guidelines' for products and related process and production methods".¹¹³⁷ According to Australia, inherent in the ordinary meaning of the term "guidelines", as used in that definition, is the notion that a standard may allow for a "certain degree of flexibility" in terms of how relevant product characteristic, or related processes and production methods, are prescribed.¹¹³⁸ For Australia, the fact that "precise details

¹¹³⁰ Honduras's second written submission, para. 483.

¹¹³¹ Honduras further explains the implications of this "combined result" as follows:

Countries that participated in the elaboration of any instrument laying down product requirements may have expressed their approval precisely because of the use of hortatory language, which in their view signified that no legal obligations were created concerning the adoption of those product requirements in their national legislation. However, if a WTO panel subsequently finds that this hortatory instrument actually constitutes a "relevant international standard" in terms of Article 2.5, countries that approved that standard would now have a WTO obligation to base their national legislation on that hortatory international instrument. This is because Article 2.4 of the TBT Agreement requires that WTO Members base their technical regulations on international standards whenever they exist. While such countries may have originally understood the hortatory language to mean that no obligations were created, the panel's consideration of this instrument as a "relevant international standard" would, in effect, create a WTO obligation for those countries to adopt those international guidelines.

Honduras's second written submission, para. 484. (footnote omitted)

¹¹³² Dominican Republic's response to Panel question No. 163, para. 148 (referring, in turn, to Australia's reference to this definition in its response to Panel question No. 128, para. 183) (emphasis added by the Dominican Republic).

¹¹³³ Dominican Republic's response to Panel question No. 163, para. 149. See also Dominican Republic's second written submission, paras. 894-895.

¹¹³⁴ Dominican Republic's response to Panel question No. 163, para. 151 (footnote omitted). See also Dominican Republic's second written submission, para. 897 (adding that this means that in "setting a standard, an international standardizing body must, therefore, specify the **salient features** of an appropriate regulation to render the standard suitable for 'for common and repeated use' as a model for countries to adopt on a harmonized basis" (emphasis original)).

¹¹³⁵ Australia's second written submission, para. 323; and Australia's response to Panel question No. 67, para. 165.

¹¹³⁶ Australia's second written submission, paras. 322-323; and Australia's response to Panel question No. 67, para. 165.

¹¹³⁷ Australia's second written submission, para. 323.

¹¹³⁸ Australia's second written submission, para. 323 (referring to the definition of "guideline" as "a standardizing principle" and referencing Shorter Oxford English Dictionary, Vol. 1 AUS Excerpts, Part 2,

of a standard may be prescribed by sovereign states does not mean that guidelines are in any way ill-suited for 'common and repeated use'".¹¹³⁹

7.356. Australia also rejects the view that, in order to be suitable for "common and repeated use", a standard must be also *prescriptive*. For Australia, such a view is "directly contradicted" by another key element in the definition of a "standard": that it should be a document that provides for requirements with which compliance is "not mandatory". Therefore, and consistent with the non-mandatory nature of standards, Australia considers that the existence of "variations in how standards are implemented by States" is something "unremarkable", and, in fact, international standards "routinely allow" for such domestic implementation differences.¹¹⁴⁰

7.357. Australia also does not agree that the definition of "standard" in Annex 1.2 to the TBT Agreement contains a requirement that a "document" be *trade-facilitating* rather than *trade-restrictive*.¹¹⁴¹ Australia explains that international standards under Article 2.5 may pursue the legitimate objectives specified in Article 2.2, and nothing in Article 2.2 suggests that these objectives may only be pursued in a manner that facilitates trade. To the contrary, the Appellate Body expressly recognised, on the basis of the fifth and sixth recitals to the TBT Agreement, that its disciplines do not prevent a WTO Member from pursuing legitimate objectives in a manner that restricts trade.¹¹⁴²

7.358. Australia concludes that, overall, the text of the Annex 1.2 definition indicates that it is only by being flexible, and not strict or prescriptive, that standards can ensure that measures using them are effective and, ultimately, able to attain the objectives enshrined in Article 2.2 of the TBT Agreement.¹¹⁴³

7.359. In support of their respective views, and in response to a question by the Panel, the parties also refer to certain "international standards" adopted by certain international bodies, mostly from the International Organization for Standardization (ISO).¹¹⁴⁴

(Exhibit AUS-539), p. 1174). See also Australia's response to Panel question No. 163, para. 101; and Australia's comments on complainants' responses to Panel question No. 150, para. 32, and No. 163, para. 119.¹¹³⁹ Australia's response to Panel question No. 163, para. 101. See also Australia's comments on complainants' responses to Panel question No. 163, para. 119.

¹¹⁴⁰ Australia's response to Panel question No. 163, para. 103 (listing as examples certain ISO standards).

¹¹⁴¹ Australia's second written submission, para. 328.

¹¹⁴² Australia's second written submission, para. 329 (referring to the Appellate Body Report, *US – Clove Cigarettes*, para. 95) (emphasis original; footnote omitted). See also Australia's opening statement at the second meeting of the Panel, para. 142 (agreeing that international standards "fulfil an important harmonization function", while also rejecting Dominican Republic's assertion that "international standards that protect human health are 'antithetical' to the objectives of the TBT Agreement") (footnote omitted). See, further, Australia's opening statement at the first meeting of the Panel, para. 97; Australia's response to Panel question No. 128, paras. 192-194; and Australia's comments on complainants' responses to Panel question No. 150, para. 35.

¹¹⁴³ Australia suggests that the fact that standards provide flexibility is not surprising and is indeed desirable if they are to be effective. For example, different cultures may react differently to particular colour combinations of packaging in the same way different cultures may react differently to particular GHWs. Hence prescribing the appearance of either element could in fact decrease, rather than enhance, their effectiveness. Australia's comments on complainants' responses to Panel question No. 163, para. 120.

¹¹⁴⁴ The Dominican Republic considers, in addition, that a "similar level of precision is manifest in the standards emerging from the [Codex Alimentarius Commission]". Dominican Republic's second written submission, para. 896 (referring to Codex List of Standards, (Exhibit DOM-345)).

Honduras refers to ISO International Standard 3394, "Packaging - Complete, Filled Transport Packages and Unit Loads - Dimensions of Rigid Rectangular Packages", ISO 3394:2012(E), (ISO 3394), (Exhibit HND-121). Honduras's response to Panel question No. 129, pp. 43-44 (noting that, as seen in the reproduction of the illustration and table of dimensions that form its content, this standard "sets forth precise dimensions for rigid rectangular transport packages"; and then concluding that this ISO standard is thus one that is "suitable for common and repeated use given the level of precision of its requirements"). See also Honduras's second written submission, para. 503; Honduras's response to Panel question No. 163, p. 17; Dominican Republic's second written submission, para. 896; Dominican Republic's response to Panel question No. 163, para. 151 fn 96; and Cuba's opening statement at the second meeting of the Panel, para. 48.

Australia claims that this ISO standard does not support the complainants' interpretation. Australia argues that ISO standard 3394 is, in fact, an example of a standard that allows for flexibility for its implementation given that it "provides choices as to which of the various packaging sizes to adopt, and

7.360. The Panel observes that the phrase "for common and repeated use" in Annex 1.2 of the TBT Agreement has never been interpreted by the Appellate Body. We therefore begin by discerning the meaning of this composite term with reference to the definitions of its key terms.¹¹⁴⁵

7.361. We first note that the adjectives "common" and "repeated", together ("common *and* repeated"), qualify the noun "use". The adjective "common" may be defined, *inter alia*, as: "[b]elonging equally to more than one"; "possessed or shared alike by both or all (the persons or things in question)"; "of general application, general".¹¹⁴⁶ The adjective "repeated" may be defined, *inter alia*, as "[d]one again or many times; renewed; frequent".¹¹⁴⁷

7.362. While the separate meanings of the words "for" and "use"¹¹⁴⁸ are relevant, we consider that the meaning most relevant to an interpretation of these terms in the phrase "for common and repeated use" is that of the composite term "for ... use", employed with a "modifying word". In this sense, "for ... use" is defined as something "[i]ntended or designed for a specific purpose". Examples of "for ... use", when employed with a "modifying word" (indicated in *italics*), include: "for *winter* use"; "for *needful* use"; and "for *recreational* use".¹¹⁴⁹ In the phrase "for common and repeated use", "common and repeated" are the "modifying words" preceding "use" and following "for", denoting the fact that something (in the context of Article 2.5, a document and its content) is intended or designed "for" a specific purpose, that is, "common and repeated use".

7.363. Taken together, these definitions therefore indicate that something can be said to be "for common and repeated use" when it is intended or designed for the specific purpose of being frequently shared alike by all persons or things in question. This provides us with a "useful starting

does not specify every possible variable that one could think of with regard to packaging". Australia's comments on complainants' responses to Panel question No. 163, para. 119. Australia also refers to certain other ISO standards as confirming the opposite view: that the TBT definition, overall, and the term "for common and repeated use", specifically, do not require that documents be precise and prescriptive. Australia refers, in this respect, to the following three standards adopted by the ISO: (1) ISO 6385, (Exhibit AUS-596); (2) ISO 26000, (Exhibit AUS-597); and (3) ISO 14001, (Exhibit AUS-598). See Australia's response to Panel question No. 163, para. 103. These and other ISO standards, according to Australia, confirm that, consistent with their non-mandatory nature, international standards "routinely allow for differences when implemented at the domestic level". Australia's response to Panel question No. 163, para. 103; and comments on complainants' responses to Panel question No. 163, para. 119.

¹¹⁴⁵ We observe that, among the WTO's Multilateral Trade Agreements, this composite term is unique to the TBT Agreement. There is no equivalent term(s) in the SPS Agreement, in particular, from which we could draw any useful contextual interpretative guidance. See, in this respect, Panel Report, *Russia – Pigs (EU)*, para. 7.274 fn 413; and Panel Report, *US – Animals*, para. 7.231 (both observing that Annex A to the SPS Agreement "does not set forth a specific definition of ... 'standards' ... and that "[n]o panel has yet been faced with determining the meaning of [this] term[] in the context of the SPS Agreement"). We note, on the other hand, that the composite term "for common and repeated use" is present in one of the WTO's *Plurilateral* Trade Agreements: both the GPA (Article VI:2(b), fn 4), and the Amended GPA (Article I(s)), contain definitions for "standard" that, with the exception of the additional references to "service(s)", are virtually identical to that in Annex 1.2 to the TBT Agreement. However, to date, these definitions have not yet been discussed in any dispute involving the GPA.

¹¹⁴⁶ Oxford English Dictionary online, definition of "common, *adj.*", available at: <http://www.oed.com/view/Entry/37216?rskey=Us5wI&result=3&isAdvanced=false#eid>, accessed 2 May 2017. The Dominican Republic also partially quotes this definition to support the view that the word "common" suggests "that a standard must be capable of ensuring that domestic implementing measures have the same or shared characteristics: that is, through their 'sameness', standards must be capable of facilitating common terms of trade". Dominican Republic's comments on Australia's response to Panel question No. 147, para. 34 and fn 54. (footnote omitted)

¹¹⁴⁷ Oxford English Dictionary online, definition of "repeated", available at: <http://www.oed.com/view/Entry/162715?redirectedFrom=repeated#eid>, accessed 2 May 2017.

¹¹⁴⁹ Oxford English Dictionary online, definition of "use, *n.*", "P11. *for use*", <http://www.oed.com/view/Entry/220635?redirectedFrom=for+use#eid129699296>, accessed 2 May 2017. (emphasis added)

point"¹¹⁵⁰ for discerning the meaning of the term "for common and repeated use" as used in Annex 1.2 and in light of other relevant context.¹¹⁵¹

7.364. As used in the definition of a "standard" in Annex 1.2, it is the "rules, guidelines or characteristics" or packaging, marking or labelling requirements contained in the "document" at issue that must be intended or designed for "common and repeated use".

7.365. The phrase "for common and repeated use" is consistent with the normative dimension implied by the terms "rules, guidelines or characteristics" discussed in the previous section.¹¹⁵² It suggests that the content of the document at issue must be expressed in such a way as to provide "rules" or "guidelines" or "characteristics" – including labelling or packaging "requirements" – that are intended or designed for the specific purpose of being frequently shared alike by all persons or things in question, i.e. that are "for common and repeated use". At the same time, the fact that compliance must *not* be mandatory makes it clear that the condition that rules, guidelines or characteristics must be "for common and repeated use" does not relate to their legally binding status. Rather, this element of the definition addresses, in our view, the manner in which these rules, guidelines or characteristics (including labelling or packaging requirements) are formulated and the purpose for which they are intended.¹¹⁵³

7.366. In this respect, we agree with the complainants that a degree of precision and "prescriptiveness" may be expected, for the document to be considered to be for "common and repeated use". This understanding is also consistent with the object and purpose of the TBT Agreement in terms of promoting the harmonization of technical regulations, as described above¹¹⁵⁴, which assumes the intention of following certain commonly shared norms or practices. We consider, however, that for the purpose of applying this element of the definition under Annex 1.2, the *precise* degree of specificity of such requirements is a matter to be assessed on a case-by-case basis, depending on the particular context and the nature of the issue being addressed.

7.367. We note in this respect that paragraph "I" of Annex 3 of the TBT Agreement (containing the "Code of Good Practice for the Preparation, Adoption and Application of Standards") states that "[w]herever appropriate, the standardizing body shall specify standards based on product requirements in terms of performance rather than design or descriptive characteristics".¹¹⁵⁵ This

¹¹⁵⁰ As explained by the Appellate Body, while "dictionary definitions are a useful starting point for discerning the ordinary meaning of a treaty term, ... they are not necessarily dispositive", for a "term cannot be interpreted in isolation from the context in which it appears and in the light of the treaty's object and purpose". Appellate Body Report, *India – Additional Import Duties*, para. 167 fn 324 (also referring to Appellate Body Reports, *EC – Chicken Cuts*, para. 175; and *US – Softwood Lumber IV*, para. 59).

¹¹⁵¹ Article 3.2 of the DSU.

¹¹⁵² See para. 7.338 above.

¹¹⁵³ In this regard, we note that the Appellate Body considered that the terms "document" and "lays down product characteristics" and the term "with which compliance is mandatory" (only used for "technical regulation"), taken together, mean that "the scope of [the definition for technical regulation in] Annex 1.1 appears to be limited to those documents that establish or prescribe something and thus have a *certain normative content*." Appellate Body Reports, *EC – Seal Products*, para. 5.10 (emphasis added). We do not believe, however, that this statement contradicts our understanding, at para. 7.338 above, on the normative content as part of the definition of a standard. In this respect, we note again here that the texts of the second sentences of the definitions for "technical regulation" and "standard" in Annexes 1.1 and 1.2, respectively, are identical. This, according to the Appellate Body, *inter alia* means that "[c]ertain features exhibited by a measure may be common to both technical regulations ... and ... standards", including, for instance, that they could both "contain conditions that must be met in order to use a label"; conditions which, in both cases, "could be 'compulsory' or 'binding' and 'enforceable'". Appellate Body Report, *US – Tuna II (Mexico)*, para. 188. We also note, in this respect, that the ISO/IEC Guide 2: 1991, sub-clause 3.1, defines "normative document" as a "[d]ocument] that provides rules, guidelines or characteristics for activities or their results". Note 1 to this definition states that "normative document" "is a generic term that covers such documents as *standards, technical specifications, codes of practice* and *regulations*". (emphasis original)

¹¹⁵⁴ See, e.g. para. 7.271 above.

¹¹⁵⁵ Emphasis added. See also, with respect to technical regulations, Article 2.8 of the TBT Agreement.

suggests that the level of specificity of requirements in standards, and the manner in which the relevant requirements are defined may vary, depending on the circumstances.¹¹⁵⁶

7.368. We also observe that the *Explanatory note* to Annex 1.2 to the TBT Agreement refers to "[s]tandards prepared by the international standardization community". The term "standardization" is present in various provisions of the TBT Agreement, but is not defined in the Agreement.¹¹⁵⁷ The reference to "standardization" in this *Explanatory note* indicates that the meaning of this term may provide additional useful context to the understanding of the term "for common and repeated use". The term "standardization" is defined in the ISO/IEC Guide 2:1991. In accordance with Article 1.2 of the Agreement and the introductory paragraph of Annex 1, the terms presented in the ISO/IEC Guide 2:1991, when used in the TBT Agreement, have the same meaning as given in the said Guide.¹¹⁵⁸ The term "standardization" is defined in this ISO/IEC Guide as:

[T]he "[a]ctivity of establishing, with regard to actual or potential problems, provisions for common and repeated use, *aimed at the achievement of the optimum degree of order in a given context*".¹¹⁵⁹

7.369. The definition of "standard" in Annex 1.2 to the TBT Agreement, read together with the above definition of "standardization" in the ISO/IEC Guide 2:1991, thus suggests that **standardization is the activity that leads to the "establish[ment] ... [of] provisions for common and repeated use"**, as referred to in Annex 1.2. Relevant "provisions", in this context, should be understood to refer to those concerning, for example, product characteristics or packaging requirements. We note, in this respect, that the Appellate Body has related the term "provisions", as used in this ISO/IEC Guide definition, with elements of the definition of "standard" in Annex 1.2.¹¹⁶⁰ The definition of "standardization" suggests therefore that documents that constitute standards under Annex 1.2 are those providing such product characteristics (or other relevant features) "for common and repeated use" with a particular aim in mind, i.e. "the achievement of the optimum degree of order in a given context".¹¹⁶¹ This definition informs the definition of "standard" by suggesting that the objective of "standardization", and thus of the "provisions for common and repeated use" contained in a "standard", is to "achieve the optimum degree of order in a given context".

¹¹⁵⁶ We also note in this respect the findings of the panel in *US – Clove Cigarettes* concerning the level of "specificity" required of technical regulations for the purposes of applying Article 2.8. See Panel Report, *US – Clove Cigarettes*, paras. 7.468-7.497. See, in particular, paras. 7.473-7.484.

¹¹⁵⁷ The term "standardization" appears alone only once in the Agreement (in Article 1.1); it otherwise appears as part of the following composite terms: "international standardization"; "international standardization activity"; and "standardization activities". See, e.g. preamble, eighth recital; Annex 1.2, *"Explanatory note"*; and Annexes 3.C, 3.G and 3.J. These terms also appear in other WTO Agreements, e.g. the Agreement on Preshipment Inspection, footnote 2 to Article 2.4, as part of the definition of "international standard", quoted at fn 970 above, and the Agreement on Agriculture, Annex 2.2(e), referring to "standardization purposes".

¹¹⁵⁸ See also Appellate Body Reports, *EC – Asbestos*, para. 66; and *US – Tuna II (Mexico)*, para. 184.

¹¹⁵⁹ See sub-clause 1.1 of the ISO/IEC Guide 2: 1991 (emphasis added). See also Appellate Body Report, *US – Tuna II (Mexico)*, para. 360; Australia's response to Panel question No. 128, para. 183; and Dominican Republic's response to Panel question No. 163, para. 148. This definition for "standardization" has been kept unchanged in subsequent versions of this Guide. See, e.g. ISO/IEC Guide 2: 2004 (8th edn), sub-clause 1.1.

¹¹⁶⁰ Appellate Body Report, *US – Tuna II (Mexico)*, para. 360 ("With respect to the 'provisions' that are established through standardization, we recall that the definition of a standard in the *TBT Agreement* refers to a 'document ... that provides ... rules, guidelines or characteristics for products or related processes and production methods' and 'may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method'.").

¹¹⁶¹ Australia observes, in this respect, that the phrase "provisions for common and repeated use", also used in the definition of "standardization" in the ISO/IEC Guide 2: 1991, sub-clause 1.1, "is mirrored in the TBT Agreement as a 'document ... that provides ... rules, guidelines or characteristics for products or related processes and production methods'". Australia's response to Panel question No. 128, para. 184. Australia then, relying on the elements of the definition for "standard" in the ISO/IEC Guide 2: 1991, sub-clause 3.2, claims that the Article 11 and Article 13 FCTC Guidelines "are intended for common and repeated use by Parties to the FCTC, so that an optimum degree of order may be achieved in the implementation of the FCTC across all Parties". Ibid. para. 185.

7.370. Based on the above, we conclude that, for the purposes of the definition of "standard" in Annex 1.2 of the TBT Agreement, a document provides product characteristics (or other relevant features, such as packaging requirements) "for common and repeated use" when these are designed for the specific purpose of being frequently shared alike by all persons or things in question, with the aim of achieving the optimum degree of order in a given context. The need for the characteristics at issue to be amenable "for common and repeated use" further suggests that they need to possess a degree of clarity and precision sufficient to allow them to be implemented in a consistent and predictable manner, as documents lacking these attributes are unlikely to achieve the optimum degree of order required to address the "actual or potential problem" giving rise to them. At the same time, as clarified above¹¹⁶², the exact degree of specificity needed for such requirements to be "for common and repeated use" can only be assessed on a case-by-case basis, depending on the type of "problem" addressed by the document claimed to be a standard, and the "context" under which this problem arises.

7.371. With these clarifications in mind, we now examine whether, as claimed by Australia, any product characteristics or labelling, marking and packaging requirements provided by the Article 11 and Article 13 FCTC Guidelines in respect of tobacco plain packaging are "for common and repeated use" within the meaning of the definition in Annex 1.2 of the TBT Agreement.

Whether the product characteristics provided in the Article 11 and Article 13 FCTC Guidelines in respect of tobacco plain packaging are "for common and repeated use"

Main arguments of the parties

7.372. The complainants argue that the Article 11 and Article 13 FCTC Guidelines are not suitable "for common and repeated use" because, as mere hortatory general policy statements¹¹⁶³ developed as guidance on the implementation of a treaty (the FCTC)¹¹⁶⁴, they do not provide for tobacco plain packaging requirements that are sufficiently *specific* and *prescriptive* as required by the TBT Agreement¹¹⁶⁵ and cannot be uniformly transposed by Members into their technical regulations addressing tobacco products and their packaging.¹¹⁶⁶ The complainants consider that the Article 11 and Article 13 FCTC Guidelines may result in countries implementing plain packaging

¹¹⁶² See para. 7.366 above.

¹¹⁶³ See, e.g. Honduras's response to Panel question No. 66, p. 29 (stating that these instruments are not "sufficiently prescriptive" as they "incorporate[] non-binding guidelines that contain only hortatory references to plain packaging"). See also Indonesia's response to Panel question No. 67, para. 92 (submitting that these two FCTC Guidelines only possess "vague references to a general regulatory approach"). They point out, in particular, that such hortatory nature stems from the Guidelines' own terms, given that in both texts tobacco plain packaging is simply described as a measure that FCTC Parties "should consider adopting". See, e.g. Honduras's second written submission, paras. 22 and 499; Cuba's opening statement at the second meeting of the Panel, para. 49; and Indonesia's second written submission, para. 226.

¹¹⁶⁴ See, e.g. Dominican Republic's comments on Australia's response to Panel question No. 163, para. 43 (arguing that the Article 11 and Article 13 FCTC Guidelines were "designed as a policy recommendation for implementing a particular obligation under the FCTC" and were not therefore "intended to lay down specific guidance for common and repeated use by legislators on *how* to standardize the features of tobacco products, once design features were removed"; and then concluding that, while the flexibility these instruments conferred to each FCTC Party to implement plain packaging differently "is in keeping with the *raison d'être* of guidance on the implementation of a treaty, it is not in keeping with the *raison d'être* of an *international standard* to promote harmonization and facilitate common terms of trade." (emphasis original)). See also Dominican Republic's second written submission, paras. 901-902.

¹¹⁶⁵ See, e.g. Honduras's second written submission, para. 498 (accepting that these Guidelines "provide certain general parameters" for tobacco plain packaging, but nonetheless also arguing "they do not achieve the level of precision necessary for parties to implement them in a uniform fashion"); and Dominican Republic's response to Panel question No. 66, para. 319 (stating that, while these Guidelines suggest that countries "use two contrasting colours on packaging", "prescribe font size and style of the brand name" and "standardize the shape, size and materials", the "detailed choices for the content of plain packaging measures is not specified" as those choices are left to "national authorities", which, therefore, means that these instruments "lack the necessary precision to create the presumption under Article 2.5").

¹¹⁶⁶ See, e.g. Honduras's response to Panel question No. 70, p. 33 (submitting that these FCTC instruments lack the necessary "technical content"). See also Dominican Republic's response to Panel question No. 150, fn 44 (considering that Article 2.9 of the TBT Agreement confirms the view that "a measure that lacks any 'technical content' – like the generally worded recommendation to consider 'plain packaging' in the Guidelines – cannot be an 'international standard'").

specifications in different ways¹¹⁶⁷, so that they cannot perform the core functions of standards, namely¹¹⁶⁸ promoting harmonization, improving efficiency of production, and facilitating international trade.¹¹⁶⁹

7.373. The complainants identify certain elements in the texts of the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines illustrating a lack of precision making them unsuitable "for common and repeated use".¹¹⁷⁰ They also point out that nowhere in the Article 11 and Article 13 FCTC Guidelines is it recommended that plain packaging measures should fully prohibit the display of brand names or variant names in tobacco products themselves, including in individual cigarettes or cigar sticks.¹¹⁷¹

7.374. The complainants also consider that other provisions identified as relevant by Australia, addressing "inserts and onsets", "adhesive labels" and the "importance of packaging" – are "even less detailed" than the provisions of the Guidelines expressly addressing "plain packaging". While acknowledging that the texts of these other paragraphs of the Article 11 and Article 13 FCTC Guidelines provide "general useful suggestions", the complainants describe them as only being "broad recommendations on ways to improve the visibility of health warnings". Consequently, as

¹¹⁶⁷ See, e.g. Dominican Republic's response to Panel question No. 66, para. 308 (arguing that the fact that the Article 11 and Article 13 FCTC Guidelines are just policy statements rather than standards, "is borne out by the fact that 100 Members could follow the policy statements by adopting 100 *very different* packaging requirements, which would not enhance efficiency or facilitate trade") (emphasis original). See also, e.g. Dominican Republic's response to Panel question No. 163, para. 154; Honduras's response to Panel question No. 129, p. 42; Cuba's response to Panel question No. 163, p. 9; Indonesia's second written submission, paras. 227-228 (referring to Nicaragua's third-party submission); Indonesia's response to Panel question No. 163, para. 21; and Indonesia's comments on Australia's response to Panel question No. 163, para. 39.

¹¹⁶⁸ See, e.g. Honduras's second written submission, paras. 493-507; Honduras's response to Panel question No. 70, p. 33; Dominican Republic's second written submission, paras. 894-902; Dominican Republic's response to Panel question No. 163, para. 154; Cuba's second written submission, paras. 182-188; Cuba's response to Panel question No. 70, p. 33 (agreeing with Honduras's response to the same question); Indonesia's second written submission, paras. 226-228; and Indonesia's response to Panel question No. 136, para. 10.

¹¹⁶⁹ The complainants observe, in particular, that the ultimate purpose of the Article 11 and Article 13 FCTC Guidelines is to eliminate the tobacco trade. This, they claim, provides further confirmation that these instruments are not intended, as documents "for common and repeated use" should, to facilitate international trade, but rather to restrict it. See, e.g. Honduras's response to Panel question No. 70, p. 33; Dominican Republic's response to Panel question No. 66, para. 307; and Cuba's response to Panel question No. 70, p. 33 (annexed to its response to Panel question No. 138) (agreeing with Honduras's response to the same question).

¹¹⁷⁰ Regarding the plain packaging elements in paragraph 46 of the Article 11 FCTC Guidelines, the complainants claim that the Guidelines give "no details on how Parties should implement plain packaging": Should regulators "restrict" the use of logos, colours, brand images or promotional information, or "prohibit" their use? Should regulators restrict or prohibit the use of logos, colours, brand images and promotional information, or only one of the four categories of brand identifiers? Should regulators actually "restrict or prohibit" the use of these logos, colours, brand images or promotional information, or only "consider" doing so? See Honduras's second written submission, para. 498. See also, e.g. Cuba's second written submission, paras. 183-185; and Indonesia's second written submission, para. 258. The complainants consider that the tobacco plain packaging elements in the text of paragraph 16 of the Article 13 FCTC Guidelines also "lack the necessary level of precision to allow parties to use them commonly and repeatedly". This is so, they argue, because countries wishing to internalize them must first decide details such as: (i) what colours to adopt; (ii) what font and size to require, and (iii) in what shape, size and materials must packs be manufactured. Honduras's second written submission, paras. 500-501 (also arguing that it was Australia's "own interpretation" of what "plain packaging" means, when it "chose to require that packs must have a background in drab dark brown (colour Pantone 448C), that the brand name must be displayed in Lucida Sans no larger than 14 points in size, and that packs may only be made of cardboard"). See also, e.g. Honduras's response to Panel question No. 129, pp. 42-44; and Cuba's second written submission, paras. 182-186.

¹¹⁷¹ Dominican Republic's second written submission, para. 910; Dominican Republic's response to Panel question No. 136, paras. 39-43; Indonesia's second written submission, paras. 257-258; and Indonesia's response to Panel question No. 136, para. 4 (noting that, while paragraph 16 and the "*Recommendation*" following paragraph 17 state that there should be no advertising or promotion on *individual cigarettes or other tobacco products (including cigar sticks)*, they do not recommend prohibiting the appearance of any mark at all, such as the brand name, on individual cigarettes sticks). See also Indonesia's response to Panel question No. 136, para. 4 (noting that the TPP measures, while "permit[ing] the brand, company or business name and variant name to appear on a cigar, they do not allow for any marks, other than an alphanumeric code, to appear on individual cigarette sticks").

these paragraphs "do not stipulate precise product characteristics that are capable of being implemented in a common and repeated manner by authorities of different countries", they do not qualify as "standards" for purposes of the TBT Agreement.¹¹⁷²

7.375. The complainants further argue that, even seen in combination, the plain packaging elements contained in the Article 11 and Article 13 FCTC Guidelines still lack precision. In this respect, the Dominican Republic argues that for packaging requirements, the Guidelines do not specify standardized terms in respect of the type face, font colour, and font size for the brand and variant name; the background colour of the packaging; the location of the brand and variant name on the packaging; the size or shape of the packaging; the type of opening mechanism; and, the materials to be used (e.g. hard or soft pack). For individual cigars, the Guidelines lack specificity in terms of the type face, font colour and font size for the brand, variant and country name; and the background colour of the cigar band. National regulators are consequently left with considerable discretion to decide on these key features of a plain packaging measure.¹¹⁷³

7.376. Finally, the complainants compare the "general terms" of the Article 11 and Article 13 FCTC Guidelines' texts identified by Australia as addressing "plain packaging", against the "detailed" terms of two standards they consider as "documents" containing product requirements "for common and repeated use"¹¹⁷⁴: an ISO standard, setting forth precise dimensions for rigid rectangular transport packages¹¹⁷⁵, and a Codex Alimentarius Commission (Codex) standard on the description of sardines and sardine-type products.¹¹⁷⁶

7.377. Australia argues that the Article 11 and Article 13 FCTC Guidelines' tobacco plain packaging requirements are provided "for common and repeated use". Even assuming that minimum thresholds of specificity or prescriptiveness¹¹⁷⁷ would be relevant for that definition, Australia considers that the Article 11 and Article 13 FCTC Guidelines are, in any event, "sufficiently precise" and, consequently, suitable "for common and repeated use". This, in Australia's view, is attested by the fact that these Guidelines are already being used as such by other Members as a basis for their own tobacco plain packaging measures.¹¹⁷⁸ In this respect, Australia contends that, "consistent with the aims of enhancing the effectiveness of graphic health warnings and eliminating the effects of advertising and promotion on packaging", the key paragraphs of the Article 11 and Article 13 FCTC Guidelines "explicitly", "clearly" and "unequivocally" provide direction on the key permissive and prohibitive tobacco packaging and product requirements that any plain packaging measure should contain, including with respect to

¹¹⁷² Honduras's second written submission, para. 502 (also finding support to this view in the text of paragraph 15 of the Article 13 FCTC Guidelines, where it says that "[p]ackaging is an important element of advertising and promotion" and that "[t]obacco pack or product features are used in various ways to attract consumers [...]", and then stating that "[i]t is hard to see how this type of policy statement can be regarded as a 'standard' for purposes of the TBT Agreement."). See also Cuba's second written submission, paras. 186-187.

¹¹⁷³ Dominican Republic's response to Panel question No. 163, para. 153 (noting, in fn 97, with respect to the "background colour of the packaging", that the Article 13 FCTC Guidelines refer to "black and white or two other contrasting colours, as prescribed by national authorities"). See also Dominican Republic's second written submission, para. 899.

¹¹⁷⁴ See, e.g. Honduras's second written submission, para. 503; Honduras's response to Panel question No. 70, p. 33; Honduras's response to Panel question No. 129, p. 42; Dominican Republic's second written submission, para. 896; and Cuba's opening statement at the second meeting of the Panel, paras. 48-49.

¹¹⁷⁵ ISO 3394, (Exhibit HND-121), referenced at fn 1144 above. Honduras also refers to the three other ISO standards Australia submitted as evidence that standards need not be specific. Honduras notes that each of these documents cover "from 20 to more than a 100 pages", and then claims that this stands in "sharp[]" contrast with the one paragraph hidden in the FCTC Guidelines to Articles 11 and 13 that generally refers to 'plain packaging' without providing any further guidance or definitions to determine the parameters of this non-standard that does not allow for 'common' and repeated use". Honduras's comments on Australia's response to Panel question No. 163, para. 51. See also *ibid.* paras. 48-50.

¹¹⁷⁶ Codex Stan 94, referenced at fn 1006 above. See Honduras's response to Panel question No. 70, p. 33 (recalling that in *EC – Sardines*, the Appellate Body and the panel held that Codex Stan 94 constituted a "relevant international standard" for the purposes of Article 2.4 of the TBT Agreement; and also noting that this Codex standard "is six pages long [and] contains, *inter alia*, a detailed description of the product to which it applies, including its essential composition, quality factors and permissible food additives, and concrete specifications for labelling").

¹¹⁷⁷ Australia's second written submission, para. 323. See also Australia's response to Panel question No. 163, para. 102.

¹¹⁷⁸ Australia's response to Panel question No. 163, paras. 101-104. See also, e.g. Australia's first written submission, para. 573; and Australia's second written submission, para. 324.

the restriction or prohibition of the use of logos, colours, brand images or promotional information on packaging or on individual tobacco products, and with respect to permitting, *inter alia*, the use of brand names, product and/or manufacturer names, and certain government-mandated information. Australia also notes, in this regard, that these key provisions of the Article 11 and Article 13 FCTC Guidelines "specify in detail", *inter alia*, the following elements: (i) the **colours** ("black and white or two other contrasting colours"¹¹⁷⁹); (ii) the **content of a pack** ("nothing other than a brand name, a product name and/or manufacturer's name, contact details and the quantity of product in the packaging, without any logos other features apart from health warnings, tax stamps and other government-mandated information or markings"¹¹⁸⁰); (iii) the **font** (a "prescribed font style and size"¹¹⁸¹); and (iv) the **format** ("standardized shape, size and materials"¹¹⁸²).¹¹⁸³

7.378. Australia also rejects the argument that the Article 11 and Article 13 FCTC Guidelines do not include requirements prohibiting the display of brand names on individual cigarettes or cigars. Australia first notes that the Article 13 FCTC Guidelines recognise that "[p]romotional effects, both direct and indirect, may be brought about by the use of words, designs, images, sounds and colours, including brand names, trademarks, logos, names of tobacco manufacturers or importers, and colours or schemes of colours associated with tobacco products, manufacturers or importers, or by the use of a part or parts of words, designs, images and colours."¹¹⁸⁴ Australia also claims that, contrary to the complainants' assertions, the Article 13 FCTC Guidelines "specifically refer to packaging and product features, including individual cigarettes and other tobacco products".¹¹⁸⁵

7.379. Australia does not agree that the Article 11 and Article 13 FCTC Guidelines cannot be considered as being intended "for common and repeated use" because they are designed to limit, rather than facilitate, international trade. Australia argues that "there is no conflict between the trade liberalization goals of the WTO Agreements and the public health objectives of the [FCTC]. Trade and public health can and should be mutually supportive."¹¹⁸⁶

¹¹⁷⁹ Paragraph 16 of the Article 13 FCTC Guidelines.

¹¹⁸⁰ Paragraph 16 of the Article 13 FCTC Guidelines. Australia also refers to paragraph 46 of the Article 11 FCTC Guidelines. Australia's response to Panel question No. 135, para. 26.

¹¹⁸¹ Paragraph 16 of the Article 13 FCTC Guidelines.

¹¹⁸² Paragraph 16 of the Article 13 FCTC Guidelines. Australia notes that paragraphs 15 and 16 of the Article 13 FCTC Guidelines specifically refer to "materials on or in packs" as well as "advertising or promotion inside or attached to the package", and include within their scope "promotional packaging and product design features". Australia's response to Panel question No. 135, para. 29.

¹¹⁸³ Australia's second written submission, paras. 324-325; Australia's response to Panel question No. 135, paras. 21-32; Australia's response to Panel question No. 163, para. 102; and Australia's comments on complainants' responses to Panel question No. 163, paras. 114-116. Australia also makes references to the parallel plain packaging elements in paragraph 46 of the Article 11 FCTC Guidelines, "... measures to restrict or prohibit the use of logos, colours, brand images or promotional information on packaging **other than brand names and product names displayed in a standard colour and font style (plain packaging)** ...". Australia's response to Panel question No. 135, para. 26 (emphasis original). Australia also notes, referring to the text of its paragraph 10, that the Article 11 FCTC Guidelines "specifically require [FCTC] Parties to ensure that health warnings and messages are not obstructed by other required packaging and labelling markings or by commercial inserts and onsets". Australia also recalls that paragraph 46 of the Article 11 FCTC Guidelines recommends FCTC Parties to "consider adopting" plain packaging because it is a measure that "may increase the noticeability and effectiveness of health warnings and messages, prevent the package from detracting attention from them, and address industry package design techniques that may suggest that some products are less harmful than others." Australia's response to Panel question No. 135, para. 29.

¹¹⁸⁴ Australia's response to Panel question No. 135, para. 23 (quoting part of the text of paragraph 9 of the Article 13 FCTC Guidelines).

¹¹⁸⁵ Australia's response to Panel question No. 135, para. 24 (quoting, in particular, certain parts of paragraph 15, and the "**Recommendation**" following paragraph 17, of the Article 13 FCTC Guidelines, in which references are made to tobacco products, including "individual cigarettes"). Australia says that this therefore also means that the TPP measures' respective regulations on the use and appearance of brand names on individual cigarettes (prohibited) and on cigar sticks (restricted) are "in accordance with" the relevant parts of the Article 13 FCTC Guidelines addressing plain packaging measures with respect to the appearance of tobacco products. Australia's response to Panel question No. 135, paras. 27-28 (quoting the "**Recommendation**" following paragraph 17 and paragraph 15 of the Article 13 FCTC Guidelines, in which references are made to tobacco products, including "individual cigarettes").

¹¹⁸⁶ Australia's opening statement at the first meeting of the Panel, para. 97. See also Australia's second written submission, paras. 328-329 (arguing that the definition of "standard" in Annex 1.2 does not contain

7.380. The parties also refer in this context, to certain similarities or differences in the manner in which tobacco plain packaging requirements have been implemented in the TPP measures and in adopted or draft tobacco control legislation from other Members.¹¹⁸⁷ The parties submitted and discuss evidence relating to measures adopted or drafted by Ireland¹¹⁸⁸, the United Kingdom¹¹⁸⁹, France¹¹⁹⁰, Hungary¹¹⁹¹, New Zealand¹¹⁹² and Norway.¹¹⁹³

7.381. The complainants argue that the different ways in which the TPP measures and measures from other Members implemented tobacco plain packaging requirements domestically are evidence that the Article 11 and Article 13 FCTC Guidelines are not amenable "for common and repeated use".¹¹⁹⁴

7.382. Australia contends that significant similarities exist between the plain packaging requirements in the TPP measures and those in measures from other Members¹¹⁹⁵ and that these

any reference to such attributes); opening statement at the second meeting of the Panel, para. 142; response to Panel question No. 128, paras. 192-194; and comments on complainants' responses to Panel question No. 150, para. 35.

¹¹⁸⁷ Although in another context in these proceedings, Australia also made reference to a 2015 news report informing that Chile's Senate had approved a Bill introducing tobacco plain packaging, and that the Bill was awaiting "clearance in the lower house". Australia's second written submission, para. 245 fn 256 (referring to Packaging Business Review, Chile Proposes Plain Packaging for Cigarettes, (Exhibit AUS-554)).

¹¹⁹¹ Hungary, Draft Amendment to Government Decree 39/2013, (Exhibit AUS-616). This Draft Amendment was notified to the TBT Committee on December 2015 in document G/TBT/N/HUN/31. See, e.g. Honduras's comments on Australia's response to Panel questions, Introduction, para. 17 fn 1; and Dominican Republic's comments on Australia's response to Panel question No. 147, para. 42 fn 63.

¹¹⁹² New Zealand, Smoke-free Environments (Tobacco Plain Packaging) Amendment Bill (2014), (Exhibit AUS-617). See also Consultation Paper, New Zealand Ministry of Health, (Exhibit AUS-549). This Bill was notified to the TBT Committee on February 2014 in document G/TBT/N/NZL/62/Add.1. See, e.g. Indonesia's second written submission, para. 226 fn 338. The consultation document preceding the introduction of this Bill was notified to the TBT Committee in July 2012 in document G/TBT/N/NZL/62. See, e.g. Honduras's comments on Australia's response to Panel questions, Introduction, para. 17 fn 1.

¹¹⁹³ Norway, Draft Amendments, (Exhibit AUS-618). See also Norway Standardised Tobacco Packaging Consultation Paper, (Exhibit AUS-553). The draft amendments were notified to the TBT Committee in May 2015 in document G/TBT/N/NOR/23. See, e.g. Honduras's comments on Australia's response to Panel questions, Introduction, para. 17 fn 1; and Dominican Republic's comments on Australia's response to Panel question No. 147, para. 42 fn 63.

¹¹⁹⁴ See, e.g. Honduras's response to Panel question No. 163, pp. 17-18; Dominican Republic's comments on Australia's response to Panel question No. 163, paras. 41-43 and fn 63; Cuba's response to Panel question No. 163, p. 9; and Indonesia's second written submission, paras. 226-227 and fn 338.

¹¹⁹⁵ Australia's comments on complainants' responses to Panel question No. 163, para. 118 and fns 208-212 (describing in detail the specific provisions of these other tobacco plain packaging measures where such equivalent requirements are contained). With respect, in particular, to the Irish plain packaging legislation, Australia lists the following additional requirements as similar to those under the TPP measures: (i) prohibition to use in packaging of mark or trademark other than brand name or company name, and a

examples demonstrate that the "permissive and prohibitive elements of the FCTC Guidelines are sufficiently clearly expressed so as to allow for common and repeated use by countries in designing their own tobacco plain packaging measures".¹¹⁹⁶

7.383. The parties also discuss the relevance of the fact that Australia and other Members notified their TPP measures to the TBT Committee to the characterization of the Article 11 and Article 13 FCTC Guidelines as a "standard". The complainants point to the fact that these notifications have been made under Article 2.9.2 of the TBT Agreement, which requires notifications to be submitted only when a relevant international standard "does not exist".¹¹⁹⁷ Australia considers that the Panel "should afford no probative value" to its notification of the TPP measures to the TBT Committee since this notification was made in accordance with its practice "maintaining a high level of transparency in fulfilling obligations under the TBT Agreement".¹¹⁹⁸

Analysis by the Panel

7.384. As we have concluded above¹¹⁹⁹, a document may be considered to provide product characteristics and other relevant requirements "for common and repeated use", for the purposes of the definition of "standard" in Annex 1.2, if these characteristics or requirements were designed and intended for the specific purpose of being frequently shared alike by all persons or things in question, with the aim of achieving the optimum degree of order in a given context. We further found that, to fulfil such function, a degree of clarity and specificity sufficient to enable consistent and predictable implementation is required.¹²⁰⁰ This is particularly important where what it is being assessed is the existence of an "international standard"¹²⁰¹, given that "documents" not possessing sufficient specificity and clarity are unlikely to achieve the intended "optimum degree of order" necessary to address the "actual or potential problem" giving rise to these documents, and thereby contribute to the objective of harmonization on the basis of such international standards.

7.385. In this instance, as discussed above, those aspects of the Article 11 and Article 13 FCTC Guidelines that directly address tobacco plain packaging do not do so in a single location or in a uniform way; instead, tobacco "plain packaging" is addressed and described in paragraph 46 of the Article 11 FCTC Guidelines, on the one hand, and in paragraph 16 as well as in the "Recommendation" following paragraph 17 of the Article 13 FCTC Guidelines, on the other hand. Each of these Guidelines formulates the relevant plain packaging recommendation in terms that are related to the terms of the specific treaty obligation the implementation of which by FCTC Parties they intend to support.

variant name; (ii) prescribed colour and shape for cigarette packages; (iii) health warnings and other government mandated information permitted in standardized form; and (iv) standardized appearance of cigarettes. Australia's comments on complainants' responses to Panel question No. 163, para. 117. See also Australia's second written submission, para. 245; and Australia's response to Panel question No. 164, para. 104.

¹¹⁹⁶ Australia's comments on complainants' responses to Panel question No. 163, paras. 113 and 116. See also Australia's second written submission, para. 327 (arguing that the number of other Members considering tobacco plain packaging measures "fall[ing] within the parameters specified in the FCTC Guidelines" is evidence demonstrating that just because these instruments leave "details such as the **exact colour and size ... to be prescribed by national authorities**", this does not render them instruments ill-suited "for common and repeated use").

¹¹⁹⁷ See, e.g. Honduras's second written submission, paras. 516-517; Dominican Republic's second written submission, para. 845 and fns 859-860; Cuba's second written submission, paras. 160 and 167; and Indonesia's response to Panel question No. 70, paras. 98-99.

¹¹⁹⁸ Australia's response to Panel question No. 127, paras. 178-180 (also stating that if the Panel would "attribute dispositive value" to this notification to the issue of whether an international standard exists, this "would seriously undermine the core transparency obligations of the TBT Agreement, which are self-reporting").

¹¹⁹⁹ See para. 7.370 above.

¹²⁰⁰ We also said, however, that what the *precise* degree of specificity for such requirements should be can only be assessed in a case-by-case basis, depending on the type of "problem" addressed by the document claimed to be a standard, and the "context" under which this problem arises. See para. 7.370 above.

¹²⁰¹ And this is further more so when the task of considering the existence of an "international standard" is for the purpose of the second sentence of Article 2.5 of the TBT Agreement, which confers a "*privilege*" in the form of a rebuttable presumption of conformity with a treaty obligation (Article 2.2). See paras. 7.272 and 7.275 above.

7.386. We have discussed above¹²⁰² the different ways in which the Article 11 and Article 13 FCTC Guidelines address, and make recommendations in respect of, plain packaging of tobacco products. In this context, we observed that relevant parts of the Article 11 FCTC Guidelines and Article 13 FCTC Guidelines each describe certain recommended features of "plain packaging", or more generally, of tobacco packaging, but do so in different terms and in different levels of detail.¹²⁰³ These differences (including in scope, stringency of requirements, etc.) suggest that FCTC parties intending to devise tobacco "plain packaging" measures "in accordance with" one or the other set of Guidelines would have a range of options available to them, with respect in particular to the regulation in packaging and/or products themselves of "brand name", "brand imagery", "logos" etc. For instance, two Members may implement plain packaging measures that are both significantly different in terms of their packaging specifications, and may yet be equally consistent with the guidance provided under paragraph 46 of the Article 11 FCTC Guidelines. A party could decide to only "restrict" the use of "logos" and "brand images" in all tobacco packaging by determining that they only appear in one specific size and in one specific face of the package ("brand names" and "product names" would be, however, fully allowed on the packs, provided they are displayed in "standard colour and font style"), or, it could instead, go further and "prohibit" the use of any "logos" and "brand images" in all tobacco packaging (only allowing the use of "brand names" and "product names" provided they are displayed in "standard colour and font style").¹²⁰⁴

7.387. We recall our earlier observation that the specific elements of the Article 11 and Article 13 FCTC Guidelines that Australia has identified as constituting an international standard for tobacco plain packaging are part of the legal framework established under the FCTC, whereby FCTC Parties commit to implement a wide range of interconnected effective tobacco control measures. Against this context, the Article 11 and Article 13 FCTC Guidelines, by their own terms, may be understood as recommending "plain packaging" differently¹²⁰⁵ because they intend this measure solely to serve as a means of assisting FCTC Parties in the implementation of obligations that, although related, address different aspects or angles of policies to reduce demand¹²⁰⁶ for tobacco: Article 11 (by regulating tobacco labelling and packaging with respect to the obligation to avoid consumers being misled and also to enhance effectiveness of health warnings) and Article 13 (by regulating "packaging and product features" as part of a comprehensive ban on "[t]obacco advertising, promotion and sponsorship").¹²⁰⁷

7.388. These considerations are also an indication, in our view, that the specific elements of the Article 11 and Article 13 FCTC Guidelines addressing plain packaging that Australia has identified as constituting an international standard for tobacco plain packaging were not intended to provide a unified document "for common and repeated use" in respect of tobacco plain packaging, within the meaning of Annex 1.2 to the TBT Agreement (and therefore for the purpose of the second sentence of Article 2.5 of the Agreement), in isolation from the broader context of implementing a comprehensive range of tobacco control measures under the FCTC. Rather, we understand the different manners in which "plain packaging" is recommended under the two Guidelines to reflect the flexibility accorded to FCTC parties in determining the most appropriate manner of addressing packaging, including through the adoption of plain packaging, as a component of effective tobacco control measures under the FCTC. We find this approach to be consistent with the logic of the FCTC as an international framework convention establishing different obligations to adopt a range of effective tobacco control measures and setting out, through the FCTC Guidelines, various modalities through which parties to the Convention may implement these obligations in light of their particular circumstances.

¹²⁰² See paras. 7.335-7.347.

¹²⁰³ See para. 7.347 above.

¹²⁰⁴ The complainants have alluded to this possibility. See, e.g. Honduras's response to Panel question No. 163, p. 17.

¹²⁰⁵ See paras. 7.335-7.347 and 7.385 above.

¹²⁰⁶ As indicated at para. 7.325 and fn 1060 above, Articles 11 and 13 are both contained under Part III of the FCTC, entitled "Measures relating to the reduction of demand for tobacco". Article 7 of the FCTC lists Articles 11 and 13 as among those provisions under Part III of the Convention addressing, more specifically, "non-price measures to reduce the demand for tobacco".

¹²⁰⁷ We note again, in this respect, that footnote 4 to the Article 13 FCTC Guidelines, set out at para. 7.310 above, refers to the Article 11 FCTC Guidelines as being those "which address plain packaging with regard to health warnings and misleading information". See Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, fn 4 (appearing erroneously as fn 2).

7.389. The parties have also discussed the extent to which differences or similarities between the TPP measures and certain tobacco plain packaging measures adopted or drafted by other Members confirm their respective views as to whether the Article 11 and Article 13 FCTC Guidelines are "documents" containing product specification "for common and repeated use". In this respect, they discussed adopted or drafted tobacco plain packaging measures by Ireland, the UK, France, Hungary, New Zealand and Norway. We do not consider an examination of these domestic practices to be necessary to our assessment. We are not persuaded, in particular, that evidence relating to domestic practices can directly inform whether these Guidelines, as such, constitute a standard. In particular, to the extent that such an assessment would imply an assessment or assumption on our part as to the extent to which these domestic practices reflect and are, or not, in accordance with the requirements of the standard at issue, we do not consider that we are in a position to make such assumptions.¹²⁰⁸

Whether compliance with the product characteristics and packaging requirements provided in the Article 11 and Article 13 FCTC Guidelines in respect of tobacco plain packaging is "not mandatory"

7.390. We now turn to whether compliance with the product characteristics and packaging requirements provided by the Article 11 and Article 13 FCTC Guidelines, as defined above, "is not mandatory", which is the final element of the definition of "standard" under Annex 1.2 of the TBT Agreement relating to the contents of the alleged standard, as outlined above.¹²⁰⁹

7.391. Australia claims that this condition has been also met because the Article 11 and Article 13 FCTC Guidelines "employ conditional rather than obligatory language."¹²¹⁰ Indonesia and Cuba disagree. Indonesia argues that the Article 11 and Article 13 FCTC Guidelines are instead "mandatory" and, thus, not in compliance with that definition. Indonesia argues that, while these FCTC Guidelines "purport to be non-binding recommendations", ultimately, they are intended to be "recommendations on how Parties should implement the 'mandatory' provisions of Articles 11 and 13 [of the FCTC itself]"¹²¹¹ on tobacco packaging and advertising. For Indonesia, the fact that no tobacco company has ever "adopted voluntarily" plain packaging requirements, as described in the Article 11 and Article 13 FCTC Guidelines, further confirms their non-voluntary nature.¹²¹² Cuba understands the reference to non-binding documents that provide product characteristics for common and repeated use, in the definition of "standard" in the TBT Agreement, as addressing these conditions to "producers" of these products, and not government authorities.¹²¹³ Based on such understanding, and after comparing how the Article 11 and Article 13 FCTC Guidelines address tobacco plain packaging with how an ISO standard¹²¹⁴ addresses dimensions for rigid rectangular transport packages, Cuba argues:

Unlike those [ISO] standards, the FCTC guidelines are completely different and aim to encourage the authorities to impose binding technical regulation on producers. The FCTC guidelines are not, and were never intended to be, binding technical standards to be directly observed by producers. That is why the FCTC guidelines are not precise and prescriptive: they are policy recommendations for regulators and legislators, not

¹²⁰⁸ We consider, for similar reasons, unnecessary to assess whether the fact that Australia or other Members have notified their respective tobacco plain packaging measures under Article 2.9.2 of the TBT Agreement can shed any light on the question of whether the Article 11 and Article 13 FCTC Guidelines constitute a standard. We note, in this respect, Australia's point that if the Panel would "attribute dispositive value" to these notifications to the issue of whether an international standard exists, this "would seriously undermine the core transparency obligations of the TBT Agreement, which are self-reporting". Australia's response to Panel question No. 127, para. 180.

¹²⁰⁹ See para. 7.281 above.

¹²¹⁰ Australia's first written submission, para. 573. See also Australia's second written submission, para. 330.

¹²¹¹ Indonesia's second written submission, para. 229.

¹²¹² Indonesia's second written submission, para. 229 (also contrasting the Article 11 and Article 13 FCTC Guidelines with the US "dolphin-safe labelling scheme" at issue in *US – Tuna II (Mexico)*, and saying that, unlike the former, the latter represented the "nature of a truly 'voluntary' standard" for it did not require tuna product importers to comply with that label as a condition to access the US market).

¹²¹³ Cuba's opening statement at the second meeting of the Panel, para. 48.

¹²¹⁴ Standard ISO 3394:2012(E), entitled "*Packaging - Complete, filled transport packages and unit loads - Dimensions of rigid rectangular packages*" (Exhibit HND-121) (already referred at fns 1144 and 1175 above).

detailed technical guidance for producers. Paragraph 46 of the guidelines of Article 11 even explicitly addresses the FCTC Parties: "**Parties should consider adopting measures to restrict or prohibit the use of logos colours, trademark images or promotional information**". How could a producer ever be expected to apply and use these guidelines in the same way that he can apply and use an ISO standard? By contrast, companies seeking to produce and use rigid rectangular transport packages will know exactly what to do when using ISO 3394.¹²¹⁵

7.392. The definition of "standard" in Annex 1.2 to the TBT Agreement is relevant both for the legal characterization of a measure under the Agreement as a **national** (domestic) standard (as opposed to a technical regulation)¹²¹⁶ and for various TBT disciplines addressing **international** standards, including Articles 2.4 and 2.5. As can be inferred from the way they are disciplined in the TBT Agreement, international standards can serve, *inter alia*, as references for the development and adoption by governments of either **domestic** regulations or **domestic** standards.¹²¹⁷ From this perspective, given this "dual" purpose, we see no basis for, and therefore disagree with, Indonesia's and Cuba's arguments that the voluntary nature of a "standard", as defined under Annex 1.2 of the TBT Agreement, should only be assessed vis-à-vis the way the document is addressed to "producers" of the products concerned, and not governments.

7.393. With respect, more specifically, to the "not mandatory" nature of the Article 11 and Article 13 FCTC Guidelines, we note that in two of the relevant parts of these instruments expressly addressing "plain packaging" (paragraph 46 of the Article 11 FCTC Guidelines and in the text following paragraph 17 of the Article 13 FCTC Guidelines), both texts state that FCTC Parties "**should consider adopting**" plain packaging "measures" or "requirements".¹²¹⁸

7.394. Additionally, plain packaging is addressed in paragraph 46 of the Article 11 FCTC Guidelines in the form of a "recommendation". This language stands in contrast, for instance, with that employed by Articles 11 and 13 of the FCTC.¹²¹⁹ We also note that this contrasts also with the way certain other measures are addressed within these Guidelines themselves. For instance, paragraph 44 of the Article 11 FCTC Guidelines state that "Parties **should prohibit** the display of figures for emission yields (such as tar, nicotine and carbon monoxide) on packaging and labelling, including when used as part of a brand name or trademark."¹²²⁰ Similarly, the Article 13 FCTC Guidelines contain a "recommendation" that "Parties **should ban** 'brand stretching' and 'brand sharing', as they are means of tobacco advertising and promotion."¹²²¹

7.395. For the foregoing reasons, we find that compliance with the product characteristics and packaging requirements provided by the Article 11 and Article 13 FCTC Guidelines, as defined above, "is not mandatory", within the meaning of the definition of "standard" in Annex 1.2 to the TBT Agreement.¹²²²

¹²¹⁵ Cuba's opening statement at the second meeting of the Panel, para. 49. (emphasis original)

¹²¹⁶ A threshold question that was at issue, for instance, in *US – Tuna II (Mexico)*. Appellate Body Report, *US – Tuna II (Mexico)*, paras. 178 and 187–188.

¹²¹⁷ See, e.g. Article 2.4 and Annex 3.F to the TBT Agreement, respectively.

¹²¹⁸ Paragraph 1 of the Article 11 FCTC Guidelines also clarifies that the purpose of this instrument is, *inter alia*, to "**propose** measures that Parties **can** use to increase the effectiveness of their packaging and labelling measures". (emphasis added)

¹²¹⁹ See, e.g. Articles 11.1(b) and 13.4 of the FCTC. These FCTC provisions, however, seem to often describe such commitments in a qualified manner. For instance, the full text of Article 11.1(b) of the FCTC reads: "Article 11 [...] 1. Each Party **shall** [...] adopt and implement, in accordance with its national law, effective measures to ensure that: [...] (b) each unit packet and package of tobacco products [...] also carry health warnings [...] and **may** include other appropriate messages. These warnings and messages: (i) **shall** be approved by the competent national authority; (ii) **shall be rotating**; [...] (iv) **should be 50% ... but shall be no less than 30%** [...] (v) **may** be in the form of or include pictures or pictograms." The texts of these two FCTC provisions are set out in full in paras. 2.104 and 2.105 above.

¹²²⁰ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 44. (emphasis added).

¹²²¹ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, "**Recommendation**" following paragraphs 22–24.

¹²²² In these proceedings we need not, however, express a view, either as a legal or factual matter, on whether binding international instruments, in general, and any obligations established under the FCTC (including those in Articles 11 and 13), in particular, could also be considered as "not mandatory" for the purposes of the definition of "standard" in Annex 1.2 to the TBT Agreement. In these proceedings, Australia

Conclusion on the Article 11 and Article 13 FCTC Guidelines as a "standard"

7.396. We have examined the instruments Australia claims constitute a "standard" for tobacco plain packaging: the Article 11 and Article 13 FCTC Guidelines. We have found that the relevant parts within these instruments, including those explicitly addressing plain packaging, taken in isolation from their context as part of the FCTC, do not constitute a "document" containing a "standard" within the meaning of the definition of "standard" in Annex 1.2 of the TBT Agreement. We also concluded that, while the parts of the Article 11 and Article 13 FCTC Guidelines explicitly addressing plain packaging could be considered to be "guidelines" providing for "product characteristics" (including with respect to packaging requirements), they do so in different ways, reflecting the flexibility provided to FCTC parties in determining how to implement their various obligations under the FCTC, including, as appropriate, plain packaging of tobacco products. This is consistent, overall, with the fact that FCTC Guidelines, by their own terms, are intended to "assist Parties in meeting their obligations" under, respectively, Article 11 and Article 13 of the FCTC. These Guidelines, and the obligations that they relate to, must be read "in light" of the relevant obligations in the FCTC itself, as well as "other provisions" of that Convention that are "also relevant to implementation of plain packaging".¹²²³

7.397. Overall, therefore, we find that, while the Article 11 and Article 13 FCTC Guidelines provide important guidance to FCTC parties in addressing packaging, and, as relevant, implementing plain packaging as an element of a comprehensive scheme of effective tobacco control policies, Australia has not demonstrated that they constitute a "standard" under Annex 1.2 of the TBT Agreement with respect to tobacco plain packaging.

7.2.5.2.4 Overall conclusion on whether the Article 11 and Article 13 FCTC Guidelines are "relevant international standards" and whether the TPP measures are "in accordance with" these Guidelines under Article 2.5 (second sentence)

7.398. We recall our statement above¹²²⁴ that, should we conclude that the Article 11 and Article 13 FCTC Guidelines meet the TBT definition of a "standard", we would then proceed to consider whether they are also "international" in character, including in terms of "recognition" of the body that has adopted them.¹²²⁵

7.399. In the present proceedings, the parties disagree on whether the body which adopted the Article 11 and Article 13 FCTC Guidelines, the FCTC COP¹²²⁶, is an "international standardizing body" for the purposes of assessing the "international" character of these instruments¹²²⁷, and whether it has "recognized activities in standardization" such that it should be considered an "international standardizing body" for the purposes of Article 2.5 of the TBT Agreement.

7.400. Having determined that Australia has not established that the Article 11 and Article 13 FCTC Guidelines constitute a "standard" for tobacco plain packaging within the meaning of Annex 1.2, we need not assess further whether they are "international" in character.¹²²⁸ We therefore make no determination in respect of whether the COP FCTC is an international standardizing body or has recognized activities in standardization within the meaning of the relevant definition of "international standard", for the purposes of the TBT Agreement.

only claims that the instruments that constitute a "relevant international standard" under the second sentence of Article 2.5 are specific aspects of the Article 11 and Article 13 FCTC Guidelines, not the Convention itself.

¹²²³ WHO/FCTC Additional Information to Panel, paras. 61 and 64, at fn 63 above.

¹²²⁴ See para. 7.289 above.

¹²²⁵ See para. 7.333 above.

¹²²⁶ See paras. 2.98-2.99 above.

¹²²⁷ See, e.g. Honduras's second written submission, paras. 508-515; Dominican Republic's second written submission, paras. 854-893; Cuba's second written submission, paras. 167-181; Indonesia's second written submission, paras. 222-225 and 230-253; and Australia's second written submission, paras. 331-341.

¹²²⁸ Or whether they are "relevant". See also, in a similar vein, Honduras's second written submission, para. 507. See also paras. 7.398 and 7.289 and, in particular, fn 995 above.

7.401. It also follows from these conclusions that we need not consider further whether the TPP measures are "in accordance with" the relevant parts of the Article 11 FCTC Guidelines or the Article 13 FCTC Guidelines.¹²²⁹

7.402. In light of the above, we find that Australia has not demonstrated that the TPP measures are "in accordance with relevant international standards" for the purpose of the second sentence of Article 2.5 of the TBT Agreement. We also find, therefore, that the TPP measures cannot be "rebuttably presumed not to create an unnecessary obstacle to international trade".

7.403. Notwithstanding this conclusion, we wish to make clear that the determinations we have reached above under the second sentence of Article 2.5 do not imply any determination concerning the relevance of the FCTC, or any its instruments (including the Article 11 and Article 13 FCTC Guidelines) to other aspects of our analysis of the claims before us in these proceedings.

7.404. A respondent's failure to successfully invoke the rebuttable presumption under the second sentence of Article 2.5 of the TBT Agreement does not, in our view, have any adverse implications for other aspects of its defence with respect to a claim under Article 2.2 of the same agreement. In the present proceedings, our determinations above in relation to whether the relevant parts of specific FCTC Guidelines constitute, for the purposes of the second sentence of Article 2.5 of the TBT Agreement, a "standard" within the meaning of Annex 1.2, therefore imply no determination on the potential relevance of the FCTC and related instruments, including relevant parts of the Article 11 and Article 13 FCTC Guidelines, to the remainder of our analysis under Article 2.2 of the TBT Agreement. The complainants continue to bear the burden of making a *prima facie* case that the TPP measures are inconsistent with this provision.¹²³⁰

7.405. More generally, the fact that a given instrument is not relevant or persuasive for one purpose under a given claim does not, in our view, render it *ipso facto* irrelevant for another purpose, including in the context of other aspects of the same claim. Rather, its relevance, if any, must be assessed in the context of each specific claim and the purpose for which it has been raised in that context. We note in this respect that all parties in these proceedings have discussed and/or relied on the FCTC and some of its instruments (including, in particular, the Article 11 and Article 13 FCTC Guidelines)¹²³¹, not only with respect to Australia's invocation of the second sentence of Article 2.5, but also regarding other aspects of the complainants' claims under Article 2.2 of the TBT Agreement and Article 20 of the TRIPS Agreement. The parties have, however, expressed different views on the relevance of these instruments for the analysis of the claims before us if they do not constitute an "international standard" under Article 2.5 of the TBT Agreement.

7.406. Honduras considers that "the only avenue contemplated in the TBT Agreement that would allow an international standard to temper [the] obligation [under Article 2.2] is Article 2.5. There is no TBT provision indicating that, even if a particular instrument does not qualify as a relevant international standard, panels must nonetheless consider such instrument in their examination under Article 2.2."¹²³² Honduras also submits that while the FCTC and its Guidelines confirm the

¹²²⁹ See paras. 7.263 and 7.289 above. Some parties have also suggested that we take this approach. See, e.g. Honduras's response to Panel question No. 66, p. 26; and Dominican Republic's response to Panel question No. 66, para. 292.

¹²³⁰ Our clarification finds support in certain statements by the Appellate Body in *EC – Hormones*. In that dispute, the measure at issue was found not to enjoy the presumption of consistency with the SPS Agreement (and the GATT 1994) because it did not "conform to international standards", as required by Article 3.2 of that Agreement. The question before the Appellate Body was whether any negative implications should ensue with respect to a respondent's defence against a claim of violation of Article 3.1 of the SPS Agreement, when the measure at issue cannot enjoy that presumption of conformity. The Appellate Body clarified that just because the "Member imposing [a] measure does not benefit from the presumption of consistency set up in Article 3.2", this does not mean that this Member is "penalized by exemption of a complaining Member from the normal burden of showing a *prima facie* case of inconsistency with Article 3.1 or any other relevant article of the SPS Agreement or of the GATT 1994." Appellate Body Report, *EC – Hormones*, para. 171. See also *ibid.* para. 102. See further, Appellate Body Report, *US – Continued Suspension*, para. 532; Panel Report, *Russia – Pigs (EU)*, paras. 7.254, 7.261, 7.331 and 7.860; and Brazil's third-party statement, paras. 4-5.

¹²³¹ The Panel also received information regarding the FCTC and the FCTC Guidelines directly from the WHO and the FCTC Secretariat. See section 1.6.7.1 above regarding the materials submitted by the WHO and the FCTC Secretariat and the Panel's request for additional information.

¹²³² Honduras's response to Panel question No. 130, pp. 44-45.

harmful nature of smoking and the existence of international consensus on the legitimacy of smoking reduction as an objective, the relevant question before the Panel is whether the TPP measures are more trade-restrictive than necessary. As the FCTC Guidelines do not suggest that tobacco plain packaging is not more trade-restrictive than necessary, they are not pertinent to this dispute. Honduras also argues that the FCTC Guidelines are not relevant because they do not constitute an element of interpretation of Article 2.2 of the TBT Agreement under Article 31 of the Vienna Convention (e.g. a subsequent agreement between the parties regarding the interpretation of Article 2.2 or a relevant rule of international law).¹²³³ Honduras also does not see any role for the FCTC Guidelines in the panel's analysis under Article 20 of the TRIPS Agreement, as this provision does not contain a "rebuttable presumption" of consistency for special requirements conforming to an "international standard".¹²³⁴ As "non-binding, soft law" instruments, Honduras submits that the FCTC Guidelines, in accordance with the Vienna Convention, are not relevant for interpreting Article 20, especially "terms of art" such as "unjustifiably".¹²³⁵ Finally, Honduras considers that the FCTC Guidelines cannot be used as facts to demonstrate that the TPP measures are capable of achieving Australia's objective of improving public health because "the scientific bases underlying [these instruments] are unclear".¹²³⁶

7.407. The Dominican Republic argues that if the presumption in the second sentence of Article 2.5 of the TBT Agreement is not applicable, the FCTC Guidelines "have no bearing on any of the legal or factual questions before the Panel".¹²³⁷ The Dominican Republic rejects, in particular, the notion that the adoption of the FCTC Guidelines "in themselves" can serve as evidence that the TPP measures "comply with all relevant aspects of the applicable legal standards" under both the TBT Agreement and the TRIPS Agreement, as "[t]he Guidelines do not, for example, demonstrate that [the TPP] measures will ever reduce smoking".¹²³⁸ The Dominican Republic considers, in this respect, that the Panel "has a duty to make an objective assessment of the facts, as required by Article 11 of the DSU[, and that it] cannot 'contract out' of this obligation through reliance on the work of another international body[, in particular] when the other body declines to share its evidence or its assessment of that evidence".¹²³⁹ "At most", the Dominican Republic continues, "the FCTC Guidelines ... could confirm the legitimacy of the plain packaging as a measure with the **objective** of promoting public health."¹²⁴⁰ The recommendation in the Article 11 and Article 13 FCTC Guidelines that parties consider implementing plain packaging "does not constitute proof of the effectiveness of plain packaging in reducing smoking behaviour" and cannot "be more reliable than the evidence on which it is based".¹²⁴¹

¹²³³ Honduras's response to Panel question No. 130, p. 45. See also Honduras's second written submission, para. 474. Honduras also states that neither the FCTC nor its Guidelines can "constitute a defence to a violation of the WTO agreements, for example that plain packaging would be necessary to comply with the FCTC Guidelines [given that i]t is well established that GATT Article XX may exempt WTO inconsistent measures when they are necessary to secure compliance with WTO-consistent domestic laws, not with international law." Honduras's second written submission, para. 475 (referring to Appellate Body Report, *Mexico – Taxes on Soft Drinks*, para. 75). See also *ibid.* para. 474.

¹²³⁴ Honduras's response to Panel question No. 130, p. 45. See also Honduras's second written submission, para. 463.

¹²³⁵ Honduras's response to Panel question No. 130, pp. 45-46. Honduras also states that, given that tobacco plain packaging measures "go beyond the obligations imposed on [FCTC Parties]" because they are not mandated by the FCTC, Australia's TPP measures, by virtue of the FCTC itself (Article 2.1), "can only be imposed if [] consistent with international law, including the law of the WTO". Honduras's second written submission, para. 472. Honduras also adds that "the WTO dispute settlement system is intended to 'preserve the rights and obligations of Members under the covered agreements' and to clarify 'those agreements', not other international agreements, including the FCTC", as confirmed by Articles 3.2 and 19.2 of the DSU and the terms of reference under Article 7 of the DSU, which refer to the WTO covered agreements. Honduras's second written submission, para. 473.

¹²³⁶ Honduras's response to Panel question No. 130, p. 45. In this respect, Honduras also recalls its arguments concerning the lack of information available on the scientific basis for the preparation and adoption of the FCTC Guidelines. Honduras's first written submission, paras. 135-137. See also Honduras's response to Panel question No. 70.

¹²³⁷ Dominican Republic's second written submission, para. 917. See also responses to Panel question No. 89, para. 27; and No. 130, para. 314.

¹²³⁸ Dominican Republic's second written submission, para. 918.

¹²³⁹ Dominican Republic's second written submission, para. 920.

¹²⁴⁰ Dominican Republic's response to Panel question No. 130, para. 315. (emphasis original)

¹²⁴¹ Dominican Republic's second written submission, para. 543. The Dominican Republic recalls that "the FCTC Secretariat made publicly available the evidence considered by the COP in adopting the Article 11

7.408. Cuba considers that the FCTC Guidelines "are not pertinent" for the Panel's assessment under Article 2.2 of the TBT Agreement and Article 20 of the TRIPS Agreement.¹²⁴² Cuba argues that the WTO dispute settlement system seeks "to preserve the rights and obligations of Members under the covered agreements" and to clarify "those agreements", not other international agreements, such as the FCTC.¹²⁴³ Cuba considers that the FCTC Guidelines "will be of little importance" in these disputes, even as an "interpretative tool" under the Vienna Convention.¹²⁴⁴ For Cuba, the relevant question under WTO rules, i.e. whether the specific plain packaging measure adopted by Australia is more trade-restrictive than necessary or unjustifiably encumbers or in some other way violates trademark rights, is not dealt with by the FCTC or its Guidelines. "Since the harmful nature of smoking is not a question to be assessed in this dispute, [the FCTC and its Guidelines] should not be taken into account" when interpreting the TBT Agreement or TRIPS Agreement in the context of plain packaging measures.¹²⁴⁵

7.409. Indonesia "recognizes that the [FCTC] Guidelines are pertinent for th[ese] dispute[s] even though they are not a 'relevant international standard' under Article 2.5 of the TBT Agreement".¹²⁴⁶ It also considers, however, that due to their non-binding nature and hortatory language, the FCTC Guidelines "do not provide interpretive context for the TRIPS and TBT Agreements and nothing in [these instruments] can supplant obligations in the WTO".¹²⁴⁷ While noting that a Member, if faced with a conflict between what the FCTC recommends and what the WTO requires, "must comply with its WTO obligations",¹²⁴⁸ Indonesia also states that, "[f]ortunately, no such conflict exists in this case ... **given that, "[i]n Indonesia's view there is sufficient policy latitude to address the packaging elements that raise concern under the FCTC, while still complying with all of the relevant WTO obligations."**¹²⁴⁹

7.410. Australia considers that, even if the Panel were to conclude that the Article 11 and Article 13 FCTC Guidelines are not a relevant international standard under the second sentence of Article 2.5 of the TBT Agreement, they are still "highly relevant" at "each stage of the analysis" of the claims under both the TBT and TRIPS Agreements.¹²⁵⁰ Australia also considers that while the

Guidelines, but not the Article 13 Guidelines", and that "[o]f the 22 listed studies [that were considered by the COP in adopting the Article 11 Guidelines], just one study, consisting of 1 page, examined plain packaging". Dominican Republic's second written submission, para. 544 (footnotes omitted). The Dominican Republic also submits that any "evidence" relied upon by the FCTC could only consist of predictive research that suffers from a number of serious flaws. Ibid. paras. 545-546. See also Dominican Republic's second written submission, para. 919 and fn 926 and para. 927; and responses to Panel question No. 130, para. 316; and No. 66, para. 186.

¹²⁴² Cuba's response to Panel question No. 130, p. 17. Cuba also considers *amicus curiae* submissions by the WHO and FCTC Secretariat to be "irrelevant" for the settlement of the present disputes, pointing out that "the FCTC itself has not been signed and/or ratified by all WTO Members", including Cuba, which is not an FCTC Party and did not participate in the adoption of the FCTC Guidelines. Cuba submits that its WTO obligations cannot therefore "reasonably be determined by reference to the FCTC Guidelines". Cuba's second written submission, paras. 382-383. See also *ibid.* para. 361.

¹²⁴³ Cuba's second written submission, para. 355.

¹²⁴⁴ Cuba's second written submission, para. 356. See Cuba's second written submission, paras. 357-359; and Cuba's response to Panel question No. 130, p. 17.

¹²⁴⁵ Cuba's second written submission, para. 360. See also Cuba's response to Panel question No. 130, p. 17. Cuba also argues that neither the FCTC nor the non-binding FCTC Guidelines impose any obligation to adopt tobacco plain packaging, and notes that Article 2.2 of the FCTC permits "imposing stricter requirements that are consistent with the provisions of the FCTC 'and are in accordance with international law'". Cuba's second written submission, paras. 361, 366-368 and 370. Cuba also notes that during the debates for the preparation of the Guidelines with respect to plain packaging, "the representative of Australia indicated ... [that] the 'Guidelines proposed that Parties should consider other measures, going beyond the requirements of the [FCTC]'." Ibid. para. 368 (referring to Conference of the Parties to the WHO Framework Convention on Tobacco Control, Third Session, Durban, South Africa, FCTC/COP/3/REC/3 (17-22 November 2008), p. 11).

¹²⁴⁶ Indonesia's response to Panel question No. 130, para. 81.

¹²⁴⁷ Indonesia's response to Panel question No. 130, para. 81. See also Indonesia's opening statement at the first meeting of the Panel, para. 20.

¹²⁴⁸ Indonesia's opening statement at the first meeting of the Panel, para. 21.

¹²⁴⁹ Indonesia's opening statement at the first meeting of the Panel, para. 23. See also Indonesia's response to Panel question No. 130, para. 81 (stating that "the FCTC and WTO should be interpreted harmoniously as there is no conflict between FCTC and WTO obligations."); and Indonesia's response to Panel question No. 130, para. 83 (arguing that "compliance with the FCTC Guidelines and WTO obligations can be achieved by imposing prohibitions or restrictions only on those elements of tobacco products and packaging that have been shown, based on evidence, to mislead consumers or increase prevalence.").

¹²⁵⁰ Australia's response to Panel question No. 130, para. 204.

TBT Agreement encourages technical regulations to be in accordance with international standards, it "imposes no particular obligations on Members with respect to the nature and extent of evidence on which they may rely before adopting a technical regulation".¹²⁵¹ For Australia, tobacco plain packaging measures "reflect[] a world-wide consensus in the scientific community and among the 180 Parties to the FCTC that measures affecting consumer perceptions, intentions, and attitudes toward tobacco products are apt to contribute, as part of a comprehensive tobacco control policy, to reducing smoking behaviour, and ultimately, to saving lives."¹²⁵²

7.411. Some third parties also addressed this question in their submissions or statements.¹²⁵³

7.412. We note that it is not uncommon in WTO disputes for parties to refer to, and panels and the Appellate Body to rely on, non-WTO international instruments as evidence of fact¹²⁵⁴ or to

¹²⁵¹ Australia's closing statement at the first meeting of the Panel, para. 17.

¹²⁵² Australia's closing statement at the first meeting of the Panel, para. 24. See also Australia's second written submission, para. 256; and Australia's response to Panel question No. 126, para. 172.

¹²⁵³ Brazil believes that FCTC Guidelines should be taken into consideration as relevant context in the panel proceedings under the WTO dispute settlement system, especially if such guidelines are qualified as relevant international standards under the second sentence of Article 2.5 of the TBT Agreement. Brazil's third-party submission, paras. 13-17.

The European Union considers that irrespective of whether or not the FCTC Guidelines relating to plain packaging are a relevant international standard within the meaning of the second sentence of Article 2.5 of the TBT Agreement, they must be given appropriate weight in these proceedings. European Union's third-party statement, para. 12. The European Union observes that Article 2.2 of the TBT Agreement requires the Panel to take into account the "risks non-fulfilment would create" and that, in assessing such risks, relevant elements of consideration are, *inter alia*, available scientific and technical information, related processing technology or intended end-uses of products. The European Union considers that the Guidelines fall within the open category delimited by the final sentence of Article 2.2 of the TBT Agreement. European Union's response to Panel question No. 8, para. 37. In assessing that risk, the European Union contends that the FCTC Guidelines are "relevant", particularly because they speak precisely to the means by which the relevant international organisation considers that tobacco control can be effectively enhanced. Therefore, they will need to be considered and taken into account by the Panel, irrespective of whether or not they are a "relevant international standard" within the meaning of Article 2.5 of the TBT Agreement." Ibid. para. 38. With respect to the TRIPS Agreement, the European Union also considers it "important that these evidence-based international guidelines are accorded proper weight, by interpreting TRIPS provisions in a way that is supportive of WTO Members' right to protect public health." European Union's third-party submission, paras. 36-38.

Korea submits that, while in principle "the object and purpose of other international agreements should not be allowed to undermine the interpretation or application of WTO Agreement provisions, the value of the [FCTC] should be sufficiently respected", given it is "the most widely ratified convention among UN Member states". Korea's third-party statement, para. 5.

Uruguay notes that, in these disputes, three of the original complaining Members have signed the FCTC and have "played a role in the drafting of the [FCTC Guidelines], such as those on plain packaging". For Uruguay, while "[i]t could be argued that the plain packaging measures are not binding under the [FCTC,] [they] form part of the repository of rules governed thereby and must therefore be shared by its members; the latter should not in principle challenge or undermine them in other forums." Uruguay's third-party submission, paras. 102-103.

¹²⁵⁴ For instance, in *EC – Asbestos*, the panel relied on documentation originating from the WHO and the International Labor Organization (ILO) as evidence that "regulations restricting the use of asbestos could have been anticipated". Panel Report, *EC – Asbestos*, para. 8.295. In *EC – Seal Products*, the panel considered that various sources submitted to it, including certain UN and ILO instruments (i.e. the 1989 UN Declaration on the Rights of Indigenous Peoples and the 1989 ILO Convention concerning Indigenous and Tribal Peoples in Independent Countries), "taken in their entirety as factual evidence", demonstrated that the rationale for including in the EU seal products' ban an exception for products from indigenous communities was "justifiable". Panel Reports, *EC – Seal Products*, para. 7.295. The panel explained the basis for and purpose of relying upon such instruments as follows:

In taking into account the recognition given by international instruments in the context of the United Nations and the ILO to the interests of Inuit and indigenous communities, the Panel is mindful that these instruments are not WTO instruments and they do not set out WTO obligations *per se*. We are considering the content of these instruments as part of the evidence submitted by the European Union to support its position concerning the interests of Inuit and indigenous communities, not as legal obligations of Members.

Ibid. para. 7.295 fn 475. See also Panel Report, *US – Clove Cigarettes* (relying on certain FCTC Guidelines, discussed in paras. 7.414-7.415 below).

inform the interpretation of specific provisions under a covered agreement.¹²⁵⁵ We also note, in particular, that the FCTC and certain FCTC Guidelines have been specifically discussed and relied upon as evidence in at least two previous WTO disputes, including one concerning claims under the TBT Agreement.

7.413. In *Dominican Republic – Import and Sale of Cigarettes*, the Dominican Republic cited the FCTC in support of its argument on the international recognition of tax stamps as a legitimate method to prevent the smuggling of cigarettes and the resulting loss of tax revenue, notwithstanding the fact that both parties had agreed that it was not legally binding on them.¹²⁵⁶ Specifically, the Dominican Republic argued that properly enforced tax stamps were required to mark, monitor, and collect data regarding cross-border trade in cigarettes in accordance with the FCTC.¹²⁵⁷ That panel took this and other information before it into account in finding that it did not disagree with the Dominican Republic's argument that "tax stamps may be a useful instrument to monitor tax collection on cigarettes and, conversely, to avoid tax evasion".¹²⁵⁸

7.414. The FCTC and certain FCTC Guidelines were also referenced and discussed in detail in *US – Clove Cigarettes* in the context of claims under the TBT Agreement.¹²⁵⁹ In that dispute, the panel, referring to certain FCTC Guidelines as "WHO *Partial Guidelines*"¹²⁶⁰, considered the FCTC as part of the "broader factual context" of the US measure at issue¹²⁶¹ and observed that it was "aware of the important international efforts to curb smoking within the context of the WHO FCTC and its WHO *Partial Guidelines*."¹²⁶² It further relied on certain FCTC Guidelines¹²⁶³ to corroborate its conclusion that "in the mind of youth, flavoured cigarettes, including those flavoured with clove or menthol, are similar".¹²⁶⁴ The panel, having noted that "[b]oth parties seem to agree that the WHO *Partial Guidelines* are potentially relevant to the dispute", agreed with the United States that

¹²⁵⁵ For instance, in *US – Shrimp*, the Appellate Body relied on several international conventions and international instruments (including *inter alia* the United Nations Convention on the Law of the Sea – UNCLOS, and Convention on Biological Diversity – CBD and the Convention on International Trade in Endangered Species of Wild Fauna and Flora – CITES) to support its conclusion that the meaning of the term "exhaustible natural resources" in Article XX(g) of the GATT 1994 was not limited to just "non-living" resources (e.g. minerals). See Appellate Body Report, *US – Shrimp*, paras. 130-132.

¹²⁵⁶ As explained above, the FCTC was adopted in 2003, but only entered into force in 2005. See para. 2.96 above. Honduras signed the FCTC on 18 June 2004, shortly before the second substantive meeting of that panel with the parties. See Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, paras. 1.6 and 4.370.

¹²⁵⁷ See Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 7.216.

¹²⁵⁸ See Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, paras. 1.6 and 4.370. Ultimately, however, the panel concluded that the GATT-inconsistencies of the cigarette "tax stamp" requirements could not be justified because they were not necessary "[s]ince the Dominican Republic has not proved why other, reasonably available, less-GATT inconsistent, measures would not be able to achieve that same level of enforcement that it has chosen to attain". *Ibid.* para. 7.230. This finding was later upheld by the Appellate Body. See Appellate Body Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 128(a). As explained above, the FCTC was adopted in 2003, but only entered into force in 2005. See para. 2.96 above.

¹²⁵⁹ We note that neither of the parties to the dispute in *US – Clove Cigarettes* were parties to the FCTC. Australia also refers to the panel's use of certain FCTC instruments as evidence of fact in *US – Clove Cigarettes* as a precedent lending support for its view that FCTC instruments can be used in a similar way with respect to the claims at issue in these proceedings. See, e.g. Australia's response to Panel question No. 206, paras. 409-410; and Australia's comments on complainants' responses to Panel question No. 206, para. 406. See also Brazil's third-party submission, paras. 15-16.

¹²⁶⁰ *Partial Guidelines for implementation of Articles 9 and 10 of the Convention*, adopted at the fourth FCTC COP held in Punta del Este from 15 to 20 November 2010. Panel Report, *US – Clove Cigarettes*, para. 2.30.

¹²⁶¹ Panel Report, *US – Clove Cigarettes*, para. 2.2. We also note that that panel relied on the definition of "*tobacco control*" in Article 1(d) of the FCTC as meaning "a range of supply, demand and harm reduction strategies that aim to improve the health of a population by eliminating or reducing their consumption of tobacco products and exposure to tobacco smoke". Panel Report, *US – Clove Cigarettes*, para. 2.1 fn 3.

¹²⁶² Panel Report, *US – Clove Cigarettes*, para. 7.4. The FCTC and certain FCTC Guidelines were also described in the "factual context" section of the panel report. On appeal, although the Appellate Body did not make express reference to the FCTC, it "recognize[d] the importance of Members' efforts in the World Health Organization on tobacco control." Appellate Body Report, *US – Clove Cigarettes*, para. 235.

¹²⁶³ See Panel Report, *US – Clove Cigarettes*, paras. 7.229-7.231.

¹²⁶⁴ Panel Report, *US – Clove Cigarettes*, para. 7.232.

they "do not necessarily apply directly to the particular regulatory needs of a particular country".¹²⁶⁵ However, the panel also found that the FCTC Guidelines at issue:

"[D]rawing on the best available scientific evidence and the experience of Parties", do show a growing consensus within the international community to strengthen tobacco-control policies through regulation of the content of tobacco products, including additives that increase the attractiveness and palatability of cigarettes. Thus, we consider that the WHO *Partial Guidelines* corroborate our understanding.¹²⁶⁶

7.415. That panel further relied on certain FCTC Guidelines in its analysis under Article 2.2 of the TBT Agreement¹²⁶⁷ as evidence "reinforc[ing] its understanding"¹²⁶⁸ that "there is extensive scientific evidence supporting the conclusion that banning clove and other flavoured cigarettes could contribute to reducing youth smoking"¹²⁶⁹, notwithstanding the fact that the measure recommended was not expressly identified in the FCTC itself.¹²⁷⁰ We also note that the panel relied on particular FCTC Guidelines as factual evidence supporting certain findings under both Articles 2.1 and 2.2 of the TBT Agreement, despite the fact that it and the parties had agreed that, for the purpose of that dispute, no "relevant international standard" existed under either Article 2.4 or the second sentence of Article 2.5 of the TBT Agreement.¹²⁷¹

7.416. In the present proceedings, the FCTC and its Guidelines have been referred to as evidence in support of specific arguments not only by Australia, but also by certain complainants.¹²⁷² We see no basis to dismiss *ex ante* the relevance of these instruments, based solely on the fact that they do not constitute an "international standard" for the purposes of the second sentence of Article 2.5 of the TBT Agreement. In particular, we see no reason to assume that the FCTC, which has been

¹²⁶⁵ Panel Report, *US – Clove Cigarettes*, para. 7.230.

¹²⁶⁶ Panel Report, *US – Clove Cigarettes*, para. 7.230.

¹²⁶⁷ The panel's findings with respect to Article 2.2 of the TBT Agreement were not appealed. See Appellate Body Report, *US – Clove Cigarettes*, para. 9.

¹²⁶⁸ Panel Report, *US – Clove Cigarettes*, para. 7.414. The Panel also relied on a 2007 WHO Report entitled "The Scientific Basis of Tobacco Product Regulation". This report was produced by a study group, established pursuant to the FCTC, comprised of eleven experts in the field, supported by a secretariat. See *ibid.* para. 7.413.

¹²⁶⁹ Panel Report, *US – Clove Cigarettes*, para. 7.415. We also note that, in that dispute, Indonesia also referred to various measures set out in the FCTC "aimed at preventing cigarettes sales to minors" in its list of available less trade-restrictive alternatives to the US ban on clove cigarettes. *Ibid.* para. 7.317. The United States responded saying that "mere[ly] listing of a number of different restrictions drawn from ... the FCTC does not satisfy Indonesia's burden of proving that there is a less trade-restrictive measure that would achieve the U.S. objective at the level of protection that the United States finds appropriate". *Ibid.* para. 7.324. The Panel agreed with the United States in this respect. *Ibid.* paras. 7.420-7.423.

¹²⁷⁰ "Finally, while a ban on flavoured-cigarettes is not one of the various measures set out in the [FCTC] itself, we recall that prohibiting the sale of flavoured cigarettes is actually one of the measures that has now been recommended in the WHO *Partial Guidelines*". Panel Report, *US – Clove Cigarettes*, para. 7.427.

¹²⁷¹ As we previously noted in footnote 929 above, in *US – Clove Cigarettes*, the panel did not begin its assessment of the claim under Article 2.2 "from any rebuttable presumption that the ban on clove cigarettes is not an unnecessary obstacle to trade", in recognition of the parties' agreement that no "relevant international standard" within the meaning of the second sentence of Article 2.5 existed. Panel Report, *US – Clove Cigarettes*, para. 7.331 (cited in Honduras's comments on Australia's response to Panel question No. 147, para. 40; and in Cuba's second written submission, paras. 179-180 and 188). See also *ibid.* para. 7.458 and fn 831 (where the panel concludes that, "[g]iven the facts of the present dispute and the absence of any 'relevant international standards', [Article 2.4 of the TBT Agreement] would not appear to be of any relevance").

¹²⁷² For example, Honduras and Cuba cite Article 11 of the FCTC in the course of their arguments regarding "wear-out" effects of GHWs. Honduras's response to Panel question No. 126, p. 38 and fn 148; Honduras's second written submission, para. 51 and fn 50; and Cuba's second written submission, para. 155 and fn 56. The Dominican Republic also references Article 11 of the FCTC to support an assertion that GHWs are intended to ensure that people do not misunderstand the health risks of smoking. Dominican Republic's comments on Australia's response to Panel question No. 148, para. 87 and fn 105. The Dominican Republic also relies upon the FCTC Article 11 Guidelines when discussing the relative importance of the front and back faces of a pack as compared to the sides and the relationship between the size of health warnings and their effectiveness. Dominican Republic's comments on Australia's response to Panel question No. 204, para. 891 and fn 958, and para. 897 and fn 973.

adopted by 180 countries¹²⁷³, and related instruments adopted under its auspices could not inform, together with other relevant evidence before us, our understanding of relevant aspects of the matters with which they are concerned, namely "tobacco control measures ... **to reduce ... the prevalence of tobacco use**".¹²⁷⁴ Our determination above in respect of the second sentence of Article 2.5 is, therefore, without prejudice to the relevance and probative value to be given to the FCTC and related instruments in the context of other aspects of our analysis of the claims before us.¹²⁷⁵

7.417. Finally, we wish to stress that any assessment and observations we make under this, or any other section of these Reports, with respect to the FCTC, its Guidelines, or any other FCTC instrument, is for the sole purpose of resolving the specific legal and factual questions that stand before us in these proceedings, in relation to the claims before us under the relevant WTO covered agreements and pursuant to our limited mandate under the DSU.

7.418. Having determined that the TPP measures do not benefit from a rebuttable presumption under the second sentence of Article 2.5 that they are not more trade-restrictive than necessary, we pursue our analysis under Article 2.2, in accordance with the approach outlined at section 7.2.2 above.

7.419. Having determined that the objective pursued by the TPP measures is to improve public health by reducing the use of, and exposure to, tobacco products and that this is a legitimate objective within the meaning of Article 2.2 of the TBT Agreement, we must now conduct a relational analysis of different factors, including the degree to which the TPP measures contribute to this objective, the extent to which they are trade-restrictive, and the nature of the risks of non-fulfilment of the objective pursued and the gravity of the consequences that would arise from such non-fulfilment.

7.420. We note that no particular order is *a priori* required in all cases in considering the three aforementioned factors of the "relational analysis". However, in the circumstances of this case, we find it appropriate to consider first the degree of contribution of the TPP measures to their objective, to the extent that there may be a correlation between the extent to which the measures contribute to this objective and their trade-restrictiveness. In this respect, without prejudice to our later analysis of this question, we note Australia's observation that the TPP measures will result in a limiting effect on overall trade in tobacco products because "(i) the measure will reduce the use of tobacco products (by discouraging uptake and relapse and encouraging quitting); and (ii) since imports will soon represent the entirety of Australia's tobacco product market, with domestic production being phased out, a reduction in the use of tobacco products will necessarily limit overall trade in tobacco products".¹²⁷⁶

7.421. In light of the potential relationship, as identified by Australia itself, between the contribution of the measures to their objective and their effect on trade, we will consider first the contribution of the measures to their objective, and then their trade-restrictiveness. We will also identify the nature and gravity of the risks of non-fulfilment of the objective pursued by Australia through these measures.

7.422. These various factors will inform our further assessment, as relevant, of whether the complainants have shown that there are *less* trade-restrictive alternative measures reasonably available to Australia, that would achieve an equivalent contribution to its objective, such that the TPP measures would be *more* trade-restrictive than necessary within the meaning of Article 2.2.

¹²⁷³ WHO/FCTC Request for Permission to Submit Information, (Exhibit AUS-42 (revised)), para. 7; and WHO/FCTC *amici curiae* brief, (Exhibit AUS-42 (revised)), para. 12. See also paras. 2.97 and 7.250 and fn 908 above.

¹²⁷⁴ FCTC, (Exhibits AUS-44, JE-19), Article 3, entitled "Objectives". We also note that some of the complainants argue that the FCTC and its Guidelines are not relevant beyond their use for the purpose of the second sentence of Article 2.5 of the TBT Agreement, *inter alia* because they are not pertinent for the purpose of clarifying, in accordance with customary rules of interpretation of public international law, relevant provisions of the covered Agreements that are the object of the claims before us. We note however that neither the FCTC nor its Guidelines have been argued, in these proceedings, to inform the interpretation of a specific provision of the covered agreements before us.

¹²⁷⁵ See also footnote 894 above.

¹²⁷⁶ Australia's response to Panel question No. 119.

7.2.5.3 The degree of contribution of the TPP measures to their objective

7.423. Having determined that the objective pursued by the TPP measures is to improve public health by reducing the use of, and exposure to, tobacco products and that this is a legitimate objective within the meaning of Article 2.2 of the TBT Agreement, we now consider the extent to which the TPP measures contribute to this objective. This contribution "must be determined objectively, and then evaluated along with the other factors mentioned in Article 2.2".¹²⁷⁷ Specifically, "a panel must seek to ascertain to what degree, or if at all, the challenged technical regulation, as written and applied, actually contributes to the legitimate objective pursued by the Member".¹²⁷⁸

7.424. We therefore seek to determine, in this section, the degree to which the TPP measures, as written and applied, contribute, if at all, to Australia's legitimate objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.425. The parties have presented extensive arguments and evidence in support of their respective positions on the existence and degree of the TPP measures' contribution to their objective. They also have different views on the approach that should be taken to this assessment. We therefore consider first our overall approach to the conduct of this assessment.

7.2.5.3.1 Overview of the parties' arguments

7.426. Honduras argues that the TPP measures make no contribution to Australia's objective, nor are they apt to do so. Honduras argues that the evidence relied on by Australia, both at the time of adoption of the measures and thereafter, was neither relevant nor probative.¹²⁷⁹ It argues that the studies upon which Australia relied on are seriously flawed, to the extent that no government should regard them as serious science.¹²⁸⁰ Honduras states that it and other complainants have provided robust evidence through market and sales data that confirm the lack of contribution of the TPP measures since their adoption.¹²⁸¹

7.427. Honduras states that market data shows that the TPP measures have not reduced smoking prevalence or tobacco consumption. It further argues that principles of social science confirm that the measures not only cannot reduce smoking prevalence but will actually result in consumption increase, and that economic theory indicates that by imposing a uniform appearance on all tobacco products, plain packaging reduces consumer loyalty to brands, thus increasing price competition, the inevitable consequence of which is increase in demand.¹²⁸²

7.428. Honduras further argues that medical science also demonstrates that the TPP measures will not contribute to a reduction in prevalence. Smoking prevalence is determined by assessing different types of behaviour: namely, whether people take up smoking (*initiation*), whether they stop smoking (*cessation*) and whether they resume smoking after a period of abstinence (*relapse*).¹²⁸³ Smoking is a complex, multifaceted activity, with well-documented drivers that are not related at all to the packaging of the product.¹²⁸⁴ Honduras further contends that cessation and relapse have well-documented drivers which are more complex than the mere appearance of tobacco products or attractive packaging.¹²⁸⁵ Plain packaging fails to address the idiosyncratic factors that influence adolescents' decision-making, and, therefore, cannot discourage adolescents from taking up smoking. Changing the packaging in which cigarettes are supplied is not likely to overpower the basic motives of an adolescent to smoke, which comes from the act of smoking

¹²⁸⁵ Honduras's first written submission, para. 442.

itself, not from the tobacco package.¹²⁸⁶ In addition, it is possible that the aura of mystery, risk, or transgression created by the TPP measures may lure teens into smoking activities.¹²⁸⁷

7.429. Honduras further elaborates that Australia inappropriately relies upon behavioural theories to argue that the TPP measures will contribute to their objective via a causal chain whereby plain packaging impacts three mechanisms which in turn are supposed to impact smoking behaviour. Even if the TPP measures were to lower the appeal and increase the perceived risks of tobacco products, it may very well not affect ultimate smoking behaviour. Theories cannot demonstrate or prove a link between non-behavioural constructs, e.g. "surrogate" variables, such as attitudes, opinions, stated intentions, or perceptions of a cigarette pack, and whether study participants would stop smoking or smoke less if only plain packs were available.¹²⁸⁸

7.430. Honduras argues that Australia's comparison between tobacco packaging and advertising is inapplicable in the dark market of Australia and where there is a dominant GHW on packaging. Packaging does not constitute promotion or advertising according to basic principles of marketing science. Even if it were, it is difficult to conceive that a person would take the important decision to become a smoker simply because he or she was attracted to the package. At most, packaging could convince a person, who is already a smoker, to switch to another brand of tobacco products. Second, economic theory indicates that by imposing a uniform appearance on all tobacco products, the TPP measures create a market where producers must compete on the basis of price, resulting in lower prices and increased demand and prevalence.¹²⁸⁹

7.431. Under WTO law, domestic regulation must be objectively justifiable and, where relevant, based upon objective and scientific evidence.¹²⁹⁰ In Honduras's view, the studies that Australia has referred to before and after the implementation of the TPP measures to justify its belief that they will contribute to a reduction in smoking lack scientific rigour and are vitiated by many flaws that cast doubt on the scientific objectivity of the research and the authors.¹²⁹¹ Australia's studies were based on unreliable, self-reported statements about possible behavioural intentions on the basis of which the study authors drew unwarranted conclusions.¹²⁹² No government should regard the studies upon which Australia relied as sound science.¹²⁹³

7.432. Honduras argues that it would be reasonable to expect, and indeed the pre-implementation evidence predicted, that an intervention such as plain packaging would reveal its impact within the first two years of its implementation.¹²⁹⁴ Australia's argument that the TPP measures are expected to produce results over time and in combination with other measures is, Honduras argues, self-serving and not supported by qualitative or quantitative evidence that the measures are "apt" to make a material contribution, as required.¹²⁹⁵ The nature, architecture and design of the measures are not apt to contribute to changing smoking behaviour in the short or long term, because they do not deal with the drivers of smoking.¹²⁹⁶ Further, it is well-known

that a non-price based tobacco control measure has the strongest effect in the short run and is subject to "wear-out", an effect which researchers have already observed in Australia.¹²⁹⁷

7.433. Honduras argues that empirical evidence of the actual effect of a measure on behaviour is the best evidence against which to test whether the architecture, structure and design of the measure is apt to contribute to the objective. Reliable and probative empirical evidence of the lack of actual impact of the measure more than two and a half years after its introduction is available and must be given primacy in the analysis.¹²⁹⁸ It is not valid for Australia to focus only on theories when there are sufficient facts to assess the impact of the measures.¹²⁹⁹

7.434. The Dominican Republic states that Australia has offered a conceptual framework whereby the measures contribute to their objective at some unspecified time in the future via a chain of effects whereby the measures will work through three mechanisms (appeal, GHW effectiveness, deception); then, changes in those three mechanisms will, in turn, adversely affect beliefs, attitudes, and intentions (including perceptions and knowledge of smoking harm, enjoyment of smoking, and intentions to smoke); and, these changes will, ultimately, act as antecedents to behaviour, and reduce smoking. Australia and its experts posit that changes in smoking behaviour will follow inevitably from a change in beliefs, attitudes, and/or intentions. This assumption, the Dominican Republic argues, rests on fundamental misconceptions regarding behavioural theories.¹³⁰⁰

7.435. Further, the research relied upon by Australia to support its hypothesis suffers from many serious methodological flaws rendering it neither reliable nor probative. Applying standards of methodological rigour that apply in social science research into consumer behaviour to the body of literature investigating the predicted behavioural effects of plain packaging reveals fatal flaws. These flaws include, in the Dominican Republic's view, (a) measuring remote outcomes, such as visual appeal, beliefs, and attitudes and intentions towards smoking, rather than actual smoking behaviour; (b) employing non-experimental study designs that do not permit any conclusions to be reached regarding the effect of plain packaging on the outcome measured; and (c) other methodological failings that permit the study results to be influenced by factors other than the plain packaging intervention.¹³⁰¹ Further, the process by which the research in support of plain packaging developed raises serious questions about its objectivity and reliability.¹³⁰²

7.436. The Dominican Republic also rejects Australia's analogy between tobacco packaging and advertising, whereby (1) advertising causes people to smoke; (2) packaging is a form of advertising; and (3) removing branding from packaging is "*capable* of affecting" smoking behaviour. The Dominican Republic challenges the comparison between the small amount of space on the package not covered by the GHW and traditional advertising, and asserts that even before the TPP measures were introduced, Australia's packaging had negative appeal, in contrast with traditional advertising, which communicates strongly positive messages. The demand effects of plain packaging, according to Australia's own expert, cannot be discerned by analogy with the demand effects of traditional advertising.¹³⁰³

7.437. The Dominican Republic also contends that well-accepted axioms of social and medical science confirm that the TPP measures will not be effective in achieving Australia's stated goals. Branded packaging serves product identification and differentiation purposes. It does not change

the overall size of the market for the product.¹³⁰⁴ Plain packaging will also not reduce smoking initiation, because adolescents have a propensity for risk-taking behaviour and are attracted to smoking by the social rewards of engaging in the behaviour itself, not because of any consumer packaging.¹³⁰⁵ Similarly, plain packaging will not increase smoking cessation or discourage relapse, because those behaviours are not driven by packaging.¹³⁰⁶

7.438. The Dominican Republic observes that the relative weight ascribed by a panel to evidence regarding a measure's structure and design, on one hand, and its expected or actual operation, or application, on the other, is necessarily case-specific and influenced by variables including the evidence available, the relevance of the evidence, and the nature of the claims and arguments of the parties.¹³⁰⁷ Evidence of actual operation may reveal that a measure's design and structure are misconceived, or are not operating as expected, and are thus not probative of whether the measure contributes to its objective. The Dominican Republic argues that, at this stage, evidence of actual operation is far more valuable than mere expectations.¹³⁰⁸ Real-world empirical data, which is not opinion-based or predictive, permits an objective assessment of the actual behavioural effects of changing the appearance of tobacco products and their packaging, and is the most reliable and credible evidence available to the Panel to assess the contribution these measures make to achieving their objective.¹³⁰⁹ With close to three years' worth of data available at the time of its submission, the Dominican Republic argues that there is no evidence that the TPP measures are having statistically significant effects on prevalence or consumption.¹³¹⁰ A survey conducted by Australia designed to evaluate the actual operation of the TPP measures after implementation also reveals that, "aside from certain obvious changes in pack appeal and the noticeability of health warnings that more-than-doubled in size", there is a consistent lack of evidence of changes in the so-called antecedents to smoking behaviour. Further, the "rather limited impact of the policies that we have seen to date will tend to weaken over time". Thus, the TPP measures have changed neither the antecedents of smoking behaviour nor smoking behaviour itself.¹³¹¹ In the Dominican Republic's view, the reality of the actual operation is that the TPP measures "have not lived up to the expectations of either tobacco control researchers or the Australian government".¹³¹²

7.439. The TPP measures cannot, the Dominican Republic argues, continue to be justified by short-term research-based predictions that have failed to materialize over an extended period.¹³¹³ Australia's assertion that the impact of tobacco plain packaging on smoking rates will be most pronounced in the long term must be supported by robust evidence, and cannot be a matter of speculation. To ensure that WTO Members cannot circumvent scrutiny of their restrictive measures by simply asserting long-term effects, beyond the timeline of the panel proceedings, the Appellate Body in *Brazil – Retreaded Tyres* explained that claims of future effects must be clearly defined and rigorously tested. The pathway must be established by "*quantitative projections* in the future, or *qualitative reasoning* based on a set of hypotheses that are *tested and supported by sufficient evidence*". Australia has failed to adduce either. Rather, the evidence on which Australia relies

predicted that the effect of plain packaging would have materialized by now, and that its effect will only weaken over time.¹³¹⁴

7.440. Cuba argues that post-implementation data on consumption and prevalence demonstrates that the TPP measures have not contributed to reduced tobacco use in Australia. The complementary analysis of the data conducted by a number of independent experts fail to find evidence of an impact on prevalence or consumption either within Australia's overall population or within the relevant sub-groups with which health experts are most concerned.¹³¹⁵ Nor do Australia's own post-implementation surveys show that the TPP measures have impacted the mechanisms that Australia considers will lead to a change in smoking behaviour.¹³¹⁶ Ultimately, there is no better test of the effectiveness of a policy than its implementation in the real world. The post-implementation data on prevalence and consumption must be taken as decisive evidence of whether the TPP measures can actually achieve their intended aim. Abstract hypotheses and speculative conclusions will not be adequate in the presence of credible evidence of the measures' actual effects.¹³¹⁷ Given the absence of even any short-term "shock" effect, and the widely accepted fact that health communications are subject to "wear out", any longer term effects on smoking behaviour are unrealistic.¹³¹⁸

7.441. Cuba also argues that Australia's rationale for adopting the TPP measures was flawed, thus revealing why the measures have been ineffective. The studies that Australia relies upon do not provide a sound basis for concluding that the TPP measures will reduce tobacco use. None of the studies measure actual tobacco consumption. They utilise research designs which leave considerable doubts about the reliability of any conclusions reached, and were implemented in a manner that gives rise to further methodological concerns.¹³¹⁹ Further, research regarding the key determinants of initiation, cessation and relapse indicates that tobacco packaging is not a material factor.¹³²⁰

7.442. Cuba argues that Australia's argument that the TPP measures will "reduce the appeal of tobacco products to consumers" is flawed. First, studies do not establish that branded packaging is appealing in the Australian regulatory context, which includes a dominant 75% GHW on the front of the pack. Second, the effects of branding on the residual portion of the pack cannot be equated to advertising. Third, Australia fails to demonstrate a link between the concept of appeal and tobacco consumption.¹³²¹ Australia's attempt to hide behind convoluted behavioural theories to establish a relationship between smokers' intentions and attitudes and their behaviour is unconvincing.¹³²²

7.443. Cuba submits that Australia's claim that the TPP measures will "increase the effectiveness of health warnings", thereby reducing smoking rates, is also flawed. Specifically, "[i]t is implausible to suggest that consumers ... who ... fail to notice [a GHW covering 75% of the front

face of the pack] will have their capricious attention appropriately re-directed because of plain packaging". Findings from studies on this subject "provide no basis for concluding that plain packs make warnings more effective". Even if they were, it can have little effect on smoking behaviour, given that the overwhelming majority of the population is already aware of the relevant risks.¹³²³

7.444. Cuba, referring to Australia argument that packaging is a kind of advertising that can influence consumer responses, including purchasing and consumption behaviour, argues that Australia's own expert recognizes, however, that evidence on the effects of advertising is not relevant for tobacco plain packaging. Tobacco packaging does not serve as advertising in Australia's dark and mature market for tobacco, where GHWs dominate the pack.¹³²⁴ Further, the TPP measures may have adverse effects on public health, by causing prices to decline and consumption and prevalence to increase. The TPP measures may also increase the appeal of smoking to rebellious teens.¹³²⁵

7.445. Cuba endorses in general the arguments advanced by the other complainants with respect to the validity of the evidence presented in their first written submissions as well as the evidence put forward in their second written submissions to demonstrate that the TPP measures do not make a contribution to Australia's objective and that they have been ineffective.¹³²⁶

7.446. Indonesia notes that the Appellate Body has counselled that the contribution of a measure to its objective can be demonstrated quantitatively or qualitatively, and can involve (i) the assessment of evidence or data, pertaining to the past or the present; as well as (ii) quantitative projections in the future, or qualitative reasoning based on a set of hypotheses that are tested and supported by sufficient evidence.¹³²⁷

7.447. Indonesia claims that studies conducted by multiple researchers using different analytical approaches have failed to find any empirical evidence that the TPP measures have reduced prevalence after implementation. Further, state-level evidence shows that in some parts of Australia prevalence has increased.¹³²⁸ In instances, such as these proceedings, where there is actual evidence demonstrating the contribution (or in this case, absence of a contribution) from a challenged measure, the Panel should give more weight to this evidence than to "the design, structure, and operation of the technical regulation".¹³²⁹

7.448. Indonesia challenges Australia's assertion that the TPP measures will contribute to decreasing smoking initiation and increasing smoking cessation.¹³³⁰ Australia failed to provide a sound empirical basis for the hypothesis that the TPP measures will change the smoking behaviours targeted by them. Instead, it assumed that behavioural theory "proved" that attitudes toward the appeal of tobacco products and health risks affect actual smoking behaviour, which resulted in a number of flaws in the subsequent research.¹³³¹ The studies relied upon by Australia fail to reflect the reality of the marketplace, in which only plain packs, dominated by unappealing

GHWs, are available¹³³², and suffer from numerous serious methodological flaws that render their conclusions unreliable.¹³³³

7.449. Indonesia urges the Panel not to allow Australia to deny that the TPP measures are subject to scrutiny because they are part of a "suite of measures"¹³³⁴ or will contribute to reducing smoking "in the long run".¹³³⁵ Any contribution must be distinguished from the overall decline in smoking prevalence that has existed in Australia for years and from the effect of the expanded GHW.¹³³⁶

7.450. Australia responds that, by removing "one of the last remaining frontiers for tobacco advertising in Australia" through the introduction of tobacco plain packaging, it "sought to sever the link between tobacco product packaging and tobacco smoking behaviour, particularly for youth".¹³³⁷ As acknowledged by the tobacco industry, and evidenced in marketing and public health science, left unregulated, tobacco product packaging can perform the same function as other forms of marketing and promotion, including advertising, especially in a dark market¹³³⁸ like Australia.¹³³⁹ Branding, packaging innovation, and design elements influence consumer behaviour by producing positive perceptions of the brand and tobacco products.¹³⁴⁰ Youth can be motivated to begin smoking by tobacco packaging that communicates that the brand will fulfil important psychological needs, which outweigh any consideration of the potential risks.¹³⁴¹ Similarly, branded packaging can serve as a cue for maintaining tobacco use for smokers and those who have quit but are at risk of relapse.¹³⁴² Packaging thus functions as a form of advertising which influences initiation, cessation, and relapse behaviours, thereby increasing overall demand for tobacco products.¹³⁴³

7.451. Australia argues that "TPP fulfils its objectives" by way of a "mediational" model, or "causal chain", whereby the TPP measures improve public health by impacting the three mechanisms identified in the TPP Act.¹³⁴⁴ There is "strong empirical evidence" that each of the mechanisms will contribute to Australia's overall objective of protecting human health.¹³⁴⁵ Namely, plain packaging decreases the appeal of tobacco products by (i) reducing the attractiveness of tobacco packaging¹³⁴⁶; (ii) reducing positive perceptions of taste¹³⁴⁷; and (iii) reducing positive perceptions of smokers.¹³⁴⁸ Plain packaging also increases the effectiveness of health warnings by minimizing distractions of pack design and elements that suppress risk perception, as indicated by studies demonstrating (a) increases in visual attention paid to the warnings; and (b) increases in health warning recall and perceptions about the warnings' believability and seriousness.¹³⁴⁹ Pack

standardization also limits the ability of the pack to mislead by preventing the use of descriptors, packaging design, colour, and structural innovation to mislead consumers about the harmfulness of tobacco products.¹³⁵⁰ Both directly and via each mechanism, the TPP measures affect consumer intentions and behaviour with respect to smoking.¹³⁵¹

7.452. Australia adds that the evidence supporting tobacco plain packaging is extensive, comprehensive, and reliable, and the complainants' critiques fail to consider its "overwhelming weight" and "convergent nature". The complainants instead exaggerate the studies' limitations and ignore their strengths, among other errors.¹³⁵² The most appropriate approach to discerning the effects of the TPP measures in the early stages of its introduction was to rely upon experiments and surveys which consider drivers of choice, attitudes and, ultimately, the elicitation of behavioural intentions, one of the strongest predictors of future behaviour.¹³⁵³ The complainants' dismissal of this evidence is mistaken, as non-behavioural variables are commonly relied on in consumer, psychology, and marketing research journals and textbooks, and are considered strong predictors of behaviour in tobacco control.¹³⁵⁴ Further, empirical evidence demonstrates the effect of the TPP measures on smoking-related behaviour¹³⁵⁵, as the complainants necessarily concede as a consequence of their argument that the TPP measures have reduced consumers' willingness to pay for certain tobacco products.¹³⁵⁶

7.453. The principal basis on which the complainants argue that the TPP measures are not capable of contributing to their objective is their contention that the quantitative evidence does not indicate discernible reductions in smoking prevalence and tobacco consumption in Australia.¹³⁵⁷ The complainants have failed to establish that tobacco plain packaging will increase tobacco consumption¹³⁵⁸, or that prevalence and consumption have not declined since the introduction of tobacco plain packaging. Australia considers the complainants' empirical post-implementation evidence on prevalence and consumption to be fundamentally flawed, and submits that the post-implementation data indicates that the TPP measures have resulted in discernible reductions in prevalence and consumption.¹³⁵⁹

7.454. Australia argues, however, that it has always been its expectation that the TPP measures will have their greatest effects in the long term.¹³⁶⁰ As the measures have been in operation for a limited period of time, the utility of the short-term quantitative data is "limited", particularly in light of its "numerous difficulties". Short-term prevalence and consumption data is likely to "mask[]" changes in initiation, consumption, relapse, as demonstrated by the delayed impact that the introduction of GHWs had upon smoking prevalence rates in Canada.¹³⁶¹ The Appellate Body has acknowledged that the contribution of a technical regulation to its objectives, particularly in the case of a public health measure, need not be "immediately observable", and that effects of certain complex public health measures "can only be evaluated with the benefit of time".¹³⁶² Accordingly, "any inability on the part of the complainants' experts to isolate a statistically significant plain packaging effect in short term prevalence and consumption datasets at this point

in time does not prove that the tobacco plain packaging measure is not capable of contributing to its legitimate public health objectives".¹³⁶³

7.455. Australia further argues that "having regard to the nature of the objective of the tobacco plain packaging measure, its characteristics as revealed by its design and structure, and the nature, quantity and quality of evidence available, the Panel should determine the measure's degree of contribution in qualitative terms".¹³⁶⁴ Australia submits that there is no requirement to quantify the degree of contribution of a challenged technical regulation and that, depending upon the circumstances, it is sufficient to demonstrate contribution through "qualitative reasoning based on a set of hypotheses that are tested and supported by scientific evidence".¹³⁶⁵ Australia refers to the Appellate Body's finding in *EC – Seal Products* that, where evidence of the actual operation of the measure was "limited and uneven", contribution could be demonstrated by qualitative evidence indicating that the measure is "**capable** of making and does make **some** contribution to its objective, or that it did so to a **certain extent**".¹³⁶⁶ This, Australia submits, "is the methodology best suited to yielding a correct assessment of contribution in the circumstances" of this measure.¹³⁶⁷ Australia has presented evidence that "overwhelmingly establishes a causal link" between the specific mechanisms through which it is designed to operate and its general objectives – including evidence that tobacco packaging is a form of advertising, tobacco packaging affects perceptions of tobacco products, and tobacco packaging influences smoking behaviour. It adds that "[t]he aptness of tobacco plain packaging to contribute to its long term objectives is further bolstered by the fact that 130 parties to the FCTC recommended this precise measure as a means of furthering the FCTC's public health objectives".¹³⁶⁸

7.2.5.3.2 Main arguments of the third parties

7.456. Argentina, quoting the Appellate Body report in *US – COOL*, states that panels adjudicating a claim under TBT Article 2.2 must seek to ascertain the degree to which a technical regulation contributes to the achievement of a legitimate objective from "the design, structure, and operation of the technical regulation, as well as from evidence relating to its application". It further notes that the Appellate Body has explained, in the context of Article XX of the GATT 1994, that "a panel must assess the contribution to the legitimate objective actually achieved by the measure at issue".¹³⁶⁹

7.457. Brazil believes that the measures' "degree of achievement" should be discerned by the design, structure and operation of the measure.¹³⁷⁰ Brazil states that evidence relating to the application of the measure "should be taken into account as an objective piece of information with which to evaluate the design, structure, and operation of a measure", in part to ensure that measures that have not been fully implemented, but are apt to contribute, can still be deemed consistent with the covered agreements. It also suggests that in situations where measures have been recently implemented, panels may wish to apply "a longer temporal perspective".¹³⁷¹

7.458. Referring to the Appellate Body report in *US – COOL (Article 21.5 – Canada and Mexico)*, Canada states that "the nature of the objective of the technical regulation, its characteristics as revealed by its design and structure, and the nature, quantity, and quality of evidence that is available will have a bearing on whether the technical regulation's degree of contribution to its objective can be assessed in quantitative or qualitative terms". Further, "it is the

¹³⁷¹ Brazil's third-party response to Panel question No. 6.

overall degree of contribution that a measure makes to its objective that is relevant in identifying the contribution of the measure in issue, rather than any isolated aspect of contribution".¹³⁷²

7.459. According to Canada, given the recent implementation of the plain packaging measure, and the fact that the TPP Act forms part of a comprehensive regime designed to address a complex public health problem, post-implementation empirical evidence should be viewed together with relevant quantitative and qualitative future projections of the contribution of the measure to its objective.¹³⁷³

7.460. China also recalls the Appellate Body's guidance that a measure's degree of contribution may be discerned from the design, structure, operation, and application of the measure. It notes that a Panel must assess the measure's actual contribution, not its intended contribution.¹³⁷⁴ The Appellate Body indicated in *US – COOL (Article 21.5 – Canada and Mexico)* that the degree of contribution can be assessed in either quantitative or qualitative terms, depending on the particular circumstances of a given case.¹³⁷⁵ In these proceedings, evidence concerning the post-implementation period may not offer decisive guidance, considering the relatively recent implementation of the measures.¹³⁷⁶ China also argues that compliance with Article 2.2 does not require a minimum threshold of contribution. Rather, a low degree of contribution might be sufficient if the extent of trade-restrictiveness is low.¹³⁷⁷

7.461. The European Union notes that the Appellate Body has indicated, in the context of Article XX of the GATT 1994, that contribution may be demonstrated by reference to "evidence or data, pertaining to the past or present" or by "a demonstration that the measure is apt to produce **a ... contribution**", possibly by reference to **"quantitative projections into the future or qualitative reasoning based on a set of hypotheses that are tested and supported by sufficient evidence"**.¹³⁷⁸ It encourages the Panel to apply an appropriately "long term temporal perspective" that would permit the measures to produce their intended effects.¹³⁷⁹ It notes that the Panel "must consider" evidence that is offered regarding the post-implementation period, but believes the weight to be assigned to any particular evidence should be determined on a case-by-case basis.¹³⁸⁰

7.462. The European Union suggests that the Panel consider that the measures are "part of a comprehensive strategy of tobacco control measures" and that the Appellate Body has observed in similar situations that a measure's contribution may prove difficult to isolate in the short term.¹³⁸¹ In examining the actual effects of the measure, the Panel will need to consider whether or not there is a genuine and substantial relationship of cause and effect between the measure and the observed effects. In the event that the Panel is unable to separate and distinguish the causal impact of the measure at issue from other variables, the measure contributes to the objective within the meaning of Article 2.2 of the TBT Agreement.¹³⁸²

7.463. Japan notes that the Appellate Body has held that "a panel adjudicating a claim under Article 2.2 must seek to ascertain from the design, architecture, structure and operation of the technical regulation, as well as from evidence relating to its application - **to what degree ... the challenged technical regulation actually contributes to the achievement of the legitimate objective pursued by the Member**".¹³⁸³ The Appellate Body has also noted, in the context of assessing the contribution of a measure at issue, that "the nature of the objective of a technical regulation at issue, its characteristics as revealed by its design and structure, and the nature, quantity, and

quality of evidence available, may have a bearing on whether a relevant factor ... can be assessed in quantitative or qualitative terms under Article 2.2, as well as on the degree of precision with which such an analysis can be undertaken".¹³⁸⁴

7.464. Japan considers that evidence concerning the post-implementation period can be used as evidence relating to the measure's application, and thus may be used to confirm the analysis of the design, structure and operation of technical regulation for determining the contribution of the measure to its legitimate objectives. Such evidence should not be given decisive weight in part because it is difficult to isolate the actual contribution that can be attributed only to the measure in the post-implementation period.¹³⁸⁵

7.465. Malawi contends that evidence of an "actual effective contribution of technical regulations to the stated objective" is required to confirm the TPP measures.¹³⁸⁶ The information and data presented by the complainants indicate that the measures have not been effective and have failed to change smoking behaviour. Australia has relied upon research papers that do not examine the effect of the measures on smoking behaviour¹³⁸⁷, and its expert has noted that "the smoking rate is the result of many factors that have nothing to do with packaging".¹³⁸⁸ It contends that there is no information deficit in Australia with respect to the harmful effects of smoking, and argues that the measures have not had any impact on the health warnings or information on the relative harmful nature of tobacco products.¹³⁸⁹

7.466. New Zealand supports Australia's position that "the tobacco plain packaging measure contributes to its public health objectives by reducing the appeal of tobacco products, increasing the effectiveness of graphic health warnings, and reducing the ability of tobacco retail packaging to mislead consumers about the harmful effects of smoking or using tobacco products".¹³⁹⁰ New Zealand suggests that, when assessing the significance and weight to be assigned to each piece of evidence, the Panel consider that the measure is part of a comprehensive suite of measures whose impact will be most felt most significantly in the long term. The Panel is entitled to rely upon post-implementation evidence, but immediate post-implementation evidence will "clearly be less persuasive" when a measure's objective is to change behaviour over the long term.¹³⁹¹

7.467. New Zealand critiques the report submitted by Ukraine's expert, Professor Klick, which compared smoking status in Australia pre and post-plain packaging to smoking status in New Zealand (a country without tobacco plain packaging), over the same period of time. It agrees with Australia's expert Dr Chipty that the report contains flawed analysis and draws invalid conclusions. First, the study sets up a false and virtually impossible evaluation test by looking for a marked short-term reduction in long-term outcomes, namely population smoking prevalence and tobacco consumption. Significant changes in the rate of initiation and the likelihood of quitting or not relapsing – especially in the younger age groups that plain packaging targets – cannot be reliably detected by measuring the population-wide statistics in the short term. Second, the use of New Zealand as a comparison case is superficial and misleading, due to the failure to account for differences between the countries in the manner and timing of tobacco control interventions, particularly a 10% excise tax increase undertaken uniquely by New Zealand in January 2013. Third, the data sets used by Professor Klick cannot be relied upon. The sales data relied upon to measure consumption displays volatility, fails to control for confounding factors (such as stock-piling in advance of a tax increase), and contains gaps which were filled-in with data sourced from the tobacco industry. Survey data used to measure prevalence may not be representative of the population, and does not include people who have never smoked, thereby rendering it incapable of measuring initiation of new smokers. Fourth, the presentation of the survey results is misleading. Professor Klick used data sourced after tobacco products in plain packages were already on sale to represent the pre-plain packaging smoking rate, and utilized an averaging

¹³⁹¹ New Zealand's third-party response to Panel question No. 6; and New Zealand's third-party statement, para. 16.

method that produced misleading results. A more natural presentation of the results reveals that smoking rates fell further in Australia than New Zealand and reached the same level at the end of the surveyed period. Due to its fundamental flaws, the report should not be taken into account or given any weight in the Panel's overall assessment of the disputing parties' evidence.¹³⁹²

7.468. Nicaragua notes that the Appellate Body has counselled that panels must assess the contribution "actually achieved" by the measure at issue¹³⁹³, and that "empirical evidence of the measure's actual effect on smoking behaviour is the most reliable way to test its effectiveness" and should be assigned "considerable weight".¹³⁹⁴ Nicaragua does not consider that the measure was implemented only "relatively recently", and submits that two years is a proper period for assessing the effectiveness of a measure.¹³⁹⁵

7.469. Qualitative survey and expert evidence as well as quantitative market evidence indicate that the plain packaging measure has not had any positive effect on the protection of health and is not likely to have any such effect in the future.¹³⁹⁶ Qualitative evidence which examines the reasons why people smoke and why they find it hard to quit also confirms that trademarks and packaging are not drivers of smoking behaviour.¹³⁹⁷ Economic analysis confirms that it is not plausible that the measure will contribute in any meaningful way to the reduction of prevalence.¹³⁹⁸ Compared to the complainants' reference to direct behavioural evidence, Australia's reliance on predictions by behavioural scientists and psychologists and studies demonstrating that people consider the plain packs with a 75% GHW to be less pretty is unpersuasive and fails to distinguish the effects of the larger GHW from the TPP measures. The empirical post-implementation data show that the measure has had no effect on smoking behaviour, and reliance on self-reported intentions or general beliefs and perceptions is insufficient to support an argument that plain packaging is contributing to its health protection objective.¹³⁹⁹

7.470. Nigeria considers that the evidence presented by the complainants demonstrates that the TPP measures have failed to contribute to the reduction of smoking and is not likely to reduce smoking in the future.¹⁴⁰⁰ The facts show that two years after the implementation of plain packaging, the measure has not contributed to the reduction of smoking or the changing of smoking behaviour more generally.¹⁴⁰¹ Economic analysis of supply and demand confirms the unlikely nature of any positive contribution of plain packaging.¹⁴⁰² It seems speculative to argue that the TPP measures are likely to contribute in the future. The experts consider that packaging and trademarks do not play a role in taking up smoking or quitting. Nigeria also notes there is general awareness that smoking is very dangerous to consumers' health.¹⁴⁰³

7.471. Norway argues that the Appellate Body has held that the degree of contribution "may be discerned from the design, structure and operation of the technical regulation, as well as from evidence relating to the application of the measure".¹⁴⁰⁴ It notes that in *US – COOL (Article 21.5 – Canada and Mexico)*, the Appellate Body indicated that the nature of the objective of the technical regulation at issue, its characteristics as revealed by its design and structure, and the nature,

quantity and quality of evidence available, may have bearing on whether contribution can be assessed in quantitative or qualitative terms, as well as on the degree of precision with which such analysis can be undertaken. In the same report, the Appellate Body reiterated it may suffice to demonstrate via quantitative reasoning or qualitative projections that the measure was "apt to produce a material contribution" to its objective in cases where it is difficult to isolate a measure's contribution in the short term.¹⁴⁰⁵

7.472. Norway submits that "one cannot draw conclusions exclusively from data on smoking prevalence in itself" and "consumer perceptions are relevant for the purposes of assessing the effect of tobacco control policies".¹⁴⁰⁶ Norway suggests that the Panel "accord[] greater weight to the design, structure and operation of the measure", given the long-term nature of the measure and the challenges associated with obtaining robust empirical evidence.¹⁴⁰⁷

7.473. In assessing contribution, Norway suggests that the Panel take into account the difficulties in measuring the effects of an instrument working in synergy with other measures, the overarching objective of promoting public health, and the expectation that the full effects of the measure may manifest themselves gradually over several years.¹⁴⁰⁸ It agrees with Australia that the TPP measures make "a unique contribution to its general public health objectives".¹⁴⁰⁹

7.474. In Norway's view, it must amongst others be considered that (1) advertising is an effective means to enhance sales, especially to reach new and young customers, and that banning advertising effectively reduces tobacco use; (2) the more comprehensive the advertising ban is, the more efficient it is; and (3) the packaging of tobacco products has effects similar to those of traditional advertising.¹⁴¹⁰

7.475. Oman states that the TPP measures aim to prevent tobacco advertising and promotion, and achieve its stated goals of: reducing the attractiveness and appeal of tobacco products to consumers, particularly young people; increasing the noticeability and effectiveness of mandated health warnings; and reducing the ability of the tobacco product packaging to mislead consumers about the harms of smoking. It subscribes to the argumentation and factual evidence articulated by Australia that clearly demonstrates that plain packaging contributes to a reduction in smoking rates and tobacco consumption.¹⁴¹¹

7.476. Singapore states that the contribution of the TPP measures to its public health objectives has to be understood and evaluated in the context of the comprehensive suite of tobacco control measures in Australia.¹⁴¹² There is a wealth of evidence supporting the measures' effectiveness. No single study forms an evidence base by itself, but multiple well-conducted studies that point towards the same conclusions provide a strong evidence base for public policy. On the other hand, the expert reports relied on by the complainants to challenge the evidence base for plain packaging are flawed.¹⁴¹³

7.477. As the impact of new tobacco control policy measures on behaviour cannot be observed before implementation, new measures are inevitably based on predicted models of behavioural intention on subsequent tobacco use behaviours.¹⁴¹⁴ Singapore disagrees with the "complainants' narrow focus on smoking prevalence as the primary basis for assessing ... contribution"¹⁴¹⁵ and states that the Panel should consider "the totality of the evidence", which includes "post-hoc"

¹⁴¹⁵ Singapore's third-party submission, para. 69.

evidence.¹⁴¹⁶ Researchers from Australia have produced post-implementation data to demonstrate the TPP measures have a) reduced the appeal of tobacco packs; b) increased the visibility of GHWS; and c) reduced the ability of tobacco packaging to mislead consumers about the harms of smoking. Nevertheless, the Appellate Body has cautioned that "the results obtained from certain actions ... can only be evaluated with the benefit of time".¹⁴¹⁷

7.478. Uruguay notes that the TPP measures are an important component of a comprehensive public health policy.¹⁴¹⁸ The measures are based on scientific and technical information, and Australia has demonstrated a reduction in consumption, an increase in the understanding of tobacco impacts on health, and a correlation and causal link to the measures.¹⁴¹⁹ Australia has shown that the measures affect the behaviour of consumers and potential consumers of tobacco, particularly adolescents.¹⁴²⁰ It is critical to note that, although Australia has provided reliable information and statistics, the TPP measures can take time before concrete results are demonstrated and assessments can be done.¹⁴²¹

7.479. Uruguay notes that tobacco manufacturers have used deceptive descriptors such as "light" and "mild" on packaging, ostensibly to denote flavour and taste; however, "light" and "mild" brands are often promoted, either subliminally or overtly, as "healthier" products although scientific evidence demonstrates beyond any doubt that all cigarettes are equally harmful. Tobacco manufacturers have also used numbers in the names of cigarette brands, with up to 80% of smokers interpreting a lower number as an indicator of less tar and reduced risk.¹⁴²² After misleading terms on cigarette packages were prohibited, the tobacco industry continued the deception by using brand colours and variants with the aim of making consumers believe that one brand presentation is less harmful than another.¹⁴²³

7.480. Uruguay contends that packaging design and colour is important in affecting consumer perceptions of relative safety, and even taste.¹⁴²⁴ So-called "plain" packaging brands, with the colours and brand images removed, are normally classified as less attractive and of lower quality than the designs of the original packs. "Plain" packages also increase the relevance and recall of health warnings on packages. Generally speaking, the findings suggest that many of the packaging elements currently used by manufacturers are inherently misleading to consumers and provide strong support for the effectiveness of "plain packaging".¹⁴²⁵

7.481. Zimbabwe contends that there is no probative evidence demonstrating a meaningful contribution of the TPP measures to the reduction of smoking prevalence in Australia. The studies to which Australia consistently referred in WTO committees and which were considered by Australia at the time of the adoption of the measure are speculative, partial and based on questionable methodologies. Based on the evidence submitted by the complainants, plain packaging does not contribute to raising the consumers' already universal awareness of the risks associated with smoking nor does it provide a positive stimulus to quit. More importantly, the market data available since the introduction of plain packaging does not reveal a further reduction in smoking or a positive change in smoking behaviour.¹⁴²⁶

7.482. Zambia states that it fails to see the contribution of the TPP measures to their objective. After two years, no evidence shows that it reduces smoking prevalence or changes in smoking behaviour. The qualitative and quantitative evidence placed before the Panel shows the absence of

contribution to the fulfilment of Australia's stated objective and thus that there is no reason to expect any effect of the measure in the future.¹⁴²⁷

7.2.5.3.3 Approach of the Panel and structure of the analysis

7.483. As described above, our task at this stage is to determine, based on the arguments and evidence before us, "to what degree, or if at all", the TPP measures contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products. In particular, we must seek to determine the actual contribution of the measures, "as written and applied", to this objective.¹⁴²⁸

7.484. As observed by the Appellate Body, "[t]he degree of achievement of a particular objective may be discerned from the design, structure, and operation of the technical regulation, as well as from evidence relating to the application of the measure".¹⁴²⁹ However, no single approach is suited to conducting this type of analysis in all cases. Rather, we must adopt or develop "a methodology that is suited to yielding a correct assessment"¹⁴³⁰ in the circumstances of this case.

7.485. As described above, all parties have presented arguments and evidence concerning the "design, structure and operation" of the TPP measures as well as on their post-implementation effects, or "application". The parties appear to agree that the relevant legal and evidentiary standards under Article 2.2 of the TBT Agreement require a panel to consider all of the relevant evidence before it.¹⁴³¹ However, they have conflicting interpretations of this evidence. In essence, the complainants consider that the TPP measures cannot contribute to their objective through the mechanisms identified in the TPP Act, and that post-implementation evidence shows that smoking prevalence has not in fact been reduced as a result of the TPP measures. Australia in essence responds that, contrary to the complainants' assertions, the measures are designed on the basis of a sound evidence base, and that available post-implementation evidence confirms that the measures are contributing to their objective of reducing smoking.

7.486. The parties also disagree generally on *how* the effects of the measures should be assessed, and the relative weight to be given, in the circumstances of this case, to qualitative and quantitative evidence regarding the measure's design and structure (mostly predating their implementation) and to post-implementation evidence relating to the application of the measures and their impact upon various smoking-related behaviours and outcomes. The complainants consider that, since post-implementation information about actual smoking behaviours is available, this should be the primary basis for the Panel's assessment of the contribution of the measures to their objective of reducing smoking in Australia.¹⁴³² Australia considers that in the early stages of the introduction of the measures, the most appropriate way to discern their effects was to rely on experiments and surveys which consider drivers of choice, attitudes and, ultimately, the elicitation of behavioural intentions.¹⁴³³ It argues that the Panel should determine the measures' degree of contribution to their objectives in qualitative terms, as this is, in Australia's view, the methodology best suited to yielding a correct assessment in the circumstances of these particular measures.¹⁴³⁴

7.487. We therefore first consider the overall approach that will be best suited to our assessment, taking into account both the characteristics of the measures at issue and the nature and extent of

¹⁴³⁴ Australia's response to Panel question No. 71, para. 192.

the evidence presented to us. In approaching this determination, while we are mindful that the burden is on the complainants to demonstrate the existence of a violation of Article 2.2¹⁴³⁵, we find it appropriate to consider, as a starting point, the "design, structure and operation" of the TPP measures, as described by Australia, to inform our understanding of the nature of the assessment to be conducted in the circumstances of these proceedings. This understanding will inform the selection of an appropriate methodology to assess the degree of contribution of the measures to their objective.¹⁴³⁶

7.488. As described by Australia¹⁴³⁷, by design, the TPP measures are intended to operate on the basis of a "causal chain model" or "mediational model" based on three specific mechanisms through which their public health objectives are to be achieved.¹⁴³⁸ These objectives and mechanisms are reflected in Sections 3(1) and 3(2) of the TPP Act.

7.489. Specifically, as reflected in Section 3(1)(a) of the TPP Act, the TPP measures are intended to improve public health by (i) discouraging people from taking up smoking, or using tobacco products; (ii) encouraging people to give up smoking, and to stop using tobacco products; and (iii) discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing; and (iv) reducing people's exposure to smoke from tobacco products.¹⁴³⁹ Section 3(2) of the TPP Act provides, in turn, that:

(2) It is the intention of the Parliament to contribute to achieving the objects in subsection (1) by regulating the retail packaging and appearance of tobacco products in order to:

- (a) reduce the appeal of tobacco products to consumers; and
- (b) increase the effectiveness of health warnings on the retail packaging of tobacco products; and

¹⁴³⁵ Appellate Body Report, *US – Tuna II (Mexico)*, para. 323; and *US – COOL*, para. 379.

¹⁴³⁶ We note the following observation of the Appellate Body in the context of Article 2.1 of the TBT Agreement:

[H]aving promulgated the technical regulation containing the regulatory distinctions that result in the detrimental impact, the responding Member will be best situated to adduce the arguments and evidence needed to explain why, contrary to the complainant's assertions, the technical regulation *is* even-handed and thus why the detrimental impact on imports stems exclusively from a legitimate regulatory distinction.

Appellate Body Report, *US – Tuna II (Mexico) (Article 21.5 – Mexico)*, para. 7.33. (emphasis original)

Similarly, in an analysis of the measure's contribution to its legitimate objective in the context of Article 2.2, we consider that Australia, as the implementing Member, will be best situated to explain what the design and structure of the measures are and therefore how they are intended to operate to contribute to their objective. We also note the first sentence of Article 2.5, which states: "A Member preparing, adopting or applying a technical regulation which may have a significant effect on trade of other Members shall, upon the request of another Member, explain the justification for that technical regulation in terms of the provisions of paragraphs 2 to 4". See also para. 7.1087 below.

¹⁴³⁷ See para. 7.451 above.

¹⁴³⁸ See Australia's first written submission, section II.I.1 and para. 142 (referring to Fong Report, (Exhibit AUS-14), paras. 14-15).

¹⁴³⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 3. Section 3 of the TPP Act states:

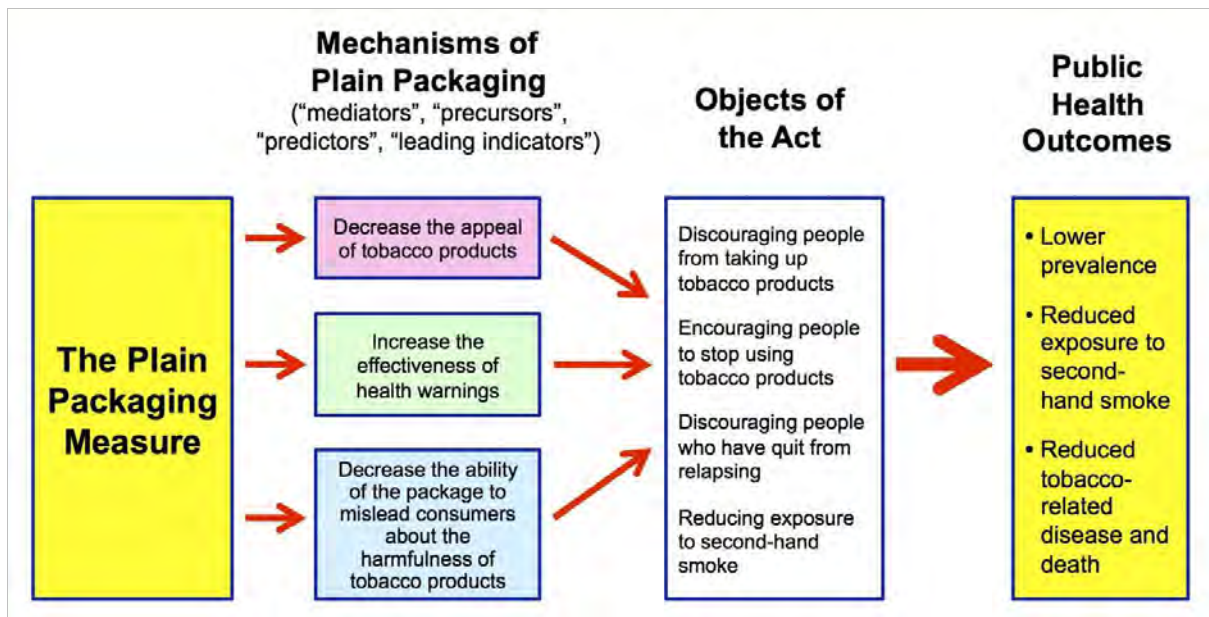

- (1) The objects of this Act are:
 - (a) to improve public health by:
 - (i) discouraging people from taking up smoking, or using tobacco products; and
 - (ii) encouraging people to give up smoking, and to stop using tobacco products; and
 - (iii) discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing; and
 - (iv) reducing people's exposure to smoke from tobacco products;

- (c) reduce the ability of the retail packaging of tobacco products to mislead consumers about the harmful effects of smoking or using tobacco products.¹⁴⁴⁰

7.490. As Australia describes it in Figure 12 below, the TPP measures are intended to contribute to Australia's objective in the following manner:

- Tobacco plain packaging is intended to reduce the appeal of tobacco products to consumers, increase the effectiveness of the health warnings, and reduce the ability of the packaging to mislead consumers about the harmful effects of smoking (see second column in Figure 12 below). Australia refers to these processes as the TPP mechanisms, as will the Panel.¹⁴⁴¹
- If the TPP measures operate as intended upon any one or any combination of the above three mechanisms, then Australian consumers are expected to be discouraged from taking up smoking (initiation) or resuming smoking (relapse), and to be encouraged to stop smoking (cessation) and reduce exposure to second-hand smoke (see third column in Figure 12 below). We will refer to initiation, relapse, cessation as, more generally, smoking behaviours relating to the use of tobacco products.¹⁴⁴²
- As a consequence, positive public health outcomes, specifically reduced use of, and exposure to, tobacco products, and an associated reduction in tobacco-related disease and death, would arise (see fourth column in Figure 12 below).

Figure 12: Australia's depiction of the TPP Act

Source: Australia's first written submission, para. 144 and Figure 9; and Fong Report, (Exhibit AUS-14), p. 25.

¹⁴⁴⁰ TPP Act, (Exhibits AUS-1, JE-1), Section 3(2). See also TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), pp. 1-2 and 6-7; and TPPA Regulation Explanatory Statement, (Exhibit JE-22), pp. 1 and 10-11.

¹⁴⁴¹ At various points in time, Australia and its experts have also referred to these mechanisms also as "mediators", "precursors", "predictors", and "leading indicators". See Australia's first written submission, para. 144 and Figure 9; and Fong Report, (Exhibit AUS-14), p. 25.

¹⁴⁴² Australia has labelled these smoking behaviours "Objects of the Act". We note that we determined in section 7.2.5.1.1.2 that the objective of the measures within the meaning of Article 2.2 of the TBT Agreement is to improve public health by reducing the use of, and exposure to, tobacco products. For the purpose of these Reports, "smoking behaviours" are those directly related to the use of tobacco products, including, for example, initiation, cessation, relapse, and consumption. "Smoking-related behaviours" are behaviours that are associated with these behaviours, such as purchasing tobacco products, calling a Quitline, concealing a pack in public, and eye movements directed to GHWs.

7.491. By design, therefore, the TPP measures, by changing the packaging and appearance of tobacco products, are intended to act in the first instance on the appeal of tobacco products, the effectiveness of GHWs, and the ability of the pack to mislead consumers about the harmfulness of tobacco products (the *mechanisms*), which in turn is intended to influence smoking *behaviour*, resulting in positive public health outcomes. Impacts on the three mechanisms in the "causal chain" may be described as "non-behavioural" or "proximal" outcomes, while intention and behavioural outcomes, such as increased intentions to quit and increased quit attempts, which relate more closely to smoking behaviours such as initiation, relapse, cessation, and exposure to second-hand smoke, can be described as "distal" outcomes.¹⁴⁴³

7.492. In the words of Australia's expert Professor Fong, the expected "causal chain" reflected in the design of the TPP measures can be described as follows:

One can make reasonable and confident predictions that if the plain packaging measure is shown to decrease appeal and/or increase the effectiveness of health warnings and/or decrease the ability of the package to mislead consumers about the harmfulness of tobacco products, the Objectives of the Act will likely be achieved. If the Objectives of the Act are achieved then this will lead to positive short-term and longer-term public health outcomes.¹⁴⁴⁴

7.493. The complainants dispute the evidentiary base underlying this design, and therefore the capacity of the measures, as designed, to produce the intended outcomes on smoking behaviours through the specific mechanisms described in this "mediational model".¹⁴⁴⁵ They also consider that available evidence on the actual application of the measures demonstrates that they have not in fact had the intended impact on tobacco consumption and prevalence.¹⁴⁴⁶ Further, the complainants consider that, to the extent that such evidence of *actual* smoking behaviours is now available, this should be given preponderant weight in the Panel's assessment.¹⁴⁴⁷

¹⁴⁴³ Fong Report, (Exhibit AUS-14), paras. 14-15 and 88-90 (describing a "causal chain" and "mediational model"); Chaloupka Rebuttal Report, Exhibit (AUS-582), para. 2 (referring to "proximal" and "distal" outcomes); Australia's first written submission, paras. 142-144 and Figure 9 (describing a "causal chain"); NTPPTS Technical Report, (Exhibits AUS-570, HND-124, DOM-307), p. 21 (referring to "proximal" and "distal" outcomes).

"Distal" has been defined as follows: "outcomes such as increased interest in quitting, which ultimately lead to changes in tobacco use behaviors, including quit attempts" (Chaloupka Rebuttal Report, (Exhibit AUS-582), para. 2); "evaluation of tobacco control policies needs to focus on more proximal exposure, belief and intention outcomes ... before assessing more distal behavioural outcomes ... the relationship between proximal belief outcomes with more distal intention and behaviour outcomes is underpinned by a large body of literature". NTPPTS Technical Report, (Exhibits AUS-570, HND-124, DOM-307), pp. 6 and 21.

"Proximal outcomes" have been described as "reducing the appeal of tobacco products and increasing the noticeability of graphic health warnings" (Chaloupka Rebuttal Report, (Exhibit AUS-582), para. 2); and "belief outcomes". NTPPTS Technical Report, (Exhibits AUS-570, HND-124, DOM-307), pp. 6 and 21. We note that Australia's expert Professor Chaloupka also refers to "intermediate" outcomes, such as "greater knowledge about the health consequences of tobacco use and increased perceptions of the risks from tobacco use". Chaloupka Rebuttal Report, (Exhibit AUS-582), para. 2.

See also, referring to the "causal chain" offered by Australia, Honduras's second written submission, para. 150; Dominican Republic's second written submission, paras. 371-376; Cuba's second written submission, paras. 287-289; and Ajzen Report, (Exhibit DOM/HND/IDN-3), paras. 6-7 and 29-33. In analysing the results of the NTPPTS, the complainants' experts refer to "proximal" and "distal" outcomes, as they were denoted in the NTPPTS Technical Report. See Ajzen et al. Data Report, (Exhibit DOM/IDN-2), paras. 47, 51, 83, and 233. The complainants frequently refer to the three mechanisms as "non-behavioural". See *ibid.* para. 51; Honduras's second written submission, para. 150; Dominican Republic's second written submission, paras. 14 and 378; and Klick Supplemental Rebuttal Report, (Exhibit HND-122), para. 58.

¹⁴⁴⁴ Australia's first written submission, para. 143 (quoting Fong Report, (Exhibit AUS-14), para. 90).

¹⁴⁴⁵ See section 7.2.5.3.5.1 below.

¹⁴⁴⁶ See Appendices C and D below.

¹⁴⁴⁷ See, e.g. Honduras's response to Panel question No. 71, p. 34; Dominican Republic's second written submission, para. 310; Dominican Republic's response to Panel question No. 2, para. 21; Dominican Republic's response to Panel question No. 71, paras. 348-349; Cuba's second written submission, para. 40; Cuba's response to Panel question No. 71 (annexed to its response to Panel question No. 138) (agreeing with the response to Honduras to Panel question No. 71); and Indonesia's response to Panel question No. 71, para. 102.

7.494. In Australia's view, the focus of the Panel in its contribution analysis is not on quantitative evidence of immediately observable effects of the TPP measures in the limited period of time since its introduction. For Australia, while such evidence is relevant to the Panel's inquiry, the Panel must give due regard to the nature of the measure's public health objectives, the specific mechanisms through which the measure is designed to make its contribution to these objectives and the nature, quantity and quality of all the available evidence across a range of relevant fields.¹⁴⁴⁸ Australia considers that "[h]aving regard to the nature of the objective of the tobacco plain packaging measure, its characteristics as revealed by its design and structure, and the nature, quantity and quality of evidence available" the Panel should determine the measure's degree of contribution in **qualitative** terms and must accord greater weight to the design, structure and operation of the measure.¹⁴⁴⁹

7.495. As we have determined above, the objective of the measures is to improve public health by reducing the use of, and exposure to, tobacco products. The fulfilment of this objective through the TPP measures is predicated on their ability to influence smoking **behaviours**, such as initiation, cessation, and relapse. A consideration of the impact of the measures on such behaviours is therefore, **a priori**, directly relevant to an assessment of the degree of contribution of the measures to this objective. Specifically, it is consistent with the design and structure of the measures that evidence relating to their actual impact on the use of tobacco products in Australia should inform an assessment of their degree of contribution to their objective.

7.496. Indeed, Australia's expert Professor Fong points out that "tobacco control policies are best measured by their influence on downstream psychosocial variables such as knowledge, beliefs, attitudes and intentions, **and on subsequent tobacco use behaviours**".¹⁴⁵⁰ This is consistent with observations by researchers in the field of tobacco control that "the optimal test of plain packaging would be its implementation and evaluation in a population-based setting"¹⁴⁵¹ and that notwithstanding any intuitive appeal, tobacco control policies "must be evaluated to provide concrete evidence of their effects"¹⁴⁵² as **"one cannot ... be certain of the effectiveness of interventions before they are implemented"**.¹⁴⁵³ Thus, "[t]obacco control practitioners and policy-makers need to be open to the possibility that data from evaluation efforts will reveal that the assumptions underpinning the intervention are flawed".¹⁴⁵⁴ We are also mindful that what we must ascertain is the **actual** degree of contribution of the measures, as designed and as applied.

7.497. We therefore consider that, to the extent that relevant evidence is available, information relating to actual smoking behaviours and the use of tobacco products in Australia following the implementation of the measures should be an integral part of our assessment of the TPP measures' contribution to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.¹⁴⁵⁵ The exact weight to be accorded to this evidence will, however, depend on its nature, quality, and probative value in respect of the question before us.¹⁴⁵⁶

7.498. We also note that a significant part of the evidence before us consists of a number of studies, mostly predating Australia's implementation of the TPP measures, identified as the "plain packaging literature" (TPP literature), that sought to explore the expected operation in particular of the three mechanisms now reflected in the "causal chain" of the TPP Act. The complainants base their argument that the measures are not capable of achieving their intended outcomes in part on critiques of the reliability of these studies. The post-implementation evidence before us on the effects of the TPP measures since their entry into force also relates not only to smoking prevalence

¹⁴⁴⁸ Australia's second written submission, para. 438.

¹⁴⁴⁹ Australia's response to Panel question No. 71, paras. 192-193. (emphasis original)

¹⁴⁵⁰ Australia's first written submission, para. 146 (quoting Fong et al. 2006, (Exhibit AUS-132), pp. iii10-iii11). (emphasis added)

¹⁴⁵¹ Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)), p. 1166.

¹⁴⁵² Fong et al. 2006, (Exhibit AUS-132), p. iii3.

¹⁴⁵³ 2008 IARC Handbook, (Exhibits AUS-602, DOM-368), p. 15.

¹⁴⁵⁴ Borland and Cummings 2010, (Exhibit DOM-369), p. 632.

¹⁴⁵⁵ We note that Australia relies upon evidence relating to the actual implementation of the measures to counter the complainants' assertion that the TPP measures will cause the price of tobacco products to fall. Australia's first written submission, paras. 660-661.

¹⁴⁵⁶ See section 7.2.5.3.6 below on the nature of post-implementation evidence and the weight to be given to it.

and consumption, but also to the effect of the measures on the type of "proximal outcomes" underlying the three mechanisms described above, through which the TPP measures are designed to operate. We do not exclude, at this stage of our analysis, that such evidence relating to "proximal" outcomes reflecting the three mechanism of the TPP Act may, in combination with other relevant evidence before us, inform our assessment of the degree of contribution of the measures to their objective, to the extent that it would inform the impact of the measures on the smoking behaviours that are the ultimate target of the measures.

7.499. More generally, the relative weight to be attributed to specific evidence, including evidence relating to the design, structure and intended operation of the measures, on the one hand, and evidence relating to their application, on the other hand, will depend on the nature and quality of such evidence and its probative value for the question before us. We must assess the TPP measures' degree of contribution to their objective, as precisely as possible, based upon the totality of the relevant evidence before us.¹⁴⁵⁷ The level of precision to which this can be done will however depend on a number of factors:

[T]he nature of the objective of the technical regulation ..., its characteristics as revealed by its design and structure, and the nature, quantity, and quality of evidence available, may have a bearing on whether a relevant factor ... can be assessed in quantitative or qualitative terms ... as well as on the degree of precision with which such an analysis can be undertaken.¹⁴⁵⁸

7.500. In light of the above, we consider that evidence relating to the design, structure, and operation of the TPP measures (including their anticipated impact on "proximal" outcomes reflecting the specific mechanisms through which they are designed to operate and on smoking behaviours), as well as evidence relating to the application of the challenged measures (including evidence relating to their actual effect both on proximal outcomes reflecting the mechanisms under the TPP Act and on smoking behaviours) is *a priori* relevant to an assessment of the degree to which the TPP measures contribute to Australia's objective of reducing the use of, and exposure to, tobacco products.

7.501. The TPP measures cover "tobacco products", which the TPP Act defines as "processed tobacco, or any product that contains tobacco, that: (a) is manufactured to be used for smoking, sucking, chewing or snuffing; and (b) is not included in the Australian Register of Therapeutic Goods maintained under the *Therapeutic Goods Act 1989*".¹⁴⁵⁹ The Explanatory Memorandum to the TPP Bill adds that:

The definition of "tobacco product" in the Bill means that generally any product containing tobacco, no matter how small the amount, will be within the scope of the Bill if it was manufactured for smoking, sucking, chewing or snuffing.

This definition is based on the definition in the WHO FCTC. It is intended to encompass all tobacco products designed for human consumption, and will include, for example, cigarettes, cigars, roll-your-own tobacco, bidis, kreteks, little cigars, and dissolvable tobacco products such as tablets containing tobacco for sucking.

It is important to note that therapeutic goods, which are aimed at helping people to quit their use of tobacco products, will not be regulated by the Bill when they are included on the Australian Register of Therapeutic Goods. Products that contain nicotine but do not contain any tobacco will not be regulated by the Bill.

The broad definition of "tobacco products" may encompass some tobacco products which are unlawful, under Commonwealth, State or Territory laws that regulate the use and sale of tobacco, and that are not affected by the operation of this Bill.¹⁴⁶⁰

¹⁴⁵⁷ See Appellate Body Report, *Korea – Dairy*, para. 137.

¹⁴⁵⁸ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.211.

¹⁴⁵⁹ TPP Act, (Exhibits AUS-1, JE-1), Section 4.

¹⁴⁶⁰ TPP Bill Explanatory Memorandum, (Exhibits AUS-2, JE-7), p. 9.

7.502. As a subcategory of tobacco products, the TPP Act defines "cigarette" as "a roll of cut tobacco for smoking, enclosed in paper".¹⁴⁶¹ The above definitions also apply in the context of the TPP Regulations¹⁴⁶², which additionally define "cigar" as "a roll of cut tobacco for smoking, enclosed in tobacco leaf or the leaf of another plant"¹⁴⁶³, and "bidi" as "a tobacco product for smoking, not enclosed in paper, commonly known as a bidi".¹⁴⁶⁴

7.503. A voluminous body of evidence was submitted by the parties in these proceedings. Most of this evidence either relates to cigarettes or generally to tobacco products. Some of the evidence before the Panel is specific to cigarillos and cigars.¹⁴⁶⁵

7.504. None of the parties suggests that the approach of the Panel should differ, in respect of its analysis of the contribution of the TPP measures in respect of different tobacco products.¹⁴⁶⁶ According to Australia, the relational and comparative analyses under Article 2.2 of the TBT Agreement should mirror each other, and therefore the Panel should conduct a holistic analysis of tobacco products, rather than separate analyses of cigarettes, cigars and other tobacco products.¹⁴⁶⁷ Cuba, while not suggesting that the approach taken to the analysis should be different in respect of different tobacco products,¹⁴⁶⁸ argues that the TPP measures have a disproportionate effect on LHM cigars¹⁴⁶⁹ and will not reduce LHM cigar prevalence and consumption.¹⁴⁷⁰

7.505. To the extent that the objective pursued, and the mechanisms through which the TPP measures are intended to contribute to this objective, are the same in respect of the various products covered by the TPP measures, we see no reason to assume that a different approach would be required, in considering the contribution of the measures to Australia's objective in relation to different types of tobacco products. Nonetheless, to the extent that specific evidence is presented, that would have an impact on our conclusions concerning the degree of contribution of the measures to their objective in respect of specific tobacco products, we will consider such evidence in the course of our analysis. Accordingly, we will assess the complainants' Article 2.2

¹⁴⁶¹ TPP Act, (Exhibits AUS-1, JE-1), Section 4.

¹⁴⁶² TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3.

¹⁴⁶³ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3.

¹⁴⁶⁴ TPP Regulations, (Exhibits AUS-3, JE-2), Regulation 1.1.3.

¹⁴⁶⁵ Some evidence also addressed specifically RYO tobacco; however, no party made arguments with respect to this subgroup of tobacco products.

¹⁴⁶⁶ The Dominican Republic argues that it would be within the Panel's discretion to separately assess the evidence relating to cigars and cigarettes in its Article 2.2 analysis, but considers that there is no basis in the arguments or evidence before the Panel for a separate assessment of the trade-restrictiveness and contribution of the *alternative* measures as they apply to cigars and cigarettes, and that none of the parties has sought to make any relevant distinction in this respect. Dominican Republic's response to Panel question No. 152. Likewise, in the context of Articles 22.2 and 24.3 of the TRIPS Agreement, the Dominican Republic argues that distinctions between types of tobacco products entail no relevant factual or legal differences, although GIs are more likely to be relevant for LHM cigars. Dominican Republic's response to Panel question No. 44. Honduras similarly does not consider that a different assessment of the proposed alternative measures is required in respect of cigars and cigarettes. Honduras's response to Panel question No. 152. Further, in the context of Article 16.1 of the TRIPS Agreement, Honduras argues that there is no need for distinguishing tobacco products. Honduras's response to Panel question No. 29. Likewise, in the context of Articles 22.2 and 24.3 of the TRIPS Agreement, Honduras argues that as a matter of commercial reality, geographical indications are more likely to be relevant for LHM cigars, rather than for other tobacco products; however, the greater commercial relevance of geographical indications for LHM cigars "is not legally relevant." Honduras's response to Panel question No. 44. Indonesia states that it makes no claims regarding cigars in this dispute but incorporates by reference the above points of Honduras and the Dominican Republic. Indonesia's response to Panel question No. 152 (referring to Dominican Republic's response to Panel question No. 152; and Honduras's response to Panel question No. 152).

¹⁴⁶⁷ Australia's response to Panel question No. 152.

¹⁴⁶⁸ Cuba's response to Panel question No. 152. Likewise, in the context of Article 16.1 of the TRIPS Agreement, Cuba argues that "while the basic principles of analysis mentioned above also correspond to the effect of the plain packaging measures on cigars and cigarettes, for the reasons given, Cuba considers that the commercial impact of the measures is much greater for cigars than for cigarettes. Cigarettes are a "basic", low-value product; LHM cigars are higher value luxury products. The creation of an effective brand image and product differentiation are key for the promotion of the premium status of LHM cigars. For this reason, the obstacles on the effective use of trademarks have a much greater prejudicial impact on cigars than on cigarettes." Cuba's response to Panel question No. 29 (annexed to its response to Panel question No. 138).

¹⁴⁶⁹ Cuba's response to Panel question No. 29.

¹⁴⁷⁰ Cuba's first written submission, para. 273.

claims for tobacco products in general, while taking into account, as necessary, relevant evidence specific to certain types of tobacco products.

7.506. Finally, we note that the operation of the TPP measures, including their contribution to Australia's objective, must be viewed in the broader context of other tobacco control measures maintained by Australia. While this broader context does not remove or reduce the need to identify the contribution that the challenged measures themselves make to Australia's objective, it is a relevant consideration in our assessment, to the extent that it informs and affects the manner in which the measures are applied and operate, as a component of a broader suite of complementary tobacco control measures.¹⁴⁷¹

7.507. In the interest of clarity of exposition, we consider first the evidence before us on the design, structure, and intended operation of the TPP measures, and subsequently, the evidence relating to their actual application. However, as described above, our overall assessment will be based on the entirety of the relevant evidence, taken together.

7.508. We first address, as a preliminary matter, some general issues raised by the complainants concerning the probative value to be given to certain evidence before us.

7.2.5.3.4 Access to data and probative value of certain evidence

7.509. As described above, a considerable amount of factual evidence has been presented and relied upon by all parties in these proceedings. This includes numerous expert reports commissioned by the parties for these proceedings as well as published scientific studies in a variety of fields.

7.510. In the course of the proceedings, Australia, Ukraine¹⁴⁷², and the Dominican Republic asked the Panel to exercise its discretion pursuant to Article 13 of the DSU to request data, coding, and other materials, including material underlying expert reports commissioned for the purposes of these proceedings and certain publications relied upon by Australia or its experts.¹⁴⁷³ Taking into account the requirements of due process as well as the potential usefulness of this information to the Panel's own assessment, and without prejudice to the relevance or evidentiary weight to be ultimately accorded to this evidence, the Panel invited Cancer Council Victoria (CCV) and Cancer Council Queensland (CCQ) to provide, among other materials, the dataset underlying two published papers relied upon by Australia or its experts.¹⁴⁷⁴ Citing ethical and legal obligations, and concerns that providing the data would jeopardize its ability to conduct future studies, CCV and CCQ partly declined these requests.¹⁴⁷⁵

7.511. The Dominican Republic and Honduras have questioned the extent to which publications based upon data that they did not have direct access to can be relied upon in these proceedings. The Dominican Republic claims that it is not possible to make an objective assessment of the findings of those studies for which they have not received full access to the underlying data, and invites us to infer that the underlying data that has been withheld is less favourable to Australia.¹⁴⁷⁶ Honduras argues that it would be inappropriate for the Panel to rely on those studies, as the complainants have not had the opportunity to review the underlying data.¹⁴⁷⁷

7.512. We note that, in these proceedings, all parties have had access to, and submitted, a considerable – indeed, an unusually large – volume of evidence to support their claims and arguments. This has included the data and computer coding directly underlying numerous expert reports commissioned for the purposes of these proceedings, as well as a range of data underlying

¹⁴⁷¹ See Appellate Body Report, *Brazil – Retreaded Tyres*, para. 154.

¹⁴⁷² See section 1.6.6 above with respect to DS434.

¹⁴⁷³ See section 1.6.7.3 above.

¹⁴⁷⁴ The two papers are (a) White et al. 2015b, (Exhibits HND-135, DOM-236, DOM-288); and (b) White et al. 2015a, (Exhibits AUS-186, DOM-235). White et al. 2015b is referred to in the Slovic Report, (Exhibit AUS-12), para. 87 and in the Fong Report, (Exhibit AUS-14), para. 348.

¹⁴⁷⁵ See paras. 1.99-1.100 above.

¹⁴⁷⁶ Dominican Republic's second written submission, paras. 443-445; and Dominican Republic's response to Panel question No. 134, paras. 12-16.

¹⁴⁷⁷ Honduras's second written submission, para. 160.

certain publications relied on by Australia that sought to evaluate the effects of the TPP measures since their entry into force.¹⁴⁷⁸

7.513. We do not consider that lack of direct access to the full data underlying a peer-reviewed scientific publication should in itself lead the Panel to disregard such publication or its conclusions as evidence. We do not exclude that, where evidence is presented that may call into question the conclusions of certain research results reflected in scientific publications cited as evidence, this may be validly taken into account in assessing the probative value of that evidence in demonstrating the facts at issue. However, we see no basis for assuming that scientific publications presented as evidence in dispute settlement proceedings can only be validly considered by a panel, if access is also provided to the complete underlying research data. Indeed, as observed by Australia¹⁴⁷⁹, such an approach would render reliance on such information, and the management of evidence in dispute settlement proceedings, unduly complex and ultimately unmanageable. We note in this respect that a range of scientific sources including, where relevant, scientific publications, has been relied upon by parties and taken into account as admissible evidence in prior panel proceedings.¹⁴⁸⁰

7.514. More generally, in these proceedings, all parties have extensively discussed the validity and implications of conclusions drawn from a range of scientific studies in a variety of research fields, including on the basis of the many expert reports commissioned for these proceedings. In assessing the probative value of this evidence, we are mindful that our role is not to make scientific determinations or otherwise seek to resolve scientific debates. Rather, our task is to assist the DSB in resolving a dispute and, in this context, to make an objective assessment, based on the arguments and evidence before us, of the degree of contribution of the TPP measures to their objective, as part of a broader determination on their consistency with Article 2.2 of the TBT Agreement.

7.515. In this context, we will need to assess on the basis of the evidence before us to what extent relevant facts have been established, and the extent to which this evidence, taken as a whole, supports a conclusion that the challenged measures contribute to their objective. To the extent that this is the case, we will need to ascertain as precisely as possible to what degree they do so, in light of the nature and quality of the evidence before us. As observed above, the degree of precision with which this can be done will depend, *inter alia*, on the nature and quality of the evidence before us.

7.516. To the extent that scientific evidence is relied upon, our assessment may include in particular a consideration of whether such evidence "comes from a qualified and respected source"¹⁴⁸¹, whether it has the "necessary scientific and methodological rigor to be considered reputable science" or reflects "legitimate science according to the standards of the relevant scientific community"¹⁴⁸², and "whether the reasoning articulated on the basis of the scientific evidence is objective and coherent".¹⁴⁸³

7.517. These considerations were first identified as relevant in the context of Article 5.1 of the SPS Agreement. The assessment required in reviewing the consistency of an SPS measure under Article 5.1 of the SPS Agreement and the assessment that we are called upon to perform in the context of Article 2.2 of the TBT Agreement are not identical, but they similarly involve a consideration of relevant scientific evidence. The question that a panel must consider under Article 5.1 of the SPS Agreement relates to the existence of a proper risk assessment and whether the conclusions reached in that assessment sufficiently warrant the measure at issue. As described

¹⁴⁷⁸ See section 1.6.7.3 above.

¹⁴⁷⁹ Australia's response to Panel question No. 134, paras. 11-18.

¹⁴⁸⁰ See, e.g. Panel Reports, *US – Tuna II, (Mexico)*, paras. 7.438 fn 634 and 7.498 fn 693; and *US – Clove Cigarettes*, paras. 7.403-7.412.

¹⁴⁸¹ Appellate Body Report, *US – Continued Suspension*, paras. 591-592. See also *ibid.* paras. 598 and 601. These observations were made by the Appellate Body in the context of a consideration of the "scientific basis" of SPS measures under Article 5.1 of the SPS Agreement; however, we consider that they may be relevant, *mutatis mutandis*, to a consideration of the probative value of disputed scientific evidence in other comparable contexts.

¹⁴⁸² See Appellate Body Report, *US – Continued Suspension*, para. 591.

¹⁴⁸³ See Appellate Body Report, *US – Continued Suspension*, paras. 591-592. See also *ibid.* paras. 598 and 601.

above, we are called upon, at this stage of our analysis, to make an objective factual determination on the degree to which, "if at all", the measures contribute to their objective. In carrying out this task and arriving at factual findings in this respect, we have the duty to examine and consider all the evidence before us and to "evaluate the relevance and probative force of each piece thereof".¹⁴⁸⁴ We consider that, in this assessment, the types of considerations identified above as relevant in the context of a review of the scientific basis of a risk assessment under the SPS Agreement may, *mutatis mutandis*, shed important light on "the probative force" to be ascribed to disputed evidence of a scientific nature, also in the context of an assessment under Article 2.2 of the TBT Agreement.

7.2.5.3.5 Design, structure and operation of the measures

7.518. In this section, we focus on evidence relating to the manner in which the TPP measures are designed to operate, in other words, their "design, structure and operation". At this stage of our analysis, therefore, we focus primarily on evidence predating the implementation of the TPP measures in Australia. This is without prejudice to our subsequent consideration of evidence relating to the actual application of the TPP measures in the next section. As described earlier, our overall assessment of the degree of contribution of the measures to their objective will be based on a consideration of the entirety of this evidence.

7.519. As described above, the design underlying the structure of the TPP measures reflects a causal chain or "mediational model" whereby the adoption of a uniform, standardized presentation of tobacco products and their retail packaging (i.e. "plain" packaging) is intended to reduce the appeal of tobacco products to the consumer, enhance the effectiveness of GHWs and reduce the ability of the pack to mislead consumers about the harmful effects of smoking, and thereby affect smoking behaviours.

7.520. The complainants contest the capacity of the TPP measures to contribute to their objective through any of these mechanisms. They argue that the evidentiary base for the TPP measures, in particular the literature in support of tobacco plain packaging, is not of a quality or methodological rigour sufficient to provide a reliable basis to support the measures. They also argue that, even assuming that the measures would, as Australia argues, be apt to reduce the appeal of tobacco products, increase the effectiveness of GHWs or limit the ability of packaging to mislead consumers about the harmful effects of smoking, this will not have an impact on relevant smoking behaviours.

7.521. The complainants' critique of the body of tobacco plain packaging-related studies (TPP literature) cuts across an entire body of evidence relating to the anticipated effects of tobacco plain packaging, mostly consisting of studies predating the implementation of the TPP measures in Australia and seeking to evaluate the potential impact of tobacco plain packaging on the three mechanisms now reflected in the TPP Act. We therefore consider this horizontal critique first. We then turn to a consideration of the evidence relating to each specific mechanism and associated behavioural outcomes underlying the design and structure of the TPP measures.

7.2.5.3.5.1 Critique of the "plain packaging literature" (TPP literature)¹⁴⁸⁵

7.522. The complainants identify a group of 68 published papers, which report the results of studies conducted mostly prior to Australia's implementation of the TPP measures¹⁴⁸⁶ and primarily focusing on the potential for tobacco plain packaging to impact the "non-behavioural" or "proximal" outcomes identified in the TPP Act.

¹⁴⁸⁴ Appellate Body Report, *Korea – Dairy*, para. 137.

¹⁴⁸⁵ This expression is used by the Panel in these Reports without implying a specific list of relevant studies. As described below, the complainants have presented a set of 68 studies that they refer to as "the PP literature". They have also presented a number of expert reports containing reviews of relevant TPP-related studies, each of which defines the scope of review undertaken in the specific report. These lists overlap partially with the literature referred to by Australia. The Panel refers to this body of studies generally as "the TPP literature".

¹⁴⁸⁶ See Plain packaging literature, (Exhibit JE-24). Each of the 68 studies that were submitted as part of Exhibit JE-24 was assigned an individual exhibit number, from JE-24(1) through JE-24(68).

7.523. The complainants engage in individual critiques of specific studies, and also argue that the TPP literature as a whole, applying established social science research criteria¹⁴⁸⁷, suffers from serious methodological flaws and lacks the scientific rigour and objectivity required to form a reliable evidentiary base for a policy intervention of this kind.¹⁴⁸⁸ Australia responds that the TPP measures are based upon "a wealth of evidence supporting [their] effectiveness" and that the complainants' critiques of the TPP literature are "unjustified, irrelevant, and misrepresentative of the body of literature supporting the tobacco plain packaging measure".¹⁴⁸⁹

7.524. In this section, we consider the complainants' overall critique of this literature, without prejudice to the weight to be given to this body of evidence in our overall assessment.

Main arguments of the parties

7.525. The complainants argue that the TPP literature as a whole suffers from flaws that prevent it from serving as reliable scientific evidence of the short or long-term effectiveness of the TPP measures. More specifically, the complainants consider that the TPP literature does not meet the standards of objectivity or methodological rigour that generally apply to social science research on consumer behaviour. In support of this argument, the complainants commissioned expert reports, for the purpose of these proceedings, from three groups of experts: (1) Professor Inman et al.¹⁴⁹⁰; (2) Kleijnen Systematic Reviews¹⁴⁹¹; and (3) Professor Klick.¹⁴⁹² Each applied a distinct review methodology.

7.526. First, the Dominican Republic and Honduras¹⁴⁹³ commissioned a team of seven academics, led by Professor Inman, who have each published and served editorial functions in scholarly journals in the field of consumer behaviour, to conduct a "Peer Review Project" of 55 plain packaging papers (Peer Review Project).¹⁴⁹⁴ The reviewers were instructed to proceed as if each paper was assigned to them as a reviewer for a leading scholarly consumer research journal, and to apply as a benchmark the criteria and rigour by which they would normally judge submitted manuscripts.¹⁴⁹⁵ None of the reviewed studies were recommended for publication by any of the reviewers. Forty-six were "rejected" outright for methodological reasons, with no possibility of revision, while the perceived flaws in the remaining nine studies, if corrected, were deemed substantial enough to potentially alter the studies' results and conclusions.¹⁴⁹⁶

7.527. Second, the Dominican Republic and Honduras¹⁴⁹⁷ commissioned a group of researchers, led by Professor Kleijnen, to systematically "identify, select and critically appraise" plain packaging studies using objective criteria and predefined processes (Kleijnen Systematic Review).¹⁴⁹⁸ Among the 58 papers considered, Professor Kleijnen's team determined that 31 utilized an experimental

¹⁴⁸⁷ See Peer Review Project Rebuttal Report, (Exhibit DOM/HND-12), para. 6; and Kleijnen Systematic Review Second Rebuttal Report, (Exhibit DOM/HND-18), paras. 2 and 22-23.

¹⁴⁸⁹ Australia's first written submission, Annexure E, paras. 3 and 6.

¹⁴⁹⁰ See Peer Review Report, (Exhibit DOM/HND-3); Peer Review Project Rebuttal Report, (Exhibit DOM/HND-12); and Peer Review Project Second Rebuttal Report, (Exhibit DOM/HND-17).

¹⁴⁹¹ See Kleijnen Systematic Review, (DOM/HND-4); Kleijnen Systematic Review Rebuttal Report, (Exhibit DOM/HND-13); and Kleijnen Systematic Review Second Rebuttal Report, (Exhibit DOM/HND-18).

¹⁴⁹² Klick TPP Literature Report, (Exhibit UKR-6) (relied upon by Cuba: see Cuba's communication to the Panel of 13 July 2015).

¹⁴⁹³ Cuba has also relied upon this expert report. Cuba's first written submission, paras. 170 and 172. Indonesia has referenced discussions in the Dominican Republic's first written submission which refer to this report. See Indonesia's second written submission, para. 186 and fn 275.

¹⁴⁹⁴ See Honduras's first written submission, paras. 470-474; Dominican Republic's first written submission, paras. 569-572; and Peer Review Report, (Exhibit DOM/HND-3), paras. 12-14.

¹⁴⁹⁵ Peer Review Report, (Exhibit DOM/HND-3), para. 26 and Appendix A.

¹⁴⁹⁶ See Dominican Republic's first written submission, para. 575; and Peer Review Report, (Exhibit DOM/HND-3), para. 17.

¹⁴⁹⁷ Cuba has also relied upon this expert report. See Cuba's first written submission, paras. 170 and 172. Indonesia has referenced discussions in the Dominican Republic's first written submission which refer to this report. See Indonesia's second written submission, para. 186 and fn 275.

¹⁴⁹⁸ Honduras's first written submission, para. 476; Dominican Republic's first written submission, para. 578; and Kleijnen Systematic Review, (Exhibit DOM/HND-4), p. 9.

design capable of drawing conclusions regarding the causal impact of plain packaging on the measured outcome.¹⁴⁹⁹ These studies were then assessed for bias based upon "four generally accepted grounds of methodological 'validity'", each of which represents a potential source of bias: construct validity, internal validity, external validity, and conclusion validity.¹⁵⁰⁰ The assessment concluded that each study was "implemented in a manner that gives rise to a considerable or high risk of bias" and thus none of the studies constitute reliable or probative sources for assessing the effects of the TPP measures.¹⁵⁰¹

7.528. Third, Cuba relies upon a report reviewing the literature underlying the TPP measures conducted by Professor Klick (Klick TPP Literature Report).¹⁵⁰² The report focuses on 48 individual studies¹⁵⁰³ and five reviews of the literature conducted by public health academics and governmental bodies.¹⁵⁰⁴ Professor Klick concluded that the research is "an unsuitable foundation for public policy" due to methodological problems, concerns regarding objectivity, and a "disconnect between the research designs and the conclusions reached".¹⁵⁰⁵

7.529. The complainants have also submitted reports from other experts who critique to varying degrees certain studies in the TPP literature.¹⁵⁰⁶

7.530. The expert reports submitted by the complainants concluded that the research used by plain packaging advocates is "neither reliable nor relevant" for the purpose of implementing this policy in Australia.¹⁵⁰⁷ Overall, the complainants contend that the studies share the following primary flaws¹⁵⁰⁸:

- Measuring the impact of packaging on attitudes, perceptions, and intentions, rather than on actual smoking behaviour¹⁵⁰⁹;
- Relying on survey data or information solicited in focus groups or interviews, rather than employing an experimental design that is capable of drawing causal inferences¹⁵¹⁰;
- Failing to control for demand effects and socially desirable responses¹⁵¹¹;

¹⁴⁹⁹ See Kleijnen Systematic Review, (Exhibit DOM/HND-4), pp. 27-28.

¹⁵⁰⁰ Dominican Republic's first written submission, para. 589. **Construct validity** "concerns whether the way(s) a researcher has measured a construct of interest (e.g. appeal of a cigarette pack or an aspect of smoking behaviour) fully encapsulates that construct and whether the outcome measure has particular properties such as reliability"; **internal validity** concerns "whether the study has measured the true effect, in other words, whether the attribution of causality to the intervention is valid"; **external validity** is "concerned with the generalisability (applicability) of findings beyond the confines of the study"; and **conclusion validity** concerns "whether there is an appropriate correspondence between the methods actually employed, the results and the researchers' interpretation of findings concerning the relationship of interest". Kleijnen Systematic Review, (Exhibit DOM/HND-4), p. 23.

¹⁵⁰⁷ See, e.g. Klick TPP Literature Report, (Exhibit UKR-6), p. 1.

¹⁵⁰⁸ See Dominican Republic's first written submission, para. 591.

¹⁵⁰⁹ See Klick TPP Literature Report, (Exhibit UKR-6), pp. 1; Kleijnen Systematic Review, (Exhibit DOM/HND-4), pp. 32-33; Peer Review Report, (Exhibit DOM/HND-3), para. 61.iv.b; Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), paras. 60 and 61.e; Viscusi Report, (Exhibit UKR-8), paras. 45-48; and Mitchell Report, (Exhibit UKR-154), para. 11.

¹⁵¹⁰ See Honduras's first written submission, para. 497; Cuba's first written submission, paras. 174-175; and Kleijnen Systematic Review, (Exhibit DOM/HND-4), pp. 16-20, 31, and 49; and Figure 5.

- Extrapolating real-world results from samples and environments that are not representative¹⁵¹²;
- Failing to control for confounding variables¹⁵¹³, such as GHWs and novelty effects¹⁵¹⁴;
- Drawing conclusions that do not follow from the study's results¹⁵¹⁵;
- A lack of objectivity in favour of study outcomes that support plain packaging, given:

Most of the studies post-date Australia's announcement in April 2010 that it would adopt plain packaging;

The preferences of the public health community and its journals; and

The small size of the tobacco control community, where a small group of researchers conducted the majority of the studies.¹⁵¹⁶

7.531. Australia strongly criticizes the methodologies used in these reviews.¹⁵¹⁷ It considers that the complainants' granular critiques of the TPP literature deconstruct studies against unrealistic criteria that exaggerate shortcomings in an attempt to distract from and diminish the results, at odds with established methods for informing policy through evidence.¹⁵¹⁸ Australia criticizes the "strategy" used by the complainants in their review of the evidence base for plain packaging.¹⁵¹⁹

7.532. Professor Fong, in expert reports submitted by Australia, identifies the following general strategies and themes in the complainants experts' reports critiquing the TPP literature:

- Illusion of rigour and demanding the "perfect" study;
- Exclusive focus on smoking rates as the target of the TPP Act;
- Almost exclusive focus on outcome measures of real-world behaviour;
- Disregarding all non-experimental research;
- Misleading or inaccurate reporting of evidence;
- Presenting a minor point as a main conclusion;

¹⁵¹¹ See Honduras's first written submission, para. 496; Dominican Republic's first written submission, paras. 598-600; Cuba's first written submission, para. 176; Klick TPP Literature Report, (Exhibit UKR-6), p. 1; Peer Review Report, (Exhibit DOM/HND-3), paras. 18.i and 61.i-61.ii; Kleijnen Systematic Review, (Exhibit DOM/HND-4), pp. 36 and 48; Viscusi Report, (Exhibit UKR-8), paras. 34-35 and 46; Ajzen Report, (Exhibit DOM/HND/IDN-3), paras. 179-188; Peer Review Project Rebuttal Report, (Exhibit DOM/HND-12), paras. 41-51; Satel Report, (Exhibit UKR-7), para. 65; and Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 61.h.

¹⁵¹⁹ Samet Report, (Exhibit AUS-7), para. 137; and Fong Second Supplemental Report, (Exhibit AUS-585), para. 35-36.

- Attributing any effects of plain packaging to novelty only;
- Overemphasis on social desirability bias;
- Overemphasis on demand effects;
- Failing to address how claimed flaws could actually account for the results;
- Exaggerating impact of limitations and ignoring study strengths;
- Claiming a small set of authors involved in a majority of papers is a bias; and
- Ignoring the convergence of evidence.¹⁵²⁰

7.533. Australia also notes that the vast majority of the studies reviewed by the complainants were published in peer-reviewed scientific journals, including some of the leading scientific journals on public health and tobacco.¹⁵²¹ Thus, Australia contends, the studies have already been subject to "rigorous scholarly review".¹⁵²²

7.534. The complainants respond that the peer-review process is not fool-proof, that it can fail to prevent the publication of studies with significant flaws¹⁵²³, and that publication is not a guarantee of reliable methodology and results.¹⁵²⁴ They point to the Peer Review Project, wherein seven marketing experts with experience in reviewing studies for publication provided an "objective critique ... to assess whether the papers that form the body of the [] plain packaging literature would be accepted for publication in high-quality peer-reviewed academic journals".¹⁵²⁵ These experts concluded that none of the studies were acceptable in their current form.¹⁵²⁶

7.535. Australia's expert Professor Fong observes that of the 55 articles considered as part of the Dominican Republic and Honduras's Peer Review Project, 39 had already been published in peer-reviewed journals. Yet none were "accepted" for publication as part of the complainants' hypothetical review. In other words, there was no overlap between the results of the peer review process of the 20 scientific journals across different scientific disciplines in which these articles had been published and the results of the Peer Review Project.¹⁵²⁷ Likewise, Australia notes, the "Kleijnen Systematic Review uniformly indicated a high potential for bias" among the 31 papers that were considered adequate for analysis.¹⁵²⁸ Australia submits that these results are the product of overly strict distorted review criteria, misapplied in a manner that is inconsistent with established principles and methods of review.¹⁵²⁹ Australia argues that the "implausible" conclusions of these reports, as well as their disparity with the results of the actual peer review process at a variety of journals, discredits the complainants' experts' assessments.¹⁵³⁰

7.536. Australia's expert Professor Fong submits that individual studies are inevitably subject to a range of limitations but that, considered collectively, the range of designs constitute a persuasive

body of evidence.¹⁵³¹ Australia commissioned two experts who undertook comprehensive qualitative reviews of the plain packaging literature to determine whether the evidence "taken together as a whole" supports the effectiveness of tobacco plain packaging.¹⁵³² They both concluded that the weight of the evidence, from diverse sources that employed a variety of research designs, outcome measures, and participants, converges upon the conclusion that plain packaging will reduce the use of tobacco products.¹⁵³³

7.537. Australia and its experts submit that their approach is that taken by "authoritative bodies of international standing" such as the US National Cancer Institute, the International Agency for Research on Cancer (the World Health Organisation's cancer research unit), and the US Surgeon General.¹⁵³⁴ Australia refers to US Surgeon General Reports, the US National Cancer Institute, the US Institute of Medicine (USIOM), and the WHO to support its qualitative approach to assessing the available literature "as a whole"¹⁵³⁵, while acknowledging that individual studies are inevitably subject to a range of limitations given the challenges inherent in evaluating national-level policies.¹⁵³⁶ According to Australia, the consistency of the results supports the conclusion that plain packaging has the potential to contribute to public health.¹⁵³⁷ Australia draws further support for this conclusion from several external reviews of the TPP literature, which also agree that the evidence base for plain packaging is sound.¹⁵³⁸

7.538. The complainants challenge the accuracy of the external reviews of the TPP literature.¹⁵³⁹ They also disagree with the approach followed by Australia's experts. The complainants argue that no matter how many studies point in the same direction, a review of the findings and conclusions alone tells nothing about the methodological quality of the body of literature. In their view, a

convergence of evidence may simply be a reflection of repeated methodological flaws and biases in the literature.¹⁵⁴⁰

Analysis by the Panel

7.539. As described above, the complainants identify as the TPP literature a body of 68 published studies, mostly predating Australia's adoption of the TPP measures, that sought to explore the effect of "plain packaging" for tobacco products.

7.540. The complainants' general critique of this literature is reflected in three main expert reports¹⁵⁴¹ and encompasses a large number of studies. We note that it does not, however, cover the entire field of studies relied upon by Australia in these proceedings, and also covers studies that Australia has not expressly relied upon in these proceedings in support of its argument that the TPP measures contribute to their public health objective. Australia has expressly relied, in the context of the "contribution" analysis in these proceedings, on 47 of the 68 papers identified by the complainants as part of the TPP literature.¹⁵⁴² Australia has also relied upon 40¹⁵⁴³ of the 55 papers reviewed as part of the Dominican Republic and Honduras's Peer Review Project¹⁵⁴⁴; 41¹⁵⁴⁵

¹⁵⁴⁰ Kleijnen Systematic Review Second Rebuttal Report, (Exhibit DOM/HND-18), paras. 31-38. See also Honduras's first written submission, paras. 462-463; Cuba's second written submission, paras. 314-315; and Klick TPP Literature Report, (Exhibit UKR-6), pp. 15-17.

¹⁵⁴¹ See generally Klick TPP Literature Report, (Exhibit UKR-6); Peer Review Report, (Exhibit DOM/HND-3); and Kleijnen Systematic Review, (Exhibit DOM/HND-4).

¹⁵⁴² Australia has directly cited in its submissions, and provided as exhibits, 47 of the articles that the complainants submitted as part of Exhibit JE-24. (1) Brose et al. 2014, (Exhibits AUS-263, JE-24(11)); (2) Centre for Health Promotion 1993, (Exhibits AUS-142, JE-24(14)); (3) Donovan 1993, (Exhibits AUS-151, JE-24(16)); (4) Environics 2008a, (Exhibits AUS-179, JE-24(19)); (5) Ford et al. 2013a, (Exhibits AUS-137, JE-24(20)); (6) Gallopel-Morvan et al. 2013, (Exhibits AUS-162, JE-24(24)); (7) Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)); (8) Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27)); (9) Hammond 2010, (Exhibits AUS-91, JE-24(28)); (10) Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)); (11) Bansal-Travers et al. 2011, (Exhibits AUS-150, JE-24(3)); (12) Hammond et al. 2013a, (Exhibits AUS-177, JE-24(32)); (13) Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)); (14) Hoek et al. 2012, (Exhibits AUS-163, JE-24(35)); (15) Beede et al. 1990, (Exhibits AUS-147, JE-24(4)); (16) Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); (17) Moodie and Ford 2011, (Exhibits AUS-189, JE-24(42)); (18) Moodie and Mackintosh 2013, (Exhibits AUS-185, JE-24(43)); (19) Moodie et al. 2011, (Exhibits AUS-155, JE-24(44)); (20) Munafò et al. 2011, (Exhibits AUS-199, JE-24(47)); (21) CBRC 1992, (Exhibits AUS-198, JE-24(13)); (22) Parr et al. 2011a, (Exhibits AUS-117, JE-24(49)); (23) Beede and Lawson 1991, (Exhibits AUS-153, JE-24(5)); (24) Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)); (25) Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); (26) Rousu and Thrasher 2013, (Exhibits AUS-228, JE-24(54)); (27) Scollo et al. 2014, (Exhibits AUS-507, JE-24(57)); (28) Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)); (29) Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); (30) Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)); (31) Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)); (32) Wakefield et al. 2013, (Exhibits AUS-184, JE-24(64)); (33) White et al. 2012, (Exhibits AUS-160, JE-24(66)); (34) Young et al. 2014, (Exhibits AUS-214, JE-24(67), DOM-285); (35) Bondy et al. 1994, (Exhibits AUS-143, JE-24(7)); (36) Borland and Savvas 2013a, (Exhibits AUS-135, JE-24(8)); (37) Borland et al. 2013, (Exhibits AUS-136, JE-24(9)); (38) Doxey and Hammond 2011, (Exhibits AUS-156, JE-24(17)); (39) Al-hamdani 2013, (Exhibits AUS-203, JE-24(1)); (40) Gallopel-Morvan et al. 2012, (Exhibits AUS-152, JE-24(23)); (41) Germain et al. 2010, (Exhibits AUS-154, JE-24(25)); (42) Hammond et al. 2011, (Exhibits AUS-157, JE-24(30)); (43) Hammond et al. 2013b, (Exhibits AUS-158, JE-24(31)); (44) Borland and Savvas 2013b, (Exhibits AUS-175, JE-24(10)); and (45) Zacher et al. 2014, (Exhibits AUS-222 (revised), JE-24(68), DOM-286)); (46) Moodie et al. 2012, (Exhibits AUS-174, JE-24(45)); (47) Van Hal et al. 2012, (Exhibits AUS-161, JE-24(60)).

We also note that Australia has submitted and relied upon a newsletter article that was authored by the same researchers, and appears to discuss the same study, as another paper that was submitted by the complainants as part of Exhibit JE-24. Compare Northrup and Pollard 1995, (Exhibit JE-24(48)), with ISR newsletter, (Exhibit AUS-146).

¹⁵⁴³ Australia has cited directly to, and provided as an exhibit, 40 of the papers considered as part of the Peer Review Project. See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports. We also note that Australia has submitted and relied upon a newsletter article that was authored by the same researchers, and appears to discuss the same study, as another paper that was considered as part of the Dominican Republic and Honduras's Peer Review Project. Compare Northrup and Pollard 1995, (Exhibit JE-24(48)), with ISR newsletter, (Exhibit AUS-146).

¹⁵⁴⁴ See Honduras's first written submission, paras. 470-474; Dominican Republic's first written submission, paras. 569-572; and Peer Review Report, (Exhibit DOM/HND-3), paras. 12-14.

¹⁵⁴⁵ Australia has cited directly to, and provided as an exhibit, 41 of the papers considered as part of the "Systematic Review". See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports. We also note that Australia has submitted and relied upon a newsletter article that

of the 58 papers considered as part of the Kleijnen Systematic Review¹⁵⁴⁶; and each of the five reviews of the literature¹⁵⁴⁷, and 36¹⁵⁴⁸ of the 48 individual studies identified by Professor Klick.¹⁵⁴⁹ Australia has relied, in addition, on a number of other sources¹⁵⁵⁰ as well as on expert reports that it commissioned for the purposes of these proceedings.¹⁵⁵¹

7.541. As described above, the complainants' critique of this literature reflects a range of underlying concerns. These can be broadly categorized as relating to:

- The objectivity of the research results and of the community of researchers conducting the studies;
- The object of the studies, in particular their focus on non-behavioural "proximal" outcomes rather than smoking behaviours; and
- The methodological rigour of the studies.

7.542. We address these aspects in turn.

Objectivity of the TPP literature

7.543. The complainants question the objectivity of the TPP literature on three grounds. First, they contend that most of the papers post-date the Australian Government's announcement in April 2010 that it would adopt plain packaging of cigarettes.¹⁵⁵² Second, the complainants also suggest that the TPP literature is predisposed in favour of study outcomes that support plain packaging due to the preferences of the public health community and its journals.¹⁵⁵³ Third, the complainants submit that the objectivity of the studies is compromised by the small size of the tobacco control community, where a small group of researchers conducted the majority of the studies.¹⁵⁵⁴

was authored by the same researchers, and appears to discuss the same study, as another paper that was included in the Dominican Republic and Honduras's "Systematic Review". Compare Northrup and Pollard 1995, (Exhibit JE-24(48)), with ISR newsletter, (Exhibit AUS-146).

¹⁵⁵⁴ Dominican Republic's first written submission, paras. 72, 75, and 78. See also Klick TPP Literature Report, (Exhibit UKR-6), pp. 2, 13 and 15-17; and Peer Review Report, (Exhibit DOM/HND-3), para. 40.

7.544. With respect to the first point, we note that the evidence before us indicates that researchers began to explore the potential impact of tobacco plain packaging over two decades ago. Among the publications relied on by Australia or otherwise cited in these proceedings and referring to the possible merits of tobacco plain packaging, some date as far back as the early 1990s.¹⁵⁵⁵ The evidence before us also suggests that there was a noticeable increase in the number of publications relating to plain packaging in recent years, including following the announcement by Australia of its intention to implement tobacco plain packaging.¹⁵⁵⁶ However, this does not seem surprising, to the extent that one would expect scholarly interest in a policy intervention that has never before been implemented to intensify over time, as evidence develops on its potential impact. The intensification of research in this field may rather be taken as a sign of an interest of the research community in testing further this potential impact, without prejudice to the potential outcomes of such further research.

7.545. The complainants also suggest that the TPP literature is predisposed in favour of study outcomes that support plain packaging due to the alleged preferences of the public health community and the small size of the tobacco control community. Although "publication bias" is a known phenomenon¹⁵⁵⁷, we see no basis to assume that researchers in the tobacco control community or more broadly in the public health community would have an *a priori* vested interest in supporting one type of tobacco control intervention over another.¹⁵⁵⁸

7.546. At the same time, we note that a core group of researchers are frequent co-authors on multiple TPP literature papers¹⁵⁵⁹, and one of the most comprehensive literature reviews relied upon by Australia (and discussed below¹⁵⁶⁰) was conducted by researchers who also co-authored some of the reviewed studies.¹⁵⁶¹ The author of one plain packaging study¹⁵⁶² consulted 33 tobacco control experts, a number that she believed, in 2012, represented a "substantial

¹⁵⁵⁵ See, e.g. Beede et al. 1990, (Exhibits AUS-147, JE-24(4)); Centre for Health Promotion 1993, (Exhibits AUS-142, JE-24(14)); Bondy et al. 1994, (Exhibits AUS-143, JE-24(7)); Donovan 1993, (Exhibits AUS-151, JE-24(16)); Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); Golberg et al. 1995, (Exhibits AUS-221, JE-24(26)); Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); and J. ¹⁵⁶¹ See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 91-96 (lead author C. Moodie co-authored five of the 37 reviewed studies); and Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), pp. 15-18 (lead author C. Moodie co-authored three of the 17 reviewed papers).

¹⁵⁶² Pechey et al. 2013, (Exhibit JE-24(51)).

proportion" of international experts in the field.¹⁵⁶³ Several authors of TPP literature studies were also members of Australia's National Preventative Health Taskforce (NPHT) Tobacco Working Group (TWG), which recommended that the Government adopt plain packaging.¹⁵⁶⁴

7.547. Australia's expert, Professor Fong, notes that "reviews of research studies in a given field should be undertaken by those with knowledge of the research domain and of the research norms of that research domain".¹⁵⁶⁵ Nevertheless, the authors of a systematic review of the TPP literature (the Stirling Review) acknowledged that reviewing one's own work can create the appearance of a conflict of interest. Those authors took measures accordingly to minimize the risk of bias.¹⁵⁶⁶ We also note that the author of a subsequent review, Sir Cyril Chantler, drew upon the involvement of the independent Evidence for Policy and Practice Information and Co-ordinating Centre, based at the University of London, to discount allegations of bias against the Stirling Review by the tobacco industry and its experts.¹⁵⁶⁷ We further note the presence of common principles governing authors and peer-reviewers that are designed to avoid conflicts-of-interest in published studies.¹⁵⁶⁸

7.548. Moreover, some of the TPP studies identify and discuss a number of potential downsides to the introduction of tobacco plain packaging¹⁵⁶⁹, which suggests to us that, where concerns are identified, these are disclosed and discussed. We have also noticed that some of the studies report mixed outcomes.¹⁵⁷⁰ In our view, this is a sign that those authors aim to objectively report study results notwithstanding the impact they may have on the perception of the utility of plain packaging as an instrument of tobacco control policy.

7.549. Overall, therefore, we do not consider that we should *a priori* discount the body of studies identified by the complainants as the TPP literature, based upon either the size of the research community from which it originates or assumptions relating to potential bias within this community. We further note that the studies reviewed by the complainants were authored by a total of more than 110 individuals, affiliated with a number of different institutions, including University College London, the University of Surrey, the University of Melbourne, Sydney Medical School, the University of Paris 1-Sorbonne, Pennsylvania State University, the University of Calgary, and the University of Ottawa. These elements support the view that these studies "come from ... qualified and respected source[s]".¹⁵⁷¹

7.550. Finally, we agree with Australia that, to the extent that convergent research outcomes would reflect the results of a range of studies consistent with accepted standards in their respective fields¹⁵⁷², this may confirm the strength of the conclusions reached in individual

¹⁵⁶³ See Author's response to peer reviews of Pechey et al. 2013, available at <<http://www.biomedcentral.com/1471-2458/13/18/prepub>>, accessed 7 October 2014, (Exhibit DOM-165), p. 2.

studies¹⁵⁷³, rather than demonstrate publication or researcher bias.¹⁵⁷⁴ We note in this respect the observation formulated by a number of reviewers that "consistency of association" and "coherence of association" are of "particular relevance to evaluating the evidence related to plain packaging"¹⁵⁷⁵, and that the TPP literature studies demonstrate both.¹⁵⁷⁶

7.551. In light of the above, we are not persuaded that the time-frame over which the TPP literature studies were conducted, preferences among researchers or publications for outcomes favourable to tobacco plain packaging, or the size of the relevant scientific community, provide, *in themselves*, a basis for us to question the objectivity, and hence the general reliability, of the entire body of studies identified by the complainants as the TPP literature. Rather, at this stage of our analysis, and without prejudice to our further consideration of the contents of this research and the extent to which it supports the conclusions drawn from it, we note that these studies originate from qualified and respected sources within their respective communities.

Focus of the TPP studies on "non-behavioural" outcomes

7.552. The complainants submit that one of the greatest methodological weakness of the TPP literature, which sought to inform the potential effectiveness of tobacco plain packaging as a population-level behaviour change intervention, is that the "studies fail to measure smoking behaviour", the "outcome of interest from a policy perspective".¹⁵⁷⁷

7.553. We first note that Australia does not dispute that many of the studies that form part of the TPP literature focus on the impact of tobacco packaging on "proximal" or "non-behavioural" outcomes. In particular, as will be discussed in more detail below, much of the TPP literature focuses on the ability of plain packaging to have an impact on the three "mechanisms" through which the TPP measures are intended to act: reducing the appeal of tobacco packaging, increasing the effectiveness of GHWs and reducing the ability of the pack to mislead the consumer about the harmful effects of smoking.¹⁵⁷⁸

7.554. Australia argues that the complainants' experts err in their "exclusive focus on prevalence as the only outcome of the [TPP measures]", and in "insisting on outcome measures of real-world behaviour".¹⁵⁷⁹ Australia's expert, Professor Fong, considers that the complainants' experts have misidentified the target of the TPP Act, and ignored the actual stated objects of the Act and the mechanisms through which plain packaging will achieve these effects. The emphasis on prevalence, Australia argues, also fails to appreciate the many different causal influences on smoking prevalence, including Australia's other tobacco control measures.¹⁵⁸⁰

7.555. The focus of the TPP literature on "non-behavioural" outcomes does not, in our view, constitute an inherent flaw, provided that this is understood as constituting one component of a broader evidence base. We note in this respect that the TPP measures were designed to act on these "non-behavioural" or "proximal" outcomes, with a view to ultimately affecting smoking

(noting the "heterogenous mix of research designs" and wide variety of outcome measurements from different research domains); and Chantler Report (Exhibits AUS-81, CUB-61), para. 4.10 (noting the "wide range of research methods").

¹⁵⁸⁰ Fong Report, (Exhibit AUS-14), paras. 451-462.

behaviours. The three "mechanisms" identified in the TPP measures¹⁵⁸¹ adopted by Australia closely reflect the specific "non-behavioural" outcomes that were studied in a large proportion of the TPP literature predating the adoption of the TPP measures.¹⁵⁸² We note that these are also referenced in the Article 11 and Article 13 FCTC Guidelines.¹⁵⁸³

7.556. The complainants also criticize the TPP literature for its failure to measure smokers' actual tobacco use following exposure to plain versus branded packaging.¹⁵⁸⁴

7.557. There appears to be some convergence among researchers that the ideal test of the effectiveness of plain packaging would have been a longitudinal randomized controlled trial in a population-based setting, where packaging is manipulated in some markets but not in others.¹⁵⁸⁵ The complainants' expert, Professor Ajzen, thus states that "it was essential to test the impact of plain packaging on actual smoking behaviour prior to implementation of the TPP Act over a sufficiently long period of time". He asserts that "[v]ery few studies conducted in Australia before the TPP Act attempted to measure the impact of plain packaging on actual smoking behavior, and the researchers readily acknowledged some of the limitations of such studies".¹⁵⁸⁶ Specifically, Professor Ajzen suggests that Australia should have conducted a controlled experiment in which participants would be assigned at random into branded and plain pack conditions, and the cigarette packs used would differ only in the presence or absence of brand imagery¹⁵⁸⁷, to test the impact of plain packaging on actual smoking behaviour.

7.558. We note, however, that Professor Ajzen also identifies important limitations to the possibility of conducting such randomised controlled experiments. Specifically, Professor Ajzen explains that "the difficulty lies in the fact that the experimental situation created prior to implementation of the TPP Act is not an exact reproduction of the situation that would be encountered afterwards" and that this can jeopardize the experiment's external validity.¹⁵⁸⁸ Australia's expert Professor Fong also observes that it would be "unrealistic" to expect that participants assigned to the group to which branded packs are shown, could be convinced that the branded packs that they are being shown are new experimental plain packs, given even non-smokers' familiarity with current cigarette packs.¹⁵⁸⁹ The feasibility or utility of such experiments is similarly questioned in other evidence before us.¹⁵⁹⁰ For example:

¹⁵⁸¹ See, e.g. TPP Act, (Exhibits AUS-1, JE-1), Section 3.

¹⁵⁸² See, e.g. Environics 2008a, (Exhibits AUS-179, JE-24(19)); Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)); Germain et al. 2010, (Exhibits AUS-154, JE-24(25)); Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); Gallopel-Morvan et al. 2010, (Exhibit AUS-176); Centre for Health Promotion 1993, (Exhibits AUS-142, JE-24(14)); Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)); Hoek et al. 2009, (Exhibit JE-24(33)); and Donovan 1993, (Exhibits AUS-151, JE-24(16)).

¹⁵⁸³ See Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46 ("address[ing] plain packaging with regard to health warnings and misleading information", according to the Article 13 FCTC Guidelines); and Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 16 and "**Recommendation**" following para. 17 (addressing plain packaging with regard to "packaging and product features" as elements of "advertisement and promotion").

¹⁵⁸⁴ See, e.g. McKeganey Report, (Exhibits DOM-105, CUB-72), p.43; and Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), paras. 61.i-61.j.

¹⁵⁸⁵ See, e.g. Cuba's first written submission, para. 175 (referring to Klick TPP Literature Report, (Exhibit UKR-6), pp. 6-7 and 14; and Kleijnen Systematic Review, (Exhibit DOM/HND-4), pp. 16-19). See also Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63), p. 1166; Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 89; and Chantler Report, (Exhibits AUS-81, CUB-61), para. 1.19.

¹⁵⁸⁶ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 61.i.

¹⁵⁸⁷ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 55. See also Klick TPP Literature Report, (Exhibit UKR-6), p. 6. Cf. Viscusi Report, (Exhibit UKR-8), para. 32 (noting the importance of an across-subject versus within-subject study design). We note that several TPP literature studies did implement a between-subject design, albeit with non-behavioural outcome measurements. See, e.g. Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)); Germain et al. 2010, (Exhibits AUS-154, JE-24(25)); Doxey and Hammond 2011, (Exhibits AUS-156, JE-24(17)); and Hammond et al. 2011, (Exhibits AUS-157, JE-24(30)).

¹⁵⁸⁸ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 56, pp. 12-13.

¹⁵⁸⁹ Fong Supplemental Report, (Exhibit AUS-531), paras. 167-168. Professor Fong also notes that a more realistic version of Professor Ajzen's proposed study was in fact conducted prior to the implementation of the TPP measures. Smokers in several different cities in Scotland were provided with plain cigarette packages, and asked to smoke for one week from the plain packs, another week from branded packs, and to complete questionnaires twice a week measuring behavioural indicators such as forgoing cigarettes, thinking about

It was suggested that the "ideal" SP [standardized packaging] study, in line with "proper research design", would be a randomized controlled trial that randomized different cities over a "long time period" to having/not having SP. This is clearly an unfeasible proposition not least because population mobility would mean that *both* groups have access to branded and standardized packages, rendering the results meaningless.¹⁵⁹¹

7.559. Professor Ajzen further observes that "a limitation on the study of smoking behavior is of an ethical nature".¹⁵⁹² This observation is also consistent with other evidence before us suggesting that executing studies comparing smoking uptake among subjects exposed to plain versus branded packs is impossible for ethical reasons.¹⁵⁹³

7.560. Professor Ajzen thus observes that, while it would have been possible and useful to test the impact of plain packaging on smoking behaviour prior to the implementation of the TPP Act¹⁵⁹⁴, the "practical limitations of studying the impact of plain packaging on behavior prior to **implementation of the [TPP] Act draw attention to the importance of the research ... regarding the impact of plain packaging on the *theoretical determinants* of smoking behavior**".¹⁵⁹⁵

7.561. This conclusion suggests that, as Professor Ajzen himself acknowledges, while it may have been desirable in principle to conduct randomised controlled trials or large-scale longitudinal studies directly seeking to evaluate the potential impact of plain packaging on smoking behaviour, there were legitimate practical and ethical reasons for which this would have been difficult to carry out, prior to the introduction of such a measure anywhere in the world. As Australia was the first country to implement plain packaging of tobacco products, the opportunity directly to observe actual smoking behaviours in the presence of plain packaging was also very limited prior to the implementation of the TPP Act.

7.562. In light of the above, while we agree that the relevant evidence base underlying a policy intervention should seek to reflect as closely as possible the conditions under which the intervention will take place, we are not persuaded that the evidence discussed above demonstrates that the absence of a study, prior to the implementation of the measures, that utilized an "ideal" experimental design allowing an observation of actual smoking behaviours constitutes a flaw in the TPP literature, of such nature as to fundamentally undermine its probative value and the evidentiary base underlying the adoption of the TPP measures. We also note that certain studies within the pre-implementation TPP literature predating the implementation of the TPP measures in Australia did in fact seek to assess smoking-related behavioural outcomes, although these studies were found to have "quite weak predictive value".¹⁵⁹⁶

quitting, and consumption. Differences favouring the plain packs were found in each of the indicators. Fong Supplemental Report, (Exhibit AUS-531), paras. 169-171. We also note that the merits of this study have been the subject of debate among the parties. See, e.g. Klick TPP Literature Report, (Exhibit UKR-6), pp. 47-48.

¹⁵⁹⁰ See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 17-18 and 88-89; and Stead et al. 2013, (Exhibit CUB-58), p. 8 (noting that randomized controlled trials and longitudinal studies of a policy intervention, such as plain packaging, are not feasible prior to implementation).

¹⁵⁹¹ S. Ulucanlar, G. Fooks, J. Hatchard, and A. Gilmore, "Representation and Misrepresentation of scientific evidence in contemporary tobacco regulation: a review of tobacco industry submissions to the UK Government consultation on standardised packaging", PLoS Medicine, Vol. 11 (2014), p. 6, (Ulucanlar et al. 2014), (Exhibit AUS-501). (emphasis original; footnote omitted)

¹⁵⁹² Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), p. 13, para. 57.

¹⁵⁹³ See Chantler Report, (Exhibits AUS-81, CUB-61), p. 13, para. 1.19 (noting that a trial comparing the uptake of smoking among children exposed to branded versus plain packaged cigarettes could "never receive ethical approval"). See also Hammond Review, (Exhibit AUS-555), p. 35 ("there is no ethical or feasible way to test the appeal of packaging or products among youth other than to measure perceptions of appeal and interest in trying a product"). But see Cuba's first written submission, para. 175 (arguing that assuming a trial is unethical presumes that packaging design causes smoking).

¹⁵⁹⁴ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 58.

¹⁵⁹⁵ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 59. (emphasis original)

¹⁵⁹⁶ See, e.g. Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 89:

It is also worth noting that findings regarding smoking-related attitudes, beliefs and behaviour from both the surveys and qualitative studies in the review are reliant upon self-report. Without any form of validation (such as validating reported changes in cigarette consumption) these have

7.563. At the same time, the constraints associated with measuring the impact of plain packaging on actual smoking behaviours prior to the implementation of the TPP measures do not dispose of the need to inform this question in the context of our assessment of the contribution of the challenged measures to their objective.

7.564. To the extent that the "mediational model" underlying the TPP measures relies on a combination of the three mechanisms identified in the TPP Act (leading to the "proximal outcomes" that are the main focus of the TPP literature) *and* their resulting impact on smoking behaviours (e.g. initiation, cessation, and relapse), a consideration of "proximal outcomes" alone would not be sufficient to draw conclusions about the contribution of the TPP measures to their public health objective. Rather, it would be necessary to consider, in addition, the impact of these mechanisms on the relevant smoking behaviours leading to the desired public health outcomes, i.e. a reduction in the use of, and exposure to, tobacco products. As suggested by Professor Ajzen, an absence of direct empirical evidence on actual behaviours may make reliance on "the *theoretical determinants* of smoking behaviour" important in this context.¹⁵⁹⁷

Methodological rigour of the TPP literature

7.565. The complainants argue generally that the TPP literature fails to meet accepted standards of methodological rigour, including in respect of study design and implementation, and in respect of the ability to draw the stated conclusions from the results of the studies.

7.566. The complainants rely in particular on three expert reports commissioned for the purposes of these proceedings (Inman et al.'s Peer Review Project¹⁵⁹⁸, the Kleijnen Systematic Review¹⁵⁹⁹, and the Klick TPP Literature Report¹⁶⁰⁰, respectively), each of which assessed the quality of the TPP literature under a distinct methodology. Other external reviews of the TPP literature have been referred to in these proceedings. We describe these various reviews of the literature below, before turning to an overall assessment in light of these reviews.

The complainants' commissioned reviews of the TPP literature

The Peer Review Project

7.567. Inman et al.'s Peer Review Project, as described above, involved the review of 55 tobacco plain packaging studies, applying as a benchmark the criteria and rigour by which the reviewers would normally judge submitted manuscripts in the field of consumer behaviour.¹⁶⁰¹ On the basis of this review, none of the studies at issue were considered fit for publication by any of the reviewers. Forty-six were "rejected" outright for methodological reasons, with no possibility of revision, while the perceived flaws in the remaining nine studies, if corrected, were deemed substantial enough to potentially alter the studies' results and conclusions.¹⁶⁰² Professor Inman concludes that:

In sum, having studied all relevant plain packaging papers and the reviewer reports, and applying mainstream criteria for methodological rigor that are found in standard textbooks, I must conclude that the plain packaging literature is of surprisingly low quality. The serious methodological flaws identified by the reviewers across the plain packaging studies make them unacceptable for publication in a major consumer

quite weak predictive validity. A common argument is that plain packaging research can never truly replicate real market conditions and, as such, the suggested impacts on consumption, cessation and uptake are so far speculative.

¹⁵⁹⁷ Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 59. (emphasis original)

research journal in their current form. This literature does not provide a reliable research basis for public policy.¹⁶⁰³

7.568. Australia argues that the fact that most of the papers that comprise the TPP literature were published in 20 different peer-reviewed scientific journals¹⁶⁰⁴, across a range of scientific disciplines, compromises the complainants' assertions that it suffers from critical methodological flaws, as most of the studies were subject to "rigorous scholarly review" prior to publication.¹⁶⁰⁵ Australia describes, as an example, the peer review process at the journal *Tobacco Control*, a British Medical Journal (BMJ) publication, as one in which a high proportion of submissions are rejected up-front, with the remaining papers assigned to an editor, who will then send it for external review to one or more reviewers selected from a database of experts. The paper may also be sent to a statistical reviewer. The process is designed to ensure that the paper "meets rigorous academic standards and fairly reflects the outcomes of the work".¹⁶⁰⁶ Two such external reviews of published TPP literature papers have been submitted as exhibits in these proceedings.¹⁶⁰⁷

7.569. We agree with Australia that the very fact that most of the papers at issue have been published in various specialized public health and medical journals, while the conclusion of the Peer Review Project is that *none* of the reviewed studies would meet relevant publication standards, raises serious doubts about the criteria and benchmarks used by Professor Inman et al. in their review. We also note that the journals in which these papers were published include medical publications as well as public health and tobacco control journals, while the aim of Professor Inman et al. was to evaluate the studies according to the criteria of leading consumer research journals.¹⁶⁰⁸

7.570. Without prejudice to the existence, in individual studies reviewed, of potential shortcomings that may have been validly identified in the Peer Review Project, we find it implausible that flaws of such a fundamental and pervasive character as to render each and every reviewed study unworthy of publication would have entirely escaped the attention of researchers and reviewers in the relevant field of study. We concur with Australia that this outcome in itself suggests that the Peer Review Project reflects an excessively strict approach that does not in fact accurately reflect the accepted practices of the relevant scientific community.¹⁶⁰⁹

The Kleijnen Systematic Review

7.571. The second expert review of the TPP literature relied on by the complainants, commissioned from Kleijnen Systematic Reviews, adopts a different approach, based on an analysis of the strength of the TPP literature in terms of study design and outcomes measured, ("traffic light matrix"), followed by an assessment of the methodological rigour of the studies,

¹⁶⁰³ Peer Review Report, (Exhibit DOM/HND-3), para. 69, p. 47.

¹⁶⁰⁷ See Peer review of Pechey et al. 2013, (Exhibit DOM-108); and Peer review of Lund and Scheffels 2013, (Exhibit DOM-164). See also Author's response to peer reviews of Pechey et al. 2013, available at <<http://www.biomedcentral.com/1471-2458/13/18/prepub>>, accessed 7 October 2014, (Exhibit DOM-165), p. 2.

¹⁶⁰⁸ See Peer Review Report, (Exhibit DOM/HND-3), para. 13.

¹⁶⁰⁹ See, e.g. Fong Report, (Exhibit AUS-14), paras. 501-506. As one researcher stated:

Science can be understood as a negotiated order sustained by craft conventions that are formulated, maintained, and altered over time within communities of practice. Methodological choices and compromises need to be made in response to contingencies; surrogate end points ... are used when necessary; boundaries of acceptable limitations are defined; and different epistemologies (e.g., experimental, quantitative, and qualitative methods) are not only tolerated but put to productive use singly and in combination.

Ulucanlar et al. 2014, (Exhibit AUS-501), p. 11.

using the "Study Design and Implementation Assessment Device" (Study DIAD).¹⁶¹⁰ This review concludes that:

[T]he evidence base regarding the potential causal impact of plain packaging on reducing smoking prevalence or tobacco consumption is unreliable and lacks credibility. Three major concerns arise with the research that was assessed. First, half of the studies employed designs that are unsuitable for establishing causal inferences. Second, instead of focusing on the key outcome of smoking behaviour, virtually all studies measured more remote and less relevant surrogate outcomes, such as appeal, attitudes and intentions. Third, even for those studies that are suitable for establishing causal inferences, all were implemented such that the findings exhibit a considerable or high risk of bias.¹⁶¹¹

7.572. We note that, although the research question underlying the Kleijnen Systematic Review is identified as relating to the reliability of the evidence "about the potential causal impact of plain packaging on tobacco consumption or smoking prevalence, *either directly or indirectly through surrogate variables (behavioural intentions and/or 'other' outcome variables, such as appeal of tobacco products, effectiveness of health warnings, or perceived harm of tobacco products)*"¹⁶¹², the authors indicate that they "placed an emphasis on whether it is possible to infer that plain packaging has a causal impact on the outcome of interest, *i.e.* smoking behaviour". Specifically, the authors consider that "[b]ehavioural outcomes are the most relevant, as opposed to surrogate outcomes such as intentions and appeal", and that "[t]he relevance of these surrogate outcomes for ultimate smoking behaviours is unknown and needs to be demonstrated".¹⁶¹³

7.573. This assumption leads the authors to consider, in the first step of their assessment ("traffic light matrix") that the TPP literature is "particularly weak in terms of measuring actual smoking-related behaviour", as "only two studies used an appropriate experimental design and measured actual smoking-related behaviour". This is one of the three "major concerns" identified with the TPP literature in this review.¹⁶¹⁴

7.574. Another "major concern" identified by the Kleijnen Systematic Review is that "half of the studies employed designs that are unsuitable for establishing causal inferences".¹⁶¹⁵ This conclusion is based on the identification, in the second part of the initial "traffic light matrix" assessment, of a "hierarchy" of study designs, based on their suitability for causal inference. In this classification, randomized experiments are ranked highest, followed by quasi-experiments, cohort and case-control studies, case series, cross-sectional studies, case studies, and finally expert reports. Randomized experiments are considered, under this hierarchy, to constitute the best available design because "if performed optimally, it excludes possible confounding by other factors that may influence the outcome".¹⁶¹⁶ Upon classifying each of the studies according to the design hierarchy, the reviewers determined that 27 papers did not merit further assessment in the next review phase, as their cross-sectional study designs "do not provide evidence from which causal inferences can be made about plain packaging".¹⁶¹⁷

7.575. In summarizing the results of the first step of their review, the "traffic light matrix", the authors conclude:

[T]he plain packaging literature does not fare well in terms of this first stage of assessment, because half of the study outcomes are from designs that do not allow causal inferences to be drawn about the impact of plain packaging. For the half that do, all but two fail to measure the key outcome of smoking behaviour. The literature

would therefore benefit from being more robust in terms of study design and more relevant in terms of outcomes investigated.¹⁶¹⁸

7.576. The second stage of the Kleijnen Systematic Review assessed the quality of the studies within the remaining 31 papers whose designs were deemed suitable for drawing causal inferences, namely experimental and quasi-experimental designs. The reviewers applied a Study DIAD intended to provide "a fine-grained examination of relevance of outcomes and the risk of bias within each of the studies".¹⁶¹⁹ The Study DIAD assessed the "risk of bias in a study against the four facets of 'validity' that are recognized throughout the social sciences as crucial to the design and implementation of experimental studies: **construct, internal, external** and **conclusion** validity".¹⁶²⁰ The reviewers concluded that each of the studies have a "considerable" or "high" risk of bias for one or more facets of validity, thereby making their results unreliable.¹⁶²¹

7.577. Australia's expert, Professor Fong, submits that the Kleijnen Systematic Review employed "overly restrictive" and "completely unreasonable" criteria to assess the level of bias in individual studies.¹⁶²² Indeed, the extreme nature of the results of the Kleijnen Systematic Review, which identified fatal flaws in each of the assessed 31 papers (most of which were otherwise published in peer-reviewed journals) causes us again to question the standard by which the studies were judged, and whether the particular context of tobacco control research was taken into account.

The Klick TPP Literature Report

7.578. The third review of the TPP literature, relied upon by Cuba, was authored by Professor Jonathan Klick of the University of Pennsylvania.¹⁶²³ The Klick TPP Literature Report adopted a narrative approach to reviewing the literature relied upon by tobacco plain packaging advocates. It focuses on 48 individual studies, 36 of which Australia has directly relied upon in these proceedings¹⁶²⁴, and five surveys of the literature conducted by public health academics and governmental bodies.¹⁶²⁵ Professor Klick concludes that, "[g]iven [] reliability and relevance concerns, the studies discussed in this report do not provide a sound basis upon which to base claims about the expected effects of plain packaging regulations in Australia".¹⁶²⁶

7.579. Professor Klick submits that the individual studies suffer from threats to internal validity, defined as whether the conclusions about the contribution to the stated behavioural objective in a study are justified.¹⁶²⁷ The "most obvious threat to internal validity" is that "almost every available study draws a conclusion about smoking when the research design examines subjectively reported attitudes and preferences of the subjects, not actual smoking behaviour".¹⁶²⁸ This "disconnect between the research designs and the conclusions reached makes the entire literature unreliable".¹⁶²⁹

7.580. As we have noted above, we consider that evidence pertaining to the impact of tobacco plain packaging on "non-behavioural", "intermediate", or "proximate" outcomes, on the one hand,

¹⁶¹⁸ Kleijnen Systematic Review, (Exhibit DOM/HND-4), section 4.2.3, p. 33.

¹⁶¹⁹ Kleijnen Systematic Review, (Exhibit DOM/HND-4), section 4.2.4, p. 34. "Bias" refers to the degree to which the research methodology used may have distorted the results by yielding inaccurate estimates of the true effect. Ibid. Section 2.1, p. 10.

¹⁶²⁹ Klick TPP Literature Report, (Exhibit UKR-6), p. 14.

and actual smoking behaviours, on the other, are both potentially pertinent to an assessment of the TPP measures' contribution to the objective of improving public health by reducing the use of, and exposure to, tobacco products through the TPP measures. As described above, the results of such studies may inform whether tobacco plain packaging impacts the "non-behavioural" or "proximate" outcomes that are a component of the causal chain or mediational model underlying the design and operation of the TPP measures.

7.581. Similar to the Kleijnen Systematic Review, Professor Klick offers a list of possible study designs assessing the impact of tobacco plain packaging, starting from those he considers as most methodologically sound to those considered least sound. Field experiments and natural/quasi experiments (where changes in smoking are measured in two comparable jurisdictions after one adopts plain packaging), are ranked highest, while experiments tracking impressions and intentions, and focus groups and interviews are ranked lowest. According to Professor Klick, "all of the available studies of plain packaging fall in the last two categories" and none of the reviewed individual studies meet "minimum thresholds for research design reliability and relevance".¹⁶³⁰

7.582. Professor Klick further identifies methodological problems associated with the designs of the TPP literature studies. Internal validity, he argues, is threatened by researchers who do not attempt to isolate the relevant sample group (i.e. excluding non-smokers who are unlikely to ever smoke from the sample) or ensure that the sample is representative.¹⁶³¹ Professor Klick also considers that the fact that non-Australian samples make up the bulk of the literature raises concerns about the likelihood that the results of those studies will be predictive of what happens in Australia (external validity), particularly considering Australia's regulatory environment.¹⁶³² Further, Professor Klick contends, each of the individual studies discussed in his report involved participants observing the package in a focused sterile environment. This raises concerns, Professor Klick argues, regarding ecological validity, namely whether what is observed in the study environment will correspond to what occurs in reality.¹⁶³³

7.583. Overall, the three reviews submitted by the Dominican Republic, Honduras, and Cuba conclude that the various individual studies that are part of the TPP literature are flawed. From this, the reviewers deduce that the literature in support of tobacco plain packaging is neither reliable nor relevant to predicting the impact of the TPP measures in Australia, and is unsuitable for establishing any causal link between tobacco plain packaging and smoking behaviours.¹⁶³⁴

7.584. We note, however, that the TPP literature has also been the subject of various external reviews conducted outside of these proceedings, which have also been referred to by the parties.¹⁶³⁵ We describe these below.

Other reviews of the TPP literature

The Stirling Review

7.585. A systematic review of the literature relating to tobacco plain packaging¹⁶³⁶ was undertaken by Crawford Moodie, a "prominent researcher in the area"¹⁶³⁷, and colleagues from the University of Stirling, the University of London, the University of Nottingham, and the UK Centre for Tobacco Control Studies. An initial report was issued in 2012¹⁶³⁸ (Stirling Review), followed by

¹⁶³⁰ Klick TPP Literature Report, (Exhibit UKR-6), pp. 9-11.

¹⁶³¹ Klick TPP Literature Report, (Exhibit UKR-6), p. 14.

¹⁶³² Klick TPP Literature Report, (Exhibit UKR-6), p. 15.

¹⁶³³ Klick TPP Literature Report, (Exhibit UKR-6), p. 16.

¹⁶³⁴ See, e.g. Peer Review Report, (Exhibit DOM/HND-3), paras. 61(iv) and 65; and Klick TPP Literature Report, (Exhibit UKR-6), p. 1.

¹⁶³⁵ See, e.g. Chantler Report, (Exhibits AUS-81, CUB-61); Stirling Review, (Exhibits AUS-140, HND-130, CUB-59); Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60).

¹⁶³⁶ The initial Stirling Review considered 37 studies that were reported in 50 papers. Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 91-96. The subsequent Stirling Review 2013 Update considered an additional 17 papers. Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), pp. 2 and 15-17.

¹⁶³⁷ Klick TPP Literature Report, (Exhibit UKR-6), p. 60.

¹⁶³⁸ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59). We note that two of the same researchers from the University of Stirling first conducted a review of tobacco plain packaging research at the request of the UK Department of Health in 2009. See Moodie et al. 2009, (Exhibit AUS-141). The 2009 review was,

a 2013 update¹⁶³⁹ (Stirling Review 2013 Update). The Stirling Review was initiated in the context of a consultation conducted by the British Government on the possible introduction of tobacco plain packaging in the UK:

The review was conducted following the publication of the March 2011 White Paper *Healthy Lives: Healthy People* which set out a renewed Tobacco Control Plan for England. One of the key actions identified in the plan was to consult on possible options to reduce the promotional impact of tobacco packaging, including plain packaging. This systematic review was commissioned to provide a comprehensive overview of evidence on the impact of plain packaging in order to inform a public consultation on the issue.

...

A total of 4,518 citations were identified following initial searching, and after screening and quality appraisal 37 studies were included. Data were extracted from each of these to inform a narrative synthesis organised around five main headings: appeal of cigarettes, packs and brands; salience of health warnings; perceptions of harm; smoking-related attitudes and behaviour; and barriers and facilitators to the introduction of plain packaging.¹⁶⁴⁰

7.586. Having considered in detail the study design and outcomes of each of the relevant studies identified through their initial screening and quality appraisal¹⁶⁴¹, the reviewers concluded as follows:

This review found that there is strong evidence to support the propositions set out in the Framework Convention on Tobacco Control relating to the role of plain packaging in helping to reduce smoking rates; that is, that plain packaging would reduce the attractiveness and appeal of tobacco products, it would increase the noticeability and effectiveness of health warnings and messages, and it would reduce the use of design techniques that may mislead consumers about the harmfulness of tobacco products. In addition, the studies in this review show that plain packaging is perceived by both smokers and non-smokers to reduce initiation among non-smokers and cessation-related behaviours among smokers.¹⁶⁴²

7.587. The authors also assess the strengths and limitations of the Stirling Review, observing that:

The main strength of this project is that it is a systematic review of the relevant literature, with the studies it included identified as the result of careful and extensive searches. As such, while we cannot be sure we have found every single possibly relevant study, we can be confident that we have followed best practice with regard to our searching and have taken steps to avoid bias in the sample of studies we have retrieved. We have also checked the studies we have included for relevance and methodological rigour. This being the case, we can be confident that the statements we have made in this review genuinely reflect the current state of research evidence in this area.¹⁶⁴³

7.588. The authors of this review also identify the limitations they see in the literature that their review is based upon. They identify certain limitations in the individual studies reviewed, including

however, "[b]rief", conducted under time constraints, and did not purport to be systematic in nature. Ibid. title and pp. 1 and 18. It is our understanding that the subsequent Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), considered both the research evaluated in Moodie et al. 2009, as well as newly-available evidence.

¹⁶³⁹ Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60).

¹⁶⁴⁰ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. i.

¹⁶⁴¹ Four studies, in addition to the 37 that were ultimately reviewed, met initial relevancy requirements but were excluded following data extraction and a quality assessment. Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 19-20.

¹⁶⁴² Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. v.

¹⁶⁴³ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 88.

those arising from the fact that tobacco plain packaging was not yet in place in any country at the time that the studies were conducted. They also acknowledge the difficulty of drawing conclusions about expected outcomes, including behavioural outcomes, on the basis of surveys and qualitative studies. In addition, the authors note that all the reviewed studies "have been confined to a small number of high income countries, most of which have strong tobacco control", which "restricts the ability to predict the potential impact of plain packaging in less developed nations".¹⁶⁴⁴ Nonetheless, overall, the authors conclude that:

Despite these limitations it is worth emphasizing the remarkable consistency in study findings regarding the potential impact of plain packaging. Across studies using different designs, conducted in a range of countries, with young and older populations and with smokers and non-smokers the key findings are similar. This consistency of evidence can provide confidence about the observed potential effects of plain packaging. If and when introduced, existing evidence suggests that plain packaging represents an additional tobacco control measure that has the potential to contribute to reductions in the harm caused by tobacco smoking now and in the future.¹⁶⁴⁵

7.589. Following the issuance of the Stirling Review, the authors, with the assistance of two additional colleagues, published an article on its main findings, focusing on the 25 quantitative studies among the 37 studies considered, "in order to facilitate comparisons and synthesis of results between studies".¹⁶⁴⁶ Despite the reduced number of studies and designs reviewed in this paper, the authors again note that "the findings were largely consistent across different designs, countries, populations, smokers and non-smokers suggesting that we can be fairly confident about the potential effects of standardised packaging".¹⁶⁴⁷

7.590. The Stirling Review team updated their report in 2013 by issuing an additional report analysing 17 further studies that had been published following the August 2011 cut-off date for the initial report. The Stirling Review 2013 Update concludes:

As with the studies included in the original systematic review, most were conducted in a few high income countries, with 15 of the 17 studies included here having been conducted in Australia, New Zealand or the UK. Of the 17 studies identified, nine assessed the impact of plain packaging on appeal and eight the impact of plain packaging on warning salience and effectiveness. Seven studies explored perceptions of product harm and eight explored the impact of pack design on smoking-related attitudes, beliefs, intentions and behaviour. Four studies considered potential facilitators or barriers to plain packaging ...

The findings of these 17 studies, discussed below, suggest that plain packaging would: reduce the appeal of cigarettes and smoking; enhance the salience of health warnings on packs; and address the use of packaging elements that mislead smokers about product harm.¹⁶⁴⁸

7.591. In sum, the Stirling Review and Stirling Review 2013 Update teams, following a review spanning 54 tobacco plain packaging studies reported in 67 papers, concluded that "plain packaging represents an additional tobacco control measure that has the potential to contribute to reductions in the harm caused by tobacco smoking" by reducing the appeal of cigarettes and smoking; enhancing the salience of health warnings; and addressing the use of packaging elements that mislead smokers about product harm.¹⁶⁴⁹

¹⁶⁴⁴ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 89.

¹⁶⁴⁵ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 90. We note that this conclusion was reached on the basis of an analysis of those studies that were considered by the authors of the review to meet required standards in terms of relevance and quality, based on an initial screening process by the authors of the review. Hence it was not expressed as a *substitute* for quality review.

¹⁶⁴⁶ See Stead et al. 2013, (Exhibit CUB-58), p. 4.

¹⁶⁴⁷ Stead et al. 2013, (Exhibit CUB-58), p. 8.

¹⁶⁴⁸ Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), p. 2. (emphasis omitted)

¹⁶⁴⁹ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. v; and Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), p. 2.

7.592. The Stirling Review has been criticized by the complainants' experts.¹⁶⁵⁰ Professor Kleijnen's team thus stated that its review "sought to improve on the quality assessment standard applied in [the Stirling Review] by taking a more comprehensive and rigorous approach that better assesses the risk of bias of the evidence, particularly in the Australian context".¹⁶⁵¹ Likewise, Professor Klick claims that the Stirling Review "does not critically examine the studies or their conclusions, but simply provided a qualitative discussion of why ... certain studies are more flawed than others".¹⁶⁵² In the same vein, the review has been critiqued for being a "narrative synthesis", rather than a "meta-analysis showing overall effect size".¹⁶⁵³

7.593. We note, however, that the original Stirling Review appraised each of the underlying studies for relevance and quality, applying published "quality tools", principles of good practice for conducting social research with the public, and principles of good practice for the critical appraisal of primary research.¹⁶⁵⁴ On this basis, each of the 37 reviewed studies was assigned a relevance and quality score, distributed as shown below in Table 2:

Table 2: Relevance and quality ratings awarded by the Stirling Review

	High	Medium	Low
Relevance of studies	23	14	6
Quality of studies	5	36	2

Source: Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 25-37.

Note: A total of 43 ratings were supplied for each criterion, because five of the 37 studies implemented multiple designs, each of which received a separate rating.

7.594. These scores indicate that a substantial majority of the studies were found to be of medium to high quality and relevance to the question of the effectiveness of tobacco plain packaging.

7.595. In addition, an independent review of the Stirling Review and the Stirling Review 2013 Update was conducted in the context of a subsequent consultation at the request of the UK Government (the Chantler Report, discussed below). The Chantler Report verified the quality of the primary evidence base in support of plain packaging, as well as the quality of the Stirling Review process itself.

7.596. Sir Cyril Chantler, who commissioned independent appraisals of the Stirling Review, the Stirling Review 2013 Update, and the studies within, summarized the results as follows:

- the Stirling Review was conducted according to recognised best practice;
- whilst not agreeing on all details of quality appraisal of the individual studies in the Stirling Review, all were considered appropriate for inclusion in its narrative synthesis; and
- the [Stirling Review 2013 Update], whilst not itself a systematic review, added useful information, and, generally speaking, included papers of individually higher quality than in the original review.¹⁶⁵⁵

¹⁶⁵⁰ See, e.g. Mitchell Report, (Exhibit UKR-154), para. 35; McKeganey Report, (Exhibits DOM-105, CUB-72), pp. 43-50; Klick TPP Literature Report, (Exhibit UKR-6), pp. 60-61; and Kleijnen Systematic Review, (Exhibit DOM/HND-4), section 2.3, p. 11; and Kleijnen Systematic Review Second Rebuttal Report, (Exhibit DOM/HND-18), paras. 7, 43 and 64-68. ¹⁶⁵⁵ Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.18.

The Chantler Report

7.597. In April 2014, Sir Cyril Chantler presented a report¹⁶⁵⁶ (Chantler Report) commissioned by the UK Secretary of State for Health, to advise, "taking into account existing and any fresh evidence, as to whether or not the introduction of standardised packaging is likely to have an effect on public health (and what any effect might be), in particular in relation to the health of children".¹⁶⁵⁷

7.598. As noted by the complainants' expert Professor Klick, Sir Cyril Chantler did not conduct novel research.¹⁶⁵⁸ Rather, he reviewed the relevant literature, including the studies underlying the Stirling Review, studies regarding the influence of media, promotion, and branding, tobacco industry documents, commissioned the independent reviews of the Stirling Review described above¹⁶⁵⁹, and engaged in discussions with stakeholders in the plain packaging debate, including representatives from the major tobacco companies. He also visited Australia in March 2014 to study the implementation of the TPP measures.¹⁶⁶⁰

7.599. With respect to the nature of the evidence, Sir Cyril Chantler observes that he was asked whether the evidence shows "that it is *likely* that there would be a public health impact" (of tobacco plain packaging) and that "[t]his is clearly not an issue which is capable of scientific proof in the manner one might apply, for example, to the efficacy of a new drug".¹⁶⁶¹ He also observes that no double blind randomized controlled trials of plain packaging exist and "none could conceivably be undertaken".¹⁶⁶²

7.600. While noting that the evidence base is "modest"¹⁶⁶³ and noting study design constraints, the Chantler Report concludes as follows:

Having reviewed the evidence it is in my view highly likely that standardised packaging would serve to reduce the rate of children taking up smoking and implausible that it would increase the consumption of tobacco. I am persuaded that branded packaging plays an important role in encouraging young people to smoke and in consolidating the habit irrespective of the intentions of the industry. Although I have not seen evidence that allows me to quantify the size of the likely impact of standardised packaging, I am satisfied that the body of evidence shows that standardised packaging, in conjunction with the current tobacco control regime, is very likely to lead to a modest but important reduction over time on the uptake and prevalence of smoking and thus have a positive impact on public health.¹⁶⁶⁴

7.601. As part of his review, Sir Cyril Chantler addressed a number of criticisms of the underlying studies considered in the Stirling Review, which essentially overlap with those raised by the complainants in these proceedings in relation to the TPP literature:

- there are no randomised controlled trials of standardized packaging;
- each study had significant methodological flaws which invalidate the results;
- studies looking at hypothetical situations and attitudes are of little predictive value; and
- in particular the studies fail to demonstrate a link with actual behaviour.¹⁶⁶⁵

¹⁶⁶⁴ Chantler Report, (Exhibits AUS-81, CUB-61), p. 6, para. 18.

¹⁶⁶⁵ Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.11.

7.602. Given the centrality of the debate on the quality of the evidence at issue, Sir Cyril Chantler commissioned, as described above, independent analyses of the primary evidence reviewed in the Stirling Review.¹⁶⁶⁶ The studies were divided into two groups, quantitative and qualitative. The independent reviewers¹⁶⁶⁷ evaluated them using an alternative appraisal structure to that applied by the Stirling Review team, to facilitate an independent judgment of the quality of the studies.¹⁶⁶⁸

7.603. The assessment of the quantitative studies concluded that they were "conducted to a high standard" and that "the conclusions that were drawn are a reasonable reflection of the evidence available".¹⁶⁶⁹ Nearly half of the studies included in the original review, and seven out of 12 in the update, were assigned ratings indicating high quality and low risk of bias.¹⁶⁷⁰ Similarly, the assessor of the qualitative studies concluded that the Stirling Review is "a high quality systematic review" which was "clearly documented and follows recognised best practice for such reviews".¹⁶⁷¹ She noted that her scores of three of the ten qualitative papers differed from those assigned by the Stirling Review team, but indicated that this was not fatal and was a result of applying a purposefully different assessment tool.¹⁶⁷² She also concluded that the Stirling Review team properly utilized a narrative form of review, given the diversity of designs and types of studies analysed.¹⁶⁷³

7.604. The Chantler Report has been criticized by Cuba and in a number of expert reports submitted by the complainants.¹⁶⁷⁴ For the most part, these criticisms are of the underlying studies and the conclusions drawn from them, and duplicate critiques presented in these proceedings in relation to these studies.¹⁶⁷⁵ Critiques of the Chantler Report also include that it is

¹⁶⁶⁶ We note that the reviewers of the quantitative studies considered by the Stirling Review indicate that their aim was to examine the evidence rather than to repeat the Stirling Review. Accordingly, each paper was appraised by a single independent reviewer rather than two reviewers. Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 49.

¹⁶⁶⁷ Dr Yanzhong Wang and Professor Janet Peacock of King's College London, and Professor Catherine Pope of Southampton University.

¹⁶⁶⁸ Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.17. flawed due to allegedly inadequate consideration of certain types of evidence, i.e. post-implementation evidence¹⁶⁷⁶, theories of adolescent health behaviour¹⁶⁷⁷, or theories of automatic behaviour.¹⁶⁷⁸ We note that evidence relating to these aspects has been presented in these proceedings, which goes beyond the materials that were relied upon in the Chantler Report.¹⁶⁷⁹ This evidence is addressed in these Reports as part of our own assessment regarding the contribution of the TPP measures to their objective, in light of the totality of the evidence before us.

7.605. To the extent that Sir Cyril Chantler may have "resolve[d] ambiguities in this evidence in favor of a move to standardized packaging"¹⁶⁸⁰, or gave "'the benefit of the doubt' to possible future developments where they favour plain packaging"¹⁶⁸¹, we consider this to have been an exercise of judgment on Sir Cyril Chantler's part, to which he was entitled. We further note that the Report readily acknowledges weaknesses in the evidence and possible countervailing impacts of standardized packaging¹⁶⁸², suggesting that it seeks to present a balanced assessment of the then-available evidence.

Other surveys of the literature

7.606. During the course of these proceedings, the parties referred to other surveys of the evidence which have reached positive conclusions regarding the likely impact of tobacco plain packaging.

7.607. Australia has referenced a "review of the evidence" prepared for the Irish Department of Health¹⁶⁸³, and has also referred to a 2012 US Surgeon General's Report as an "independent

McKeganey Report, (Exhibits DOM-105, CUB-72), pp. 15-23); "Impact of plain packaging on the salience and processing of GHWs" within section 7.2.5.3.5.3 with respect to the impact of tobacco plain packaging on the salience of health warnings (with respect to Mitchell Report, (Exhibit UKR-154), para. 35); "Ability of plain packaging to increase the effectiveness of GHWs by improving risk awareness and risk beliefs" within section 7.2.5.3.5.3, discussing adolescents' awareness of the risks of smoking (with respect to Mitchell Report, (Exhibit UKR-154), para. 34); and paras. 7.738 et seq. discussing the distinction between primary and secondary demand (with respect to Mitchell Report, (Exhibit UKR-154), paras. 27-32).

The Panel considers the post-implementation data on the record in section 7.2.5.3.6 below.

¹⁶⁷⁷ See Mitchell Report, (Exhibit UKR-154), paras. 14-26. Theories of adolescent behaviour are discussed at "Smoking initiation" within section 7.2.5.3.5.2 of these Reports.

¹⁶⁷⁸ See Cuba's first written submission, paras. 205-207 and 348(c); Cuba's second written submission, para. 46(c); Klick Report, (Exhibit UKR-6), p. 63; and Mitchell Report, (Exhibit UKR-154), paras. 14-17. The Panel discusses the "affect heuristic" theory and unconscious or automatic responses to branded packaging at paras. 7.725 et seq. See also Slovic Report, (Exhibit AUS-12), paras. 116-117 (responding to criticism of the Chantler Report's application of theories of automatic behaviour).

¹⁶⁷⁹ See section 7.2.5.3.3 for a discussion of the Panel's approach to the evidence regarding contribution presented in these proceedings.

¹⁶⁸⁰ Mitchell Report, (Exhibit UKR-154), para. 58.

¹⁶⁸¹ Gibson Report, (Exhibit DOM-92), p. 13.

¹⁶⁸² See, e.g. Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.5 (acknowledging criticisms of the Stirling Review and the Stirling Review 2013 Update); para. 4.23 (acknowledging the argument that standardized packaging could produce a perverse appeal for children); para. 4.21 (noting that the findings of the Stirling Review regarding smoking behaviour are "essentially indirect and 'speculative'"); paras. 5.1-5.3 (indicating that an economist had been commissioned in order to thoroughly address the argument by opponents of standardized packaging that it could cause large scale price reductions); para. 6.2 (acknowledging that the evidence base regarding standardized packaging is "relatively modest"); and para. 6.11 (concluding that "after a careful review of all the relevant evidence ... there is sufficient evidence derived from independent sources").

¹⁶⁸³ Australia's second written submission, para. 246 (referring to Hammond Review, (Exhibit AUS-555)). This review, completed in March 2014, examined more than 55 articles. It states, with respect to the methodological quality of the studies:

The plain packaging literature includes a heterogeneous mix of research designs, with a wide variety of outcomes from different research domains. Plain packaging has been assessed using consumer perceptions, physiological measures of visual attention and neuroimaging, behavioural

review of the literature".¹⁶⁸⁴ The complainants' expert, Professor Klick, also classifies the 2012 US Surgeon General's Report, as well as reports by CCV and Health Canada, as "surveys of the literature".¹⁶⁸⁵ We distinguish, however, the Stirling Review and Chantler Report described above, which, in addition to synthesizing and summarizing the evidence, applied critical appraisal tools to each study in order to evaluate the overall *quality* of the evidence.¹⁶⁸⁶

7.608. We note that no systematic review of the TPP literature appears to have been undertaken in Australia prior to the adoption and implementation of the TPP measures.¹⁶⁸⁷ A working group of the NPHT in Australia considered the evidence on tobacco plain packaging in a report outlining various recommended tobacco control actions, including the introduction of plain packaging. This report describes the main findings of certain relevant studies relating to tobacco plain packaging.¹⁶⁸⁸ CCV published a "compilation of literature" in 2011, which "summarises the findings

tasks, as well as population-level cessation behaviour. A substantial proportion of these studies use experimental research designs, with high levels of internal validity, strengthening the level of causal inference that can be made. The diversity of the research designs and outcomes is a considerable strength of the evidence base.

Studies on packaging have been conducted with diverse samples, including youth and adults, as well as smokers and non-smokers.

Hammond Review, (Exhibit AUS-555), p. 30.

The review notes the consistency and coherence across different research methods and most outcomes examined, which it describes as "a considerable strength of the evidence base" that increases the likelihood of a causal association with tobacco plain packaging. Hammond Review, (Exhibit AUS-555), p. 31. The volume of the evidence is sufficient, the review concludes, to provide an informed opinion, namely that:

[T]obacco packaging is a critically important form of tobacco promotion, particularly in jurisdictions with comprehensive advertising and marketing restrictions, such as Ireland. The evidence indicates that plain packaging reduces false beliefs about the risks of smoking, increases the efficacy of health warnings, reduces consumer appeal among youth and young adults, and may promote smoking cessation among established smokers.

Hammond Review, (Exhibit AUS-555), p. i.

¹⁶⁸⁴ Australia's first written submission, para. 612 (referring to US Surgeon General's Report 2012, (Exhibit AUS-76)).

¹⁶⁸⁵ Klick TPP Literature Report, (Exhibit UKR-6), pp. 58-60 (critiquing US Surgeon General's Report 2012, (Exhibit AUS-76); Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)); and CCV Review 2011, (Exhibit AUS-86)).

¹⁶⁸⁶ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 47, and Annex E, p. 56; and Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 19-20.

¹⁶⁸⁷ Australia explains that its decision to adopt the TPP measures was based on an extensive body of evidence available at the time, as well as the explicit recommendation of the Parties to the FCTC to adopt plain packaging as a means to implement their obligations under the FCTC (Australia's closing statement at the second substantive meeting, para. 5). See also Australia's closing statement at the second substantive meeting, para. 7.

¹⁶⁸⁸ NPHT Technical Report 2, (Exhibits AUS-52, JE-12). It states in relevant part:

Cigarette brand names and package design enable the communication of personal characteristics, social identity and aspirations,[185] and are a crucial aspect of marketing the product.[186, 187] Consumer research indicates that decreasing the number of design elements on the packet reduces its appeal and perceptions about the likely enjoyment and desirability of smoking.[188] Requiring cigarettes to be sold in plain packaging would reinforce the idea that cigarettes are not an ordinary consumer item. It would also reduce the potential for cigarettes to be used to signify status. Plain packaging would increase the salience of health warnings: research subjects show an improved ability to recall health warnings on plain packs.[189-191] Plain packaging would prohibit brand imagery, colours, corporate logos and trademarks, permitting manufacturers only to print the brand name in a mandated size, font and place, in addition to required health warnings and other legally mandated product information such as toxic constituents, tax-paid seals or package contents. A standard cardboard texture would be mandatory, and the size and shape of the package and cellophane wrapper would also be prescribed. A detailed analysis of current marketing practices[187] suggests that plain packaging would also need to encompass pack interiors and the cigarette itself, given the potential for manufacturers to use colours, bandings and markings, and different length and gauges to make cigarettes more "interesting" and appealing. Any use of perfuming, incorporation of audio chips or affixing of "onserts" would also need to be banned.

of more than 25 published studies conducted to assess the likely impact of plain packaging".¹⁶⁸⁹ Neither publication, however, indicates or suggests that it constitutes a systematic review or quality assessment of the evidence regarding tobacco plain packaging. We understand the post-implementation review (PIR) undertaken after the entry into force of the TPP measures to have been intended to provide such an assessment, albeit in a post-implementation context.¹⁶⁹⁰

Overall assessment

7.609. As described above, the complainants consider that the TPP literature as a whole is methodologically flawed, as an evidentiary base in support of tobacco plain packaging. This conclusion is reflected in all three of the expert reviews described above commissioned by the complainants for the purposes of these proceedings, which largely overlap in the substance of their criticism.

7.610. One of the main criticisms addressed by the complainants to the TPP literature is the fact that it focuses on the "proximal outcomes" of plain packaging, including the appeal of tobacco products, and fails to measure smoking-related behaviours. We have already determined, in this respect, that we are not persuaded that this constitutes, in itself, a flaw, provided that such

Industry opposition to restrictions on pack design is a strong indication of its importance to tobacco sales.[192]

"In our opinion, [after taxation] the other two regulatory environment changes that concern the industry the most are homogenous packaging and below-the counter sales. Both would significantly restrict the industry's ability to promote their products." Morgan Stanley Research (2007)[193].

NPHT Technical Report 2, (Exhibits AUS-52, JE-12), p. 20. Another section of the report discusses the elimination of the promotion of tobacco products through packaging:

An experimental study of the effects of packaging on the image of smoking and characteristics of tobacco products found that smokers of plain packs were rated as significantly less trendy/stylish, less sociable/outgoing and less mature than smokers of the original pack. Compared with original packs, smokers inferred that cigarettes from these plain packs would be less rich in tobacco, less satisfying and of lower quality tobacco.[91]

A paper presented at the 2009 meeting of the Society for Research into Nicotine and Tobacco[92] found that substantial proportions of UK adult smokers and children reported false beliefs about health risk based on packaging ...

...

A case study presented at the World Conference on Tobacco or Health in Mumbai in March 2009[98] demonstrated how the Dunhill brand was able to significantly increase sales and market share in the absence of any allowable media advertising following significant changes in packaging of the product and promotion to retailers encouraging more prominent display at point of sale.

NPHT Technical Report 2, (Exhibits AUS-52, JE-12), pp. 99-101. The quoted passages cite the following eleven sources, four of which Australia has offered as exhibits in these proceedings: J. Scheffels J. A difference that makes a difference: young adult smokers' accounts of cigarette brands and package design. Dublin, Ireland, 2009 (sharing the same authors and a similar title to Hammond et al. 2009, (Exhibits AUS-166, JE-24(29))); and Lindorff K. Power of the packet: A case study for plain packaging. 14th World Conference on Tobacco or Health. Mumbai, 2009. See NPHT Technical Report 2, (Exhibits AUS-52, JE-12), pp. 61 and 138.

¹⁶⁸⁹ CCV Review 2011 (Updated), (Exhibit JE-16), p. 5.

¹⁶⁹⁰ See Tobacco Plain Packaging PIR, (Exhibit AUS-624), p. 3.

"proximal outcomes" are understood to form one element of the "causal chain" in the "mediational model" underlying the design and operation of the measures.¹⁶⁹¹

7.611. Other key criticisms of the relevant studies by the complainants include the inability of the chosen study designs to inform causal relationships with respect to the measured outcome, a lack of consideration of confounding factors, in particular GHWs, and the possibility of demand effects and social desirability bias. We consider these aspects in turn.

7.612. With respect to study design, we note that the studies at issue are based on a range of study designs, including non-experimental qualitative studies and focus groups, and quantitative cross-sectional surveys. The complainants¹⁶⁹² and their experts, in particular Professor Kleijnen et al., contend that nearly half of the TPP literature studies employed designs that were inappropriate for research questions addressing the causal impact of tobacco plain packaging. Professor Kleijnen offers a "widely accepted" hierarchy of study design types based upon their suitability for causal inference.¹⁶⁹³ Randomised experiments, quasi-experiments, and cohort and case control studies "may be capable of allowing causal inferences to be drawn", whereas cross-sectional studies, case studies, and expert reports "are not capable of allowing causal inferences to be drawn".¹⁶⁹⁴ Professor Kleijnen et al. accordingly determined that, among the 63 different studies discussed across the 58 papers considered, 32 of the studies employed a cross-sectional (non-experimental) design to measure the impact of plain packaging on intentions and perceptions of smoking and pack design¹⁶⁹⁵, and were thus not further assessed due to their inability to allow causal inferences to be drawn.¹⁶⁹⁶ This approach, they claim, is "similar to other recent systematic reviews outside the plain packaging domain" and reflects "accepted practice".¹⁶⁹⁷

7.613. The evidence before us suggests that it is generally recognized that different study methods and designs may have diverse abilities to demonstrate relevant causal relationships and that in particular, properly executed experimental designs may in principle have predictive superiority. At the same time, as discussed above, it has also been recognized that, in respect of tobacco plain packaging research, practical and ethical constraints would have affected the possibility of conducting the type of randomized experiment that may in principle have been considered to have the highest level of predictive value. There is no indication, in the Kleijnen Systematic Review, that such considerations were taken into account in applying the chosen analytical framework to the TPP literature. We note in this respect that the Stirling Review, while indicating that some systematic reviews only include controlled trials, included in its review of the TPP literature "all feasible study designs"¹⁶⁹⁸, including non-experimental studies, as did the subsequent Stirling Review update and the Chantler Report.¹⁶⁹⁹

7.614. We further note in this respect the observation from a handbook for systematic reviews, cited by Australia, that "evidence from qualitative studies can play an important role in adding value to systematic reviews for policy, practice and consumer decision-making".¹⁷⁰⁰ Kleijnen et al., while considering that non-experimental designs are not a recommended means of measuring the effectiveness of an intervention¹⁷⁰¹, at the same time acknowledge that non-experimental studies are capable of "developing and examining ideas" and "identifying barriers and facilitators for behavioural change". Professor Inman also notes that non-experimental studies can provide

¹⁷⁰¹ Kleijnen Systematic Review Rebuttal Report, (Exhibit DOM/HND-13), paras. 29 and 34-35.

evidence of association or correlation.¹⁷⁰² We also note the observation by Professor Pope, whose independent quality assessment of the qualitative studies included in the Stirling Review was incorporated into the Chantler Report, that such studies may reveal factors likely to be relevant or influential in behaviour.¹⁷⁰³ Accordingly, we are not persuaded that the limitations of non-experimental designs are such as to justify, as suggested in the review of the TPP literature by Kleijnen et al., a wholesale exclusion of the relevance of such studies to informing the effects of tobacco plain packaging on relevant outcomes.

7.615. The complainants further identify a number of specific limitations of the TPP studies, which they argue affect the studies' internal, external, conclusion, and construct validity.¹⁷⁰⁴ They observe in particular that most of the plain packs used in the TPP literature studies failed to include a dominant GHW.¹⁷⁰⁵

7.616. The evidence before us suggests that it is recognized, within the research community, that study designs should take account of relevant variables that may affect the external, internal, and construct validity of the study, but also that certain constraints inherent in the construct of experimental studies may affect the extent to which all relevant factors, including potential sources of bias or confounding factors, may be accounted for simultaneously in a given study. Professor Fong thus quotes *The Handbook of Social Psychology* in asserting that "it is next to impossible to design an experiment that is high in both internal and external validity".¹⁷⁰⁶ We also note the observation by Australia's expert Professor Slovic that in the realm of tobacco control, it is particularly difficult to control for confounding factors.¹⁷⁰⁷

7.617. In this respect, the complainants question in particular the validity of those TPP studies that compared branded and plain packs without dominant health warnings. The comparatively smaller amount of remaining space on Australian plain packs *with* a dominant GHW, they claim, would likely have a smaller impact on the measured outcomes of pack appeal, noticeability of GHWs, and beliefs and attitudes about harm.¹⁷⁰⁸ Further, they allege that the dominant negative imagery resulting from the large Australian GHW itself impacts the measured outcomes.¹⁷⁰⁹ At the same time, one of the complainants' experts asserts that the use of differently sized GHWs in a single study across various experimental packs introduces a confounding variable¹⁷¹⁰ that threatens internal validity by preventing results from being attributable to plain packaging alone.¹⁷¹¹

7.618. It seems unsurprising, in our view, that TPP literature studies conducted prior to the implementation of the TPP measures in Australia, and intended to examine the impact of tobacco plain packaging in various possible configurations, would have utilized a variety of different pack conditions, including different types and sizes of health warnings, given the novelty of the intervention and the variety of health warning requirements in place across the globe. As noted by Professor Fong, some of the studies varied the size of the warnings and the degree of branding in order to assess the effectiveness of various combinations.¹⁷¹²

¹⁷⁰⁹ Honduras's first written submission, para. 495; Dominican Republic's first written submission, paras. 608-611; Cuba's first written submission, paras. 12(b), 176(a), and 189; and Indonesia's second written submission, paras. 186-187.

¹⁷¹⁰ A confounding variable is a variable that is not a focus of the study, but is highly correlated with a variable that is. Peer Review Report, (Exhibit DOM/HND-3), para. 61.iii.

¹⁷¹¹ See, e.g. Kleijnen Systematic Review, (Exhibit DOM/HND-4), p. 45 (critiquing Hoek et al. 2011, (Exhibits AUS-148, JE-24(34))).

¹⁷¹² Fong Supplemental Report, (Exhibit AUS-531), para. 155 (referring to Hammond et al. 2013a, (Exhibits AUS-177, JE-24(32)); and Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63))).

7.619. Nonetheless, we also note that some of the TPP literature studies did include plain packs with dominant GHWs on the front of the pack.¹⁷¹³ Australia identifies two experimental studies specifically designed to measure whether plain packaging has an impact in the presence of large GHWs.¹⁷¹⁴ We note that the independent reviewers of the Chantler Report assigned both of these studies a quality score of 5 out of 6, or "high".¹⁷¹⁵ We further note a study from New Zealand, which permitted a degree of comparison between plain and branded packs with a dominant GHW. This study found that packs with a 75% GHW were deemed "very unattractive, regardless of the level of branding present".¹⁷¹⁶ Wakefield et al. submit that the results of this study may have been influenced by the use of an arguably more appealing white background on the plain packs rather than a brown background, as well as a novel GHW and a single front-of-pack view rather than a multi-dimensional view which displays branding or "plainness" to a greater degree.¹⁷¹⁷

7.620. We also note that the study commissioned by Australia, Parr et al. 2011b, to test the impact of plain and branded packages of roll-your-own (RYO) tobacco, cigarillos/little cigars, and premium cigars, assessed each of these with a 75% GHW.¹⁷¹⁸ Honduras¹⁷¹⁹, the Dominican Republic¹⁷²⁰, and Cuba¹⁷²¹ argue that Parr et al. 2011b utilised an inadequate sample and suffered from methodological flaws. In particular, they argue that, as regards premium cigars, Parr et al. 2011b relies on responses from eight LHM cigar smokers, none of whom were selected randomly to participate in the research. Further, Parr et al. 2011b adopted a purely qualitative approach to

¹⁷¹³ For example, the following studies included packs where a GHW occupied more than 50% of the front pack face: Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)); Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)); Hoek et al. 2012, (Exhibits AUS-163, JE-24(35)); Hammond et al. 2013a, (Exhibits AUS-177, JE-24(32)); Parr et al. 2011a, (Exhibits AUS-117, JE-24(49)); Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)); and Germain et al. 2010, (Exhibits AUS-154, JE-24(25)).

¹⁷¹⁴ Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)); and Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)). Wakefield et al. 2012 employed a between-subjects experiment, which collected Australian smokers' ratings of positive pack characteristics, positive smoker characteristics, negative smoker characteristics, positive taste characteristics, and negative harm characteristics for each of six different packs, including a plain pack with a 70% GHW and a branded pack with a 70% GHW. The branded pack with a 70% GHW was rated more highly on positive pack characteristics and positive smoker characteristics, while the plain pack with a 70% GHW was rated more highly on the negative smoker characteristic, "boring". The packs rated similarly on measures of positive taste characteristics, while the branded pack received higher ratings on negative harm characteristics. Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)), p. 1164. Further, analysis of the ratings of these two packs, in conjunction with ratings of four other packs, each of which was either branded or plain and included either a 30% or 100% GHW on the pack face, indicated that plain packaging had more of an effect on brand appeal and purchase intentions than increasing the size of the GHW. Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)), pp. 1163-1164. Thrasher et al. 2011 assessed demand among smokers in the United States, via an auction, for variously packaged cigarettes, including a branded pack with a 50% GHW and a plainer pack with a 50% GHW. Bids for the more plainly packaged cigarette pack were lower, indicating that plain packaging further reduces demand for cigarettes beyond the impact of a 50% GHW. Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)), p. 47.

¹⁷¹⁵ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 48, 51, and 54. Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)), was included in the original Stirling Review, and was assigned a quality score of "Medium". Stirling report, (Exhibits AUS-140, HND-130, CUB-59), p. 31. Wakefield et al. 2012 was published after the cut-off date of the original Stirling Review, and was included in the Stirling Review 2013 Update, which did not assign quality ratings to individual studies. See Stirling update report, (Exhibits CUB-216, CUB-60).

¹⁷¹⁶ Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)), pp. 185-186. Hoek et al. 2011 conducted a within-subjects best-worst experiment in which young adult smokers identified their preferred and least-preferred pack among thirteen different packs which displayed various degrees of branding alongside a 30%, 50%, or 75% GHW on the front face. This study concluded that where graphic health warnings covered at least 50% of the pack face, respondents preferred plain packages.

¹⁷¹⁷ Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)), p. 1165.

¹⁷¹⁸ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 11. This study generally found that the plain packages minimised perceptions of appeal and quality, although the GHWs were perceived as equally noticeable on the branded and plain RYO and cigarillo/little cigar packages. The study also found that darker colours were seen to be more harmful to health than lighter colours. Among 6 packages tested with a 75% GHW, 5 with branding and one plain package, the plain package was perceived to contain the second most harmful RYO cigarettes, and the third most harmful cigarillos/little cigars. Ibid. pp. 25-26 and 34. The study also noted a possible link between appeal, quality, and perceived harm with respect to cigarillos/little cigars. Ibid. p. 34. The impact of plain packaging on the noticeability of health warnings or the ability of a pack to mislead regarding harmfulness to health were not tested in this study for cigars.

¹⁷¹⁹ Honduras's first written submission, paras. 530-537.

¹⁷²⁰ Dominican Republic's first written submission, paras. 66 and 628-639.

¹⁷²¹ Cuba's first written submission, paras. 263-267.

its research on LHM cigars to draw conclusions about the likely effects of a substantial public health intervention for an entire population of interest. Also, Parr et al. 2011b asked respondents to compare images of digitally created, unbranded, plain pack cigar tubes, carrying a full health warning, with images of existing branded cigar tubes with no health warning. As a result, according to Cuba, it is impossible to separate out the potential effect of plain packaging from the potential effect of the brand name and the health warning. The interviewers also presented respondents with a plain pack cigar band that did not display any information at all and asked them to compare it with a fully branded band.¹⁷²²

7.621. As Cuba and the Dominican Republic note, Parr et al. 2011b explains the reasons for some of these shortcomings. According to Parr et al. 2011b, the methodology for premium cigar smokers was qualitative and the number of interviewees was limited to eight due to difficulties recruiting large numbers of premium cigar smokers in Australia.¹⁷²³ Parr et al. 2011b adds that the brand name for the plain packaged brand "Mayfair" was chosen for cigarillos and little cigars as there is currently no other similarly named tobacco product in the Australian market and there would be no latent association with the brand name among the research audiences.¹⁷²⁴ According to Parr et al. 2011b, in the case of cigar tubes it was not possible to produce images of branded products that would show both the health warning in full as well as the brand because of the specification that the health warning take up 60% of the circumference and 95% of the length of the tube. It was determined that images showing only the health warning or branding in part would not be useful for research purposes. In addition, time constraints meant it was not possible to create physical mock ups of cigar tubes.¹⁷²⁵

7.622. We consider that these explanations provide relevant reasons for specific limitations of the methodology of Parr et al. 2011b criticised by Cuba, the Dominican Republic, and Honduras. In light of this, and while we agree with the complainants that a better methodology may have been preferable, we note that, as Cuba and the Dominican Republic point out, Parr et al. 2011b is the only pre-implementation study submitted in these proceedings that sought to investigate the impact of tobacco plain packaging on cigars and cigarillos.¹⁷²⁶ We shall therefore take its conclusions into account in our subsequent analysis – to the extent that these contain relevant observations for assessing specific aspects of how plain packaging, in the design used by Parr et al. 2011b, may contribute to the objective of the TPP measures, in particular to certain mechanisms outlined by the TPP measures.

7.623. The complainants identify other instances where the validity of TPP literature studies may, in their view, have been compromised, such as the use of non-representative samples that include non-smokers or do not reflect the demographics of the population¹⁷²⁷, presenting subjects with a "false choice" between branded and plain packs, when only plain packs will be available following implementation¹⁷²⁸, or the use of an unfamiliar branded pack rather than an existing/familiar branded pack.¹⁷²⁹ However, even assuming that various factors have impacted the validity of certain studies within the TPP literature as the complainants argue, it is not always clear what impact such factors may have had on study results and the conclusions that may be drawn from them, either individually or taken together. We note in this respect Professor Fong's observation that these factors in most cases have an indeterminate impact upon study results.¹⁷³⁰

¹⁷²² Honduras's first written submission, paras. 530-537; Dominican Republic's first written submission, paras. 628-639; and Cuba's first written submission, paras. 263-267.

¹⁷³⁰ Fong Report, (Exhibit AUS-14), paras. 507-509 and 553-555.

7.624. The complainants and their experts also identify socially desirable responding (SDR) and demand effects as common concerns in the tobacco plain packaging studies.¹⁷³¹ SDR arises when respondents in a study are simply giving the response that they believe is consistent with social norms and expectations – in this particular case about smoking and tobacco control policies – rather than their own true attitudes.¹⁷³² The complainants' expert Professor Ajzen explains how SDR can influence the results of the TPP research, and that it is the researchers' responsibility to make sure that the obtained results cannot be explained by reactive effects.¹⁷³³ The complainants argue that the risk of SDR is particularly present in research contexts that involve issues of strong social norms and expectations, addictive behaviour, or social ostracism, such as tobacco control research, and can be controlled by measuring each participant's tendency to engage in SDR and including the resulting scores in the analysis. None of the papers reviewed as part of the Peer Review Project reported having accounted for the possibility of SDR.¹⁷³⁴ Australia responds that several of the TPP studies employed a "between-subjects" study design, a method endorsed by the complainants' expert Professor Ajzen to reduce the possibility of bias¹⁷³⁵, and claims that the complainants are applying a much more critical standard to the TPP research than the prevailing standard in the field of marketing.¹⁷³⁶

7.625. Demand effects arise in the presence of research design features that may lead participants to anticipate the researchers' hypothesis and as a result to be inclined to respond as they think the researcher wishes them to respond rather than in accordance with their own attitudes and preferences.¹⁷³⁷ The complainants' experts suggest that while the need to investigate such reactive effects is well-recognized in behavioural sciences and, more specifically, in the tobacco control literature, the plain packaging studies do not all report having accounted for those effects. The complainants also explain how the studies could have accounted for them.¹⁷³⁸ Australia responds that the complainants fail to provide any evidence that biases are indeed present, and if so, how they could influence the results of any particular study, and that, in many cases, these supposed biases could not have influenced the findings.¹⁷³⁹ Australia's expert also submits that, in a number of the studies where reactive effects were allegedly a "concern", any potential bias could not explain the results; and provides examples of cases where the standards of review used by the complainants' experts for plain packaging studies is not consistent with the standards of review used in this research field.¹⁷⁴⁰ The complainants' expert Professor Ajzen does not agree that the designs of a number of TPP studies rule out the risk that reactive effects bias the study results¹⁷⁴¹ and argues that whatever impact plain packaging is observed to have, including on the appeal of tobacco products, is conceivably due to no more than such reactive effects.¹⁷⁴² Inman et al. allege that SDR and/or demand effects may be present in more than 70% of the 56 papers reviewed.¹⁷⁴³ SDR and/or demand effects appear to be a systematic concern of

¹⁷³¹ Honduras's first written submission, para. 496; Dominican Republic's first written submission, paras. 598-600; Cuba's first written submission, para. 176; Klick TPP Literature Report, (Exhibit UKR-6), p. 1; Peer Review Report, (Exhibit DOM/HND-3), paras. 18(i) and 61.ii; Kleijnen Systematic Review, (Exhibit DOM/HND-4), Section 4.2.5, p. 36; Viscusi Report, (Exhibit UKR-8), paras. 32 and 34; Ajzen Report, (Exhibit DOM/HND/IDN-3), paras. 179-188; Peer Review Project Rebuttal Report, (Exhibit DOM/HND-12), paras. 41-51; and Ajzen Supplemental Report, (Exhibit DOM/HND/IDN-4), para. 61.h.

Inman et al. with respect to studies featuring focus groups, telephone interviews, or within-participant designs. It is also noted as a possible source of bias in studies involving children and those where the participants self-report results.¹⁷⁴⁴

7.626. We note that the Chantler Report's independent reviewers acknowledged possible social desirability effects in some of the studies that they reviewed.¹⁷⁴⁵ Among the 37 quantitative studies considered in the Chantler Report, the independent reviewers noted social desirability bias as a comment or "key limitation" in relation to four of the studies.¹⁷⁴⁶ It appears therefore that demand effects and socially desirable responding may have affected a subset of TPP studies, including some of those relating to the impact of plain packaging on the appeal of tobacco products. We note, however, that despite these concerns, the independent experts assigned each of those studies "high" **overall** quality ratings, indicating that the presence of such risks may have a limited impact upon the overall quality of a study.¹⁷⁴⁷ We further note that several other studies for which the Dominican Republic and Honduras's Peer Review Project identified a risk of bias from SDR or demand effects have nevertheless been assessed favourable overall quality ratings by the Stirling Review and/or the independent reviewers commissioned for the Chantler Report.¹⁷⁴⁸ We have previously determined that the Stirling Review, as confirmed by the Chantler Report's independent experts, is a high-quality review of the literature that was executed in accordance with best practices.¹⁷⁴⁹ Thus, even assuming that certain studies failed to account for such effects, we do not consider that we have a sufficient basis to draw conclusions on the extent to which such bias could, or actually does, affect the results of the studies at issue, and, as a result, call into question the probative value of the TPP literature.

7.627. Overall, we do not consider that we are in a position to draw definitive conclusions on the methodological merits of each individual study referred to in relation to the impact of plain packaging on the various outcomes that they measure, including the three "proximal outcomes" reflected in the TPP Act. Nor, indeed, do we consider that it would be appropriate for us to do so.

¹⁷⁴⁴ See Peer Review Report, (Exhibit DOM/HND-3), Appendix C.

¹⁷⁴⁵ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55.

¹⁷⁴⁶ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55. "Social desirability bias" was noted in entries corresponding to Doxey and Hammond 2011, (Exhibits AUS-156, JE-24(17)); Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)); and Hammond et al. 2011, (Exhibits AUS-157, JE-24(30)). Social desirability was also referred to with respect to a study that was presented at the SRNT 17th Annual Meeting in Toronto in 2011 and under review with a peer-reviewed journal at the time of the Stirling Review. The title and authorship of the subsequently published paper Hammond et al. 2013b, (Exhibits AUS-158, JE-24(31)), is similar to the description of this study, and a note at the bottom of p. 151 indicates that it was presented at the Society for Research on Nicotine and Tobacco Annual Conference in Toronto in 2011.

¹⁷⁴⁷ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 48 and 50. Each of the studies identified in fn 1746 above as at-risk of SDR were assigned overall quality/assessment ratings of 5 out of a total possible of 6, which is considered "high".

¹⁷⁴⁸ Compare Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 54 (assigning Borland et al. 2013, (Exhibits AUS-136, JE-24(9)) an overall quality/bias assessment score of 5 out of 6), with Peer Review Report, (Exhibit DOM/HND-3), p. 606 (noting that the within-subjects design utilized in Borland et al. 2013, (Exhibits AUS-136, JE-24(9)), **produces "impossible ... to avoid" threats to validity in the form of SDR and demand effects**); Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 54 (assigning Ford et al. 2013a, (Exhibits AUS-137, JE-24(20)) an overall quality/bias assessment score of 5.5 out of 6), with Peer Review Report, (Exhibit DOM/HND-3), p. 620 (noting social desirability biases in Ford et al. 2013a, (Exhibits AUS-137, JE-24(20)), may be "systematic and large"); Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 50 (assigning Germain et al. 2010, (Exhibits AUS-154, JE-24(25)) an overall quality/bias assessment score of 5.5 out of 6), and Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 28 (assigning Germain et al. 2010, (Exhibits AUS-154, JE-24(25)), a quality score of "Medium"), with Peer Review Report, (Exhibit DOM/HND-3), p. 293 (noting possible bias in Germain et al. 2010, (Exhibits AUS-154, JE-24(25)) due to parental recruitment of subjects as well as possible demand effects due to the novelty of the packs); Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 50 (assigning Donovan 1993, (Exhibits AUS-151, JE-24(16)) an overall quality/bias assessment score of 5 out of 6), and Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 26 (assigning Donovan 1993, (Exhibits AUS-151, JE-24(16)) a quality score of "Medium"), with Peer Review Report, (Exhibit DOM/HND-3), pp. 176-177 and 180 (noting the possibility of social desirability bias in Donovan 1993, (Exhibits AUS-151, JE-24(16))); and Chantler Report (Exhibits AUS-81, CUB-61), Annex E, p. 61 (assigning Hoek et al. 2012, (Exhibits AUS-163, JE-24(35)), an overall quality/bias assessment score of 6 out of 6), and Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 34 (assigning Hoek et al. 2012, (Exhibits AUS-163, JE-24(35)), a quality score of "Medium"), with Peer Review Report, (Exhibit DOM/HND-3), pp. 463-464 (indicating that it is unknown whether demand effects have influenced the results of Hoek et al. 2012, (Exhibits AUS-163, JE-24(35))).

¹⁷⁴⁹ See paras. 7.595-7.596 above and 7.633 below.

Rather, as described above, what we must consider is the extent to which the body of evidence before us, as a whole, provides a reasonable basis in support of the proposition for which it is being invoked. In this assessment, to the extent that scientific evidence is being relied upon, we must determine whether such evidence has the "necessary scientific and methodological rigor to be considered reputable science" according to the standards of the relevant scientific community¹⁷⁵⁰, as well as the extent to which its use in support of the measures at issue is "objective and coherent".¹⁷⁵¹

7.628. In the present instance, it is clear from the above that a body of research developed, mostly prior to the implementation of the TPP measures in Australia, with the aim of evaluating the potential impact of tobacco plain packaging on a range of outcomes, including the appeal of tobacco products, the salience of GHWs and the ability of tobacco packaging to mislead consumers about the harmful effects of tobacco products. This research gave rise to a number of publications, emanating from a range of recognized institutions conducting research on tobacco control, in support of the proposition that plain packaging of tobacco products would lead, *inter alia*, to a reduction in the appeal of tobacco products to consumers, increased effectiveness of GHWs, and a reduction in the ability of the pack to mislead consumers about the harmful effects of tobacco products.

7.629. It is recognized, including by Australia, that individual studies within this body of literature may have limitations, in terms of their study design or implementation. However, credible evidence has also been presented to us, which suggests that certain ethical and practical constraints exist in the conduct of this type of research. As discussed above, this includes constraints in respect of the ability to conduct the type of experiments that would in principle be considered optimal, such as large-scale randomized experiments¹⁷⁵², as well as limitations on the ability to design and implement a study in such a manner as to account effectively and simultaneously for all potential biases and confounding factors.¹⁷⁵³

7.630. As described above, aside from the three reviews commissioned by Honduras, the Dominican Republic, and Ukraine (relied upon by Cuba) for the purpose of these proceedings, at least two comprehensive reviews of the TPP literature have previously been carried out, including a systematic review and an independent assessment of this review and the underlying studies (the Stirling Review and the Chantler Report). Both were conducted in the context of the UK Government's consultations on the possible introduction of tobacco plain packaging.¹⁷⁵⁴

7.631. While the various reviews before us do not all cover exactly the same group of studies, there is a significant overlap among them: of the 55 papers included in the Peer Review Project, 42 were included in the Stirling Review and its subsequent update¹⁷⁵⁵, and 37 in the Chantler Report. Among the 58 papers that were the focus of the Kleijnen Systematic Review, 45 were included in the Stirling Review and its subsequent update¹⁷⁵⁶, and 40 were evaluated in the Chantler Report.¹⁷⁵⁷ Among the 48 studies reviewed by Professor Klick, 39 were included in the Stirling Review and its subsequent update¹⁷⁵⁸, and 34 were evaluated in the Chantler Report.

¹⁷⁵⁰ Appellate Body Report, *US – Continued Suspension*, paras. 591-592. See also *ibid.* paras. 598 and 601.

¹⁷⁵¹ Appellate Body Report, *US – Continued Suspension*, paras. 592, 598, and 601.

¹⁷⁵² See paras. 7.557-7.562 above, regarding the practical and ethical limitations on the conduct of large-scale randomized experiments, in respect of tobacco plain packaging.

¹⁷⁵³ See paras. 7.615-7.622 above.

¹⁷⁵⁴ See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59); and Chantler Report, (Exhibits AUS-81, CUB-61).

¹⁷⁵⁵ One of the Peer Review Project papers was excluded from the Stirling Review due to poor quality data, and six were published after the mid-September 2013 cut-off date for the Stirling Review 2013 Update. Two of the studies included in the Peer Review Project but not included in the Stirling Review were unpublished studies conducted by GfK Bluemoon at the request of Australia.

¹⁷⁵⁶ Four papers assessed in the Kleijnen Systematic Review were published after the Stirling Review 2013 Update's mid-September 2013 cut-off date.

¹⁷⁵⁷ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports.

¹⁷⁵⁸ Four papers assessed by Professor Klick were published after the Stirling Review 2013 Update's mid-September 2013 cut-off date.

7.632. We also note that the reviews conducted in the context of the UK consultations, like those presented by the complainants in these proceedings, consider individual studies as well as the conclusions that may be drawn from the TPP literature as a whole. These reviews focus on key questions of interest to our own assessment, including the expected impact of tobacco plain packaging on the three "non-behavioural" or "proximal" outcomes that correspond to the three mechanisms reflected in Australia's TPP measures, and, to a lesser extent, on smoking-related behaviours.

7.633. We further note that the main methodological criticisms expressed by the complainants in these proceedings in relation to the TPP studies duplicate critiques that were made to Sir Cyril Chantler during the course of his consultation for the UK Government, and did not lead him to conclude that the evidence base for plain packaging was flawed.¹⁷⁵⁹ As described above, the preparation of the Chantler Report included a process whereby independent reviewers assessed the quality of individual studies comprising the TPP literature, as well as the quality of the systematic review of this literature in the Stirling Review. These independent reviewers concluded both that the methodology followed in the Stirling Review was consistent with best practices, and that the underlying research was "robust".¹⁷⁶⁰

7.634. As described above, the reviewers of the quantitative studies concluded that the Stirling Review was conducted to a high standard and that the conclusions drawn are "a reasonable reflection of the evidence available".¹⁷⁶¹ Specifically, they found that "the three main outcomes, appeal, health warning and harm were mainly addressed in the high quality papers".¹⁷⁶² With respect to the qualitative studies, the reviewer observes that this work "is necessarily small scale and indicative of factors likely to be relevant/influential in behaviour rather than offering the kinds of predictive accuracy associated with Randomized Trials or large scale quantitative analyses".¹⁷⁶³ The reviewer notes that, in the absence of population studies or experiments "this is probably the best evidence available".¹⁷⁶⁴ She concludes as follows:

My conclusions are that, in the absence of strong experimental or quantitative analyses of actual behaviour, the qualitative research reviewed provides a reasonable summary of attitudes and perceptions regarding plain packaging. This work suggests that:

- Plain packaging is perceived as less attractive/appealing by smokers and non-smokers.
- Colour and branding are important: gold and silver convey brand and quality, and 'sludgy' brown/grey may be viewed more negatively by smokers and non-smokers.
- Plain packaging increases the visibility/prominence of health warnings (however there is some evidence that smokers and non-smokers – including young people – are aware of, and/or can recall messages about health risks and harm but this may not alter behaviour).
- Plain packaging may have different impacts on smoker and non-smoker populations (it may not deter current smokers or reduce brand familiarity/loyalty and is unlikely to increase transaction times).¹⁷⁶⁵

7.635. We accord particular weight to these assessments, which constitute an independent judgment, from qualified sources¹⁷⁶⁶, of the quality of the studies underlying the Stirling Review,

¹⁷⁵⁹ See Chantler Report, paras. 4.5-4.10. In particular, the Chantler Report considered criticisms that the Stirling Review and its associated update were: (a) a narrative synthesis rather than a meta-analysis showing overall effect size; (b) tainted by bias; and (c) demonstrated consistent results due to repeated flaws in the underlying studies

¹⁷⁶⁰ Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.18.

¹⁷⁶¹ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 49.

¹⁷⁶² Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 49.

¹⁷⁶³ Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 56.

¹⁷⁶⁴ Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 56.

¹⁷⁶⁵ Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 57.

as well as the quality of the Stirling Review itself, thereby lending credence to its overall conclusions regarding the anticipated impact of tobacco plain packaging.

7.636. The conclusions of this independent review and the Stirling Review, which together reviewed 49 of the same 69 papers (71%) considered across the complainants' three TPP literature reviews (the Kleijnen Systematic Review, Peer Review Project, and the review conducted by Professor Klick), contrast with those of the complainants' experts. The Peer Review Project concludes that "the Plain Packaging literature as a whole falls short of providing compelling evidence of the effect of plain packaging on the demand for tobacco products".¹⁷⁶⁷ It is not clear to us, however, given the nature and constraints of the research at issue, that such "compelling evidence" could have been reasonably expected, especially prior to the adoption of tobacco plain packaging measures in Australia or elsewhere. Rather, as discussed above, it may be expected that some flaws and limitations will inevitably affect individual studies, which do not necessarily invalidate the entirety of their conclusions.

7.637. The two comprehensive external reviews of the literature described above, the Stirling Review and Chantler Report, acknowledge the existence of such limitations in the TPP literature, including some of the type identified in the expert reviews commissioned by the complainants for the purposes of these proceedings. Nonetheless, they found that these studies, on the whole, constituted the "best available evidence" and supported the conclusions drawn from them. We also note that the complainants have not presented a body of other studies that would suggest conclusions contrary to the converging conclusions reached by the main body of plain packaging-related literature.

7.638. In conclusion, it may well be that the TPP literature would "benefit from being more robust in terms of study design", as expressed in the Kleijnen Systematic Review.¹⁷⁶⁸ However, in light of the elements above, we are not persuaded that the complainants have demonstrated that this body of evidence, taken as a whole, lacks methodological rigour to such an extent that it should be considered not to constitute reputable science according to the standards of the relevant scientific community, or that Australia's reliance on it in these proceedings is not "objective and coherent". To the contrary, a systematic review awarded a substantial majority of the then-available tobacco plain packaging studies medium to high quality and relevance scores¹⁷⁶⁹, assessments which were in turn substantiated by an independent review which confirmed that the studies are "methodologically sound".¹⁷⁷⁰

Overall conclusion on the critique of the TPP literature

7.639. Overall, in light of the above, we find that the studies forming the TPP literature come from respected and qualified sources, focus on relevant outcomes and have not been shown to be, overall, so methodologically flawed that they should be dismissed in their entirety as an unreliable evidentiary base in support of tobacco plain packaging.

7.640. At this stage of our analysis therefore, we note the existence of a body of published studies, predating the implementation by Australia of the TPP measures, and supporting the hypothesis of an effect of tobacco plain packaging on the appeal of tobacco products, the effectiveness of GHWs, and the ability of packs to mislead the consumer about the harmful effects of smoking, as well as on some smoking-related behaviours.

7.641. While some of these studies may suffer from methodological flaws or limitations, some of which are identified in the relevant publications themselves, these were not considered fatal in an independent review. We note in this respect the observations by Australia that "individual studies

¹⁷⁶⁶ We note that this independent review was conducted by academics commissioned by Sir Cyril Chantler who are not themselves authors of the reviewed studies. By contrast, some of the co-authors of the Stirling Review co-authored some of the reviewed publications.

¹⁷⁶⁷ Peer Review Report, (Exhibit DOM/HND-3), para. 68.

¹⁷⁶⁸ Kleijnen Systematic Review, (Exhibit DOM/HND-4), Section 4.2.3, p. 33.

¹⁷⁶⁹ See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 25-37.

¹⁷⁷⁰ See Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.24 and p. 5, para. 13.

within any body of literature will vary in their methodological strengths"¹⁷⁷¹ and that an assessment of the quality of the TPP literature should take into account the totality of the relevant evidence, rather than seek to disaggregate the analysis in such a manner that each individual study would be judged in isolation for its ability to provide the basis for general conclusions.¹⁷⁷² This view is echoed in the Stirling Review and Chantler Report, which take into consideration, in their assessment, not only the quality of the individual studies under review, but also their combined strength and consistency with the wider literature and, in the case of the Chantler Report, other relevant evidence, including tobacco industry documents.¹⁷⁷³ Sir Cyril Chantler thus observes that:

In my view the criticisms of the primary research have a tendency to take a "binary approach", dismissing studies in their entirety on the basis that each has some (usually identified) limitations. The correct approach should be to take account of the limitation in considering the described results. Few research studies are without limitations, and undoubtedly many could be improved with insights from related fields, but this does not seem a reasonable basis on which completely to discount the findings of over 50 peer-reviewed, published studies. Any scientific study can only, realistically, attempt to minimize risk of bias to contribute towards an overall estimate of a likely effect.¹⁷⁷⁴

7.642. We also note that, to the extent that the TPP literature predates the implementation of the TPP measures, it could inform the design of Australia's measures but does not purport to reflect the actual outcomes of the TPP measures as adopted by Australia. The TPP literature, in particular the body of studies conducted prior to the introduction of the TPP measures and relied upon in these proceedings, is only one component of the relevant evidence before us. Australia, in recognizing the predominant focus of these studies on "proximal" outcomes and the difficulty in measuring outcomes in a situation where the ideal study design is impracticable or unethical, recognizes this inherent limitation, which is similarly recognized in an early review of tobacco plain packaging literature.¹⁷⁷⁵

7.643. Notwithstanding any potential limitations of these studies, taken individually or as a whole, we also have before us, in addition to the TPP literature, qualitative and quantitative research and evidence drawn from a variety of sources and fields, as well as empirical evidence relating to the application of the TPP measures in Australia since their entry into force. This includes empirical studies addressing the actual impact of the TPP measures on the three proximal outcomes that are the object of most of the reviewed TPP literature studies. As the complainants have observed,

¹⁷⁷¹ Hammond Review, (Exhibit AUS-555), p. 33. See also Fong Report, (Exhibit AUS-14), paras. 489, 493, and 527 (noting that it is standard practice to acknowledge a study's limitations, and then to draw appropriate conclusions from the data that can be made despite the limitations).

¹⁷⁷² See Fong Report, (Exhibit AUS-14), paras. 492-493. See also Hammond Review, (Exhibit AUS-555), pp. 33-34 ("[C]ausality is rarely, if ever, established on the basis of a single study; rather, it should be evaluated based upon a body of research.").

¹⁷⁷³ See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 20-23 (describing the method by which study results were synthesized); Chantler Report, (Exhibits AUS-81, CUB-61), para. 1.20 (noting that a considerable volume of evidence from interested parties on all sides of the debate was taken into account, as augmented by further tobacco control publications, internal tobacco industry documents, and wider marketing literature and practice). See also Stead et al. 2013, (Exhibit CUB-58), p. 8 (describing the available research "overall" and comparing the findings to the wider marketing literature and other literature on health warnings).

¹⁷⁷⁴ Chantler Report, (Exhibits AUS-81, CUB-61), para. 4.14.

¹⁷⁷⁵ See Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)), p. 4:

In marketing and social research, no single study or research method by itself can provide definitive answers to the research question, "What will consumers do if?" Without the benefit of field experiments, such research can only determine what consumers would "say" they would do if. In this case, the Panel had to ask consumers what they would do if all cigarettes were only available in the same plain and generic packages. The Panel could not measure what consumers will do – it could only measure what they say they would do, what they say they think about plain packaging, what they say they think about the idea, etc. Thus, this type of research question is much more difficult to answer than the types of research questions physical scientists typically ask. They can measure what molecules do if, but they cannot ask the molecules what they would do if?

evidence relating to actual application of the measures should be given appropriate weight in our assessment.

7.644. We consider this additional evidence in section 7.2.5.3.6 below, and therefore do not seek to draw, at this stage of our analysis, any overall conclusion on the impact of the TPP measures on relevant outcomes addressed in the TPP literature. The evidentiary weight to be given to this body of studies in our assessment will depend not only on its intrinsic quality, but also on its relevance to our overall assessment, in light also of other relevant evidence before us.

7.645. With these initial determinations in mind, we consider further the evidence before us in relation each of the three "mechanisms" identified in the TPP Act, and the associated behavioural outcomes intended to arise from them, that underlie the design, structure and operation of the measures.

7.2.5.3.5.2 First mechanism: impact of plain packaging on the appeal of tobacco products to consumers

7.646. As described earlier, the first "mechanism" through which the TPP measures are designed to contribute to the achievement of their objective is by "reduc[ing] the appeal of tobacco products to consumers", which, in turn, is expected to influence smoking behaviours and thereby contribute to a reduction in the use of, and exposure to, tobacco products.

7.647. A relevant assumption underlying this mechanism is that, where branding features are available on tobacco products or their retail packaging, these may act as advertising and thereby influence perceptions of tobacco products. The complainants disagree that tobacco packaging functions as advertising. As discussed above, the complainants also generally consider that the evidentiary base for the proposition that the *removal* of branding features through the uniform presentation of tobacco products and their retail packaging (plain packaging) will lead to a reduction of the appeal of tobacco products, is flawed. They further argue that plain packaging will not reduce the "coolness" factor of branded packs to adolescents¹⁷⁷⁶ and will, at best, cause attitudes toward some brands to become less positive and attitudes toward other brands to become more positive.¹⁷⁷⁷ The complainants further argue that, even assuming that the appeal of tobacco products could be reduced through plain packaging, this would not have the expected "follow-on" effect on smoking behaviours, because packaging is not a driver of the relevant behaviours, namely smoking initiation, cessation or relapse.

7.648. In light of the parties' arguments, and taking into account the elements constituting the "causal chain" under the first mechanism of the measures, we consider below the following aspects of the design, structure and intended operation of the TPP measures, in relation to this "first mechanism"¹⁷⁷⁸:

- The role of tobacco packaging as a form of advertising or promotion, and its impact on the perception of tobacco products;
- The impact of tobacco *plain* packaging on the appeal of tobacco products; and
- The impact of a reduction in product appeal on smoking *behaviours*.

Tobacco packaging as a form of promotion or advertising

7.649. Australia considers that tobacco packaging is a form of marketing and advertising, which can generate positive perceptions of a product, and that advertising increases demand for tobacco products.¹⁷⁷⁹ Australia explains that "[b]y removing one of the last remaining frontiers for tobacco advertising in Australia through the introduction of tobacco plain packaging, Australia sought to sever the link between tobacco product packaging and tobacco smoking behaviour, particularly for

¹⁷⁷⁶ See Steinberg Report, (Exhibit DOM/HND-6), paras. 54-57.

¹⁷⁷⁷ See Mitchell Report, (Exhibit UKR-154), paras. 27-32.

¹⁷⁷⁸ As described above, we will consider the evidence relating to the application of the TPP measures in the next part of our analysis. See section 7.2.5.3.6 below.

¹⁷⁷⁹ See Australia's first written submission, paras. 66-91 and 615-626.

youth".¹⁷⁸⁰ The complainants consider however that packaging is not a form of advertising and does not have an impact on the decision to smoke.¹⁷⁸¹ In their view, therefore, the adoption of plain packaging does not eliminate "one of the last remaining frontiers for advertising".¹⁷⁸²

Main arguments of the parties

7.650. The complainants argue that there are significant differences between general advertising media, which are very versatile in terms of their ability to create brand imagery, and the limited role that branded packaging can play in communicating messages.¹⁷⁸³ The complainants also argue that packaging needs to serve identification functions that necessarily limit its ability to convey messages in the way that mass advertising media do.¹⁷⁸⁴ Australia responds that packaging can create a "billboard" effect that has the ability to act as "five-second commercials for the product"¹⁷⁸⁵ and that packaging performs similarly to, "and in several cases favourably to", many forms of mass media advertising.¹⁷⁸⁶

7.651. The parties further discuss the extent to which brand packaging acts as a form of advertising in the tobacco sector. The complainants argue that branded packaging on tobacco products is used for the purposes of "brand differentiation", i.e. to influence the consumer's decision to purchase one brand over another, rather than to influence the decision to purchase a tobacco product.¹⁷⁸⁷ Australia responds that tobacco packaging "can communicate descriptive and persuasive information to a consumer in a manner that influences her perceptions about the brand, the brand's image and the product itself".¹⁷⁸⁸ It provides examples from tobacco industry documents to demonstrate that tobacco companies themselves have acknowledged the use of packaging as an advertising medium.¹⁷⁸⁹

7.652. The parties also disagree on the extent to which tobacco packaging can act as advertising in the Australian context, that is, in the presence of, *inter alia*, a total advertising ban, point-of-sale restrictions, and GHWs occupying 75% of the pack surface.¹⁷⁹⁰ The complainants consider that differences between packaging and mass media advertising are particularly pronounced in Australia's "dark market", where "dominant and ugly" GHWs leave very little space for branding; there is no opportunity for the packaging to recall or evoke advertising as part of a communications mix; and there is virtually no opportunity for a potential consumer to see the limited space available for branding.¹⁷⁹¹ For the complainants, in this context, "it is not credible to

¹⁷⁸⁷ See, e.g. Honduras's first written submission, para. 453; Honduras's second written submission, para. 304; Dominican Republic's first written submission, para. 666; Dominican Republic's response to Panel question No. 102, para. 77; and Steenkamp Report, (Exhibit DOM/HND-5), paras. 9, 50-60, 110, and 114.

¹⁷⁸⁸ Dubé Report, (Exhibit AUS-11), para. 13.

¹⁷⁸⁹ See Australia's first written submission, paras. 67-69; Australia's opening statement at the first meeting of the Panel, para. 18; and Australia's opening statement at the second meeting of the Panel, para. 32.

¹⁷⁹⁰ See sections 2.2.1-2.2.2 and 2.2.4.

¹⁷⁹¹ This argument is developed in particular in an expert report by Professor Steenkamp, relied upon by the complainants. See Steenkamp Report, (Exhibit DOM/HND-5), paras. 13, 76-86 and 116.

suggest that the use of non-misleading trademarks on the remainder of the pack would turn this package into an advertising tool" or create positive associations.¹⁷⁹²

7.653. Australia considers that the fact that Australia is a dark market on the contrary "likely enhances" the ability of the pack to serve as an effective advertising vehicle.¹⁷⁹³ This argument is developed in two expert reports submitted by Australia, by Professors Dubé and Tavassoli respectively. Professor Dubé argues that marketing impressions are created by packaging mostly at the point of consumption (rather than the point of sale) and that there is evidence to suggest that advertising media can be substitutes, as opposed to complements.¹⁷⁹⁴ Professor Tavassoli considers that packaging provides "a potent means of advertising" in the Australian context, and discusses various concepts ("selective attention"¹⁷⁹⁵, "size-invariance") in support of the notion that the power of branding imagery on packaging is not dependent on its size.¹⁷⁹⁶ Professor Steenkamp responds that Professor Tavassoli's examples are inapt to explain the impact of TPP on overall demand, as they relate to market conditions that do not reflect the Australian context.¹⁷⁹⁷ Professor Steenkamp also responds to Professor Dubé's critique, contending that the studies Professor Dubé relies on to conclude that tobacco packaging would be more effective in a "dark market" do not support that conclusion.¹⁷⁹⁸

Analysis by the Panel

7.654. We do not consider it necessary, for the purposes of our findings, to determine in the abstract what would be a proper textbook characterization of product packaging in relation to advertising, and, in particular, whether "packaging" can be generally considered as a medium of advertising and promotion¹⁷⁹⁹ or is more properly characterized as relating primarily to the product itself.¹⁸⁰⁰

7.655. Rather, as we understand it, the relevant question before us is, more specifically, the extent to which the aspects of tobacco products and packaging regulated by the TPP measures can be considered to play a role in promotion and communication about tobacco products¹⁸⁰¹, and the extent to which it may, as such, have an impact on perceptions relating to these products. This question is relevant to our determination, to the extent that an understanding of the potential impact of tobacco packaging on perceptions about tobacco products will inform our assessment of the capacity of the TPP measures, which regulate tobacco products through the *removal* of a number of branding features on tobacco products and their retail packaging, to affect their appeal to the consumer (and, as a result, affect smoking behaviours and contribute to reducing the use of, and exposure to, tobacco products in Australia, including by reducing their appeal to the consumer).

7.656. We first note that some of the complainants, while emphasizing the distinction between communication and advertising¹⁸⁰², acknowledge that tobacco packaging "can be a vehicle for

¹⁷⁹² See, e.g. Honduras's comments on Australia's response to Panel question No. 204, para. 196.

¹⁷⁹³ Australia's opening statement at the second meeting of the Panel, para. 39.

¹⁷⁹⁵ In Professor Tavassoli's description, "selective attention refers to the process of determining which amongst competing items of information to process". Tavassoli Report, (Exhibit AUS-10), para. 110. See also *ibid.* paras. 111-113.

¹⁷⁹⁶ Tavassoli Rebuttal Report, (Exhibit AUS-588), heading 2 and paras. 21-24. See also Tavassoli Report, (Exhibit AUS-10), paras. 25-34.

¹⁷⁹⁷ Steenkamp Rebuttal Report, (Exhibit DOM/HND-14), paras. 46-47.

¹⁷⁹⁸ Steenkamp Second Rebuttal Report, (Exhibit DOM/HND-19), paras. 26-31.

¹⁷⁹⁹ See Dubé Report, (Exhibit AUS-11), paras. 25-26; and Tavassoli Report, (Exhibit AUS-10), para. 16.

¹⁸⁰⁰ See Dominican Republic's first written submission, para. 673; Steenkamp Report, (Exhibit DOM/HND-5), paras. 26-33 and Figure 3.1; and Steenkamp Rebuttal Report, (Exhibit DOM/HND-14), paras. 50-54.

¹⁸⁰¹ Honduras thus considers the debate about whether packaging is advertising not to be relevant, in that it accepts that packaging can be a vehicle for communication, but not every form of communication is advertising. See Honduras's comments on Australia's response to Panel question No. 204, para. 195. See also Cuba's comments on Australia's responses to Panel question Nos. 166, 170, and 204, para. 30 (indicating that whether use of a trademark or GI is "advertising" is "irrelevant").

¹⁸⁰² See Honduras's comments on Australia's response to Panel question No. 204, para. 195.

communicating quality perceptions to consumers".¹⁸⁰³ Indeed, the complainants generally explain the nature of the economic impact of the TPP measures for manufacturers with reference to their influence on the possibility of communicating to the consumer, through branding on tobacco packaging, about the qualities of tobacco products.¹⁸⁰⁴

7.657. We also note that various documents referred to or presented as evidence in these proceedings identify a number of industry documents suggesting that the tobacco industry has in fact used packaging as an instrument of communication, including in the Australian market:

"In the absence of any other marketing messages, our packaging ... is the sole communicator of our brand essence."¹⁸⁰⁵

"The most effective means Australia has had to get the consumer to notice something new post restrictions was a new/different packaging configuration."¹⁸⁰⁶

"In some key markets legislative restrictions mean that the only medium available to communicate with consumers is via packaging. The pack becomes the primary communication vehicle for conveying the brand essence. In order to ensure the brand remains relevant to target consumers, particularly in these darkening markets, it is essential that the pack itself generates the optimum level of modernity, youthful image and appeal amongst ASU30 [Adult Smokers Under 30] consumers".¹⁸⁰⁷

7.658. We further note that the use of branded packaging as an advertising tool for tobacco products was acknowledged as recently as 2014 in a statement made by British American Tobacco Australia (BATA) in the context of the consultations on plain packaging conducted for the UK Government: "tobacco companies, like other consumer goods companies, see branded packaging as one of the tools of advertising".¹⁸⁰⁸

7.659. These elements sufficiently establish, in our view, that "branded packaging" can act as an advertising or promotion tool in relation to tobacco products, and that this has in fact been considered to be the case by tobacco companies operating in the Australian market, even in the presence of significant restrictions on advertising in the period leading to the entry into force of the TPP measures.¹⁸⁰⁹ Indeed, as observed by Australia and as suggested by the industry statements

¹⁸⁰³ Honduras's comments on Australia's response to Panel question No. 204, para. 195. See also Cuba's comments on Australia's responses to Panel question Nos. 166, 170 and 204, para. 34 (referring to a "trademark communication function" and stating that whether the display of a trademark on a package is described as "promotion" rather than "communication" is unimportant); Indonesia's comments on Australia's response to Panel question No. 204, paras. 60 and 63 (stating, as a "fact", that "branding is an element of marketing and provides a path of communicate with consumers" and that "us[ing] trademarks to distinguish a product inherently includes communicating with consumers"); and Neven Report, (Exhibit UKR-3) (SCI), section 4.1, p. 19 ("From an economic perspective, branding is a form of communication").

¹⁸⁰⁷ Australia's first written submission, para. 8 (quoting British American Tobacco, Packaging Brief 2001, (Exhibit AUS-23)). See also Slovic Report, (Exhibit AUS-12), para. 71.

¹⁸⁰⁸ Australia's first written submission, para. 69 (referring to Chantler Report, (Exhibits AUS-81, CUB-61), para. 3.22). See also *JTI v. Commonwealth*, Transcript, (Exhibit AUS-84), line 735 (wherein counsel for Japan Tobacco International refers to the cigarette pack as "our billboard"); and Chaloupka Public Health Report, (Exhibit AUS-9), para. 58.

¹⁸⁰⁹ As regards cigars and cigarillos, we note that Parr et al. 2011b does not address directly whether tobacco packaging is a form of advertising as regards cigarillos and cigars. Nonetheless, Parr et al. 2011b does show that the importance of packaging in establishing tobacco brand associations and perceptions also applies to cigarillo, little cigar and less frequent premium cigar smokers, and to a lesser extent also to more frequent premium cigar smokers: "As with other plain packaging research, existing associations had a significant impact on how smokers viewed particular brands. In particular, packaging is a significant means of informing these perceptions. This is the case for RYO, cigarillo / little cigar and less frequent premium cigar smokers. For more frequent cigar smokers, rather than the packaging it is the cigar bands which act as markers of legitimacy and carry essential product information, in particular for single sale loose cigars." Parr et al. 2011b (Exhibit AUS-219, JE-24(50)), p. 11. In addition, Parr et al. 2011b notes the brand attachment and loyalty of the cigarillo smokers surveyed: "Cigarillo smokers in this study tended to have established brand relationships,

above, product packaging becomes the only means of brand communication available, in a context where no other form of promotion or advertising is permitted in relation to tobacco products.¹⁸¹⁰ This understanding is supported by a 2012 report by the US Surgeon General entitled *Preventing Tobacco Use Among Youth and Young Adults* which regards tobacco packaging as a "highly visible form of marketing" that assumes greater importance as a promotional tool as exposure to other forms of marketing becomes increasingly restricted.¹⁸¹¹

7.660. The evidence above, in particular the statements emanating from the tobacco industry itself, further indicate that a key purpose of the use of branding on tobacco products, including packaging, is to generate certain positive perceptions in relation to the product in the eyes of the consumer, including, as described above, to "generate the optimal level of modernity, youthful image and appeal" among consumers.¹⁸¹² We are not persuaded that branding on tobacco packaging cannot serve this promotional function or generate certain positive perceptions in the presence of Australia's expanded GHWs, which occupy 75% of the front pack face.¹⁸¹³

7.661. We further note that the use of particular packaging design features such as colours, graphic elements, texture, typography, opening mechanisms, and shapes has been documented as constituting an integral part of the use of branding on tobacco retail packs, for the purposes of creating a brand image and positive associations with the products. Australia points to a "sizable" body of research indicating that brand features, such as pack colour, a key element of brand identity¹⁸¹⁴, affects perceptions of tobacco products and those who smoke them.¹⁸¹⁵ Eye-catching, brightly coloured packs, with prominent and bold designs, have been shown to invoke the strongest positive imagery¹⁸¹⁶, while features such as pack shape can reinforce branding and make products more appealing.¹⁸¹⁷

7.662. For example, reference is made to research conducted by the tobacco industry demonstrated that packs that deviated from a traditional flip-top box by utilizing features such as slide openings or rounded or beveled corners were associated with positive image attributes.¹⁸¹⁸ Small and narrow "perfume packs" oriented towards women have been described as "glamorous", while a pack with an embossed logo was associated with high levels of sophistication.¹⁸¹⁹ Texture or lacquering has been used to create a tactile sensation, enabling an emotional or affective connection with the product or package, while the use of fragrance has been found to connect to emotions, mood and memory.¹⁸²⁰ Packaging features have thus been used to support "identity

only smoking specific brands. That said, while there was some sense that some brands were of higher quality than others, cigarillo smokers did not generally have a large amount of previous knowledge of brands other than their preferred brand." Ibid. p. 8.

¹⁸¹⁰ See section 2.2.2 above.

branding", whereby brands appeal to the "ideal self" or "type" of person that the consumer aspires to be.¹⁸²¹

7.663. In light of the above, we are not persuaded that the complainants have demonstrated that tobacco packaging cannot act as an advertising or promotion tool, including in Australia's "dark market".¹⁸²² On the contrary, the evidence before us suggests that tobacco packaging may be used as an instrument of promotion. More specifically, the evidence before us also suggests that it may be used, and has in fact been used, to generate positive perceptions of tobacco products.

7.664. These findings are consistent with certain statements in the Article 13 FCTC Guidelines.¹⁸²³ Paragraph 3(c) of the "Purpose and Objectives" of these Guidelines provides that "a comprehensive ban on all tobacco advertising, promotion and sponsorship applies to all forms of commercial communication, recommendation or action and all forms of contribution to any event, activity or individual with the aim, effect, or likely effect of promoting a tobacco product or tobacco use either directly or indirectly".¹⁸²⁴ Paragraph 8 of the Article 13 FCTC Guidelines further states that "'Tobacco advertising and promotion' is not restricted to 'communications', but also includes '**recommendations**' and '**actions**', which should cover at least the following categories: [...] (d) **promotional packaging and product design features**".¹⁸²⁵ Paragraph 9 further elaborates on the ways in which, "[p]romotional effects, both direct and indirect may be brought about", including by the use of:

[W]ords, designs, images, sounds and colours, including brand names, trademarks, logos, names of tobacco manufacturers or importers, and colours or schemes of colours associated with tobacco products, manufacturers or importers, or by the use of a part or parts of words, designs, images and colours. Promotion of tobacco companies themselves (sometimes referred to as corporate promotion) is a form of promotion of tobacco products or tobacco use, even without the presentation of brand names or trademarks. Advertising, including display and sponsorship of smoking accessories such as cigarette papers, filters and equipment for rolling cigarettes, as well as imitations of tobacco products, may also have the effect of promoting tobacco products or tobacco use.¹⁸²⁶

7.665. Paragraph 15 of the Article 13 FCTC Guidelines further states that:

Packaging is an important element of advertising and promotion. Tobacco pack or product features are used in various ways to attract consumers, to promote products and to cultivate and promote brand identity, for example by using logos, colours, fonts, pictures, shapes and materials on or in packs or on individual cigarettes or other tobacco products.¹⁸²⁷

7.666. With these determinations in mind, we consider the arguments of the complainants that tobacco *plain* packaging does not have the capacity to *reduce* the appeal of tobacco products to the consumer and, as a result, influence smoking behaviours. As described above, at this stage of our analysis, we focus on evidence relating to the design, structure and operation of the measures.

¹⁸²¹ See Tavassoli Report, (Exhibit AUS-10), paras. 74-85.

¹⁸²² See fn 1338 above.

¹⁸²³ As described above, these Guidelines were adopted by the FCTC COP in 2008 to assist each Party to implement, "in accordance with its constitution or constitutional principles", a "comprehensive ban of all tobacco advertising, promotion and sponsorship" pursuant to Article 13 of the Convention. FCTC, (Exhibits AUS-44, JE-19), Article 13, para. 2; and Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21). The Article 13 FCTC Guidelines "give ... guidance" to FCTC Parties for introducing and enforcing such a ban (or, for those Parties that are not in a position to undertake a comprehensive ban, applying restrictions as comprehensive as possible on "advertising, promotion and sponsorship"). Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 1. See also sections 2.4 and 7.2.5.2 above.

¹⁸²⁴ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 3(c). (emphasis omitted)

¹⁸²⁵ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 8. (emphasis added)

¹⁸²⁶ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 9.

¹⁸²⁷ Article 13 FCTC Guidelines, FCTC/COP/3(12), (Exhibit JE-21), Annex, para. 15. Paragraph 15 is under the heading "Packaging and product features", under which, as discussed above, "plain packaging" is described in para. 16 and recommended in the "**Recommendation**" that follows para. 17. Ibid. Annex, paras. 15-17. See also section 2.4 and paras. 7.314-7.315 above.

We will consider further in section 7.2.5.3.6 below the relevant evidence relating to the actual application of the TPP measures.

Impact of plain packaging on the appeal of tobacco products

7.667. As discussed above¹⁸²⁸, the complainants generally consider that the literature in support of tobacco plain packaging (the TPP literature) lacks the methodological rigour to support the proposition that the TPP measures are capable of contributing to their objective. This body of literature includes a number of studies relating in part or in whole to the anticipated impact of tobacco plain packaging on the appeal of tobacco products. Australia disagrees with these criticisms and responds that numerous studies have established that tobacco plain packaging reduces the appeal of tobacco products by reducing the attractiveness of tobacco packaging, reducing positive perceptions of taste, and reducing positive perceptions of smokers.¹⁸²⁹

7.668. Australia refers to a number of empirical studies¹⁸³⁰, as well as the Stirling Review discussed above¹⁸³¹, which it argues have found that plain packaged tobacco products are rated as substantially less attractive overall than the equivalent non-plain packaged products, particularly by young smokers.¹⁸³² Australia further argues that this was also the case for particular segments of the population, such as women targeted with female design elements on packs associated with greater levels of attractiveness¹⁸³³, as well as subjects from a range of cultures and demographics.¹⁸³⁴

7.669. Australia notes that the Stirling Review summarised this evidence and found that:

In terms of attractiveness, plain packs were perceived as less attractive, exciting, fashionable, cool, stylish, appealing, nice and colourful than branded packs, and were less likely to be chosen in preference tests. Studies that tested a range of branded and unbranded packs found that packs became more negatively rated as progressively more brand elements were removed.¹⁸³⁵

7.670. Australia concludes that by altering consumers' positive perceptions of tobacco products, tobacco plain packaging brings about a reduction in the overall appeal of tobacco products and positive perceptions of those who smoke them.¹⁸³⁶

¹⁸²⁸ See "Main arguments of the parties" within section 7.2.5.3.5.1 above.

¹⁸²⁹ See Australia's first written submission, paras. 148-162.

¹⁸³⁰ Australia's first written submission, para. 151 fn 250 (referring to Centre for Health Promotion 1993, (Exhibits AUS-142, JE-24(14)); Bondy et al. 1994, (Exhibits AUS-143, JE-24(7)); d'Avernas et al. 1997, (Exhibit AUS-144)); Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); ISR newsletter, (Exhibit AUS-146)); Beede et al. 1990, (Exhibits AUS-147, JE-24(4)); Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)); Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)); Bansal-Travers et al. 2011, (Exhibits AUS-150, JE-24(3)); Donovan 1993, (Exhibits AUS-151, JE-24(16)); and Gallopel-Morvan et al. 2012, (Exhibits AUS-152, JE-24(23))).

¹⁸³⁵ Australia's first written submission, para. 151 (quoting Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 84).

¹⁸³⁶ Australia's first written submission, para. 152.

7.671. Australia's expert Professor Fong further identifies a number of studies that he submits have shown that tobacco products in plain packaging are substantially less attractive to young smokers as well as smokers of all ages.¹⁸³⁷ Professor Fong refers to the findings of the initial report of the Stirling Review, noting that:

(1) All 19 studies identified found that plain packages were rated as less attractive than branded equivalent packs, or were rated as unattractive, by both adults and children; (2) The 12 studies that compared perceptions of plain and branded packs consistently found that plain packs were perceived to be poorer quality by both adults and children; (3) Plain packs consistently received lower ratings on projected personality attributes (such as "popular" and "cool") than branded packs; (4) Visual experiments measuring the strength of association between specific brands and person types found the association between particular brands and smoker identity weakened or disappeared with plain packaging; (5) Studies found that plain packs were perceived as being more likely to be smoked by "older" or "less fashionable" people than branded packs; and (6) The ten qualitative studies that examined appeal found that: (a) plain pack colours have negative connotations; (b) plain packs weaken attachment to brands; (c) plain packs project a less desirable smoker identity; and (d) plain packs expose the reality of smoking.¹⁸³⁸

7.672. As discussed above, the complainants dispute the relevance and quality of the TPP literature generally. The complainants' review and critique of the TPP literature overlaps in scope with, but is not identical to, the studies relied upon by Australia in relation to the impact of the TPP measures on the appeal of tobacco products. Overall, among the 51 papers identified by the Stirling Review and/or the Chantler Report as relating to the impact of tobacco plain packaging on the appeal of tobacco products¹⁸³⁹, 40 were also assessed by at least one of the complainants' three reviews of the TPP literature, the Peer Review Project¹⁸⁴⁰, Kleijnen Systematic Review¹⁸⁴¹, and/or the review conducted by Professor Klick.¹⁸⁴² Australia has relied on 29 of these¹⁸⁴³ in the course of these proceedings, as reflected by their provision to the Panel as exhibits.¹⁸⁴⁴ Australia

¹⁸³⁷ See Fong Report, (Exhibit AUS-14), para. 200 (referring to, with reference to young smokers: Beede et al. 1990, (Exhibits AUS-147, JE-24(4)); Bondy et al. 1994, (Exhibits AUS-143, JE-24(7)); Centre for Health Promotion 1993, (Exhibits AUS-142, JE-24(14)); d'Avernas et al. 1997, (Exhibit AUS-144); Northrup and Pollard 1995, (Exhibit JE-24(48)); and Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); and with respect to smokers of all ages: Bansal-Travers et al. 2011, (Exhibits AUS-150, JE-24(3)); Donovan 1993, (Exhibits AUS-151, JE-24(19)); Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)); and Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)), and stating that two of these studies note a greater impact for youth).

¹⁸³⁸ Fong Report, (Exhibit AUS-14), para. 201.

¹⁸³⁹ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the end of these Reports. We note that the Chantler Report's reviewers of the quantitative studies did not identify "appeal" as a "main outcome" with respect to one of the papers, Pechey et al. 2013, (Exhibit JE-24(51)). We have included this paper in our count as the Chantler Report's reviewer of the qualitative studies, who also reviewed this paper, did consider "appeal" to be one of the "main outcomes covered". See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 55; and Annex E, p. 61. We also note that the Stirling Review did not identify "appeal" as a "type of finding" in Carter S M, Chapman S (2006). Smokers and non-smokers talk about regulatory options in tobacco control. *Tobacco Control*, 15(5): 398-404.

<http://dx.doi.org/10.1136/tc.2006.015818> (not on the record). We have also included this paper in our count as the Chantler Report's reviewer of the qualitative studies did consider "appeal" to be one of the "main outcomes covered". See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 32; and Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 60.

¹⁸⁴⁰ Peer Review Report, (Exhibit DOM/HND-3).

¹⁸⁴¹ Kleijnen Systematic Review, (Exhibit DOM/HND-4).

¹⁸⁴² Klick TPP Literature Report, (Exhibit UKR-6).

¹⁸⁴³ Additionally, we note that Australia has submitted and relied upon a newsletter article that was authored by the same researchers, and appears to discuss the same study, as another paper that was reviewed by all three of the complainants' TPP literature reviews, and assessed by the Stirling Review and Chantler Report as measuring the impact of tobacco plain packaging upon the appeal of tobacco products. Compare Northrup and Pollard 1995, (Exhibit JE-24(48)), with ISR newsletter, (Exhibit AUS-146).

¹⁸⁴⁴ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports.

also refers to a number of other papers that were not reviewed in one of the three reviews of the TPP literature presented by the complainants.¹⁸⁴⁵

7.673. As described above, we do not consider that we are in a position to draw definitive conclusions on the methodological merits of each individual study referred to in relation to the impact of plain packaging on various relevant measured outcomes, or that it would be appropriate for us to do so. Rather, as described above, what we must consider is the extent to which the body of evidence before us, as a whole, provides a reasonable basis in support of the proposition that it is being invoked for, i.e. in this instance, the proposition that plain packaging of tobacco products will lead to a reduction in the appeal of tobacco products for consumers. In this assessment, as described above, we consider it pertinent to take into account the extent to which the scientific evidence relied upon has the "necessary scientific and methodological rigour to be considered reputable science"¹⁸⁴⁶ as well as the extent to which the use being made of it is "objective and coherent".¹⁸⁴⁷

7.674. With respect to the methodological rigour of the relevant studies, and notwithstanding the potential limitations of individual studies, we consider that the Stirling Review and Chantler Report offer credible evidence with respect to the adequacy of the methodological rigour of the studies that assessed the potential impact of tobacco plain packaging on the appeal of tobacco products, taken as a whole. Among the 40 papers that measured the impact of tobacco plain packaging on the appeal of tobacco products (as determined by the Stirling Review and/or Chantler Report), and were reviewed in one or more of the complainants' three TPP literature reviews¹⁸⁴⁸, 29 were assigned quality ratings during the course of the initial Stirling Review. Of these, two received a "high" rating, and 27 received a "medium rating".¹⁸⁴⁹ Among the papers that received a medium rating, four also received a "low" rating for the focus group aspect of their underlying studies.

7.675. Thirty-five of the 40 papers considered in one or more of the complainants' three TPP literature reviews, and identified by the Stirling Review and/or Chantler Report as relating to the appeal "mechanism", also received ratings from the independent reviewers of the Chantler Report. Of these, 23 were given a rating of between 5 and 6 (denoting high quality/low risk of bias), while the remaining 12 earned a score of between 3 and 4.5 (denoting moderate quality/moderate bias).¹⁸⁵⁰ Thus, the independent reviewer of the qualitative studies concluded that "[o]verall the papers are satisfactory", while the reviewers of the quantitative studies stated that the conclusions drawn in the Stirling Review (which included, *inter alia*, that tobacco plain packaging would reduce the appeal of tobacco products) were a "reasonable reflection of the evidence available".¹⁸⁵¹

7.676. We also note that the packaging features standardized by the TPP measures align with those that were evaluated in the TPP literature and other studies relied upon by Australia. Namely, the studies considered the presence, size, location, and use of, *inter alia*, colour, fonts, designs, shapes, opening mechanisms, descriptors, and warnings on tobacco packaging.¹⁸⁵² To the extent that the TPP Act's depiction of the first "mechanism" underlying the design and structure of the TPP measures is closely aligned to the measured outcome in the relevant studies, we also find that Australia's reliance on this evidence base in support of the capacity of the TPP measures to

¹⁸⁴⁵ See, e.g. Gallopel-Morvan et al. 2010, (Exhibit AUS-176); Wakefield 2011, (Exhibit AUS-172); Hammond and Parkinson 2009, (Exhibit AUS-165); Wakefield et al. 2002, (Exhibits AUS-93, CUB-28); Gendall et al. 2012, (Exhibit AUS-178); Kotnowski 2013, (Exhibit AUS-138); Kotnowski and Hammond 2013, (Exhibit AUS-139); d'Avernas et al. 1997, (Exhibit AUS-144); Difranza et al. 2003, (Exhibit AUS-92); and Hammond 2010, (Exhibits AUS-91, JE-24(28)).

contribute to its objective by reducing the appeal of tobacco products is "coherent and objective".¹⁸⁵³

7.677. We also note that Australia has sought to ensure that the remaining features permitted on tobacco packs under the TPP measures, in particular the background colour and font on the 25% of the pack not covered by the GHW, were selected with a view to minimizing their attractiveness.¹⁸⁵⁴ In this respect also, to the extent that it has adopted TPP requirements that are intended to act upon the type of design and other features that are described in the TPP literature as affecting the appeal of tobacco products, and to minimize their attractiveness, we also find that Australia's reliance on this body of evidence is "coherent and objective".

7.678. We note that only one of the cited studies, Parr et al. 2011b¹⁸⁵⁵, addressed specifically the impact of plain packaging on the appeal of cigars and cigarillos. As regards cigarillo/little cigar smokers, plain packs are reported to be seen as "least appealing"¹⁸⁵⁶ or "least palatable".¹⁸⁵⁷ Further, qualitative discussions reported in that study consistently found the plain pack to be unappealing and unattractive, which was strongly tied to perceptions of low quality. In particular, it was felt the plain packaging has a significant effect in lowering the appeal of cigarillo smoking.¹⁸⁵⁸ With respect to smokers of premium cigars, Parr et al. 2011b found that they "differed considerably in their attitude to cigars compared to smokers of other tobacco products", as "[s]moking cigars is felt to be a choice rather than an addiction or habit", and "is seen as a luxury and occurs most often in conjunction with a specific activity, for a specific occasion, or in a specific location".¹⁸⁵⁹

7.679. Within the group of premium cigar smokers, Parr et al. 2011b distinguished less frequent smokers¹⁸⁶⁰ from more frequent and connoisseur smokers¹⁸⁶¹, identifying them as two "very different types of cigar smokers".¹⁸⁶² For less frequent cigar smokers, Parr et al. 2011b finds that the "presenting" or giving of cigars could play a major role in the perceived appeal, and that the plain packaged tube has a marked effect on the perceived appeal of cigar smoking.¹⁸⁶³ Conversely,

¹⁸⁵³ We note also that the TPP measures address, in addition to the packaging of tobacco products, the appearance of the products themselves, including cigar bands. This is consistent, in our view, with the objective of preventing the design features addressed by the TPP measures from acting as instruments of promotion and advertising and creating the types of associations discussed above on the products themselves, thereby having an effect comparable to that of packaging.

¹⁸⁵⁴ Australia's first written submission, para. 118; and Parr et al. 2011a, (Exhibits AUS-117, JE-24(49)), p. 6.

¹⁸⁵⁵ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)).

¹⁸⁵⁶ Specifically, in quantitative testing, the plain packaged cigarillo tin was generally seen to be the least appealing pack and the pack containing the lowest quality cigarillos. Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 8.

¹⁸⁵⁷ In qualitative discussions, the participants felt that the plain package pack was least palatable and that they would least want to smoke it themselves. Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁵⁸ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁵⁹ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁶⁰ According to Parr et al. 2011b, "[t]he less frequent smokers of premium cigars in the study tended to smoke a premium cigar about twice a month on average (smokers who smoked cigars less frequently than this were excluded from participating in the study). Some of the less frequent cigar smokers were smokers of other tobacco products, including cigarettes. While they felt driven by habit to smoke cigarettes, cigar smoking was seen an occasional pleasure. Their cigar smoking was generally associated with a specific activity, such as a card game, or a specific occasion such as a success at work. These cigar smokers were less knowledgeable about premium cigars and how to determine quality so were more influenced by brand names. They were more likely to assume quality based on origin, rather than have more detailed understanding of difference that the more frequent cigar smokers had." Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁶¹ According to Parr et al. 2011b, "[m]ore frequent cigar smokers, were often extremely knowledgeable about the different types of cigars, and regularly smoked different brands of cigars for enjoyment and as a learning activity. Preference for a specific brand was driven by a combination of factors such as best value for money, the amount of time available to enjoy the cigar, the company and the perceived quality of the tobacco used in the cigar. The brand name and variant of the cigar provides an indication of this type of product information. The more frequent cigar smokers interviewed did not smoke any other tobacco product." Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁶² Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

¹⁸⁶³ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 10:

The less frequent smokers take particular interest in the branding and packaging of cigar tubes. Their smoking is largely driven by social occasions within which the "presenting" or giving of

Parr et al. 2011b concludes that plain cigar tubes did not have the same impact in terms of lowering appeal or attractiveness of cigar smoking for more frequent or connoisseur cigar smokers.¹⁸⁶⁴

7.680. In general, Parr et al. 2011b concludes that "[t]here are ... differences in the strength of th[e] impact [of plain packaging, including GHWs,] depending on the types of cigar smokers involved":

In general the connoisseurs and more frequent cigar smokers reported feeling that the plain packaging would be more of an inconvenience but ultimately not affect their smoking behaviour. In contrast the less frequent and more occasion based cigar smokers reported a much stronger feeling that plain packaging may have a significant effect on their smoking behaviour due to lowering the appeal of cigars.¹⁸⁶⁵

7.681. Overall, therefore, the only pre-implementation study addressing specifically the impact of plain packaging on cigars and cigarillos suggests that smokers of cigarillos or little cigars and less frequent smokers of premium cigars found plain packaged products less appealing, although plain cigar tubes did not have the same impact on frequent or connoisseur premium cigar smokers.

7.682. In light of the above, we take note of the existence of a body of studies, emanating from qualified sources, supporting the proposition that plain packaging of tobacco products would reduce their appeal to the consumer. We also note that the evidence in this respect is more limited in relation to cigars than in relation to cigarettes.

7.683. Notwithstanding any potential limitations of the above studies, taken individually or as a whole, we recall that we also have before us evidence relating to the actual application of the TPP measures in Australia since their entry into force, including empirical studies in relation to their impact on the appeal of tobacco products. We consider this evidence in section 7.2.5.3.6 below, and therefore do not seek to draw, at this stage of our analysis, an overall conclusion on the impact of the TPP measures on the appeal of tobacco products to the consumer.

cigars can play a major role in the perceived appeal. The branding also has a strong effect on their perceptions of quality in regards to their purchases and as such the plain packaged tube has a marked effect on the perceived appeal of cigar smoking. It significantly deglamourises the event and reduces their appeal as gifts or when presenting them to friends. The lack of brand association for the plain packaged products, in contrast with existing products, leaves them nothing "to go on" bar the colour of the tube. This was described as "muddy", "tar like" and highly unappealing. This lack of appeal is strongly tied to a perception of low quality.

¹⁸⁶⁴ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 10:

For more frequent and connoisseur cigar smokers the [cigar] tubes did not have the same impact in terms of lowering appeal or attractiveness of cigar smoking. This is because they judge the quality of a cigar on criteria other than the branding, which can include the type of tobacco, the roll, the age and particular country and region of origin. The brand name is taken as a sign of authenticity or legitimacy of the product.

The Report also considers the specific impact, for frequent and connoisseur cigar smokers, of plain package bands not containing brand name information:

This information is most often contained on the cigar band. As such a plain pack band (which did not display any information) obscuring the branded band has a more significant impact as it deprives them of the product information which they use to inform their purchases. This lowers the desirability of any given particular cigar as they are unable to verify the product they are receiving as opposed to lowering the overall appeal of cigar smoking which remains high.

Ibid. We note however that the TPP measures allow the brand name to be shown on cigar bands (see TPP Regulations, (Exhibits AUS-3, JE-2), Section 3.2.1(3)(a)), so that these specific findings are not directly pertinent to an assessment of the impact of the TPP measures on cigars.

¹⁸⁶⁵ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 40.

Impact of reduced product appeal on smoking behaviours

7.684. As described above, the "causal chain" along which the TPP measures are designed to contribute to Australia's objective posits that the mechanisms of the TPP measures (including reduced product appeal) have a consequential effect on smoking **behaviours**. Specifically, the "proximal outcomes" of the measures, including a reduction in the appeal of tobacco products, are expected to cause Australian consumers to be discouraged from taking up smoking (**initiation**), or resuming smoking (**relapse**), and to be encouraged to stop smoking (**cessation**).¹⁸⁶⁶

7.685. Australia submits that the effect of tobacco control policies on these behaviours is best measured by their influence on "downstream psychosocial variables such as knowledge, beliefs, attitudes and intentions, and on subsequent tobacco use behaviours".¹⁸⁶⁷ In Australia's view, the evidence, which includes theoretical models of behaviour, confirms that behavioural intentions are immediate precursors to behaviour and are one of the strongest predictors of future behaviour.¹⁸⁶⁸ For Australia, "intentions are strongly related to measuring future behaviour", such that "the attitudes, perceptions and beliefs of consumers – most particularly young consumers – provide strong evidence of the effect of the tobacco plain packaging measure".¹⁸⁶⁹

7.686. Honduras argues that an accurate assessment of the contribution of the TPP measures to Australia's objective can only be made by evaluating how they affect **actual smoking behaviour** and, in particular, that "[v]arious surrogate factors, such as changes in consumer attitudes and beliefs about smoking, cannot in themselves prove that a tobacco-control measure is effective".¹⁸⁷⁰ The Dominican Republic contends that behavioural theory does not establish that the TPP measures will reduce smoking behaviour¹⁸⁷¹, and that Australia has not adequately tested the assumptions it made concerning the ability of product appeal and perception of health risks to affect smoking behaviour.¹⁸⁷² Cuba argues that Australia has not provided probative evidence of the "sole parameter that is important for the evaluation of the impact of [the TPP measures], namely, its effect on actual smoking behaviour and tobacco consumption".¹⁸⁷³ Indonesia similarly submits that "Australia simply assumed behavioral theory 'proved' that attitudes toward the appeal of tobacco products and health risks affect actual smoking behavior, which resulted in a number of flaws in the subsequent plain packaging research".¹⁸⁷⁴

7.687. The question before us at this stage is whether the reduction in the appeal of tobacco products hypothesized to occur as a result of the plain packaging of tobacco products could have an impact on subsequent smoking-related behaviours, as posited under the mediational model underlying the design and structure of the TPP measures. The complainants consider that Australia has not demonstrated that a reduction in appeal would in fact lead to changes in actual behaviours. In support of this argument, the complainants consider that the behavioural theories relied on by Australia do not support its assumptions on the ability of product perceptions (and health risks) in relation to tobacco products to effect changes in behaviours, and that tobacco packaging is not a driver of the relevant smoking behaviours.

7.688. For the purposes of this part of the analysis, there is no disagreement between the experts for the complainants and Australia that the appeal of tobacco products to consumers can be considered an "attitude" towards tobacco products.¹⁸⁷⁵ However, the parties disagree on the impact that a change in such attitudes can have on smoking behaviours. The complainants dispute

¹⁸⁶⁶ We note that Section 3(1)(a)(iv) of the TPP Act also posits that an object of the TPP Act is to reduce people's exposure to smoke from tobacco products. See TPP Act, (Exhibits AUS-1, JE-1).

¹⁸⁶⁷ Australia's first written submission, para. 146 (quoting Fong et al. 2006, (Exhibit AUS-132), p. iii10).

Australia's assertions regarding the expected correlation between attitudes and future behaviours in general. They also argue that a change in the appeal of tobacco products cannot have an effect on the behaviours of interest in respect of those products (i.e. smoking behaviours), given that packaging is not a driver of such behaviours. We consider these two aspects in turn.

Relationship between attitudes and behaviours

7.689. Australia's expert Professor Fong considers that "[n]on-behavioural, psychological variables are critically important variables in predicting and understanding consumer behaviour, both in conceptual models of consumer behaviour and research in consumer behaviour".¹⁸⁷⁶ Professor Fong states that "the starting point for research on attitude-behaviour relationship is that such a relationship does indeed exist".¹⁸⁷⁷ Moreover, "[m]odels of consumer behaviour are dominated by mediational models that posit that marketing efforts influence psychological variables within the person, and these psychological variables, in turn, cause changes in future behaviour".¹⁸⁷⁸ Professor Fong states that:

Social psychological theories, notably the "Theory of Reasoned Action" [TRA] (Fishbein & Ajzen 1975), and research arising from such theories, have demonstrated clearly that attitudes are indeed related to behaviour. A considerable proportion of these attitude-behaviour studies have been devoted to examining the conditions under which attitudes may be more or less strongly related to behaviour.¹⁸⁷⁹

7.690. The complainants consider that Australia's reliance on behavioural theory to establish a correlation between the operation of the mechanisms in the TPP Act and smoking behaviours is inappropriate. The Dominican Republic, Honduras and Indonesia rely in this respect on an expert report by Professor Ajzen.¹⁸⁸⁰ In respect of the proposition that "the starting point for research on attitude-behaviour relationship is that such a relationship does indeed exist", Professor Ajzen contends that the "exact opposite is true".¹⁸⁸¹ He argues that:

The starting point in the 1970s for developing my [TRA] was precisely to account for, and offer a solution to, the fact that there is a **weak** relation between attitudes and behavior, such that attitudes do not reliably predict behavior. ... [M]y research revealed that **general attitudes toward non-behavioral targets** (e.g. tobacco products) are poor predictors of actual behavior with respect to those targets. In contrast, attitudes toward a **specific behavior** (e.g. smoking initiation) are more likely to predict this behavior.¹⁸⁸²

7.691. Professor Ajzen also notes that the TRA was limited by its assumption that the behaviour in question "is a direct function of the intention to perform the behaviour". The Theory of Planned Behaviour (TPB) was thus developed "recognizing that ... people often find it difficult or impossible to act on their avowed intentions".¹⁸⁸³ Thus, the TPB posits that a decision to engage in behaviour is guided by "behavioural", "normative" and "control" beliefs, which then have flow-on effects for, respectively, a subject's attitude towards the behaviour in question, their subjective norms, and their perception of their own behavioural control.¹⁸⁸⁴ Professor Ajzen illustrates this relationship in the following manner:

¹⁸⁷⁶ Fong Report, (Exhibit AUS-14), para. 94.

¹⁸⁷⁷ Fong Report, (Exhibit AUS-14), para. 252.

¹⁸⁷⁸ Fong Report, (Exhibit AUS-14), para. 95.

¹⁸⁷⁹ Fong Report, (Exhibit AUS-14), para. 252.

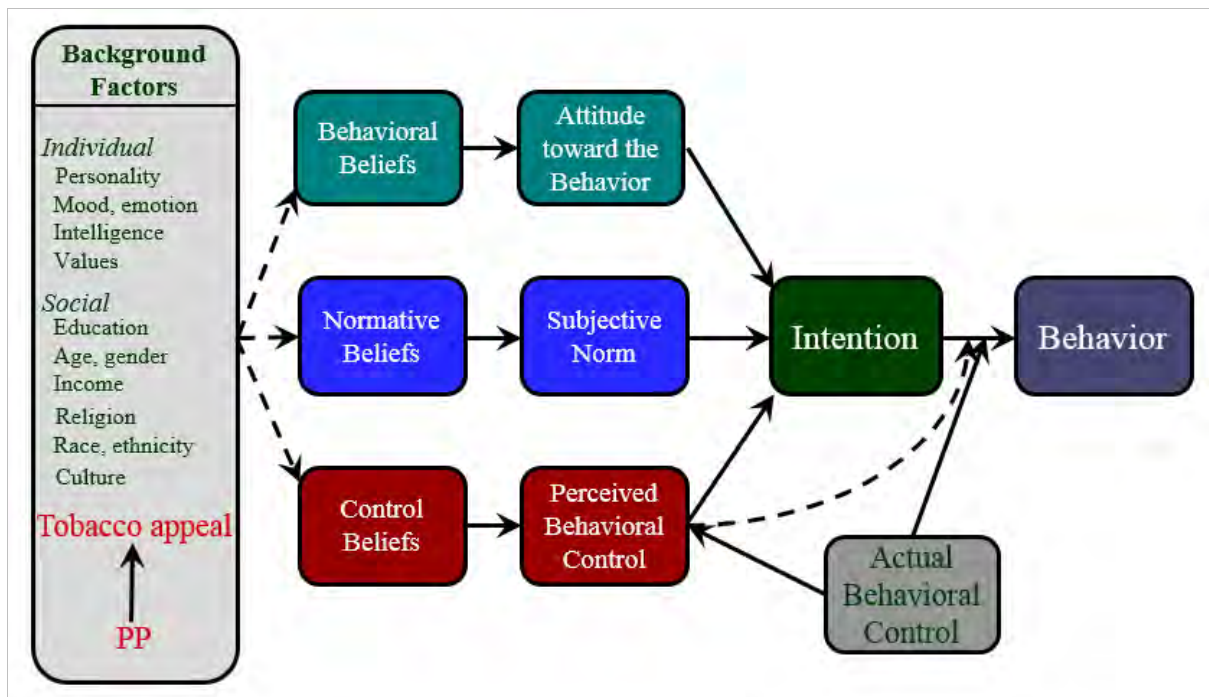

¹⁸⁸⁰ Ajzen Report, (Exhibit DOM/HND/IDN-3). We note that Cuba has not relied upon this report in its submissions. Cuba has, however, questioned the value of the behavioural theories put forward by Australia. Cuba's response to Panel question No. 146, p. 2. Cuba argues that Australia is attempting to "hide behind abstract and convoluted theories", which "can be developed to justify any conclusions", while the "best approach for measuring the effectiveness of [the TPP measures] is through an analysis of the facts as reflected in the actual consumption data ...". Cuba's second written submission, para. 289; and opening statement at the second meeting of the Panel, para. 11.

¹⁸⁸³ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 59.

¹⁸⁸⁴ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 61.

Figure 13: Diagram of the TPB¹⁸⁸⁵

Source: Ajzen Report, (Exhibit DOM/HND/IDN-3), Figure 3, p. 19.

7.692. For Professor Ajzen, "the relations between successive links in the chain, though often quite substantial, are far from perfect", such that "the impact of changes in background factors or in beliefs – which are not direct determinants of intentions, much less behavior – may have to be quite large to carry all the way across to actual behavior".¹⁸⁸⁶ In addition, "even if there are changes in a direct determinant of behavioral intentions (e.g. attitude toward the behavior), these may not change intentions if, for example, attitudes don't carry much weight in the prediction of intentions; and, even if behavioral intentions are changed to some extent, that may not influence actual behavior, for example, because of a weak correlation between intentions and behavior or because of the influence of actual behavioral control (or both)".¹⁸⁸⁷

7.693. We first note that we do not understand Australia's reliance on "social psychological theories", including the TRA and related research, as suggesting or implying that a change in attitude in respect of a particular object will lead *in every case* to a change in behaviour in respect of that object. We also do not understand Australia to disagree with the general proposition, reflected in Professor Ajzen's description above, that the correlation between beliefs, attitudes, behavioural intentions and actual behaviours depends on successive "links in the chain", and that the relations between such links in a given context is a product of a combination of factors that will affect the strength of the correlation. This point appears clearly in Professor Fong's observation that a "considerable proportion of these attitude-behaviour studies have been devoted to examining the conditions under which attitudes may be *more* or *less* strongly related to behaviour". Professor Fong thus articulates that downstream psychosocial mediators are affected by multiple means.¹⁸⁸⁸

7.694. We also note Professor Ajzen's own description, in a recent publication, of how the TPB informs the way in which attitudes and perceptions influence intentions and behaviours:

¹⁸⁸⁵ We will elaborate on these steps in our analysis, below.

¹⁸⁸⁶ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 82.

¹⁸⁸⁷ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 83.

¹⁸⁸⁸ Fong Report, (Exhibit AUS-14), para. 252. See also Fong et al. 2006, pp. ii4-ii5.

All the theory stipulates is that people's attitudes, subjective norms and perceptions of control follow reasonably and consistently from their beliefs, no matter how the beliefs were formed, and that in this way they influence intentions and behaviour.¹⁸⁸⁹

7.695. Overall, the above suggests that a significant body of research is devoted to the study of the correlation between attitudes, intentions and behaviours, and that the parties all acknowledge, with reference to this research, that the strength of the correlation between attitudes and behaviours is affected by the interaction of multiple factors.¹⁸⁹⁰ As Professor Fong expresses it, quoting separate work by Professor Ajzen, "low attitude-behaviour relations are neither unexpected, nor do they imply that attitudes are irrelevant for the prediction of behaviour".¹⁸⁹¹

7.696. Professor Fong further explains that his use of theory does "not put forward a line of argument that 'dispensed' with the need for empirical evidence or claimed that theories 'prove' the importance of appeal and perceived health risks to smoking behaviour", but rather "used behavioural theories as a way of providing context and meaning for the available empirical evidence that examined the impact of plain packaging on beliefs, perceptions, and behaviour".¹⁸⁹² Professor Ajzen similarly states that "[t]heories do not demonstrate or prove a link between non-behavioral constructs (e.g. beliefs, attitudes, intentions) and behavior" but do "generate useful *hypotheses* about the possible presence, or absence, of a causal link" that "must be confirmed or rejected through properly conducted research".¹⁸⁹³ We further note in this respect Professor Ajzen's acknowledgement that, while the "TPB is ... not a theory of behaviour change" and is instead "meant to help explain and predict people's intentions and behaviour", it can nonetheless "serve as a useful framework for designing effective behaviour change interventions".¹⁸⁹⁴

7.697. We understand Australia's reliance on "social psychological theories", including the TRA and related research, in the context of its intervention on tobacco plain packaging as intending to support its argument that it is reasonable to expect a correlation to exist between a reduction in the appeal of tobacco products and subsequent smoking behaviours, such that reduced appeal will influence *at least some* consumers in their smoking behaviours. This is reflected in Professor Fong's description of the expected impact of Australia's TPP measures:

One can make reasonable and confident predictions that if the plain packaging measure is shown to decrease appeal and/or increase the effectiveness of health warnings and/or decrease the ability of the package to mislead consumers about the harmfulness of tobacco products, the Objects of the Act will likely be achieved.¹⁸⁹⁵

7.698. Professor Ajzen, however, argues that under the TPB, "the three constructs of attitude towards a behaviour, subjective norm, and perceived behavioural control together predict *intentions* to take up smoking and to quit smoking quite well", as such constructs "accounted for 26% to 48% of the variance in *intentions to start smoking* ..." ¹⁸⁹⁶ but that "prediction of *actual behavior* from intentions and perceived behavioral control was much less successful".¹⁸⁹⁷

¹⁸⁸⁹ I. Ajzen, "The Theory of Planned Behaviour is Alive and Well, and Not Ready to Retire: A Commentary on Sniehotta, Penseau, and Araújo-Soares", Health Psychology Review (2014), (Ajzen, Health Psychology Review 2014), (Exhibit HND-134), p. 3.

¹⁸⁹⁰ See Ajzen, Health Psychology Review 2014, (Exhibit HND-134), pp. 3-4.

¹⁸⁹¹ Fong Supplemental Report, (Exhibit AUS-531), para. 60 (referring to M. Fishbein and I. Ajzen, *Predicting and Changing Behavior: The Reasoned Action Approach* (Psychology Press, 2010), not on the record of these proceedings).

¹⁸⁹² Fong Supplemental Report, (Exhibit AUS-531), para. 39.

¹⁸⁹³ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 13 (emphasis original) (cited by Honduras in para. 147 of its second written submission).

¹⁸⁹⁴ Ajzen, Health Psychology Review 2014, (Exhibit HND-134), p. 3. The extent to which behavioural changes may be induced by such interventions will, Professor Ajzen explains, depend on the circumstances: "For an intervention to have an appreciable effect on intentions, ... it has to produce large changes in beliefs; and for the intention to lead to the desired behaviour, people must have the requisite resources and potential barriers to behavioural performance must be removed." Ibid. pp. 3-4.

¹⁸⁹⁵ Fong Report, (Exhibit AUS-14), para. 90. See also ibid. para. 306.

¹⁸⁹⁶ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 100. (emphasis original)

¹⁸⁹⁷ Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 102. (emphasis original)

7.699. As we understand it, therefore, the disagreement among the parties relates primarily to the **extent** to which attitudes and perceptions, and changes in such attitudes and perceptions, may be expected or assumed to have an influence on intentions and subsequent behaviours, in the specific context of the TPP measures. Specifically, the question at issue at this stage of our analysis is the extent to which a reduction in the appeal of tobacco products may be expected to have an impact on smoking behaviours.

7.700. With this understanding in mind, we consider the evidence before us relating to the impact on smoking behaviours of a reduction in the appeal of tobacco products through the TPP measures.

Impact of a reduction in the appeal of tobacco products on smoking behaviours

7.701. Section 3(1) of the TPP Act identifies specific behaviours that Australia seeks to influence through the TPP measures – that is, "discouraging people from taking up smoking, or using tobacco products" (which we refer to as initiation); "encouraging people to give up smoking, and to stop using tobacco products" (which we refer to as cessation); and discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing (which we refer to as relapse).¹⁸⁹⁸

7.702. The complainants consider that the TPP measures cannot influence these behaviours, because they are driven by factors other than packaging, unlikely to be overpowered by a change in the packaging of tobacco products. Specifically, the complainants argue that research on the drivers of smoking initiation does not identify packaging as a factor influencing the decision to start smoking. They also argue that plain packaging cannot have an impact on cessation or relapse behaviours. We consider these different behaviours in turn.

Smoking initiation

Drivers of smoking initiation

7.703. The complainants argue that smoking initiation is driven by factors other than packaging, with the effect that packaging cannot have an influence on the decision to smoke.¹⁸⁹⁹ Honduras refers to research identifying the drivers of smoking initiation as psychosocial characteristics, interpersonal influences, and community context (including price and availability of tobacco products).¹⁹⁰⁰ The Dominican Republic argues that both the propensity for risk-taking, combined with societal factors such as the influence of peer pressure, increase the chances that young people will engage in risky behaviours, including smoking.¹⁹⁰¹ Cuba argues that smoking is a specific manifestation of the more general category of risk taking.¹⁹⁰² Indonesia argues that the main risk factors for adolescent smoking include psychological characteristics that incline people to smoke (sensation-seeking, tendencies toward negative emotions, impulsivity, and inattentiveness); peers and family members who smoke; and access to cigarettes.¹⁹⁰³

7.704. The evidence before us regarding the factors affecting the initiation¹⁹⁰⁴ of tobacco use focuses on adolescents and young adults. As expressed by Australia's expert, Dr Biglan, this is

¹⁸⁹⁸ TPP Act, (Exhibits JE-1, AUS-1), Section 3(1)(a).

¹⁸⁹⁹ Honduras's first written submission, paras. 418-425. See also Dominican Republic's first written submission, paras. 689-700; Cuba's first written submission, paras. 208-213; and Indonesia's first written submission, para. 412.

¹⁹⁰⁰ Honduras's first written submission, paras. 412-416.

¹⁹⁰¹ Dominican Republic's first written submission, para. 691.

¹⁹⁰² Cuba's first written submission, para. 213.

¹⁹⁰³ Indonesia's first written submission, para. 412.

¹⁹⁰⁴ The US Surgeon General defines "initiation" as having ever tried tobacco. This is distinct from experimental use (i.e. occasional use), and regular use (i.e. an increase in the frequency and quantity of use). In adolescence, regular use "is often marked by a pattern of monthly or weekly use and may include psychological and physical dependence on tobacco". US Surgeon General's Report 2012, (Exhibit AUS-76), p. 429. This definition is also used by the USIOM. See R. Bonnie, K. Stratton, and L. Kwan (eds.), *Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products*, United States Institute of Medicine (The National Academies Press, 2015), (2015 USIOM Report), (Exhibit DOM-232), p. 2-11.

because "[v]irtually all smoking begins during adolescence or young adulthood".¹⁹⁰⁵ Dr Biglan premises this point on findings of the US Surgeon General, which state that:

Among adults who had ever tried a cigarette, 81.5% reported trying their first cigarette by the time they were 18 years of age, while an additional 16.5% did so by 26 years of age. Among adults who had ever smoked cigarettes daily, 88.2% reported trying their first cigarette by the time they were 18 years of age, while an additional 10.8% did so by 26 years of age. About two-thirds (65.1%) of adults who had ever smoked daily began smoking daily by 18 years of age, and almost one-third of these adults (31.1%) began smoking daily between 18 and 26 years of age. Therefore, virtually *no* initiation of cigarette smoking (<1-2%) and few transitions to daily smoking (<4%) actually occur in adulthood after 26 years of age.¹⁹⁰⁶

7.705. This observation accords with findings by the USIOM:

Tobacco use by young adults (those between 18 and 24 years of age) also poses serious concerns. While nearly 90 percent of people who have ever smoked daily first tried a cigarette before 19 years of age, the fact that another 9.4 percent tried their first cigarette **before the age of 26 should not be overlooked ... Additionally, only 54 percent of daily smokers are smoking daily before age 18, but 85 percent are doing so by age 21, and 94 percent before age 25 ... These data strongly suggest that if someone is not a regular tobacco user by 25 years of age, it is highly unlikely they will become one.**¹⁹⁰⁷

7.706. In the Australian context, Professor Samet refers to data from the 2013 National Drug Strategy Household Survey (NDSHS) which "show[s] that the average age of initiation of smoking over the age range 14 to 24 years has steadily risen since 1995 from 14.2 to 15.9 in 2013" and that "the age window of 14 to 24 is now the period of greatest risk for starting to smoke and adolescence remains a period during which initiation occurs".¹⁹⁰⁸

7.707. The US Surgeon General summarizes¹⁹⁰⁹ the risk factors associated with the initiation and use of tobacco products as: relatively low socio-economic status; the relatively high accessibility

¹⁹⁰⁵ Biglan Report, (Exhibit AUS-13), para. 14.

¹⁹⁰⁶ US Surgeon General's Report 2012, (Exhibit AUS-76), p. 134. This report also refers to "[o]ne of the most important—and widely cited—findings from the 1994 Surgeon General's report on smoking and health" which "was that virtually all cigarette smoking begins before adulthood". Ibid. Referring to survey data, the 1994 Surgeon General's report found that:

Of all persons who had ever tried a cigarette, 88 percent had tried their first cigarette by age 18. The mean age of first trying a cigarette was 14.5 years. Thirty-five percent of the respondents had become daily smokers by age 18. Of those who had ever smoked daily, 71 percent had smoked daily by age 18. The mean age of becoming a daily smoker was 17.7 years.

US Surgeon General's Report 1994, (Exhibit CUB-66), p. 51. See also US Surgeon General's Report 1994, Executive Summary, (Exhibit AUS-73), p. 9.

¹⁹⁰⁷ 2015 USIOM Report, (Exhibit DOM-232), p. 1-2.

¹⁹⁰⁸ Samet Report, (Exhibit AUS-7), para. 45. See also Biglan Report, (Exhibit AUS-13), para. 14. We note that a 2014 survey by Vision One, commissioned by Cuba and assessing a considerably smaller sample, assessed that the mean age of cigarette initiation in Australia is 17.7. Vision One Report, Exhibit CUB-79, para. 14, chart 2-3. Cuba notes, however, that this report acknowledges that its data concerning cigarette initiation is not necessarily representative of the cigarette smoking population in Australia, as it was looking at a subset of the cigarette smoking population, i.e. current LHM Cigar smokers who have ever smoked cigarettes on a regular basis. Cuba's first written submission, para. 249, referring to Vision One Report, Exhibit CUB-79, para. 18.

¹⁹⁰⁹ This summary is provided in the Surgeon General's 2012 report, relying on conclusions drawn in its 1994 report. We note that the entirety of the 1994 report, including the chapter concerning the drivers of initiation of tobacco use, has not been provided to us as evidence by the parties. Cuba has provided excerpts of that report and Australia has provided excerpts of its executive summary. See US Surgeon General's Report 1994, (Exhibit CUB-66); and US Surgeon General's Report 1994, Executive Summary, (Exhibit AUS-73). A summary of findings on the epidemiology of tobacco use among young people states:

Sociodemographic, environmental, behavioral, and personal factors can encourage the onset of tobacco use among adolescents.

and availability of tobacco products; perceptions by adolescents that tobacco use is normative (i.e. usual or acceptable behaviour); use of tobacco by significant others and approval of tobacco use among those persons; a lack of parental support; low levels of academic achievement and school involvement; a lack of the skills required to resist influences to use tobacco; relatively low self-efficacy for refusal¹⁹¹⁰; previous tobacco use and intention to use tobacco in the future; relatively low self-image; and the belief that tobacco use is functional or serves a purpose.¹⁹¹¹

7.708. A number of other expert reports submitted by the parties discuss the drivers of smoking initiation, and display similarity with the broad range of factors identified by the US Surgeon General as influencing youth smoking initiation.¹⁹¹² Professor Viscusi summarizes the key factors that contribute to smoking initiation by youth as involving one's parents, siblings, friends, peers, access to cigarettes, personal characteristics, and cost.¹⁹¹³ Professor Mitchell refers to studies of underage smoking focussing on factors at the individual (genetic, cognitive, affective, and demographic characteristics), proximal (familial, interpersonal, social networks) and environmental (neighborhood, community, state, national) levels, and notes that within each level of analysis, a wide range of variables has been found to predict underage smoking initiation and continuation.¹⁹¹⁴ Professor McKeganey states that tobacco use "begins through a complex

... Behavioral factors figure heavily during adolescence, a period of multiple transitions to physical maturation, to a coherent sense of self, and to emotional independence. Adolescents are thus particularly vulnerable to a range of hazardous behaviors and activities, including tobacco use, that may seem to assist in these transitions. Young people who report that smoking serves positive functions or is potentially useful are at increased risk for smoking. These functions are associated with bonding with peers, being independent and mature, and having a positive social image. Since reports from adolescents who begin to smoke indicate that they have lower self-esteem and lower self-images than their non-smoking peers, smoking can become a self-enhancement mechanism. Similarly, not having the confidence to be able to resist peer offers of tobacco seems to be an important risk factor for initiation. Intentions to use tobacco and actual experimentation also strongly predict subsequent regular use.

US Surgeon General's Report 1994, Executive Summary (Exhibit AUS-73), pp. 7-8. See also McKeganey Report, (Exhibits DOM-105, CUB-72), pp. 17-20.

¹⁹¹⁰ Self-efficacy is described as being "related to an individual's confidence in achieving goals through personal efforts, such as the ability to resist smoking or to remain smoke-free after quitting". US Surgeon General's Report 2012, (Exhibit AUS-76), p. 447.

¹⁹¹¹ US Surgeon General's Report 2012, (Exhibit AUS-76), p. 427.

¹⁹¹² We note that Professor Heckman, in a report submitted by Ukraine, focuses on cognitive abilities (as a predictor of educational attainment, wages, and many other forms of economic and social success, including physical and mental health, and healthy behaviors and outcomes, including avoiding smoking, obesity, and eating fried foods) and non-cognitive skills (which affect school performance and wages later in life, as well as on smoking, physical health, mental health, teen pregnancy, and participation in crime), while also noting the relevance of price and parental and peer smoking. He concludes that causal factors affecting youth smoking behaviour include prices, peers (social networks), parents, early family environments and investments in children. Heckman Report, (Exhibit UKR-144), paras. 21-42.

¹⁹¹³ Viscusi Report, (Exhibit UKR-8), para. 111. See also *ibid.* paras. 112-119.

¹⁹¹⁴ Mitchell Report, (Exhibit UKR-154), para. 52. Professor Mitchell elaborates that:

A number of factors observable at the individual level are associated with increased risk of underage smoking. For instance, lower socioeconomic status males with lower academic achievement are at greater risk of smoking than females in general or other males who are from a different class or who are performing better in school. Adolescents exhibiting certain behavioral and psychiatric disorders are at greater risk, as are victims of sexual abuse. Genetic markers indicating heritability for tobacco use have been found, and neurological correlates of tobacco use (in brain regions associated with decision-making and impulse control) have been found.

A number of factors in an adolescent's proximal environment can increase the risk of smoking. For instance, the presence of a smoker in the household increases the risk of underage smoking, as does the presence of a smoker within a peer group. Females appear to be more susceptible to peer influences, but the influence of peers for all persons will depend on the status of those peers within the potential smoker's social network, family views on smoking, and individual beliefs about the costs and benefits of smoking, as well as other individual, proximal, and environmental factors.

interaction of psychosocial risk factors, which broadly involve sociodemographic, environmental, behavioural, personal and interpersonal factors".¹⁹¹⁵ In this connection, Professor McKeganey refers to the US Surgeon General's 2012 report.¹⁹¹⁶

7.709. We note the shared views before us concerning the age-related factors that contribute to smoking behaviour among youth and young adults. The US Surgeon General, for example, notes that "adolescence is a sensitive developmental period, characterized by brain changes and high levels of emotionality, impulsivity, and risk-taking", and that "the plasticity of the adolescent brain, together with the relatively immature neurobehavioral systems necessary for self-control and affect regulation, confer a heightened vulnerability for the development of smoking behavior".¹⁹¹⁷ It adds that the period following early and middle adolescence (18-25 years) has particular developmental significance with regard to smoking behaviour, as many risk behaviours peak during this period of life, including rates of substance use, smoking, risky driving, and unsafe sex.¹⁹¹⁸

7.710. The US Surgeon General, in making these observations, refers (*inter alia*) to previous work by Professor Steinberg.¹⁹¹⁹ In its 2015 report, the USIOM, in reaching similar conclusions to the US Surgeon General with respect to the drivers of smoking initiation, also refers to research by Professor Steinberg.¹⁹²⁰ In his expert report for Honduras and the Dominican Republic in these proceedings, Professor Steinberg sets out the "dominant model" of adolescent risk-taking, the "maturational imbalance" or "dual systems" model. According to this model:

[H]eightedened risk taking in adolescence is a *natural* byproduct of the asynchronous maturation of two different brain systems: a "reward system" (sometimes referred to as an "incentive processing system" or a "socioemotional system"), which is responsive to emotion, reward, and novelty, and a "cognitive control system," which is critical for impulse control, emotion regulation, and planned decision making. Briefly, the "dual systems" model posits that the incentive processing system becomes especially aroused early in adolescence, shortly after puberty, and that this arousal pushes the adolescent to engage in sensation-seeking in the pursuit of immediate rewards, but that this arousal takes place before the cognitive control system has matured enough to provide much-needed self-control. The combination of a highly responsive incentive processing system and a still immature cognitive control system sets the stage of risk taking.¹⁹²¹

7.711. Professor Steinberg identifies three sets of risk factors for smoking during adolescence: psychological characteristics that incline individuals to smoke¹⁹²², interpersonal influences that encourage and support smoking¹⁹²³, and a community context in which smoking is seen as normal, and where cigarettes are readily available and affordable.¹⁹²⁴ This leads Professor Steinberg to the view that adolescents' behaviour is strongly influenced by their relationships with peers and their intense desire for peer approval, which manifests through behaviours they associate with being an adult, such as smoking. Professor Steinberg argues that, "[g]iven the way that the adolescent brain works, there is an inherent appeal of behaviors that are exciting, that are perceived as

Examples of correlates at the environmental level include price and purchasing regulations: increasing the price of cigarettes through government regulation has been found to be an effective means of reducing demand among underage smokers, and education of merchants about restrictions on sales to minors and increased enforcement of laws prohibiting sales to minors is associated with reduced underage smoking.

¹⁹²⁴ Steinberg Report, (Exhibit DOM/HND-6), para. 39.

rewarding, and that are expected to elicit the approval of one's peers".¹⁹²⁵ Professor Steinberg concludes that adolescents' interest in smoking comes primarily from the act of smoking itself, and its influence on peer approval and social status, and not from other factors such as the package. He adds that changing tobacco packaging is not likely to overpower the basic motive of seeking approval from peers.¹⁹²⁶

7.712. Australia's expert, Professor Slovic, agrees with Professor Steinberg that the high rate of risk-taking in adolescence is the natural result of the asynchronous maturation of two brain systems: a reward system responsive to emotion and immediate pleasures and a cognitive control system essential for impulse control, emotion regulation, and planned decision making.¹⁹²⁷ Professor Slovic elaborates that "[t]he reward system becomes prominent shortly after puberty, but the control system is not fully developed until adulthood", and that this "asynchrony leads youth to be especially sensitive to rewards, immediate consequences of a decision, and the influence of peers".¹⁹²⁸ Moreover, the "immaturity of the regions in the brain associated with cognitive control leads adolescents to act without thinking and to fail to make and carry out plans". Professor Slovic argues that "[e]xperimentation with smoking is likely a manifestation of the general tendency to seek new experiences and to engage in impulsive risk taking in the service of sensation seeking and having fun with friends".¹⁹²⁹

7.713. Another of Australia's experts, Dr Biglan, also refers to previous work by Professor Steinberg in the context of his arguments that adolescents are motivated to use tobacco by concerns about fitting in with peers, as well as increased levels of sensation-seeking, risk-taking, rebelliousness, and anxiety and depression in motivating tobacco.¹⁹³⁰ Dr Biglan also notes that during emerging adulthood the tendency toward high levels of risk taking may diminish, but not yet to the levels they will be later on¹⁹³¹, and that young adults are still concerned by social acceptance, and that such concerns may affect levels of loneliness, depression and shame.¹⁹³²

7.714. On the basis of the above descriptions, we observe a certain consistency in the evidence before us in respect of the drivers of smoking initiation, including the developmental factors which have a bearing on the extent to which these drivers may lead to smoking initiation in adolescents and young adults.

7.715. Notwithstanding this convergence, we also note the observation by the US Surgeon General that "[c]igarette smoking among adolescents and young adults is a multi-determined behavior, influenced by the unique and overlapping combinations of biological, psychosocial, and environmental factors".¹⁹³³ The USIOM also reports that "[t]obacco use is the result of a complex and dynamic interplay of multiple converging developmental, social, and environmental factors" and that "[m]any of these factors are developmentally related, with adolescence and young adulthood as a key period of vulnerability to tobacco use and the progression to nicotine dependence".¹⁹³⁴

¹⁹³³ US Surgeon General's Report 2012, (Exhibit AUS-76), p. 428.

¹⁹³⁴ 2015 USIOM Report, (Exhibit DOM-232), p. 3-1. This view is echoed by Professor Heckman, who states:

Over the past decades, scholars in many disciplines, including neuroscience, psychology, sociology, health policy, and economics have extensively studied youth and adult participation in a variety of risky behaviors, including smoking. The numerous studies of youth smoking and initiation that have resulted from this research have not been able to identify any single factor that fully explains youth smoking behavior. There is a consensus view that there are many complex and interactive influences on youth smoking.

7.716. Professor Steinberg notes that, although adolescents are more likely than children or adults to engage in risky behaviour, only a minority of adolescents smoke because of individual differences in personality and availability¹⁹³⁵ – "[g]enerally, the more risk factors that are present for an individual, the more likely she or he is to smoke".¹⁹³⁶

7.717. Thus, while the evidence indicates shared views among various experts and institutions concerning the factors that can, individually or in combination, have an effect on the initiation of the use of tobacco products by youth, the view is equally shared that no single factor is determinative of such behaviour.

7.718. Neither the reports by the various public health bodies referred to above, nor the expert reports before us, identify tobacco packaging as a driver of smoking initiation in the same way as they list the other factors of initiation identified above.¹⁹³⁷ However, we do not understand Australia to argue that tobacco packaging is an independent factor that drives initiation of tobacco use. Rather, it argues that packaging plays a role in influencing some of the factors that are drivers of smoking initiation.¹⁹³⁸ Specifically, Australia argues that tobacco packaging is a form of marketing that influences smoking behaviour by generating positive perceptions of tobacco products, including by communicating to young people that smoking the brand will help fulfil particular psychological needs.¹⁹³⁹

7.719. Accordingly, what is at issue is not whether tobacco packaging **causes** adolescents and young adults to initiate smoking or is, in itself, an independent driver of smoking initiation. Rather our inquiry should focus on whether the evidence before us suggests that tobacco packaging has a bearing on the complex interaction of factors that are understood to drive smoking initiation, including among youth, such that it would be capable of having an influence on the decision to smoke. This is expressed most clearly by the USIOM, in respect of advertising and promotion generally:

The question is not, "Are advertising and promotion **the** causes of youth initiation?" but rather, "Does the preponderance of evidence suggest that features of advertising and promotion tend to encourage youths to smoke?"¹⁹⁴⁰

7.720. Similarly, the question before us here is whether the evidence before us suggests that features of tobacco packaging can have an impact on the factors that drive smoking initiation, including among youth. We consider this question next.

Influence of packaging on the drivers of smoking initiation

7.721. As described above, in essence, the complainants' experts argue that tobacco use by adolescents (including, most relevantly, initiation) is best viewed in the context of the high-risk behaviours in which adolescents often engage as a result of their neurological development, such as drug use and alcohol consumption. Professor Viscusi argues that the determinants of such behaviours are very similar as they involve peer influences, family background including parental and sibling influences, the school environment, and socioeconomic status.¹⁹⁴¹ Professor Mitchell argues that an explanation for risky behaviour is found in developmental approaches to adolescent

¹⁹⁴⁰ 1994 USIOM Report, Chap. 4, (Exhibit AUS-78), p. 131. The report concludes, "The answer is yes, and this is a sufficient basis for action, even in the absence of a precise and definitive causal chain." Ibid. In this connection, we note that Professor Ajzen seems to agree that a complex set of factors drive smoking initiation. See Ajzen Report, (Exhibit DOM/HND/IDN-3), para. 92; Ajzen Rebuttal Report, (Exhibit DOM/HND/IDN-5), para. 205. We are surprised, therefore, that they both nonetheless consider that Australia must demonstrate a direct causative link between tobacco packaging and smoking initiation.

¹⁹⁴¹ Viscusi Report, (Exhibit UKR-8), para. 113. See also Heckman Report, (Exhibit UKR-144), paras. 19-29.

decision-making, which find that while adolescents possess the ability to reason logically about outcomes, they are more likely to attend to the immediate rewards rather than future costs that can come from engaging in risky behaviour, just at the time when their desire for new sensations and experiences increases.¹⁹⁴²

7.722. Professor Steinberg elaborates that young people smoke because the act of smoking itself confers the approval of peers and the feeling of being adult because it is an activity reserved for adults, and the brand they select is immaterial.¹⁹⁴³ Put differently, according to Professor Steinberg, the desired reward of smoking is inherent in the act of smoking itself, and so "[i]t is highly improbable that an adolescent who is interested in trying smoking will decline a cigarette from a friend because of the packaging from which the cigarette is offered".¹⁹⁴⁴ Professor Steinberg elaborates that risky behaviour by adolescents, including smoking, derives from the desire to seek approval of peers, and changing packaging is unlikely to overpower these motives.¹⁹⁴⁵

7.723. Professor Steinberg also argues that branding of tobacco products is less important to **adolescents because of the way young people obtain cigarettes – that is, from friends, "often without necessarily seeing the package in which they were sold"**.¹⁹⁴⁶ Professor Steinberg argues that the effect of branding can only be relevant "in a world where branded packs are available", as it is "highly improbable on the face of it" that "the additional cool value added by packaging is so great that people will not smoke if the packages of cigarettes they buy carry more minimal branding than at present".¹⁹⁴⁷ He adds that it would be easy for underage smokers who are concerned about projecting a particular image to personalize the packaging of the cigarettes they smoke.¹⁹⁴⁸

7.724. As we have noted, Australia's expert Professor Slovic agrees with Professor Steinberg in a number of important respects concerning adolescents' neurological development, risk-taking, experimentation with tobacco, and sensitivity to rewards and the influence of peers.¹⁹⁴⁹ Where they diverge is that Professor Slovic argues that Professor Steinberg's "characterization of youth risk taking is actually a strong argument in favor of plain packaging".¹⁹⁵⁰

7.725. Professor Slovic refers to "the importance of affect in guiding judgments, decisions and all forms of motivated behaviour". He uses "affect" to mean the specific quality of "goodness" or "badness" that may be "(a) experienced as a feeling state (with or without conscious awareness) and (b) demarcating a positive or negative quality of a stimulus". Professor Slovic notes that "[a]ffective responses occur rapidly and automatically".¹⁹⁵¹ Reliance on such feelings can be characterized as the "affect heuristic" and, in Professor Slovic's view, the majority of risk-taking behaviors are motivated by affect rather than by deliberative analysis of quantitative probabilities or statistics.¹⁹⁵² Professor Slovic elaborates in the following terms:

Although analysis is certainly important in many circumstances, reliance on affect and emotion is a quicker, easier, and more efficient way to navigate in a complex, **uncertain, and sometimes dangerous world ... Many theorists have given affect a direct and primary role in motivating behavior.** Epstein's view on this is as follows:

The experiential system is assumed to be intimately associated with the experience of affect ... which refer[s] to subtle feelings of which people are often unaware. When a person responds to an emotionally significant event ... the experiential system automatically searches its memory banks for related events, including their emotional accompaniments. ... If the

activated feelings are pleasant, they motivate actions and thoughts anticipated to reproduce the feelings. If the feelings are unpleasant, they motivate actions and thoughts anticipated to avoid the feelings.¹⁹⁵³

7.726. In respect of smoking initiation, Professor Slovic refers to evidence from survey data and the tobacco industry which, in his view, indicate that "experiential and affective forces, rather than analytic decision making, are leading many young people to begin smoking, a behavior that they later regard as a mistake".¹⁹⁵⁴ In respect of tobacco advertising and promotion, Professor Slovic submits that a considerable variety of tobacco advertising and other promotions have been designed to associate positive imagery and positive affect with the act of smoking. Additionally, he continues, the affective cues emanating from the social environment are powerful influences on smoking behaviour (for example, having a good time with friends and avoiding the risk of peer disapproval are examples of social factors in which affect or experiential thinking dominates any tendency for analytic or deliberative thinking).¹⁹⁵⁵ Thus, Professor Slovic argues that tobacco companies invest considerable resources in the development of packages to ensure they appeal to young people, and that the feeling produced by brand images and associations can exert powerful influences on behaviours that are not consciously recognized.¹⁹⁵⁶ Professor Slovic thus critiques Professor Steinberg's submission for not "examining the role of billions of dollars of sophisticated marketing that creates the cachet that leads the young person, driven by the brain's early maturing reward system, to consider smoking and leads that person's friend to offer a cigarette in settings where smoking is socially attractive".¹⁹⁵⁷ He also argues that Professor Steinberg "neglects to consider restricting the availability of brands and other marketing imagery that have been designed to exploit the vulnerability of immature brains by enhancing the emotional appeal of tobacco products".¹⁹⁵⁸

7.727. Another of Australia's experts, Dr Biglan also agrees with Professor Steinberg that the act of smoking is important to newly initiating youth because of "what it says to peers and to the adolescent him or herself"¹⁹⁵⁹ and that "until they become addicted, their primary motivations involve the fulfillment of psychosocial needs such as acceptance by their peers and a sense of popularity, fun, and excitement".¹⁹⁶⁰ He also explains that emerging adulthood is also affected by concerns over social acceptance and social attachment.¹⁹⁶¹ On this basis, Dr Biglan states that "when young people have or aspire to a self-image that is consistent with their image of a smoker they are more likely to intend to smoke or to become a smoker", and that the young people on the margins of social in-groups are more likely to be rebellious and risk-taking.¹⁹⁶²

7.728. Dr Biglan refers to studies that he explains "show that the image that young people have of smokers is an important influence on their smoking and that those who have or aspire to such an image or who find that image attractive become more likely to smoke" and that in this context, smoking can be a ticket to social acceptance.¹⁹⁶³ Specifically, beginning to smoke a particular brand "may seem to be a useful move, to the extent that the brand is effectively associated in their minds with social acceptance and with social attributes, such as autonomy, maturity, and ruggedness".¹⁹⁶⁴ Psychological needs that induce young people to smoke "include having a positive masculine or feminine image, reducing psychological distress, being rebellious, and sensation seeking"; adolescents high in these needs are more likely to smoke, tobacco companies seek to

associate their brands with the fulfilment of one or more of these needs, and youth-popular brands associate their brands with the achievement of one or more of these needs.¹⁹⁶⁵

7.729. For Dr Biglan, whether branded packs in Australia's dark market will influence young people to initiate and continue smoking hinges on whether features of branded packs have the kind of influence that other features of marketing have:

[D]o they communicate to young people that the brand and smokers of a brand have social characteristics that young people aspire to, such as stylishness, popularity, excitement, and sex appeal? Do they influence the young person to believe that popular people smoke the brand? Do young people find the branded pack attractive? Do the packs communicate that the branded cigarette will be easy to smoke? Good tasting? Easy to stop smoking? To the extent that branded packs have these effects on young people, then branded packs are simply another facet of marketing and we can expect them to influence young people to try smoking or to continue smoking.¹⁹⁶⁶

7.730. We note the disagreement between the experts concerning whether these elements would cause an adolescent or young adult to initiate smoking because of the act of smoking itself, or whether branding adds something additional *independent* of the act of smoking. As noted above, for Professor Slovic, branding does add something additional, namely "the cachet that leads the young person, driven by the brain's early maturing reward system, to consider smoking and leads that person's friend to offer a cigarette in settings where smoking is socially attractive".¹⁹⁶⁷

7.731. We recall our findings above that branded packaging can act as an advertising or promotion tool in relation to tobacco products and the evidence before us, in particular the statements emanating from the tobacco industry itself, indicating that branding on tobacco products, including packaging, can generate certain positive perceptions in relation to the product in the eyes of the consumer. We also noted that the use of particular packaging design features such as colours, graphic elements, texture, typography, opening mechanisms, and shapes has been documented as constituting an integral part of the use of branding on tobacco retail packs, for the purposes of creating a brand image and positive associations with the products.¹⁹⁶⁸

7.732. In addition, it is apparent from a number of industry documents referred to in these proceedings that such branding efforts, including as applied to packaging, are intended to create images that would be expected to act *inter alia* on perceptions of the function of tobacco use, described above, to which adolescents and youth have been identified as being particularly sensitive.

7.733. A "research and planning memorandum" from RJ Reynolds thus describes, *inter alia*, the psychological effects of smoking, which it identifies as "group identification", "stress and boredom relief", "self-image enhancement", and "experimentation".¹⁹⁶⁹ The memorandum goes on to

¹⁹⁶⁵ Biglan Report, (Exhibit AUS-13), para. 33 (referring to NCI Tobacco Control Monograph No. 19, (Exhibit AUS-77); and US Surgeon General's Report 2012, (Exhibit AUS-76).

¹⁹⁶⁶ Biglan Report, (Exhibit AUS-13), para. 77.

¹⁹⁶⁷ Slovic Report, (Exhibit AUS-12), para. 111.

¹⁹⁶⁸ See paras. 7.660-7.663 above.

¹⁹⁶⁹ RJ Reynolds Memo 1973, (Exhibit AUS-69), pp. 6-8. The memorandum noted that cigarette marketing "should not in any way influence non-smokers to start smoking" but recognized that "many or most of the '21 and under' group will inevitably become smokers, and offer them an opportunity to use our brands". Ibid. p. 1. The memorandum goes on to state that, "[f]or the pre-smoker and 'learner' the physical effects of smoking are largely unknown, unneeded, or actually quite unpleasant or awkward". It continues that "[t]he expected or derived psychological effects are largely responsible for influencing the pre-smoker to try smoking, and provide sufficient motivation during the 'learning' period to keep the 'learner' going, despite the physical unpleasantness and awkwardness of the period". Ibid. p. 2. The memorandum sets out that:

Brands tailored for the beginning smoker should emphasize the desirable psychological effects of smoking, also suggesting the desirable physical effects to be expected later. Happily, then, it should be possible to aim a cigarette promotion at the beginning smoker, at the same time making it attractive to the confirmed smoker. The information and outline in Table I then may be used as a basis for arriving at some specifications for new "youth" brands and for determining how they should be promoted.

consider the "image a new brand aimed at the youth market should have" and elaborates that "product image factors" should "emphasize participation, togetherness, and membership in a group, one of the group's primary values being individuality", "be strongly perceived as a mechanism for relieving stress, tension, awkwardness, boredom, and the like", "be associated with doing one's own thing to be adventurous, different, adult, or whatever else is individually valued", "be perceived as some sort of new experience, something arousing some curiosity, and some challenge", "be different from established brands used by the over-thirty and perhaps even over-twenty-five groups" and "[m]ust become the proprietary 'in' thing of the 'young' group"; and "not be perceived as a 'health' brand".¹⁹⁷⁰

7.734. Further evidence relating to the marketing of specific brands presented or referred to in these proceedings illustrates the role of brand marketing, including through packaging, in conveying the type of images and perceptions that youth are known to be sensitive to and that have been identified above as contributing to smoking initiation. For example:

- In a document entitled "Packaging Brief" for the Benson & Hedges brand, it was noted that "it is essential that the pack itself generates the optimum level of modernity, youthful image and appeal amongst ASU30 [Adult Smokers Under 30] consumers".¹⁹⁷¹ Among the "Key Consumer Benefit[s]" identified is "[p]ositively radiates the personal, emotional values of an 'impassioned spirit' inside & outside".¹⁹⁷² It continues that "Benson & Hedges embodies a true impassioned spirit by: Understanding that it takes strength to achieve what you want out of life[:]; Supporting the true emotions of the human spirit[:]; Actively encourages person to person contact among impassioned people all over the world[:]; Possessing a reputation for quality that is the foundation for its confident, progressive attitude".¹⁹⁷³
- In a 1990 Philip Morris document entitled "Marketing New Products in a Restrictive Environment", the proposition is for "an innovative packaging concept which projects a distinctive young masculine appearance".¹⁹⁷⁴ In addition, "non[-]traditional trademarks" are noted as a "new product idea" with the "target market" being "young adult urban European and the trademarks that appeal to them / reflect their lifestyle today".¹⁹⁷⁵ In respect of a "refill" product idea, the presentation notes that the idea of refill "changes the smoking ritual" by using "the ultimate container: a newly designed exclusive case that is an expression of personal identity" and would "make[] the product more socially acceptable".¹⁹⁷⁶ With respect to a "made to measure" product idea, it is noted that "consumers today look for self[-]fulfillment and are consciously choosing those products which fit their individual lifestyles".¹⁹⁷⁷

Ibid. p. 4. These "psychological effects" were defined in the paper as "group identification" (i.e. "participating, sharing, conforming, etc."), "stress and boredom relief" (i.e. "buys time, valid interruption, bridges awkward times and situations, something to do, etc."), "self-image enhancement" (i.e. "identification with valued persons, daring, sophisticated, free to choose, adult, etc.") and "experimentation" (i.e. "try something new, experiment, etc"). Ibid. pp. 6-8.

¹⁹⁷⁰ RJ Reynolds Memo 1973, (Exhibit AUS-69), p. 9. It further notes that the "name and appearance of the product will here become crucial in establishing the desired image". Ibid. p. 10. It exemplifies this by noting that "the name chosen should have a double meaning" or be "one which evokes different but desirable responses from different age groups". It exemplifies this with reference to the Marlboro "western theme", which "suggests independence, clean air, open spaces and freedom to the youth group, while at the same time suggesting the 'good old days', hard work, white hats over black hats, and the like to the older generation". Ibid. p. 10.

¹⁹⁷¹ British American Tobacco, Packaging Brief 2001, (Exhibit AUS-23), p. 1.

¹⁹⁷² British American Tobacco, Packaging Brief 2001, (Exhibit AUS-23), p. 2.

¹⁹⁷³ British American Tobacco, Packaging Brief 2001, (Exhibit AUS-23), p. 2. The advertising brief further identifies the "brand character" as "Inner Substance & Outward Style[:]; Inner Confidence & Outward Success[:]; Inner Imagination & Outward Expressiveness[:]; Inner Determination & Outward Achievement[:]; Inner Warmth & Outward Generosity[:]; Inner Motivation & Outward Optimism[:]; Inner Passion & Outward Energy[:]; Inner Pride & Outward Joy[:]; Inner Quality & Outward Reputation". Ibid. p. 2.

¹⁹⁷⁴ Philip Morris, "Marketing New Products in a Restrictive Environment", Marketing Meeting, Naples, Florida (June 1990), Bates No. 2044762173/2364, (Philip Morris Marketing Meeting 1990), (Exhibit AUS-96), p. 12.

¹⁹⁷⁵ Philip Morris Marketing Meeting 1990, (Exhibit AUS-96), p. 24.

¹⁹⁷⁶ Philip Morris Marketing Meeting 1990, (Exhibit AUS-96), pp. 29 and 31.

¹⁹⁷⁷ Philip Morris Marketing Meeting 1990, (Exhibit AUS-96), p. 33.

- In a 1992 Philip Morris document entitled "Opportunities in packaging innovation" the "value of new" is identified as "looks different", "I'd have something different", "looks more contemporary; now; 90's", "makes me feel special, makes me feel my brand is paying attention to me", "creates eye-appeal", "draws attention (jealousy) from others", "renews my attention to what I have in my hand", "rekindles attachment, excitement about my brand", and "if I'm paying full price, I should be getting something creative, exciting, different".¹⁹⁷⁸
- In a document in respect of Alpine cigarettes by Philip Morris in 2000, the author noted that "smokers of this product are seen" as "[s]ophisticated", "[f]ashion conscious", "[y]ounger adult", "[c]onfident", "[o]utgoing/sociable", "[m]ore like me", "[m]ost popular", and "[f]airly innovative".¹⁹⁷⁹
- In another document prepared for Philip Morris in 1994, in discussing the Alpine smoker and "[w]hat ... she want[s]", reference is made to: a "[f]eminine, upmarket social image" (elaborated in the following terms: "[s]ophistication", "[b]alanced success as woman", and it is noted that "[t]he white filter & pack give this"), "emotional gratification" (elaborated in the following terms: "[w]ind down, regain control & confidence"; "[l]ook and feel attractive").¹⁹⁸⁰ Under the heading "Repositioning Alpine for the 90's", a "[m]ove toward the Princess Image" is noted and equated with "[s]oft, less driven (balance), less masculine, a bit more dreamy".¹⁹⁸¹ In respect of packaging and type styles, it is noted that "[i]deally want a cross between [r]elaxed, trendy modernity of Squiggles" and "[r]efined quality image of Double Line".¹⁹⁸²
- In a Camel advertising development "White Paper", it is noted that: CAMEL's "current existing market image (i.e., brand perceptions, not advertising perceptions) includes aspects that are highly consistent with the wants of younger adult males, and have a strong fit with what CAMEL has always stood for".¹⁹⁸³ These aspects were said to include "independence", "doesn't follow crowd", "lives by its own beliefs", "stands up for beliefs", "not afraid to express individuality", "enjoys being different", and "won't settle for ordinary".¹⁹⁸⁴
- Australia also submits a Philip Morris document entitled "Virginia Slims Rounded Corners Name/Pack Test", which sets out the results of a quantitative research study in respect of a proposal to change the packaging of Virginia Slims.¹⁹⁸⁵ It notes that, in interviews conducted in fifteen malls in which different pack designs were tested, the "full flavour Modified Rounded Corners pack and lights Rounded Corners pack were more likely to be associated with positive image attributes such as 'innovative', 'pack my friends would carry', 'sophisticated' and 'good value'".¹⁹⁸⁶
- In a pack test for Merit for Philip Morris, in "an effort to revitalize the Merit brand", research was conducted to obtain reactions to alternative packages for different brand variants. The study states that the objective of the research "was to determine the relative appeal of each pack among Merit and competitive smokers, as well as to learn about the imagery and product attributes communicated by each pack".¹⁹⁸⁷ Across all three variants, three packaging alternatives were ranked against a range of perceptions,

¹⁹⁸⁶ Philip Morris, Virginia Slims Rounded Corners Name/Pack Test, (Exhibit AUS-168), pp. i and iv. Full flavour cigarettes in "the Modified Rounded Corners pack were significantly more likely to be described as 'light' versus the Direct Translation Rounded Corners and Standard Box packs". Of the names under consideration for the rounded corners pack, "Sleek Box and Contour Box were considered most appealing and appropriate in general", and "were aligned with more favourable imagery attributes including 'stylish', 'innovative', 'contemporary', 'unique', 'classy sounding' and 'sophisticated'". Ibid. p. v.

¹⁹⁸⁷ Philip Morris, Merit Pack Test, (Exhibit AUS-170), p. i.

including whether the pack is "[f]or smokers my age", "[h]as a fresh, revitalized look", "[c]lassy looking", "[e]ye-catching", "[a]ttractive", "[h]igh quality", "[c]ould become popular among [Young Adult Smokers]", "[f]or someone like me", "[m]odern/contemporary", "[a] pack I'd like to carry", "[t]rendy", "[c]ool/hip", "[b]oring/dull", "[g]eneric", "[u]nattractive" and "[c]heap looking".¹⁹⁸⁸

- In a study for RJ Reynolds concerning the Salem brand family, participants were asked to indicate how well they thought various statements described particular brands, including whether the brand is: "bold and dynamic"; "changing for the better"; "intriguing"; "up and coming"; "progressive"; and "for young adult urban smokers". Participants were also asked whether the brand "[r]eflects an attitude you like", "[h]as a mystical feel", and whether they "[w]ould recommend to adult friend who smokes".¹⁹⁸⁹
- In a 1990 Philip Morris marketing presentation, in respect of the Longbeach brand, it is noted that "[s]ome of the reasons for the brand's success have been identified in qualitative research" and that "[i]t's **[sic]** packaging and advertising have been found to project a personality that many super value smokers aspire to, [p]articularly its attitude of freedom, escape, mildness and its genuine mainstream brand value".¹⁹⁹⁰

7.735. This evidence indicates to us that the tobacco industry and its marketing agencies consider that tobacco packaging (including word, design, shape, and other features) can communicate a wide range of imagery relating not only to the characteristics of the product but also projecting images about its consumer, such as modernity¹⁹⁹¹, a youthful image¹⁹⁹², "Inner Substance & Outward Style", "Inner Confidence & Outward Success"¹⁹⁹³, "an expression of personal identity"¹⁹⁹⁴, "[c]onfident", "[o]utgoing/sociable", "[m]ost popular"¹⁹⁹⁵, can "emphasize participation, togetherness, and membership in a group"¹⁹⁹⁶, "individuality"¹⁹⁹⁷, a way of "relieving stress, tension, awkwardness, boredom, and the like"¹⁹⁹⁸, "be associated with doing one's own thing to be adventurous, different, adult, or whatever else is individually valued"¹⁹⁹⁹, "be perceived as some sort of new experience, something arousing some curiosity, and some challenge"²⁰⁰⁰, make the user "feel special"²⁰⁰¹, can "draw[] attention (jealousy) from others"²⁰⁰², "emotional gratification"²⁰⁰³, a way to "[l]ook and feel attractive"²⁰⁰⁴, "[p]layful[ness], social adventure & exertion"²⁰⁰⁵, a sense of being "stylish"²⁰⁰⁶, "[u]nique"²⁰⁰⁷, "[c]ool" or "hip"²⁰⁰⁸, "[t]raditional"²⁰⁰⁹, "[o]ld-fashioned"²⁰¹⁰, "tough/rugged"²⁰¹¹, "trendy"²⁰¹², "expensive looking"²⁰¹³, "cheap looking"²⁰¹⁴,

"prissy"²⁰¹⁵, "bold and dynamic"; "intriguing"; "up and coming"; "progressive"²⁰¹⁶; and a notion of "independence"²⁰¹⁷, "doesn't follow crowd"²⁰¹⁸, "lives by its own beliefs"²⁰¹⁹, "stands up for beliefs"²⁰²⁰, "not afraid to express individuality"²⁰²¹, "enjoys being different"²⁰²², "won't settle for ordinary"²⁰²³, "freedom"²⁰²⁴, "escape".²⁰²⁵

7.736. This evidence indicates to us that designers of packaging innovations in the tobacco industry are conscious of the power of branding, including design and other elements of packaging, to elicit certain responses in the minds of consumers and imbue those products with images with which the prospective consumer would want to be associated. Specifically, the evidence above suggests that tobacco packaging seeks to capture images and associations that are appealing to the consumer in respect of *what that package says about them* as well as the *image of the owner that those packages conveys or elicits*. In this respect, we agree with Professor Fong that:

Product differentiation is key to tobacco packaging in that it increases appeal through package design (graphical and structural) aimed at making tobacco products attractive and aesthetically pleasing to the eye and engendering perceptions of positive product *quality characteristics, identity and personality characteristics*, and positive taste perceptions.²⁰²⁶

7.737. The experts' views and tobacco industry documents summarized above provide evidence that the images and messages conveyed by tobacco packaging are of such a nature as to be capable of conveying a belief that tobacco use can fulfil certain needs, or create certain associations with the user. Moreover, as identified above, it is recognized that youth and young adults are particularly vulnerable to the initiation of tobacco use in the event that they believe those needs can be fulfilled through tobacco use. Taken together, therefore, the evidence before us supports the view that the imagery and associations, with which tobacco products may be imbued by virtue of their packaging, are of such a nature as to engender a belief that their use will attribute certain qualities to the user, and that adolescents are particularly vulnerable to acting on the basis of such beliefs by virtue of the nature of adolescent decision-making processes, as summarized above.²⁰²⁷

7.738. Notwithstanding this observation, we note the complainants' arguments that the impact of such branding, and the positive associations that it may generate, is limited to secondary demand (as opposed to primary demand).²⁰²⁸ Honduras describes this distinction as follows:

²⁰¹¹ Philip Morris, New Parliament Pack Test, (Exhibit AUS-169), p. 41.

As observed by Professor Winer, when assessing the effects of brands on demand for a product, it is essential to consider the distinction between primary and secondary demand. Primary demand refers to the total demand for products within an industry or product category. In the cigarette market, primary demand is the volume of cigarettes that consumers buy across all brands. Secondary demand is [a] measure of demand for a particular brand within a market. In the cigarette market, secondary demand refers to the volumes of consumption of a specific brand, e.g. Dunhill, Marlboro, etc.²⁰²⁹

7.739. The complainants refer, in respect of this distinction and the role of marketing in respect of primary and secondary demand, to expert reports by Professors Winer and Steenkamp. Professor Winer argues that in a mature market, like that for cigarettes, "branding does not affect the primary demand or market size but affects secondary demand, consumer choices within the market".²⁰³⁰ For Professor Winer, a key reason that branding is most effective as a means of generating secondary demand in a mature market is that consumers already know about the product, its perceived benefits and disadvantages, and may be experienced repeat customers.²⁰³¹ In such a market, brand communications aid competitors in gaining share from other participants in the industry, rather than informing consumers of the existence of the product.²⁰³² Professor Winer adds that the majority of consumers may not be willing to switch brands, but the fact that some consumers will do so is a powerful incentive for brands to fight to maintain or increase their share, such that "[s]witching or the threat of switching is the essence of a competitive marketplace because brands must strive to improve their product, service and/or value proposition to grow or, at least, protect their share and continue to be profitable and provide value to their shareholders".²⁰³³ Professor Winer refers to a number of studies and notes that "given advertising campaigns do not increase aggregate, primary demand in mature industries, the trademarked package features certainly cannot increase aggregate demand, particularly in the context of the known health risks and strong anti-smoking environment", especially given the lack of support from any of the other "usual promotional contexts".²⁰³⁴

7.740. Professor Steenkamp, though rejecting the notion that brand packaging is a dedicated advertising instrument, argues that if packaging has some advertising function, the effect of advertising on primary demand²⁰³⁵ is overstated.²⁰³⁶ He reviews a number of econometric studies of advertising elasticities to examine the extent to which increases in expenditures on tobacco advertising affect demand for tobacco products. Concluding that advertising has at best a negligible effect on primary demand, he continues that firms nonetheless advertise in order to increase inter-brand sales, to contribute to brand differentiation, to charge a premium price for their brands, and to create barriers to entry for new entrants.²⁰³⁷

²⁰²⁹ Honduras's first written submission, para. 450 (referring to Winer Report, (Exhibit UKR-9), para. 28). See also Dominican Republic's first written submission, para. 683 (referring to Steenkamp Report, (Exhibit DOM/HND-5), para. 115; and Winer Report, (Exhibit UKR-9), p. 32). Honduras and the Dominican Republic both rely upon the Winer Report, (Exhibit UKR-9). See Honduras's communication to the Panel of 8 July 2015; and Dominican Republic's responses to Panel questions following the first substantive meeting, para. 1.

²⁰³² Winer Report, (Exhibit UKR-9), para. 30.

²⁰³³ Winer Report, (Exhibit UKR-9), para. 31.

²⁰³⁴ Winer Report, (Exhibit UKR-9), paras. 32-34.

²⁰³⁵ Professor Steenkamp also uses the expression "category demand".

²⁰³⁶ Steenkamp Report, (Exhibit DOM/HND-5), para. 90.

²⁰³⁷ Steenkamp Report, (Exhibit DOM/HND-5), paras. 90-112. We also note Professor Neven's argument that, from an economic perspective, branding as a specific type of marketing strategy can, first, increase the willingness to pay of consumers for a particular type of product; and, second, may increase the inclination of consumers to purchase a particular *brand* inside that product group. Professor Neven argues that, generally speaking, marketing measures are more likely to lead to market expansion effects when a product is new and when consumers are still relatively uninformed about its characteristics, and that over the lifecycle of a product, market expansion elements of branding (primary demand) tend to become less important, and are replaced by business stealing effects (secondary demand). When products "are mature, branding may in fact have hardly any market expansion value anymore at all". Neven Report, (Exhibit UKR-3) (SCI), pp. 20-25. See also Steenkamp Rebuttal Report, (Exhibit DOM/HND-14), paras. 73-80.

7.741. Australia relies on expert reports by Professors Chaloupka and Tavassoli to contest these assertions. Specifically, Professor Chaloupka surveys various reports by, *inter alia*, the US Surgeon General, USIOM, and the US National Cancer Institute concerning the role of advertising and promotion on tobacco use (and specifically initiation), and critiques the complainants' experts for their failure to take into account such information. He also critiques the bases upon which they reach their conclusions on the effects of advertising.²⁰³⁸ Professor Tavassoli argues that advertising can be effective in stimulating primary demand in mature categories, and that brand-level effects can affect perceptions of product categories as a whole and therefore can affect primary demand.²⁰³⁹

7.742. Australia refers to internal tobacco industry documents, findings by the United States District Court for the District of Columbia in *United States v. Philip Morris*, as well as reports by the US Surgeon General, the US National Cancer Institute, the USIOM and the WHO, in support of a causal link having been established between tobacco marketing and tobacco use, including the initiation of tobacco use.²⁰⁴⁰

7.743. We take note of the econometric studies referred to by Professor Steenkamp suggesting an "at best negligible impact" of advertising on primary demand for tobacco products.²⁰⁴¹ However, we also note the limited ability of econometric evidence based on aggregate data to detect increases in consumption resulting from increased advertising, as suggested in an analysis by the World Bank, as cited and co-authored by Professor Chaloupka.²⁰⁴² Accordingly, we consider it appropriate to take due account also of other relevant evidence before us that may inform the potential impact of branding features on tobacco packaging on demand for, and consumption of, tobacco products.

7.744. In this respect, the evidence before us makes clear that new smokers must continuously be recruited to maintain the primary demand for tobacco products at a level that will sustain the industry and "replace" those who cease to use the product because they have quit or died. As the US Surgeon General has observed:

²⁰³⁸ Chaloupka Public Health Report, (Exhibit AUS-9), paras. 57-88.

²⁰³⁹ Tavassoli Report, (Exhibit AUS-10), paras. 42-53.

²⁰⁴⁰ Australia's first written submission, paras. 62-65.

²⁰⁴¹ We also note in this respect that the complainants have presented these arguments as an alternative to their main contention that packaging cannot be considered to act as advertising.

²⁰⁴² See Chaloupka Public Health Report, (Exhibit AUS-9), para. 79 (quoting Jha and Chaloupka 1999, (Exhibit AUS-51), pp. 49-50):

These studies may be misleading for the following reasons. First, economic theory suggests that advertising will have a diminishing marginal impact on demand; that is, when advertising for a product increases, consumers will gradually respond less and less to additional advertising, and ultimately, advertising will stop making any impact on them at all. Advertising in the tobacco industry is at a relatively high level, around 6 per cent of sales revenue, about 50 per cent higher than the average industry. Thus any increased consumption that may result from increased advertising is likely to be very small and difficult to detect. This does not mean that, in the absence of advertising, consumption would necessarily be as high as it is in the presence of advertising - only that the marginal impact of an increase in advertising is negligible. Second, data that record the impact of advertising on sales are usually highly aggregated for relatively long time periods, for all advertisers, in all media, and often over large populations. Any subtle changes that might be apparent at a more disaggregated level of analysis are therefore obscured. In studies that use less aggregated data, researchers find more evidence of a positive effect of advertising on consumption, but such studies are expensive and time-consuming and, therefore, rare.

We also note the "tropicana" example provided by Professor Steenkamp in support of his argument that the effects of a packaging change are limited to secondary demand. Professor Steenkamp explains that a change in pack appearance in respect of the brand "Tropicana" led some consumers to shift to other brands, which Professor Steenkamp suggests indicates that the impact of such change is on secondary rather than primary demand for the product (in that case, orange juice). (see Steenkamp Report, (Exhibit DOM/HND-5), paras. 58-59). We note however the very different circumstances of that situation, as compared to the application of uniform packaging across all brands: in that example, competing products continued to be available to the consumer in their familiar packaging, and some consumers switched to those other brands. As Professor Steenkamp acknowledges, this is a very different situation from that of tobacco plain packaging, where *all* brands are plain and there is no opportunity to switch to another product that has not been affected by the same change in packaging.

Young people are a strategically important market for the tobacco industry. Since most smokers try their first cigarette before age 18, young people are the chief source of new consumers for the tobacco industry, which each year must replace the many consumers who quit smoking and the many who die from smoking-related diseases.²⁰⁴³

7.745. The evidence further indicates that young adult smokers are a key target of brand marketing in light of their high degree of brand loyalty to their first brand choice. That this age group has a high degree of brand loyalty to their first brand choice has been recognized by the tobacco industry.²⁰⁴⁴ Indeed, the industry has noted that "the aging of younger adult smokers combined with their brand loyalty guarantee the growth of a brand for decades", such that "[t]he future success of any cigarette brand is driven by its ability to attract younger adult smokers, between the age of 18 and 24 years old", and that "smokers aged 18-24 determine the future trends of the tobacco industry".²⁰⁴⁵ Indeed, as noted by the US National Cancer Institute:

A successful tobacco brand must attract young smokers who will ideally (from the manufacturer's perspective) go through a series of stages leading from experimentation, to loyalty to a particular brand, to increased consumption as they age and become mature smokers. Because every day approximately 4,000 adolescents between the ages of 12 and 17 initiate cigarette smoking, the early years are critically important in helping young adult smokers settle on a brand for life, thus helping tobacco companies gain total brand share.²⁰⁴⁶

7.746. Taking these elements into account, we agree with Professor Tavassoli's assessment that "[t]he critical question, from the perspective of product adoption, is not whether a category is mature or not, but whether a consumer is new to the category".²⁰⁴⁷ The evidence mentioned above indicates that it is essential that new users be recruited to smoke in order to sustain the industry, and that youth are strategically important in this regard given that adolescence represents the age at which initiation generally occurs²⁰⁴⁸, and because of the high degree of brand loyalty that young people exhibit over the course of their tobacco use.

7.747. In light of the above, we are not persuaded that the impact of branding of tobacco products, and the positive associations that it may generate, is limited, as the complainants argue, to secondary demand. We are therefore also not persuaded that the evidence before us, taken as a whole, demonstrates, as the complainants argue, that tobacco packaging could not play a role in influencing the decision to smoke, and specifically on smoking initiation, in particular among adolescents and young adults, by virtue of the positive perceptions and associated product appeal created by such packaging.

7.748. We further note that some of the evidence before us suggests that the age of initiation of LHM cigar smokers is significantly higher than that of cigarette smokers.²⁰⁴⁹ Cuba refers to an online survey of the Australian cigar market (the "Vision One Report")²⁰⁵⁰ which found that the majority of LHM cigar smokers initiate when they are adults. According to this report, of those sampled, the mean age of initiation in Australia for smoking LHM cigars was found to be 31.1 years, as compared to 17.7 years for cigarette initiation, and the modal age of LHM cigar initiation

²⁰⁴³ US Surgeon General's Report 1994, Executive Summary, (Exhibit AUS-73), p. 8. See also Tavassoli Report, (Exhibit AUS-10), para. 50 (stating that "[p]rimary demand also depends on the ability to attract new consumers without whom it will shrink in the long term"); and US Surgeon General's Report 2012, (Exhibit AUS-76), p. 541.

²⁰⁴⁹ Cuba's first written submission, para. 244.

²⁰⁵⁰ Vision One Report, (Exhibit CUB-79), para. 11 (referenced in Cuba's first written submission, para. 245 et seq.).

in Australia was recorded as 30 years, as compared to 18 years for cigarette initiation.²⁰⁵¹ Cuba adds that a statistical analysis of the results of the Vision One Report shows that only 2% of LHM cigar smokers started to regularly smoke LHM cigars under 18, and only 30% by the age of 24.²⁰⁵² Data and analysis by the USSG in its 2014 report indicate that cigar use among youth and adolescents continued to follow a similar pattern.²⁰⁵³

7.749. Cuba notes that the Vision One Report acknowledges that the data it collected on cigarette initiation is not necessarily representative of the cigarette smoking population in Australia as it was looking at a subset of the cigarette smoking population, i.e. current LHM cigar smokers who have ever smoked cigarettes on a regular basis.²⁰⁵⁴ Therefore, Cuba also relies on statistics on initiation presented by the 1994 US Surgeon General's Report to show the same patterns of behaviour with regard to cigarette smokers.²⁰⁵⁵ According to the 1994 US Surgeon General's Report, as regards the age of initiation, the data shows that whilst 53% of persons who had ever smoked a cigarette daily began smoking cigarettes daily before they reached 18, only 2% of persons who currently smoke LHM cigars had started regularly smoking LHM cigars by the same age. By age 29, almost all (98.1%) of persons who had ever smoked cigarettes daily had begun smoking while less than half (49%) of persons who currently smoke LHM cigars had started regularly smoking those products.²⁰⁵⁶

7.750. Cuba adds that smokers of LHM cigars are significantly older than smokers of cigarettes.²⁰⁵⁷ Of the respondents to the Vision One survey (all of whom answered that they currently smoke LHM cigars on a regular basis), only 5% were aged between 18 and 25, whilst the majority (47.1%) were between 35 and 54 years of age (with 66.9% aged 35 or above).²⁰⁵⁸ By contrast, of the respondents to the 2013 Victorian Smoking and Health Survey (VSHS), of whom 86.7% smoked factory made cigarettes and only 2.6% did not smoke cigarettes, 26.1% were aged between 18 and 29, 42.2% were aged between 30 and 49, and 31.7% were aged 50 or above.²⁰⁵⁹

7.751. According to Cuba, the later initiation age range for consumers of LHM cigars is significant because of what is known about tobacco initiation.²⁰⁶⁰ The US Surgeon General's 2012 Report concluded that tobacco prevention efforts should be focused on youth because nearly all tobacco use begins in childhood and adolescence (88% of adult smokers who smoke daily report that they

²⁰⁵¹ Cuba's first written submission, para. 246 (referring to Vision One Report, (Exhibit CUB-79), paras. 14-15, charts 2-3). Further, Cuba argues that the Vision One Report shows that there is a sharp and steep incline in cigarette initiation as age progresses and a more moderate curve in initiation for LHM Cigar smoking, which is indicative of the finding that, of the survey respondents who had ever smoked cigarettes regularly, 80% started smoking cigarettes when they were under 19 years of age, whereas a similar percentage of LHM Cigar smokers (69%) did not start smoking LHM Cigars regularly until the ages of 20 to 39. See also Cuba's first written submission, para. 247 (referring to Vision One Report, (Exhibit CUB-79), para. 16, chart 4).

²⁰⁵² Cuba's first written submission, para. 248 (referring to Vision One Report, (Exhibit CUB-79), para. 17). This compared to just over half (52%) of those who have ever smoked cigarettes started smoking them regularly when they were under 18, whilst almost all (92%) had started smoking them regularly by the age of 24.

²⁰⁵³ See US Surgeon General 2014 report, (Exhibit AUS-37), page 735.

²⁰⁵⁴ Cuba's first written submission, para. 249 (referring to Vision One Report, (Exhibit CUB-79), para. 18).

²⁰⁵⁵ Cuba's first written submission, para. 249 (referring to US Surgeon General's Report 1994, (Exhibit CUB-66)).

²⁰⁵⁶ Cuba's first written submission, para. 250 (referring to US Surgeon General's Report 1994, (Exhibit CUB-66), paras. 19-22, Chart 6).

²⁰⁵⁷ Cuba's first written submission, para. 251.

²⁰⁵⁸ Cuba's first written submission, para. 251 (referring to Vision One Report, (Exhibit CUB-79), para. 9(a)(ii) and Appendix I).

²⁰⁵⁹ Cuba's first written submission, para. 251 (referring to Tobacco in Australia 2012, CUB Excerpts, (Exhibit CUB-13), Chap. 1, p. 3 (Methods), p. 5 (Table 1), and p. 6 (Discussion)). This was a telephone survey undertaken with adults aged over 18 residing in the Australian state of Victoria, where just under one-quarter of the Australian population reside.

²⁰⁶⁰ Cuba's first written submission, para. 252.

started smoking by the age of 18 years)²⁰⁶¹ and the Chantler Report also concluded that "most smokers become addicted when they are children or young adults".²⁰⁶²

7.752. Accordingly, Cuba concludes that, as LHM cigars are hardly smoked by youth, and since older smokers are significantly less likely to be susceptible to plain packaging, regulating the appearance of 25% of the front surface of LHM cigar packaging is unlikely to make any incremental contribution to reducing initiation levels in Australia for LHM cigars.²⁰⁶³ Cuba notes that legislative proposals in the European Union and the United Kingdom reflect these demographic realities.²⁰⁶⁴ Cuba argues that this must have been based on data collated by the UK Office for National Statistics, which showed that in 2011 whilst 18% of people aged 16 to 19 smoked cigarettes, only 0.2% of this age group smoked cigars, and that in June 2014 "almost all cigar smokers [we]re ... **over 25 years of age**".²⁰⁶⁵

7.753. In response, Australia points out that Cuba's own evidence indicates that 30% of smokers of large handmade (LHM) cigars started to smoke before the age of 24²⁰⁶⁶, and that nearly half of all LHM cigar smokers surveyed for the Vision One Report commissioned by Cuba had started smoking these products in their 20s.²⁰⁶⁷ Australia adds that when coupled with initiation rates of other cigar products such as small cigars and cigarillos, cigars are no longer the domain of "traditional male smokers". Rather, cigar products are increasingly associated with an upscale status, luxury, affluence, sophistication and style, and the image of cigar smokers has adapted in recent years to reflect the changing consumer market.²⁰⁶⁸ This includes innovations such as the release of exclusive cigar tubes, brightly coloured "foil fresh" packaging and presentation in brightly coloured boxes.²⁰⁶⁹ Australia adds that consumers often keep these specialised cigar boxes, displaying them long after purchase²⁰⁷⁰, and that the tobacco industry is well aware of the importance of product packaging for cigar products.²⁰⁷¹

7.754. The evidence before us thus suggests that certain age and demographical differences exist, which might reduce the relevance of youth initiation for cigars, in particular LHM cigars

²⁰⁶¹ Cuba's first written submission, para. 252 (referring to US Surgeon General's Report 2012, CUB excerpts, (Exhibit CUB-26), pp. 3 and 8).

²⁰⁶² Cuba's first written submission, para. 252 (referring to Chantler Report, (Exhibits AUS-81, CUB-61), para. 6.11).

²⁰⁶³ Cuba's first written submission, para. 254.

²⁰⁶⁴ Cuba's first written submission, para. 255. The European Commission's proposal for a Revised Tobacco Products Directive currently permits European Union Member States to exempt various non-cigarette tobacco products, including cigars of all types, from requirements imposing increased graphic health warnings and restricting the use of certain flavourings as these products "are mainly consumed by older consumers, while the focus of this proposal is to regulate tobacco products in such a way as they do not encourage young people to start using tobacco". Cuba's first written submission, para. 255 (referring to European Commission, "Questions & Answers: New Rules for Tobacco Products", Memo/14/134 (26 February 2014), (Exhibit CUB-38)). Likewise, the public consultation document concerning the UK proposal to introduce regulations requiring standardized packaging of tobacco products explains that the proposed regulations are not intended to cover cigars, which are classed as a "specialist tobacco product" "given their low rates of use, particularly by young people". Cuba's first written submission, para. 255 (referring to UK Department of Health, "Consultation on the Introduction of Regulations for Standardised Packaging of Tobacco Products", June 2014 (Exhibit CUB-67), para. 5.12).

²⁰⁶⁵ Cuba's first written submission, para. 255 (referring to UK Department of Health, "Consultation on the Introduction of Regulations for Standardised Packaging of Tobacco Products", June 2014, (Exhibit CUB-67), para. 5.10, in turn referring to the Office for National Statistics website (2013), *Opinions and Lifestyle Survey, Smoking Habits Amongst Adults*, 2012).

relative to youth initiation of cigarette smoking.²⁰⁷² However, as Australia points out, the data submitted by Cuba does not suggest LHM cigar use by youth and adolescents would be non-existent or that youth initiation would be totally irrelevant in the context of cigars, including LHM cigars. This is underscored by evidence before us on the importance accorded to cigar packaging by certain consumers, as well as the corresponding cigar marketing policies of tobacco companies referenced by Australia. In particular, Australia has submitted evidence indicating that cigar marketing also features the use of imagery. In one published study relied on by Australia, the authors argue that increases in cigar smoking observed in the late 1990s are attributable to the "positive and improving image of cigar smoking" which has resulted from cigar publications like *Cigar Aficionado* and increased visibility and use by celebrities, and that cigar use is portrayed as "young, independent, vibrant, rebellious, and frequently female".²⁰⁷³ This assertion is supported by another published study presented by Australia, which describes the promotion of cigars by American rapper Snoop Dogg and likens this to other cigarette advertising campaigns which targeted "young African-American men, and exploited the popular hip-hop musical genre to sell cigarettes".²⁰⁷⁴

7.755. These elements suggest that imagery relating to the branding of cigars is capable of being used to appeal to adolescent behaviour in a similar manner as has been observed in the context of cigarettes. We are therefore not persuaded that cigar packaging could not play a role in influencing the decision to initiate the use of cigars, in particular among adolescents and young adults, by virtue of the positive perceptions and associated product appeal created by such packaging. More generally, given the acknowledged importance of branding in respect of cigars,²⁰⁷⁵ we see no basis to assume that packaging of cigars would not have the ability to contribute to the appeal of the products, in a similar manner to that observed in respect of cigarettes, such that a reduced opportunity to use brand imagery as a result of plain packaging of cigars would also have the ability to reduce their attractiveness.

7.756. Notwithstanding these conclusions, we acknowledge the observation, made in particular by Professor Ajzen, that the "carry-through" effect from perceptions of the product, in this case tobacco products, to attitudes towards it and ultimately, purchase decisions, is not automatic. Specifically, in relation to tobacco plain packaging, we see no basis to assume that an impact on proximal outcomes, including a reduction in the appeal of tobacco products, would *in all cases* lead to a change in smoking behaviours. Indeed, we do not understand this to be the assumption underlying the design and structure of the TPP measures. Rather, as discussed above, we understand the assumption underlying the operation of the TPP measures to be that at least some consumers will be influenced in their smoking behaviours, and be discouraged from taking up smoking, if the appeal of tobacco products is reduced through tobacco plain packaging, in combination with other tobacco control measures in place in Australia. The fact that this measure is, by design, one element of a broader range of tobacco control measures designed to act on various aspects of the complex and multifaceted decision-making involved in the decision to initiate smoking – including restrictions on the advertisement and promotion of tobacco products²⁰⁷⁶ and social marketing campaigns²⁰⁷⁷ – is consistent with this understanding.

Smoking cessation and relapse

7.757. The complainants also argue that the TPP measures are not capable of having an influence on the other smoking behaviours targeted by the measures, namely smoking cessation and relapse. Honduras argues that the TPP measures "are fundamentally ill-suited to have any effect on the behaviour of existing or former smokers".²⁰⁷⁸ The Dominican Republic argues that "there is no credible evidence supporting Australia's position that the plain packaging measures could

²⁰⁷² We note that the US Surgeon General referenced US cigar initiation data showing an overall decrease among adolescents, but an increase among Hispanic young adults between 2006 and 2010. See US Surgeon General's Report 2012, (Exhibit AUS-76), p. 149.

contribute to smoking cessation".²⁰⁷⁹ Cuba submits that "tobacco packaging is not a material factor in encouraging cessation or preventing relapse".²⁰⁸⁰ Indonesia asserts that "it is highly unlikely that [the TPP measures] will have a significant effect on the number of people who stop smoking"²⁰⁸¹ and that the "potential for [plain packaging] to ever generate a significant effect on smoking prevalence is purely speculative".²⁰⁸² Australia responds that, in the context of cessation and relapse, tobacco packaging "plays an important role" in "presenting a visual cue and reminder to those smokers who have, or are attempting to, quit smoking".²⁰⁸³

7.758. We therefore consider next the evidence before us on the drivers of smoking cessation and relapse and whether, as the complainants argue, these could not be affected by plain packaging of tobacco products.

7.759. Honduras and Cuba rely on an expert report by Dr Satel, who submits that people who smoke (like users of drugs in general) have a bias towards satisfying short-term gains over protecting one's long-term interests (which she refers to as "discounting")²⁰⁸⁴, and that plain packaging would not affect the discounting phenomenon.²⁰⁸⁵ She states that "[i]n the absence of discrete concerns about negative consequences, motivation to quit and confidence in one's capacity to quit, there is no evidence to suggest that plain packaging will genuinely contribute to tipping the scales in favor of quitting".²⁰⁸⁶ Dr Satel discusses "conditioned cues" for smoking²⁰⁸⁷, which refer to "stimulus – such as the substance itself (the cigarette, its smell) or its container (the pack) – that provokes desire to smoke because the link between stimulus and the positive effects of smoking has been tightly established through prior experience".²⁰⁸⁸ In Dr Satel's view, "[t]his form of learning represents classic Pavlovian conditioning" such that the pack, ashtray, or lighter itself can produce an urge to smoke. Dr Stael adds that "[u]nder a regime of plain packaging, a plain brown package – as opposed to a branded package – will simply become the normal visual cue to a smoker".²⁰⁸⁹ Dr Satel thus contends that even if it is correct that smokers and former smokers may respond to the sight of a cigarette pack or display with an urge to purchase, "it is unlikely that plain packaging will alleviate that urge", as "conditioned cue-substitution would presumably occur, and the plain pack would simply take on the significance of the formerly branded pack".²⁰⁹⁰ Concerning relapse, Dr Satel posits that such behaviour is driven by "[e]pisodic events" such as divorce, the initiation of smoking by a partner, and conflicts with others as risk factors, and that economic strain, insecure employment, socializing with people who smoke, and limited opportunities for respite and recreation, make quitters vulnerable to relapse.²⁰⁹¹ She adds that predictors of relapse also include weight concerns and lack of a feeling of self-efficacy. Thus, according to Dr Satel, when ex-smokers relapse, "they may desire the missed pleasures and benefits of smoking".²⁰⁹² Dr Satel states that there is no compelling evidence that pack design plays an important role in stimulating resumption of smoking²⁰⁹³, and that the appearance of the pack itself "plays no role in the web of factors that motivate patients to remain smoke-free and to undertake cessation".²⁰⁹⁴ To the extent that a pack of cigarettes serves as a cue to pick up a cigarette, the plain pack would serve as a reminder as well, as it would acquire the status of a conditioned cue.²⁰⁹⁵

7.760. In an expert report submitted by Honduras and the Dominican Republic, Professor Fischer argues that tobacco addiction results in repeated, elevated dopamine release that occurs in the

presence of related cues (or "environmental stimuli that have previously been associated with smoking").²⁰⁹⁶ In Professor Fischer's view, this association, via Pavlovian or classical conditioning, grows "to the point where exposure to environmental stimuli that are associated with the behavior can induce a strong desire to take the drug (*i.e.*, craving)".²⁰⁹⁷ She notes that this can be affected by, *inter alia*, cue-induced craving.²⁰⁹⁸ In respect of packaging as a smoking cue, Professor Fischer makes three contentions. First, she asserts that the link between cues, craving and smoking behaviour is "much weaker than one might expect"²⁰⁹⁹, as "just because cues may induce craving, it does not necessarily follow that craving prompts actual smoking behaviour".²¹⁰⁰ Second, Professor Fischer alleges that there is a wide degree of variation in the extent to which different cues demonstrate a capacity to induce craving, and that there is clear evidence for a hierarchy among cues in this regard²¹⁰¹, and that "there is evidence that the cigarette pack was the weakest of a series of established proximal cues".²¹⁰² Third, she maintains that under tobacco plain packaging, "smokers will simply see one form of smoking cue replaced by another".²¹⁰³ She elaborates that plain packs will very quickly acquire the cue status of the old package through the same process of classical conditioning, with the effect that "while certain features of the appearance of the cue may have changed, its essential ability to act as a cue – arising through its association with cigarettes and smoking behavior – will remain the same".²¹⁰⁴ Professor Fischer submits that if "essentially generic" cigarettes can exhibit salience, then "there is no reason plain packs cannot also be strongly salient absent brand imagery"²¹⁰⁵, and that plain packs would not function differently from other generic cues with a strong contingency (such as cigarettes, ashtrays, matches and environmental tobacco smoke). In her view, because "all packs look the same", plain packs could have stronger contingency than branded packs because a plain pack would be the only one associated with smoking among all smokers at all times.²¹⁰⁶ Professor Fischer also discusses relapse, and identifies the factors commonly associated with relapse as including negative affect (mood), higher nicotine dependence, and withdrawal symptoms.²¹⁰⁷ Professor Fischer points out that clinical samples report that relapse can be predicted by the presence of withdrawal symptoms and higher levels of nicotine dependence; negative affect (mood); younger age at time of quit attempt; a history of comorbid psychiatric disorders, including past or current anxiety disorders, depression, and schizophrenia; and absence of tobacco-related disease.²¹⁰⁸ She also notes that at the population level, relapse has been associated with the presence of withdrawal symptoms and recently failed quit attempts; negative affect; a higher level of baseline nicotine dependence; gender; lower socioeconomic status; lower subjective social status; and high stress situations following a period of low stress.²¹⁰⁹ She further states that the inability of current research to consistently identify treatable factors associated with smoking relapse "highlights the complex, individual nature of the smoking-cessation process".²¹¹⁰

7.761. Australia submits an expert report by Dr Brandon, who asserts that, in respect of "conditioned cue reactivity", stimuli vary in their ability to become effective conditioned stimuli on the basis of whether they are presented close to the unconditioned stimulus in both space and time ("spatiotemporal proximity"), will be apparent and garner the attention of the subject ("salience"), and will be reliably paired, with relatively few unpaired occurrences of the conditioned stimulus or unconditioned stimulus without the other ("strong contingency").²¹¹¹ In applying these criteria, Professor Brandon states that cigarette packs are nearly always present immediately

²¹¹¹ Brandon Report, (Exhibit AUS-15), para. 42. Professor Brandon also argues that, in the tobacco context, nicotine deprivation and the opportunity to smoke are conditions which have been shown to improve conditioned responding to smoking-related cues. Brandon Report, (Exhibit AUS-15), para. 44. See also Australia's first written submission, paras. 97-100.

before an individual smokes (proximity); branding is designed to attract the attention of, and be memorable to, the consumer (salience); and there is near-perfect pairing between handling a pack and smoking (contingency).²¹¹² Dr Brandon notes that it "is a reasonable argument" to say that plain packages could acquire conditioned cue status, but adds that there "are reasons to believe that plain packaging would be a less effective conditioned cue than fully branded packaging".²¹¹³ Specifically, "[w]hereas proximity would not change with plain packaging, [salience and contingency] might".²¹¹⁴ Dr Brandon elaborates that "[d]rab dark brown packaging with small, standardised text is designed to be less salient than fully branded tobacco packaging" and, additionally, "the tight contingency between viewing one's own brand and smoking is likely to be reduced".²¹¹⁵ In respect of relapse, Dr Brandon notes that relapse has been "reliably paired" with the presence of other smokers, the use of alcohol, stress and negative mood states, "among other[situations]", and that such observations strengthen the evidence for cue-reactivity in smoking motivation.²¹¹⁶ On the basis of this connection with cue-reactivity, Dr Brandon's discussion of relapse behaviour is made largely in the context of cessation, as summarized above.

7.762. In respect of this evidence, we note, first, that cessation and relapse, though identified as separate behaviours in Section 3(2) of the TPP Act that are expected to be impacted through the operation of the specific mechanisms in Section 3(1), are discussed together by all parties and the experts upon whose reports they rely.

7.763. Second, we note that there are some differences in the depictions of drivers of smoking cessation by Drs Satel and Brandon, and by Professor Fischer. However, we also note that they agree in respect of the brain chemistry underlying classical, or Pavlovian, conditioning, and accept that this is applicable in the context of addiction to tobacco products.²¹¹⁷ They also agree that a cue in this context can be sufficient to instigate a reaction within the brain of the addicted smoker – neither the complainants, nor Australia, nor their respective experts, contest that cue reactivity is one of many factors that may influence a smoker's ability to quit, or a recent quitter's ability to remain so.²¹¹⁸ though they do contest the strength of that relationship.²¹¹⁹ Finally, the parties, through their experts, also appear to agree that tobacco packaging can constitute a cue for the use of tobacco products, to the extent that it satisfies many of the elements common to cues.²¹²⁰

7.764. The difference of view between the parties' experts concerns whether the adoption of plain tobacco packages in Australia will have any bearing on the elements that render tobacco packaging a cue, and will thus undermine the ability of the package to "present[] a visual cue and reminder to those smokers who have, or are attempting to, quit smoking".²¹²¹ In this connection, as described above, Dr Brandon sets out that "among the key characteristics of a strong conditioned stimuli" are spatiotemporal proximity, salience, and strong contingency.²¹²² The key divergence between the parties' experts in this respect relates to salience and contingency –

²¹¹² Brandon Report, (Exhibit AUS-15), para. 59. Professor Brandon also notes that the smoker usually chooses to light a cigarette after the onset of early nicotine withdrawal symptoms, which begin within 30 minutes of the last cigarette, and that stronger conditioned responses are found when the smoker knows that there is an opportunity to smoke. He argues that these factors "that magnify conditioned responding in smokers are also consistent with cigarette packs" as smokers "usually smoke after a period of nicotine deprivation, during the early stages of nicotine withdrawal", and "will likely see their pack during such a state". He also submits that "the cigarette pack—unless it's known to be empty—also signals the availability of smoking". Brandon Report, (Exhibit AUS-15), paras. 45 and 59.

²¹²² Brandon Report, (Exhibit AUS-15), para. 42.

specifically, whether plain packs are likely to be less salient and less contingent, and thus less effective as a cue than branded packages.²¹²³

7.765. Concerning salience, Dr Brandon submits that "[d]rab dark brown packaging with small, standardised text is designed to be less salient than fully branded tobacco packaging".²¹²⁴ He adds that:

Indeed, the entire purpose of full branding, and the reason that the tobacco industry (and any other consumer product industry) uses brands and logos is to attract the attention of the consumer and to associate the product with the brand. Thus, an effective brand is, by definition, salient. It is doubtful that the tobacco industry would object to plain packaging if they truly believed that consumers did not attend to their full brand and logo and associate them with immediate nicotine reinforcement effects.²¹²⁵

7.766. This notion is echoed in an expert report by Professor Tavassoli, submitted by Australia, in which he argues that the TPP measures can decrease the salience of tobacco packaging (that is, decrease the attention given to tobacco packaging). He submits that attention is used to select information that is necessary and/or influential in subsequent judgements, such that marketers strive to control consumer attention in shopping environments, using vivid packaging and other attention-drawing techniques to encourage consideration of product offerings. He notes that "[c]olours, in particular, are important to marketers because they are an attention-grabbing device". He adds that, in Australia's dark market for tobacco products (and before the TPP measures were introduced), salience could not be effective at the point of sale, but post-purchase usage could be triggered by product packaging's salience.²¹²⁶

7.767. Professor Fischer, for her part, submits that the comparison between the relative salience of branded and plain tobacco packages overlooks the fact that Australian plain packs are "dominated by a large health warning", such that there is a limited possibility for the salience to differ due to the residual difference in brand imagery.²¹²⁷ Professor Steenkamp similarly argues that the absence of GHWs in the examples used by Professor Tavassoli (*inter alia*) overlooks the negative message conveyed on Australian packages by the GHW.²¹²⁸

7.768. In relation to these arguments, we note that the complainants' experts have not contested Australia's depiction of the notion of salience, which refers to the level of attention given (in this context) to tobacco packaging. Moreover, at least some of the complainants' experts have acknowledged the capacity of features of tobacco packaging such as colours or graphics, as specifically discussed by Professor Tavassoli to have a degree of salience²¹²⁹; they instead contest the effect that such branding elements may have given the concurrent presence and salience of GHWs (which they argue, on balance, convey a "dominant message" which is "highly negative"²¹³⁰) and the role of other factors known to affect cessation and relapse generally.²¹³¹ In this respect, we note that Professor Fischer's argument is that, in light of these GHWs, there is a "**limited possibility**" for the salience to differ due to the residual difference in brand imagery²¹³², and that Professor Steenkamp focuses on the **relative effect** of the positive and negative messages conveyed by the branded and GHW-dominated portions (respectively) of tobacco packaging in light of the differences in size of those portions of the pack face, rather than on the **existence** of both positive and negative messages.²¹³³

²¹²³ See Fischer Report, (Exhibit DOM/HND-7), para. 66; and Brandon Rebuttal Report, (Exhibit AUS-534), para. 24.

7.769. This evidence suggests to us that the use of visual features such as colours or logos is understood to have in principle the capacity to have an impact on the salience of a pack and that a pack's salience is an element of its strength as a conditioned cue. The question at issue is, rather, to what extent the salience of the pack, and therefore its ability to act as a cue, could be at least **reduced** by the removal of such features on those parts of tobacco packaging that are not covered by GHW requirements. In this respect, while we agree that the size of GHWs reduces the part of the pack on which brand features may be used to achieve salience, relative to a pack that does not have such large GHWs, we are not persuaded that the complainants have demonstrated that this context would be such as to entirely prevent branded features from contributing to the salience of the pack, and its ability to act as a cue.

7.770. We also note Dr Brandon's assertion that plain tobacco packages would have lower "contingency" and would also, by extension, be a weaker cue than branded tobacco packages. Dr Brandon describes contingency in this context as relating to the extent to which the conditioned stimulus (the pack) and the unconditioned stimulus (the cigarette) are "reliably paired", in that there are relatively few unpaired occurrences of the conditioned or unconditioned stimulus without the other.²¹³⁴ Dr Brandon describes how the cigarette itself is reliably paired with smoking, and notes that there is also near-perfect pairing between handling a pack and smoking.²¹³⁵ Elsewhere in his report, Dr Brandon identifies that the contingency is between "viewing one's own brand and smoking".²¹³⁶ In response, Professor Fischer submits, on the basis of a 1995 paper by Dr Brandon, that he:

[A]ccepts a strong contingency ("high correlation with nicotine delivery") between smoking and generic proximal cues, such as cigarettes, ashtrays, matches, and environmental tobacco smoke. Consider cigarettes and plain packs. A smoker will see cigarettes in at least as many situations as s/he sees plain packs. Although cigarettes are seen everywhere, Prof. Brandon accepts in his report and in his 1995 paper that they are a strong – if not the strongest – conditioned cue.²¹³⁷

7.771. Dr Brandon does not address this contention in his second report. However, he submits, in a different context, that the notion that unbranded or minimally-branded cigarettes can be powerful cues to smoke does not indicate that branding is inconsequential, but instead indicates that cigarettes maximize the contingency factor associated with classical conditioning.

7.772. Overall, this evidence suggests that the presence of branding elements on tobacco packaging may increase the contingency of the package and smoking (i.e. the extent to which they are paired), such that the removal of such branding elements would be apt, in turn, to reduce such contingency and thus reduce the ability of the pack to act as a conditioned cue. At the same time, however, we note that Australia's own expert, Dr Brandon, acknowledges that it is a "reasonable argument" that plain packages would themselves acquire conditioned cue status, and that other generic items are also capable of acting as conditioned cues. This suggests that it is recognized that in a market where only plain packs are available, and where these are the only packs universally associated with smoking among all smokers at all times, the removal of the ability of branding elements to act as cues on the pack would not prevent the pack itself from continuing to act at least to some extent as a conditioned cue, to the extent that it is recognized to be closely paired/associated with the act of smoking.

7.773. We also note the evidence before us that underscores the addictive nature of other tobacco products, such as cigars.²¹³⁸ We note in this respect that Parr et al. 2011b addresses perceptions of "ease of quitting" in relation to cigars and cigarillos. It finds that plain packed cigarillos were perceived as "easiest to quit"²¹³⁹ and that this is "driven by low desirability of the [plain packaged]

²¹³⁴ Brandon Report, (Exhibit AUS-15), para. 42.

²¹³⁶ Brandon Report, (Exhibit AUS-15), para. 76.

²¹³⁷ Fischer Rebuttal Report, (Exhibit DOM/HND-11), para. 27.

²¹³⁸ See Cigars: Facts and Figures, (Exhibit AUS-34) ("Cigars contain the same addictive, toxic and carcinogenic compounds found in cigarettes and are not a safe alternative. In fact, a single large cigar can contain as much tobacco as an entire pack of cigarettes.").

²¹³⁹ According to Parr et al. 2011b, "[o]n the measure of ease of quitting, there was no obvious consistency in how the different packs were ranked on perceived ease of quitting and the [plain] pack was seen

pack".²¹⁴⁰ As regards premium cigars, Parr et al. 2011b concludes that "[f]or both types of cigar smoker there was little perceived need to 'quit' smoking"²¹⁴¹ but finds that there were differences in this respect "across the product and audience range":

For example, whereas less frequent premium cigar smokers felt the plain packaging significantly lowers the appeal and suitability for specific occasions (such as gift giving) and were thus more likely to quit, frequent premium cigar smokers felt largely unaffected by plain packaging and therefore unlikely to quit because of it."²¹⁴²

7.774. On the basis of the foregoing, overall, we are not persuaded that the complainants have demonstrated that plain packaging of tobacco products, including cigars, is not capable of influencing smoking cessation or relapse by acting on the ability of the pack to act as a conditioned cue for smoking and thus affect the ability of smokers to quit smoking, or to remain quit.

7.775. At the same time, as in the context of initiation, we acknowledge the observation that the "carry-through" effect from perceptions of the product, in this case tobacco products, to attitudes towards it and ultimately, purchase decisions, is not automatic. In the context of cessation and relapse, both Professors Ajzen (for the complainants) and Slovic (for Australia) highlight the difficulties of quitting smoking²¹⁴³; Professor Ajzen characterizes this difficulty as a "behavioural control" factor, which in his view is the best predictor of intentions to quit within the construct of the TPB.²¹⁴⁴ From this Professor Ajzen concludes that, "[g]iven the relatively low empirical intention-behavior correlation, one would expect that even if research were to show that plain packaging lowers intentions to smoke or raises intentions to quit, these changes may not produce changes in actual behavior".²¹⁴⁵

7.776. As we noted in the context of initiation, we do not understand the assumption underlying the design and structure of the TPP measures to be that an impact on proximal outcomes, including a reduction in the ability of a pack to act as a conditioned cue following the introduction of tobacco plain packaging, would be expected *in all cases* to lead to a change in smoking behaviours. Rather, as discussed above, we understand the assumption underlying the operation of the TPP measures to be that at least some consumers would be influenced in their smoking behaviours, and be more inclined to quit (or disinclined to relapse, as the case may be) if the ability of the tobacco package to act as a conditioned cue is reduced through tobacco plain packaging. The fact that this measure is, by design, one element in a set of tobacco control measures designed to act on various aspects of the complex and multifaceted decision-making involved in the decision to smoke, including restrictions on the advertisement and promotion of tobacco products²¹⁴⁶ and restrictions on the sale of tobacco products (including point of sale restrictions)²¹⁴⁷ – is consistent with this understanding.

Conclusion

7.777. In light of the above, we are not persuaded that the complainants have shown that the TPP measures would not be capable of reducing the appeal of tobacco products, and thereby contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

to contain cigarillos that were easiest to quit. This result appeared to be influenced by varied interpretation of the question, as seen for RYO smokers." Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

²¹⁴⁰ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 11.

²¹⁴¹ "They did not see themselves as 'addicted' to their habit in the same way they perceived cigarette smokers to be 'addicted'. As there was no perceived 'addiction' there was also no need to quit. Both types of cigar smoker also had low perceptions of any health risks connected with their cigar smoking, which further contributed to the lack of perceived need to quit. As most did not smoke daily but rather weekly or once every two weeks they also did not feel their frequency of smoking warranted concern about health implications or a need to quit." Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 10.

7.778. Rather, we find that credible evidence has been presented, emanating from recognized sources, that plain packaging of tobacco products may reduce their appeal, by minimizing the ability of various branding features to create positive associations with tobacco products that could have an influence on smoking behaviours, including smoking initiation, cessation and relapse.

7.779. In addition, we recall that we also have before us evidence relating to the actual application of the TPP measures since their entry into force, including empirical studies specifically addressing the impact of plain packaging on the appeal of tobacco products, which will be considered in section 7.2.5.3.6 below, and given appropriate weight. We therefore do not seek to draw, at this stage of our analysis, any overall conclusion on the impact of the TPP measures on the appeal of tobacco products, and the extent to which any reduction in such appeal arising from the TPP measures contributes to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.2.5.3.5.3 Second mechanism: impact of the TPP measures on the effectiveness of GHWs

7.780. As described above, the second "mechanism" through which the TPP measures are designed to contribute to the achievement of their objective is by "increas[ing] the effectiveness of health warnings on the retail packaging of tobacco products", which, in turn, is expected to influence smoking behaviours and thereby contribute to a reduction in the use of, and exposure to, tobacco products.

7.781. The complainants contest the ability of the TPP measures to have an effect on this "mechanism". Australia responds that the TPP measures increase the visual attention paid to health warnings, make them more prominent and salient²¹⁴⁸, and increase perceptions about the believability and seriousness and enhances recall of health warnings.²¹⁴⁹ Australia further submits that increases in the effectiveness of health warnings affect consumer intention and behaviour.²¹⁵⁰

Main arguments of the parties

7.782. Honduras argues that there is no basis for Australia to consider that plain packaging "will enhance the visibility of the on-pack graphic health warning"²¹⁵¹ which "are very visible". It adds that "empirical evidence demonstrates that Australian adolescents are well-aware of the health risks associated with smoking, and, in any event, their decision to smoke is driven by other factors, such as peer pressure, whether they are sensation-seeking, and are responsive to reward stimuli".²¹⁵² Honduras argues that most adolescents, when experimenting with smoking, are likely not even to see a tobacco package, as they obtain cigarettes from their friends usually when the cigarette has already been removed from its package.²¹⁵³ Honduras refers to an expert report by Professor Viscusi, in which he argues that increasing the effectiveness of warnings is only of behavioural consequence if consumers have an informational deficit and do not find existing warning to be credible.²¹⁵⁴ Honduras refers to Professor Viscusi's observation that Australians are aware of the risks and personalize them, and that it is highly unlikely that increasing warning size or prominence will have any influence on smoking behaviours or consumer perceptions of health consequences.²¹⁵⁵

7.783. Honduras refers to the expert report by Professor Steinberg, which questions policies seeking to increase adolescent awareness of the health risks of smoking, with reference to recent research demonstrating that Australian adolescents are well aware of and understand the risks of smoking and that "it is difficult to imagine how the introduction of plain packaging could – even conceptually – increase this awareness".²¹⁵⁶ Honduras also submits that "these policies fail to

consider the fact that an adolescent's decisions to engage in a potentially dangerous activity is based not only on the *perceived risks* of the activity but on its *perceived benefits*, and is largely influenced by his particular psychological characteristics as well as his emotional and social context".²¹⁵⁷

7.784. The Dominican Republic argues that the TPP literature "fail[s] to assess the effect of plain packaging on packs dominated by a 75 percent graphical health warning".²¹⁵⁸ The Dominican Republic submits that with a large GHW, there is a small amount of space available for branding, which is likely to have a small impact, if any, on the outcomes measured in the TPP studies. The Dominican Republic submits that "more fundamentally, the dominant negative imagery resulting from a large GHW will also have an impact on these outcomes".²¹⁵⁹

7.785. The Dominican Republic further submits that adolescents will continue to engage in smoking behaviour, even where it is "abundantly clear that adolescents are aware of and understand the risks of smoking and know that it has harmful long-term health consequences".²¹⁶⁰ Thus, the Dominican Republic submits, with reference to the expert report of Professor Steinberg, that "even if plain packaging were shown to increase the prominence of health warnings (which recent research in fact suggests is not the case), this would ... have no influence on adolescent experimentation with, or use of, tobacco products".²¹⁶¹

7.786. Cuba argues that "[o]ne glance at any current Australian [GHW] should suffice to refute [Australia's] claim" concerning the effectiveness of GHWs.²¹⁶² Noting that the GHW covers 75% of the front face of the pack (in the case of cigarette packaging) and "is designed to make an impact and hold consumer attention", Cuba argues that the "prominence and powerful design" of these GHWs makes it "implausible to suggest that consumers of tobacco products in Australia will fail to notice them or that any Australian consumers who do somehow fail to notice these warnings will have their capricious attention appropriately re-directed because of plain packaging".²¹⁶³ Cuba refers to a 2013 study which "acknowledged that the findings in the literature relating to the [GHW] Effectiveness Claim are 'mixed'"²¹⁶⁴ and to an expert report by Professor Viscusi, which concludes that "[t]he findings from the studies discussed ... provide no basis for concluding that plain packs make warnings more effective". Cuba also refers to a report finding that once the GHW reaches 75% pack coverage, it "stands out" to the same extent on plain and branded packaging.²¹⁶⁵ Cuba also refers to Professor Viscusi's discussion of a 2011 study which "concluded that '[t]aken together with the existing literature, it is plausible that plain packaging will increase the salience and impact of health warnings in those yet to establish a smoking habit'".²¹⁶⁶ Cuba points out that the authors "accept that 'it is unclear whether increased visual attention to health warnings will translate to actual differences in cigarette smoking behaviour'".²¹⁶⁷

7.787. Cuba submits that, in any case, increased attention to health warnings does not necessarily imply that there will be significant changes in smoking rates in Australia.²¹⁶⁸ For Cuba, "[t]here is no basis to conclude that the attention accorded to the health warning on a branded pack is inadequate for the necessary information about risk to be conveyed", and "[n]othing in the literature suggests otherwise".²¹⁶⁹ Cuba argues, with reference to Professor Viscusi's conclusions, that acting by increasing risk awareness can have little, if any, incremental effect on smoking

behaviour in Australia, given that the overwhelming majority of the population is already aware of the relevant risks.²¹⁷⁰

7.788. Cuba refers to the report by Australia's expert, Professor Tavassoli and considers that its conclusion that packaging can increase primary demand by inhibiting the effectiveness of GHWs is untenable. Cuba elaborates that there is no evidence to show that without plain packaging, GHWs will be less effective or visible. For Cuba, the appearance of a trademark on the remaining 25% of the front part of the pack will not have "any appreciable effect on consumers' appreciation of the health risks of tobacco use".²¹⁷¹

7.789. Indonesia's arguments concerning whether the TPP measures increase the effectiveness of GHWs relate to post-implementation evidence and are addressed in section 7.2.5.3.6.1 below.²¹⁷²

7.790. Australia argues that "[s]tudies into the effectiveness of graphic health warnings indicate that effectiveness of the warnings can be greatly reduced by distraction caused by pack design". Australia contends that "[p]ackaging elements compete with health warning labels, drawing consumer attention away from the mandated health warnings, and also adversely affect consumer perceptions of risk about the severe health consequences of tobacco use".²¹⁷³

7.791. Australia does not agree with the complainants that Australians are fully informed of the health risks of smoking. Referring to the expert report by Professor Slovic, Australia argues that "knowledge of risk is 'a multilayered concept' and studies of Australians found that even though people are sometimes 'aware' that smoking can lead to adverse health consequences, they do not have even a basic understanding of the nature and severity of these consequences".²¹⁷⁴ This is "further compounded by what Professor Slovic terms 'optimism bias', whereby those who exhibit an awareness of health risks caused by smoking often think that it applies to other people more than themselves".²¹⁷⁵ In Australia's view, "informed, rational decision making requires deeper levels of knowledge about the risks of tobacco use than many Australians currently have".²¹⁷⁶

7.792. Australia adds that it has improved the Australian population's knowledge of the risks of smoking through the introduction of GHWs, but that this measure alone is not enough to ensure that Australians are fully informed of the risks of tobacco use. In Australia's view, branding and package design of tobacco products "can exert powerful influences on behaviour which may not be consciously recognised, but which can influence understandings and perceptions of risks of smoking".²¹⁷⁷ Australia contends that misperception of risk is compounded in relation to non-cigarette tobacco products, as cigars are perceived as a "safe alternative" because they are considered more natural and less harmful than cigarettes, despite delivering nicotine in concentrations comparable to cigarettes and smokeless tobacco.²¹⁷⁸ Australia argues that the TPP measures were "designed to standardize pack elements which suppress risk perception and to ensure that the warnings on packs were both noticeable and presented in such a way as to have an influence on consumer perceptions and smoking behaviour. Australia points out that "adolescent experimentation with smoking usually happens without conscious consideration of the risks", and adds that "even for addicted smokers, branding and packaging designs can draw attention away from, or positively undermine, health warnings on packs".²¹⁷⁹

²¹⁷⁹ Australia's first written submission, para. 174 (referring to Camel Advertising Development White Paper, (Exhibit AUS-197)).

7.793. Australia also adds that it adopted "[o]ptimal combinations" of the size of GHWs with TPP following testing and recommendations from commissioned research and that as a result, the TPP measures increase the effectiveness of health warnings by increasing the visual attention paid to them, making them more prominent and salient, removing the distraction caused by branding, increasing perceptions about the believability and seriousness of health warnings; and increasing consumer recall of health warnings to foster a deeper understanding of the health effects of tobacco use.²¹⁸⁰

7.794. Australia submits that the overall weight of the evidence "strongly indicates that tobacco plain packaging leads to a greater noticeability of health warnings, particularly when operating together with the increased size of the graphic health warnings".²¹⁸¹ This is largely because the visual interference and competition of brand images are greatly reduced.²¹⁸² For Australia, "[b]y reducing the positive imagery of tobacco product branding and innovative packaging, there is strong evidence to suggest that both users and non-users of tobacco products will be much more likely to think about the information conveyed by health warnings, thereby deepening consumer understanding about the severe consequences of tobacco addiction and use".²¹⁸³

7.795. Australia further submits that, by removing competition and interference between health warnings and positive images conveyed on and by tobacco packaging, tobacco plain packaging is likely to increase the believability and seriousness of the messages contained in the health warnings.²¹⁸⁴ Likewise, the TPP measures "have also been found to increase consumer recall of health warnings on plain packs, compared with recall of health warnings on non-plain packaged packs".²¹⁸⁵ Australia submits that *any* increase in recall, believability and/or seriousness of health warnings will contribute to negating the positive associations conveyed by pack design, including brand imagery.²¹⁸⁶

7.796. Australia also argues that this evidence demonstrates that increased effectiveness of health warnings influences potential consumers to resist the uptake of tobacco products and influences current consumers to quit smoking.²¹⁸⁷

Analysis by the Panel

7.797. At the outset, we note that the question before us is not whether GHWs are an effective tobacco control measure, either in principle or in the enlarged form that is required in Australia by the *Competition and Consumer (Tobacco) Information Standard 2011* (Cth)²¹⁸⁸ (Information Standard), implemented contemporaneously with the TPP measures.²¹⁸⁹

7.798. We note in this respect that GHWs are recognized as a legitimate tobacco control measure under the FCTC. Article 11(1)(b) of the FCTC provides that each Party shall adopt and implement effective measures to ensure that "each unit packet and package of tobacco products and any outside packaging and labelling of such products also carry health warnings describing the harmful effects of tobacco use, and may include other appropriate messages". This provision further states

²¹⁸⁶ Australia's first written submission, para. 181.

²¹⁸⁷ Australia's first written submission, para. 182. Australia elaborates on this argument with respect to evidence post-dating the implementation of the TPP measures concerning consumers' responses to GHWs. Australia's first written submission, paras. 183-184 (referring to Wakefield et al. 2015, (Exhibits AUS-206, DOM-306); Dunlop et al. 2014, (Exhibits AUS-207, HND-132, DOM-199); Fong Report, (Exhibit AUS-14), para. 432; and Miller et al. 2015, (Exhibits AUS-102, DOM-315)). This evidence will be considered in section 7.2.5.3.6 below.

²¹⁸⁸ Information Standard, (Exhibits AUS-128, JE-8).

²¹⁸⁹ See section 2.2.1 above.

that these warnings "may be in the form of or include pictures or pictograms".²¹⁹⁰ The Article 11 FCTC Guidelines stipulate that:

Globally, many people are not fully aware of, misunderstand or underestimate the risks for morbidity and premature mortality due to tobacco use and exposure to tobacco smoke. Well-designed health warnings and messages on tobacco product packages have been shown to be a cost-effective means to increase public awareness of the health effects of tobacco use and to be effective in reducing tobacco consumption. Effective health warnings and messages and other tobacco product packaging and labelling measures are key components of a comprehensive, integrated approach to tobacco control.²¹⁹¹

7.799. Indeed, Honduras and Indonesia note their own domestic requirements in respect of health warnings and their use on tobacco products within their respective territories.²¹⁹²

7.800. We also note that paragraph 46 of the Article 11 FCTC Guidelines states that the adoption of plain packaging measures²¹⁹³ "may increase the noticeability and effectiveness of health warnings and messages, prevent the package from detracting attention from them, and address industry package design techniques that may suggest that some products are less harmful than others".²¹⁹⁴

7.801. The point of contention is whether the TPP measures can increase the effectiveness of GHWs in Australia, as envisaged by section 3(2) of the TPP Act, and thereby have an impact on smoking behaviours and contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.802. The TPP Act, in identifying an "increase [in] the effectiveness of [GHWs] on the retail packaging of tobacco products" as one of the "mechanisms" through which the TPP measures will contribute to their objective, does not elaborate upon how "effectiveness" is to be understood in that context.

7.803. We note, in this respect, that the Article 11 FCTC Guidelines state, under the heading "Developing Effective Packaging and Labelling Requirements", that:

Well-designed health warnings and messages are part of a range of effective measures to communicate health risks and to reduce tobacco use. Evidence demonstrates that the effectiveness of health warnings and messages *increases with their prominence*. In comparison with small, text-only health warnings, *larger warnings with pictures are more likely to be noticed, better communicate health risks, provoke a greater emotional response and increase the motivation of tobacco users to quit and to decrease their tobacco consumption*. Larger picture warnings are also more likely to retain their effectiveness over time and are particularly effective in communicating health effects to low-literacy populations, children and young people. *Other elements that enhance effectiveness include locating health warnings and messages on principal display areas, and at the top of these principal display areas; the use of colour rather than just black and white; requiring that multiple health*

²¹⁹⁰ FCTC, (Exhibits AUS-44, JE-19), Article 11(1)(b) and Article 11(1)(b)(v), respectively.

²¹⁹¹ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 3. These Guidelines address health warnings *inter alia* in paras. 7-31.

²¹⁹² Honduras's first written submission, para. 115 (referring to Republica de Honduras, Ley Especial para el Control del Tabaco, Decreto 92-2010, Diario Oficial Num. 32, 296 (21 August 2010), (Exhibit HND-24)); and Indonesia's first written submission, para. 6 (referring to Australian Broadcasting Corporation News, "Indonesia Pushes for Graphic Health Warnings on Cigarette Packs", (25 June 2014), available at: <http://www.abc.net.au/news>, accessed 27 September 2015, (Exhibit IDN-1)).

²¹⁹³ We recall that such measures are elaborated as being those that "restrict or prohibit the use of logos, colours, brand images or promotional information on packaging other than brand names and product names displayed in a standard colour and font style". See Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46.

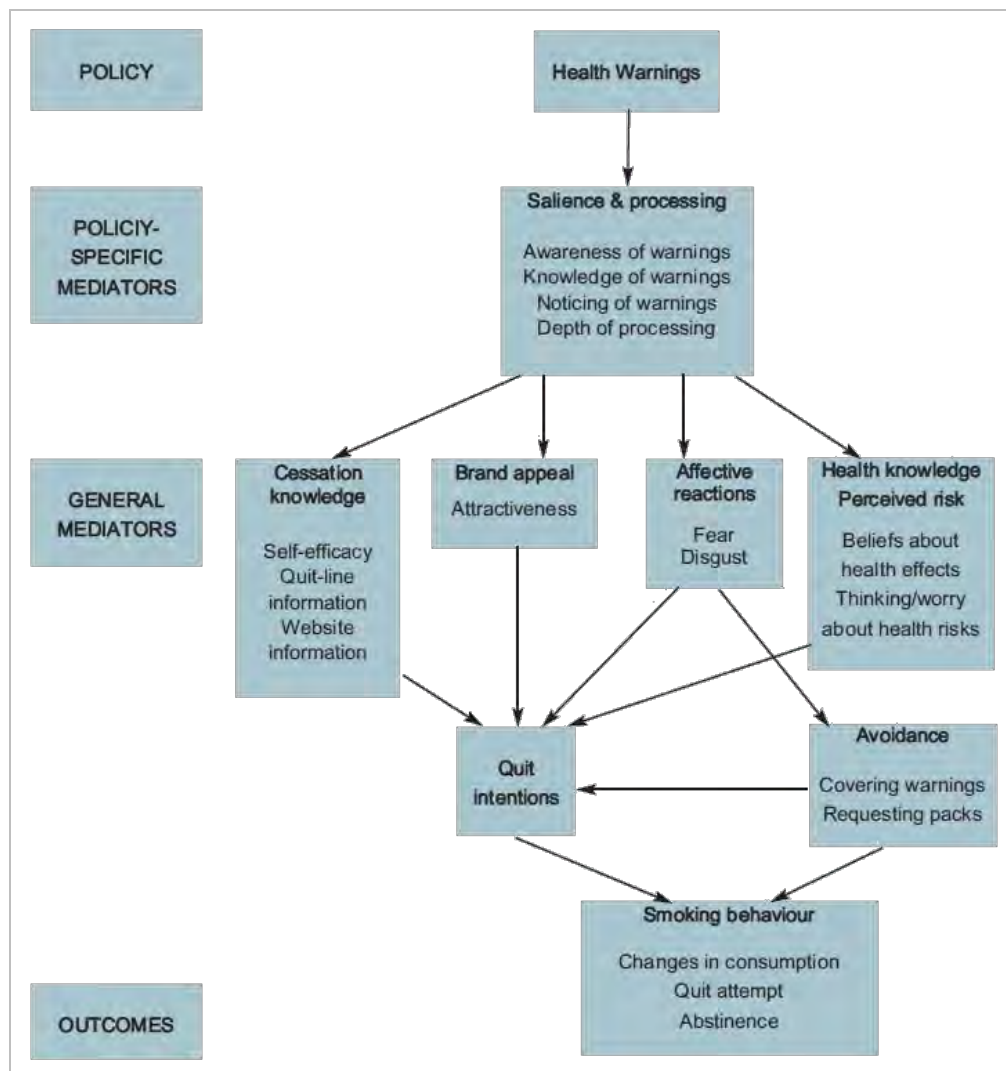

²¹⁹⁴ See Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 46.

*warnings and messages appear concurrently; and periodic revision of health warnings and messages.*²¹⁹⁵

7.804. We understand this passage to indicate that the effectiveness of GHWs may be determined with reference to their prominence, which affects their noticeability, their ability to communicate health risks and provoke an emotional response, and the motivation of smokers to quit or decrease consumption. The location, appearance and content of GHWs are also acknowledged as relevant to their effectiveness.

7.805. Australia's expert Professor Chaloupka depicts a conceptual model of the pathways through which GHWs would ultimately lead to reductions in smoking prevalence, which "emphasizes the importance of the salience and processing of health warnings, which affects their impact on perceived risk and other health knowledge, brand appeal, and emotional responses, all of which contribute to quit intentions and other changes in smoking behavior, which will eventually lead to increased quit attempts, reductions in consumption, and successful cessation".²¹⁹⁶ Professor Chaloupka depicts this as follows:

Figure 14: Professor Chaloupka's conceptual framework for the evaluation of health warning policies

Source: Chaloupka Public Health Report, (Exhibit AUS-9), p. 71.

²¹⁹⁵ Article 11 FCTC Guidelines, FCTC/COP/3(10), (Exhibit JE-20), Annex, para. 7. (emphasis added)

²¹⁹⁶ Chaloupka Public Health Report, (Exhibit AUS-9), para. 89, Figure 5.

7.806. This model identifies cessation knowledge, brand appeal, affective reactions, and health knowledge/risk perception, as relevant factors in an assessment of the effectiveness of GHWs. Such factors are expected to have a bearing on quit intentions (or, in respect of affective reactions, avoidance) and, ultimately, smoking behaviours. There appears to be a high degree of consistency between this model and the elements set out in the Article 11 FCTC Guidelines which have a bearing on the effectiveness of GHWs. In addition, we note that this conceptual framework has been endorsed by the International Agency for Research on Cancer (IARC), which was established by the WHO, in a handbook on tobacco control entitled *Methods for Evaluating Tobacco Control Policies*²¹⁹⁷ (2008 IARC Handbook).

7.807. We note that in a 2008 evaluation of the effectiveness of GHWs in Australia, commissioned by Australia's DHA, participants were asked questions that sought to ascertain the salience and processing of health warnings, their cessation knowledge, affective reactions to GHWs, and their knowledge of the health effects and their perception of the risk associated with tobacco use.²¹⁹⁸ The measurement of such elements through these questions is consistent with the elements identified as relevant in the FCTC and by Professor Chaloupka.²¹⁹⁹

7.808. We further note that the complainants have not directly addressed the relevance of these elements to an assessment of the effectiveness of GHWs. The complainants' expert Professor Viscusi argues that "[i]ncreasing the effectiveness of warnings as measured by 'recall, attention, seriousness and believability' is only of behavioral consequence if consumers currently have an informational deficit and do not find existing warnings credible" which, he argues, is not established by the studies he critiques in his report.²²⁰⁰ He argues that "whether plain packs will enhance the effectiveness of warnings on risk beliefs depends on how much people know about the risks of smoking and how much having warnings on plain packs rather than regular packs will alter these risk beliefs".²²⁰¹ Professor Viscusi's statements in this respect suggest that, while he considers that they are not always of behavioural consequence, he does not suggest that the "recall ... seriousness and believability" of, and "attention" to, GHWs, are not relevant for the purpose of understanding the effectiveness of GHWs.

7.809. Furthermore, we note that neither the complainants, nor their experts, seem to contest the notion that the effect of GHWs on health knowledge and/or risk perception is also relevant – indeed, the fact that the complainants direct much of their argumentation towards the notion that health awareness and risk perception is already high in Australia (and that this cannot be further improved by increasing the effectiveness GHWs, as we discuss in the next section) suggests that the complainants do not dispute the relevance of these elements.

7.810. As we understand it, what the complainants in essence contest is the ability of the TPP measures to have an impact on those factors that affect the effectiveness of GHWs, including their visibility and noticeability (in light in particular of the size of GHWs in Australia), their ability to increase risk awareness (which the complainants argue is already very high in Australia) and, as a consequence, the ability of the TPP measures to have an impact on smoking behaviours by increasing the effectiveness of GHWs. We consider each of these points in turn.

Impact of plain packaging on the salience and processing of GHWs

7.811. Honduras argues that there is no basis for Australia to consider that plain packaging will enhance the visibility of on-pack GHWs.²²⁰² The Dominican Republic argues in particular that the TPP literature fails to assess the effect of tobacco plain packaging on packs dominated by a 75%

²¹⁹⁷ 2008 IARC Handbook, (Exhibits AUS-602, DOM-368), p. 296. We note that this report contains "the views and opinions of an IARC Working Group on Methods for Evaluating Tobacco Control Policies", among whom were Professor Chaloupka and Professor Fong. This report also notes that "[o]ther psychosocial variables, such as social norms and beliefs about the tobacco industry, could also be added to this model". Ibid. p. 298.

²²⁰² Honduras's first written submission, para. 419.

GHW.²²⁰³ Cuba submits that the 75% GHWs are "designed to make an impact and hold consumer attention" and, "[g]iven the prominence and powerful design of these [GHWs], it is implausible to suggest that consumers of tobacco products in Australia will fail to notice them or that any Australian consumers who do somehow fail to notice these warnings will have their capricious attention appropriately re-directed because of plain packaging".²²⁰⁴

7.812. Australia responds that a number of studies support the contrary view that plain packaged tobacco products will increase the visual attention paid to health warnings, thereby making them more prominent and salient.²²⁰⁵ Australia further argues that the TPP measures increase perceptions about the believability and seriousness of health warnings, and enhance their recall.²²⁰⁶ Australia also argues that these effects are present across both adults and youth.²²⁰⁷

7.813. The evidence before us in respect of the impact of tobacco plain packaging on the effectiveness of GHWs includes certain studies that are part of the body of literature discussed above as the TPP literature as well as evidence relating to the application of the TPP measures since their entry into force. In this section, we focus on evidence relating to the design and structure of the TPP measures, with respect to their aptitude to contribute to Australia's objective of reducing the use of, and exposure to, tobacco products by increasing the effectiveness of GHWs. We consider relevant evidence relating to the *application* of the TPP measures, including evidence in respect of their effect on increasing the effectiveness of GHWs, in section 7.2.5.3.6.1 below.²²⁰⁸

7.814. Australia's expert Professor Fong identifies a number of studies relating both to the impact of branding features as a potential source of distraction from GHWs, and to the expected impact of tobacco plain packaging on the salience, visibility and noticeability of GHWs, including the visual attention paid to them, their cognitive processing and their recall. On the basis of these studies, he submits that "it is reasonable to consider that the tobacco plain packaging measure will increase the effectiveness of health warnings on the retail packaging of tobacco products, including cigarettes and cigar products".²²⁰⁹ In another expert report submitted by Australia, Dr Biglan, referencing many of the same studies as well as certain others submitted in these proceedings, concludes that "across a wide variety of measures, subject populations (country, smoker/non-smoker, or adolescent/adult), investigators, and pack variations, the impact of health warnings strengthens when packs have no brand features".²²¹⁰ Expert reports by Professors

²²⁰³ Dominican Republic's first written submission, para. 608.

²²⁰⁴ Cuba's first written submission, para. 223. See also Indonesia's first written submission, para. 13; and second written submission, paras. 186-187.

²²⁰⁵ Australia's first written submission, paras. 176-179.

²²⁰⁶ Australia's first written submission, paras. 180-181.

²²⁰⁷ Australia's first written submission, paras. 177 and 179 (referring to Gallopel-Morvan et al. 2010, (Exhibit AUS-176); Environics 2008a, (Exhibits AUS-179, JE-24(19)); Moodie and Mackintosh 2013, (Exhibits AUS-185, JE-24(43)); and Mays et al. 2015, (Exhibit AUS-201)).

²²⁰⁸ Indonesia focuses its arguments in respect of the effectiveness of GHWs on post-implementation evidence. See Indonesia's response to Panel question No. 146; and Indonesia's comments on Australia's response to Panel question No. 170, para. 47.

²²⁰⁹ Fong Report, (Exhibit AUS-14), paras. 355-356. Professor Fong's conclusion follows his description of the results of a number of studies that are on the record of these proceedings, including those discussed in the following papers: Moodie et al. 2011, (Exhibits AUS-155, JE-24(44)); Moodie and Mackintosh 2013, (Exhibits AUS-185, JE-24(43)); CBRC 1992, (Exhibits AUS-198, JE-24(13)); d'Avernas et al. 1997, (Exhibit AUS-144); McCool et al. 2012, (Exhibit JE-24(41)); Van Hal et al. 2012, (Exhibits AUS-161, JE-24(60)); Munafo et al. 2011, (Exhibits AUS-199, JE-24(47)); Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); Northrup and Pollard 1995, (Exhibit JE-24(48)); Gallopel-Morvan et al. 2010, (Exhibit AUS-176); Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)); Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); Al-hamdani 2013, (Exhibits AUS-203, JE-24(1)); Germain et al. 2010, (Exhibits AUS-154, JE-24(25)); Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27)); Environics 2008a, (Exhibits AUS-179, JE-24(19)); Environics 2008b, (Exhibit JE-24(18)); Borland et al. 2009a, (Exhibit AUS-210); Borland et al. 2009b, (Exhibit AUS-211); Hammond et al. 2007, (Exhibit AUS-212); Borland 1997, (Exhibit AUS-213); Partos et al. 2013, (Exhibit AUS-204); Borland and Hill 1997, (Exhibit AUS-208); Hammond et al. 2006, (Exhibit AUS-190); and McCaul et al. 2006, (Exhibit AUS-205). Fong Report, (Exhibit AUS-14), paras. 314-354.

²²¹⁰ Biglan Report, (Exhibit AUS-13), para. 175. Dr Biglan's conclusion follows his consideration of the results of studies documented in the following papers, among others: Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); Borland et al. 2013, (Exhibits AUS-136, JE-24(9)); Environics 2008a, (Exhibits AUS-179, JE-24(19)); Gallopel-Morvan et al. 2010, (Exhibit AUS-176); Germain et al. 2010, (Exhibits AUS-154, JE-24(25)); Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27)); Hammond et al. 2013b, (Exhibits AUS-158, JE-24(31)); Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)); Hammond and Parkinson, (Exhibit

Samet, Tavassoli, and Slovic, submitted by Australia, also refer to a number of studies in the context of their assertions that tobacco plain packaging increases the noticeability and salience of GHWs, and changes the attention paid to the risks of tobacco use; a number of these studies are on the record of these proceedings.²²¹¹

7.815. We note that in this context²²¹², Australia and its experts have provided, and refer to, a number of studies which indicate that the *visual attention* paid to GHWs increases in the presence of plain packaging.²²¹³

7.816. Of these papers, five²²¹⁴ are critiqued in each of the reviews by Kleijnen Systematic Reviews²²¹⁵, Professor Inman et al.²²¹⁶, and Professor Klick²²¹⁷; one is critiqued only by Professor Inman et al. and Professor Klick.²²¹⁸ Two are not considered in any of the complainants' three literature reviews.²²¹⁹ The critiques of the complainants' experts regarding these particular studies largely follow the criticisms that they make of the TPP literature in general, which we have highlighted above; namely, the (in)ability of the designs of these studies to inform causal relationships with respect to the measured outcome (in this case, the visual attention paid to GHWs); the presence of threats to the internal, external, and construct validity of the studies, including possible demand effects and/or SDR; and the fact that the studies do not measure smoking behaviour.

AUS-165); Hoek et al. 2011, (Exhibits AUS-148, JE-24(34)); Moodie et al. 2011, (Exhibits AUS-155, JE-24(44)); Rousu and Thrasher 2013, (Exhibits AUS-228, JE-24(54)); Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)); Wakefield et al. 2008, (Exhibits AUS-149, JE-24(62)). See Biglan Report, (Exhibit AUS-13), para. 174.

²²¹¹ Samet Report, (Exhibit AUS-7), para. 125 (referring to a number of pre-implementation papers, including Hammond et al. 2013a, (AUS-177, JE-24(32)); and Arora et al. 2013, (Exhibit JE-24(2))); Tavassoli Report, (Exhibit AUS-10), paras. 109-119 (referring to a number of pre-implementation papers, including Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); and Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27))); Slovic Report, (Exhibit AUS-12), paras. 84-99 (referring to a number of pre-implementation papers, including Hammond et al. 2006, (Exhibit AUS-190); Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)); Wakefield et al. 2002, (Exhibits AUS-93, CUB-28); and Kennedy et al. 2012, (Exhibit AUS-192)).

²²¹² Australia's first written submission, paras. 176-179.

²²¹³ See, e.g. Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)), p. 6 (finding that 51% of students surveyed reported that it was easier to see the health warning on the plain package, whereas 29% considered that it was easier on the regular package, and 20% reported no difference); d'Avernas et al. 1997, (Exhibit AUS-144), p. 13 (reporting that, when participants were presented with different packs featuring different combinations of GHWs, colours, and branding, "significantly more daily smokers mentioned the health warning on the plain package (82%) than on the regular package (62%)"); Gallopel-Morvan et al. 2010, (Exhibit AUS-176), Table 1, p. 8 (finding that French youth who compared four cigarette package designs were more likely to notice the (written) health warning first on non-branded designs, whereas branding was more likely to be noticed first for branded designs); Munafò et al. 2011, (Exhibits AUS-199, JE-24(47)), p. 1508 (finding that, when tracking eye movement in the presence of plain and branded packages, "among non-smokers and weekly (i.e. light, non-established) cigarette smokers, plain packaging increases visual attention towards health warning information and away from brand information", but that "[t]his effect is not observed among daily (i.e. established) cigarette smokers"); Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)), p. 417 ("largely replicat[ing] and extend[ing]" the results of Munafò et al. 2011, (Exhibits AUS-199, JE-24(47))); McCool et al. 2012, (Exhibit JE-24(41)), p. 1272 (reporting that "[a]n overwhelming majority of participants" in semi-structured focus group interviews "regarded warning labels on plain packages as more potent, since 'there's nothing to distract you from the warnings'"); Arora et al. 2013, (Exhibit JE-24(2)), p. 4 (reporting that 90% of participants in an opinion poll in India indicated that plain packaging would increase the noticeability and effectiveness of health warnings on tobacco products); and Borland et al. 2013, (Exhibits AUS-136, JE-24(9)). See also Australia's first written submission, paras. 176-179; Samet Report, (Exhibit AUS-7), para. 125; Tavassoli Report, (Exhibit AUS-10), para. 112; Biglan Report, (Exhibit AUS-13), para. 174; Fong Report, (Exhibit AUS-14), paras. 314-322.

²²¹⁴ Rootman and Flay 1995, (Exhibits AUS-145, JE-24(53)); Munafò et al. 2011, (Exhibits AUS-199, JE-24(47)); Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); McCool et al. 2012, (Exhibit JE-24(41)); and Arora et al. 2013, (Exhibit JE-24(2)).

²²¹⁵ Kleijnen Systematic Review, (Exhibit DOM/HND-4).

²²¹⁶ Peer Review Report, (Exhibit DOM/HND-3).

²²¹⁷ Klick TPP Literature Report, (Exhibit UKR-6).

²²¹⁸ Borland et al. 2013, (Exhibits AUS-136, JE-24(9)).

²²¹⁹ d'Avernas et al. 1997, (Exhibit AUS-144); and Gallopel-Morvan et al. 2010, (Exhibit AUS-176).

7.817. We note that six of these eight studies were considered in the original Stirling Review report or the subsequent Stirling Review 2013 Update²²²⁰; the three studies considered by the original Stirling Review report were given a quality score of "medium" (though the focus group component of Rootman and Flay 1995 was considered of "low" quality).²²²¹ Considering the relevant studies as a whole, the Stirling Review concluded (*inter alia*) that "the studies suggest **that plain packaging tends to increase ... the attention paid to [health warnings]**".²²²² Moreover, five of these studies were considered in the Chantler Report; one was given a score of 5 out of 6 (denoting high quality/low risk of bias)²²²³, and the other four were given a score of either 4²²²⁴ or 4.5²²²⁵ out of 6 (denoting moderate quality/moderate bias).²²²⁶ In respect of the qualitative studies, the reviewer concluded that, *inter alia*, "[p]lain packaging increases the visibility/prominence of health warnings".²²²⁷

7.818. Overall, therefore, this group of studies in respect of visual attention paid to GHWs in the presence of plain packaging was favourably rated in the Stirling and Chantler reviews. Indeed, we note in this respect Cuba's observation, quoting an expert report by Professor Viscusi, that "[i]t is **'almost tautological'** that the eye would be more drawn to a graphic health warning on a plain pack, which will inevitably have less to read than a branded pack".²²²⁸

7.819. In addition, Australia's expert Professor Fong discusses the impact of **not** regulating the appearance of tobacco packaging on GHW effectiveness, referring, *inter alia*, to a study by Borland et al. 2013²²²⁹ which "showed that bevelled pack shape distracts more from warnings than a standard pack, and other non-standard pack designs which are banned under the [TPP measures] were also found to distract from warnings".²²³⁰ Australia concludes in this respect by quoting

²²²⁰ The original Stirling Review considered Rootman and Flay 1995, (Exhibit JE-24(53)); Munafò et al. 2011, (Exhibits AUS-199, JE-24(47)); and Gallopel-Morvan et al. 2010, (Exhibit AUS-176). Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 27, 30, and 36. The Stirling Review 2013 Update considered Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); Borland et al. 2013, (Exhibits AUS-136, JE-24(9)); and McCool et al. 2012, (Exhibit JE-24(41)). Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), pp. 15-16.

²²²¹ Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), pp. 27, 30, and 36.

²²²² Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 52. See also Stirling Review 2013 Update, (Exhibits AUS-216, CUB-60), pp. 5 and 7. "The findings of these ... studies ... suggest that plain packaging would: ... enhance the salience of health warnings on packs ...". *Ibid.* p. 2.

²²²³ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 54 (with respect to Borland et al. 2013, (Exhibits AUS-136, JE-24(9))). We note that the Chantler Report did not identify GHWs as one of the main outcomes of this study. *Ibid.*

²²²⁴ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 51 (with respect to Gallopel-Morvan et al. 2010, (Exhibit AUS-176)).

²²²⁵ See Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 51 and 54; and Annex E, p. 61 (with respect to Munafò et al. 2011, (Exhibits AUS-199, JE-24(47)); Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)); and McCool et al. 2012, (Exhibit JE-24(41))).

²²²⁶ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 49.

²²²⁷ See also Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 57.

²²²⁸ Cuba's first written submission, para. 225 (emphasis original; footnotes omitted) (quoting Viscusi Report, (Exhibit UKR-8), para. 74). Referencing Munafò et al. 2011, the Viscusi Report states that "[a] major finding of the study is that for daily smokers there was no effect whatsoever of viewing plain packs rather than regular packs." Viscusi Report, (Exhibit UKR-8), para. 75. The relevant study found that "[a]nalysis of variance indicated more eye movements (i.e. greater visual attention) towards health warnings compared to brand information on plain packs versus branded packs", as "observed among non-smokers and weekly smokers, but not daily smokers", and concluded that "[a]mong non-smokers and non-daily cigarette smokers, plain packaging appears to increase visual attention towards health warning information and away from brand information." Munafò et al. 2011 (Exhibits AUS-199, JE-24(47)), p. 1505. See also Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 55; and Maynard et al. 2013, (Exhibits AUS-200, JE-24(40)).

²²²⁹ Borland et al. 2013, (Exhibits AUS-136, JE-24(9)). We note that this study was first published online in 2011, prior to the implementation of the TPP measures. The study identified a relationship between pack shapes and distraction from health warnings. Study participants rated the standard pack shape least distracting from health warnings compared with bevelled and rounded packs. *Ibid.* p. 99. We note that this study used GHWs covering 30% and 70% of the pack surface.

²²³⁰ Fong Report, (Exhibit AUS-14), para. 309 (referring to Borland et al. 2013, (Exhibits AUS-136, JE-24(9))). We note that, in this context, Professor Fong also refers to a study by Moodie and Ford (2011), and the statement therein that "packaging not only allows tobacco companies to enhance the promotional offering by showcasing design and innovation, which often sets a new standard among consumer products, but in doing so they distract from health warnings". See *ibid.* para. 312 (quoting Moodie and Ford 2011, (Exhibits AUS-189, JE-24(42)), p. 175). We note that Moodie and Ford 2011, (Exhibits AUS-189, JE-24(42)), did not test for this effect.

Professor Fong's statement that by "reducing the positive imagery that branded packages of cigarettes create, there is good evidence that smokers and non-smokers will be more focused on the negative imagery of the health warnings, and be more likely to think about the risk information that they convey".²²³¹

7.820. Australia, and in particular its expert Professor Fong, further identifies and submits a number of studies in support of the proposition that tobacco plain packaging increases *the cognitive processing of warnings*²²³² and *recall of GHWs*²²³³, and enhances *the seriousness and believability of GHWs*.²²³⁴ Professor Fong concludes that (in addition to his conclusions concerning the visual attention paid to GHWs, discussed above), "[o]n the basis of the available evidence ... it is reasonable to consider that the tobacco plain packaging measure will increase the effectiveness of health warnings on the retail packaging of tobacco products, including cigarettes and cigar products."²²³⁵

²²³¹ Australia's first written submission, para. 179 (quoting Fong Report, (Exhibit AUS-14), para. 341).

²²³² See, e.g. Moodie and Mackintosh 2013, (Exhibits AUS-185, JE-24(43)), p. 6 (reporting that, when participants from Scotland smoked cigarettes from a fictitious plain pack for one week, and then from their own pack for one week, overall ratings of the warnings did not differ between the plain and participants' normal packs, but the warnings were rated as being read more closely on the plain pack than on the participants' own packs, and thought about more on the plain pack relative to participants' own packs). See also Parr et al. 2011b (Exhibits AUS-219, JE-24(50)), which, as Professor Fong notes, states that "[w]hen the graphic health warning has 75% pack coverage, plain packaging had limited additional impact on the noticeability of health warnings for RYO and cigarillo / little cigars". Parr et al. 2011b (Exhibits AUS-219, JE-24(50)), pp. 11 and 47; and Fong Report, (Exhibit AUS-14), para. 320.

²²³³ Australia's first written submission, para. 180 and fn 345 (referring to Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)); and Al-hamdani 2013, (Exhibits AUS-203, JE-24(1))). Beede and Lawson 1992 found that recall of the presence of health warnings was greater among students for US plain packs than for US branded packs, but observed no significant difference for the more familiar New Zealand packs. Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)), p. 317. Al-Hamdani 2013 found that, of the four packages shown to participants, the two with the least branding information elicited the highest percentages of correct recall of GHWs, and that non-smokers (82%) were more likely to correctly recall the correct health warning than smokers (60.4%). Al-hamdani 2013, (Exhibits AUS-203, JE-24(1)), p. 73.

Australia's expert, Professor Fong, refers to studies which "reported mixed results regarding differences in recall on plain versus branded packages of cigarettes, depending on the specific message of the warning". Fong Report, (Exhibit AUS-14), para. 333 (referring to Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)) and Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27))). Goldberg et al. 1995 reported that in unaided recall, one warning ("Smoking can kill you") was recalled by 44% of teenagers on the branded packages, and 50% of teenagers on the plain package. This was the only warning recalled by a "meaningful number" of subjects. In aided recall, two out of the three warnings used were more successfully matched with the brand on which they appeared by those who viewed the branded pack, whereas for the third warning, 50% of those exposed to branded packs, and 50% of those exposed to plain packs, were able to successfully match the warning with the brand on which they appeared. Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)), p. 107. In a later study, Goldberg et al. 1999, the authors reported that recall of health warnings on two of the three subject packages was higher when subjects were exposed to the plain cigarette packages. Recall of one warning was lower on plain packages. The authors attributed this difference to the content of the health warning. Goldberg et al. 1999, (Exhibits AUS-209, JE-24(27)), p. 1434. Professor Fong also refers to Northrup and Pollard 1995 and Germain et al. 2010. Fong Report, (Exhibit AUS-14), para. 332. In Northrup and Pollard 1995, the authors found that recall of health warnings did not vary by the type of plain package used (white compared to off-white), and that recall of the health warning was not enhanced by using plain packaging. However, recall of health warnings on the plain package was higher for light smokers and for daily smokers. Northrup and Pollard 1995, (Exhibit JE-24(48)), pp. 28-30. Germain et al. 2010 found no difference in the ability of participants to recall the correct GHW between individuals who saw a plain pack with a 30% GHW and a plain pack with a 80% GHW. Germain et al. 2010, (Exhibits AUS-154, JE-24(25)), p. 390.

²²³⁴ See Northrup and Pollard 1995, (Exhibit JE-24(48)), Table 8, p. 18 (finding that students surveyed were more likely to say that plain packages make the health warning look more serious); Moodie et al. 2011, (Exhibits AUS-155, JE-24(44)), p. 369 (finding that smokers, who carried their cigarettes in their normal, and in plain mock-up, packs for the study period, did not, overall, vary their ratings of the noticeability, seriousness and believability of the warnings); Moodie and Mackintosh 2013, (Exhibits AUS-185, JE-24(43)), p. 370 (finding, in a study similar to Moodie et al. 2011, (Exhibits AUS-155, JE-24(44)), no noticeable difference in term of the perceived seriousness or believability of health warnings in a comparison between plain and branded packs). We also note that in the context of the seriousness and believability of GHWs, Australia refers to Beede and Lawson 1992, (Exhibits AUS-202, JE-24(6)), and Al-hamdani 2013, (Exhibits AUS-203, JE-24(1)), in respect of consumer recall of warnings on plain packages. Australia's first written submission, para. 180 and fn 345. We have discussed these studies in footnote 2233 above.

²²³⁵ Fong Report, (Exhibit AUS-14), para. 355.

7.821. The complainants' review and critique of the TPP literature overlaps in scope with, but is not identical to, the studies relied upon by Australia in relation to the impact of the TPP measures on the effectiveness of GHWs. Among the 67 papers reviewed between the original Stirling Review and the Stirling Review 2013 Update, 26 measured impacts on GHWs (including recall, cognitive processing, seriousness and believability, as well as visual attention paid to GHWs on plain packs, discussed above) after "impact on GHWs" as a "type[]" of finding[]" or "main outcome[]", as determined by the original Stirling Review²²³⁶ or the Chantler Report.²²³⁷ Overall, 20 of these papers were also considered in one or more of the complainants' three literature reviews, the Peer Review Project, the Kleijnen Systematic Review, and/or the review conducted by Professor Klick. Of these, Australia has directly relied upon 15 in the course of these proceedings, as reflected by their provision to the Panel as exhibits.²²³⁸ Australia also refers in this context to a number of other papers that were not reviewed in one of the three reviews of the TPP literature presented by the complainants.²²³⁹

7.822. We also note that, among the 20 papers that measured the impact of tobacco plain packaging on GHWs which were considered in both the Stirling Review or the Stirling Review 2013 Update, and one or more of the complainants' three reviews of the TPP literature, 12 were included in the original Stirling Review, and received quality ratings. Eight were rated as being of "medium" quality, while four received a "medium" rating for the survey aspect of the underlying study and a "low" rating for the focus group aspect of the underlying study.²²⁴⁰ 16 of the 20 papers also received quality scores from the independent Chantler Report. Of these, four were given a rating of between 5 and 6 (denoting high quality/low risk of bias), while ten earned a score of between 3 and 4.5 (denoting moderate quality/moderate bias), and two earned a score of 2 (denoting low quality/high risk of bias).²²⁴¹

7.823. In respect of the salience of health warnings, the Stirling Review concluded, on the basis of the evidence it considered, that:

- Overall, the studies suggest that plain packaging tends to increase the recall of health warnings, the attention paid to them and their perceived seriousness and believability.
- Findings appear to be moderated by the type, size and position of health warning used.
- Only one study examined sub-group differences, and reported that non-smokers and weekly smokers may pay more attention to warnings on plain packs than daily smokers.²²⁴²

7.824. In respect of cigars, we note some of the observations in Parr et al. 2011b addressing the salience of GHWs on cigar tubes, in the presence of plain packaging. While among frequent and

²²³⁷ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55, and Annex E, pp. 60-62.

²²³⁸ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports. See also Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), Table 4.1; and Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55, and Annex E, pp. 60-62. We note that Australia has also submitted and relied upon a newsletter article that was authored by the same researchers, and appears to discuss the same study, as a paper that assesses the impact of tobacco plain packaging on GHWs and was considered by the Stirling Review and each of the complainants' three TPP literature reviews. Compare Northrup and Pollard 1995, (Exhibit JE-24(48)), with ISR newsletter, (Exhibit AUS-146).

²²³⁹ See, e.g. Gallopel-Morvan et al. 2010, (Exhibit AUS-176); d'Avernas et al. 1997, (Exhibit AUS-144); Hammond et al. 2007, (Exhibit AUS-212); Hammond et al. 2006, (Exhibit AUS-190); and Borland et al. 2009b, (Exhibit AUS-211).

²²⁴⁰ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports. See also Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), Table 4.1.

²²⁴¹ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the back of these Reports. See also Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55, and Annex E, pp. 60-62. We also note that Gallopel-Morvan et al. 2010, (Exhibit AUS-176), which was not reviewed in the complainants' literature reviews, was assigned a "medium" rating by the Stirling Review, and a score of 4 by the Chantler Report. See Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 27; and Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 51.

²²⁴² Stirling Review, (Exhibits AUS-140, HND-130, CUB-59), p. 52.

connoisseur smokers of premium cigars "the [plain cigar] tubes were disregarded"²²⁴³, the less frequent smokers of premium cigars²²⁴⁴ "had a stronger reaction to the plain pack tube", in particular the GHW²²⁴⁵:

When presented with the plain pack tube they reported feeling the appeal and attractiveness of the tubes had been severely decreased. They reported feeling that part of the "fun" had been removed. Standing out most was the size of the health warning which was unavoidable.²²⁴⁶

7.825. Overall, therefore, the evidence before us suggests that a number of studies, emanating from qualified sources and favourably reviewed in external reviews, support the proposition that plain packaging of tobacco products would increase the effectiveness of GHWs. Specifically, it suggests that in the presence of plain packaging, GHWs on tobacco products are considered easier to see, more noticeable, perceived as being more credible and more serious, attract greater visual attention²²⁴⁷, are less subject to distractions caused by other packaging elements, and are read more closely and thought about more. We also note the existence of mixed evidence in respect of whether tobacco plain packaging improves GHW recall, or affects whether GHWs are perceived as being more serious and believable. In this respect, we note the description by Australia's expert, Professor Samet, that the studies he reviews "are consistent in showing that plain packaging reduces the appeal of the cigarettes in the pack and enhances awareness of pictorial warnings on the pack"²²⁴⁸, though "[t]he evidence is not as abundant on the effect of plain packaging on the salience of pack warnings".²²⁴⁹

7.826. Notwithstanding the potential limitations of these studies, taken individually or as a whole, we also have before us evidence relating to the actual application of the TPP measures since their entry into force, including empirical studies specifically addressing the impact of tobacco plain packaging on the effectiveness of GHWs. This evidence should be given appropriate weight in our assessment. We consider this evidence in section 7.2.5.3.6.1 below, and therefore do not seek to draw, at this stage of our analysis, any overall conclusion on the impact of the TPP measures on the effectiveness of GHWs.

7.827. With this conclusion in mind, we turn now to consider whether an increase in the effectiveness of GHWs may be expected to affect risk beliefs and risk awareness in Australia, as contested by the complainants.

Ability of plain packaging to increase the effectiveness of GHWs by improving risk awareness and risk beliefs

7.828. As described above²²⁵⁰, it appears to be undisputed that an assessment of the effectiveness of GHWs is, as a general matter, informed by their ability to communicate information about health risks and thereby increase levels of risk awareness. The complainants' submissions in this respect focus on the potential for such awareness to *increase* in the presence

²²⁴³ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 40. Although "frequent cigar smokers did feel that the plain pack tube would have an impact on their purchasing enjoyment and the appeal of cigar smoking in general. They felt it would render the tobacconists and cigar sellers less appealing and inviting as places to stop and shop. Some reported that it might push their purchases online." Ibid. p. 41.

²²⁴⁴ "Less frequent smokers reported that currently the purchasing of cigars was part of the ritual and enjoyment involved in cigar smoking. They reported that the 'revealing' of the cigars on a social occasion was one of the highlights of the process. A number of respondents reported paying particular attention to the tubes and packaging, and often spending more than they would normally, in order to impress guests, friends, or to give as gifts. The plain packaged tube was felt to take away this aspect of cigar smoking which was often cited as a main driver in their smoking behaviours." Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 41.

²²⁴⁵ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 41.

²²⁴⁶ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 41.

²²⁴⁷ In this respect, we note Cuba's observation that it is "*almost tautological*" that the eye would be more drawn to a graphic warning on a plain pack, "which will inevitably have less to read than a branded pack". Cuba's first written submission, para. 225 (emphasis original) (quoting Viscusi Report, (Exhibit UKR-8), para. 74).

²²⁴⁸ Samet Report, (Exhibit AUS-7), para. 128.

²²⁴⁹ Samet Report, (Exhibit AUS-7), para. 129.

²²⁵⁰ See paragraphs 7.803-7.806 above.

of plain packaging, in light in particular of existing levels of knowledge about the health risks arising from the use of tobacco products in Australia.

7.829. Honduras and Cuba argue that Australians, and in particular Australian adolescents, already have a high understanding and awareness of the risks associated with smoking and that their smoking behaviour is not driven by that understanding and awareness.²²⁵¹ The complainants rely in this respect on an expert report by Professor Viscusi²²⁵², who argues that increasing the effectiveness of warnings as measured by "recall, attention, seriousness and believability"²²⁵³ is "only of behavioral consequence if consumers currently have an informational deficit and do not find existing warnings credible", which, he argues, is not established in any the studies underpinning the tobacco plain packaging.²²⁵⁴ He argues that "whether plain packs will enhance the effectiveness of warnings on risk beliefs depends on how much people know about the risks of smoking and how much having warnings on plain packs rather than regular packs will alter these risk beliefs".²²⁵⁵

7.830. Australia responds that "knowledge of risk is 'a multilayered concept' and studies of Australians found that although people are sometimes 'aware' that smoking can lead to adverse health consequences, they do not have even a basic understanding of the nature and severity of these consequences".²²⁵⁶

7.831. Professor Viscusi reviews a number of studies in support of the conclusion that tobacco plain packaging increases the effectiveness of health warnings in Australia and sets out a series of methodological concerns in respect of these studies. In particular, he identifies the need to "carefully assess baseline knowledge among respondents" of risk beliefs, the purpose of which is to make possible meaningful comparisons with risk beliefs elicited after providing the warnings in a plain pack environment.²²⁵⁷ Professor Viscusi notes that "[n]one of the existing plain packaging studies starts from a determination of the existing risk beliefs to compare with the risk beliefs resulting from plain packaging".²²⁵⁸ If there is no increase in risk beliefs, then one cannot, in Professor Viscusi's view, conclude that plain packs foster a greater understanding of smoking risks.²²⁵⁹ Professor Viscusi argues that plain packaging does not provide any new warning information and that there is no evidence that new warnings were not noticed before tobacco plain packaging. In his view, the plain pack studies "fail to assess the alleged informational deficit that plain packaging would fill and do not examine whether people's risk belief changes as a result of plain packaging".²²⁶⁰

7.832. Professor Viscusi further submits that over time, "the progress that can be made through additional warnings efforts will taper off as people become better informed of the risks of smoking"²²⁶¹, and "[o]nce people become generally aware of the major risks posed by cigarettes, such as the mortality risk and lung cancer risk, there will be fewer gains in risk awareness that can be achieved, if any".²²⁶² Professor Viscusi addresses risk beliefs in Australia, noting that "[t]here is substantial evidence in Australia that people are not only aware of the risks but also personalize the risks to themselves"²²⁶³; that "[e]ven before the current warnings were enacted, in an earlier warnings era, Australians indicated substantial risk awareness"²²⁶⁴; and that "[e]ven subgroups of

²²⁶⁴ Viscusi Report, (Exhibit UKR-8), para. 105.

the Australian population that one might think are difficult to reach with a broadly based warnings policy have received the risk information".²²⁶⁵

7.833. Honduras also refers to an expert report by Professor Steinberg, summarized above²²⁶⁶, and in particular his argument that "it is abundantly clear that Australian adolescents are aware of and understand the risks of smoking and know that it has harmful long-term health consequences".²²⁶⁷ He argues that "adolescents' awareness of the health risks of smoking is nearly universal (and was achieved without plain packaging)", and that it is therefore "difficult to imagine how the introduction of plain packaging could – even conceptually – increase this awareness".²²⁶⁸

7.834. Australia's expert Professor Slovic submits that, contrary to the opinion of Professor Viscusi, many people do not adequately understand and appreciate the risks that smoking entails.²²⁶⁹ He argues that beginning smokers "give little conscious thought to risk", "are lured into the behavior by the prospects of fun, excitement, and adventure" and "begin to think of risk only after they have started to smoke regularly, become addicted, and gained what to them is new information and appreciation of smoking's health risks".²²⁷⁰ Professor Slovic adds that "[t]here is no evidence to show that adolescents, or others who start smoking, have adequate knowledge of the many diseases caused by smoking", nor the experience of lung cancer, chronic obstructive pulmonary disease, or congestive heart failure.²²⁷¹

7.835. Professor Slovic further argues that tobacco advertising and promotion, "of which the pack is a part", have been "designed to play a key role in this process by exposing young people to massive amounts of positive imagery associated with smoking". Professor Slovic observes that these imagery and affective feelings are never mentioned by Professor Viscusi as motivators of smoking.²²⁷² Professor Slovic suggests that "[t]hrough the workings of the affect heuristic, positive feelings suppress feelings of risk", such that scientific or statistical warnings are ignored or undervalued.²²⁷³ Professor Slovic considers that Professor Viscusi "also fails to appreciate [] that research has shown that knowledge of risk from smoking is a multilayered concept", at the "tip" of which is "superficial awareness that smoking is dangerous to health", and progresses through "level 2" (i.e. "knowing a bit about how and why smoking is dangerous"). Professor Slovic argues that rational decision making requires deeper knowledge and, he argues, "few smokers have this deeper, experiential knowledge" (some of which has been shown to be provided by GHWs).²²⁷⁴

7.836. In an expert report submitted by Australia, Dr Biglan also argues that adolescents are not fully informed about the risks of smoking²²⁷⁵ and points out that both smoking and non-smoking adolescents underestimated the death rate due to these diseases.²²⁷⁶ Dr Biglan further argues that in contesting the notion that plain packaging affects risk perceptions, the complainants' experts reviewed only a portion of the empirical literature on the impact of plain packaging²²⁷⁷ and, in the case of Professor Viscusi, provided a critique which contains "inaccuracies and misrepresentations" and overlooked "how clearly [the relevant studies] show the impact of plain packaging on health risk perceptions".²²⁷⁸ Reviewing a number of studies, Dr Biglan concludes that "across a wide variety of measures, subject populations (country, smoker/nonsmoker, or adolescent/adult), investigators, and pack variations, the impact of health warnings strengthens when packs have no brand features".²²⁷⁹

7.837. We understand the complainants to argue, in essence, that risks awareness levels in Australia are such that there is no meaningful scope for an increase in health knowledge and/or risk perception in Australia through more effective GHWs. Professor Viscusi thus suggests that "[o]nce people become generally aware of the major risks posed by cigarettes, such as the mortality risk and lung cancer risk, there will be fewer gains in risk awareness that can be achieved, if any."²²⁸⁰

7.838. We note that a number of studies submitted as evidence in these proceedings address the existing level of awareness among Australians concerning the risks associated with tobacco use, and the extent to which GHWs increase such awareness. For example, a study by Borland and Hill (1997)²²⁸¹ found that the health warnings introduced in 1995 (which required written health warnings covering **no less than 25% of the face of the pack**) achieved **"high levels of awareness ... at least among smokers"**²²⁸², as acknowledged by Professor Viscusi²²⁸³, while also noting that smokers who lacked awareness of the warnings may simply "have never noticed them".²²⁸⁴ The same study also states that "[m]any smokers still lack even a basic understanding of the major constituents of tobacco smoke or of their potential health effects, even though there was a small increase in knowledge at follow up", and that "[o]ne striking finding was that smokers were far more likely to agree that smoking is addictive than to agree that it is harmful, and far more thought it was addictive than thought it was enjoyable".²²⁸⁵ The same paper notes that "[i]t is true that in Australia almost everybody has heard about dangers of smoking (as can be inferred from the data in this paper) but it does not mean that they know and believe all the information that is central to making rational decisions about whether or not to smoke".²²⁸⁶

7.839. Australia's expert Professor Slovic refers²²⁸⁷ to a study based on data gathered in 2002 from the International Tobacco Control Policy Evaluation Project's (ITC Project) 4-country survey, which indicates a high level of awareness in Australia of various conditions in smokers, following phone-based surveys involving prompted recall of those conditions.²²⁸⁸ A 2009 report²²⁸⁹ commissioned by Australia's DHA to evaluate the effectiveness of GHWs on tobacco products also reports, as Professor Viscusi notes²²⁹⁰, a high level of awareness that certain health risks are associated with smoking²²⁹¹, although levels of recall of the content of warnings, unaided²²⁹² and

²²⁸⁶ Borland and Hill 1997, (Exhibit AUS-208), p. 324.

²²⁸⁷ Slovic Report, (Exhibit AUS-12), para. 91.

²²⁸⁸ The surveys considered in particular knowledge of lung cancer in smokers (94.3%), heart disease (88.7%), stroke (80.8%), lung cancer in non-smokers (69.0%), and impotence (35.8%). Hammond et al. 2006, (Exhibit AUS-190), p. iii21. We note that Professor Slovic also refers in this context to a study by Hammond et al. 2009, (Exhibits AUS-166, JE-24(29)), in which participants from the United Kingdom were asked to compare five packs on the basis of their perception of the packs' taste, tar delivery, health risk, attractiveness and either ease of quitting (for adult smokers) or the brand they would choose if trying smoking (for youth). See Slovic Report, (Exhibit AUS-12), para. 91. As this study is based in the UK, we are of the view that this study is not directly relevant to the question of existing levels of risk awareness in Australia.

²²⁸⁹ Shanahan and Elliott 2008, (Exhibit CUB-15).

²²⁹⁰ Viscusi Report, (Exhibit UKR-8), para. 105.

²²⁹¹ Specifically, the study reports that in Australia 91% of all smokers disagree with the statement: "I don't think smoking has any real negative effect on your health at all"; that 88% of smokers agree with the statement: "I think that smoking probably does increase the risk of a health problem occurring for me"; and that 96% "disagree with statements that smoking does not have any real health effect". Shanahan and Elliott 2008, (Exhibit CUB-15), p. 181).

²²⁹² Shanahan and Elliott 2008, (Exhibit CUB-15), p. 66. Respondents identified the content of warnings to different degrees: specifically, respondents recalled "smoking causes mouth and throat cancer" (18%); "smoking – a lead cause of death" (18%); "smoking causes peripheral vascular disease/gangrene" (17%); "smoking causes emphysema" (9%); "smoking clogs your arteries" (5%); "don't let children breathe your smoke" (4%); "quitting will improve your health" (3%); "smoking causes lung cancer" (34%); "smoking harms unborn babies" (29%); "smoking causes heart disease" (10%); "smoking causes blindness" (4%); "smoking doubles your risk of stroke" (3%); "smoking is addictive" (2%); and "tobacco smoke is toxic" (1%). Ibid. p. 66, Table 15. Results were further disaggregated on the basis of respondents' status as a smoker, recent quitter, non-smoker and ex-smoker. Ibid.

aided²²⁹³, varied. We note also a market research study referred to by Professor Viscusi in support of the point that the health warnings required in 2011 (that is, before their enlargement pursuant to the Information Standard) "are effective, so that smokers and the public at large have been informed of the risks".²²⁹⁴ That report also notes that "with very few exceptions, all respondents could easily identify a specific health warning from the current suite that stood out to them", which "was often the one they avoided buying if they could".²²⁹⁵ Professor Steinberg, in his expert report, also refers to a Victorian Government study based on 2011 Australian Secondary Students Alcohol Smoking and Drug (ASSAD) Survey data²²⁹⁶ reporting high levels of awareness of various specific diseases associated with smoking.²²⁹⁷

7.840. This evidence suggests, overall, that Australians have a high level of awareness that smoking increases the risks of health problems in general. It also suggests a high, and in the case of some conditions, extremely high level of awareness of some specific health risks associated with tobacco use, but a notably lower level of risk awareness in respect of certain conditions discussed in the evidence.

7.841. This evidence further indicates that GHWs have been effective in Australia at, *inter alia*, communicating certain specific effects of tobacco use to the Australian public and, in particular, **bringing about gains in risk awareness that go beyond the "major" risks of "mortality ... and lung cancer ..."**.²²⁹⁸ For example, we note a 2012 study which found that Australian smokers, who were exposed to a GHW with the message that smoking causes blindness, were more likely to report when prompted that smoking causes blindness than smokers from Canada, the United States and the United Kingdom, who were not exposed to this same warning.²²⁹⁹ In this connection, we also note that the timing of many of the studies described above indicates that they refer to periods

²²⁹³ Shanahan and Elliott 2008, (Exhibit CUB-15), p. 71. Respondents identified the content of warnings to different degrees; specifically, respondents recalled "smoking clogs your arteries" (83%); "smoking causes peripheral vascular disease/gangrene" (83%); "smoking causes mouth and throat cancer" (82%); "smoking causes emphysema" (81%); "smoking – a lead cause of death" (73%); "don't let children breathe your smoke" (69%); "quitting will improve your health" (63%); "smoking causes lung cancer" (94%); "smoking harms unborn babies" (90%); "smoking is addictive" (89%); "smoking causes heart disease" (89%); "tobacco smoke is toxic" (76%); "smoking doubles your risk of stroke" (64%); "smoking causes blindness" (61%); "smoking exposes you to more than 40 harmful chemicals" (65%); "quit now to reduce your risk of chronic illness or premature death" (62%); and "these chemicals damage blood vessels, body cells and the immune system" (49%). See *ibid.* p. 71, Table 18.

²²⁹⁴ Viscusi Report, (Exhibit UKR-8), para. 105. Parr et al. 2011c bears this out, insofar as it states that:

The reported behaviour of smokers demonstrated that current health warnings on packs are still effective. Although few smokers claimed to take notice or think about the current health warnings, many admitted to particular behaviours which indicated that the warnings have some impact. Many claimed to [] put the pack into something else (a cover or container); [] empty cigarettes into another container to carry; and/or [] ask retailers for packs with images less personally relevant or graphic".

Parr et al. 2011c, (Exhibits AUS-119, CUB-75), p. 5.

²²⁹⁵ Parr et al. 2011c, (Exhibits AUS-119, CUB-75), p. 25. The authors otherwise report mixed responses to the warnings, however, noting that "[s]mokers claimed that they viewed the health warnings as extreme and rare cases and responded in a rational manner, claiming to dismiss the health consequences as unlikely to occur to them", but that "even if they perceive them as extreme examples they impact on smokers at an emotional level as they highlight areas of potential health concern of which they remain conscious".

²²⁹⁶ ASSAD 2011 Report, (Exhibit DOM-360).

²²⁹⁷ Steinberg Report, (Exhibit DOM/HND-6), para. 44. Professor Steinberg refers to this study in support of an argument that "greater than 90 percent of 12-17 year-olds agreed or strongly agreed with statements that smoking causes lung cancer (97 percent), smoking increases the risk of having a heart attack (91 percent), smoking can harm unborn babies (93 percent), and causes mouth cancer (95 percent), with high percentages for a range of other diseases". The study also notes agreement or strong agreement in prompted recall with the notion that smoking is addictive (86%), is a leading cause of death (75%), causes diseases in toes and fingers (87%), causes emphysema (84%), clogs arteries (83%), causes blindness (52%), doubles risk of stroke (85%), and is toxic (80%). ASSAD 2011 Report, (Exhibit DOM-360), pp. 110-111.

²²⁹⁸ See, e.g. Shanahan and Elliott 2008, (Exhibit CUB-15).

²²⁹⁹ Kennedy et al. 2012, (Exhibit AUS-192).

during which GHWs in Australia have been of different sizes, and have contained different messages.²³⁰⁰

7.842. We further note that the 2008 IARC Handbook suggests that "smokers in different parts of the world have different levels of existing health knowledge", which "has implications for the type of messages to be included in warnings".²³⁰¹ It cites as an example in this respect that "Australian smokers may have a relatively higher level of health literacy than smokers in other regions, which may account for the decision to include a warning for 'peripheral vascular disease' on packages".²³⁰²

7.843. This evidence suggests to us that, in the context of their role in improving health knowledge and perception of risks, the content of GHWs is legitimately informed by gaps in knowledge within the relevant country, with the aim of addressing those gaps in knowledge. We are not persuaded, however, that the existence of a relatively high level of knowledge or risk awareness in Australia implies that GHWs could not be made *more* effective in achieving their objective of increasing such knowledge or risk awareness. It appears to us that such a view would be tenable only if assessed at the highest level of generality (namely that Australians consider smoking to be harmful and to carry risks, which the evidence before us suggests is almost universally known), and if we were to assume that the need to inform individuals about the health risks associated with tobacco use is contingent *only* on the extent of general knowledge already existing in the relevant territory.²³⁰³ Professor Viscusi's own analysis appears to acknowledge that this is not the case, when he notes that "[t]hat the public is well informed does not imply that warning efforts should be abandoned", as "[n]ew generations of potential smokers would still benefit from the information, and removing the warnings would imply that cigarettes have become safer".²³⁰⁴ The complainants' argument on the inability of plain packaging to improve the effectiveness of GHWs due to current levels of risks awareness in Australia would seem to imply that the effectiveness of GHWs would not be capable of being improved in *any* meaningful way, or even that they would no longer be necessary in Australia, which we do not understand the complainants to be suggesting.

7.844. We also note that the evidence before us suggests a lower level of risk awareness in relation to cigars. Parr et al. 2011b conclude that "[s]mokers of premium cigars differed considerably in their attitude to cigars compared to smokers of other tobacco products."²³⁰⁵ Both types of cigar smoker also had "low perceptions of any health risks connected with their cigar smoking", and "[a]s most did not smoke daily but rather weekly or once every two weeks they

²³⁰⁰ As we noted in section 2.2.1, tobacco health warning requirements were enacted by all Australian states and territories in 1973 and set out textual health warnings for cigarettes only. Subsequent measures at the federal level expanded the scope of the warnings with respect to their form (i.e. to include textual and graphic/pictorial warnings), size (i.e. as a percentage of the surface of the pack), position (i.e. on the front and/or back of packs), modalities (i.e. the variation and rotation of text and images) and scope (i.e. application of the requirements to other categories of tobacco products). As of 1 March 2006, GHWs were required for almost all tobacco products – regular packages were required to feature a warning message that covered 25% of the area of the face of the pack on which it was printed, and explanatory messages were required to cover one third of the area of the face of the pack on which it was printed. *Trade Practices (Consumer Product Information Standards) (Tobacco) Regulations 1994* (Cth), (Exhibit AUS-322), Regulation 11. The *Competition and Consumer (Tobacco) Information Standard 2011* (Cth), which sets out the current 75%/90% requirements for GHWs and explanatory statements, entered into force on 1 January 2012. See Information Standard, (Exhibits AUS-128, JE-8).

²³⁰¹ 2008 IARC Handbook, (Exhibits AUS-602, DOM-368), p. 294.

²³⁰² 2008 IARC Handbook, (Exhibits AUS-602, DOM-368), p. 294.

²³⁰³ Shanahan and Elliott 2008, (Exhibit CUB-15), p. 181. In this connection, we are similarly not persuaded by Professor Viscusi's critique of a number of studies concerning the effect of plain packaging of tobacco products on the effectiveness of GHWs, on the basis that "[n]one of the existing plain packaging studies starts from a determination of the existing risk beliefs to compare with the risk beliefs resulting from plain packaging". See Viscusi Report, (Exhibit UKR-8), paras. 36-38 and 43-44. Relatedly, and as discussed in "Focus of the TPP studies on 'non-behavioural' outcomes" within section 7.2.5.3.5.1 above, we are not persuaded that the focus on "proximal" outcomes in the TPP literature constitutes, in itself, a flaw, provided that such "proximal outcomes", including the impact of plain packaging on increasing the effectiveness of GHWs, are understood to form only one element of the "causal chain" in the "mediational model" underlying the adoption of the measures. See paras. 7.555 and 7.564 above. We are therefore similarly not persuaded by Professor Viscusi's critique in this respect. See Viscusi Report, (Exhibit UKR-8), paras. 45-49.

²³⁰⁴ Viscusi Report, (Exhibit UKR-8), para. 101.

²³⁰⁵ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 9.

also did not feel their frequency of smoking warranted concern about health implications".²³⁰⁶ We also note the observations by Australia, uncontested by the complainants, as to the higher harmfulness of a single cigar compared with a single cigarette²³⁰⁷ and misperceptions of actual cigar risks.²³⁰⁸ Further, we note the finding in Parr et al. 2011b in respect of plain packaged cigar bags: "no one wanted to be seen carrying a bag with a large graphic health warning on it, or to have to look at the bag themselves. It did serve as a reminder of the negative effects of their cigar smoking".²³⁰⁹

7.845. In light of the above, we are not persuaded that the complainants have shown that existing levels of health knowledge and risk awareness in Australia are such that they could not be increased if GHWs achieved greater salience and thereby have a greater ability to increase levels of risk awareness in respect to the health risks posed by tobacco products, in the presence of plain packaging.

7.846. Finally, we will consider the extent to which the complainants have demonstrated that, even if GHWs on tobacco products are considered easier to see, more noticeable, perceived as being more credible and more serious, attract greater visual attention, and increase levels of risk awareness, this could, in any event, have no influence on quit intentions and smoking behaviours.

Effect of an increase in the effectiveness of GHWs through plain packaging on quit intentions and smoking behaviours

7.847. Cuba argues that increased attention to health warnings does not necessarily imply that there will be significant changes in smoking rates in Australia, given that even in the case of branded packs, "observers pay attention to both the health warning and package design elements".²³¹⁰ Cuba further argues that "even if th[e] claim [that plain packaging will increase the effectiveness of GHWs] were true, because it operates by increasing risk awareness, it can have little, if any, incremental effect on smoking behaviour in Australia (given that the overwhelming majority of the population is already aware of the relevant risks)".²³¹¹ Honduras similarly refers to Professor Viscusi's observation that Australians are aware of the risks and personalize them, and that it is highly unlikely that increasing warning size or prominence will have any influence on smoking behaviours or consumer perceptions of health consequences.²³¹² The Dominican Republic also submits, with reference to the expert report of Professor Steinberg, that "even if plain packaging were shown to increase the prominence of health warnings (which recent research in

²³⁰⁶ Parr et al. 2011b, (Exhibits AUS-219, JE-24(50)), p. 10. Parr and Ell 2011 further finds that:

Premium cigar smokers do perceive that there are likely to be health effects from premium cigar smoking. However, these are largely perceived as negligible compared to the smoking of other tobacco products. This is for a number of reasons:

- less tobacco is perceived to be consumed as it is not habitual;
- it is not perceived as physically addictive; and
- it is not perceived to impact on the lungs as much as cigarette smoke does as the smoke is not directly inhaled.

Parr and Ell 2011, (Exhibit CUB-41), p. 27.

²³⁰⁷ Australia's response to Panel question No. 13 (referring to American Lung Association, "Cigars: Facts and Figures", <<http://www.lung.org/stop-smoking/about-smoking/facts-figures/cigars.html>> accessed 30 January 2015, (Cigars: Facts and Figures), (Exhibit AUS-34)). See also Australia's first written submission, para. 30, (referring to US National Cancer Institute, "Fact Sheet: Cigar Smoking and Cancer", 27 October 2010, <<http://www.cancer.gov/cancertopics/factsheet/Tobacco/cigars/>>, accessed 25 February 2015, (NCI Cigar Fact Sheet), (Exhibit AUS-40); Samet Report, (Exhibit AUS-7), paras. 75-77; and WHO/FCTC amici curiae brief, (Exhibit AUS-42 (revised))).

²³⁰⁸ See Australia's first written submission, paras. 173 and 197, and fn 2306 above. Likewise, Miller et al. 2015 notes that "[c]igars and cigarillos were consistently viewed as less harmful and distinct from cigarettes, all of which is consistent with the way cigars have been positioned." Miller et al. 2015, (Exhibits AUS-102, DOM-315), p. 7. See also Australia's first written submission, para. 173.

fact suggests is not the case), this would ... have no influence on adolescent experimentation with, or use of, tobacco products".²³¹³

7.848. Australia submits that increases in the effectiveness of GHWs affect consumer intentions and behaviour. It submits that the personal health risks of tobacco use are an important motivator for consumers to cease using tobacco products, and that the combination of plain packs with health warnings decreases positive perceptions of tobacco use and increases the understanding that tobacco use presents a health risk.²³¹⁴ Australia also submits that reducing design elements on tobacco packaging to "detract from health warnings (and the serious and severe consequences of tobacco use), has already started to have its desired effect of changing attitudes, which is likely to encourage quitting behaviour".²³¹⁵

7.849. We understand the design and structure underlying the operation of the second mechanism under the TPP Act to be that at least some consumers will be influenced in their smoking behaviours if GHWs are made more effective as a result of plain packaging of tobacco products, in combination with other tobacco control measures in place in Australia. This is described as follows by Professor Fong:

Given my conclusion that the tobacco plain packaging measure would increase the effectiveness of health warnings on the retail packaging of tobacco products, ***I also consider it reasonable to conclude that this increase in effectiveness could lead to important behavioural effects*** such as discouraging people from taking up smoking, or using tobacco products; encouraging people to give up smoking, and to stop using tobacco products; and discouraging people who have given up smoking, or who have stopped using tobacco products, from relapsing.²³¹⁶

7.850. Based on the evidence before us, we see no basis to assume that, to the extent that tobacco plain packaging would make GHWs more effective through greater salience and processing of the risk-related information that they convey, as described above, such increased effectiveness of GHWs could not, in combination with the other tobacco control measures applied by Australia, affect smoking behaviours.

7.851. We recall that the complainants have not challenged the conceptual model described above for the assessment of effectiveness of GHWs, as set out by Professor Chaloupka and reflected in the 2008 IARC Handbook. This model associates changes in cessation knowledge, brand appeal, affective reactions, and health knowledge/risk perception with changes in quit intentions, avoidance and subsequent smoking behaviour.²³¹⁷ We also do not understand the complainants to have contested the ability of GHWs, in principle, to be effective.²³¹⁸ Moreover, Australia and its experts, Professor Fong and Dr Biglan, refer to several studies which report an effect of GHWs on smoking behaviour.²³¹⁹

²³¹³ Dominican Republic's first written submission, para. 695.

²³¹⁴ Australia's first written submission, para. 182.

²³¹⁵ Australia's first written submission, para. 185. Evidence relating to the actual application of the TPP measures is considered in section 7.2.5.3.6 below.

²³¹⁶ Fong Report, (Exhibit AUS-14), para. 356. (emphasis added)

²³¹⁷ See Figure 14 above.

²³¹⁸ We note that the Dominican Republic argues, on the basis of post-implementation data, which was also discussed in White et al. 2015a, (Exhibits AUS-186, DOM-235), that the antecedents that feature in Professor Chaloupka's model are absent in Australia, as are certain tobacco-related behaviours (such as making a quit attempt), and that as such the pathway cannot be inferred. See Dominican Republic's second written submission, paras. 526-529. As noted, evidence from Australia concerning the post-implementation period is the subject of section 7.2.5.3.6 below. We also note that the Dominican Republic submits a number of criticisms of a study by Professor Chaloupka (and others) concerning the effect of GHWs in Canada in 2005 on smoking behaviour. See Dominican Republic's second written submission, paras. 530-535. See also Chaloupka Public Health Report, (Exhibit AUS-9); Chaloupka Rebuttal Report, (Exhibit AUS-582); IPE Updated Report, (Exhibit DOM-303), ch 6; and RJ Reynolds v. FDA, (Exhibit DOM-317). Notwithstanding these criticisms of the study by Professor Chaloupka, we do not understand the Dominican Republic's submission as challenging or questioning whether a connection exists between GHWs and smoking behaviour *per se*.

²³¹⁹ Among these studies are Borland 1997, (Exhibit AUS-213) (finding that warnings that were noticed more often were associated with an increase in cigarettes foregone, and that cigarettes foregone was predictive of increases in cessation); and Shanahan and Elliott 2008, (Exhibit CUB-15) (a report for the

7.852. Turning first to quit *intentions*, we note that, as described in Figure 14, these are identified as one of the relevant parameters for an assessment of the effectiveness of GHWs, as a precursor to smoking behaviours. Australia has submitted a number of studies in respect of the relationship between changes in noticeability of, salience of, and cognitive responses to, GHWs, and changes in behavioural intentions. It cites three studies suggesting a positive correlation between pack warnings and quit intentions or attempts.²³²⁰ Australia also refers to a 2009 study that specifically examined the effect of the different health warnings in Australia (at the time of the study, a GHW covering 30% of the front and 90% of the back of the pack), Canada (a GHW covering 50% of the front and back of the pack), and the United Kingdom (a textual warning covering 30% of the front and 40% of the back of the pack) on variables including "two behavioural responses": forgoing cigarettes and avoiding the warnings. The study reported that Australians reported more avoidance of the warnings than Canadians and British respondents, but there was no significant difference between Canadians and Australians, or Australians and British respondents, in respect of foregoing cigarettes.²³²¹ The authors also reported that the "strongest predictors of subsequent quitting" – which they identify as cognitive responses and foregoing cigarettes – indicated that Australian warnings produced stronger cognitive responses and trend towards greater foregoing

Australian Government's DHA). Shanahan and Elliott 2008 reported on a study in which telephone survey respondents were asked a prompted question in regard to the behavioural effects of health warnings. Among smokers, health warnings were reported as helping smokers smoke less (36%), try to quit (43%), and think about quitting (57%). Forty-nine percent of smokers reported no effect on behaviour. Recent quitters reported that health warnings helped them smoke less (62%), try to quit (64%), think about quitting (75%), give up smoking (62%); and stay quit (55%). In prompted questioning, recent quitters (53%) and ex-smokers (11%) identified "Health warnings on cigarette packets – Pictures" as a factor that helped them decide to quit smoking, whereas recent quitters (44%) and ex-smokers (14%) also identified "Health warnings on cigarette packets – Text" as a factor that helped them decide to quit smoking. 2% of recent quitters mentioned the text and 1% the pictures in respect of the main reason to quit). See *ibid.* pp. 118-122. Australia's expert, Dr Biglan, also refers to a 2011 study, in which an experimental auction was used to estimate the differences in demand associated with different health warning label formats and different packaging formats (including plain packaging). Biglan Report, (Exhibit AUS-13), paras. 102-103 and 174 (referring to Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)); and Rousu and Thrasher 2013, (Exhibits AUS-228, JE-24(54))). Thrasher et al. 2011 found that packages with the pictorial warning attracted a lower mean bid than the mean bid on the control pack (which featured a 50% text-only warning on one side of the pack), and that the mean bid for the package featuring a pictorial health warning was lower still on the plain unbranded package. Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)). A separate paper discussing the same study sought to estimate the percentage of US smokers that would decrease their demand for cigarette packs with GHWs and with plain packaging. The authors reported that 45% of participants bid less for a package with a pictorial health warning than a package with a front text warning label, and 64% bid less for a plain package with a pictorial label than a package with a front text warning label. Rousu and Thrasher 2013, (Exhibits AUS-228, JE-24(54)). The authors of these two studies argue that the use of an auction-based methodology of this kind "may be preferable to hypothetical valuation techniques such as hypothetical choice experiments or hypothetical auctions" because of the immediate monetary consequences, and the reduction of bias that can exist when consumers are asked for hypothetical valuations. Thrasher et al. 2011, (Exhibits AUS-229, JE-24(58)), p. 42. See also Rousu and Thrasher 2013, (Exhibits AUS-228, JE-24(54)), p. 171.

²³²⁰ A 2007 study considered smoking behaviour with reference to variables including quit attempts in the past year, and intention to quit and found that those warnings that were more likely to be noticed and read (the warnings considered in this study were UK warnings) were also more likely to lead smokers to think about quitting, to think about the health risks of smoking, and had deterred them from having a cigarette in comparison with smokers from other countries. Hammond et al. 2007, (Exhibit AUS-212), p. 207. In a telephone survey covering four countries, the object was to examine variations in smokers' knowledge about tobacco risks and the impact of package warnings. The authors found that, *inter alia*, a higher level of health knowledge was positively correlated with planning to quit, and that the odds of planning to quit were greater among smokers who agreed that smoking causes the health effects identified in prompted recall, and increased in a linear fashion with the total number of health effects reported. Hammond et al. 2006, (Exhibit AUS-190). Another study using data from the same four countries examined prospectively the impact of health warnings on quitting activity. Specifically, in a total of five waves, the authors used reactions to health warnings collected at one wave to predict cessation activity at the next wave. The authors examined warning salience and cognitive responses (i.e. thoughts about harm and of quitting, forgoing of cigarettes, and avoidance of warnings) as predictors of quit attempts, and of quitting success among those who tried (measured as one month of sustained abstinence, replicated across four wave-to-wave transitions). The authors determined that each of these indicia were significantly positively correlated with making a quit attempt by the next survey wave, though there were no consistent patterns of success. The authors also identified that cognitive responses and foregoing cigarettes were consistent predictors of making a quit attempt across all wave-to-wave transitions where they were measured (though the size of the effect was reduced when controlling for quit intentions). Borland et al. 2009b, (Exhibit AUS-211), pp. 669-672.

²³²¹ Borland et al. 2009a, (Exhibit AUS-210), p. 360.

than the United Kingdom's text-only warnings.²³²² We note that these studies are not critiqued in the reports by Professors Kleijnen et al, Professors Inman et al, or Professor Klick. We also note that these studies are not critiqued by Professor Viscusi in his more general assessment of studies concerning the effect of plain packaging on GHWs.

7.853. Turning to *actual smoking behaviours*, in our earlier analysis of the relationship between attitudes and behaviour²³²³, we noted that a body of research is devoted to the study of the correlation between attitudes, intentions and behaviours, and that the parties all acknowledge, with reference to this research, that the strength of the correlation between attitudes and behaviours in a given context is affected by the interaction of multiple factors.²³²⁴ We also found, in that context, that smoking behaviours are recognized to be influenced by a broad range of factors.

7.854. In the context of our analysis of the effect of changes in the appeal of tobacco products on smoking behaviours, we noted that we do not understand the assumption underlying the design and structure of the TPP measures to be that a reduction in the appeal of tobacco products would be expected *in all cases* to lead to a change in smoking behaviours.²³²⁵ Similarly, we see no basis to assume that GHWs made more effective through changes in cessation knowledge, brand appeal, affective reactions, and health knowledge/risk perception need to be assumed to systematically affect quit intentions and subsequently change smoking behaviour, to establish that increased effectiveness of GHWs through the introduction of tobacco plain packaging would have the ability to contribute to reducing the use of, and exposure to, tobacco products. As discussed above, we understand the reasoning underlying the structure and operation of the TPP measures to be that at least some consumers will be influenced in their smoking behaviours, if GHWs are made more effective as a result of TPP, in combination with other tobacco control measures in place in Australia. We will therefore consider the effect of more effective GHWs on the relevant smoking behaviours, which are initiation, cessation and relapse, as elaborated in Section 3(2) of the TPP Act.

7.855. With respect to initiation, we note Honduras's argument that adolescents, who are "well-aware of the health risks associated with smoking", are driven in their decision to smoke by peer pressure, whether they are sensation-seeking, and whether they are responsive to reward stimuli.²³²⁶ This argument accords more generally with the arguments made by all complainants in connection with the factors that drive adolescent smoking behaviour.²³²⁷

7.856. In our consideration of adolescent smoking behaviour, above, we noted a number of consistencies in the evidence before us in respect of the drivers of smoking initiation, including the developmental factors which have a bearing on the extent to which these drivers may lead to smoking initiation in adolescents and young adults (and with particular reference to adolescent risk-taking, short term rewards, failure to take adequate account of risks, and the need to achieve peer approval).²³²⁸ We also concluded that the evidence indicates that the images and messages conveyed by tobacco packaging are of such a nature as to be capable of conveying a belief on adolescents and young adults that initiating tobacco use can fulfil certain needs, and that it is recognized that youth and young adults are particularly vulnerable to acting on compulsions that are caused by those needs. Taken together, therefore, the evidence before us supports the view that the imagery and associations, with which tobacco products are imbued by virtue of their packaging, are of such a nature as to tap into the vulnerabilities faced in particular by adolescents, by virtue of the nature of adolescent decision-making processes as summarized above.²³²⁹

7.857. Consistently with these conclusions, in the context of the question at issue – whether GHWs, made more effective by plain packaging, could be expected to affect smoking behaviours – we recall in particular the agreement between the complainants' expert, Professor Steinberg, and Australia's expert, Professor Slovic, that "young people do not pay attention to risk

²³²⁷ See "Smoking initiation" within section 7.2.5.3.5.2 above.

²³²⁸ See paras. 7.709-7.714 above.

²³²⁹ See para. 7.737 above.

information".²³³⁰ In this sense, the prospect that plain tobacco packaging may enhance the visual attention paid to, or increase the noticeability of, GHWs, may not in and of itself be sufficient to overcome the reward-seeking behavioural impulses of those adolescents for whom this impulse is a dominant factor in their decision-making.

7.858. We note, however, Professor Tavassoli's discussion of the notion of "selective attention", and in particular that human brains are not capable of attending to numerous elements that may at once compete for attention.²³³¹ Professor Tavassoli discusses, in that context, studies by Maynard et al. 2012 and Beede and Lawson 1992, which are discussed above, in respect of eye-tracking indicating greater attention to GHWs on plain packs than on branded packs, and that recall of warnings was also enhanced when it did not compete with brand imagery.²³³² Professor Tavassoli also discusses the concept of "goal competition", in which he argues that "the perceived value of a product is based on its perceived ability to satisfy consumption goals".²³³³ He argues that the "accessibility of a goal can also be influenced by the activation or accessibility of other goals", as "making one goal accessible will not only increase the impact of that goal on behaviour, but it will decrease the impact of unrelated or oppositional goals", because it is "difficult for people to entertain multiple goals in their minds, and if one gains prominence, others are inhibited".²³³⁴ Professor Tavassoli states that goal-competition research highlights "that there is a difference between whether people know something and how much influence that knowledge has on what people do in a given situation".²³³⁵ In this respect, he argues that goal-competition "does not require GHWs to change consumer beliefs about the health benefits of not smoking"; instead, "TPP can increase GHWs effectiveness by allowing GHWs to activate more effectively already held beliefs at critical moments, i.e. by limiting the activation of competing goals that momentarily inhibit the goal of staying healthy".²³³⁶

7.859. In response to this argument, Cuba argues that the appearance of a trademark on the remaining 25% of the front of the pack will not have any appreciable effect on the consumers' appreciation of the health risks of tobacco use.²³³⁷

7.860. In our view, Professor Tavassoli's arguments, seen against the broader context of the factors recognized to influence smoking behaviours that we considered in earlier parts of our analysis, including smoking initiation among adolescents, suggest that the removal of the branding elements that may constitute a cause for adolescents to associate tobacco products with positive imagery and rewards (on the basis of which they would be inclined to act, as discussed above), would remove, or at least significantly reduce, the competition (both in terms of attention, and between different goals) between the negative message conveyed by the GHW, and branding elements of the package. Such a conclusion appears consistent with Professor Chaloupka's model for understanding the functioning of GHWs, and in particular the bearing that GHWs can have on the overall appeal of the product²³³⁸, in that in the presence of tobacco plain packaging the *only* message communicated by the packaging is the GHW, and that no association with rewards is communicated. In this respect, though we accept that knowledge of risk will not always be a sufficient motivator of adolescent behaviour, we are nonetheless not persuaded that the removal of branding elements, which we have found to communicate messages that appeal to adolescent reward-seeking behaviour, could not increase the effectiveness of GHWs by removing those appealing elements that may compete with, and detract from appreciation of, the GHWs.

7.861. In respect of cessation and relapse, we recall the discussion by the parties, including through their experts' reports (which are most relevantly, in this context, those submitted by Drs Satel and Brandon, and by Professor Fischer), in respect of the drivers of cessation and relapse. As we have discussed, much of these experts' discussion of cessation and relapse relates to the extent to which the absence of branding on tobacco products influences whether tobacco

²³³⁸ See paras. 7.805-7.806 above.

packaging can act as a conditioned cue and thus inhibit cessation or encourage relapse. These experts have not addressed specifically the effect of more effective GHWs on cessation and relapse. We note however that all three of these experts²³³⁹ agree that concern regarding the health effects of tobacco use is a factor associated with successful quit attempts and/or cessation.²³⁴⁰ This is consistent with the observation by Professor Slovic that "[w]ith experience, the health risks and other adverse consequences of smoking became evident and stood as a major motivation to quit using cigarettes".²³⁴¹ We also note that an expert report by Professor McKeganey, relied on by the Dominican Republic, identifies a number of studies that set out factors associated with cessation, among which are concerns over health and awareness of health consequences of smoking.²³⁴² Professor Fong also refers to Professor McKeganey's report and observes that "factors such as concerns about the health harms of smoking, lower consumption, and stronger motivation to quit are significant predictors of cessation".²³⁴³

7.862. This evidence suggests a convergence among these experts on the role of concerns regarding the health effects of tobacco products as a factor associated with motivation to quit and cessation. This is consistent with the conceptual model set out by Professor Chaloupka and endorsed by the IARC in respect of the effectiveness of GHWs, which identifies health knowledge and perceived risk as a mediator on which GHWs are intended to have an impact, and thereby affect quit intentions and, ultimately, smoking behaviours. This is also consistent with studies on the record of these proceedings²³⁴⁴, to one of which Professor Slovic also refers.²³⁴⁵ Moreover, the studies summarized above indicate that there is published evidence in support of a connection, for at least **some smokers**, between the noticeability of GHWs and thoughts about quitting²³⁴⁶; about the health risks of smoking, and deterrence from having a cigarette²³⁴⁷; that levels of health knowledge are correlated with plans to quit²³⁴⁸; and that warning salience and cognitive responses are correlated with foregoing cigarettes and with quit attempts.²³⁴⁹ This evidence, taken together, therefore suggests that the type of impact that plain packaging is anticipated to have on the effectiveness of GHWs, i.e. an improved awareness of health concerns associated with smoking, is among those factors that are recognized as influencing the motivation to quit and cessation of the use of tobacco products. Moreover, as observed above, we do not understand the complainants to challenge the ability of GHWs in general to have an impact on the level of awareness of the health risks associated with the use of tobacco products, or the relevance of such awareness to the motivation to quit and cessation.

7.863. In light of the above, we are not persuaded that the complainants have demonstrated that there could be no correlation between increases in the effectiveness of GHW (as measured by changes in cessation knowledge, brand appeal, affective reactions, and health knowledge/risk

²³³⁹ See Satel Report, (Exhibit UKR-7), paras. 26 and 33; Fischer Report, (Exhibit DOM/HND-7), para. 50; and Brandon Report, (Exhibit AUS-15), para. 79.

²³⁴⁰ Dr Satel identifies the following "general predictors of cessation": motivation to quit (which is influenced by the immediacy of health concerns); a supportive, encouraging network of friends and family; and the smoker's sense of self-efficacy (i.e. degree of confidence that once they have stopped smoking they can remain abstinent). Satel Report, (Exhibit UKR-7), paras. 21-33. Professor Fischer argues that successful quit attempts are associated with variables such as motivation, self-efficacy, lower nicotine dependence, and prior quit attempts, younger age, lower cigarette consumption, and smoking-related health concerns. She associates smoking cessation with factors including motivation, self-efficacy, lower nicotine dependence, and prior quit attempts, older age, male gender, higher income, low alcohol consumption, lower expected health benefit, level of education, and having a higher age of smoking initiation. Professor Fischer notes in her description that this list is not exhaustive. Fischer Report, (Exhibit DOM/HND-7), paras. 18-19 and 50-51. The paper relied upon by Professor Fischer in this context also identifies health concerns as being a common motivator of quit attempts. See Hyland et al. 2006, (Exhibit AUS-226), p. iii83. Dr Brandon states that he considers that the variables identified by Professor Fischer are "all reasonable", though they "include only distal, stable characteristics, excluding proximal, environmental, and phasic variables". Brandon Report, (Exhibit AUS-15), para. 79.

perception) and changes in quitting intentions or smoking behaviours, including initiation and cessation.

7.864. In respect of relapse, Dr Satel submits that this may be precipitated by stress and negative feelings that are typically evident in the hours leading up to relapse²³⁵⁰, and that "[e]pisodic events" (such as divorce, the initiation of smoking by a partner, and conflicts with others) and economic strain, insecure employment, socializing with people who smoke, and limited opportunities for respite and recreation, make quitters vulnerable to relapse.²³⁵¹ Professor Fischer submits that clinical samples report that several predictors of relapse to smoking are the presence of withdrawal symptoms and higher levels of nicotine dependence; negative affect (mood); being younger at the time of the quit attempt; a history of comorbid psychiatric disorders, including past or current anxiety disorders, depression, and schizophrenia; and absence of tobacco-related disease.²³⁵² At the population level, she notes that relapse has been associated with the presence of withdrawal symptoms and recently failed quit attempts; negative affect; a higher level of baseline nicotine dependence; gender; lower socioeconomic status; lower subjective social status; and high stress situations following a period of low stress.²³⁵³ Australia's expert Dr Brandon appears to agree with Professor Fischer, noting that these factors are "all reasonable", although he adds that they "include only distal, stable characteristics, excluding proximal, environmental, and phasic variables".²³⁵⁴

7.865. It seems to be agreed, therefore, that such "episodic" events can drive relapse, and suggest that whether a smoker relapses depends at least in part on whether the effect of the episodic event is sufficient in its influence to overcome the impetus created by whichever factor caused a given smoker to quit in the first place. This is supported by studies on the record of these proceedings. For example, a literature review by McCaul et al. 2006 identified health concerns as a primary motivator for quitting in almost all studies reviewed, and suggested that motivation or cessation strategies include having smokers construct systems to remind themselves about the health consequences of smoking in order to, *inter alia*, assist in the maintenance of a successful quit attempt and rejuvenate quit attempts among those who have relapsed.²³⁵⁵ In addition, survey data collected between 2002 and 2009 of smokers in Australia, Canada, the United Kingdom, and the United States analysed by Partos et al. 2013 found that frequent noticing of health warnings among ex-smokers was associated with greater relapse one year later, but that this effect disappeared when the authors controlled for urges to smoke and self-efficacy. The authors also reported that participants who reported that health warnings make staying quit "a lot" more likely were less likely to have relapsed one year later.²³⁵⁶

7.866. This evidence suggests to us that by influencing the extent to which GHWs on tobacco products are considered easier to see, more noticeable, perceived as being more credible and more serious, attracting greater visual attention among non-smokers and weekly smokers, less subject to distractions caused by other packaging elements, and read more closely and thought about more, the TPP measures could impact the factors that drive cessation (including, in particular, concerns about the health effects of tobacco use). However, in making this observation, we note that there is significantly less evidence before us concerning the impact of GHWs, including those made more effective because of plain packaging, on preventing relapse.

7.867. In light of the foregoing, we are not persuaded that the complainants have shown that improvements in the effectiveness of GHWs brought about by the TPP measures could not be also associated with changes in smoking behaviours, and in particular with smoking initiation and cessation.

Conclusion

7.868. In light of the above, we are not persuaded that the complainants have demonstrated that the TPP measures would not be capable of increasing the effectiveness of GHWs, and thereby contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.869. Rather, we find that credible evidence has been presented, emanating from recognized sources, that plain packaging of tobacco products may increase the salience of GHWs, by making them easier to see, more noticeable, and perceived as more credible and more serious. We are not persuaded that the complainants have demonstrated that these effects could not arise in Australia by reason of the large size of the GHWs applied simultaneously with the TPP measures, or that existing levels of risk awareness in Australia would render inutile any additional effort to increase such awareness and thereby affect risk beliefs. We are also not persuaded, in light of the evidence before us, that GHWs that would be more visible and noticeable, and perceived as being more credible and more serious, could not be expected to have an impact on smoking behaviours, including initiation, cessation and relapse.

7.870. In addition, we recall that we also have before us evidence relating to the actual application of the TPP measures since their entry into force, including empirical studies specifically addressing the impact of plain packaging on the effectiveness of GHWs, which will be considered in section 7.2.5.3.6.1 below, and given appropriate weight. We therefore do not seek to draw, at this stage of our analysis, any overall conclusion on the impact of the TPP measures on the effectiveness of GHWs, and the extent to which any change in that effectiveness has contributed to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.2.5.3.5.4 Third mechanism: reducing the ability of the pack to mislead consumers about the harmful effects of smoking

7.871. As described above, the third "mechanism" through which the TPP measures are designed to contribute to the achievement of their objective is by "reducing the ability of the pack to mislead consumers about the harmful effects of smoking", which, in turn, is expected to influence smoking behaviours and thereby contribute to a reduction in the use of, and exposure to, tobacco products.

7.872. The complainants contest the TPP measures' ability to contribute to Australia's objective through this "mechanism". Their challenge derives in part from their critique of the TPP literature, discussed in section 7.2.5.3.5.1 above, wherein the complainants dispute the relevance and reliability of the evidentiary base underlying the design and structure of the measures, which includes studies that attempted to measure the impact of plain packaging on the ability of tobacco packaging to mislead consumers about the harmful effects of smoking. In addition, the complainants argue that the TPP measures make no contribution to reducing prevalence by preventing misleading packaging because Australia's current regulatory framework is capable of preventing, and does prevent, packaging from misleading consumers.

7.873. Australia responds that the TPP measures, by reducing the ability of tobacco products to mislead consumers about the relative harmfulness of brands, or product types, will contribute to discouraging initiation and encouraging cessation of tobacco use. Where consumers are fully informed of the real risks and serious consequences of tobacco use, Australia argues, they are more likely to engage in quitting behaviour.

7.874. Australia refers to a number of studies predating the implementation of the TPP measures (including evidence drawn from the body of studies discussed above as the TPP literature) and evidence relating to the application of the TPP measures since their entry into force. In this section, we focus on the design and structure of the measures, in respect of their aptitude to reduce the ability of the pack to mislead consumers about the harmful effects of smoking, and thereby contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.875. We consider the *application* of the TPP measures, and specifically the evidence in respect of their effect on the "proximal" outcomes (of which reducing the ability of the pack to mislead consumers about the harmful effects of smoking is one) in section 7.2.5.3.6.1 below.

Main arguments of the parties

7.876. Honduras asserts that the TPP measures seem to be based on the assumption that portion of the pack that is not occupied by large GHWs could mislead consumers about the harmful effects of smoking or using tobacco products.²³⁵⁷ It recalls its argument that "there is no real and practical connection between smoking behaviours (namely smoking initiation, cessation or relapse) and tobacco packaging", and that "smoking is a highly complex behaviour, which is not influenced by tobacco packaging".²³⁵⁸ Honduras also argues that, nevertheless, the report by Honduras's and the Dominican Republic's expert, Mr Shavin, "demonstrates that the use of any design elements of packaging (including tobacco packaging) that are likely to mislead or deceive consumers could, if proper evidence is presented, be effectively dealt with under the existing legal and administrative structures in Australia".²³⁵⁹ Honduras argues that Sections 29 and 33 of the Australian Consumer Law (ACL) are adequate and broad enough to address the concern that tobacco packaging can "mislead consumers about the harmful effects of smoking or using tobacco products". Honduras refers to Mr. Shavin's statement that a representation that tobacco products are not as harmful as they actually are "could qualify as a false or misleading representation as to: (i) a 'standard' or 'quality' of a product", the "'performance characteristics' of a product" both within the meaning of Section 29, **"and/or ... the 'nature' and 'characteristics' of goods in the sense of Section 33"**.²³⁶⁰ Honduras further explains that there must be a *causal link* between the conduct and the outcome.²³⁶¹ Honduras adds that this possibility must be assessed in relation to a particular class of persons to whom the representation is directed and who are allegedly being affected by the impugned conduct, and that judges must consider the totality of all representations constituting the message, rather than focusing on one specific element thereof.²³⁶² For Honduras, in the context of tobacco packaging, this means that "it is wrong to assess whether the packaging might cause consumers to be misled as to the health effects or otherwise the desirability of the tobacco products by considering only the trademarks in isolation, without considering the effects of all of the design elements in their context, including the graphic health warnings".²³⁶³

7.877. Honduras submits that the Australian Competition and Consumer Commission (ACCC) is entrusted with, *inter alia*, investigating possible breaches of the competition and consumer protection provisions of the Australian law and has strongly enforced Australia's law against misleading or deceptive conduct. Honduras refers to Mr. Shavin's description of "specific examples of the ACCC's successful enforcement proceedings against tobacco companies, distributors and retailers", including its successful action against the promotion by some tobacco companies of brands as "light", "ultra-light", "mild", "ultra-mild" or "low-tar", which, in the ACCC's view, resulted in misleading consumers about the dangers of smoking.²³⁶⁴

²³⁵⁷ Honduras's first written submission, para. 518.

²³⁵⁸ Honduras's first written submission, para. 519.

²³⁵⁹ Honduras's first written submission, para. 520. Honduras elaborates that, as set out by Mr Shavin, four sections of the Australian Consumer Law (ACL) regulate misleading or deceptive conduct – Section 18 ("a general provision that establishes a broad prohibition on engaging, in trade or commerce 'in conduct that is misleading or deceptive or is likely to mislead or deceive'"); Section 29 (which contains specific prohibitions on kinds of false or misleading representation); and Sections 33 and 34, ("which address goods and services, respectively, and provide that a person must not, in trade or commerce, engage in conduct 'that is liable to mislead the public **as to the nature,... the characteristics ... of any goods**'"). Honduras's first written submission, para. 521 (referring to D. Shavin, "Prohibitions Against Misleading and Deceptive Conduct Pursuant to the Australian Consumer Law and the Australian Competition & Consumer Commission's History of Effective Enforcement Thereof", 4 October 2014, (Shavin Report) (Exhibit DOM/HND-1), paras. 18-22; and **Competition and Consumer Act 2010** (Cth), Excerpts, (Exhibit HND-66), Sections 29(1)(a) and 29(1)(g)).

²³⁶⁰ Honduras's first written submission, para. 523.

²³⁶¹ Honduras's first written submission, para. 524.

²³⁶² Honduras's first written submission, para. 524.

²³⁶³ Honduras's first written submission, para. 524 (referring to Shavin Report, (Exhibit DOM/HND-1), paras. 49-53).

²³⁶⁴ Honduras's first written submission, para. 529. Honduras explains that as a result of the ACCC's action, the companies gave an undertaking, amongst other things, to cease these activities and to provide funding for a consumer education campaign.

7.878. In Honduras's view, this "demonstrates that there is a comprehensive and robust legal and administrative framework in Australia to address any misleading or deceptive conduct, including in the context of tobacco retail packaging"; and that "the Australian authorities responsible for enforcing ACL against such conduct (namely the ACCC), have acted successfully and diligently against tobacco companies, distributors and retailers, when there was credible evidence that the investigated companies did in fact engage in misleading or deceptive acts".²³⁶⁵ This "shows that the plain packaging measures are superfluous" and that "[t]hey will not contribute to Australia's objective to reduce smoking prevalence by eliminating the alleged misleading or deceptive elements of tobacco packaging".²³⁶⁶

7.879. The Dominican Republic argues that the TPP measures have not contributed to reducing any tobacco consumption that would result from misleading packaging as the ACCC can and does already intervene to prohibit deceptive packaging. Specifically, the Dominican Republic submits that "Australia has had in place for many years a highly effective regulatory regime to tackle misleading packaging, and the [TPP] measures have contributed nothing to this pre-existing capability to reduce any tobacco consumption that would result from such misleading packaging".²³⁶⁷

7.880. The Dominican Republic relies on an expert report by David Shavin QC, who "explains how the Australian Competition & Consumer Commission ('ACCC') has made use of the pre-existing and longstanding consumer protection regime to prevent misleading of consumers, through packaging or otherwise, including for tobacco products".²³⁶⁸ Mr. Shavin concludes that the TPP measures will not contribute anything beyond the regime and mechanisms that already existed in Australia (and continue to exist) toward reducing the risk that tobacco packaging misleads consumers about the harmful effects of smoking,²³⁶⁹ as the use of any design element on tobacco packaging likely to mislead or deceive consumers could, if proper evidence is presented, be dealt with as misleading or deceptive conduct under Australian law.²³⁷⁰ The Dominican Republic argues that the provisions of the ACL are "broad enough to address one of the key concerns of the [TPP] **Act** – that tobacco packaging can 'mislead consumers about the harmful effects of smoking or using tobacco products'".²³⁷¹ The Dominican Republic refers in addition to Mr. Shavin's submission that the ACL's prohibition on misleading or deceptive acts has been interpreted broadly, and "creates powerful incentives for steps to be taken against packaging and other acts likely to mislead consumers, through the ability of the ACCC or private parties to bring actions resulting in the imposition of civil penalties or criminal sanctions for violations".²³⁷² The Dominican Republic submits that Australia already has at its disposal the power to prevent any ability of tobacco packaging "to mislead consumers about the harmful effects of smoking or using tobacco products", and "makes good use of such power through the ACCC's investigations and enforcement actions".²³⁷³ Thus, in the Dominican Republic's view, "the [TPP] Act fails to contribute

²³⁶⁵ Honduras's first written submission, para. 529.

²³⁶⁶ Honduras's first written submission, para. 529. See also Honduras's closing statement at the first meeting of the Panel, para. 10.

²³⁶⁷ Dominican Republic's first written submission, para. 725.

²³⁶⁸ Dominican Republic's first written submission, para. 726 (referring to Shavin Report, (Exhibit DOM/HND-1), p. 9).

²³⁶⁹ Dominican Republic's first written submission, para. 726 (referring to Shavin Report, (Exhibit DOM/HND-1), para. 15).

²³⁷⁰ Dominican Republic's first written submission, para. 727 (referring to Shavin Report, (Exhibit DOM/HND-1), para. 13). The Dominican Republic refers to Section 29 of the ACL, as well as Section 18, the latter of which "is a related, although more generalized, obligation, providing that a person 'must not, in trade or commerce, engage in conduct that is misleading or deceptive or is likely to mislead or deceive'". Dominican Republic's first written submission, para. 728 (referring to ACL, (Exhibit DOM-110)).

²³⁷¹ Dominican Republic's first written submission, para. 729 (quoting Shavin Report, (Exhibit DOM/HND-1), para. 23). For example, "an explicit or implicit representation that tobacco products are not as harmful as they actually are would qualify as a false/misleading representation as to a 'standard' or 'quality' or 'nature' of a product within the meaning of sub-section 29(1)(a) of the ACL", and, furthermore, such a representation would qualify as a false/misleading representation as to the "performance characteristics" of a product, within the meaning of sub-section 29(1)(g) of the ACL. Ibid.

²³⁷² Dominican Republic's first written submission, paras. 730-731.

²³⁷³ Dominican Republic's first written submission, para. 735. Dominican Republic's first written submission, para. 732 (referring to Shavin Report, (Exhibit DOM/HND-1), and Shavin Pre-Vetting Report, (Exhibit DOM/HND-9), paras. 73-74). Reference is also made to the ACCC's investigations of "allegations that the use of such descriptors constituted misleading or deceptive actions in violation of Australian consumer protection law, resulting in three major tobacco companies entering into legally enforceable undertakings to,

to the objective of reducing tobacco consumption through the prevention of misleading information on tobacco packaging, as there was no need in Australia to supplement the existing regime".²³⁷⁴

7.881. Cuba argues that the claim that plain packaging reduces the ability of packaging to mislead consumers about the harmful effects of smoking cannot justify the TPP measures.²³⁷⁵ Cuba elaborates that it "does not dispute that it is possible for design elements and information placed on the retail packaging of tobacco products to convey misleading information about the harm or the relative harm associated with the consumption of tobacco products".²³⁷⁶ However, Cuba submits that Australia's claim in this respect "only works as a justification for the [TPP] Measures if one adopts the far-reaching assumption that all of the design elements included on tobacco product packaging are deceptive".²³⁷⁷ Cuba adds that if, as Cuba contends, only a subset of design elements can be classified as deceptive then the appropriate regulatory response is to require that the relevant manufacturers remove any such deceptive material from product packaging. Cuba argues that there are existing mechanisms under Australian law that achieve this outcome.²³⁷⁸ Cuba submits that, in contrast, "by banning all design elements and outlawing the inclusion of a broad range of information (including innocuous elements such as the Habanos GI and the Cuban Government Warranty Seal)", Australia has "imposed an overbroad restriction that goes further than necessary to attain any possible public health benefit".²³⁷⁹ For Cuba, this "indiscriminate approach is disproportionate in light of the alternatives available to Australia".²³⁸⁰ Cuba summarizes that the appropriate regulatory response is not plain packaging but a requirement that the relevant manufacturers remove any such deceptive material from product packaging, and Australian law already contains such a requirement.²³⁸¹ Moreover, Cuba argues that "[n]one of the studies assessing this matter address the effect of any misperceptions as to risk on actual smoking behaviour".²³⁸²

7.882. Indonesia argues that, "as a factual matter", if Australia considers that any specific typeface currently used in a registered trademark is misleading to consumers, the ACCC has existing authority to de-register such trademarks, but has taken no such action to date.²³⁸³

7.883. Australia responds that, when coupled with packaging innovations to detract from health warnings, the packaging of a tobacco product contributes to misleading consumers about the serious health consequences of using such products.²³⁸⁴ Australia adds that "[s]uch misperceptions have been compounded by the tobacco industry's deliberate attempts to market some types of brands of tobacco products as 'safer' than others, by creating 'light' or 'low tar' cigarettes, which were previously marketed as having less distinct flavour and lower delivery of harmful chemicals compared with regular cigarettes".²³⁸⁵ Australia submits that "[t]here is a large body of evidence that the [TPP measures], by limiting the ability to use packaging design, colour and structural innovations through standardization of the packaging, reduces the ability of the retail packaging of tobacco products to mislead consumers (particularly young consumers) about the harmfulness of tobacco products".²³⁸⁶

7.884. Australia refers to various studies on the use of certain colours²³⁸⁷ and argues that in using colours to convey certain meanings, the design of tobacco product packages continues to reinforce

inter alia, cease the use of such descriptors and contribute AUD 9 million to fund a consumer education campaign". Dominican Republic's first written submission, para. 733.

²³⁸² Cuba's first written submission, paras. 350-351; and Cuba's second written submission, para. 48.

²³⁸³ Indonesia's second written submission, para. 183.

²³⁸⁴ Australia's first written submission, para. 187.

²³⁸⁵ Australia's first written submission, para. 188.

²³⁸⁶ Australia's first written submission, para. 188.

²³⁸⁷ Australia's first written submission, para. 189. Australia refers to a study that "found that smokers of gold, silver, blue or purple brands were more likely to believe their own brand might be 'a little less harmful' compared to smokers of red or black brands", and "studies [which] have found that the use of blue, gold, and white is often used to convey mildness, while darker and richer colours were seen as conveying strong

misperceptions about the notion that some tobacco brands or types are less harmful than others.²³⁸⁸

7.885. Australia submits that, while an undertaking entered into between the ACCC and the tobacco industry in Australia in 2006 resulted in the withdrawal of descriptors such as "mild", "extra mild" and "light", the tobacco industry "continued to use a variety of colours to help convey certain associations such as taste, harshness and product strength".²³⁸⁹ Australia's expert, Professor Tavassoli, notes that similar tactics were used in other jurisdictions, where *Pall Mall Filter* and *Pall Mall Lights* became *Pall Mall Red* and *Pall Mall Blue* respectively. The ban on misleading descriptors may thus "have been only partially effective, based on the learned associative meaning of colour".²³⁹⁰ In this way, "the package design and colouring used for 'light' or 'low-tar' products has been an important component of the overall strategy to mislead consumers into believing certain brands or product types are less harmful".²³⁹¹

7.886. Australia submits that tobacco industry documents "clearly describe use of colours and shading to create perceptions of reduced strength by the tobacco industry"²³⁹² and that its own commissioned research "confirmed earlier findings, concluding that darker colours [on packs] were seen to contain cigarettes which were more 'harmful to health' and 'harder to quit'" and that lighter colours were seen to be less "harmful to health", and "easier to quit".²³⁹³ Australia adds that drab dark brown packaging, which was chosen for the implementation of the TPP measures, was rated as containing tobacco products that are harder to quit, and were most harmful to health.²³⁹⁴ Australia submits that "[u]nique and creative package designs, in addition to special shapes, opening styles, and filters, have been used to differentiate brands and product types based on their harmfulness in the minds of consumers".²³⁹⁵ This is exemplified by narrow "perfume" type packs which, Australia argues, are portrayed as a fashion accessory rather than a health risk; small packs with "super slims" which, Australia contends, are portrayed to offer lower levels of addiction; and more masculine packs, which Australia argues are suggestive of being heavier or stronger.²³⁹⁶

7.887. Australia argues that plain packaging removes the design and structural features of tobacco product packaging which mislead consumers and reduces false beliefs about the harmfulness of product types or brands or variants by standardizing the package structure.²³⁹⁷ Australia adds that other product characteristics, such as the colour of the tipping paper, also convey the sense in the minds of consumers that particular products are less harmful.²³⁹⁸ Australia also argues that the misleading effect of packaging is also evident across tobacco product types, and that a study in Australia on the effect of tobacco plain packaging on cigar products linked the standardization of package structure and colour design to the perception that those products in plain packaging were more harmful.²³⁹⁹

7.888. Australia further argues that in reducing brand and product category appeal and regulating pack design and structure, plain packaging contributes to reducing false beliefs held by consumers about the "relative harmfulness" of tobacco product types and brands and variants.²⁴⁰⁰ Australia argues that the TPP measures reduce the ability of the tobacco package to mislead consumers and potential consumers (and particularly youth) by requiring that drab dark brown be utilised for all tobacco product packaging which, in Australia's submission, removes the effect of colour and

flavour". Ibid. (referring to Mutti et al. 2011, (Exhibit AUS-217); Difranza et al. 2003, (Exhibit AUS-92); Wakefield et al. 2002, (Exhibits AUS-93, CUB-28); NCI Tobacco Control Monograph No. 19, (Exhibit AUS-77); and Parr et al. 2011a, (Exhibits AUS-117, JE-24(49))).

design elements on perceptions of harm for smoking and non-smoking adults, youth, and young women, and by standardizing package designs.²⁴⁰¹

7.889. Australia also argues that tobacco plain packaging reduces the opportunities to mislead consumers about the health risks of individual products, which "is of particular relevance in the case of non-cigarette tobacco products, which are still consistently viewed as less harmful and distinct from cigarettes".²⁴⁰²

7.890. Australia concludes that, "by reducing the ability of the tobacco pack to mislead, the tobacco plain packaging measure works together with other tobacco control policies such as public education efforts and health warnings to continue to inform consumers as to the harmfulness of all tobacco product types as well as to encourage cessation behaviour", which "directly contributes to the public health objectives of the tobacco plain packaging measure, as set out under subsection 3(1) of the TPP Act".²⁴⁰³

7.891. Australia does not dispute that "the ACL *could* be used to address" this mechanism, though it "is not nearly as effective in achieving this objective as the tobacco plain packaging measure".²⁴⁰⁴ Australia elaborates that "[t]obacco plain packaging has prevented any misleading package from being released onto the Australian market since its full implementation in December 2012", whereas "using litigation under the ACL to restrain the use of misleading packaging would involve: a case-by-case approach and significant cost and uncertainty of outcome, even in circumstances where Australia has extensive evidence to demonstrate that particular packaging techniques are misleading".²⁴⁰⁵

Analysis by the Panel

7.892. The complainants consider that the ACL already provides a legal mechanism sufficient to address any concern Australia may have in respect of whether tobacco packaging can mislead consumers and through which any packaging having this effect can be removed from the market, such that the TPP measures would not be capable of making a contribution to this mechanism in excess of what is already achieved by the ACL. Australia responds that the TPP measures reduce the ability of the pack to mislead consumers about the harmful effects of smoking and, in doing so, are more effective in preventing Australians from being misled than the ACL.

7.893. At this stage of our analysis, the question before us is whether the structure, design and operation of the TPP measures is such that they would have the capacity to reduce the ability of tobacco packaging to mislead consumers about the harmful effects of smoking, and thereby contribute to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.894. We first consider the evidence in relation to the capacity of plain packaging to reduce the ability of tobacco packaging to mislead consumers about the harmful effects of tobacco products, notwithstanding the existence of a regulatory framework in Australia to address such effects. In light of the complainants' arguments that no *additional* reduction could be expected from the TPP measures in light of the pre-existing legal framework in Australia for the prevention of misleading practices, we also consider whether the presence of this legal framework implies that no additional benefit could be gained in this respect from the introduction of the TPP measures.

²⁴⁰¹ Australia's first written submission, para. 196.

²⁴⁰² Australia's first written submission, para. 197.

²⁴⁰³ Australia's first written submission, para. 200. Australia argues, with reference to Fong Report, (Exhibit AUS-14), para. 52, that the TPP measures will "likely" cause (i) "current smokers of regular (non-light) brands who are health-concerned may be more likely to understand and believe that light cigarettes are not less harmful and therefore may be more likely to quit smoking rather than switching from regular to light cigarettes"; (ii) "current smokers already smoking light cigarettes may be more likely to understand and believe that their own brand is not less harmful and therefore may be encouraged to quit"; and (iii) "non-smokers may be less likely to start to smoke and experimental smokers may be less likely to progress to increase their frequency and quantity of smoking because they are more likely to understand and believe that certain brands are not less harmful than others, and that there is no health benefit to smoking a light brand compared to a regular brand". Australia's first written submission, para. 199.

²⁴⁰⁴ Australia's first written submission, para. 731.

²⁴⁰⁵ Australia's first written submission, para. 731.

7.895. We note that some of the complainants' arguments, and in particular some of Cuba's arguments, are formulated in terms of whether plain packaging is an "appropriate" or "disproportionate" regulatory response, to address the ability of tobacco packs to mislead consumers about the harmful effects of smoking. At this stage of our analysis, however, we limit ourselves to a consideration of the capacity of the TPP measures to reduce the ability of the pack to mislead consumers about the harmful effects of smoking, and thereby contribute to Australia's objective of reducing the use of, and exposure to, tobacco products. This question is distinct, in our view, from whether an equivalent contribution could be achieved through other means that may be less trade-restrictive. We note in this respect that the complainants have, elsewhere in their submissions, proposed, as a reasonably available alternative to the TPP measures, that Australia adopt a "pre-vetting mechanism" for tobacco packaging to be administered by the ACCC, to assess individual tobacco packaging features, before a pack is placed on the Australian market. We will consider this proposed alternative in section 7.2.5.6.5 below, in the context of our "comparative analysis" under Article 2.2.

Whether the TPP measures can, by design, reduce the ability of tobacco packaging to mislead consumers about the harmful effects of smoking

7.896. The complainants do not present detailed arguments in addition to those addressed in section 7.2.5.3.5.1 above, in respect of whether the design of the TPP measures is such that they can reduce the ability of retail packaging of tobacco products to mislead consumers about the harmful effects of smoking,²⁴⁰⁶ including in the specific Australian context where a 75% GHW covers the front pack face.

7.897. Australia refers to reports by the US Surgeon General and the US National Cancer Institute, tobacco industry documents, published papers, and a number of empirical studies in support of its argument that the elimination of colour contributes to reducing the ability of the pack to mislead consumers²⁴⁰⁷, that plain packaging removes design and structural features of tobacco product packaging which mislead consumers²⁴⁰⁸, and that the reduction of the ability of the pack to mislead affects consumer intentions and behaviour.²⁴⁰⁹ Australia's expert Professor Fong further identifies a number of studies published prior to the adoption of the TPP measures, that he argues indicate that "there is strong evidence to suggest that the plain packaging measure will have the effect of reducing the ability of the retail packaging of tobacco products to mislead consumers about the harmful effects of smoking or using tobacco products".²⁴¹⁰ Another of Australia's experts, Dr Samet, referencing several of these same studies, as well as certain other studies on the record of these proceedings, concludes that "it is reasonable to propose that reduction of exposure to brand imagery would reduce consumption of cigarettes to the benefit of public health", and that the anticipated benefits would come from the consequences of plain packaging for "product appeal, salience of warnings, *and preventing misleading use of the package by the tobacco industry*".²⁴¹¹

7.898. The complainants address some of these empirical studies in the context of their critique of the TPP literature. As discussed above the complainants have submitted individual critiques of specific studies and also argue that the TPP literature as a whole suffers from serious methodological flaws and lacks the scientific rigour and objectivity required to form a reliable evidentiary base for a policy intervention of this kind.²⁴¹² Australia relies upon a number of papers that were not part of either the Peer Review Project, the Kleijnen Systematic Review, and/or the

²⁴⁰⁶ We note that Cuba acknowledges that tobacco packaging can, in principle, convey misleading information to consumers about the harm, or relative harm, associated with the consumption of tobacco products. Cuba's first written submission, para. 229.

Klick TPP Literature Report to support its assertion that the measures will prevent the ability of tobacco packaging to mislead consumers about the harmful effects of smoking.²⁴¹³

7.899. Australia specifically references the conclusions of the Stirling Review and the Stirling Review 2013 Update to support its arguments. Overall, 26 of the papers included in the Stirling Review or the Stirling Review 2013 Update and either the Peer Review Project, the Kleijnen Systematic Review, and/or the Klick TPP Literature Report relate to tobacco plain packaging and the ability of branded packages to mislead consumers regarding the harmful effects of smoking, as identified by the Stirling Review and/or the independent Chantler Report reviewers. Of these, Australia has directly relied upon 19 in the course of these proceedings, as reflected by their provision to the Panel as exhibits.²⁴¹⁴

7.900. We also note that 23 of the 26 papers included in the Stirling Review or the Stirling Review 2013 Update and either the Peer Review Project, the Kleijnen Systematic Review, and/or the Klick TPP Literature Report, relate to plain packaging and the ability of branded packages to mislead consumers regarding the harmful effects of smoking, as identified by the Stirling Review and/or Chantler Report, and are on the record of these proceedings.²⁴¹⁵ Of these 23 papers, 16 were included in the original Stirling Review report and assigned quality ratings. One²⁴¹⁶ was determined to be of "high" quality, and 15²⁴¹⁷ of "medium" quality.²⁴¹⁸ Moreover, all 23 papers were assessed in the Chantler Report; 14²⁴¹⁹ were given a score of between 5 and 6 (denoting high quality/low risk of bias), and the remaining nine²⁴²⁰ were given a score of between 3 and 4.5 (denoting moderate quality/moderate bias).²⁴²¹

7.901. On the basis of its assessment, including its identification of all of the reviewed studies being of either high or medium quality, the Stirling Review concluded that:

²⁴¹³ See, *inter alia*, Mutti et al. 2011, (Exhibit AUS-217); Difranza et al. 2003, (Exhibit AUS-92); Wakefield et al. 2002, (Exhibits AUS-93, CUB-28); Labrecque et al. 2013, (Exhibit AUS-218); Hammond and Parkinson 2009, (Exhibit AUS-165); Miller et al. 2015, (Exhibits AUS-102, DOM-315); DeSantis and Morgan 2003, (Exhibit AUS-220); Borland et al. 2009a (Exhibit AUS-210); Borland et al. 2009b, (Exhibit AUS-211); Hammond et al. 2007, (Exhibit AUS-212); Borland 1997, (Exhibit AUS-213); and Brose et al. 2014, (Exhibits AUS-263, JE-24(11)).

²⁴¹⁴ See Table A: Papers Included in a Primary TPP Literature Review and/or Exhibit JE-24, at the end of these Reports. We have used the column heading assigned by both the Chantler Report and the Stirling Review, namely "Perceptions of Harm and Strength", to identify papers that measure the impact of plain packaging on the ability of a pack to mislead consumers regarding the harmful effects of smoking. We further note that the Stirling Review did not identify "perceptions of harm and strength" as a "type of finding" with respect to one of the 26 studies, namely Van Hal et al. 2012, (Exhibits AUS-161, JE-24(60)). We have included this study in our count as the reviewers of the Chantler Report did consider "perceptions of harm and strength" to be one of the "main outcomes covered" by this study.

²⁴²¹ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, pp. 50-55, and Annex E, pp. 60-62.

- Plain packaging can reduce misperceptions about the relative harmfulness of different brands.
- Colours of packs affect perceptions of product harm and strength and, in general, plain packs are perceived as more harmful than branded packs if in a darker colour such as brown and, conversely, less harmful than branded packs if in lighter colours such as white.
- Use of descriptors such as 'gold' or 'smooth' on plain packs have the potential to mislead consumers, as they do on branded packs.
- In general, smokers are more likely to have misperceptions about the harmfulness of packs, both branded and plain, than non-smokers.²⁴²²

7.902. Furthermore, the Chantler Report concluded, *inter alia*, that tobacco plain packaging will cause consumers to "be less deceived into thinking that some brands are healthier than others and that therefore health warnings apply less to them".²⁴²³ We are not persuaded that these conclusions are voided in their entirety by the presence of enlarged GHWs enacted simultaneously with the TPP measures.²⁴²⁴ We note in this respect that Australia has presented evidence that even small amounts of branding are capable of communicating information to consumers, including in the presence of large GHWs.²⁴²⁵

7.903. We further note Australia's observation that preventing the pack from misleading consumers about the harmful effects of smoking "is of particular relevance in the case of non-cigarette tobacco products, which are still consistently viewed as less harmful and distinct from cigarettes".²⁴²⁶ This assertion concerning these products is consistent with the observations contained in Parr et al. 2011b in respect of cigars and cigarillos²⁴²⁷; data from Australia, Canada, the United Kingdom, and the United States considered by O'Connor et al.²⁴²⁸; and the historical practice adopted by the industry, as documented in Kostygina et al. 2014, of "imply[ing that] cigars are better for your health than are cigarettes and that you'll enjoy them more".²⁴²⁹

7.904. In light of the above, we are not persuaded that the complainants have demonstrated that the TPP measures, by their design, would not be capable of reducing the ability of tobacco packaging to mislead consumers about the harmful effects of smoking.

Whether the TPP measures have the capacity to reduce the ability of tobacco packaging to mislead consumers about the harmful effects of smoking, in light of the pre-existing capacity to do so under the ACL

7.905. As noted above, the complainants argue that Australia's existing ACL is sufficient to address any misleading aspects of tobacco packaging, and that the TPP measures will therefore not add to this capacity. Honduras thus argues that "the use of any design elements of packaging (including tobacco packaging) that are likely to mislead or deceive consumers could, if proper evidence is presented, be effectively dealt with under" the ACL.²⁴³⁰ The Dominican Republic similarly argues that the TPP measures "have contributed nothing to [the] pre-existing capability to reduce any tobacco consumption that would result from ... misleading packaging".²⁴³¹ Cuba argues that the "appropriate regulatory response" is "a requirement that the relevant manufacturers remove any ... deceptive material from product packaging", and that "Australian law already contains such a requirement".²⁴³² Indonesia argues that "if Australia considers that any specific typeface currently used in a registered trademark is 'misleading' to consumers, the [ACCC]

has existing authority to de-register such trademarks, but has taken no such action to date".²⁴³³ The complainants rely on separate expert reports by Messrs Heydon and Shavin in this connection.

7.906. Australia submits that certain colours can convey impressions regarding the *relative* harmfulness of certain tobacco products, and in particular perpetuate an association between certain colours and descriptors such as "light" or "mild", which are no longer used in Australia by virtue of an undertaking between the tobacco industry and the ACCC in 2006.²⁴³⁴ Australia makes a similar observation in respect of pack shapes, with reference to "narrow 'perfume' type packs [that] are portrayed as a fashion accessory rather than a health risk; small packs with 'super slims' [that] are portrayed to offer lower levels of addiction; and more masculine packs [that] are suggestive of being heavier or stronger".²⁴³⁵

7.907. We have concluded in earlier parts of our analysis that such elements of package design, among others, have the capacity to convey a range of perceptions about tobacco products, including in the presence of Australia's mandatory GHWs, and influence the appeal of tobacco products and the effectiveness of GHWs (as measured by the attention paid to, cognitive processing of, perceptions of the seriousness and believability of, or recall of those warnings), such that their removal could be expected to reduce the use of, and exposure to, tobacco products. The question before us in the present context is whether, to the extent that the TPP measures can be expected to reduce the ability of tobacco packaging to mislead consumers about the harmful effects of smoking (which, as we have concluded, the complainants have not demonstrated cannot occur), they can be expected to do so to a greater extent than was already possible under the ACL.

7.908. We take note of the discussion, through the expert reports of Mr Heydon for the complainants²⁴³⁶, and Messrs Finkelstein and Sims for Australia²⁴³⁷, of the extent to which the ACL may be used to address concerns relating either to the impact of tobacco packaging on the appeal of tobacco products or to the effectiveness of GHWs. The specific question before us however, is whether, through the TPP measures, Australia can expect to reduce further (i.e. beyond that which may be possible under the ACL) the extent to which tobacco packaging has the ability to address the concern reflected in the *third mechanism* of the TPP Act, namely mislead consumers about the harmful effects of tobacco products.

7.909. In this connection, Mr Heydon, in his expert report, submits that Australia's *Competition and Consumer Act 2010* (Cth) (CCA), and in particular the ACL, "has many provisions regulating the misleading and deceptive packaging of goods, including tobacco products", and that there "is no element of the allegedly misleading conduct precluded by the challenged regime which is incapable of remedy under the Act".²⁴³⁸ Honduras's and the Dominican Republic's expert, Mr Shavin, also concludes that "given the broad consumer protections provided by the ACL and the ACCC's enforcement of the relevant provisions", the Australian Government "already has at its disposal the power to prevent any ability of tobacco packaging 'to mislead consumers about the harmful effects of smoking or using tobacco products'".²⁴³⁹ Australia's expert, Mr Sims, considers that "at best, the misleading or deceptive conduct provisions in the ACL might be capable of being used only in relation to the third objective of the [TPP Act], that is to reduce the ability of the retail packaging of tobacco products to mislead consumers about the harmful effects of smoking or using tobacco products".²⁴⁴⁰

7.910. Mr Sims' statement indicates that, to the extent that tobacco packaging would feature some element which amounts to conduct that misleads consumers about the harmful effects of

²⁴³³ Indonesia's second written submission, para. 183.

²⁴⁴⁰ Sims Report, (Exhibit AUS-22) (SCI), para. 5.8.

smoking, Australia's ACCC²⁴⁴¹ takes the view that the ACL could be enforced in respect of those elements to through the ACCC's enforcement powers, or through the various provisions of the ACL concerning penalties and remedies. This is consistent with Australia's own acknowledgement that the ACL could be used to address this mechanism, though, in its view, it "is not nearly as effective in achieving this objective as the tobacco plain packaging measure".²⁴⁴² The ability of the ACCC to address concerns relating to the misleading character of certain features of branding on tobacco products is also confirmed by the examples referred both by the complainants and by Australia relating to the use of terms such as "mild" or "light".²⁴⁴³

7.911. However, we also note the powers of the ACCC to enforce the ACL, as described in the ACL²⁴⁴⁴ and as elaborated by Messrs Shavin, Heydon, and Sims.²⁴⁴⁵ As Mr Sims explains, the ACCC has discretion in respect of which allegations of inconsistency with the ACL it pursues. Mr Sims explains that the ACCC cannot pursue all the complaints it receives about the conduct of traders or businesses, and that it "exercises its discretion to direct resources to the investigation and resolution of matters that provide the greatest overall benefit for competition and consumers".²⁴⁴⁶ In outlining the factors that influence the ACCC's discretion in this regard, Mr Sims notes (*inter alia*) that the ACCC "will always prioritise the assessment of product safety issues which have the potential to cause serious harm to consumers".²⁴⁴⁷ In his discussion of the settlement reached between the ACCC and certain tobacco companies in relation to the "mild" and "light" descriptors, Mr Sims states that the "fact that settlement was reached without any admission of liability from the tobacco companies in question is unusual and indicative of the challenges facing the ACCC in this investigation".²⁴⁴⁸ Mr Sims notes the investment of "considerable resources" in this matter between 2001 and 2005²⁴⁴⁹, and highlights the cost and uncertainty that would have been associated with the pursuit of the matter through litigation.²⁴⁵⁰

7.912. We do not wish to speculate about the costs or uncertainty that may or may not be associated with domestic litigation of this nature. However, we do observe that actions taken by the ACCC as enforcer of the ACL is a matter that is at its discretion, and that notwithstanding the priority it may give to the product safety issues that have the potential to cause serious harm to consumers²⁴⁵¹, we note that the object of the CCA, to which the ACL is a schedule, is stated, according to Mr Shavin in Section 2 of the CCA as "to enhance the welfare of Australians through

²⁴⁴¹ In his report, Mr Sims, who is the Chairman of the ACCC, points out that the report was "prepared by the ACCC at the request of the Australian Government in relation to [these proceedings]". Sims Report, (Exhibit AUS-22) (SCI), para. 1.1.

²⁴⁴² Australia's first written submission, para. 731.

²⁴⁴³ Messrs Shavin, Heydon, Finkelstein and Sims, and all parties to these proceedings, refer to the ACCC's investigation of allegations that tobacco companies had engaged in contraventions of the *Trade Practices Act 1974* (Cth) (the precursor to the ACL), including, in particular, misleading or deceptive conduct and false representations through the promotion of cigarette brands as "light", "ultra-light", "mild", "ultra-mild", or "low tar", and on the basis of test results that were allegedly artificial and did not provide an accurate reflection of a smoker's actual exposure to tar when smoking these cigarettes. This investigation began in 2001, and was settled in 2005 when the ACCC accepted court enforceable undertakings from each of the three tobacco companies involved pursuant to Section 87B of the *Trade Practices Act 1974* (Cth) (the precursor to Section 218 of the ACL). Sims Report, (Exhibit AUS-22) (SCI), paras. 4.4, 4.13-4.15. See also Heydon Report, (Exhibit UKR-11), pp. 7-9; Finkelstein Report, (Exhibit AUS-21), paras. 117-118; Shavin Report, (Exhibit DOM/HND-1), para. 96; Honduras's first written submission, para. 527; Dominican Republic's first written submission, para. 733; Cuba's first written submission, para. 82; Indonesia's first written submission, paras. 70-72; and Australia's first written submission, para. 190.

²⁴⁴⁴ ACL, (Exhibit DOM-110), Chap. 5.

²⁴⁴⁵ See, respectively, Shavin Report, (Exhibit DOM/HND-1), Part IV; Heydon Report, (Exhibit UKR-11), pp. 11-15; and Sims Report, (Exhibit AUS-22) (SCI), Part 3.

²⁴⁴⁶ Sims Report, (Exhibit AUS-22) (SCI), para. 3.5.

²⁴⁴⁷ Sims Report, (Exhibit AUS-22) (SCI), para. 3.9.

²⁴⁴⁸ Sims Report, (Exhibit AUS-22) (SCI), para. 4.13.

²⁴⁴⁹ Sims Report, (Exhibit AUS-22) (SCI), para. 4.14.

²⁴⁵⁰ Sims Report, (Exhibit AUS-22) (SCI), para. 4.15. In this respect, Mr Sims quotes the then Chairman of the ACCC, who stated:

If we were to instate proceedings of this nature, it would require a substantial vote of our litigation budget towards these particular proceedings. That would then impact significantly on the ability of the ACCC to deal with other enforcement activities that are within the scope of its jurisdiction.

²⁴⁵¹ Sims Report, (Exhibit AUS-22) (SCI), para. 3.9.

the promotion of competition and fair trading and provision for consumer protection".²⁴⁵² We note that Section 2 of the CCA itself has not been provided to us; however, there is no disagreement between the parties in this respect – indeed, Australia's expert, Mr Sims, submits that "the ACCC's main goals are to maintain and promote competition and remedy market failure, and protect the interests and safety of consumers and support fair trading in markets".²⁴⁵³ While Mr Sims' description suggests that the protection of the interests and safety of consumers are among the goals of the ACCC, it is not clear to us that tobacco packaging that misleads consumers in respect of the harmful effects of smoking would *in all cases* be the subject of enforcement by the ACCC. Indeed, it seems inevitable that the ACCC, with such a broad mandate, would face competing priorities and as such cannot, in our view, be assumed to be practically capable of intervening in the market to systematically prevent tobacco packaging from misleading consumers regarding the harmful effects of tobacco products.

7.913. Relatedly, we also note that Section 232(2) of the ACL allows the ACCC, or any other person, to apply for an injunction in respect of conduct, or proposed conduct, that may contravene (*inter alia*) the provisions of the ACL concerning misleading or deceptive conduct.²⁴⁵⁴ Messrs Shavin and Heydon each argue that it is not necessary for a person to show a special connection with the subject matter of the proceeding or otherwise to satisfy rules as to "standing" before being entitled to apply for an injunction.²⁴⁵⁵ To this, Mr Heydon adds:

It is quite common for the Australian Consumer Law to be enforced, not by public officials and not by persons directly injured by the impugned conduct, but by persons whom it does not directly affect. Any lobby group, for example, can apply for an injunction against any tobacco packaging which it considers contravenes the Australian Consumer Law. So can any concerned citizen. The Australian Consumer Law is thus in considerable measure self-enforcing: its enforcement does not depend only on the decisions of government officials.²⁴⁵⁶

7.914. Notwithstanding the breadth of the ability to apply for an injunction, the fact that the granting of such an injunction remains contingent on the exercise of discretion (in this context, of a lobby group or "concerned citizen") to seek one against an entity responsible for marketing allegedly misleading tobacco products, the exercise of such discretion cannot be assured, especially given that the applicant must undertake to pay any damages caused by the grant of the injunction in the event that no final injunction is granted.²⁴⁵⁷ It therefore cannot be assumed, in our view, that individuals or interest groups would, as Mr Heydon suggests, intervene in the market to systematically prevent tobacco packaging from misleading consumers regarding the harmful effects of tobacco products.

7.915. Furthermore, the implication of the complainants' arguments in this respect is that tobacco product packaging that is alleged to give rise to misleading representations regarding the harmful effects of smoking would remain on the market and continue to represent such information to consumers, at least until such time as the ACCC (or any other applicant, in respect of an injunction²⁴⁵⁸) did actually seek and obtain an order or undertaking to have that product removed from the market, or that the misleading conduct brought into conformity with the ACL.

7.916. Finally, we note Australia's explanation that the standardization of pack features through plain packaging, including the adoption of a single background colour for the 25% of the pack surface not covered by a GHW, prevents the possibility of differences in such pack features from having any impact on perceptions of *relative* harmfulness of different tobacco products.²⁴⁵⁹

7.917. In light of the above, we are not persuaded that the removal of the elements of tobacco packaging that are prohibited by the TPP measures could not reduce the ability of tobacco

²⁴⁵² Shavin Report, (Exhibit DOM/HND-1), para. 17.

²⁴⁵³ Sims Report, (Exhibit AUS-22) (SCI), para. 3.3.

²⁴⁵⁸ It is noted that injunctions against misleading and deceptive conduct may be granted by a court on the basis of an application by the ACCC "or any other person". See ACL, (Exhibit DOM-110), Section 232(2).

²⁴⁵⁹ Australia's first written submission, para. 187.

packaging to mislead consumers to a greater extent than what was already possible under the ACL and its enforcement through the ACCC or, as the Dominican Republic puts it, that the TPP measures "have contributed nothing to [the] pre-existing capability to reduce any tobacco consumption that would result from ... misleading packaging".²⁴⁶⁰ Rather, in our view, the TPP measures address, in this respect, regulatory gaps that may arise by virtue of the practical limitations faced by the ACCC in enforcing the ACL.

Whether the TPP measures, by reducing the ability of tobacco packaging to mislead consumers about the harmful effects of smoking, would affect smoking behaviours

7.918. The complainants have argued, as discussed in section 7.2.5.3.5.1 above, that the evidence underlying the design and operation of the TPP measures, which includes preventing tobacco packaging from misleading consumers about the harmful effects of smoking, fails to assess the impact of plain packaging on smoking behaviours. Honduras argues, in the context of this mechanism, that there is "no *real and practical* connection between smoking behaviours and tobacco packaging".²⁴⁶¹ Cuba specifically contends that none of the studies on the impact of plain packaging on the ability of the pack to mislead consumers "address the effect of any misperceptions as to risk on actual smoking behaviour".²⁴⁶² Australia argues that "reducing of the ability of tobacco products to mislead consumers about the relative harmfulness of brands, or product types, means that tobacco plain packaging will contribute to discouraging initiation and encouraging cessation of tobacco use", and that, "[w]here consumers are fully informed of the real risks and serious consequences of tobacco use, they are more likely to engage in quitting behaviour".²⁴⁶³

7.919. We also note that there is far less discussion among the parties' experts concerning the connection between the ability of the pack to mislead consumers regarding the harmful effects of smoking, and smoking behaviours. We note in particular the observation by Professor Fong that "[t]he direct evidence linking plain packaging to behaviour change through the mechanism of reducing misperceptions about tobacco products is not strong", a factor that he attributes to "the challenges of studying this linkage before the plain packaging measure had been implemented".²⁴⁶⁴

7.920. In respect of initiation, we recall our discussion in earlier parts of our analysis, and in particular the agreement between the complainants' expert, Professor Steinberg, and Australia's expert, Professor Slovic, that "young people do not pay attention to risk information".²⁴⁶⁵ However, the evidence also suggests that there is a difference between adolescents not paying attention to risk information, and adolescents being positively led to believe that the use of one tobacco product over another changes the nature of the risk. Professor Fong describes this in the following terms:

[T]he messages about lightness can also be used to target susceptible nonsmokers or experimental smokers that may have health concerns about starting smoking. Some studies suggest that youth may initiate smoking light cigarettes or continue to smoke light cigarettes because they believe that light cigarettes are less harmful. In addition, youth believe that smoking light cigarettes would make it easier for them to quit compared to regular cigarettes. Moreover, many youth believe that they would be less susceptible to the adverse health consequences of smoking by smoking lighter cigarettes. It is reasonable to conclude that these effects would have the potential to increase the likelihood that youth would take up smoking, and that smoking youth would be more likely to continue to smoke.²⁴⁶⁶

²⁴⁶⁰ Dominican Republic's first written submission, para. 725.

²⁴⁶¹ Honduras's first written submission, para. 518. (emphasis original)

²⁴⁶³ Australia's first written submission, para. 198.

²⁴⁶⁴ Fong Report, (Exhibit AUS-14), para. 421.

²⁴⁶⁵ Slovic Report, (Exhibit AUS-12), para. 110 (referring to Steinberg Report, (Exhibit DOM/HND-6)).

²⁴⁶⁶ Fong Report, (Exhibit AUS-14), para. 379.

7.921. The US Surgeon General, the US National Cancer Institute, and Professor Fong refer to tobacco industry documentation which indicates that this effect is known to and utilized by the tobacco industry.²⁴⁶⁷

7.922. In this respect, we note the argument by Professor Steinberg, that "despite knowing the **risks of smoking ... adolescents engage in [it] anyway because ...** they privilege the short term reward over long term risk".²⁴⁶⁸ We see a difference between the privileging of such short-term rewards over long-term risks and being led to perceive that in respect of some tobacco products the long-term risk is diminished or non-existent. Indeed, though Professor Steinberg (as well as, *inter alia*, Professor Viscusi) contend that young people have a high awareness of the risks of smoking, and notwithstanding our observation that there is a high, and in the case of some conditions, extremely high level of awareness of some specific health risks associated with tobacco use in Australia²⁴⁶⁹, the prospect that packaging elements can create a perception that certain risks are reduced when certain tobacco products are used would seem to catalyse the scenario described by Professor Slovic:

Research shows that young smokers, as cumulative risk takers, believe they can get away with some amount of smoking before the risk takes hold. In short, many young smokers tend to believe that smoking the "very next cigarette" poses little or no risk to their health or that smoking for only a few years poses negligible risk. These young people expect to smoke occasionally for a short while and then quit before any real harm occurs to them. The problem is nicotine addiction – another factor not adequately appreciated by the experiential mode of thinking. As noted above, the powerful visceral cravings characteristic of addiction are difficult, if not impossible, to appreciate unless you are in their grip. The "experience" of these cravings is impossible to predict or even to remember accurately. As a result, young smokers end up smoking more, over a longer time period, than they ever anticipated.²⁴⁷⁰

7.923. Indeed, the evidence before us suggests that young people's pre-disposition to not paying attention to risk information²⁴⁷¹ is in fact more likely to drive behaviour in instances where the perception of the long-term risk is diminished.

7.924. In respect of cessation, we noted in the context of the effectiveness of GHWs that the evidence before us indicates that tobacco cessation can be predicted by concerns regarding the health effects of tobacco products.²⁴⁷² We have noted, above, evidence before us that indicates that tobacco plain packaging can reduce misperceptions among consumers about the relative harmfulness of different brands, the different perceptions of harm created by the use of different design elements (including colours), and also perceptions of the relative harmfulness of different tobacco products (including cigars). Furthermore, there is evidence before us that smokers often use tobacco products that they perceive as being less harmful (including because of the perception created by the use of descriptors as well as packaging elements such as colours²⁴⁷³) as an alternative to, or substitute for, cessation²⁴⁷⁴, including as a result of the belief that they are easier to quit.²⁴⁷⁵ We are therefore not persuaded that the complainants have demonstrated that the TPP measures, by changing the ability of tobacco packaging to mislead consumers about the harmful effects of smoking, would not have an effect on smoking cessation.

7.925. In respect of relapse, we note that there is no detailed discussion before us concerning whether a reduction in the ability of tobacco packaging to mislead consumers about the harmful effects of tobacco use would prevent relapse behaviour. We recall, however, the study by McCaul et al. 2006, which suggested, in light of the role of health concerns as a primary motivator for

²⁴⁶⁷ US Surgeon General's Report 2012, (Exhibit AUS-76), pp. 531-532; NCI Tobacco Control Monograph No. 19, (Exhibit AUS-77), p. 78; and Fong Report, (Exhibit AUS-14), para. 369.

²⁴⁷⁵ Fong Report, (Exhibit AUS-14), para. 377.

quitting, that motivation or cessation strategies include having smokers construct systems to remind themselves about the health consequences of smoking in order to, *inter alia*, assist in the maintenance of a successful quit attempt and rejuvenate quit attempts among those who have relapsed.²⁴⁷⁶ Moreover, as we have noted, there is evidence before us that smokers often use tobacco products that they perceive as being less harmful (including because of the perception created by the use of descriptors as well as packaging elements such as colours²⁴⁷⁷) as an alternative to, or substitute for, cessation.²⁴⁷⁸

7.926. Indeed, to the extent that the removal of branding elements can prevent tobacco packages from conveying the notion that some tobacco products are less harmful than others, we do not exclude that the TPP measures could ensure that quitters were not misled into thinking that there is a less harmful use of tobacco products that would not compromise their health-related motivation to quit.

Conclusion

7.927. On the basis of the above, we are not persuaded that the complainants have demonstrated that the TPP measures, by their design, would not be capable of reducing the ability of tobacco packaging to mislead consumers about the harmful effects of smoking. Furthermore, we are not persuaded that any such contribution to reducing the ability of tobacco packaging to mislead consumers about the harmful effects of smoking could add nothing to what can be achieved under Australia's ACL.

7.928. In addition, we recall that we also have before us evidence relating to the actual application of the TPP measures since their entry into force, including empirical evidence specifically addressing the impact of plain packaging on the ability of the pack to mislead consumers about the harmful effects of smoking, which will be considered in section 7.2.5.3.6 below, and given appropriate weight. We therefore do not seek to draw, at this stage of our analysis, an overall conclusion on the impact of the TPP measures on the ability of tobacco packaging to mislead consumers about the health risks of smoking, and the extent to which this contributes to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.2.5.3.5.5 Overall conclusion on evidence relating to the design, structure and operation of the TPP measures

7.929. Overall, our review of the evidence before us in relation to the design, structure and intended operation of the TPP measures does not persuade us that, as the complainants argue, they would not be capable of contributing to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products, through the operation of the mechanisms identified in the TPP Act, in combination with other relevant tobacco control measures applied by Australia.

7.930. Rather, our review of the relevant evidence suggests that it is recognized that various branding features are capable of being used on tobacco packaging in order to convey certain positive associations with the products, and that a body of research exists, that sought to investigate the impact of *removing* this type of features through plain packaging of tobacco products, on the types of "proximal outcomes" now reflected in the TPP Act. While individual studies within this body of research may suffer from certain limitations, we are not persuaded that the complainants have demonstrated that these are such that it could not be considered reputable science and relied upon as relevant in relation to the anticipated impact of tobacco plain packaging on the measured outcomes, including a reduction in the appeal of tobacco products, an increased effectiveness of GHWs and reducing the ability of packaging to mislead consumers about the harmful effects of smoking.

²⁴⁷⁶ See McCaul et al. 2006, (Exhibit AUS-205), p. 53.

²⁴⁷⁷ US Surgeon General's Report 2012, (Exhibit AUS-76), p. 531.

²⁴⁷⁸ NCI Tobacco Control Monograph No. 19, (Exhibit AUS-77), p. 78. See also Fong Report, (Exhibit AUS-14), paras. 367-382.

7.931. We also take note of the body of research devoted to the study of the relationship between product perceptions, intentions and behaviours discussed by the parties, including the recognition that this relationship is complex and may be influenced by a range of factors in a given context. We further note the evidence presented to us in relation to the drivers of the smoking behaviours that the TPP measures seek to influence, namely initiation, cessation and relapse. Overall, this evidence, while it makes clear the complexity and multiplicity of factors driving smoking behaviours, is consistent, in our view, with the proposition underlying the design and structure of TPP measures that relevant behaviours may be influenced by a reduction in the appeal of tobacco products or an improved awareness and understanding of health risks of smoking, or both.

7.2.5.3.6 Evidence relating to the application of the TPP measures

7.932. As described above, the evidence before us on the contribution of the TPP measures to their objective includes empirical evidence relating to their application since their full entry into force in December 2012, which we consider in this section.

7.933. Overall, this evidence relates to the period between the entry into force of the measures in December 2012 and September 2015, with some variations in the exact period covered, depending on the data used. The empirical evidence available to us in relation to the actual operation of the TPP measures therefore reflects between a few months and a maximum of three years of application of the measures.

7.934. While all parties recognize that this evidence should play a role in our assessment of the contribution of the measures to their objective, they have different views on the weight to be given to it, and on the relative weight to be given, within the relevant post-implementation evidence, to evidence relating to "proximal" and more "distal" outcomes of the measures.

7.935. The Dominican Republic argues that, after two years of application, the time elapsed since the implementation of Australia's plain packaging regime is sufficient to observe the effectiveness of that regime in affecting smoking behaviours in Australia. It is reasonable to expect, the Dominican Republic argues, that, were the TPP measures going to reduce smoking prevalence and tobacco consumption, those effects would be discernible by now.²⁴⁷⁹ In considering these results, the Dominican Republic observes, it is worth highlighting that proponents of plain packaging predicted that the policy would reduce tobacco use within two years.²⁴⁸⁰ Honduras similarly argues that reliable and probative empirical evidence of the lack of actual impact of the measure more than two and a half years after its introduction is available and must be given primacy in the analysis.²⁴⁸¹

7.936. Australia considers however that because the measures have been in operation for a limited period of time, the utility of short-term quantitative data is "limited".²⁴⁸² It argues that the impact of tobacco plain packaging on smoking rates will be most pronounced in the long term, as a result of the addictive power of nicotine, and the consequential need for multiple quit attempts before success. This also follows, Australia explains, from the likely impact of the measure on youth initiation, as any reductions in youth initiation are not likely to be picked up in national prevalence and consumption data for some time given that youth initiation makes up a small fraction of total smoking.²⁴⁸³ Second, Australia argues, with reference to Dr Biglan, that the important role that tobacco marketing plays in influencing youth initiation is partly a function of its ability to create positive social and peer attitudes to smoking. Accordingly, it will take time before the impact of the TPP measures on the behaviour of a generation of children who have never been exposed to promotion through tobacco packaging is reflected in national surveys.²⁴⁸⁴

7.937. Australia thus considers that "the most appropriate approach to discerning the effects of the [TPP measures] in the early stages of [their] introduction was to rely upon experiments and

²⁴⁷⁹ See, e.g. Dominican Republic's first written submission, para. 428.

²⁴⁸¹ Honduras's second written submission, para. 50.

²⁴⁸² Australia's response to Panel question No. 71, para. 194.

²⁴⁸³ See, e.g. Australia's first written submission, Annexure E, para. 12.

²⁴⁸⁴ Australia's first written submission, Annexure E, para. 12.

surveys which consider drivers of choice, attitudes and, ultimately, the elicitation of behavioural intentions"²⁴⁸⁵ and it is unreasonable for the complainants to draw definitive conclusions on the success of tobacco plain packaging solely on the basis of rates of smoking prevalence so soon after the measure's implementation.²⁴⁸⁶

7.938. We are mindful that, while our task is to assess the actual contribution of the measures to their objective in light of the available evidence before us, we must take due account of the possibility that the effects of certain measures may manifest themselves over a longer period of time and into the future. We note in this respect the observation of the Appellate Body in *US – Gasoline*, in the context of Article XX(g) of the GATT 1994, that "in the field of conservation of exhaustible natural resources, a substantial period of time, perhaps years, may have to elapse before the effects attributable to implementation of a given measure may be observable".²⁴⁸⁷ Similarly, certain measures to protect public health, including, as is the case here, certain measures based on behavioural responses to expected changes in beliefs and attitudes, may take some time to materialize fully or be perceptible in the relevant data.

7.939. We note in particular in this respect Australia's argument that the impact of the measures on smoking initiation can only manifest itself fully over a longer period of application, as it gradually affects future generations not exposed to any form of tobacco branding, on packaging or otherwise. We also note Australia's argument that smoking cessation is known to require multiple attempts and that is made more difficult by addiction to nicotine, such that, even where plain packaging would be effective in achieving the intended proximal outcomes and thereby have an influence on quitting intentions, carrying out the decision to quit may take up to several years and require repeated attempts.²⁴⁸⁸

7.940. We find these considerations persuasive and agree with Australia that, to the extent that the TPP measures rely on evolutions in smoking behaviours that may not be immediately perceptible or measurable, or may take time to materialize in actual behaviours, data and evidence relating to actual smoking behaviours in the early period of application of the measures may not provide a complete picture of the extent to which the measures contribute, and can be expected to contribute into the future, to their objective. We also consider that, in this context, and in light of the nature of the design of the measures, as discussed in preceding sections, available empirical evidence relating to the impact of the measures on "proximal" outcomes, as well as evidence relating to "distal outcomes" that may be precursors of actual smoking behaviours, may usefully inform our assessment of the actual contribution of the TPP measures to their objective, together with evidence before us relating to actual smoking behaviours since the entry into force of the measures.

7.941. We further note the submission of the complainants that, even if the TPP measures produced short-term effects, these effects would rapidly "wear-out". The complainants refer in this context to the "wear-out" effect of advertising messages. We note however that, as observed by Australia, the TPP measures do not, in themselves, seek to transmit a specific message, the effect of which would "wear-out" over time, but rather seek to *limit* the ability of tobacco packaging to convey specific positive associations through branding features.²⁴⁸⁹ We are not persuaded, therefore, that the examples cited by the complainants in this respect should be assumed to be fully transposable to the effects of plain packaging on relevant behavioural outcomes. Where relevant, however, specific wear-out effects are discussed in the context of the analysis of the empirical evidence before us on the application of the TPP measures.²⁴⁹⁰

²⁴⁸⁵ Australia's first written submission, para. 147.

²⁴⁸⁶ See, e.g. Australia's first written submission, Annexure E, para. 13.

²⁴⁸⁷ Appellate Body Report, *US – Gasoline*, p. 21, DSR 1996:I, 3, p. 20. See also Appellate Body Report, *Brazil – Retreaded Tyres*, para. 153 fn 243.

²⁴⁸⁸ See Australia's first written submission, para. 670; second written submission, para. 496; and response to Panel question No. 200, paras. 323-326.

²⁴⁸⁹ We note however that to the extent that specific messages are intended to be communicated through the pack, these are contained in the GHWs that apply in conjunction with plain packaging. We understand the rationale for "rotating" such messages to be precisely to avoid the type of "wear out" effect identified by the complainants.

²⁴⁹⁰ See Appendices A and B.

7.942. We take note also of the parties' detailed exchanges concerning the precedential value of the Canadian experience with the introduction of GHWs and the assessment of its effectiveness over time.²⁴⁹¹ We are not persuaded, however, that a detailed review of the evidence in respect of that measure would provide a conclusive response to the question before us here, which is limited to determining the extent to which the effects of the TPP measures can be expected to be perceptible at the time of our assessment on the basis of the empirical evidence before us, and the implications of this consideration on the conclusions that we may reach on the contribution of the TPP measures to their objective. Specifically, given the complexity of intervening factors, we are not persuaded that the experience with GHWs in the Canadian context would necessarily be directly transposable to the Australian current context relating to the introduction of the TPP measures.²⁴⁹² Nonetheless, bearing in mind this discussion, we are mindful of the challenges inherent in identifying data and methodologies apt to reveal the effects of measures intended to affect population-wide behaviours in a complex setting, and the need to exercise caution in seeking to draw conclusions on the effectiveness of this type of measures on the basis of relatively limited information.

7.943. In light of the above, we consider the evidence before us in relation to the application of the TPP measures with awareness that the time-period for which evidence of application of the measures is available may have an impact on the nature and extent of the conclusions that may be drawn from this evidence. In addition, we are mindful that the probative value of this evidence may also be affected by other factors, such as the quality and nature of the available data itself.

7.944. In light of the above, we consider in turn below:

- a. the evidence before us relating to "proximal outcomes", that is, the effect of the TPP measures on the three parameters underlying the three "mechanisms" reflected in the TPP Act (appeal of tobacco products, effectiveness of GHWs, and ability of the pack to mislead consumers about the harmful effects of tobacco products);
- b. the evidence before us in relation to quitting-related and other "distal" outcomes; and
- c. the evidence before us relating to smoking behaviours, based on consumption and sales volumes of tobacco products and smoking prevalence, since the entry into force of the TPP measures.

7.2.5.3.6.1 Impact of the TPP measures on "proximal" outcomes (appeal of tobacco products, effectiveness of GHWs and ability of the pack to mislead)

7.945. The parties submitted as exhibits a number of peer-reviewed studies investigating the post-implementation impact of the TPP measures and enlarged GHWs on non-behavioural proximal outcomes, namely: (i) reduction in the appeal of tobacco products; (ii) increased effectiveness of GHWs; and (iii) reduction in the ability of the pack to mislead consumers about smoking harms.²⁴⁹³ Appendix A reviews and discusses this evidence, in light of the relevant expert reports submitted by the parties.

7.946. Australia submits that the available post-implementation empirical studies on non-behavioural outcomes confirm that TPP and enlarged GHWs have achieved the objectives of

²⁴⁹¹ See, e.g. Australia's first written submission, para. 16; Australia's response to Panel question No. 200, paras. 334-335; Chaloupka Public Health Report, paras. 89-96; IPE Updated Report, (Exhibit DOM-303), Section 6; and J. List, "A Further Consideration of the Empirical Evidence on the Effects of Australia's Tobacco Plain Packaging Legislation", 16 September 2015, (List Rebuttal Report), (Exhibit DOM/IDN-3), paras. 76-83.

²⁴⁹² Cf. Australia's first written submission, Annexure E, paras. 53-58; Australia's response to Panel question No. 11; and List Rebuttal Report, (Exhibit DOM/IDN-3), para. 80 (highlighting the challenges associated with cross-jurisdictional comparisons).

²⁴⁹³ Some of these papers also analyse more distant variables, such as beliefs, attitudes and intentions towards smoking and quitting, as well as quitting attempts. These papers are also discussed in Appendix B to these Reports.

(i) reducing appeal, (ii) increasing the effectiveness of GHWs, and (iii) reducing the ability of packaging to mislead consumers about the harmful effects of tobacco products.²⁴⁹⁴

7.947. Based on the review of these peer-reviewed papers, and in some cases the re-analysis of the data used in these papers, the complainants argue that the TPP measures have not had the expected effects on the antecedents of behaviour posited in Australia's conceptual framework of the TPP measures.²⁴⁹⁵ In particular, they contend that beyond the obvious findings that the pack is less visually appealing and people more often notice the larger GHWs first, empirical evidence shows little or no effects of the policies on the antecedents of behaviour. They further claim that the variables relating to beliefs, attitudes and intentions towards smoking were almost entirely unaffected by the TPP measures.²⁴⁹⁶ Cuba relies in full on a report submitted by the Dominican Republic as well as on a report submitted by Ukraine, as regards the post-implementation data, analysis, and the conclusions to be drawn from it.²⁴⁹⁷ Cuba also relies upon reports submitted by Honduras, and a report prepared in connection with the UK Consultation on the Introduction of Regulations for Standardised Packaging of Tobacco Products.²⁴⁹⁸

7.948. In addition, the complainants' experts submit that some of the published empirical studies on Australia's TPP measures provide an inaccurate picture of the empirical evidence. They state that some of these papers failed to report the results for more than half of all the variables available in the survey dataset, which were overwhelmingly not statistically significant, suggesting no impact by plain packaging on these variables. The complainants contend that the authors of some of these published studies also failed to explain that a number of the reported statistically significant effects had vanished by the end of the first year of Australia's implementation of the TPP measures as a result of wear-out effects. The Dominican Republic and Indonesia further criticize these papers for failing to report the effects size of the statistically significant effects. According to their experts, most of the reported statistically significant effects are small, suggesting that the TPP measures have little importance in shifting behaviour.²⁴⁹⁹

7.949. Four peer-reviewed papers analysed empirically the impact of Australia's TPP measures on the appeal of tobacco products.²⁵⁰⁰ Different survey data were used by several of these published papers. Most survey data cover adult smokers, with the exception of a survey of students attending secondary schools.²⁵⁰¹ Most of these peer-reviewed papers analyse only cigarette smokers, although some of these survey datasets also include information on cigar smokers. Only one peer-reviewed study analyses appeal-related outcomes in relation to cigar and cigarillo smokers.²⁵⁰²

7.950. Based on different datasets, five peer-reviewed papers have also empirically investigated the impact of Australia's TPP measures on the effectiveness of GHWs.²⁵⁰³ An expert report

prepared by Professor Klick and submitted by Ukraine also contains an analysis of the impact of the TPP measures on the effectiveness of GHWs.²⁵⁰⁴

7.951. Two peer-reviewed papers analyse empirically the impact of Australia's TPP measures on the ability of the pack of tobacco products to mislead consumers among adult cigarette smokers and adolescents respectively.²⁵⁰⁵

7.952. This evidence is reviewed and discussed in detail in Appendix A. Notably, the parties discuss various results based on data from the National Tobacco Plain Packaging Tracking Survey (NTPPTS), a nationwide tracking survey funded by Australia and conducted by CCV, to track the effects of plain packaging.²⁵⁰⁶ In the context of these proceedings, the Dominican Republic sought, and obtained access to, data from this survey.²⁵⁰⁷ The Dominican Republic and Indonesia jointly submitted an expert report by Professors Ajzen, Hortaçsu, List, and Shaikh (Ajzen et al.) re-estimating the NTPPTS dataset covering questions related to the plain packaging mechanisms, and reviewing the accuracy and completeness of various findings reported in the studies relied upon by Australia.²⁵⁰⁸

7.953. On the basis of their re-analysis of the NTPPTS data, Ajzen et al. observe the following with respect to the impact of the TPP measures on the appeal of tobacco packs and products:

As we would expect, results regarding the first two measures relating to appeal of the pack showed that respondents rated plain packs with larger GHWs as significantly less appealing than previously marketed branded packs with smaller GHWs. The size of these effects was, according to Cohen's (1988) rule of thumb, moderate to large ($r = .35$ and $.54$).²⁵⁰⁹ These findings are little more than a "manipulation check," i.e., ***a check to make sure that plain packs were, as intended, perceived to be less visually attractive than branded packs. After all, plain packaging was explicitly designed and pre-tested to make sure that the package was unattractive***; and the plain packaging was combined with enlarged, dominant, and visually repulsive GHWs. Interestingly,

²⁵⁰⁴ See Klick Report, (Exhibit UKR-5). See also section 1.6.6 above for a description of Ukraine's participation in these proceedings.

²⁵⁰⁵ See Wakefield et al. 2015, (Exhibits AUS-206, DOM-306); and White et al. 2015a, (Exhibits AUS-186, DOM-235).

²⁵⁰⁶ To track the effect of the plain packaging measure, Australia funded the National Tobacco Plain Packaging Tracking Survey (NTPPTS), a nationwide tracking survey conducted by CCV. The NTPPTS is a continuous cross-sectional baseline survey of about 100 interviews per week of current smokers and recent quitters aged 18 to 69 years, conducted from 9 April 2012 to 30 March 2014. A follow-up survey of baseline participants then took place approximately four weeks after the initial survey, with the follow-up surveys conducted from 7 May 2012 to 4 May 2014. NTPPTS Technical Report, (Exhibits AUS-570, HND-124, DOM-307), pp. 7-8. According to Australia, the short time period between interviews limits the ability of the survey data to be used to examine the longer-term impacts expected of the measure. Australia's response to Panel question No. 196, paras. 230, 236; and response to Panel question No. 198, paras. 280-293. It considers that the survey data are most suited to assessing changes in the specific mechanisms of the measure. Results from the NTPPTS were used in six papers published in a supplement to the journal *Tobacco Control* in 2015. Ajzen et al. Data Report, (Exhibit DOM/IDN-2), four of which are relied on by Australia in these proceedings. See, e.g. Australia's response to Panel question No. 198, para. 294 fn 407 (referring to Wakefield et al. 2015, (Exhibits AUS-206, DOM-306); Brennan et al. 2015, (Exhibits AUS-224, DOM-304); and Durkin et al. 2015, (Exhibits AUS-215 (revised), DOM-305)), and paras. 305-308 (referring to Scollo et al. 2015a, (Exhibits HND-133, DOM-237, DOM-311)).

²⁵⁰⁷ See section 1.6.7.3.2 above.

²⁵⁰⁸ See Ajzen et al. Data Report, (Exhibit DOM/IDN-2); and Ajzen et al. Data Rebuttal Report, (Exhibit DOM/IDN-6).

²⁵⁰⁹ (footnote original) Whereas the first of the two pack appeal questions constitutes a direct measure of disliking for the pack, the second question asked respondents to rate the appeal of the current packaging "compared with a year ago." This question must have appeared odd to the participants prior to the introduction of plain packaging as there had been no significant change in the appearance of their cigarette packs. Further, asking respondents to draw comparisons with a year ago is likely to produce demand effects, leading them to believe that the investigators expected them to see a difference. For these reasons, the first direct question is likely to provide a better indication of pack appeal, and it revealed a much smaller impact of plain packaging than did the second comparative question. See Paulhus, D. L. (1991). Measurement and control of response bias. In J.P. Robinson, P. R. Shaver & L. S. Wrightsman (Eds.), *Measures of personality and social psychological attitudes* (pp. 17-59). San Diego, CA: Academic Press.

the results also showed that, even before plain packaging and enlarged GHWs, the majority of smokers disliked the look of their pack.

Turning to the appeal of tobacco products, the lowered visual appeal of the pack appears to have some bearing on the respondents' evaluations of the quality, satisfaction, and value of their cigarettes "compared with a year ago".²⁵¹⁰ These indicators of appeal of tobacco products showed statistically significant effects of the introduction of plain packaging and larger GHWs in the hypothesized direction. However, the magnitude of the effects was markedly lower (all small effects; r^2 's \leq .30) for product appeal than pack appeal.²⁵¹¹

7.954. These conclusions suggest that Ajzen et al., having reviewed the data obtained from the NTPPTS for the Dominican Republic and Indonesia, accept that plain packs have been, "as intended", perceived to be less attractive, and that "the lowered visual appeal of the pack appears to have some bearing on the respondents' evaluation of the quality, satisfaction and value of their cigarettes" compared to the previous year. We note that these experts also conclude that "these indicators of appeal of tobacco products showed statistically significant effects of the introduction of plain packaging and larger GHWs *in the hypothesized direction*".²⁵¹² The available empirical evidence relating to the application of the TPP measures since their entry into force thus confirms, rather than discredits, the "hypothesized direction", i.e. the hypothesis reflected in the TPP literature that plain packaging would reduce the appeal of tobacco products.

7.955. Ajzen et al. also discuss the results of the NTPPTS and other data in respect of the impact of the TPP measures on GHW effectiveness and conclude that they are mixed and overall weak²⁵¹³; they note *inter alia* that although the evidence presented suggests that plain packaging and enlarged GHWs do not impact recall of specific smoking risks, the results also suggest that the TPP measures, in conjunction with enlarged GHWs, had a small but statistically significant positive impact on the ability to recall a disease featured on a current GHW.²⁵¹⁴ Ajzen et al. also confirm the results reported in a study based on ITC Project data, providing insight on the magnitude of the impacts, which they describe as "intermediate" for attentional orientation and avoidance of GHWs and "small" for noticing GHWs and cognitive behaviours.²⁵¹⁵ Ajzen et al. mention the possibility of wear-out effects but do not test this assumption.²⁵¹⁶

7.956. As discussed in Appendix A²⁵¹⁷, empirical evidence on the impact of the TPP measures on appeal of cigars and cigarillos is found in a single peer-reviewed paper, in which a descriptive statistics analysis reports that occasional premium cigar and cigarillo smokers with higher TPP exposure, non-premium cigarillo smokers, and online survey participants reported reduced perceived appeal since the implementation of the TPP measures and enlarged GHWs.²⁵¹⁸ We find these findings to be consistent with the findings published in the peer-reviewed studies on adult cigarette smokers and adolescents reviewed in Appendix A. We further see no basis to reject this evidence in its entirety.²⁵¹⁹

7.957. As regards the noticeability of GHWs, the same peer-reviewed study finds that 15 months after the introduction of the TPP measures cigar and cigarillo smokers exposed to plain packaging reported greater noticeability of the GHWs and in a few cases greater concerns about the health

²⁵¹⁰ (footnote original) It is worth noting again that questions comparing attributes of current packs, brands, or products with those of a year ago are problematic. Asking respondents to make such comparisons requires them to look for differences they may not have mentioned spontaneously. It would have been better to simply ask participants to rate pack and product attributes on different occasions (before and after introduction of plain packaging) and examine any changes directly instead of asking participants to report changes.

warnings and avoidance and concealment.²⁵²⁰ As explained in Appendix A, we see no ground to reject the study in its entirety on the basis of relevant criticism.²⁵²¹ Further, the overall findings on cigar and cigarillo smokers are to some extent in line with the results reported in the other peer-reviewed papers analysing the impact of GHW effectiveness on adult cigarette smokers.²⁵²²

7.958. Overall, our review of the empirical evidence available to us regarding the impact of the TPP measures since their entry into force on the proximal outcomes of interest, as detailed in Appendix A²⁵²³, suggests that:

- a. The TPP measures and enlarged GHWs have statistically significantly reduced the appeal of cigarettes among adult smokers.
- b. The TPP measures and enlarged GHWs have statistically significantly increased GHWs' effectiveness on the noticeability of health warnings, avoidance of graphic health labels and pack concealment among adult cigarette smokers, albeit modestly for some outcomes, while the impact of the TPP measures and enlarged GHWs on adult cigarette smokers' health beliefs is relatively more limited and nuanced.
- c. The TPP measures and enlarged GHWs have had a more mixed and limited impact on the ability of the pack to mislead adult cigarette smokers about the harmful effects of smoking.
- d. While the TPP measures (together with enlarged GHWs) have contributed statistically significantly in reducing the appeal of cigarettes among adolescents, the impact of the TPP measures (with enlarged GHWs) on adolescents' health beliefs and cognitive processing of warning information on cigarettes packs is much more limited. Similarly, the impact of the TPP measures (and enlarged GHWs) on the ability of the pack to mislead adolescents about the harmful effects of smoking is more mixed and limited.
- e. There has been a decrease in perceived packaging appeal when cigar and cigarillo smokers were exposed to the TPP measures (and enlarged GHWs). In addition, there has been an increase in the noticeability of health warnings and packs concealment among cigar and cigarillo smokers, but the evidence is mixed regarding health beliefs.

7.2.5.3.6.2 Impact of the TPP measures on quitting-related outcomes and other distal outcomes

7.959. The parties have submitted as exhibits and discussed several peer-reviewed studies investigating the post-implementation impact of the TPP measures and enlarged GHWs on quitting-related cognitions, pack concealment and quit attempts.²⁵²⁴

7.960. Australia submits that these studies confirm that the TPP measures have resulted in increased calls to Quitline and the number of quit attempts.²⁵²⁵ Australia further submits that the features of certain survey data are most suited to detecting changes in proximal outcomes (i.e. the appeal of tobacco products, GHW effectiveness, and ability of tobacco packaging to mislead consumers about the harmful effects of smoking) than in more distal variables, such as intentions and quitting-related behaviours.²⁵²⁶

7.961. The complainants submit that the TPP measures have not had the expected effects on the antecedents of behaviour posited by Australia's conceptual framework of the TPP measures.²⁵²⁷ In

²⁵²⁰ Appendix A, para. 71.

²⁵²¹ Appendix A, para. 71.

²⁵²² Appendix A, para. 71.

²⁵²³ Appendix A, overall conclusions, para. 86.

²⁵²⁴ Some of these papers also analyse more proximal outcomes variables related to appeal, GHW effectiveness, and the ability of packs to mislead, which are reviewed in Appendix A to these Reports.

²⁵²⁶ Australia's comments on complainants responses to Panel question No. 197, paras. 371-375.

²⁵²⁷ See Ajzen et al. Data Report, (Exhibit DOM/IDN-2); Ajzen et al. Second Data Report, (Exhibit DOM/IDN-4); Ajzen et al. Data Rebuttal Report, (Exhibit DOM/IDN-6); Ajzen et al. Second Data Rebuttal

particular, the Dominican Republic and Indonesia's experts contend that beyond the obvious findings that the pack is less visually appealing and people more often notice the larger GHW first, empirical evidence shows little or no effects of the policies on the antecedents of behaviour. The complainants further argue that empirical evidence shows that the TPP measures have had no impact on variables relating to quitting and relapse.²⁵²⁸ The Dominican Republic and Indonesia submitted expert reports dedicated to reviewing a series of peer-reviewed papers assessing the impact of the TPP measures on quitting-related outcomes. In some cases, the complainants' experts also re-analysed the data used in the studies.²⁵²⁹

7.962. In addition, the experts of the Dominican Republic and Indonesia contend that some of the published empirical studies relied upon by Australia provide an inaccurate picture of the empirical evidence. According to them, some of these papers failed to report the results for more than half of all variables available in the survey dataset, which were overwhelmingly not statistically significant, suggesting no impact of plain packaging on these variables. The complainants contend that the authors of some of these studies failed also to explain that a number of the reported statistically significant effects had "vanished" by the end of the first year of the TPP measures' implementation as a result of wear-out effects. The Dominican Republic and Indonesia further criticize these papers for failing to report the effects size of the statistically significant effects. According to their experts, most of the reported statistically significant effects are small, suggesting that they have little importance in shifting behaviour. The complainants also criticize the authors of one of the studies for having removed the effects of a non-existent daily trend in survey responses, which has distorted the analysis by finding wrongly statistically significant effects.²⁵³⁰

7.963. This evidence is reviewed in detail in Appendix B. Overall, our review of the empirical evidence available to us regarding quitting-related outcomes and other distal outcomes, suggests that:

- a. The impact of the TPP measures and enlarged GHWs on adult cigarette smokers' quitting intentions and quitting-related cognition reactions is limited and mixed.
- b. The TPP measures and enlarged GHWs have had a statistically significant positive impact on avoidant behaviours, such as pack concealment, among adult cigarette smokers, while their impact on stubbing out and stopping smoking is much more limited and mixed.
- c. Although the TPP measures and enlarged GHWs have statistically significantly increased calls to Quitline, the observed impact on quit attempts is very limited and mixed.
- d. The empirical evidence of the impact of the TPP measures and enlarged GHWs on adolescents' quitting-related outcomes is limited. This evidence suggests that the impact of the TPP measures and enlarged GHWs on adolescents' refraining from smoking cigarettes and thoughts about quitting is statistically not significant. No empirical evidence has been submitted on pack concealment among adolescent smokers.
- e. The empirical evidence of the impact of the TPP measures and enlarged GHWs on cigar and cigarillo smokers' quitting-related outcomes is limited. This evidence suggests that the shares of premium cigar and cigarillo smokers and of non-premium cigarillo smokers reporting having decanted the cigars and cigarillos from their boxes to a humidor or an unbranded tin or concealed their pack have increased and there has been an increase in the share of non-premium cigarillo smokers contemplating quitting.

7.2.5.3.6.3 Impact of the TPP measures on smoking behaviours

7.964. The complainants generally consider that prevalence and tobacco sales data enable an objective assessment of the actual behavioural effects of changing the appearance of tobacco products and their packaging.²⁵³¹

7.965. The Dominican Republic and Indonesia argue that empirical evidence on the application of the TPP measures since their entry into force suggests that people like plain packages less than branded packages, but that this does not carry through all the variables assessing the appeal of tobacco products, as plain packaging fails to influence the appeal of smoking and has almost no effect on the appeal of the pack and of tobacco products among non-smoking adolescent.²⁵³² Ajzen et al., in an expert report submitted by Honduras and the Dominican Republic, further argue that the TPP measures have had no positive downstream impact on smokers' quit intentions and quit attempts, and led to no changes in smokers' actual smoking behaviour.²⁵³³

7.966. Australia considers that in the early stages of introduction of the measures, its outcomes are best measured on the basis of experiments and studies which consider drivers of choice, attitudes and the elicitation of behavioural intentions. Nonetheless, it engaged in an econometric analysis of data relating to smoking prevalence and consumption since the entry into force of the TPP measures.

7.967. We consider below the evidence before us on the evolution of smoking prevalence and consumption of tobacco products in Australia since the entry into force of the TPP measures.

Impact of the TPP measures on smoking prevalence

7.968. A number of expert reports submitted by the parties are dedicated in part or in whole to an assessment of the contribution of the TPP measures to reducing smoking prevalence.²⁵³⁴ These expert reports rely on different databases, statistical analysis and econometric methods to determine whether TPP and enlarged GHWs have contributed to a reduction in smoking prevalence.

7.969. The complainants argue that the overall empirical statistical and econometric studies carried out by their experts conclude that the TPP measures have failed to reduce cigarette and cigar smoking prevalence.²⁵³⁵ The complainants also initially suggested that the TPP measures "backfired" by increasing youth smoking prevalence²⁵³⁶, although they did not pursue this argument in later stages of the proceedings.

7.970. Notwithstanding its position that in the early stages of introduction of the measures, the most appropriate way to discern their effects is to rely on experiments and surveys which consider

²⁵³⁶ See Honduras's first written submission, para. 395; Dominican Republic's first written submission, para. 523; Cuba's first written submission, para. 163; and Indonesia's first written submission, para. 412.

drivers of choice, attitudes, and ultimately, the elicitation of behavioural intentions, Australia engaged in estimating econometrically the impact of the TPP measures on smoking prevalence, in response to the complainants' submissions.²⁵³⁷ Australia argues that using the most appropriate dataset available and correcting for flaws in the econometric models put forward by the complainants' experts, the results show that the TPP measures have already contributed to reducing cigarette and cigar smoking prevalence.²⁵³⁸

7.971. The approaches proposed by the parties to analyse the trends in smoking prevalence evolved over the course of the proceedings. Overall, they address the following three main aspects, which are reviewed in detail in Appendix C:

- a. First, the parties have submitted economic figures and descriptive statistics analyses aimed at determining whether smoking prevalence has decreased following the implementation of the TPP measures;
- b. Second, Australia, the Dominican Republic, Honduras and Indonesia have submitted statistical analyses to determine whether there was a break in the trend in smoking prevalence following the implementation of the TPP measures, and in particular, whether the reduction of smoking prevalence has accelerated following the implementation of the TPP measures;
- c. Finally, Australia, the Dominican Republic, Honduras and Indonesia have submitted econometric analyses to determine whether the TPP measures have contributed to a reduction in smoking prevalence by isolating and quantifying the different factors that can explain the evolution of smoking prevalence.

7.972. Based on a review of the most recent data available and econometric evidence submitted by the parties, as detailed in Appendix C, we find that:

- a. There is evidence that overall smoking prevalence in Australia continued to decrease following the introduction of the TPP measures.
- b. The downward trend in overall smoking prevalence in Australia appears to have accelerated in the post-TPP period.
- c. Although it is not possible to distinguish between the impact of TPP and the impact of enlarged GHWs on the basis of the empirical evidence submitted, there is some econometric evidence suggesting that the TPP measures, together with the enlarged GHWs implemented at the same time, contributed to the reduction in overall smoking prevalence, including cigar smoking prevalence, since their entry into force.

Impact of the TPP measures on consumption and sales volumes of tobacco products

7.973. A number of expert reports are dedicated in part or in whole to a discussion of evidence relating to the evolution of consumption of tobacco products since the entry into force of the TPP measures.²⁵³⁹ Different databases, statistical analyses and econometric methods have been

²⁵³⁷ See Australia's first written submission, para. 670. Instead Australia claimed that the impact of plain packaging had to be investigated through its mechanism by looking at its impact on non-behavioural outcomes: (1) reduction in the appeal of tobacco products, (2) increased effectiveness of health warnings, and (3) reduction of the ability of the pack to mislead. Australia referred to the series of peer-reviewed studies published in the *Tobacco Control* journal.

²⁵³⁸ See Australia's comments on complainants' response to Panel question No. 197, para. 214.

²⁵³⁹ See Chifty Report, (Exhibit AUS-17); Chifty Supplementary Report, (Exhibit AUS-511); Chifty Rebuttal Report, (Exhibit AUS-535) (SCI); Chifty surrebuttal report, (Exhibit AUS-586); Chifty Second Rebuttal Report, (Exhibit AUS-591); Chifty Third Rebuttal Report, (Exhibit AUS-605); List Report, (Exhibit DOM/IDN-1); List Rebuttal Report, (Exhibit DOM/IDN-3); List Second Supplemental Report, (Exhibit DOM/IDN-5); List Third Supplemental Report, (Exhibit DOM/IDN-7); List summary report, (Exhibit DOM/IDN-9); IPE Report, (Exhibit DOM-100); IPE Updated Report, (Exhibit DOM-303); IPE Second Updated Report, (Exhibit DOM-361); IPE Third Updated Report, (Exhibit DOM-375); IPE Summary Report, (Exhibit DOM-379); Klick Report, (Exhibit UKR-5); Klick Rebuttal Report, (Exhibit HND-118); Klick Supplemental

proposed to determine whether TPP and enlarged GHW have contributed to the reduction in cigarette consumption.

7.974. As in respect of the analysis of smoking prevalence, one of the only points of agreement among the parties is that the empirical econometric evidence on cigarette consumption submitted does not distinguish between the impact of TPP and the impact of enlarged GHWs on cigarette sales or consumption, because both measures were implemented at the exact same time.²⁵⁴⁰

7.975. The complainants argue that all their experts' empirical statistical and econometric studies show that the TPP measures failed to reduce cigarette sales volumes or consumption.²⁵⁴¹ The complainants even suggested initially that TPP measures "backfired" by increasing tobacco sales.²⁵⁴² This argument was however not developed later in the proceedings.

7.976. Notwithstanding its contention that it was too early to investigate the impact of TPP on tobacco consumption, Australia submitted expert reports estimating the TPP measures' impact on cigarette sales, in response to the complainants' submissions.²⁵⁴³ Australia contends that once the most appropriate dataset available (i.e. In-Market-Sales data) are used and the flaws of the econometric models put forward by the complainants' experts are corrected, the econometric results show that TPP measures have already contributed to their objectives by reducing cigarette sales volumes.²⁵⁴⁴

7.977. Similar to the discussion on smoking prevalence, the approaches presented by the parties to analyse cigarette sales volumes and consumption evolved over the course of the proceedings. Overall, these address three main aspects, which are reviewed in detail in Appendix D:

- a. First, the parties have submitted economic figures and descriptive statistics analyses aimed at determining whether cigarette sales or consumption have decreased following the implementation of the TPP measures²⁵⁴⁵;
- b. Second, Australia, the Dominican Republic, and Indonesia have submitted statistical analyses to determine whether there was a break in the trend in cigarette sales following the implementation of the TPP measures, and in particular, whether the reduction of cigarette sales volumes has accelerated in the post-TPP period;
- c. Finally, Australia, the Dominican Republic, Honduras, and Indonesia have submitted econometric analyses to determine whether the TPP measures have contributed to a

²⁵⁴⁰ See Australia's first written submission, para. 518; Dominican Republic's response to Panel question No. 8, para. 61; Honduras's responses to Panel question No. 8; Indonesia's response to Panel question No. 8, para. 8.

²⁵⁴¹ See Dominican Republic's comments on responses to questions from the Panel following the second substantive meeting, paras. 681-682; Honduras's second written submission, paras. 56-60; Indonesia's second written submission, para. 192; Cuba's second written submission, paras. 276-277.

²⁵⁴² See Indonesia's first written submission, para. 412; Cuba's first written submission, para. 163; Dominican Republic's first written submission, para. 523; Honduras's first written submission, para. 395.

²⁵⁴³ See Australia's first written submission, para. 670. Instead Australia claimed that the impact of TPP had to be investigated through its mechanism by looking at its impact on non-behavioural outcomes: (1) reduction in the appeal of tobacco products, (2) increased effectiveness of health warnings, and (3) reduction of the ability of the pack to mislead. Australia referred to the series of peer-reviewed studies published in the *Tobacco Control* journal.

²⁵⁴⁴ See Australia's comments on responses to questions from the Panel following the second substantive meeting, para. 214.

²⁵⁴⁵ We note that the parties also submitted data on the value and volume of Australian imports of tobacco, including cigar and cigarillo. See HoustonKemp Report, (Exhibit AUS-19) (SCI); Dominican Republic's response to Panel question No. 5; Honduras's response to Panel question No. 5; Cuba's response to Panel question No. 5 (annexed to its response to Panel question No. 138); and Indonesia's response to Panel question No. 5. These data are not reviewed here because they were not used in any of the econometric reports submitted by the parties.

reduction of cigarette sales or consumption by isolating and quantifying the different factors that can explain the evolution of cigarette sales or consumption.

7.978. The parties also presented and discussed a graphical and descriptive analysis of cigar trade data.

7.979. Overall, based on a review of the most recent data available and evidence submitted by the parties²⁵⁴⁶, as detailed in Appendix D, we find that:

- a. There is some evidence that cigarette sales in Australia continued to decrease following the introduction of the TPP measures;
- b. The downward trend in cigarette sales in Australia appears to have accelerated in the post-TPP period;
- c. Although it is impossible to distinguish between the impact of TPP and enlarged GHWs, there is some econometric evidence suggesting that the TPP measures, in combination with the enlarged GHWs implemented at the same time, contributed to the reduction in wholesale cigarette sales, and therefore cigarette consumption, after their entry into force;
- d. The evidence before us on the evolution of consumption of cigars in the post-TPP period is more limited and does not allow us to draw clear conclusions on the effect of the TPP measures on cigar consumption in Australia.

²⁵⁴⁶ We take note of the theoretical analyses and simulations based on pre-implementation data in the expert reports submitted by Professor Neven and Professor Katz regarding the effect of the TPP measures on consumption, among other outcome variables. See Neven Report, (Exhibit UKR-3) (SCI); Neven Rebuttal Report, (Exhibit HND-123); Katz Report, (Exhibit AUS-18); and Katz Surrebuttal Report, (Exhibit AUS-584). With regard to the theoretical analysis, we note that Professor Neven and Professor Katz come to different conclusions with regard to the effects of plain packaging on the price of cigarettes and on consumption. Professor Katz's view is that the prices will increase as manufacturers will respond to plain packaging by "harvesting" captive smokers and consumption will fall. Professor Neven, on the contrary, argues that (1) the harvesting strategy is a very particular case and does not correspond to the reaction that is normally expected from producers; (2) in the Australian tobacco market with strong and weak brands, a harvesting strategy would reinforce downtrading by raising the price of premium cigarettes relative to that of value brands; (3) the increase in price associated with a harvesting strategy is likely to be transitory and in the long-term prices are likely to fall. His prediction is that plain packaging will lower the price of cigarettes and raise consumption.

With regard to the simulations, Professor Neven assumes that plain packaging has, on the one hand, a moderate effect on consumers' willingness to pay but, on the other hand, significantly reduces differentiation, generating a decrease in price which is sufficient to induce an overall increase in consumption. In his rebuttal report, Professor Katz observes that prices have increased and consumption fallen in the year following the implementation of plain packaging. He further shows that under a different set of assumptions, Professor Neven's model can generate the observed effects. Professor Neven responds that insufficient time has passed for the long-term effects of plain packaging to have materialized and that the simulation methodology should be seen as an alternative methodology which focuses on long-term effects and thereby provides evidence which complements ex-post empirical analysis. Neven Rebuttal Report, (Exhibit HND-123), para. 6.

We observe that depending on the assumptions selected, Professor Neven's model can either predict that plain packaging will increase the consumption of cigarettes, or decrease it. Professor Neven and Professor Katz disagree on how plain packaging affects consumers' willingness to pay, that is on the relative importance of the "market expansion" effect compared to the "business stealing" effect. They also disagree on how producers adjust their prices in response to plain packaging, which explains why they come to different predictions regarding the effects of plain packaging on consumption. They further disagree on how long-run effects should be weighed against short-run effects in the event that the two differ. In our view, neither the theoretical analysis nor the simulations provide conclusive evidence that contradicts the panel's findings based on the rest of the evidence submitted. We note that with regard to the weighing of short- and long-term results, Professor Neven does not explain why his model predicts the long term rather than the short term, where the long term is defined as what might happen after "at least a number of years". Neven Report, (Exhibit UKR-3), fn 41. On this particular point, his view diverges from that of the complainants who typically argue that the effects of plain packaging should have become evident soon after implementation. Moreover, he does not explain how, to the extent plain packaging generates positive effects in the short term, these positive effects should be weighed against his long-term effects. See, e.g. paras. 7.1181 and 7.1215.

7.2.5.3.6.4 Overall conclusion on evidence relating to the application of the TPP measures since their entry into force

7.980. All parties recognize the inherent difficulty, in assessing the impact of the TPP measures since their entry into force, of isolating their effect from that of other factors contributing to the outcomes of interest, both proximal and more distal. In particular, the simultaneous application of enlarged GHWs, which came into effect at the same time as the TPP measures, complicates an assessment of the actual effect of the TPP measures.

7.981. In this respect, the observations of the Appellate Body on the challenges of isolating the contribution of a measure taken in the context of a comprehensive policy are especially pertinent:

We recognize that certain complex public health or environmental problems may be tackled only with a comprehensive policy comprising a multiplicity of interacting measures. In the short-term, it may prove difficult to isolate the contribution to public health or environmental objectives of one specific measure from those attributable to the other measures that are part of the same comprehensive policy. Moreover, the results obtained from certain actions—for instance, measures adopted in order to attenuate global warming and climate change, or certain preventive actions to reduce the incidence of diseases that may manifest themselves only after a certain period of time—can only be evaluated with the benefit of time.²⁵⁴⁷

7.982. We also note the observations of the Appellate Body concerning the type of the evidence that may be pertinent, in such situations, to establish that the measure at issue contributes to the protection of public health or environmental objectives pursued, including "evidence or data, pertaining to the past or the present", as well as "quantitative projections in the future, or qualitative reasoning based on a set of hypotheses that are tested and supported by sufficient evidence".²⁵⁴⁸

7.983. As discussed above, the TPP measures are intended, by design, to operate in conjunction with a range of other tobacco control measures, including effective GHWs. In this context, it appears to be inevitable that an assessment of actual outcomes would be made in the presence of such other measures, including GHWs, which could be expected to affect at least to some degree the capacity to isolate the effect of plain packaging, as applied in the presence of such GHWs.

7.984. Notwithstanding this constraint, we consider that the evidence before us usefully informs the contribution, as of the time of our assessment, of the TPP measures to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products. As described above, a range of evidence has been presented in these proceedings, and discussed, that seeks to identify the effects of the TPP measures since their entry into force. As analyzed in detail in Appendices A to D, this evidence relates to each of the proximal outcomes of interest (appeal of tobacco products, effectiveness of GHWs and ability of the pack to mislead consumers about the harmful effects of tobacco products), to certain smoking-related behavioural outcomes, and to actual smoking behaviours (sales and consumption of tobacco products and smoking prevalence).

7.985. We note that some of the reported results on proximal, or "non-behavioural", outcomes are mixed. Nonetheless, the evidence before us, including a review by the complainants' own experts of data collected in a national tracking survey conducted specifically to assess the impact of the TPP measures, is consistent with the view that, together with the enlarged GHWs, these measures have led in particular to a reduction in the appeal of tobacco products, as hypothesized in the TPP literature, and to a greater noticeability of GHWs.

7.986. The fact that pre-existing downward trends in smoking prevalence and overall sales and consumption of tobacco products have not only continued but accelerated since the implementation of the TPP measures, and that the TPP measures and enlarged GHWs had a negative and statistically significant impact on smoking prevalence and cigarette wholesale sales, is also consistent with the hypothesis that the measures have had an impact on actual smoking behaviours, notwithstanding the fact that some of the targeted behavioural outcomes could be

²⁵⁴⁷ Appellate Body Report, *Brazil – Tyres*, para. 151. (footnote omitted)

²⁵⁴⁸ Appellate Body Report, *Brazil – Tyres*, para. 151.

expected to manifest themselves over a longer period of time. We note in this respect the limited evidence before us addressing the relationship between observed proximal outcomes and actual smoking behaviours, which suggests that further analysis will be required in this respect.

7.2.5.3.7 Impact of the TPP measures on illicit trade

7.2.5.3.7.1 Main arguments of the parties

7.987. Honduras argues that "an increase in the consumption of illicit tobacco products also means an increase in Australia's general tobacco prevalence"²⁵⁴⁹, which directly undermines "Australia's objective pursued through the plain packaging measures, that is, the reduction of smoking prevalence".²⁵⁵⁰ Honduras submits that the TPP measures have encouraged illicit operators to continue selling illicit branded packs and to introduce illicit plain packs imitating compliant packs²⁵⁵¹ and create opportunities for illegal operators to supply products "in the same fully-branded format that was used before the adoption of Australia's measures".²⁵⁵² Relying on the CMZ Report, Honduras adds that "[t]he need for familiar brands may also translate into a higher demand for counterfeit branded packs".²⁵⁵³ In Honduras's view, deceiving smokers "can become increasingly easier in a plain packaging environment as smokers start to become less familiar with the appearance of fully branded products over time".²⁵⁵⁴ Further, Honduras argues that the TPP measures have encouraged the supply of a category of products known as "illicit whites" both in a fully branded format and in plain packs.²⁵⁵⁵ Honduras also argues that the TPP measures encourage not only the supply of illicit products, but also consumer demand for such products due to price sensitivity and loss of brand loyalty.²⁵⁵⁶

7.988. The Dominican Republic argues that the TPP measures have likely increased illicit trade levels in Australia.²⁵⁵⁷ In support of this contention, the Dominican Republic relies on a report prepared by KPMG titled "Illicit Tobacco in Australia" (KPMG Report)²⁵⁵⁸ indicating relative increases for certain categories of illicit tobacco products, as well as seizure data from the Australian Customs and Border Protection Services (ACBPS) indicating increased detection of illicit trade between the 2011/2012 period and the 2012/2013 period.²⁵⁵⁹

7.989. The Dominican Republic further argues that the TPP measures "promote the competitive opportunities of *illegal* producers at the expense of *legal* producers"²⁵⁶⁰ because "only the illicit market is able to provide branded product offerings in a plain packaging environment".²⁵⁶¹ With reference to an expert report by Professors Chaudhry, Murray, and Zimmerman (CMZ Report)²⁵⁶², jointly submitted with Honduras, it argues that counterfeit illicit products have become easier to produce and harder to detect²⁵⁶³ and that the cheaper price of illicit tobacco becomes more attractive to consumers under the TPP measures.²⁵⁶⁴

²⁵⁴⁹ Honduras's first written submission, para. 564.

²⁵⁵⁰ Honduras's first written submission, para. 564.

²⁵⁵¹ Honduras's first written submission, para. 551.

²⁵⁵² Honduras's first written submission, para. 552. Honduras argues that consumers seeking to purchase preferred brands in the same format as before the implementation of the TPP measures "may now decide to buy a contraband product even if that means entering the illicit market for the first time". Honduras's first written submission, para. 554.

7.990. Cuba submits that the TPP measures have not reduced smoking prevalence, and that illicit trade has substantially increased in Australia since the introduction of the TPP measures.²⁵⁶⁵

7.991. Indonesia argues that the TPP measures are contributing to "a shift in consumption from branded, more expensive tobacco products" to, *inter alia*, illicit products.²⁵⁶⁶ Referring to the KPMG report, it argues that the level of illegal tobacco consumption in Australia "reached record levels, growing from 11.8 percent in 2012 to 13.9 percent in 2013". It submits that the "key driver of this growth has been a 151 percent increase in the consumption of *illegal, branded* tobacco", which "equates to loss of AUD 1.1 billion annually to the Australian treasury".²⁵⁶⁷

7.992. Australia responds that, contrary to the complainants' assertions, "the evidence suggests that illicit tobacco is not a significant part of the Australian market, and that the tobacco plain packaging measure has not had and it is not likely to have any discernible effect on illicit tobacco consumption in Australia".²⁵⁶⁸ Australia relies on the expert report of Professor Chaloupka²⁵⁶⁹, pointing to the "serious methodological flaws" and significant overstatement of "the size of the illicit tobacco market in Australia" as presented in the KPMG Report.²⁵⁷⁰ Australia further submits that the cost of supplying illicit tobacco in Australia is high, given its "tight control over the tobacco distribution chain, active enforcement of policies targeting the illicit tobacco trade, strong governance and low levels of corruption, and low demand for illicit tobacco among Australian smokers".²⁵⁷¹ Australia contests the allegation that "the tobacco plain packaging measure makes it more difficult to detect illicit tobacco products" as "entirely speculative" and "directly contradicted by evidence suggesting an upward trend in the number of detections" by the ACBPS after the introduction of the TPP measures.²⁵⁷²

7.2.5.3.7.2 Analysis by the Panel

7.993. In support of their contention that increased illicit trade in tobacco products undermines any contribution made by the TPP measures to their objective, the complainants submit expert reports and evidence that include empirical estimates of the size of the illicit tobacco market in Australia, as well as expert opinions as to whether the TPP measures exacerbate certain contributing factors to illicit trade in tobacco products.

7.994. With regard to empirical estimates of the size of the illicit tobacco market in Australia, the complainants primarily rely upon a report prepared by KPMG (the KPMG Report) commissioned by BATA, Imperial Tobacco Australia Limited (ITA), and Philip Morris Limited (PML).²⁵⁷³ The specific purpose of the KPMG Report was "to provide an overview of the nature and dynamics of the legal and illicit tobacco markets in Australia", and "to provide an independent estimate of the size of the illicit tobacco market in Australia".²⁵⁷⁴

²⁵⁷² Australia's first written submission, para. 657.

²⁵⁷³ Honduras, the Dominican Republic, and Indonesia each submitted the 2013 full year report prepared by KPMG regarding the size of the illicit tobacco market in Australia, which forms part of a series of reports following the introduction of the TPP measures prepared by KPMG. The estimates in this report were calculated based on the approach adopted in the 2013 half-year report, using all the available data captured in 2013. KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 6. Honduras additionally submitted the 2014 full year report in which the same methodology is used as in previous reports. KPMG, "Illicit Tobacco in Australia: 2014 Full Year Report", (27 March 2015), (Exhibit HND-148), p. 6. The Panel relies in its analysis on the 2013 full year version of the report, which was the primary basis of the complainants' arguments concerning empirical estimates of the size of the illicit tobacco market in Australia.

²⁵⁷⁴ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 7.

7.995. The KPMG Report considers two main types of *legal* tobacco products in total tobacco consumption: (i) *manufactured cigarettes* sold in packets, and (ii) *loose tobacco* sold in pouches and consumed using rolling papers or tubes.²⁵⁷⁵

7.996. With regard to *illicit* tobacco consumption, the KPMG Report refers to three distinct categories of tobacco products²⁵⁷⁶:

- a. "Unbranded tobacco", which is sold as finely cut loose leaf tobacco that is most commonly smuggled from overseas countries, including what is referred to as "chop chop" (unbranded loose tobacco sold in bags) as well as unbranded tobacco sold in pre-filled tubes.
- b. "Counterfeit" tobacco products, which are manufactured cigarettes that are smuggled into Australia and that carry branding without the consent of the trademark owner.
- c. "Contraband" tobacco products, which are mainly genuine cigarettes that are manufactured legally outside of Australia and smuggled into the Australian market. This category includes cigarettes that are purchased legally abroad but are imported in excess of the personal import allowance without paying duties.²⁵⁷⁷ This category also includes what are known as "illicit whites", which is a term for brands of manufactured cigarettes that are not legally available in the local market, although they may be legal at the point of manufacture, and that are often made exclusively for smuggling.

7.997. To estimate the size of the illicit tobacco market, the KPMG Report used different data sources and methodologies for these different categories of illicit tobacco consumption. For unbranded tobacco, the KPMG used a "consumption model approach" based on results from a consumer survey.²⁵⁷⁸ The survey results were based on reports of purchases of illicit unbranded tobacco, the average frequency of purchases per year, and the average volume purchased per occasion.²⁵⁷⁹

7.998. For illicit manufactured cigarettes (counterfeit and contraband), an empty pack survey (EPS) analysis was used based on the collection of discarded cigarette packs across Australia in 2013.²⁵⁸⁰ The EPS approach involved the collection of 12,000 cigarette packs in 2013 across 16 different towns and cities in Australia.²⁵⁸¹ Each collected pack was assessed to determine whether it was a domestic or non-domestic product, and whether it was a genuine or a counterfeit product.²⁵⁸² As explained in the KPMG Report, the EPS "is used to extrapolate overall consumption in the market by projecting legal domestic sales", and "[t]he percentages of non-domestic and counterfeit packs are added to this total in order to establish the total consumption of

²⁵⁷⁵ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 9.

²⁵⁷⁶ See KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 9.

²⁵⁷⁷ In this regard, the KPMG Report notes that a "small amount of tobacco is imported into Australia by consumers for their own personal consumption". Based on the "low allowance" of 50 cigarettes or 50 grams of loose tobacco that can be brought into Australia without paying excise duty, the KPMG Report states that "the non-domestic legal volume is likely to be a small proportion of consumption". KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 12. See also *ibid.* Appendix A2.4.

²⁵⁷⁸ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 27. The consumer survey was carried out by Roy Morgan Research, an Australian Research Company, through Computer Assisted Web-based Interviewing with a sample of 2,116 adult respondents collected from 10,286 who responded to an initial contact sent to Roy Morgan Research's pool of respondents. This sample of respondents was limited to those above 18 years of age who are "regular smokers", which was defined as a person who smokes tobacco products at least five days a week. See *Ibid.* p. 32.

²⁵⁷⁹ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 33. See also *Ibid.* Appendix A1.1.

²⁵⁸⁰ See KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), pp. 25 and 27.

²⁵⁸¹ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 25. In particular, empty packs were collected "on a proportionate basis from several **neighbourhoods ... from streets and easy access public bins in areas on the sampling plan**". These neighbourhoods were "selected to be representative of the city being sampled". Packs were "collected irrespective of their brand and country of origin", and "[r]esidences, offices and other locations such as stadiums have been excluded from the sampling plan". *Ibid.* p. 34.

²⁵⁸² KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 25. As explained in the KPMG Report, packs collected in the EPS are examined by the participating companies, which are able to identify packs which are counterfeit versions of their products. *Ibid.* Appendix A1.2.1.

manufactured cigarettes in Australia".²⁵⁸³ The KPMG Report further explains that the "small proportion" of "non-domestic legal cigarettes", namely those brought into Australia legally by tourists or Australians travelling overseas, is estimated based on travel statistics from the Australian Bureau of Statistics (ABS).²⁵⁸⁴ These "non-domestic legal cigarettes" are removed from the total "non-domestic" volume to leave the total illicit manufactured cigarette market, comprised of contraband and counterfeit cigarettes.²⁵⁸⁵

7.999. Based on these analyses, the KPMG Report concludes that illicit tobacco consumption in Australia grew to 13.9% as a proportion of total consumption in 2013.²⁵⁸⁶ According to its estimates based on a number of sources, the KPMG Report presents this as an increase in the proportion of illicit tobacco consumption from 11.8% in 2012, with estimates for preceding years as 12.4% in 2011; 12.8% in 2010; 9.1% in 2009; and 8.3% in 2007.²⁵⁸⁷

7.1000. Within the illicit tobacco market, the KPMG Report finds that in 2013 contraband manufactured cigarettes constituted 52% of total illicit consumption, while counterfeit manufactured cigarettes and unbranded loose tobacco comprised 6% and 42%, respectively, of the total share.²⁵⁸⁸ Based on its primary methodologies for each category, the KPMG Report further estimates that the illicit manufactured cigarettes market increased by 151% from 2012 to 2013 (comprised of a 148% increase in contraband²⁵⁸⁹ and a 187% increase in counterfeit cigarettes²⁵⁹⁰), while the volume of unbranded tobacco consumed declined by 31% during the same period.²⁵⁹¹ The KPMG Report thus characterizes contraband products as "the predominant driver of the increase in illicit manufactured cigarette volumes between 2012 and 2013".²⁵⁹²

²⁵⁸³ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 25. More specifically, "[t]he 9.8% non-domestic incidence is combined with estimates for legal domestic sales volumes from Euromonitor to create a volume estimate for illicit manufactured cigarettes", which "can then be broken down into volume estimates for non-domestic legal, counterfeit and contraband". Ibid. Appendix A1.2.2.

²⁵⁸⁴ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 25. In the calculation of non-domestic legal cigarettes, KPMG uses travel trend data of outbound trips made by Australians and the propensity to purchase tobacco abroad, as well as inbound travel trends of overseas visitors (both short-term visitors and settlers). The calculation also takes into account the change to inbound traveller allowances in September 2012 that reduced the permissible amount. See KPMG, Appendix A2.4.

²⁵⁸⁵ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 25. The KPMG Report also provides alternative estimates based on other approaches to validate its estimates based on the approaches above. For unbranded tobacco, the KPMG Report inferred, based on a number of assumptions, the volume of loose tobacco smoked from the quantum of rolling papers sold. This was compared with the legal sales of loose tobacco to estimate a consumption gap between legal and illicit. Ibid. pp. 25 and 27. The KPMG Report also used data on seizures by the Australian Customs and Border Protection Authorities on the volume and type of tobacco intercepted at ports and airports, as well as a "consumption gap analysis" based on the difference between legal domestic sales and estimates of total tobacco consumption based on the number of smokers known to exist in Australia and historic consumption patterns. Ibid. pp. 26-27.

²⁵⁸⁶ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 6.

²⁵⁸⁷ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 6, Figure 1.1.

²⁵⁸⁸ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 28. The KPMG Report further notes that this is part of a larger structural shift in recent years towards illicit manufactured cigarettes and away from illicit unbranded tobacco. In particular, the KPMG Report finds that volumes of illicit unbranded tobacco have declined by 31% while volumes of illicit manufactured cigarettes have increased by 151% between 2012 and 2013. Ibid.

²⁵⁸⁹ Contraband manufactured cigarettes are calculated as the remainder of all "non-domestic manufactured cigarettes" that are not counterfeit or legally brought into Australia as part of travellers' inbound allowance. See KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), Appendix A1.2.1. The KPMG Report notes that "illicit whites" (brands of manufactured cigarettes that are not legally available in the local market) have significantly increased in incidence between EPS results from 2012 to 2013, and the most recent EPS results for the KPMG Report showed that illicit whites made up approximately 30% of non-domestic manufactured cigarette consumption. See *ibid.* p. 40.

²⁵⁹⁰ Specifically regarding counterfeit cigarettes, the KPMG Report states that "[a]lthough the share of counterfeit of total consumption remains relatively small, it is worth noting that this is the highest level of counterfeit incidence recorded in an empty pack survey in Australia". Further, the report states that "[a]nalysis of counterfeit packs has also highlighted that no plain packaged counterfeit packs were reported in the Q4 2013 empty pack survey". KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 38.

²⁵⁹¹ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 29.

²⁵⁹² See KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), Appendix A1.2.1. See also *ibid.* pp. 6 and 28. With respect to the alternative approaches used for validation, the KPMG Report finds that seizures data indicate that the proportion of manufactured cigarettes smuggled into Australia "appears to be growing as

7.1001. Australia's expert Professor Chaloupka provides several criticisms of the conclusions reached and the methodologies used in KPMG's studies of the illicit tobacco market in Australia.²⁵⁹³ In particular, Professor Chaloupka submits that "[i]llicit trade in tobacco products in Australia is relatively limited, likely to account for three to five per cent of the overall market for tobacco products in recent years".²⁵⁹⁴ Professor Chaloupka further submits that the methodology used in the KPMG Report "is flawed and almost certainly produces overestimates of the share of Australian tobacco consumption accounted for by illicit tobacco and distorts the trend in illicit tobacco consumption over time".²⁵⁹⁵

7.1002. Professor Chaloupka notes the inconsistency of the estimates in the KPMG Report with multiple other estimates from various sources regarding the size of the illicit tobacco market in Australia. Professor Chaloupka states that none of the estimates reviewed "provides a definitive estimate, but taken together, they do provide a good sense of the scope of the problem".²⁵⁹⁶ On the basis of his review, Professor Chaloupka concludes that most recent estimates of the size of the illicit tobacco market in Australia indicate that illicit tobacco accounts for a relatively small **share of overall tobacco consumption, with the exception of "tobacco industry supported reports ... that produce estimates that are two or more times higher than the others"**.²⁵⁹⁷

7.1003. For example, Professor Chaloupka cites annual estimates by Euromonitor International as to the volume of licit and illicit cigarettes consumed in Australia "based on 'expert' opinions on the extent of the illicit trade problem".²⁵⁹⁸ Professor Chaloupka observes based on estimates from 2000 to 2013 that illicit cigarette trade in Australia accounted "for between three and five per cent of consumption over time", without any clear trend over this period.²⁵⁹⁹

7.1004. Professor Chaloupka also refers to a number of surveys as evidence on the use of illicit tobacco products in Australia. For example, Professor Chaloupka cites Australian NDSHS surveys²⁶⁰⁰ indicating a reduction in the awareness of unbranded tobacco and counterfeit cigarettes, with "relatively infrequent" purchasing of potentially counterfeit cigarettes and purchasing "relatively small quantities" of products in 2013 without plain packaging and GHWs.²⁶⁰¹ Professor Chaloupka further cites the 2013 VSHS results of the 18 and older population in Victoria,

a percentage of total illicit tobacco, validating the growth of illicit manufactured cigarettes indicated by the primary approaches". As regards its consumption gap analysis, the KPMG Report further states that "the smoking population has declined at a slower pace than legal domestic sales, indicating that there may be room for an increase in illicit tobacco consumption". The KPMG Report additionally states that "[t]he consumption gap validates the overall estimate of the volume of illicit tobacco, indicating shifts in the mix of illicit tobacco between manufactured cigarettes and unbranded tobacco". Ibid. p. 30.

²⁵⁹³ Professor Chaloupka addresses his comments to the methodology and conclusions reached in a series of KPMG Reports that include the 2013 full year report relied upon by the complainants. See Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 79 fn 61.

²⁵⁹⁴ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 10(a).

²⁵⁹⁵ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 10(d).

²⁵⁹⁶ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 17.

²⁵⁹⁷ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 27.

²⁵⁹⁸ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 18.

²⁵⁹⁹ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 18. Specifically, the Euromonitor "Estimates of Illicit Trade Penetration in Australia" show estimates ranging from 2.8% in 2000 to 4.6% in 2013, falling slightly from 2007 through 2009, then rising by 1.5 percentage points by 2013, "in contrast to the 4.4 percentage point increase in KPMG's estimates for the period from 2009 through 2013". Ibid. Table A and para. 88.

²⁶⁰⁰ Australia and the Dominican Republic each submitted the entirety of the 2010 NDSHS Report as an exhibit in these proceedings. See 2010 NDSHS Report, (Exhibits AUS-45, DOM-280). Australia also submitted extracts from the 2013 NDSHS Detailed Report. See 2013 NDSHS Report, (Exhibit AUS-48).

²⁶⁰¹ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 20. In particular, Professor Chaloupka notes a sharp reduction in smokers' awareness and use of unbranded tobacco (including unbranded loose tobacco known as "chop chop") between 2007 and 2013. With respect to counterfeit cigarettes, Professor Chaloupka cites 2010 survey results indicating awareness of counterfeit cigarettes was lower than awareness of unbranded tobacco, and states that purchasing of potentially counterfeit cigarettes was "relatively infrequent", with only 4.6% of smokers reporting purchasing at least once a month. Further, Professor Chaloupka cites 2013 survey results as to tobacco products that did not have plain packaging with GHWs, indicating that about one in eight respondents (12.5%) and fewer than one in five smokers (18.5%) reported seeing non-compliant tobacco products. Fewer than one in ten smokers (9.6%) reported purchasing non-compliant products, most of whom reported purchasing "relatively small quantities": among the 9.6% of smokers reporting purchases of non-compliant products, 4.2% reported purchasing 5 or fewer packets, 1.2% reported purchasing 6-14 packets, and 4.4% reported purchasing 15 or more packets. Ibid.

which indicate that very low percentages of smokers reported using or purchasing illicit tobacco or products in non-compliant packaging.²⁶⁰² Similarly, a national cross-sectional survey of 8,679 Australian smokers conducted from April 2012 through March 2014 found "limited illicit tobacco use" based on certain reported behaviours.²⁶⁰³ Finally, Professor Chaloupka discusses survey results from the ITC Project on Australian smokers' purchase behaviours since 2002, showing very few reports of cross-border shopping, purchasing from online or other direct vendors, or purchases from other sources that are most likely to reflect tax evasion.²⁶⁰⁴

7.1005. In addition, Professor Chaloupka cites a study based on purchases of tobacco products in stores suggesting that the availability of illicit tobacco in retail outlets is very low²⁶⁰⁵, and develops his own estimate based on Roy Morgan survey data indicating much lower measures of illicit tobacco use and prevalence.²⁶⁰⁶

7.1006. Professor Chaloupka also refers to much lower estimates by Quit Victoria of the size of the illicit tobacco market in Australia (between two and three per cent of the market) using data from the NDSHS combined with information from Australian Customs authorities.²⁶⁰⁷ In an analysis of the estimates of the KPMG Report²⁶⁰⁸, Quit Victoria cites **"fundamental concerns ... about the representativeness of the two surveys which provide the foundation data for the study"**²⁶⁰⁹, and raises the possibility that the EPS for manufactured cigarettes "over-represents the packs used by tourists and other overseas visitors and students".²⁶¹⁰ Quit Victoria also states that "the very low estimate of legal consumption of foreign packs which is fundamental to the estimate of prevalence of contraband cigarettes is highly problematic".²⁶¹¹

7.1007. Professor Chaloupka raises similar criticisms of the methodology and findings of the KPMG Report with respect to representativeness and possible over-estimation of contraband non-domestic cigarettes. In particular, Professor Chaloupka criticizes the screening of survey participants in a way that excludes less regular smokers who are less likely to use illicit tobacco products²⁶¹²; the apparently low survey response rate and insufficiency of information regarding

²⁶⁰² Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 21 (referring to Scollo et al. 2014, (Exhibits AUS-507, JE-24(57))). Specifically, these results indicated that 4% of smokers reported using any unbranded illicit tobacco in the past year, with 1.9% reporting current use; 2.6% of smokers reported buying cigarettes in non-compliant packaging, two-thirds of whom purchased fewer than five packs in the three months prior to the survey and one in five purchasing more than 10 non-compliant packs. Further, 1.7% of smokers reported purchasing from an informal vendor in the year prior to the survey, "with very few of these reporting purchasing more than five packs from these sources in the past year". Ibid.

²⁶⁰³ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 22 (referring to Scollo et al. 2015, (Exhibit CUB-60)), and identifying behaviours such as purchasing international brands at 20% or more below the recommended retail price, purchasing from an informal seller, or using unbranded tobacco).

²⁶⁰⁴ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 23 (referring to Guindon et al. 2014, (Exhibit HND-156)).

²⁶⁰⁵ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 26.

²⁶⁰⁶ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 28-33 and Annex D. In particular, using the most recent twelve months of available survey data, Professor Chaloupka estimates that 5.7% of current tobacco users have used an illicit tobacco product in the past three months and that approximately 3.2% of the tobacco smoked in Australia consists of illicit tobacco. Ibid. para. 33.

²⁶⁰⁷ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 25. According to Professor Chaloupka, this approach aims to correct the flaws in methods used to produce tobacco industry sponsored estimates, resulting in considerably lower estimates of the size of the illicit market. Ibid.

²⁶⁰⁸ We note that Quit Victoria analysed the KPMG 2013 half-year report, which was supplemented by the full year report relied upon by the complainants. See CCV KPMG Report Analysis, (Exhibit DOM-99), p. 2.

²⁶⁰⁹ CCV KPMG Report Analysis, (Exhibit DOM-99), p. 2. For example, Quit Victoria states that the sample for the internet survey on use of unbranded tobacco was "likely to be biased towards people more likely to use unbranded tobacco" because it included people in the researcher's database who have responded to previous surveys. Quit Victoria further notes that the KPMG Report does not describe characteristics of the sample that may be relevant to the likelihood to use unbranded tobacco, and calculated averages in a manner to produce an inflated estimate "if those smokers of unbranded tobacco who purchase most frequently tend to be the same people who purchase substantially lower amounts". Ibid. pp. 5-7.

²⁶¹⁰ CCV KPMG Report Analysis, (Exhibit DOM-99), p. 7.

²⁶¹¹ CCV KPMG Report Analysis, (Exhibit DOM-99), p. 2. For example, Quit Victoria cites a number of factors including: the possibly greater prevalence of smokers among travellers than the Australian population as a whole; the large number of visitors coming from countries from which foreign packs identified in the EPS most frequently came; and the increased number of overseas trips by Australians to, and increased number of visitor arrivals from, non-domestic source countries between 2012 and 2013. See *ibid.* pp. 9-12.

²⁶¹² Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 80.

the characteristics of the resulting sample²⁶¹³; and failure to adequately distinguish in surveys between alternative illicit tobacco products with a potential for inflated estimates due to double counting (e.g. between contraband and counterfeit cigarettes).²⁶¹⁴ Professor Chaloupka states that the EPS used by KPMG "will almost certainly overstate the presence of illicit cigarettes given that it excludes smaller jurisdictions where illicit tobacco distribution networks are less likely to operate", noting that smaller jurisdictions excluded from the EPS account for roughly 25% of the Australian population.²⁶¹⁵ Professor Chaloupka also criticizes the EPS' focus on the largest cities on the grounds that it "will capture a disproportionate share of cigarettes consumed by tourists, other visitors, and foreign students who are more likely to visit these cities and who are more likely to discard their packs in public places".²⁶¹⁶

7.1008. In a study of early evidence about the "predicted unintended consequences" of standardized tobacco packaging in Australia, the authors note that the EPS discussed in the KPMG Report presumed that almost all non-domestic packs found were contraband cigarettes.²⁶¹⁷ The authors contend that the EPS methodology is problematic in tending to over-represent cigarette packs that end up in litter in public places, and that such studies "cannot distinguish between foreign packs that are illegally smuggled into Australia and those brought in by residents and visitors who have purchased them overseas and brought them in either under personal import limits or with the required duty having been paid".²⁶¹⁸

7.1009. In the PIR and cost-benefit analysis associated with the TPP measures, the Australian government took note of criticisms of estimates on illicit trade commissioned by tobacco companies. The Australian government also referred to peer-reviewed studies that found no change in smokers' reported use of unbranded illicit tobacco, no evidence of increases in use of contraband cigarettes, low levels of use of cigarettes likely to be contraband, and no increase in purchases of tobacco from informal sellers.²⁶¹⁹ Consequently, the cost-benefit analysis associated with the TPP measures' PIR "considered that it was most likely that the impact of the [TPP measures] on changes in the illicit tobacco market in Australia has not been substantive, if there has been any impact at all".²⁶²⁰

7.1010. We accept that illicit trade could in principle, and is known to in certain instances, undermine tobacco control efforts.²⁶²¹ We also note, as illustrated by the above, the inherent difficulty and limits of measuring illicit trade, given the quasi-legal or illegal nature of the activities involved.²⁶²² As described above, the size of the illicit tobacco market in Australia is disputed, with estimates in the KPMG Report significantly greater than other estimates from various sources.

²⁶¹³ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 81.

²⁶¹⁴ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 82.

²⁶¹⁵ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 85.

²⁶¹⁶ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 85. In Professor Chaloupka's view, the likelihood that the EPS will over-represent packs from visitors while under-representing packs from Australian smokers is increased by the fact that residences, offices, and other locations such as stadiums were excluded from the sampling plan. Professor Chaloupka also contrasts KPMG's findings as to the most prevalent brands of "illicit whites" with "the nationally representative ITC-Australia survey [in which] no smoker reports smoking any of these brands". Professor Chaloupka submits that the prevalence of such packs in the EPS, which are not similarly reported in a representative sample of Australian smokers, "suggests that the overseas visitors are likely to account for many of the discarded packs KPMG attributes to illicit trade". Ibid. paras. 85-86.

²⁶¹⁷ Scollo et al. 2014, (Exhibits AUS-507, JE-24(57)), p. 2.

²⁶²¹ See, e.g. FCTC, (Exhibits AUS-44, JE-19), Article 15; and FCTC Illicit Trade Protocol, (Exhibit DOM-97), Foreword, p. 1 ("Illicit trade increases the accessibility and affordability of tobacco products, thus fuelling the tobacco epidemic and undermining tobacco control policies.").

²⁶²² See, e.g. Chaloupka Illicit Market Report, (Exhibit AUS-8), Annex C, para. C1 (stating that "[n]o approach will entirely and accurately capture the extent of illicit trade and every approach has its limitations"); CMZ Report, (Exhibit DOM/HND-2), paras. 16 (noting with respect to illicit trade that "measuring its precise quantity is **extremely difficult and ... experts agree that there are no definitive statistics on the size of the global illicit tobacco trade problem**"), 29 ("there is currently no universally accepted estimate on the scale of the global illicit tobacco trade"), and 30 ("there are no generally-accepted figures on the level and composition of illicit tobacco trade in Australia"); 2011 IARC Handbook, (Exhibit DOM-117), p. 299; and "WHO Technical Manual on Tobacco Tax Administration" (2011), (WHO Tobacco Tax Manual, Full Text), (Exhibit CUB-62), p. 82.

7.1011. We note that the results of the EPS analysis used in the KPMG Report for illicit manufactured cigarettes show a "large increase in non-domestic volumes in 2013" with a very small portion of this identified as counterfeit, and an even smaller share estimated to be non-domestic *legal* cigarettes.²⁶²³ With respect to the empirical basis for the complainants' contention, critiques of the KPMG Report underline the possible underestimation of the legal share of "non-domestic incidence" identified in the EPS that may have been brought by visitors to Australia or Australians returning from abroad within the duty-free allowance.²⁶²⁴ This element of the KPMG Report's analysis and conclusions is particularly significant given the large share of total illicit trade in 2013 ascribed to "contraband cigarettes" as that category is defined in the KPMG Report.

7.1012. For the purposes of our analysis, we do not understand the KPMG Report to purport to establish a definitive conclusion as to the size of the Australian illicit tobacco market. On the contrary, we note KPMG's warning at the beginning of its report that its work "was performed to meet specific terms of reference" agreed with the tobacco companies commissioning the Report, and that its Report "should not therefore be regarded as suitable to be used or relied on by any other person or for any other purpose" and "is issued to all parties on the basis that it is for information only". KPMG further explains that "there were particular features determined for the purposes of the engagement".²⁶²⁵ These features or the "terms of reference" agreed to with the companies commissioning the work are however not expressly identified in the report.

7.1013. The criticisms raised as to its methodologies, and the inconsistency of its estimates with those of other sources, raise some doubt as to the accuracy of the estimate in the KPMG Report of the size of Australia's illicit tobacco market. On the basis of the empirical estimates and arguments before us, we are therefore not persuaded that the potential scale of illicit trade, and thus the extent to which illicit trade may undermine the contribution of the TPP measures, is of the magnitude estimated in the KPMG Report.

7.1014. The specific question before us here, however, is the extent to which the TPP measures have, as the complainants argue, led to an *increase* in the illicit trade of tobacco products, such as to undermine its contribution to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products. The complainants' contentions in this respect largely rest on qualitative arguments on the causal drivers of illicit tobacco trade in light of the requirements imposed under the TPP measures, as set out in a report prepared by experts in international business and customs matters (the CMZ Report).

7.1015. The CMZ Report considers whether the TPP measures risk exacerbating the illicit trade in tobacco products, particularly with regard to: (i) any potential opportunities developed for illicit traders; (ii) any challenges created for existing adult smokers, retailers, and enforcement bodies; and (iii) the ways in which the TPP measures could worsen the existing negative impacts of the illicit trade in tobacco.²⁶²⁶ The authors of the CMZ Report consider that "plain packaging in Australia gives illicit traders a unique 'competitive advantage' over legitimate tobacco manufacturers", given that illicit traders can use branding that brand owners are prevented from using.²⁶²⁷ Consequently, the authors explain that illicit traders will be able to sell contraband and counterfeit products in branded packs with which smokers are familiar, and that plain packages

²⁶²³ See KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), Appendix A1.2.2 and Figure A1.2.2.

²⁶²⁴ The difficulty of relying on observational data in this regard has been highlighted, as "[w]ithout tax stamps or other forms of overt markings, contraband or other contraband cigarette packs will be indistinguishable unless they fail to display Australian health warnings. Even discarded packs without Australian health warnings could be packs purchased overseas by tourists travelling in Australia." Tobacco in Australia 2012, AUS excerpts, (Exhibit AUS-343), p. 79.

²⁶²⁵ KPMG Report 2013, (Exhibits HND-67, DOM-98, IDN-41), p. 1.

²⁶²⁶ CMZ Report, (Exhibit DOM/HND-2), para. 14. As background, the CMZ Report describes various factors that contribute to the global illicit tobacco trade, including the aptitude of tobacco as a smuggled product, the profit incentives for illicit traders, complicit consumer behaviour towards purchasing illicit tobacco products, and globalization and lower trade barriers. Ibid. paras. 35-49.

²⁶²⁷ CMZ Report, (Exhibit DOM/HND-2), p. 1.

will be easier to counterfeit with static and publicly known specifications as well as economies of scale in production.²⁶²⁸

7.1016. The authors of the CMZ Report express the view "that plain packaging of tobacco products will worsen the illicit trade in those products".²⁶²⁹ In support of this view, and noting the limitations to empirical estimations of illicit trade, the CMZ Report cites the increase of detections and seizures of illicit tobacco products by the ACBPS in the period immediately before and after the introduction of the TPP measures.²⁶³⁰

7.1017. Australia's expert Professor Chaloupka takes issue with the CMZ Report's reliance on estimates by KPMG, which he characterizes as "misleading and biased estimates" that should not be used to draw conclusions about trends²⁶³¹, and notes that the authors "do not appear to consider other data that are inconsistent with their allegation that illicit tobacco use in Australia has increased following the implementation of tobacco plain packaging".²⁶³² Professor Chaloupka notes that consumption of *counterfeit* cigarettes in Australia is very limited, and questions whether plain packaging would have any significant impact on the costs of producing or supplying counterfeit products.²⁶³³

7.1018. In addition to criticizing specific aspects of the CMZ Report, Professor Chaloupka outlines a number of other "determinants or drivers" of illicit trade unrelated to plain packaging. Professor Chaloupka cites as "key factors" the level of tobacco taxes and prices (and differences between nearby jurisdictions)²⁶³⁴, and the costs of supplying illicit tobacco products to the market (including production and distribution costs).²⁶³⁵ Further, Professor Chaloupka cites a number of other factors including access to untaxed cigarettes (e.g. due to poor control of the distribution chain) and the presence of informal distribution networks.²⁶³⁶ Another "key driver" is the expected cost of engaging in illegal behaviours, which can be affected by enforcement efforts and higher penalties, with increasing costs of supplying illicit tobacco due to strong governance, effective tax administration, and the absence of corruption.²⁶³⁷

7.1019. Examining the various factors that can affect the incentives to engage in illicit trade, we note that there are a multiplicity of potential drivers and that Australia is relatively well-situated in several respects to mitigate the incidence of illicit trade in tobacco. Despite its relatively high price level compared to neighbouring countries, Professor Chaloupka notes Australia's regulation and control of the tobacco distribution chain, its geographical character as an island and the effect of

²⁶²⁸ CMZ Report, (Exhibit DOM/HND-2), pp. 1-2. With regard to illicit branded products, including contraband of genuine products and "illicit whites", the CMZ Report describes potentially increased opportunities under the TPP measures due to consumers seeking familiar branded packs, lower prices of illicit products, and easier deception of consumers through counterfeiting. The CMZ Report also cites concurrence with findings by KPMG on the increase of contraband products and "illicit whites". Ibid. paras. 66-78. With regard to illicit products in plain packaging, the CMZ Report describes the reduced complexity and cost of counterfeiting packs in plain packaging. Ibid. paras. 79-87. Additionally, the CMZ Report sets out various ways in which the authentication of products and enforcement will be made more challenging for illicit tobacco products in plain packaging. Ibid. paras. 88-92.

²⁶²⁹ CMZ Report, (Exhibit DOM/HND-2), para. 94.

²⁶³⁰ CMZ Report, (Exhibit DOM/HND-2), para. 60 (noting that between 2012 and 2013 there were 76 detections of 183 tonnes of tobacco and 200 million cigarettes, whereas between 2011 and 2012 there were 45 detections of 177 tonnes of tobacco and 141 million cigarettes).

²⁶³¹ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 91.

²⁶³² Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 94. Professor Chaloupka specifically references the Euromonitor data, NSDHS data, and ITC Project data discussed above in the context of Professor Chaloupka's criticisms of the KPMG estimates of illicit trade in Australia. Ibid.

²⁶³³ Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 96. Professor Chaloupka cites the opinions of various enforcement authorities and an officer of a tobacco company casting doubt on the impact of tobacco plain packaging on increased consumption of counterfeit products. Ibid. paras. 99-100.

²⁶³⁶ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 41-42. See also 2011 IARC Handbook, (Exhibit DOM-117), pp. 305-306.

²⁶³⁷ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 43-44. See also 2011 IARC Handbook, (Exhibit DOM-117), pp. 306-307.

this on the control of imports, and the lack of free trade and tax-free zones that are a source of illicit tobacco products in many countries.²⁶³⁸

7.1020. As part of Australia's broader tobacco control efforts, Australian authorities have recognized the importance of having a strong legislative and regulatory framework to control the illicit trade in tobacco products.²⁶³⁹ Professor Chaloupka outlines Australia's legislative framework related to illicit tobacco trade and enforcement activities under this framework, which includes licensing and conditions for trade and movement of tobacco products, recordkeeping and reporting requirements imposed by Australian customs authorities, strong controls on tobacco growing, and regulations on the retail sale of tobacco products.²⁶⁴⁰ Moreover, Australia has in place enforcement mechanisms that include inspections by Australian customs authorities (prioritizing illicit tobacco enforcement efforts in 2014) as well as interagency coordination and information sharing at multiple levels of government.²⁶⁴¹ Australia also imposes penalties on illicit tobacco growing, distribution, or sale, which were strengthened in 2012 by making tobacco smuggling a specific criminal offense under the Australian Customs Act.²⁶⁴²

7.1021. As described above, the overall size of the illicit market is disputed. With respect to evidence of increased detections and seizures of illicit tobacco following the introduction of plain packaging²⁶⁴³, we consider such evidence to be of limited probative value to the question at hand given that "the increase in detection of illicit tobacco may be, at least in part, due to an increase in enforcement efforts".²⁶⁴⁴ Moreover, seizures may not be representative of the illicit market as a whole, and even making comparisons across countries on the basis of seizures may not be meaningful due to differing customs investigative techniques, reporting procedures, and law enforcement.²⁶⁴⁵

7.1022. As described above, various factors may affect the drivers of illicit trade that are unrelated to the packaging and branding of products. We also take note of Australia's active regulatory efforts and oversight of tobacco distribution networks to address illicit trade. We also note that certain characteristics of Australia's regime to combat illicit trade are in line with the FCTC Protocol to Eliminate Illicit Trade in Tobacco Products²⁶⁴⁶, namely maintaining supply chain control through licensing and control of distribution channels, imposing penalties for unlawful conduct, and enabling cooperation among relevant authorities and law enforcement agencies.²⁶⁴⁷ Taken together, the evidence before us does not clearly establish, either through empirical evidence or descriptive argument based on the drivers of illicit trade, that the TPP measures have given rise to an increase in Australia's illicit tobacco trade, or that such increase would be of such magnitude as to undermine the contribution of the TPP measures to Australia's public health objective.

7.1023. In light of the above, we are not persuaded that the complainants have demonstrated that the TPP measures have led to increased trade or consumption of illicit tobacco in Australia,

²⁶³⁸ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 48-51.

²⁶³⁹ See, e.g. Minister for Health and Ageing, "Taking Preventative Action – A Response to Australia: The Healthiest Country by 2020 – The Report of the National Preventative Health Taskforce" (11 May 2010), (Exhibit JE-15), p. 63; and National Tobacco Strategy 2012-2018, (Exhibits AUS-129, DOM-131), pp. 19-20.

²⁶⁴⁰ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 52-56.

²⁶⁴¹ Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 57-60.

²⁶⁴² Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 61; and National Tobacco Strategy 2012-2018, (Exhibits AUS-129, DOM-131), p. 20. With respect to drivers of illicit trade, Professor Chaloupka notes Australia's high ranking in various international assessments of the absence of corruption and other indicators of strong governance, as well as data suggesting that there is not a large informal distribution network for tobacco products in Australia. Chaloupka Illicit Market Report, (Exhibit AUS-8), paras. 63-64.

²⁶⁴³ See CMZ Report, (Exhibit DOM/HND-2), paras. 32 and 60.

²⁶⁴⁴ CMZ Report, (Exhibit DOM/HND-2), para. 61. See also Chaloupka Illicit Market Report, (Exhibit AUS-8), para. 93 ("CMZ's use of ACBPS data fails to account for the increased attention Customs and other authorities have given to tobacco following sizeable tobacco tax increases and implementation of tobacco plain packaging").

²⁶⁴⁵ See WHO Tobacco Tax Manual, Full Text, (Exhibit CUB-62), p. 83.

²⁶⁴⁶ See para. 2.99 above. The FCTC Protocol to Eliminate Illicit Trade in Tobacco Products was adopted by consensus at the fifth session of the FCTC COP on 12 November 2012. It "shall enter into force on the 90th day following the deposit of the 40th instrument of ratification, acceptance, approval, formal confirmation or accession". FCTC Illicit Trade Protocol, (Exhibit DOM-97), Foreword, pp. 1-2.

²⁶⁴⁷ See FCTC Illicit Trade Protocol, (Exhibit DOM-97), Article 4 and Parts III-V.

such as to undermine the TPP measures' contribution to the objective of improving public health by reducing the use of, and exposure to, tobacco products.

7.2.5.3.8 Overall conclusion on the degree of contribution of the TPP measures to Australia's objective

7.1024. We have considered above the evidence before us in relation to the contribution of the TPP measures to their objective of improving public health by reducing the use of, and exposure to, tobacco products. We have considered the relevant evidence relating both to the design, structure and intended operation of the TPP measures, and the available evidence relating to their application since their entry into force in December 2012.

7.1025. Overall, we find that the complainants have not demonstrated that the TPP measures are not apt to make a contribution to Australia's objective of improving public health by reducing the use of, and exposure to, tobacco products. Rather, we find that the evidence before us, taken in its totality, supports the view that the TPP measures, in combination with other tobacco-control measures maintained by Australia (including the enlarged GHWs introduced simultaneously with TPP), are apt to, and do in fact, contribute to Australia's objective of reducing the use of, and exposure to, tobacco products.

7.1026. As discussed in detail above, a number of studies, including studies published in a range of relevant journals, considered the potential impact of tobacco plain packaging, prior to the implementation of the TPP measures in Australia. In particular, many of these studies address the anticipated impact of plain packaging on the three "mechanisms" identified in the TPP Act as those through which the TPP measures are intended to have an impact on smoking behaviours, namely reducing the appeal of tobacco products, increasing the effectiveness of GHWs, and limiting the ability of the pack to mislead consumers about the harmful effects of smoking. This literature has been found largely to converge towards a conclusion that plain packaging of tobacco products has the capacity to reduce the appeal of tobacco products, increase the effectiveness of GHWs, and reduce the ability of the pack to mislead consumers about the harmful effects of smoking.

7.1027. The complainants identified a number of limitations in this literature. The evidence before us in this respect suggests that it is possible, and acknowledged in reviews of this literature, that some of these studies have various limitations, some of which are inherent in the nature of the research at issue. However, we are not persuaded that the complainants have established that the largely convergent conclusions reflected in the body of studies at issue, and the overall conclusions drawn from them, should be considered to be so fundamentally flawed as to provide no support for the proposition that the TPP measures are capable of contributing to their objective through these mechanisms.

7.1028. We are comforted in this conclusion by the fact that this body of literature has been subject to various reviews conducted outside the context of these proceedings, which have concluded that the body of studies at issue supports the proposition that tobacco plain packaging would be apt to reduce the appeal of tobacco products, enhance the effectiveness of GHWs and reduce the ability of tobacco packaging to mislead consumers about the risks of smoking. We note in particular the conclusions of the independent review conducted on behalf of the UK Government²⁶⁴⁸, which considered both the quality of a previous systematic review of the evidence base relating to tobacco plain packaging and the quality of the underlying evidence itself, and concluded that the quantitative studies reviewed were "conducted to a high standard", that "the conclusions that were drawn are a reasonable reflection of the evidence available"²⁶⁴⁹ and that the review of the qualitative studies at issue was "a high quality systematic review", which was "clearly documented and follows recognised best practice for such reviews".²⁶⁵⁰

²⁶⁴⁸ We attach particular weight to this assessment conducted by independent reviewers who are not among the frequently cited "plain packaging" authors and were commissioned for the purposes of making an independent assessment of the relevant literature.

²⁶⁴⁹ Chantler Report, (Exhibits AUS-81, CUB-61), Annex D, p. 49 (referring to the Stirling Review (Exhibits AUS-140, HND-130, CUB-59)).

²⁶⁵⁰ Chantler Report, (Exhibits AUS-81, CUB-61), Annex E, p. 56 (referring to the Stirling Review (Exhibits AUS-140, HND-130, CUB-59)).

7.1029. We also note that, to the extent that the disputed studies predate the implementation of tobacco plain packaging in Australia or elsewhere, and that the adoption of the TPP measures was based on certain assumptions about behavioural responses to a policy intervention that had not yet been applied in any territory, the evidence at issue represents an anticipation of the potential effects, rather than a demonstration of the actual effects, of such an intervention. This circumstance has an impact on the nature and extent of the evidence that could have been expected to be developed, at the time that such studies were being conducted, and how conclusive such evidence could be expected to be.²⁶⁵¹

7.1030. As detailed above, to the extent that the contribution of the TPP measures is expected to arise from the operation of a "causal chain" or "mediational model" underlying the design of the TPP Act, it is appropriate to consider not only the operation of the above mechanisms (leading to "proximal outcomes") but also their correlation to smoking behaviours. The complainants have argued that Australia's assumptions in this respect are unfounded, and that, even assuming that the above mechanisms would lead to the proximal outcomes identified by Australia in the TPP Act, these would not be capable of having an influence on subsequent smoking behaviours. We have therefore also considered the evidence before us on the extent to which a reduction in the appeal of tobacco products, an increase in the effectiveness of GHWs, and a reduction in the ability of tobacco packaging to mislead consumers regarding the harmful effects of smoking, may be expected to have an impact on subsequent smoking behaviours, including smoking initiation, cessation and relapse.

7.1031. Overall, this evidence suggests that it is recognized that the relationship between perceptions, attitudes and behaviours is complex. In particular, the evidence before us suggests that while there is a correlation between attitudes and behaviours, a number of intervening factors can influence the extent to which attitudes affect intentions and ultimately actual behaviours in a given context. The context in which the intervention takes place, including the specific factors that may influence behaviours in that context, must be taken into account. However, we do not understand Australia to argue that behaviours would systematically be altered as a result of tobacco plain packaging, such that each and every individual would be similarly affected and modify their smoking behaviours. Rather, we understand Australia to rely on relevant research relating to the relationship between perceptions, attitudes and behaviours, as well as evidence of the factors that are understood to influence smoking behaviours, to argue in essence that in the specific context of this intervention, it is reasonable to expect that reducing the appeal of tobacco products and enhancing clarity about their harmful effects will influence **at least some** consumers in their smoking behaviours.

7.1032. In this respect, it is undisputed that the drivers of smoking behaviours are complex and that smoking initiation, cessation or relapse are influenced by a broad range of factors, other than product packaging. We are not persuaded, however, that this implies, as the complainants argue, that tobacco packaging can have **no** influence on smoking behaviours, especially in a regulatory context where the retail package would be the only avenue for product promotion and for conveying to the consumer any positive associations with the product. The evidence before us demonstrates, in this respect, the role played by branded packaging of tobacco products in conveying the image of tobacco products and making them appealing, especially in a "dark" market such as Australia. We are not persuaded that the effects of such branding are limited, as the complainants argue, to secondary demand for tobacco products, i.e. the choice to smoke one brand over another, to the exclusion of primary demand for such products, i.e. the decision to smoke or not smoke. In particular, we note the recognized importance, for the industry, of attracting new consumers, and therefore making their products appealing to those most likely to initiate tobacco use (i.e. youth), including through branded packaging.

7.1033. We are also not persuaded that the complainants have demonstrated that tobacco plain packaging would not also be capable of having some impact on smoking cessation and relapse, by reducing the ability of branding design features to act as a cue for smoking and by making more prominent the messages conveyed by GHWs.

²⁶⁵¹ As expressed in an early review of tobacco plain packaging literature, in which subjects were asked to theorize "What if" with respect to various packaging scenarios. Goldberg et al. 1995, (Exhibits AUS-221, JE-24(26)), Appendix C, Summary of Male Focus Groups in Toronto, III Grade 8 (Have not Smoked in Last Month).

7.1034. Overall, on the basis of our examination of the evidence relating to the design, structure and intended operation of the TPP measures, we are not persuaded that the complainants have demonstrated that a reduction in the appeal of tobacco products, or an improved awareness of risks through tobacco plain packaging, or a reduction in the ability to mislead consumers on the harmful effects of tobacco products, through plain packaging of tobacco products as applied by Australia, would not be capable of influencing any of the relevant smoking behaviours. To the contrary, in a regulatory context where tobacco packaging would otherwise be the *only* opportunity to convey a positive perception of the product through branding, as is the case in Australia, it appears to us reasonable to hypothesize some correlation between the removal of such design features and the appeal of the product, and between such reduced product appeal and consumer behaviours. It also does not appear unreasonable, in such a context, in light of the evidence before us, to anticipate that the removal of these features would also prevent them from creating a conflicting signal that would undermine other messages that seek to raise the awareness of consumers about the harmfulness of smoking that are part of Australia's tobacco control strategy, including those arising from GHWs.

7.1035. This evidence must be considered also in the light of available empirical evidence on the application of the measures. In this respect, it is not disputed that notwithstanding any "intuitive appeal", tobacco control policies "must be evaluated to provide concrete evidence of their effects"²⁶⁵² and that "the optimal test of plain packaging would be its implementation and evaluation in a population-based setting".²⁶⁵³

7.1036. The evidence before us on the application of the TPP measures includes empirical evidence relating to their impact on the proximal outcomes reflecting the three mechanisms identified and anticipated in the TPP Act, since their entry into force. This evidence suggests that the introduction of tobacco plain packaging, in combination with enlarged GHWs, has in fact reduced the appeal of tobacco products, as anticipated in a number of the pre-implementation studies criticized by the complainants. As discussed above, this is recognized by some of the complainants' own experts on the basis of a direct examination of data collected for the specific purpose of evaluating the effects of the TPP measures and which was provided to the complainants for use in these proceedings. Empirical evidence relating to the proximal outcomes of the TPP measures also suggests that plain packaging and enlarged GHWs have had some impact on the effectiveness of the GHWs.

7.1037. Finally, we also considered the evidence before us on actual smoking behaviours in Australia since the entry into force of the measures, as reflected in data relating to the evolution of smoking prevalence and consumption. As discussed, the extent to which the data available at the time of our assessment can inform an overall assessment of the actual and expected contribution of the measures to their objective is disputed. The data before us in these proceedings relates to a period of up to three years following the entry into force of the TPP measures. Overall, we find that this evidence is consistent with a finding that the TPP measures contribute to a reduction in the use of tobacco products, to the extent that it suggests that, together with the enlarged GHWs introduced at the same time, plain packaging has resulted in a reduction in smoking prevalence and in consumption of tobacco products.

7.1038. The evidence before us relating specifically to cigars is more limited. While we are mindful of the limitations of this body of evidence, it does not persuade us that our conclusion should be different in respect of cigars. The evidence before us suggests that the importance of packaging in establishing brand associations and perceptions also applies to cigar smokers, albeit with nuances. We also note the evidence before us suggesting a lower level of risk awareness in respect of cigar smoking than in respect of other tobacco products. The limited available pre-implementation evidence before us also suggests that plain packaging would have the capacity to act on at least some of the mechanisms through which the TPP measures are designed to operate also in respect of cigars. Specifically, it suggests that plain packages would have the ability to minimise appeal and perceptions of quality with regard to cigarillos, little cigars, and to a lesser extent premium cigars, and could also affect perceptions of ease of quitting as regards cigarillos and – to a lesser extent – premium cigars.

²⁶⁵² Fong et al. 2006, (Exhibit AUS-132), p. 1.

²⁶⁵³ Wakefield et al. 2012, (Exhibits AUS-557, JE-24(63)), p. 1166.

7.1039. These conclusions are consistent with the limited empirical evidence before us regarding observed outcomes of the TPP measures, which suggests a decrease in perceived packaging appeal when cigar smokers were exposed to the TPP measures and enlarged GHWs²⁶⁵⁴, and an increase in the noticeability of health warnings and pack concealment among cigar and cigarillo smokers, although the evidence is mixed regarding health beliefs.²⁶⁵⁵ The econometric evidence before us suggesting that the TPP measures and enlarged GHWs contributed to a reduction in cigar smoking prevalence²⁶⁵⁶ is also consistent with a conclusion that the measures have an impact on relevant smoking behaviours in respect of cigars.

7.1040. The overall impact of the TPP measures is difficult to quantify in terms of the magnitude of changes in smoking behaviours attributable to the measures, on the basis of the evidence available to us. In particular, this impact, as described above, is difficult to isolate empirically, on the basis of the evidence before us, from other factors that also affect the evolution of smoking behaviours, including other tobacco control measures applied simultaneously with the TPP measures.

7.1041. We note that this regulatory context has a direct bearing on the ability of the TPP measures to contribute to their objective through the mechanisms identified in the TPP Act. Specifically, the existence of a general ban on promotion and advertising ensures that the type of design features, the use of which is restricted on tobacco products and their retail packaging as a result of the TPP measures, is not able to be used in other contexts in a manner that might undermine the functioning of the first mechanism under the TPP Act, namely reducing the appeal of tobacco products through branding. The operation of the second mechanism under the TPP Act also assumes the existence of GHWs applied simultaneously, which Australia also does require.

7.1042. We also consider that the significance of the contribution that the TPP measures make to the objective of reducing the use of, and exposure to, tobacco products, must be viewed against the fact that they also operate to support and complement the effectiveness of these other measures, by avoiding regulatory gaps (in respect of advertising and promotion) and ensuring that other tobacco control efforts aimed at raising awareness of the harmful effects of smoking (including GHWs and social media campaigns) are not undermined.

7.1043. Taken as a whole, therefore, we consider that the evidence before us supports the view that, as applied in combination with the comprehensive range of other tobacco control measures maintained by Australia and not challenged in these proceedings, including a prohibition on the use of other means through which branding could otherwise contribute to the appeal of tobacco products and to misleading consumers about the harmful effects of smoking, the TPP measures are apt to, and do, make a meaningful contribution to Australia's objective of reducing the use of, and exposure to, tobacco products.

7.1044. In making this determination, we are also mindful that the impact of the TPP measures may evolve over time. Our determination is based on the evidence available to us at the time of our assessment and is not intended to prejudge the future evolution of the contribution of the TPP measures to the reduction of the use of, and exposure to, tobacco products. We note,

²⁶⁵⁴ Appendix A, para. 25.

²⁶⁵⁵ Appendix A, paras. 59 and 71. There is also evidence before us showing an increase in the share of non-premium cigarillo smokers contemplating quitting following the implementation of the TPP measures and enlarged GHWs. See Appendix B, para. 31.

²⁶⁵⁶ We note in this regard, that according to Cuba, private consumers of LHM cigars may make occasional, high-value purchases of LHM cigars over the internet from foreign suppliers, thereby receiving them in fully branded packs and with fully branded cigar bands. Cuba argues that the TPP measures are a "purely symbolic gesture" that will not reduce LHM cigar prevalence and consumption because they do not apply to products which are sold or purchased, including over the internet, for the purpose of personal use in Australia. Cuba's first written submission, paras. 272 and 274. While online purchases of non-plain packaged tobacco products appears to be a possibility under the TPP measures (see Section 32(2) of the TPP Act, (Exhibits AUS-1, JE-1)), which exempt an individual who purchase the tobacco product "for his or her personal use"), we are not persuaded that this exception would render the TPP measures a "purely symbolic gesture" that will not have the capacity to reduce LHM cigar prevalence and consumption. Indeed, there is some econometric evidence suggesting that the TPP measures, together with the enlarged GHWs implemented at the same time, contributed to a reduction in cigar smoking prevalence observed after their entry into force. See Appendix C, para. 123.

however, that we find reasonable Australia's suggestion that the measures may be expected to have an impact in particular on future generations of young people whose exposure to tobacco advertising or promotion in Australia will have been generally limited, and that impacts on smoking cessation for existing smokers will also take some time to produce their full effects.

7.1045. Finally, we understand the objective of reducing "exposure" to tobacco products (which is expressed in Section 3(1)(a)(iv) of the TPP Act as "reducing people's exposure to smoke from tobacco products")²⁶⁵⁷ through the TPP measures to be directly linked to, and consequential to the achievement of, the objective of reducing "use" of tobacco products, in that a reduced use of tobacco products by those who consume them will lead to a reduction in the exposure to these products for non-users. Therefore, we conclude that to the extent that the TPP measures contribute to a reduction in the use of tobacco products, they will also have some impact on the reduction of exposure to such products.

7.2.5.4 The trade-restrictiveness of the TPP measures

7.1046. As described above²⁶⁵⁸, one of the factors to be considered in the "relational analysis" under Article 2.2 is the "trade-restrictiveness" of the challenged measures.²⁶⁵⁹ This will inform the assessment of whether the challenged measures are "**more** trade-restrictive than necessary" (emphasis added) within the meaning of Article 2.2:

Article 2.2 does not prohibit measures that have any trade-restrictive effect. It refers to "unnecessary obstacles" to trade and thus allows for some trade-restrictiveness; more specifically, Article 2.2 stipulates that technical regulations shall not be "more trade-restrictive than necessary to fulfil a legitimate objective". Article 2.2 is thus concerned with restrictions on international trade that exceed what is necessary to achieve the degree of contribution that a technical regulation makes to the achievement of a legitimate objective.²⁶⁶⁰

7.1047. The parties have exchanged considerable argumentation concerning the standard that the Panel should apply in assessing the "trade-restrictiveness" of the TPP measures within the meaning of Article 2.2. We therefore first consider this question, before turning to an assessment of the trade-restrictiveness of the TPP measures.

7.2.5.4.1 Meaning of the term "trade-restrictive" in Article 2.2

7.2.5.4.1.1 Main arguments of the parties

7.1048. Honduras argues that the word "restriction", as used in Article 2.2 in conjunction with the word "trade", means something having a limiting effect on trade.²⁶⁶¹ Honduras states that the panel in *US – COOL* found that the challenged technical regulation was trade-restrictive because it affected negatively the competitive conditions of imported products.²⁶⁶² Honduras argues that past GATT and WTO jurisprudence on Article XI of the GATT 1994 further indicates that trade restrictions are measures that place a limiting condition on importation, or have a limiting effect on importation by negatively affecting the competitive opportunities available to imported products; measures that create uncertainties and affect investment plans; measures that have identifiable negative consequences on the importation of a product; and measures that make importation

²⁶⁵⁷ TPP Act, (Exhibits JE-1, AUS-1), Section 3(1)(a)(iv).

²⁶⁵⁸ See para. 7.31 above.

²⁶⁵⁹ See, e.g. Appellate Body Reports, *US – Tuna II (Mexico)*, para. 319; and *US – COOL*, para. 375. The other two factors to be addressed in the "relational analysis" are the degree of contribution of the measure to its objective and the risks that non-fulfilment would create, which are addressed respectively in section 7.2.5.3 above, and section 7.2.5.5 below, respectively.

²⁶⁶⁰ Appellate Body Report, *US – Tuna II (Mexico)*, para. 319.

more onerous than if the condition did not exist and thus generate a disincentive to import.²⁶⁶³ In Honduras's view, an assessment of trade-restrictiveness does not require the demonstration of any actual trade effects, as the focus is whether the measure has a detrimental effect on the competitive opportunities available to imported products.²⁶⁶⁴ Honduras submits that trade-restrictiveness should be determined on a case-by-case basis, in light of the specific circumstances of each measure. Whether a demonstration of actual trade effects is useful or necessary is something to be determined in light of each measure's characteristics and the available evidence. In this respect, Honduras adds that in certain cases, the evidence on trade flows may be unreliable, for the simple reason that the observed changes in trade flows may result from actions taken by private parties for reasons unrelated to the measure at issue.²⁶⁶⁵ Honduras refers to the TBT Committee's recommendation on the concept of "significant effect on trade of other Members" in Article 2.9 of the TBT Agreement²⁶⁶⁶ (TBT Committee Recommendation), which "is pertinent" for understanding the term "trade-restrictive" in Article 2.2. Honduras argues on this basis that the "value or other importance of imports" is a factor that may demonstrate the trade-restrictiveness of a technical regulation. In the present case, according to Honduras, "the ability to achieve product differentiation is an element of great 'value' and 'importance' to tobacco producers".²⁶⁶⁷ Furthermore, the reference in the TBT Committee Recommendation to difficulties for producers in other Members to comply with the proposed technical regulations "lends further support to Honduras's **argument that compliance costs ... is a factor that** demonstrates the trade-restrictiveness of the plain packaging measures".²⁶⁶⁸

7.1049. The Dominican Republic argues that the word "restriction", as used in Article 2.2 means something having a limiting effect on trade²⁶⁶⁹, and that the legal standard of trade-restrictive involves a comparison with a benchmark situation; namely, a comparison between the treatment of imported goods under the contested measure with the treatment of the same imports in the absence of the contested measure.²⁶⁷⁰ Concerning the evidentiary standard for trade-restrictiveness, the Dominican Republic argues that trade-restrictiveness does not require the demonstration of any actual trade effects, as the focus is whether the measure has a detrimental effect on the competitive opportunities available to imported products²⁶⁷¹, which is to be determined by reference to its design, architecture, revealing structure and operation.²⁶⁷² According to the Dominican Republic, such evidence suffices to prove a limitation on competitive opportunities without having to prove actual trade effects. Evidence of actual trade effects may be required in situations in which a limitation on competitive opportunities cannot be reliably discerned from other evidence concerning design, structure and expected operation. The need for evidence of actual trade effects turns on what can be gleaned from the other evidence²⁶⁷³, and may also be used by a complainant to confirm that the challenged measure limits competitive opportunities.²⁶⁷⁴ The Dominican Republic adds that (i) a limitation on competitive opportunities may stem from a market-wide regulation that adversely affects the situation of all goods, whether imported or domestic; (ii) a limitation on competitive opportunities may stem from a technical

regulation that reduces the opportunities of imported **products** in a particular market segment; (iii) limitation on competitive opportunities may be assessed in terms of the volume and/or the value of imports; (iv) a limitation on competitive opportunities should be assessed, taking account of how the measure affects imports from **countries** "individually or collectively"; (v) an assessment of trade-restrictiveness should take into account how the measure affects imports from countries "individually or collectively"; and (vi) trade-restrictiveness should be assessed in terms of its impact on the "potential" growth of such imports, and not on the actual impact of the measure.²⁶⁷⁵ With respect to points (ii)-(vi), above, the Dominican Republic relies on the TBT Committee Recommendation²⁶⁷⁶ which it describes as providing "useful context" for interpreting the term "trade-restrictive" in Article 2.2.²⁶⁷⁷

7.1050. Cuba argues that trade-restrictiveness is to be assessed by examining whether a measure has "a limiting effect on trade".²⁶⁷⁸ Cuba argues that it is sufficient for this standard for prejudicial effects on the position of exporters to be identified, such as restricted market access, uncertainties affecting investment and increased costs.²⁶⁷⁹ In Cuba's view, measures can be trade-restrictive even where they do not cause a reduction in import volumes, as it suffices that harmful effects on the position of exporters are identified²⁶⁸⁰, or the measure's impact on commercial opportunities for imported products²⁶⁸¹, is demonstrated. Cuba argues that the TBT Committee Recommendation²⁶⁸² "provide[s] the Panel with guidance for the analysis of trade-restrictiveness under Article 2.2". Cuba points out that the Recommendation refers not only to the volume of imports but also to their value and growth potential which, in Cuba's view, is particularly relevant in connection with its down-trading argument (discussed further below). Cuba adds that these "criteria" for the evaluation of a trade restriction go beyond an analysis of the "actual effects on trade", and support Cuba's arguments concerning the relevance of competitive opportunities for determining whether a technical regulation is trade-restrictive.²⁶⁸³

7.1051. Indonesia argues that trade-restrictiveness within the meaning of Article 2.2 means "something having a limiting effect on trade", and that trade-restrictive measures include those that deny competitive opportunities to imports.²⁶⁸⁴ Indonesia argues that the scope of the term "trade-restrictive" is broad and does not require the demonstration of any actual trade effects, as the focus is on the competitive opportunities available to imported products²⁶⁸⁵ or competitors in the market.²⁶⁸⁶ In this respect, Indonesia states that "for over 60 years the GATT and WTO have relied on the understanding that complainants do not need to show trade effects of a quantitative nature in order to show that a measure is inconsistent with the GATT or a WTO agreement", and that "the design, the structure and the architecture of a measure can be sufficient to indicate whether a measure is trade-restrictive". Indonesia notes that there may be cases where a panel's examination of the design, structure and expected operation of a measure leaves questions about whether there is a limiting effect on competitive opportunities and, where this is the case, a complainant might have to go further and demonstrate something more, such as trade effects of a quantitative value.²⁶⁸⁷ Indonesia argues that the TBT Committee Recommendation²⁶⁸⁸ provides important context for the Panel's interpretation of Article 2.2. In Indonesia's view, it indicates that

(i) a significant effect on trade can arise from an impact on a specific product, group of products or products in general; (ii) a measure that has a significant effect on trade includes measures that affect the value of imports, (including the effect of downtrading on premium brands), but that "measures may also affect 'other importance of imports'", in respect of which Indonesia notes the importance of the tobacco sector highlighted by certain least-developed third parties; (iii) a "significant effect on trade" could be "from other Members individually or collectively"; and (iv) "difficulties for producers in other Members to comply with the proposed technical regulations" "could" support the argument that compliance costs could be included in an assessment of trade-restrictiveness (notwithstanding the fact that Indonesia did not allege that compliance costs result in trade-restrictiveness).²⁶⁸⁹

7.1052. Australia argues that the ordinary meaning of the term "restriction" is "something that restricts someone or something, a limitation on action, a limiting condition or regulation", and that, when used in conjunction with the term "trade", the term "restriction" means something "having a limiting effect on trade".²⁶⁹⁰ In Australia's view, a technical regulation will have a "limiting effect on trade" when it creates an "obstacle" (which it equates with a "hindrance" or "impediment") to international trade.²⁶⁹¹

7.1053. In Australia's view, a demonstration that a technical regulation creates an obstacle to international trade does not require evidence of "actual trade effects", but rather can be discerned from the design, structure and operation of the measure.²⁶⁹² Australia notes that "one possible way" of demonstrating trade-restrictiveness is to demonstrate that the technical regulation at issue modifies the conditions of competition in the marketplace to the detriment of imported products relative to domestic products.²⁶⁹³ However, in the absence of such a claim, Australia posits that it is insufficient for the complainants to refer to changes in market conditions in the abstract without also demonstrating how such changes have a limiting effect on international trade.²⁶⁹⁴ Thus, Australia acknowledges "that raised barriers to entry, or increased compliance costs, are potentially relevant in determining whether a measure is trade-restrictive under Article 2.2", but "only if they resulted in a limiting effect on overall trade in tobacco products".²⁶⁹⁵ For Australia, unless "the design, structure and operation of the technical regulation demonstrate that it will result in a limiting effect on international trade, evidence of actual trade effects will be required to establish that the measure is, in fact, trade-restrictive".²⁶⁹⁶ Australia argues that the complainants "have merely asserted that the tobacco plain packaging measure has changed the conditions of competition in the Australian tobacco market", but have not demonstrated that such effects have arisen as a result of the TPP measures, or such changes have resulted in a limiting effect on overall trade in tobacco products.²⁶⁹⁷ Australia asserts that the complainants' claims of trade-restrictiveness are such that they are required to provide supporting evidence and argumentation of actual trade effects, which they have failed to adduce.²⁶⁹⁸

7.1054. In this context, Australia understands "effect on trade" to refer to "the effect on trade of all WTO Members in the products subject to the measure – in this case, tobacco products".²⁶⁹⁹ Furthermore, Australia asserts that "the scope of the analysis must necessarily encompass international trade more generally, rather than trade solely with respect to a single Member", **because "a measure that restricts or limits trade for one Member ... but that increases trade for all other Members, such that there is a net increase in trade, would not, without more, be trade-restrictive within the meaning of Article 2.2 of the TBT Agreement"**, (even though such a

measure could constitute a breach of the most-favoured-nation (MFN) obligation in Article 2.1).²⁷⁰⁰ In this respect, Australia argues that the TBT Committee Recommendation²⁷⁰¹ does not assist the Panel in determining whether a measure is "trade-restrictive" within the meaning of Article 2.2 of the TBT Agreement²⁷⁰², as it is of no interpretative significance.²⁷⁰³

7.2.5.4.1.2 Main arguments of the third parties

7.1055. Brazil argues that Article 2 of the TBT Agreement establishes different and cumulative conditions that should inform the adoption and application of technical regulations by WTO Members. Brazil quotes the Appellate Body statement that "ultimately, the task of a panel under Article 2.2 is to determine whether the technical regulation at issue restricts international trade beyond what is necessary for that technical regulation to achieve the degree of contribution that it makes to the achievement of a legitimate objective".²⁷⁰⁴ Supporting evidence and argumentation of actual trade effects may be used to demonstrate trade-restrictiveness in the sense of "unnecessary obstacles to trade". However, the evidence need not necessarily quantify the trade-restriction, but may be qualitatively assessed for its contributions to the legitimate goal.²⁷⁰⁵

7.1056. Canada argues that a measure may be "trade-restrictive" where it has a limiting effect on trade, and that such an effect may be created by the modification of the conditions of competition for imported products, a reduction in individual Member **or** overall global trade volumes, an import prohibition, or increased compliance costs incurred by manufacturers. Ascertaining trade-restrictiveness exclusively and in all circumstances on a rigid quantitative basis is not consistent with the broad interpretation of the term given to it by previous panels and the Appellate Body.²⁷⁰⁶ While an analysis of the **actual** trade effects may be used to **confirm** that a measure has a certain degree of trade-restrictiveness, that analysis is not required in all cases as a matter of evidentiary burden. Whether a measure is "trade-restrictive" should not be determined solely by conducting an empirical exercise; rather, the ordinary meaning of the words in their context suggests that the term captures a broad set of circumstances.²⁷⁰⁷

7.1057. China argues that the trade-restrictiveness of the measure at issue is a threshold issue and that measures which are not trade-restrictive cannot be inconsistent with Article 2.2. China argues, with reference to the Appellate Body in *US – Tuna II (Mexico)* "trade-restrictive" would mean "having a limiting effect on international trade".²⁷⁰⁸ China states that the Panel may wish to consider whether a demonstration that a technical regulation at issue modifies the conditions of competition in the marketplace to the detriment of imported products relative to domestic products is the sole way of establishing a trade-restrictive effect. Such a view might, in China's view, imply that the analysis under Article 2.2 is to a large extent dependent on the outcome of the analysis under Article 2.1. China recalls that the panel in *US – Clove Cigarettes* distinguished the nature of the analysis to be conducted under Article 2.2 from that to be conducted under Article 2.1.²⁷⁰⁹

7.1058. China also argues that the meaning of "restrictions" in Article XI of the GATT 1994 could inform the interpretation of "trade-restrictiveness" in Article 2.2 of the TBT Agreement. The Appellate Body found that the limiting effect of restrictions "need not be demonstrated by quantifying the effects of the measure at issue", but "can be demonstrated through the design, architecture, and revealing structure of the measure at issue considered in its relevant context".

Thus, supporting evidence and argumentation of actual trade effects might help to assess "trade-restrictiveness", but would not necessarily be required.²⁷¹⁰

7.1059. The European Union argues that the phrase "obstacles to international trade" in the first sentence of Article 2.2 and the phrase "trade-restrictive" in the second sentence of Article 2.2, inform each other. The European Union notes that the trade-restrictiveness referred to in the second sentence is international, notwithstanding the absence of that term in that sentence, and Article 2.2 does not refer to restrictions of commerce occurring exclusively within a WTO Member. There might "potentially appear to be a slightly different shade of meaning between the term 'obstacle', which might also imply something that could be overcome, and the term 'restriction', which might also imply a limiting effect".²⁷¹¹ However, one may also argue that something would only be an obstacle if overcoming it entailed a cost and that an additional regulatory cost could amount to a trade-restriction even if it could or would be absorbed or mitigated by firms. An examination of all the instances in which the terms obstacle and restriction appear in the TBT Agreement does not suggest that they are used other than interchangeably. The TBT Agreement also refers to an effect on trade of other Members.²⁷¹² The European Union points to instances in which the Appellate Body has found that different terms have meanings that are the same or very similar.²⁷¹³

7.1060. For the European Union, the trade restriction may be something that may be "observed" by comparing a difference between historical data (unaffected by the measure) and current data, and determining that the measure causes the trade restriction. The trade restriction may also be determined on the basis of a counterfactual or be in the future, but determined on the basis of the design and architecture of the measure, and all the surrounding facts. Thus, it is possible that, after the adoption of the measure, international trade increases for other reasons, but that the measure is nevertheless trade-restrictive, because it is preventing a further increase that would otherwise occur. Furthermore, the possibility that firms might take action in order to absorb or mitigate or overcome the obstacle does not necessarily mean that there is no trade restriction. Thus, whether or not there is an obstacle to international trade or a trade restriction or an effect on trade needs to be assessed on the basis of all the relevant facts. Reliance on hypotheticals or counterfactuals, supported by sufficient evidence may be necessary, particularly in cases involving complex interactions between different measures, which deploy their effects over time. However, an adjudicator needs to proceed with caution and prudence in dealing with a hypothetical or a counterfactual.²⁷¹⁴ The European Union considers that it would not be possible to sustain a claim of violation of Article 2.2 based on an alleged obstacle to international trade or trade restriction or effect on trade that would be excessively hypothetical or remote.²⁷¹⁵

7.1061. The European Union adds that, although volume and price are closely related, and the benefit of a trade flow would be measured in terms of both volume and price (or value), the parties in these proceedings appear to conceptualize the concept of trade-restriction particularly in terms of volume. The complainants appear to argue that a measure that increases prices (or costs) will, all other things being equal, reduce volumes. In this respect, the European Union considers that, if a measure imposes increased costs on trade, whether in the short or long term, including increased barriers to entry, then, all other things being equal, it is susceptible to giving rise to a trade-restriction.²⁷¹⁶

7.1062. The European Union notes that some parties equate the concept "of a detrimental impact on competitive conditions or opportunities used in the context of *de facto* discrimination claims", with that of trade restriction for the purposes of Article 2.2 of the TBT Agreement. However, for the European Union, Articles 2.1 and 2.2 are concerned with different issues – Article 2.1 is concerned with the question of discrimination, whilst Article 2.2 is concerned with the question of necessity. A measure might not be discriminatory but be highly trade-restrictive and unnecessary. Conversely, a measure might have a severely detrimental impact or be highly discriminatory, but

²⁷¹⁵ European Union's third-party submission, para. 57.

²⁷¹⁶ European Union's third-party submission, para. 58.

not be trade-restrictive and be entirely necessary. Consequently, the European Union does not agree that whether there is trade-restrictiveness must be assessed relative to domestic products. A measure could impact equally on domestic and imported products, but still be highly trade-restrictive.²⁷¹⁷

7.1063. The European Union does not consider that the affected trade must necessarily be between the complaining Member and the defending Member. As Article 2.2 merely refers to an obstacle to international trade or a trade restriction, and does not, unlike Article 2.1, require a comparison between domestic and imported goods, or between goods originating in two or more third countries, the trade restriction in question could be with respect to the trade of any WTO Member.²⁷¹⁸ A measure that restricts or limits trade for one Member but increases trade for all other Members, would not, without more, be trade-restrictive within the meaning of Article 2.2 of the TBT Agreement. The European Union sees the relative effect of a measure among different exporting Members, or between the exporting Member and the importing Member (issues such as the brand differentiation and down-trading alleged by the complainants in this case) as generally "more apt for treatment under Article 2.1 rather than Article 2.2".²⁷¹⁹ With respect to origin neutral measures that do not involve any *de facto* discrimination, the European Union does not think it sufficient to measure trade-restrictiveness by reference to one complainant, or several complainants. The complainants do not appear to be arguing that the measure at issue affects them in any special way, different from the way that it affects other Members. The European Union therefore does not think that it would be enough for one complainant to demonstrate that its volume has decreased (the volume of some other complainant or complainants having increased).²⁷²⁰

7.1064. Finally, the European Union states that Article 20 of the TRIPS Agreement is context for the interpretation and application of Article 2.2 of the TBT Agreement. It states that it is possible that there could be a measure that encumbers the use of a trademark in the course of trade, within the meaning of Article 20, and that causes a trade restriction within the meaning of Article 2.2; however, this is not automatically the case, and would have to be demonstrated by the complaining Members.²⁷²¹

7.1065. Japan argues that the examination of "trade-restrictiveness" under the second sentence of Article 2.2 shall be based on an examination of the measure's design, architecture, structure and operation. This may involve an inquiry as to whether a modification of competitive opportunities which is detrimental to imports as a whole or in part could not have occurred absent the measures at issue. Evidence of actual trade effects may be referenced to confirm this examination, but the actual trade effect itself may not necessarily reveal trade-restrictiveness since various factors other than the measures at issue may be the cause for the actual trade effect. Japan argues that this is consistent with the Appellate Body's finding that "the demonstration of a limiting effect on competitive opportunities in qualitative terms might suffice in the particular circumstances of a given case".²⁷²²

7.1066. New Zealand argues that the complainants' submissions seek to expand the concept of "trade-restrictiveness" under Article 2.2 beyond its ordinary meaning, without any WTO jurisprudence to support their proposition. Trade-restrictiveness can be assessed by looking at the competitive opportunities available to imported products, but, as Australia has argued, the focus should be on "whether the technical regulation at issue modifies the conditions of competition in the marketplace in a manner that has a limiting effect on trade for imported products subject to that regulation".²⁷²³

7.1067. Referring to the Appellate Body's comments in *US – COOL (Article 21.5 – Canada and Mexico)*, New Zealand submits that these are useful for informing the Panel's assessment of whether the TPP measures are "trade-restrictive". Specifically, given "that Australia's measures are

non-discriminatory internal measures that address a legitimate objective, the complainants should be required to adduce supporting evidence and argumentation of actual trade effects and demonstrate the existence and extent of trade-restrictiveness in respect of Australia's measures".

7.1068. Nicaragua notes that Article 2.2 of the TBT Agreement in no way references discrimination and that it is not relevant to consider any discriminatory impact to find that a technical regulation constitutes an "unnecessary obstacle to international trade". For Nicaragua, it is not inappropriate to consider evidence of actual trade effects, but demonstrating actual trade effects is not a requirement as the WTO obligation protects competitive opportunities. Nicaragua refers to the Appellate Body's agreement in *US – COOL* with the panel's findings that there was no need to demonstrate actual trade effects in an examination of Article 2.2. The analysis of trade-restrictiveness is about the potential of a technical regulation to adversely affect conditions of competition and competitive opportunities and is thus focused on the "structure, architecture and design of the measure" rather than any actual trade effects. Footnote 643 of the Appellate Body's reports in *US – COOL (Article 21.5 – Canada and Mexico)*, supports the proposition that it is sufficient to demonstrate "a limiting effect on competitive opportunities in qualitative terms" to demonstrate a technical regulation's trade-restrictiveness.²⁷²⁴

7.1069. Norway submits that an assessment of whether a technical regulation is "trade-restrictive" requires establishing whether the measure imposes restrictive conditions that limit international trade. Article 2.2 is thus concerned with a different issue than Article 2.1. For Norway, findings of inconsistency under Article 2.1 would however not be irrelevant for the assessment of Article 2.2. For example, if a measure discriminates against imported products as a whole, as compared to like domestic products, this could imply that the measure is also trade-restrictive under Article 2.2. On the other hand, a measure may be trade-restrictive even though it impacts equally on domestic and imported goods. This is presupposed in the Appellate Body's reference in *US – COOL (Article 21.5 – Canada and Mexico)*, to "the existence and extent of trade-restrictiveness in respect of non-discriminatory internal measures". However, the Appellate Body underlined that demonstrating the existence and extent of trade-restrictiveness in respect of non-discriminatory internal measures may require "supporting evidence and argumentation of actual trade effects", as opposed to *de jure* discriminatory measures where a detrimental modification of competitive opportunities "may be self-evident". This seems to imply that the burden of the complainant to substantiate an allegation of trade-restrictiveness may be raised in such cases.²⁷²⁵ Norway shares the views of the European Union and Australia that when assessing whether, and to what extent, a measure limits international trade, the focal point should be trade more generally and not trade solely with respect to a single member. Norway also agrees with the European Union that "issues about the relative effect of a measure among different exporting Members, or between the exporting Member and the importing Members (issues such as the brand differentiation and down-trading alleged by the complainants in this case) [are] generally more apt for treatment under Article 2.1 rather than Article 2.2".²⁷²⁶ Finally, Norway considers that the impact of a measure on access to the market or costs of compliance could be relevant in determining whether it is trade-restrictive, insofar as it has had a limiting effect on international trade in tobacco products.²⁷²⁷

7.1070. Singapore refers to the Appellate Body's statement in footnote 643 of *US – COOL (Article 21.5 – Canada and Mexico)* suggesting that it may be difficult for complainants to prove detrimental modification of competitive opportunities in respect of non-discriminatory internal measures. Trade-restrictiveness "should be seen as an absolute, rather than as a relative standard (in the sense of comparison with another 'like product')". For Singapore, the test of "modification of competitive opportunities" has its roots in the discrimination-based disciplines in Article 2.1 of the TBT Agreement and Articles I and III of GATT 1994. It invites the Panel to consider if importing such a relative standard is appropriate. Singapore submits that evidence of actual trade effects is not a requirement to demonstrate the existence and extent of trade-restrictiveness in respect of non-discriminatory internal measures that address a legitimate objective and trade-restrictiveness

can be discerned through "the characteristics of the technical regulation at issue as revealed by its design and structure".²⁷²⁸

7.2.5.4.1.3 Analysis by the Panel

7.1071. As described above, at this stage of our analysis, what we seek to establish is the "trade-restrictiveness" of the TPP measures, as an element of the broader analysis of whether they are *more* trade-restrictive than necessary within the meaning of Article 2.2.

7.1072. The Appellate Body has understood the word "restriction" as referring to "something that restricts someone or something, a limitation on action, a limiting condition or regulation". Accordingly, it found, in the context of Article XI:2(a) of the GATT 1994, that the word "restriction" refers generally to something that has a limiting effect. It further determined that as used in Article 2.2 in conjunction with the word "trade", the term means "something having a limiting effect on trade".²⁷²⁹ Specifically, what is at stake in this context is the limiting effect of the measure on *international* trade, as is made clear by the reference to "international trade" in the first sentence of Article 2.2. We therefore understand that a technical regulation is "trade-restrictive" within the meaning of Article 2.2 when it has a limiting effect on international trade.²⁷³⁰

7.1073. We note that past panels²⁷³¹, and the Appellate Body²⁷³², have assessed the trade-restrictiveness of specific technical regulations with reference to their limiting effect on the "competitive opportunities" available to imported products.²⁷³³ In those disputes, the trade-restrictiveness of the technical regulations in question was determined in the presence also of a separate assessment of whether the technical regulation accorded less favourable treatment to imported products under Article 2.1 of the TBT Agreement.²⁷³⁴

7.1074. The manner in which an assertion of trade-restrictiveness is substantiated may vary from case to case. The Appellate Body has thus found that an assertion that a technical regulation is trade-restrictive might be substantiated on the basis of whether the technical regulation has a **limiting effect on competitive opportunities "in qualitative terms ... in the particular circumstances**

²⁷²⁸ Singapore's third-party response to Panel question No. 4 (referring to Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208).

²⁷²⁹ Appellate Body Report, *US – Tuna II (Mexico)*, para. 319 (footnotes omitted). See also Appellate Body Reports, *US – COOL*, para. 375.

²⁷³⁰ As expressed by the Appellate Body in *US – Tuna II (Mexico)*, para. 319, also quoted above, "Article 2.2 is thus concerned with restrictions on international trade". This is consistent with the first sentence of Article 2.2, which uses the phrase "unnecessary obstacles to international trade", not just "unnecessary obstacles to trade". The term "trade" is qualified by "international" in other key provisions of the TBT Agreement, including "conduct of international trade" (preamble, 3rd recital), "restriction to international trade" (preamble, 6th recital), "obstacles to international trade" (preamble, 5th recital; Article 2.5; Article 5.1.2; and Annex 3.E).

²⁷³¹ Panel Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, paras. 7.367-7.370; and *US – COOL*, para. 7.572.

²⁷³² Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208 and fn 643 (referring to Appellate Body Reports, *US – COOL*, para. 477).

²⁷³³ See Appellate Body Reports, *US – COOL*, para. 477. As expressed by the Appellate Body, the panel in that case "considered the measure to have a considerable degree of trade-restrictiveness insofar as it has a limiting effect on the competitive opportunities for imported livestock *as compared to the situation prior to the enactment of the COOL measure*". Ibid. (emphasis added). In *EC – Seal Products*, the Appellate Body noted the panel's finding under Article 2.2 of the TBT Agreement that the EU Seal Regime "considered in its entirety, is trade restrictive because it does 'hav[e] a limiting effect on trade' by prohibiting certain seal products, including those imported from Canada and Norway, from accessing the EU market". Ibid. para. 5.205. The Appellate Body also observed in that report that in referring to the prohibition on the import of seal products "including those imported from Canada and Norway", the panel may have been referring not only to the restrictive impact of the ban, but also to any restrictive discriminatory impact caused by trade diversion between imports of seal products originating in different countries. Ibid. para. 5.205 fn 1269.

²⁷³⁴ In the present proceedings, the parties have not pursued claims under Article 2.1 of the TBT Agreement. We note that the complainants each identified Article 2.1 of the TBT Agreement as a legal basis for their respective complaints, but did not present arguments in respect of these claims or request findings in respect of that provision.

of a given case".²⁷³⁵ The Appellate Body has also clarified that, in certain cases, "a detrimental modification of competitive opportunities may be self-evident in respect of certain *de jure* discriminatory measures, whereas supporting evidence and argumentation of actual trade effects might be required to demonstrate the existence and extent of trade-restrictiveness in respect of non-discriminatory internal measures that address a legitimate objective."²⁷³⁶ This finding confirms that "non-discriminatory internal measures" may be found to be "trade-restrictive" within the meaning of Article 2.2 of the TBT Agreement. This is consistent, in our view, with the fact that Article 2.1 and 2.2 establish distinct obligations in respect of technical regulations, concerning respectively the treatment of imported products relative to each other and relative to domestic products, and trade-restrictiveness. While the existence of discrimination may contribute to the establishment of "trade-restrictiveness" within the meaning of Article 2.2, a determination of "trade-restrictiveness" is not dependent on the existence of discriminatory treatment of imported products.

7.1075. How the existence and extent of trade-restrictiveness is to be demonstrated in respect of technical regulations that are not alleged to be discriminatory will depend, as is the case for other technical regulations, on the circumstances of a given case.²⁷³⁷ However, as highlighted by the Appellate Body, in the absence of any allegation of *de jure* restriction on the opportunity for imports to compete on the market or of any alleged discrimination in this respect (between imports or between imported and domestic products), a sufficient demonstration will be required to establish the existence and extent of any "limiting effect" on international trade, resulting from the challenged technical regulation.

7.1076. As observed by the Appellate Body, it will not always be possible to quantify a particular factor analysed under Article 2.2, or to do so with precision, because of, *inter alia*, the nature of the objective pursued and the level of protection sought, or the nature, quantity, and quality of evidence existing at the time of our analysis, or the characteristics of the technical regulation at issue as revealed by its design and structure.²⁷³⁸ Where different methodologies for the assessment of trade-restrictiveness are available based on the facts and arguments submitted by the parties, it is incumbent upon a panel to "adopt or develop a methodology that is suited to yielding a correct assessment" in respect of the technical regulation at hand.²⁷³⁹ Depending on the circumstances of the case, such demonstration could be based on qualitative or quantitative arguments and evidence, or both, including evidence relating to the characteristics of the challenged measure as revealed by its design and operation.

7.1077. In these proceedings, the parties have expressed different views on the manner in which the Panel should assess the extent to which the challenged measures are trade-restrictive. In this respect, Australia submits that the effect of the TPP measures on international trade should be assessed on the basis of their effect on trade *with all WTO Members* taken as a whole, in the products that are the subject of the measures (i.e. "tobacco products" as defined in the TPP Act).²⁷⁴⁰ As described above, the complainants consider that the TBT Committee Recommendation²⁷⁴¹ on the meaning of the term "significant effect on the trade of other Members" in Article 2.9 of the TBT Agreement provides guidance for the analysis of trade-restrictiveness

²⁷³⁵ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208. (footnote omitted)

²⁷³⁶ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208 fn 643.

²⁷³⁷ See Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208. We also note that, in the context of its interpretation of the term "restriction" in Article XI:1 of the GATT 1994 (which it has relied upon in the context of interpreting "trade-restrictiveness" in Article 2.2 of the TBT Agreement), the Appellate Body pointed out that limiting effects "need not be demonstrated by quantifying the effects of the measure at issue; rather such limiting effects can be demonstrated through the design, architecture and revealing structure of the measure at issue in its relevant context". See, e.g. Appellate Body Reports, *Argentina – Import Measures*, para. 5.217.

²⁷³⁸ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208.

²⁷³⁹ Appellate Body Reports, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.210.

²⁷⁴⁰ See Australia's response to Panel question Nos. 68, 117, and 151; and Australia's second written submission, para. 366.

²⁷⁴¹ See fn 2666 above.

under Article 2.2, and makes clear that Australia's interpretation is incorrect. Australia considers the TBT Committee Recommendation to be of no interpretative significance.²⁷⁴²

7.1078. We see no basis in the terms of Article 2.2 to assume, as Australia proposes, that the effects of a technical regulation on international trade, and specifically the existence and extent of a "trade-restrictive" effect, should be assessed only on the basis of the effect of the measure on trade of all WTO Members, in all products that are the subject of the technical regulation. Indeed, we consider that the adoption of that interpretation would have the effect that a WTO Member could have no recourse to Article 2.2 of the TBT Agreement in respect of a particular product in which its trade were being restricted, in the event that the trade of (an)other Member(s) increased. Further, following Australia's logic, in order to succeed in a claim under Article 2.2, a Member would in all cases need to establish the existence of a limiting effect not only in respect of its own exports, but in respect of the entirety of exports from all Members. This interpretation would, in our view, diminish the rights of Members under Article 2.2.

7.1079. We find useful guidance in this respect from the context of Article 2.2, in particular Article 2.9 of the TBT Agreement. The *chapeau* of Article 2.9 provides:

Whenever a relevant international standard does not exist or the technical content of a proposed technical regulation is not in accordance with the technical content of relevant international standards, and if the technical regulation may have a *significant effect on trade of other Members*, Members shall ... (emphasis added)

7.1080. The subparagraphs immediately following this *chapeau* set out requirements for WTO Members with respect to, *inter alia*, the publication of the proposed introduction of the technical regulation, and the notification to other Members of the products to be covered by the technical regulation, together with a brief indication of its objective and rationale.

7.1081. We note that, as observed by the complainants, the TBT Committee adopted a recommendation with a view to "ensuring a consistent approach to the selection of proposed **technical regulations ... to be notified**" under Article 2.9 of the TBT Agreement. The TBT Committee Recommendation provides that:

- i. for the purposes of Articles 2.9 and 5.6, the concept of "significant effect on trade of other Members" may refer to the effect on trade:
 - of one technical regulation or procedure for assessment of conformity only, or of various technical regulations or procedures for assessment of conformity in combination;
 - in a specific product, group of products or products in general; and
 - between two or more Members.
- ii. when assessing the significance of the effect on trade of technical regulations, the Member concerned should take into consideration such elements as:
 - the value or other importance of imports in respect of the importing and/or exporting Members concerned, whether from other Members individually or collectively,
 - the potential growth of such imports, and
 - difficulties for producers in other Members to comply with the proposed technical regulations.

²⁷⁴² Australia's response to Panel question No. 127; and Australia's second written submission, para. 397 fn 380.

- iii. the concept of a significant effect on trade of other Members should include both import-enhancing and import-reducing effects on the trade of other Members, as long as such effects are significant.²⁷⁴³

7.1082. Pursuant to Article 3.2 of the DSU, panels and the Appellate Body are to clarify the provisions of the covered agreements "in accordance with customary rules of interpretation of public international law". In accordance with Article 31(3)(a) of the Vienna Convention on the Law of Treaties²⁷⁴⁴ (Vienna Convention)²⁷⁴⁵, this includes taking into account, together with the context, any "subsequent agreement" between the parties. We therefore consider the extent to which the TBT Committee Recommendation²⁷⁴⁶ may be considered to constitute a "subsequent agreement", for the purposes of interpreting the term "trade-restrictive" in Article 2.2 of the TBT Agreement.

7.1083. The TBT Committee Recommendation was adopted in 1995, subsequent to the conclusion of the TBT Agreement, by all WTO Members acting jointly through the TBT Committee, by consensus.²⁷⁴⁷ However, as the Appellate Body has noted, the extent to which a decision by Members will inform the interpretation and application of a term or provision in a specific case will depend on "the degree to which it 'bears specifically' on the interpretation and application of the respective term or provision".²⁷⁴⁸

7.1084. We first note that by its own terms, the TBT Committee Recommendation²⁷⁴⁹ does not purport to interpret Article 2.2 of the TBT Agreement, or the notion of "trade-restrictiveness" in that provision. Rather, it identifies situations to which the concept of "significant effect on trade of other Members" in Articles 2.9 and 5.6 may refer, and considerations that Members should take into account in assessing "the significance of the effect on trade of technical regulations" in the context of applying these provisions.

7.1085. Taking this into account, it is not clear to us that these aspects of the Recommendation have a function *other than* to shed light on "the concept of 'significant effect on trade of other Members'"²⁷⁵⁰ for the purposes of applying Articles 2.9 and 5.6.²⁷⁵¹ We do not consider, therefore, that the TBT Committee Recommendation²⁷⁵² "bears specifically" upon the interpretation of the term "trade-restrictiveness" in Article 2.2 of the TBT Agreement. We do consider, however that it "bears specifically" upon the interpretation of the term "significant effect on trade of other Members" in Article 2.9 of the TBT Agreement. To the extent that Article 2.9 itself provides relevant context for the interpretation of Article 2.2, the guidance provided by the Recommendation, should therefore inform, as relevant, our understanding of the relevant context provided by Article 2.9.

7.1086. The concept of "significant effect on trade of other Members", while not identical to the term "trade-restrictive" as used in Article 2.2, provides relevant context insofar as it sheds light on

²⁷⁴³ Committee on Technical Barriers to Trade, Secretariat Note, "Decisions and Recommendations Adopted by the WTO Committee on Technical Barriers to Trade Since 1 January 1995", WTO Document G/TBT/1/Rev.12 (21 January 2015), Section 4.3.1.1, p. 20 (entitled "Significant effect on trade of other Members").

²⁷⁴⁵ See Appellate Body Report, *US – Clove Cigarettes*, para. 258 ("Pursuant to Article 3.2 of the DSU, panels and the Appellate Body are required to apply the customary rules of interpretation of public international law – including the rule embodied in Article 31(3)(a) of the *Vienna Convention*").

²⁷⁴⁶ See fn 2666 above.

²⁷⁴⁷ See Appellate Body Report, *US – Tuna II (Mexico)*, para. 371.

²⁷⁴⁸ See Appellate Body Report, *US – Tuna II (Mexico)*, para. 372 (referring to Appellate Body Report, *US – Clove Cigarettes*, para. 265, in turn quoting Appellate Body Reports, *EC – Bananas III (Article 21.5 – Ecuador II)* / *EC – Bananas III (Article 21.5 – US)*, para. 390).

²⁷⁴⁹ See fn 2666 above.

²⁷⁵⁰ Committee on Technical Barriers to Trade, Secretariat Note, "Decisions and Recommendations Adopted by the WTO Committee on Technical Barriers to Trade Since 1 January 1995", WTO Document G/TBT/1/Rev.12 (21 January 2015), Section 4.3.1.1, p. 20 (entitled "Significant effect on trade of other Members").

²⁷⁵¹ See Appellate Body Report, *US – Clove Cigarettes*, para. 266. See also fn 1436 above.

²⁷⁵² See fn 2666 above.

how the word "trade" is to be understood in the term "trade-restrictiveness" under Article 2.2.²⁷⁵³ Specifically, as noted in the TBT Committee Recommendation²⁷⁵⁴, a technical regulation might have different "effects" on trade, including "import-enhancing and import-reducing" effects. One such effect may be to "restrict" trade.

7.1087. We also note the first sentence of Article 2.5 of the TBT Agreement, which requires a Member who prepares, adopts or applies a technical regulation that has a "significant effect on trade of other Members", to explain, upon the request of another Member, "the justification for that technical regulation in terms of the provisions of paragraphs 2 to 4".²⁷⁵⁵ That a technical regulation that has a "significant effect on trade of other Members", and a technical regulation that is "trade-restrictive", might both need to be "justified" on the basis of whether they create a restriction on international trade that exceeds what is necessary to achieve the degree of contribution that they make to the achievement of a legitimate objective²⁷⁵⁶, indicates to us that there is at least a significant overlap between the content of "significant effect on trade of other Members" and "trade-restrictiveness". For all these reasons, we do not accept Australia's contention that the TBT Committee Recommendation²⁷⁵⁷ is of no interpretative significance.

7.1088. The TBT Committee Recommendation²⁷⁵⁸ suggests that the concept of "significant effect on trade of other Members", under Article 2.9, may be understood to refer to *inter alia*, the effect on trade in a specific product, group of products or products in general and ***the effect on trade between two or more Members***. Furthermore, when assessing the significance of these effects on trade, Members are invited to consider the value or other importance of imports in respect of the importing and/or exporting Members concerned, ***whether from other Members individually or collectively***. We consider that this interpretation confirms our observation in paragraph 7.1078 above, that the "trade-restrictiveness" of a technical regulation need not be assessed only on the basis of the effect of the measure on trade between *all* WTO Members, in *all products* that are the subject of the technical regulation. We also consider that the TBT Committee Recommendation suggests that when considering the effects of a technical regulation (including whether the technical regulation has a *limiting* effect on trade), consideration might be given to "the value or other importance of imports in respect of the importing and/or exporting Members concerned", as well as "both import-enhancing and import-reducing effects on the trade of other Members".²⁷⁵⁹

7.1089. Having clarified the meaning of "trade-restrictiveness" under Article 2.2 of the TBT Agreement and how it should be assessed, we consider the extent to which the TPP measures are trade-restrictive.²⁷⁶⁰

7.2.5.4.2 Application to the TPP measures

7.2.5.4.2.1 Main arguments of the parties

7.1090. Honduras argues that "[t]he trademark restrictions are trade-restrictive for two reasons: they affect the competitive opportunities of imported tobacco products in the Australian market,

²⁷⁵³ We also note that Article 2.2, first sentence, requires that technical regulations not be prepared or applied "with the **effect** of creating unnecessary obstacles to international trade". (emphasis added)

²⁷⁵⁴ See fn 2666 above.

²⁷⁵⁵ We understand "paragraphs 2 to 4" in this context to refer to paragraphs 2 to 4 of Article 2 of the TBT Agreement. See also Panel Report, *US – Clove Cigarettes*, para. 7.457.

²⁷⁵⁶ Appellate Body Report, *US – Tuna II (Mexico)*, para. 319.

²⁷⁵⁷ See fn 2666 above.

²⁷⁵⁸ See fn 2666 above.

²⁷⁵⁹ We find further support for this conclusion in the notion that the nullification or impairment caused by a WTO-inconsistent measure, in the context of arbitrations under Article 22.6 of the DSU, has been assessed on the basis of the total value of trade in the products affected by the measure. See, e.g. Decisions of the Arbitrators, *EC – Hormones (Canada) (Article 22.6 – EC)*, para. 42; and *EC – Hormones (US) (Article 22.6 – EC)*, para. 43. However, we note that in making this observation, we are not conflating our task of assessing the consistency of the TPP measures with Australia's WTO obligations with that of an estimation of the level of any nullification or impairment that the TPP measures may cause. See Decision of the Arbitrator, *EC – Hormones (Canada) (Article 22.6 – EC)*, para. 41.

²⁷⁶⁰ We note also the comparable language of the SPS Committee recommendation on how to assess "significant effect on trade" for the purposes of the notification obligation in Annex B(5) of the SPS Agreement. Committee on Sanitary and Phytosanitary Measures, Recommended Procedures for Implementing the Transparency Obligations of the SPS Agreement (Article 7), G/SPS/7/Rev.3 (20 June 2008), paras. 9-10.

and they entail compliance costs for producers".²⁷⁶¹ Honduras further argues that the TPP measures are trade-restrictive because they affect competitive opportunities of imported tobacco products in various ways, "namely by removing product differentiation which acts as a competitive advantage, due to the impact on market access that results from increased barriers to entry, and due to the compliance costs"²⁷⁶² resulting from the measures.

7.1091. In Honduras's view, by restricting the form in which trademarks may appear on the packaging of tobacco products and on the actual tobacco products, the trademark restrictions harm the competitive opportunities of imported tobacco products and, thus, are trade-restrictive. Honduras elaborates that, to understand the nature of this trade restriction it is necessary to first appreciate the crucial role that trademarks play in the market. Honduras argues that trademarks fulfil a number of important functions, namely identification of the source of product, signalling product quality, reducing transactions costs and purchasing risks, and stimulating fair competition. Honduras focuses on this final element in respect of its trade-restrictiveness arguments. Honduras argues that a trademark's value is directly related to the concept of brand differentiation – in "order to compete effectively, a producer must have the ability to differentiate its product from those offered by his competitors". Referring to Professor Steenkamp, Honduras states that "differentiation is at the heart of modern marketing; it gives companies the ability to create **distinctions between competing offerings in a given product market ... so that consumers can establish those differences and act upon them**". Consequently, companies go to great lengths to show consumers that their products are different from those of their competitors.²⁷⁶³

7.1092. Honduras adds that one way to underscore differentiation is through the use of trademarks or "brands". Referring to Professor Winer, Honduras argues that brands can be defined as "the unique property of a specific owner [that] has been developed over time so as to embrace a set of values and attributes (both tangible and intangible) which meaningfully and appropriately differentiate products which are otherwise very similar".²⁷⁶⁴ Trademarks also serve as a means for companies to signal product quality to consumers²⁷⁶⁵; in this connection Honduras refers to Professor Winer, who describes brands "as the embodiment of a promise from the manufacturer to the consumer, a communication of quality, product origin, integrity and consistency that a consumer can count on when purchasing a product that is sold under the banner of the brand as signaled by the trademarked symbols".²⁷⁶⁶ Honduras submits that this is particularly important for "experience goods", such as tobacco products, "whose attributes and quality can only be discerned after purchase, once the consumer has actually used them and experienced them".²⁷⁶⁷

7.1093. Honduras argues that "[t]he ability to differentiate a product through branding is a source of competitive advantage", and that "[c]onsumers who prefer a certain brand become loyal to that brand and are willing to pay a price premium for it".²⁷⁶⁸ Honduras refers in this regard to Professor Winer's remarks that "[i]t is not unusual for a loyal buyer to pay 20 to 30 per cent more for a preferred brand" and that "loyal consumers are less likely to be swayed by the marketing activities of competitors".²⁷⁶⁹ A trademark's value can relate not only to the product's quality, but also to features like the origin and/or special nature of certain ingredients.²⁷⁷⁰

7.1094. Honduras argues that companies rely on packaging as a channel to deliver the brand message to consumers, and that this requires that packaging "display the totality of the components that form a trademark". Honduras adds that trademarks consist not only of the brand name itself, but also colours, graphics, logos, typeface, size and shapes.²⁷⁷¹ The benefits of

²⁷⁷¹ Honduras's first written submission, para. 867.

trademarks are lost when companies can no longer achieve product differentiation as, in such a market, there is "perceived quality convergence" whereby consumers, in the absence of the normal quality signals transmitted through brand packaging, perceive all products to be of the same quality.²⁷⁷² Honduras argues that this "reduces consumers' loyalty towards a particular brand and their refusal to pay a price premium for a high-end brand when brand differentiation is affected"; the ultimate consequence of which is "realignment in the marketplace, with value brands gaining market share at the expense of premium brands and pressure on pricing".²⁷⁷³ Honduras argues that post-implementation data confirms that the TPP measures "have resulted in an increased downtrading effect".²⁷⁷⁴

7.1095. Honduras adds that the reduction of product differentiation can lead to increased sales for the entire product category (i.e. for all brands as a whole), given that companies will start to compete on the basis of price to regain their market shares.²⁷⁷⁵

7.1096. Honduras argues that "the trademark restrictions are trade restrictive because they severely affect the competitive opportunities of imported products in the Australian market". This is because, "[b]efore the enactment of the trademark restrictions, foreign tobacco producers were able to compete in the Australian market by relying on the strength of their brands, whose value and reputation was developed throughout the years", but the "trademark restrictions distort the way in which trademarks appear on the packaging of tobacco products and on the tobacco products themselves", such that companies are now prevented from obtaining the benefits of the brands' value. More specifically, the reduced brand differentiation caused by the trademark restrictions cause consumers to shift away from premium brands in favour of low-end brands. This decline in product differentiation, in Honduras's view, leads consumers to down-trade, and "[a]s consumers begin to down trade, demand for imported tobacco products is bound to decline". For Honduras, this amounts to a "limiting effect on trade" and a disincentive to export tobacco products to Australia.²⁷⁷⁶

7.1097. In response to questioning by the Panel, Honduras further submits that "[b]oth [the trademark and format] restrictions affect the conditions of competition for tobacco products", as they "(i) ... affect the competitive opportunities of imported tobacco products by reducing brand differentiation and causing consumers to shift away from premium brands in favour of low-end brands; and (ii) because they entail compliance costs for producers given the need to modify tobacco products and their packaging so that trademarks appear in the form prescribed by Australia's legislation".²⁷⁷⁷ In relation to whether both sets of requirements are trade-restrictive, Honduras argues that "[a]n analysis of the design and structure of the plain packaging measures shows that the trademark restrictions and format restrictions operate in conjunction", in that both "types of restriction operate together so as to standardize the presentation of tobacco products and their packaging". Thus, the trade-restrictiveness of the challenged measure (in terms of reduced brand differentiation and compliance costs) is a result of both the trademark restrictions and the format restrictions.²⁷⁷⁸

7.1098. Honduras further argues that "the plain packaging measures are also trade-restrictive because they restrict access to the Australian market and distort conditions of competition". By imposing these barriers on market access, Honduras submits that the TPP measures affect competitive opportunities of tobacco products, have a limiting effect on trade, create a disincentive to import into Australia, and have identifiable negative consequences on the importation of tobacco products.

7.1099. Honduras elaborates, with reference to the expert report by Professor Neven, that the TPP measures produce certain communication and price effects that make access to the Australian

tobacco market almost impossible. Professor Neven states that "the profits that a manufacturer can expect to earn in a given market determine its willingness to engage in trade, enter new markets and compete with established brands".²⁷⁷⁹ Professor Neven explains that plain packaging produces three different effects on competition and trade in the Australian market: (i) a contestability effect; (ii) a communication effect; and (iii) a competitive effect. Honduras argues that, when one considers the net result from the combined operation of all three effects, "it becomes clear that plain packaging yields overall negative effects for tobacco brands regardless of whether they are already in the Australian market, or may seek to enter the Australian market".²⁷⁸⁰

7.1100. Honduras explains that the contestability effect is based on the premise that existing strong brands benefit from established brand loyalty, which is a factor that can constitute a barrier to potential entrants, such that plain packaging would, in principle, enhance prospects of entry to the Australian market. Honduras argues, however, that this initial positive effect on entry is offset by the two negative effects produced by plain packaging.²⁷⁸¹ Specifically, concerning the communication effect (which relates to the ability of potential entrants to create brand awareness for their own new products), Honduras submits that, "without the possibility to create brand awareness, successful entry for potential entrants becomes significantly more difficult".²⁷⁸² Regarding the competitive effect, Honduras explains that this looks "at the concrete commercial impact of plain packaging", according to which reduced brand differentiation created by plain packaging affects consumers' willingness to pay and thus producers' pricing power. As producers need to reduce prices to address consumers' reduced willingness to pay, their profit margins also decline, such that, for Honduras, "operators have lower willingness to engage in trade", which "also leads to a lower likelihood of entry".²⁷⁸³

7.1101. Honduras therefore submits that, taken together, the final balance of all three effects is that plain packaging significantly undermines the scope for entry into the Australian tobacco market. On this basis and with reference to Professor Neven, Honduras submits that plain packaging distorts competition and hinders international trade for potential entrants and incumbent brands in the following ways:

- a. Competition in the market is distorted by differentially harming producers of premium brands and brands that cater to specific customer preferences relative to producers of low quality cigarettes that mainly compete on price. This undermines diversity, depletes producers' brand capital and generally restricts its non-price competition. This circumstance harms incumbent brands in the Australian market.
- b. Competition for the market is significantly restricted by imposing potentially severe barriers to entry for firms intending to introduce their products into the Australian market with new brands, which is the case of a large number of internationally successful brands that have not yet penetrated the Australian market. Introducing and communicating the characteristics of such foreign brands in Australia will become all but impossible absent the ability to create brand awareness.²⁷⁸⁴

7.1102. Professor Neven thus concludes that "[p]lain packaging reduces product differentiation and thus lowers the prospect for profitable continued market presence and entry", and "also considerably hampers entry of new products on the market given that new products need trademarks and product differentiation opportunities to communicate their presence on the market to potential customers".²⁷⁸⁵

²⁷⁸⁵ Honduras's second written submission, para. 563; and response to Panel question No. 151.

7.1103. Honduras adds that "the economic effects identified by Professor Neven not only affect potential new entrants (by reducing their willingness to export to the Australian market), but also affect incumbent brands (by gradually eroding the brand awareness previously created)".²⁷⁸⁶

7.1104. The Dominican Republic argues that the trademark and format requirements under the TPP measures are highly trade-restrictive. The Dominican Republic refers to its arguments concerning "how each and every special [plain packaging] requirement severely encumbers the use of trademarks", and argues that "[f]or similar reasons, each and every one of the trademark requirements ... imposes a condition on the sale of tobacco products in Australia". In addition, "each and every one of the form requirements imposes conditions on the sale of tobacco products in Australia". Thus, cumulatively, "these requirements impose restrictions on trade in tobacco products because, if a retailer or manufacturer fails to comply with them, it is prevented from selling them on the Australian market". Specifically, the requirements prohibit the sale of tobacco products that do not comply with the strict government-mandated conditions or restrictions regarding the retail packaging and appearance of tobacco products. In the Dominican Republic's view, this has the effect that premium products can no longer be sold as premium products, but "must be sold as something entirely different – undifferentiated commodity products that appear to be virtually identical to any other tobacco product on the Australian market", which is "precisely the purpose of the [TPP] measures" – i.e. they are "designed to make all tobacco products look like the 'lowest quality' products on the market".²⁷⁸⁷

7.1105. The Dominican Republic also states that, apart from the limiting effect arising from the requirement to comply with conditions on the sale of tobacco products, "the [TPP] requirements are 'trade-restrictive' for another reason", namely that "trademarks and brands, in general, are the lifeblood of a competitive and dynamic marketplace".²⁷⁸⁸ For the Dominican Republic, it is "therefore inevitable that the trademark requirements in the [TPP] measures affect the ability of all tobacco manufacturers to differentiate their offerings in the market". This interference with all trademarks constrains "their very ability to compete on the basis of brands, eliminating competitive opportunities". In addition, the TPP measures "are likely to have a disproportionate (discriminatory) effect on the trade in premium tobacco products (such as cigars and higher end cigarettes) in Australia". The Dominican Republic, referring to Professor Steenkamp, submits that branding is particularly important for premium products, "since it allows manufacturers to develop and maintain loyal customers for their products, who are willing to pay higher prices for their preferred product". The Dominican Republic elaborates that, according to Professor Steenkamp, consumers' perceptions of the quality of competing brands are based on a combination of (i) functional benefits (e.g. taste, smell) and (ii) intangible benefits, that consumers derive from each brand. Consumers perceive both greater functional and intangible benefits for premium brands than for value brands, although the differences in intangible benefits between premium and value brands are significantly greater than the differences in functional benefits. Packaging plays an important part in establishing and maintaining the high intangible benefits attributed to premium products, such that when packaging differences are eliminated, the intangible benefits for premium products **drop significantly** more than the intangible benefits for value products. In turn, this disproportionate impact on the perceived intangible benefits of premium products translates into reduced loyalty and a reduced willingness to pay for the premium products. The result is downtrading away from premium brands.²⁷⁸⁹

7.1106. Given that the TPP measures "are designed and structured to limit the competitive opportunities for all tobacco products, and operate to do so", the Dominican Republic states that "it is not clear on what basis Australia considers it necessary, even on its reading of the Appellate Body Reports in *US – COOL (Article 21.5 – Canada and Mexico)*, for the Dominican Republic to demonstrate actual trade effects". In any case, the Dominican Republic also notes that "the

empirical evidence from the marketplace shows this distortion of trade, with significant 'down-trading' from more expensive to cheaper tobacco products due to the [TPP] measures".²⁷⁹⁰

7.1107. The Dominican Republic argues that Australia promotes plain packaging as a measure designed and structured to standardize tobacco packaging and products by eliminating the ability to effectively differentiate tobacco products through trademarks and other distinguishing features of the packaging and products, and to compete for price premiums based on that differentiation. The plain packaging requirements, comprising both trademark and form requirements, result in the standardization of the appearance of all tobacco products. In other words, by design and structure, the TPP measures restrict or limit the competitive opportunities enabled by product differentiation. The Dominican Republic refers to the Appellate Body's reports in *US – COOL (Article 21.5 – Canada and Mexico)* and argues that a panel can rely on qualitative evidence where the limiting effect of the technical regulation relates to the restriction on competitive opportunities. Though "there is no need to prove actual trade effects", the Dominican Republic argues that the measure has led to down-trading from higher-priced to lower-priced products. For these reasons, the Dominican Republic asserts that both the form and trademark requirements lead to the loss of differentiation that eliminates competitive opportunities.²⁷⁹¹ Indeed, the "ability to differentiate one product from another is critical to an exporting producer's opportunity to compete in an international market"; such competition in the marketplace "requires perceptible differences between competing products, which provide a basis for consumers to choose one product over another".²⁷⁹² By curtailing the ability to differentiate products, including imported products, the TPP measures restrict competitive opportunities and impair the conditions of competition for imported tobacco products.²⁷⁹³

7.1108. The Dominican Republic argues that in these proceedings, a limitation on competitive opportunities is already evident in the design, structure, and expected operation of the measure, without any need to establish the consequences of that limitation in terms of actual trade effects. The Dominican Republic repeats that the TPP measures are designed, structured, and implemented to eliminate the opportunity for producers to differentiate their products using design features, such as trademarks and the pack shape, size, opening mechanism, and compositional material.²⁷⁹⁴ These limitations apply to retail packaging for all tobacco products, and to all individual cigar and cigarette sticks. The "now-eliminated opportunity to differentiate a product from competing offerings in the market is the very essence of competition in the marketplace".²⁷⁹⁵ For the Dominican Republic, the differentiating features affected by the TPP measures create competitive opportunities by conveying to the consumer differences in quality, reputation and other characteristics of products. Consumers link particular differentiating features with the characteristics of particular products and producers. This differentiation engenders consumer loyalty and, in turn, increases consumers' willingness to pay.²⁷⁹⁶ The loss of differentiation resulting from the design, structure and operation of the TPP measures "necessarily entails a significant limitation on competitive opportunities for all tobacco products, including imports".²⁷⁹⁷ The Dominican Republic therefore submits that "the measures impose a large dose of commoditization on the entire market, stripping away the opportunity for brands to differentiate themselves", or to "employ the usual means of differentiating itself from competing brands". For the Dominican Republic, one of the predicted impacts of greater commoditization of the market, through a loss of differentiation, is less consumer loyalty and lower willingness to pay, resulting in brand switching from higher- to lower-priced brands".²⁷⁹⁸ The Dominican Republic adds that "Australia does not contest that the [T]PP measures limit competitive opportunities for all tobacco

products", and "freely admits that the measure is designed, structured and implemented for the very purpose of eliminating the competitive opportunities that arise from the differentiation of tobacco products, including imported tobacco products". Australia "seeks to prevent tobacco producers from using design features to enhance competitive opportunities", and "not contested that product differentiation allows consumers to make associations between particular differentiating features and the characteristics of particular products, thereby enhancing consumer loyalty and willingness to pay". In the Dominican Republic's view, there is no basis for Australia to deny that the TPP measures have a limiting effect on competitive opportunities – "given the intentions behind the design and structure of the [TPP] measures, and the way the measures have been implemented, the Dominican Republic is surprised at Australia's denial of what is self-evident from the very design and structure of the measures: that they are intended to be highly trade-restrictive by significantly impairing competitive opportunities for all tobacco products, including imports from all WTO Members".²⁷⁹⁹ The Dominican Republic also notes that "Australia's own expert, Professor Dubé, accepts, 'the decrease in desirability of tobacco brands, including those in the discount segment, would likely reduce willingness to pay for tobacco brands'".²⁸⁰⁰

7.1109. As regards the consequences of the limitation on competitive opportunities, the Dominican Republic states that the "complainants argue that, by reducing brand differentiation, the [TPP] measures have already led to switching from higher- to lower-priced cigarettes and, hence, to a reduction in the value of the trade, without reducing smoking prevalence or consumption". The Dominican Republic adds that the disagreement between the complainants and Australia concerning the actual trade effects resulting from the TPP measures is not material to the Panel's finding of trade-restrictiveness under Article 2.2, because it is evident from the design, structure, and expected operation of the measures that they severely limit competitive opportunities to differentiate tobacco products. Notwithstanding this, the Dominican Republic has "provided evidence of one form of actual trade effects engendered by the [TPP] measures, as a means of confirming that the measures limit competitive opportunities". The Dominican Republic's evidence of trade effects "shows that the predicted effect of reduced loyalty and willingness to pay, resulting in switching from higher- to lower-priced brands, actually materialized very quickly after implementation of the [TPP] measures", which the Dominican Republic argues it has demonstrated through its econometric analysis of "these 'downward substitution' or 'downtrading' effects".²⁸⁰¹ Downward substitution from higher- to low-priced brands means that some consumers buy a cheaper brand than the brand that they bought before the TPP measures were introduced. This evidence demonstrates that the elimination of differentiating features has – as predicted – led to consumers being less loyal to their former brands and has lowered their willingness to pay for their former brand. Instead, these consumers have switched to a cheaper brand.²⁸⁰²

7.1110. In relation to Australia's arguments concerning the assessment of trade-restrictiveness, the Dominican Republic submits that Australia has a "misguided preoccupation" with actual trade effects.²⁸⁰³ In respect of Australia's argument that the TPP measures are not trade-restrictive because imports of tobacco products into Australia have increased in volume since the introduction of the TPP measures, the increase in imports of tobacco products into Australia is attributable, not to the TPP measures, but to the movement of domestic production offshore as a response to fire-risk requirements in Australia applied to exports.²⁸⁰⁴ Moreover, Australia cannot simply rely on an absolute increase in the volume of imports to rebut the Dominican Republic's showing that the TPP measures are trade-restrictive; to maintain such an argument, Australia must demonstrate what trade volumes would have been absent the challenged measure.²⁸⁰⁵ Furthermore, Australia's "focus on one way in which a measure can have a limiting effect on trade – an impact on trade volumes – is unduly simplistic". In the Dominican Republic's view, Members are not concerned solely with competitive opportunities as reflected in the *number of units* of an exported product

²⁸⁰⁵ Dominican Republic's second written submission, para. 949.

sold, but also with the competitive opportunities as reflected in the *value of each unit sold*.²⁸⁰⁶ The value of trade affects the wide range of direct and indirect economic gains that a country derives from its export trade; this is also borne out by the decision of the TBT Committee referenced above, which asks Members to consider the potential trade effects of a measure in terms of the "value" of the affected trade.²⁸⁰⁷ In response to Australia's reference to data that it considers to demonstrate that the total value of the retail market increased, despite a reduction in total demand in the Australian market, the Dominican Republic argues that the correct analysis is what the situation – in value terms – would have been *absent the measure*, and not whether, in the abstract, the aggregate value of trade in tobacco products has increased in an absolute sense.²⁸⁰⁸

7.1111. In response to Australia's arguments that an assertion of trade-restrictiveness requires a demonstration of a limiting effect on "overall trade" (that is, "imports in the regulated category as a whole"), the Dominican Republic submits that this argument derives from Australia's misconception of the proper standard for demonstrating trade-restrictiveness, as Article 2.2 of the TBT Agreement does not require a demonstration of actual trade effects, but instead requires demonstration that the challenged measure limits competitive opportunities, for which evidence of the design, structure and expected operation of the measures is sufficient. The Dominican Republic reiterates that, even if the Panel were to interpret Article 2.2 as requiring a showing that "overall trade" is limited by the challenged measure, the Dominican Republic has demonstrated this, as the TPP measures are designed, structured, and implemented to affect the competitive opportunities of *all* tobacco products (that is, *all* brands, of *any* provenance, are denied the competitive opportunity to differentiate themselves using the features prohibited under the TPP measures). Therefore, the TPP measures do affect "overall trade" in all products.²⁸⁰⁹ Additionally, the Dominican Republic argues that, even if the Panel were to find that the TPP measures limit competitive opportunities solely for premium tobacco products, this limitation would still constitute a trade restriction within the meaning of Article 2.2, as a measure is trade-restrictive even if it has a limiting effect with respect only to a subset of imports, such as one segment. The Dominican Republic argues that in this respect it has demonstrated that the TPP measures have a limiting effect in the form of downward substitution of higher-priced cigarettes with low-priced cigarettes.²⁸¹⁰

7.1112. The Dominican Republic argues that Australia errs in arguing that a trade-restrictive effect of a challenged measure can be "offset" by a trade-promoting effect of that measure. Australia offers no interpretive rationale whatsoever for its argument. Moreover, where the concept of "offsetting" to which Australia alludes has been considered in the case law, it has been rejected as a basis for determining a measure's overall WTO-consistency.²⁸¹¹

7.1113. In the context of its arguments concerning alternative measures, the Dominican Republic submits that to the extent that the Panel finds that the TPP measures contribute to the objective of reducing smoking behaviour (which the Dominican Republic contests), then, to the extent of that contribution, the TPP measures will restrict trade in tobacco products by reducing the total volume of sales. In this event, the Dominican Republic posits that the Panel would have found that the TPP measures entail a volume-based restriction.²⁸¹² In this context, the Dominican Republic also repeats that, by restricting the use of trademarks on tobacco packaging and products, and standardizing all aspects of tobacco packaging and products, the TPP measures also restrict trade by eliminating the competitive opportunities flowing from differentiation, and have a limiting effect on competition for all tobacco products. Thus, the TPP measures involve a trade restriction

resulting from the elimination of differentiation, which distorts competitive opportunities to the particular detriment of premium brands.²⁸¹³

7.1114. Cuba argues that measures should be treated as trade-restrictive under Article 2.2 of the TBT Agreement even where they do not cause a reduction in import volumes: it is sufficient if prejudicial effects on the position of exporters are identified. Accordingly, the fact that, in Cuba's case, the TPP measures "will not result in a reduction in the overall volume of imports of tobacco products, does not prevent a finding that they are trade restrictive".²⁸¹⁴ Cuba argues that the TPP measures impose "limiting conditions"; namely, that Australia imposes numerous conditions relating to the appearance of the retail packaging of tobacco products and the appearance of tobacco products themselves. All of these conditions must be met before international trade in tobacco products can flow between Australia and third countries. For Cuba, these conditions limit the commercial choices available to exporters, impose costs and make the process of distribution in Australia more burdensome than it would otherwise be.²⁸¹⁵ Referring back to these comments, Cuba submits that the TPP measures "substantially affect market entry for imported tobacco products by imposing 'limiting conditions'".²⁸¹⁶ Cuba submits that the existence of these various conditions suffices, in and of itself, to establish that Australia's measures are trade-restrictive.²⁸¹⁷

7.1115. Cuba argues that, in any event, the TPP measures give rise to two further types of commercial burdens which also establish that the TPP measures are trade-restrictive. First, the TPP measures constrain the ability of exporters to distinguish clearly their products from the products of their competitors. This is a significant source of commercial prejudice for exporters, which is especially severe for producers of higher quality products because they will suffer a significant reduction of their market share and significant downward pressure on the prices that they can charge.²⁸¹⁸ In this connection, Cuba submits that the TPP measures "will fundamentally erode the ability of Cuban producers to position their LHM cigars as luxury premium products with a long tradition", and that "even if this does not occur immediately, over time it will inevitably occur if the plain packaging measures continue to be applied".²⁸¹⁹ In Cuba's view, Australia has not responded to the main argument of Cuba about the downtrading effect of plain packaging measures, i.e. that the measures "will have a negative impact on the overall volume of Cuba's trade, because they will lead to downtrading from Cuba's premium LHM cigars to cheaper products, not originating in Cuba". Premium quality products cannot survive in a market environment in which product differentiation is impossible, and Australia has explicitly stated that the TPP measures are intended to make impossible the differentiation of quality and its importance.²⁸²⁰

7.1116. Second, Cuba submits that exporters have to tailor their products to comply with the unique requirements imposed by the Australian government, which gives rise to compliance and adaptation costs (as no other jurisdiction currently imposes comparable requirements). The existence of these costs also establishes that Australia's measures are trade-restrictive.²⁸²¹ Cuba adds that this includes "the risk of severe economic and criminal penalties".²⁸²² For these reasons Cuba submits that the TPP measures are trade-restrictive within the meaning of Article 2.2 of the TBT Agreement.²⁸²³

7.1117. Cuba considers that the TPP measures is a trade restriction inasmuch as it limits competition and reduces trade opportunities, by eliminating the value of trademarks, which are the essence of competition. The TPP measures give rise to serious prejudice to manufacturers, who are

²⁸²³ Cuba's first written submission, para. 405.

thus unable to distinguish their products from those of their competitors, by wiping out the prestige and reputation they have achieved through the quality of their products.²⁸²⁴ The trade-restrictiveness may also be seen in the costs that the measure imposes on producers in order to have access to the Australian market, by obliging them to modify the manner in which they manufacture their product (paper costs, packaging costs, manufacturing process modifications) or otherwise withdraw from the market.²⁸²⁵

7.1118. Cuba considers that while the Appellate Body in *US – COOL (Article 21.5 – Canada and Mexico)* recognizes that in some cases evidence of actual trade effects "might be necessary" to demonstrate the trade-restrictiveness of a measure, this approach is not necessary in the present dispute.²⁸²⁶

7.1119. In respect of its arguments concerning product differentiation and import value, Cuba repeats that the plain packaging measure will lead to a reduction in product differentiation and, therefore, an increase in price competition, which will lead to a fall in prices and reduce the value of imported tobacco products. This commodification of tobacco products will distort competition and generate an additional disincentive to export to Australia. Cuba submits, in response to Australia's argument that there is no limiting effect on trade because imports are increasing, that this argument is irrelevant because GATT/WTO case law establishes comprehensively that an actual impact on trade is not necessary and that a measure may restrict trade even when imports increase. Moreover, if, as Australia asserts, imports are increasing because former local producers have transferred their factories abroad, these producers will attempt to retain their market share, at least in the initial term. It is "therefore wrong to argue that "imports" are increasing when the products and producers in question are the same market leaders who have simply moved their production abroad owing to decisions that do not depend on the plain packaging measure".²⁸²⁷ Furthermore, in relation to Australia's assertion that the complainants' arguments are "an attempt to use the TBT Agreement to protect profits in the premium segment of the market rather than as a guarantee that technical regulations do not act as unnecessary barriers to trade", Cuba submits that this claim misrepresents the argument concerning trade reduction and market segment profits. Cuba refers to Professor Neven's argument that it is not prices alone that determine profitability, but rather prices and sales volumes, such that "if regulation reduces profits, then this can either be because regulation diminishes output (as claimed by the proponents of regulation) or because regulation diminishes the margin firms earn for each sale".²⁸²⁸ Thus, Professor Neven concludes, in accordance with his models of branding, that profits will decline, either as a result of diminished output, or because of diminished margins firms earn if they increase output.²⁸²⁹ Furthermore, in relation to Australia's arguments that down-trading is occurring elsewhere in the absence of plain packaging, Cuba submits that this argument misses the point. Cuba does not, it submits, argue that down-trading can only exist because of plain packaging, but instead that the complainants have "shown that down-trading is caused in Australia by the withdrawal of trademarks and other characteristics that increase producers' confidence in price competition, regardless of other measures or policies that may also influence down-trading, such as the price impact of tax increases". Cuba adds that a review of the design, structure and operation of the measure acting to reduce non-price competition and increase price competition indicates that the down-trading observed in the market is a consequence, at least in part, of plain packaging.²⁸³⁰

7.1120. In respect of its arguments concerning compliance and adaptation costs associated with the TPP measures, Cuba elaborates that such costs include one-off costs of adaptation as well as continuous supervision costs owing to changes in production process. Cuba also states that, "[m]ore importantly, they also include the costs arising from the need to ensure strict compliance in view of the high fines and penalties for any failure to comply with the requirements under the measure". Cuba argues that *Brazil – Retreaded Tyres* is "highly relevant" in this context, because it "upholds the position that a penalty itself may operate as a restriction on international trade".

²⁸³⁰ Cuba's second written submission, para. 250.

The penalties in the present case, "which are again very high and aim to impose punitive measures to ensure compliance with the prohibition on trade in packs of non-complying tobacco products", constitute "an independent and important basis for arguing that the measure is very trade-restrictive".²⁸³¹

7.1121. Indonesia argues that the primary effect of the TPP measures is to prevent tobacco companies from using trademarks to distinguish their tobacco products from those of competitors and in many cases demand premium pricing. By stripping away the most identifiable elements of branding (such as colors, shapes, typefaces, etc.), plain packaging "commoditizes" tobacco products and price becomes the primary form of competition.²⁸³² By eliminating trademarks the TPP measures "fundamentally restructured the competitive conditions of the Australian cigarette market".²⁸³³ Indonesia submits that the Australian cigarette market has always been one in which branded products compete for market share within different price segments. The use of identifiable trademarks associated with brands allowed producers to respond to consumer preferences and enabled significant product differentiation. By requiring that all packages convey the same message that the products are the "lowest quality",²⁸³⁴ Indonesia submits that Australia sought to ensure that "manufacturers **cannot** compete on the basis of quality".²⁸³⁵ In this respect, Indonesia argues that "a stated goal of [plain packaging] was 'shattering the image of cigarettes as an ordinary consumer item'".²⁸³⁶ Indonesia argues that "[w]hat is essential is the fact that the cumulative effect on trade from Australia's plain packaging regime is to deny competitive opportunities for premium branded products by causing downtrading and eliminating the premium brands' ability to compete based on any factor other than prices".²⁸³⁷

7.1122. Indonesia submits that plain packaging strips design features and other distinguishing features from packaging, including trademarks. It is not contested amongst the parties that trademarks and other distinguishing features are the very essence of competitive opportunities in the sense that they make consumers more loyal and they make consumers more willing to pay for a particular product or brand, such that "[b]y removing trademarks and establishing stringent requirements for the elements of the packaging and tobacco products themselves, Australia has created a market where consumers are more willing to switch to other brands and less willing to pay a premium for the branded product". For Indonesia, this is the very essence of limiting competitive opportunities, "which Australia limited intentionally" as it "wants to diminish competitive opportunities that they believe arise from the distinguishing features of packaging and elements of the tobacco products themselves, and prevent producers of tobacco products from benefitting from those competitive opportunities".²⁸³⁸

7.1123. Indonesia argues that restrictions on trademarks, such as those imposed by plain packaging, impose a disproportionate burden on premium brands. Referring to its arguments under Article 20 of the TRIPS Agreement, Indonesia argues that downtrading occurs as consumers who were once loyal to premium brands migrate to cheaper brands.²⁸³⁹ Indonesia elaborates that the complainants also have demonstrated evidence of trade effects in the form of downtrading. When plain packaging interferes with competitive opportunities in a qualitative way with respect to market access (elaborated below), "consumers are more likely to switch brands and less willing to pay". As consumers shift from the more expensive brands to the less expensive brands because they have a higher willingness to switch brands and a lower willingness to pay, downtrading occurs, and "reflects the distortion in the market of the conditions of competition and competitive opportunities available to mid-tier and premium products".²⁸⁴⁰ Indonesia argues that evidence of increased downtrading in the Australian market from premium brands to low-price brands shows

²⁸⁴⁰ Indonesia's response to Panel question No. 117.

that plain packaging is limiting competitive opportunities for producers of premium products. Indonesia adds that downtrading harms competitors in the mid-priced and premium segment of the market that have invested in developing higher quality products. For Indonesia, evidence of downtrading already exists in the Australian market post-plain packaging.²⁸⁴¹

7.1124. Indonesia argues that a second mechanism through which plain packaging limits trade relates to the need for imported products to establish an identity with consumers who are already familiar with domestic brands. Indonesia refers to a consumer research survey conducted for the Australian government in conjunction with the implementation of plain packaging which found that whether a brand was considered "foreign" or "local" affected consumer's attitudes towards cigarette brands, and specifically that:

In contrast, a number of brands were seen as distinctly "Australian", which overall was viewed as making the brand more appealing. Distinctly "Australian" cigarettes were primarily those which were seen to be *in the market-place the longest* or were perceived to be smoked by particular types of individuals who "represented" clearly defined Australian stereotypes (for example tradies, football or cricket fans.).²⁸⁴²

7.1125. Indonesia argues that the impact of the requirements in the TPP measures "also falls disproportionately on premium foreign brands, such as Indonesia's Djarum Super, who have invested extensively in their brand identity in their domestic market but are limited in their ability to capitalize on the investment by leveraging it to introduce their product to the Australian market".²⁸⁴³ Indonesia draws a comparison with wine, where there are major variations in terms of quality and brands that are essential for consumers to identify premium products: "[a] Spanish Rioja or California Cabernet sold in Australia might be of extremely low or extremely high quality", and "[a]bsent branding, geographical indications, and other registered marks on the label, a consumer in Australia would have a difficult time distinguishing which was the premium product". However, for Australian Shiraz, it is much more likely that the names of top producers will be familiar to Australians who would be likely to choose the known premium Australian wine over an imported product of unknown quality. For Indonesia, plain packaging prevents precisely the types of trademarks, symbols, and descriptors that would facilitate an Australian consumer's understanding of imported premium tobacco products. Indonesia argues that the inability of foreign tobacco product manufacturers to establish their brand identity in Australia in order to compete against domestic competitors makes it difficult to overcome the existing domestic brand bias. The TPP measures "are thus trade restrictive because they limit trade by imposing restrictions on the right to use trademarks and other aspects of brand identity that are necessary to compete against domestic brands".²⁸⁴⁴

7.1126. Indonesia elaborates its trade-restrictiveness assertions by noting that the fact that there is no domestic like product in the current case on which to base a discrimination claim is not to say, however, that the TPP measures treat foreign and local **brands** equally. While all tobacco products that are sold in Australia now are imported, not all brands sold in Australia are viewed as "foreign". For Indonesia, because "the domestic tobacco industry has moved offshore, cigarette brands that were previously identified as 'local' brands, such as **Landshark**, are now imported, but they still enjoy a large consumer following in Australia". In Indonesia's view, this measure is trade-restrictive because it affects the competitive opportunities in the market.²⁸⁴⁵

7.1127. Indonesia also argues that "[i]t is without question that there is a profound difference in the quality of tobacco products, and this is especially true in the case of cigars". The notion that plain packaging "could have no effect on premium brands cannot be reconciled with the fact that producers are unable to leverage their branding, intellectual property, or packaging to convey quality to consumers to convince them to leave a familiar brand and try an unknown imported

²⁸⁴⁵ Indonesia's response to Panel question No. 117.

brand". For Indonesia, changes to the conditions under which tobacco products can be sold in Australia as unprecedented and significant as those imposed by the TPP measures would logically have some effect on competition in the marketplace. Indonesia adds that "[c]ertainly no one would argue that plain packaging is intended to increase trade, thus the reasonable conclusion is that the design, structure, and architecture of the plain packaging measures are intended to restrict trade".²⁸⁴⁶ Indonesia elaborates that, "[in] Australia's own words, technical regulations that protect public health 'are unlikely to be trade-facilitating'", which, for Indonesia, indicates that "Australia admits what is intuitive about the [TPP] measures: that such a radical change in the marketplace **is likely to have some effect on competitive opportunities**" and that "[i]f ... it is unlikely that the [TPP] measures are trade-facilitating, then the logical conclusion is that they are trade-restrictive".²⁸⁴⁷

7.1128. Indonesia notes that, while it has not specifically addressed compliance costs, it supports arguments made on this point by Honduras in its first written submission and at the first meeting with the Panel.²⁸⁴⁸

7.1129. Australia argues that "none of the complainants have discharged [their] burden in relation to their four overarching claims of trade-restrictiveness", which Australia characterizes as being that the TPP measures are trade-restrictive because of their alleged effects on brand differentiation and downtrading; that the TPP measures are trade-restrictive because they raise barriers to entry for the Australian tobacco market; that the TPP measures are trade-restrictive because they result in increased compliance costs; and that the TPP measures are trade-restrictive because the mandatory requirements they impose operate as a condition for the importation of tobacco products into Australia; or that technical regulations, by their very nature, impose limits on trade.²⁸⁴⁹

7.1130. With respect to brand differentiation, Australia submits that "the complainants' qualitative argument is insufficient, as a matter of law, to establish that the tobacco plain packaging is trade-restrictive, because it does not demonstrate a limiting effect on international trade in tobacco products". Australia argues that the complainants incorrectly equate the legal standard of trade-restrictiveness with one of "competitive freedom" of market participants, such that a limitation on any "competitive opportunity" in the marketplace would suffice to establish that a technical regulation is trade-restrictive, regardless of whether it results in any limiting effect on international trade in imported products.²⁸⁵⁰ This would, in Australia's view, convert "trade-restrictiveness" into a *per se* standard as "[v]irtually every technical regulation will impose, with respect to at least one market participant, a limiting condition that did not exist prior to its adoption". Australia submits that, even assuming that the TPP measures limit a producer's ability to distinguish its tobacco products from those of other producers (which, Australia says, they do not), this is insufficient to demonstrate, without more, that it has a limiting effect on international trade in tobacco products.²⁸⁵¹ Australia adds that, in the absence of additional evidence and arguments demonstrating, for example, that the design, structure and operation of the TPP measures will result in a decrease in overall demand for tobacco products in Australia, "it is not evident from a purely qualitative assessment that it is trade-restrictive in the sense that the Appellate Body found in *US – COOL*".²⁸⁵²

7.1131. Australia submits that the complainants have failed to articulate any viable basis for their argument that any purported limitations on a tobacco producer's ability to distinguish its products from those of other producers would necessarily result in a limiting effect on international trade in tobacco products. Australia notes the complainants' arguments that tobacco producers in the "premium" segment are "disproportionately" affected by the TPP measures, and submits that this is insufficient by itself to establish trade-restrictiveness under a correct reading of Article 2.2. Australia adds that the complainants have not presented any argument or evidence explaining why the design, structure and operation of the TPP measures and its alleged effects on brand

²⁸⁵² Australia's second written submission, para. 406.

differentiation are likely to result in a reduction in overall imports of tobacco products from all Members ("bearing in mind the complainants' refusal to admit that the tobacco plain packaging measure will result in a decline in overall demand for tobacco products").²⁸⁵³ Australia refers to the Appellate Body's statements in *US – COOL (Article 21.5 – Canada and Mexico)* that in respect of non-discriminatory internal measures that address a legitimate objective, a complainant may be required to provide "supporting evidence and argumentation of actual trade effects" to establish that such a measure nevertheless results in a limiting effect on overall trade for the purposes of Article 2.2. Australia submits that the complainants' arguments fit this description of a claim that requires supporting evidence and argumentation of actual trade effects but that they have failed to adduce evidence and arguments demonstrating that the TPP measures result in such a limiting effect on overall trade in tobacco products.²⁸⁵⁴

7.1132. With respect to brand differentiation and downtrading effects, Australia submits that the complainants' claim is insufficient to establish that a measure is trade-restrictive within the meaning of Article 2.2 of the TBT Agreement because the complainants have failed to demonstrate that any such downtrading effects result in a limiting effect on international trade; and (i) that downtrading is likely to occur in the Australian market as a result of the design, structure and operation of the TPP measures; or (ii) that any downtrading effects that have occurred in the Australian market are attributable to the TPP measures.²⁸⁵⁵

7.1133. Australia submits that the "first and most fundamental problem with these allegations is that it simply does not follow that any such downtrading effects will result (or have resulted) in a limiting effect on trade in imported tobacco products in Australia". Australia asserts that the complainants have failed to adduce any evidence or argument demonstrating why the design, structure and operation of the TPP measures, and their theoretical effects on the ability to differentiate tobacco products on the basis of brands, or any resulting downtrading effects on imported tobacco products, will have a limiting effect on trade in the tobacco products that are subject to the measure.²⁸⁵⁶ Further, Australia submits that the empirical evidence suggests that the TPP measures have had no "limiting effect" on imports of tobacco products, as the proportion of imported products in the Australian market has continued to rise since the introduction of the TPP measures, even as demand for tobacco products in Australia declines.²⁸⁵⁷

7.1134. Australia submits that even if downtrading effects were sufficient to establish that the TPP measures are trade-restrictive within the meaning of Article 2.2 of the TBT Agreement, the complainants have failed to establish that downtrading is likely to occur in the Australian market as a result of the design, structure and operation of the TPP measures.²⁸⁵⁸ Relying on its expert, Professor Dubé, Australia argues that "[Professor] Steenkamp does not provide any evidence, theoretical or empirical, to support the conclusion that these measures will disproportionately affect premium brands"; Australia submits that such demonstration is a condition precedent for their downtrading claims. Further, Australia argues that the complainants' own evidence suggests that the TPP measures have not put any downward pricing pressure on the premium segment of the market.²⁸⁵⁹

7.1135. Australia also contends that the complainants have failed to demonstrate that any downtrading effects that have occurred in the Australian market are attributable to the TPP measures and not to other factors.²⁸⁶⁰ In this connection, the report by the complainants' experts from the Institute for Policy Evaluation (IPE) "does not separate out the effects of the tobacco plain packaging measure from the other elements of Australia's comprehensive tobacco control policy", and in particular, the fact that the measures' implementation coincided with the introduction of updated and enlarged GHWs.²⁸⁶¹ Australia further argues that the complainants' assertion that any downtrading effects in Australia are attributable to the TPP measures is contrary

²⁸⁶⁰ Australia's first written submission, para. 542; and second written submission, para. 414.

²⁸⁶¹ Australia's first written submission, para. 543; and second written submission, para. 414.

to the views of tobacco manufacturers operating in Australia, who have instead attributed downtrading effects to increases in excise taxes.²⁸⁶² The complainants "also ignore[] the reality that downtrading is occurring in a number of markets globally, and is not unique to Australia". Thus, given that Australia is the only country to have implemented tobacco plain packaging, downtrading effects in other markets cannot be attributed in any way to a "plain packaging effect".²⁸⁶³

7.1136. Australia adds that it "is undisputed that the 'downtrading' phenomenon to which the complainants refer predates the adoption of tobacco plain packaging, not only in Australia, but in numerous other markets around the world", such that, "[e]ven if the complainants had established **that these effects are attributable to the tobacco plain packaging measure ... this would be legally** insufficient to establish trade-restrictiveness in *quantitative* terms, because it does not demonstrate a reduction in either the volume or the value of imported tobacco products".²⁸⁶⁴ In this connection, Australia submits that as the data submitted by the parties²⁸⁶⁵ "unequivocally establish, imports of tobacco products in Australia have increased in both volume and value terms since the introduction of the tobacco plain packaging measure, despite consistent decline in demand for and consumption of tobacco products", and that "there has been no decrease in the volume or value of their own imports of tobacco products, which were a negligible share of total imports in the Australian market prior to the introduction of the tobacco plain packaging measure and have remained so thereafter". Given "the enormous increase in the volume of tobacco imports in the Australian market since the introduction of the tobacco plain packaging measure, and the critical importance to the complainants' case that the measure has not led to a decline in the rates of tobacco use in Australia, their claim of trade-restrictiveness can only be based on a decline in value", for which, Australia submits, the complainants have offered no evidence.²⁸⁶⁶

7.1137. In the context of its arguments concerning the connection between downtrading and the TPP measures, Australia also points out that Professor List "expressly admitted that it was not possible to separate and distinguish the effects of tobacco plain packaging from the effects of the enlarged GHWs". Thus, Australia argues that the complainants "try artificially to address this issue by using much smaller GHWs introduced by Australia in 2006 as a proxy for the enlarged and updated GHWs adopted in 2012", and "essentially argue that, because the smaller GHWs introduced in 2006 did not have any downtrading effects, this Panel should presume that the enlarged and updated GHWs adopted in 2012 did not have any downtrading effects either". Australia submits that this is not an adequate response because of the deficiency of the evidence relied on, and because, in Australia's submission, the smaller GHWs introduced in 2006 are not an appropriate counterfactual, and cannot be presumed to have had the same effects as the enlarged and updated GHWs adopted in 2012.²⁸⁶⁷

7.1138. Australia also reiterates that downtrading is an industry trend that is occurring in a number of markets globally, and is attributable to factors such as excise taxes or the industry's own marketing and pricing strategies" Australia refers to statements by tobacco industry executives and submits that they "confirm[] the link between increases in excise taxes and 'widening gaps' in market prices, but also expressly concede[] that the alleged 'downtrading' effect **occurring in the Australian market was 'caused by the industry ... by launches in the low price segment'**".²⁸⁶⁸ Australia argues that these are "unequivocal statements by tobacco industry executives recognising the link between excise taxes and the tobacco industry's pricing strategies on the one hand, and downtrading in Australia on the other".²⁸⁶⁹

7.1139. Australia further argues that, "[i]n theory, allegations of downtrading, impact on access to the market, or costs of compliance could, *if* accompanied by proper evidence of a consequential limiting effect on trade, form the basis of a finding of trade-restrictiveness within the meaning of

Article 2.2 of the TBT Agreement".²⁸⁷⁰ Australia submits that the complainants have failed either to demonstrate that such effects have arisen as a result of the TPP measures, or that such effects have resulted in a limiting effect on trade.

7.1140. Australia submits that the complainants' focus "on alleged impacts of the tobacco plain packaging measure on sales by certain companies, in certain market segments, and ... in respect of certain WTO Members" is "plainly insufficient to establish that the tobacco plain packaging measure has a limiting effect on overall trade in tobacco products – i.e. that the measure has resulted in a limiting effect on imports of tobacco products, assessed collectively".²⁸⁷¹ Australia states that it is "inherent in the complainants' arguments of downtrading ... that sales of lower priced brands of tobacco products have *increased* as a result of Australia's tobacco plain packaging measure (to the detriment of 'premium' brands)", such that "even if the complainants had **demonstrated ... that their own tobacco product imports have been** negatively affected by the measure, this would not, without more, establish a limiting effect on *overall* trade in tobacco products because any such impact may be offset by increased trade by other Members, or by increased sales in other market segments".

7.1141. Furthermore, Australia continues, "[t]o the extent that the complainants *have* attempted to link downtrading to any actual limiting effect on overall trade, it has been by reference to the weighted average price for a cigarette." Australia points out that the Dominican Republic's expert, Professor List, "confirmed that there has been a significant *increase* in the real weighted price of a cigarette since the introduction of the tobacco plain packaging measure".²⁸⁷² Australia also argues that "subsequent to the introduction of the [TPP measures], overall trade in tobacco products has increased in both volume and value", which "can be explained in part by the movement of domestic production offshore"; however, "data provided by the complainants also clearly demonstrates that the total value of the retail market increased in the period following the introduction of the [TPP measures], despite a reduction in total demand for tobacco products in the Australian market".²⁸⁷³

7.1142. With respect to raised barriers to entry to the Australian tobacco market, Australia submits that "there are three distinct problems" with the claims.²⁸⁷⁴ First, the conclusion that the TPP measures increase barriers to entry "is directly contradicted by another of the complainants' experts, Professor Steenkamp", who "claims that brand differentiation 'creates barriers to entry that make it difficult for other firms to enter the market'; and the effect of plain packaging is to destroy such brand differentiation".²⁸⁷⁵ In Australia's view, the logical conclusion of Professor Steenkamp's claims is that the TPP measures would enhance prospects of new entry. Second, Australia contends that "the complainants have not provided any evidence to support Professor Neven's conclusion that plain packaging has, or will result in, reduced profit margins". Australia states that the complainants' evidence demonstrates a continued upward trend in prices following adoption of the tobacco plain packaging measure".²⁸⁷⁶ Finally, Australia submits that "Professor Neven's claim that the tobacco plain packaging measure reduces the ability of new entrants to communicate with potential customers is made in the abstract, entirely divorced from the reality of Australia's dark market".

7.1143. Specifically, Australia submits that Professor Neven makes no attempt to analyse the extent to which the capacity of a new entrant to communicate with potential customers in Australia had already been reduced by measures that are not challenged in these proceedings – such as Australia's existing advertising and promotion restrictions, including point of sale and retail display bans.²⁸⁷⁷ Australia refers to its experts, HoustonKemp, to argue that the Australian market for

²⁸⁷⁴ Australia's first written submission, para. 550.

²⁸⁷⁵ Australia's first written submission, para. 551 (quoting Steenkamp Report, (Exhibit DOM/HND-5), paras. 9-10 and 43).

²⁸⁷⁶ Australia's first written submission, para. 552.

²⁸⁷⁷ Australia's first written submission, para. 553.

tobacco products has been characterised by exceptionally high barriers to entry for a very long period, and that the oligopolistic nature of the Australian tobacco market, and the advantages that incumbent firms enjoy as a result, has long made market entry virtually impossible, with the effect that there is no significant alteration to barriers to entry as a consequence of the TPP measures.²⁸⁷⁸ Australia thus argues that, "while raised barriers to entry are potentially relevant in determining whether the [TPP measures have] a limiting effect on trade, the complainants have failed to establish that barriers to entry are likely to be raised as a result of the design, structure and operation of the tobacco plain packaging measure; or that any increased barriers to entry in the Australian market are attributable to the tobacco plain packaging measure and not to other factors".²⁸⁷⁹

7.1144. Australia also notes that some of the complainants argue that the TPP measures are trade-restrictive because the mandatory requirements they impose operate as a condition for the importation of tobacco products into Australia²⁸⁸⁰, or, similarly, because "technical regulations, by their very nature, impose limits on trade".²⁸⁸¹ Australia submits that "the fact that the [TPP measures are] a technical regulation, or that compliance with the [TPP measures] operate[] as a condition on the sale of tobacco products in Australia is not sufficient to establish" that they are trade-restrictive within the meaning of Article 2.2 of the TBT Agreement.²⁸⁸² Australia elaborates that, notwithstanding the fact that technical regulations are by their nature mandatory²⁸⁸³, "the Appellate Body in *US – Tuna II (Mexico)* and in *US – COOL* expressly recognized that there may be circumstances in which a technical regulation is *not* trade-restrictive"²⁸⁸⁴, such that there is "no basis for alleging that a technical regulation is trade-restrictive solely because compliance with its requirements is mandatory; or that technical regulations are *per se* trade-restrictive".²⁸⁸⁵

7.1145. Australia also submits that "there is an obvious way in which the complainants could have argued that the measure is trade-restrictive – they could admit that, over time, Australia's measure will reduce demand for tobacco products by reducing initiation and relapse, and increasing quitting. In the context of Australia's market, where domestic production is being phased out, this would necessarily result in a reduction in imports".²⁸⁸⁶ Australia elaborates that the TPP measures will result in a limiting effect on overall trade in tobacco products in the future because "(i) the measure will reduce the use of tobacco products (by discouraging uptake and relapse and encouraging quitting); and (ii) since imports will soon represent the entirety of Australia's tobacco product market, with domestic production being phased out, a reduction in the use of tobacco products will necessarily limit overall trade in tobacco products".²⁸⁸⁷ Because of this latter impact, "the complainants' trade-restrictiveness arguments are put forward in a context where their position on contribution (that the measure is incapable of achieving any degree of contribution to its objective) relies on contesting the proposition that the measure will reduce overall trade in tobacco products".²⁸⁸⁸ In this connection, Australia argues that the TPP measures restrict trade only to the extent necessary to achieve its degree of contribution to its public health objectives.²⁸⁸⁹

7.2.5.4.2.2 Main arguments by the third parties

7.1146. The European Union is "not persuaded that the issue of downtrading ... in itself, and without more, demonstrates a trade-restriction, at least insofar as it is simply limited to the observation that the market share of one complainant is increasing at the expense of another". Nor is it persuaded that such a phenomenon, which might involve a decrease in the prices of some products, demonstrates, without more, a trade-restriction. The European Union rather thinks that, as part of its overall analysis, the Panel would also have to look into the question of whether volumes and overall value had remained stable or even increased, including the effects that the measure is apt to cause, and taking into account any mitigating steps taken by the interested firms.²⁸⁹⁰

7.1147. The European Union sees "some connection between the discussion about whether or not the measure is trade-restrictive, on the one hand, and the discussion about whether or not the measure makes a contribution to its objective, on the other hand". For the European Union, both of these discussions are about what the measure causes, or is apt to cause: on the one hand, trade-restriction, and on the other hand, a reduction in smoking prevalence. The European Union suggests that the Panel adopt a consistent approach to these issues, particularly as regards its treatment of the evidence – if the Panel is minded to find that the measure has caused or is apt to cause a trade-restriction, it might also be minded to find that the measure has caused or is apt to cause some reduction in smoking prevalence. This would lead the Panel to make a full analysis under Article 2.2 of the TBT Agreement, that is, one including both a relational and a comparative analysis. For the European Union, this offers the most balanced and fruitful way of addressing the dispute.²⁸⁹¹

7.1148. For New Zealand, the complainants have failed to demonstrate that any changes in marketplace conditions in Australia with respect to tobacco products limit the trade in imported products; rather the complainants' allegations appear to be addressed towards protecting the expectations of tobacco companies to certain levels of profit or market share. Thus, the complainants' unsubstantiated allegations do not engage Australia's obligations under Article 2.2 of the TBT Agreement. The complainants have failed to establish that the TPP measures are trade-restrictive because of any alleged brand differentiation and downtrading effects.²⁸⁹²

7.1149. New Zealand does not consider that the types of impacts alleged by the complainants, such as downtrading, impact on access to the market or costs of compliance demonstrate "trade-restrictiveness" within the meaning of Article 2.2 of the TBT Agreement. The complainants seek to expand the concept of "trade-restrictiveness" under Article 2.2 beyond its ordinary meaning and without any WTO jurisprudence to support the proposition. Trade-restrictiveness can be assessed by looking at the competitive opportunities available to imported products. As Australia argued, the focus should be on "whether the technical regulation at issue modifies the conditions of competition in the marketplace in a manner that has a limiting effect on trade for imported products subject to that regulation".

7.1150. Nigeria argues that the economic expert evidence submitted by the complainants "highlights the detrimental effect on access to the Australian market and the distortion of competitive opportunities that result from the mandated lack of opportunity to differentiate products through trademarks and packaging designs". Nigeria submits that the TPP measures thus impose a very significant restriction on competition and trade.²⁸⁹³

7.1151. Norway argues that the complainants must actually establish, and not merely assert, that the measure has a limiting effect on trade in tobacco products and/or is likely to occur in the Australian market as a result of the design, structure and operation of the plain packaging

measure. It would not be sufficient, in Norway's view, "to rely on an abstract notion of market conditions".²⁸⁹⁴

7.1152. Singapore urges the Panel to consider, in formulating a test of trade-restrictiveness and applying it to the types of impacts alleged by the complainants (such as downtrading), that at the heart of the Article 2.2 obligation lies the necessity test, and the threshold for "trade-restrictiveness" should not be unduly onerous. Singapore notes that while Australia rejects the proposition that downtrading will result in a limiting effect on trade in imported tobacco products in Australia, it accepts that (1) an increase in compliance costs; and (2) raised barriers to entry in the Australian tobacco market are potentially relevant in determining whether the TPP measures are trade-restrictive.

7.1153. Singapore does not agree with Australia's proposition that in order to show that the TPP measures are trade-restrictive within the meaning of Article 2.2, the complainants must demonstrate that they have a limiting effect on overall trade in tobacco products of all WTO Members. Instead, it is of the view that the affected trade can be between the complaining Member and the defending Member, and the enquiry should not be broadened such that trade restriction in question is with respect to the trade of any WTO Member. The term "international trade" in Article 2.2 of the TBT Agreement is also found in Article XX of GATT 1994, but this term has not been applied in such a manner.²⁸⁹⁵

7.1154. Nicaragua submits that, "given the economic importance of trademarks and brands for market access and fair competition", the prohibition on the use of all distinguishing trademarks, design, logo, and color characteristics from the packaging of branded tobacco products, leaving only the brand name in a standard form, necessarily restricts competitive opportunities in the Australian market. Nicaragua adds that the TPP measures provide a strong disincentive to export to Australia and will make it extremely difficult, if not impossible, for any manufacturer of tobacco products not currently present in the Australian market to enter that market. Nicaragua considers that the evidence presented by the complainants in respect of the trade-restrictive and competition-distorting nature of Australia's plain packaging measure confirms this. For example, Professor Neven explains the different functions of a trademark and concludes that "plain packaging will have a significant negative effect on the prospects of entry into and expansion on the Australian tobacco market" with the exception of the possibility of low-cost entry by non-branded, low-quality cigarettes that compete solely on the basis of price rather than product quality. Nicaragua adds that, at the time of notifying the plain packaging measure under Article 2.9.2 of the TBT Agreement, Australia itself acknowledged that plain packaging would have a significant effect on trade.²⁸⁹⁶

7.1155. Nicaragua considers that the arguments by the complainants concerning the trade-restrictiveness of the TPP measures are sufficient to show that the measure is having a "limiting effect on competitive opportunities" in the Australian market. For example, Professor Neven "clearly and convincingly provides theoretical and empirical evidence demonstrating that the plain packaging measures restricts market access, distorts competitive opportunities and provides a disincentive to export to Australia".²⁸⁹⁷ Nicaragua considers that these impacts of the plain packaging measure on conditions of competition, market access, value, price, and profitability clearly demonstrate its trade-restrictiveness within the meaning of Article 2.2 of the TBT Agreement.²⁸⁹⁸

7.1156. South Africa submits that actual evidence of trade-restrictiveness has not been presented and in the absence of such evidence the Panel cannot make any finding in this respect. South Africa argues that Article 2.2 protects the expectations of WTO Members that technical regulations will not limit trade to a greater extent than is necessary to fulfil a legitimate objective. It would be incumbent on the complainants to prove that "downtrading" is directly related to the introduction of plain packing measures. South Africa adds that "potentially such measures may impact on

market access or the cost of compliance; however, none of the complainants have positively established that plain packaging measures may have resulted solely in such impacts". South Africa submits that "[o]ther factors such as excise taxes or even a general trend of 'downtrading' in other markets where no plain packaging measures are present were not considered to establish such an argument".²⁸⁹⁹

7.1157. Uruguay argues that if "a complainant argues or suggests the Australian measure is trade-restrictive this should be substantiated and show concrete and actual trade effects". For Uruguay, it "is not enough simply to allege that downtrading, impact on access to the market or costs of compliance [to] demonstrate trade-restrictiveness", especially "in a situation of non[-]discrimination". Moreover, Uruguay submits that the fact that consumption diminishes and the market is reduced does not imply or prove trade-restrictiveness. Though there might be some adjustments in market share, Uruguay submits that "this is a natural consequence of the policy adopted and no one can expect market shares to remain completely static".

7.1158. Uruguay adds that it can also be alleged that it is harder for imports to adjust to the new requirements "compared with local production" but this "is almost always true in most trade situations (and not only because of new regulations) and does not prove trade-restrictiveness".²⁹⁰⁰

7.1159. Zimbabwe argues that, by prohibiting the use of trademarks on tobacco products and their packaging and imposing a standardized design, the TPP measures fundamentally alter the competitive conditions on the Australian market for imported products. Zimbabwe refers to Professor Neven's expert report, and submits that the plain packaging requirements significantly limit the access of imported products to the Australian market because of the combination of negative communication and price effects.²⁹⁰¹ Referring to the reports by Victoria Parr and Professor Winer, Zimbabwe notes that they also conclude that the plain packaging requirements distort competition by greatly restricting the possibility to differentiate between products on the basis of quality.²⁹⁰² This results in the "commoditization" of these products and a downward pressure on prices. By preventing quality-based distinctions, the TPP measures will undoubtedly negatively impact trade of high-quality Virginia tobacco leaf such as that produced by Zimbabwe. Increased price competition will have a downward effect on prices of tobacco leaf as manufacturers of tobacco products will be attempting to safeguard their profit margins by sourcing cheaper raw materials. Zimbabwe further submits that a decline in prices of tobacco leaf would have devastating consequences for its economy as a whole because of the importance of tobacco as well as for small farmers and their families who are subsisting by growing tobacco. Zimbabwe cannot, it states, afford a decline in prices of tobacco leaf and has no alternatives to continuing to grow tobacco.²⁹⁰³

7.2.5.4.2.3 Analysis by the Panel

7.1160. As described above, the complainants present a number of arguments in support of their view that the TPP measures are "trade-restrictive" within the meaning of Article 2.2.

7.1161. Overall, these arguments can be described as relating to:

- a. the effects of the TPP measures on the competitive environment in the Australian market;
- b. the effects of the TPP measures on the level of trade in tobacco products; and
- c. the costs of complying with the regulatory requirements arising from the TPP measures.

7.1162. We consider these arguments in turn.

²⁹⁰³ Zimbabwe's third-party submission, para. 26.

Whether the TPP measures are trade-restrictive because they alter the competitive environment of producers in the Australian market

Whether the TPP measures harm the competitive opportunities of imported tobacco products by restricting producers' ability to differentiate their products

7.1163. As described above, the complainants generally argue that the TPP measures restrict their competitive opportunities by affecting the ability of tobacco manufacturers to distinguish their products, and compete on the Australian market, on the basis of brands²⁹⁰⁴, thereby "eliminating competitive opportunities" and, in Indonesia's words, "fundamentally restructur[ing] the competitive conditions of the Australian cigarette market".²⁹⁰⁵

7.1164. The Dominican Republic considers that the parties' disagreement on the actual trade effects resulting from the TPP measures is not material to the Panel's finding of trade-restrictiveness under Article 2.2, because "it is evident from the design, structure, and expected operation of the measures that it severely limits competitive opportunities to differentiate tobacco products".²⁹⁰⁶

7.1165. Australia submits that the complainants' "qualitative argument" with respect to brand differentiation is insufficient, as a matter of law, to establish that the tobacco plain packaging is trade-restrictive, because it does not demonstrate a limiting effect on international trade in tobacco products. Australia argues that the complainants incorrectly equate the legal standard of trade-restrictiveness with one of "competitive freedom" of market participants, such that a limitation on any "competitive opportunity" in the marketplace would suffice to establish that a technical regulation is trade-restrictive, regardless of whether it results in any limiting effect on international trade in imported products.²⁹⁰⁷ This, in Australia's view, would convert "trade-restrictiveness" into a *per se* standard as "[v]irtually every technical regulation will impose, with respect to at least one market participant, a limiting condition that did not exist prior to its adoption". Australia submits that, even assuming that the TPP measures limit a producer's ability to distinguish its tobacco products from those of other producers (which, Australia says, it does not), this is insufficient to demonstrate, without more, that it has a limiting effect on international trade in tobacco products.²⁹⁰⁸

7.1166. We agree with Australia that a demonstration that the challenged measures may result in some alteration of the overall competitive environment for suppliers on the market would not, in itself, demonstrate their "trade-restrictiveness" within the meaning of Article 2.2. Rather, as described above, what we must determine is the extent to which the challenged measures have a **limiting effect** on international trade.²⁹⁰⁹ We do not consider, therefore, that a demonstration that the TPP measures "restructured the competitive conditions of the Australian cigarette market"²⁹¹⁰, or that they **modify** the conditions under which all manufacturers will compete against each other on the market, would, in itself, be sufficient to demonstrate their trade-restrictiveness. In this respect, we do not understand the reference to the impact of a technical regulation on "competitive opportunities", in past panel and Appellate Body reports, to imply that **any** modification of the terms on which all products compete on the market as a result of a technical regulation would demonstrate the "trade-restrictiveness" of such technical regulation. Rather, as

²⁹⁰⁴ Dominican Republic's first written submission, para. 977.

²⁹⁰⁸ Australia's second written submission, paras. 404-405.

²⁹⁰⁹ See, in relation to Article III: 4 of the GATT 1994, Appellate Body Report, *Korea – Various Measures on Beef*, para. 137 ("A formal difference in treatment between imported and like domestic products is thus neither necessary, nor sufficient, to show a violation of Article III: 4. Whether or not imported products are treated 'less favourably' than like domestic products should be assessed instead by examining whether a measure modifies the **conditions of competition** in the relevant market to the detriment of imported products." (emphasis original)).

²⁹¹⁰ Indonesia's first written submission, para. 395.

described above, what must be considered is the extent to which the technical regulation at issue has a *limiting* effect on *international trade*.

7.1167. Specifically, we agree with the complainants that, to the extent that they prevent the use of certain design features on tobacco products and their retail packaging, the TPP measures limit the opportunity for producers to differentiate their products. We also agree that differentiation engenders consumer loyalty and increases consumers' willingness to pay, and that, by restricting the opportunity for brands to differentiate themselves, the TPP measures limit the opportunity for tobacco manufacturers to compete on the basis of such brand differentiation.²⁹¹¹ We are not persuaded, however that this modification of the competitive environment for all tobacco products on the entire market (which may in principle *increase* competition on the market²⁹¹²) constitutes, in itself, a restriction on "competitive opportunities" for imported tobacco products that must be assumed to have a "limiting effect" on international trade.

7.1168. Rather, as Australia expressed it, it needs to be shown *how* such effects on the conditions of competition on the market give rise to a limiting effect on international trade in tobacco products.²⁹¹³ As highlighted by the Appellate Body, appropriate evidence of such limiting effect will in particular be required in the case of a non-discriminatory internal measure. We do not consider, however, that this demonstration must be based on actual trade effects. Rather, it could in principle be based on a qualitative assessment, taking into account in particular the design and operation of the measures, or on a quantitative assessment of its actual trade effects, or both.²⁹¹⁴

7.1169. The complainants present a number of specific arguments detailing how, in their view, the reduced opportunity for manufacturers to compete on the basis of brand differentiation will lead to: (i) "downtrading" and a fall in the price of premium brands, and consequently a reduction in the value of imported products, in particular premium products; (ii) an increase in price competition and a fall in prices and, consequently, a decrease in the sales value of tobacco products and the total value of imports. Honduras and Indonesia also argue that, in addition to harming incumbents, the TPP measures create barriers to entry on the Australian market.

7.1170. Australia responds that, "[i]n theory, allegations of downtrading, impact on access to the market, or costs of compliance could, if accompanied by proper evidence of a consequential limiting effect on trade, form the basis of a finding of trade-restrictiveness within the meaning of Article 2.2 of the TBT Agreement". Australia submits however that the complainants have failed either to demonstrate that such effects have arisen as a result of the TPP measures, or that such effects have resulted in a limiting effect on trade.²⁹¹⁵

7.1171. We consider first the specific arguments of the complainants in respect of the impact of the TPP measures on barriers to entry onto the Australian market, before turning to their arguments relating to their impact on levels of trade and, finally, compliance costs.

Whether the TPP measures raise barriers to entry onto the Australian market

7.1172. Honduras argues, with reference to the expert report by Professor Neven, that Australia's TPP measures produce certain communication and price effects that make access to the Australian tobacco market almost impossible.²⁹¹⁶

7.1173. Professor Neven states that "the profits that a manufacturer can expect to earn in a given market determine its willingness to engage in trade, enter new markets and compete with established brands".²⁹¹⁷ Professor Neven explains that plain packaging produces three different

²⁹¹¹ Dominican Republic's response to Panel question No. 117.

²⁹¹² Product differentiation is typically seen as relaxing the pressure on prices and as allowing firms to charge a premium over their marginal cost.

²⁹¹³ Australia's first written submission, para. 516. See also Appellate Body Report, *US – COOL (Article 21.5 – Canada and Mexico)*, para. 5.208 fn 643 (referring to Appellate Body Report, *EC – Poultry*, paras. 126-127).

²⁹¹⁴ See para. 7.1076 above.

²⁹¹⁵ See para. 7.1139 above.

²⁹¹⁶ Honduras's second written submission, para. 556.

²⁹¹⁷ Honduras's second written submission, para. 556 (quoting Neven Report, (Exhibit UKR-3) (SCI), para. 6.1, p. 36).

effects on competition and trade in the Australian market: (i) a contestability effect; (ii) a communication effect; and (iii) a competitive effect.²⁹¹⁸ He explains that, as a result of the contestability effect, plain packaging would, in principle, lower barriers to entry and enhance prospects of entry onto the Australian market. He argues, however, that this initial positive contestability effect on barriers to entry is offset by the other two effects produced by plain packaging. In his view, the communication effect of plain packaging raises barriers to entry as successful entry for potential entrants becomes significantly more difficult without the possibility to create brand awareness. And the competitive effect also raises barriers to entry because producers need to reduce prices to address consumers' reduced willingness to pay, which reduces their profit margins, such that "operators have lower willingness to engage in trade", which "also leads to a lower likelihood of entry".²⁹¹⁹ Professor Neven thus concludes that "[p]lain packaging reduces product differentiation and lowers the prospect for profitable continued market presence and entry", and "also considerably hampers entry of new products on the market given that new products need trademarks and product differentiation opportunities to communicate their presence on the market to potential customers".²⁹²⁰

7.1174. Honduras argues that, considering the net result from the combined operation of all three effects, "it becomes clear that plain packaging yields overall negative effects for tobacco brands regardless of whether they are already in the Australian market, or may seek to enter the Australian market".²⁹²¹

7.1175. Indonesia similarly argues that plain packaging limits trade because it makes it more difficult for imported products to establish an identity with consumers who are already familiar with domestic brands. Indonesia refers to a consumer research survey conducted for the Australian government in conjunction with the implementation of plain packaging which found that whether a brand was considered "foreign" or "local" affected consumer's attitudes towards cigarette brands, and specifically that, a number of brands were seen as distinctly "Australian", which overall was viewed as making the brand more appealing. Distinctly "Australian" cigarettes were primarily those which were seen to be in the market-place the longest or were perceived to be smoked by particular types of individuals who "represented" clearly defined Australian stereotypes (for example "tradies" (i.e. tradesmen such as plumbers or electricians), football or cricket fans).²⁹²²
